Form 10-K

(Mark One)

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE
SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2005

or

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF
THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission file number 1-8787

American International Group, Inc.

(Exact name of registrant as specified in its charter)

Delaware

(State or other jurisdiction of
incorporation or organization)

13-2592361

(I.R.S. Employer
Identification No.)

70 Pine Street, New York, New York

(Address of principal executive offices)

10270

(Zip Code)

Registrant's telephone number, including area code (212) 770-7000

Securities registered pursuant to Section 12(b) of the Act:

<u>Title of each class</u>	<u>Name of each exchange on which registered</u>
Common Stock, Par Value \$2.50 Per Share	New York Stock Exchange, Inc.

Securities registered pursuant to Section 12(g) of the Act:

Title of each class

None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act. (Check one):

Large Accelerated Filer Accelerated Filer Non-Accelerated Filer

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes No

The aggregate market value of the voting and nonvoting common equity held by nonaffiliates of the registrant computed by reference to the price at which the common equity was last sold as of June 30, 2005 (the last business day of the registrant's most recently completed second fiscal quarter), was approximately \$127,330,500,000.

As of January 31, 2006, there were outstanding 2,596,987,248 shares of Common Stock, \$2.50 par value per share, of the registrant.

Documents Incorporated by Reference:

The registrant's definitive proxy statement filed or to be filed with the Securities and Exchange Commission pursuant to Regulation 14A involving the election of Directors at the Annual Meeting of Shareholders of the registrant scheduled to be held on May 17, 2006 is incorporated by reference in Part III of this Form 10-K.

ITEM 1.

Business

American International Group, Inc. (AIG), a Delaware corporation, is a holding company which, through its subsidiaries, is engaged in a broad range of insurance and insurance-related activities in the United States and abroad. AIG's primary activities include both General Insurance and Life Insurance & Retirement Services operations. Other significant activities include Financial Services and Asset Management. The principal General Insurance company subsidiaries are American Home Assurance Company (American Home), National Union Fire Insurance Company of Pittsburgh, Pa. (National Union), New Hampshire Insurance Company (New Hampshire), Lexington Insurance Company (Lexington), The Hartford Steam Boiler Inspection and Insurance Company (HSB), Transatlantic Reinsurance Company, American International Underwriters Overseas, Ltd. (AIUO) and United Guaranty Residential Insurance Company. Significant Life Insurance & Retirement Services operations include those conducted through American Life Insurance Company (ALICO), American International Reinsurance Company, Ltd. (AIRCO), American International Assurance Company, Limited together with American International Assurance Company (Bermuda) Limited (AIA), Nan Shan Life Insurance Company, Ltd. (Nan Shan), The Philippine American Life and General Insurance Company (Philamlife), AIG Star Life Insurance Co., Ltd. (AIG Star Life), AIG Edison Life Insurance Company (AIG Edison Life), AIG Annuity Insurance Company (AIG Annuity), the AIG American General Life Companies (AIG American General), American General Life and Accident Insurance Company (AGLA), The United States Life Insurance Company in the City of New York (USLIFE), The Variable Annuity Life Insurance Company (VALIC), SunAmerica Life Insurance Company (SunAmerica Life) and AIG SunAmerica Life Assurance Company. AIG's Financial Services operations are conducted primarily through International Lease Finance Corporation (ILFC), AIG Financial Products Corp. and AIG Trading Group Inc. (AIGTG) and their respective subsidiaries (collectively referred to as AIGFP), and American General Finance, Inc. and its subsidiaries (AGF). AIG's Asset Management operations include AIG SunAmerica Asset Management Corp. (SAAMCo) and AIG Global Asset Management Holdings Corp. (formerly known as AIG Global Investment Group, Inc.) and its subsidiaries and affiliated companies (AIG Global Investment Group). For information on AIG's business segments, see Note 2 of Notes to Consolidated Financial Statements.

At December 31, 2005, AIG and its subsidiaries had approximately 97,000 employees.

AIG's Internet address for its corporate website is www.aigcorporate.com. AIG makes available free of charge, through the Investor Information section of AIG's corporate website, Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q and Current Reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934 (the Exchange Act) as soon as reasonably practicable after such materials are electronically filed with, or furnished to, the Securities and Exchange Commission (SEC). AIG also makes available on its corporate website copies of its charters for its Audit, Nominating and Corporate Governance and Compensation Committees, as well as its Corporate Governance Guidelines (which includes Director Independence Standards) and Director, Executive Officer and Senior Financial Officer Code of Business Conduct and Ethics.

Throughout this Annual Report on Form 10-K, AIG presents its operations in the way it believes will be most meaningful, as well as most transparent. Certain of the measurements used by AIG management are "non-GAAP financial measures" under SEC rules and regulations. Statutory underwriting profit (loss) and combined ratios are determined in accordance with accounting principles prescribed by insurance regulatory authorities. For an explanation of why AIG management considers these "non-GAAP measures" useful to investors, see Management's Discussion and Analysis of Financial Condition and Results of Operations.

The Restatements

AIG has completed two restatements of its financial statements (the Restatements). In connection with the first restatement (the First Restatement), AIG restated its consolidated financial statements and financial statement schedules for the years ended December 31, 2003, 2002, 2001 and 2000, the quarters ended March 31, June 30 and September 30, 2004 and 2003 and the quarter ended December 31, 2003. In the second restatement (the Second Restatement), AIG restated its consolidated financial statements and financial statement schedules for the years ended December 31, 2004, 2003 and 2002, along with 2001 and 2000 for purposes of preparation of the Consolidated Financial Data for 2001 and 2000, the quarterly financial information for 2004 and 2003 and the first three quarters of 2005. AIG, however, did not amend its quarterly report on Form 10-Q for the quarter ended September 30, 2005 because the adjustments to the financial statements included therein were not material to those financial statements. All financial information included in this Annual Report on Form 10-K reflects the Restatements.

The following table shows the general development of the business of AIG on a consolidated basis, the contributions made to AIG's consolidated revenues and operating income and the assets held, in the periods indicated, by its General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management operations and other realized capital gains (losses). For additional information, see Selected Financial Data, Management's Discussion and Analysis of Financial Condition and Results of Operations and Notes 1 and 2 of Notes to Consolidated Financial Statements.

Years Ended December 31, (in millions)	2005	2004	2003	2002	2001

Total assets	853,370	801,145	675,602	561,598	490,614

(a) Underwriting profit (loss), a Generally Accepted Accounting Principles (GAAP) measure, is statutory underwriting profit (loss) adjusted primarily for changes in the deferral of policy acquisition costs. This adjustment is necessary to present the financial statements in accordance with GAAP.

(b) Calculated on a statutory basis, includes catastrophe losses of \$2.63 billion, \$1.05 billion, \$83 million, \$61 million and \$867 million (including World Trade Center and related losses (WTC losses) of \$769 million) in 2005, 2004, 2003, 2002 and 2001, respectively.

(c) In the fourth quarter of 2002, after completion of its annual review of General Insurance loss and loss adjustment expense reserves, AIG increased its net loss reserves relating to accident years 1997 through 2001 by \$2.1 billion.

(d) Includes \$867 million of catastrophe losses.

(e) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 and the application of FAS 52. For 2005, 2004, 2003, 2002, and 2001, respectively, the amounts included are \$(437) million, \$(140) million, \$78 million, \$(91) million and \$(219) million.

(f) Includes \$100 million in WTC losses.

(g) 2005 includes the effect of the non-renewal of a single large group life case of \$36 billion. Also, the foreign in-force is translated to U.S. dollars at the appropriate balance sheet exchange rate in each period.

(h) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For 2005, 2004, 2003, 2002 and 2001, respectively, the amounts included in interest, lease and finance charges are \$2.01 billion, \$(122) million, \$(1.01) billion, \$220 million and \$56 million, and the amounts included in Financial Services operating income are \$1.98 billion, \$(149) million, \$(964) million, \$240 million and \$75 million.

(i) Represents the sum of General Insurance net premiums earned, Life Insurance & Retirement Services GAAP premiums, net investment income, Financial Services interest, lease and finance charges, Asset Management advisory and management fees and net investment income from Guaranteed Investment Contracts (GICs), and realized capital gains (losses).

(j) Represents income before income taxes, minority interest and cumulative effect of accounting changes. Includes segment operating income and other realized capital gains (losses) presented above, as well as AIG Parent and other operations of \$(2.70) billion, \$(333) million, \$(1.26) billion, \$(610) million and \$(751) million in 2005, 2004, 2003, 2002 and 2001, respectively, and acquisition, restructuring and related charges of \$(2.02) billion in 2001.

General Insurance Operations

AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of property and casualty insurance both domestically and abroad. Domestic General Insurance operations are comprised of the Domestic Brokerage Group (DBG), which includes the operations of HSB; Transatlantic Holdings, Inc. (Transatlantic); Personal Lines, including 21st Century Insurance Group (21st Century); and United Guaranty Corporation (UGC).

AIG's primary domestic division is DBG. DBG's business in the United States and Canada is conducted through its General Insurance subsidiaries including American Home, National Union, Lexington and certain other General Insurance company subsidiaries of AIG.

DBG writes substantially all classes of business insurance, accepting such business mainly from insurance brokers. This provides DBG the opportunity to select specialized markets and retain underwriting control. Any licensed broker is able to submit business to DBG without the traditional agent-company contractual relationship, but such broker usually has no authority to commit DBG to accept a risk.

In addition to writing substantially all classes of business insurance, including large commercial or industrial property insurance, excess liability, inland marine, environmental, workers compensation and excess and umbrella coverages, DBG offers many specialized forms of insurance such as aviation, accident and health, equipment breakdown, directors and officers liability (D&O), difference-in-conditions, kidnap-ransom, export credit and political risk, and various types of professional errors and omissions coverages. The AIG Risk Management operation provides insurance and risk management programs for large corporate customers. The AIG Risk Finance operation is a leading provider of customized structured insurance products. Also included in DBG are the operations of AIG Environmental, which focuses specifically on providing specialty products to clients with environmental exposures. Lexington writes surplus lines, those risks for which conventional insurance companies do not readily provide insurance coverage, either because of complexity or because the coverage does not lend itself to conventional contracts.

Certain of the products of the DBG companies include funding components or have been structured in a manner such that little or no insurance risk is actually transferred. Funds received in connection with these products are recorded as deposits, included in other liabilities, rather than premiums and incurred losses.

The AIG Worldsource Division introduces and coordinates AIG's products and services to U.S.-based multinational clients and foreign corporations doing business in the U.S.

Transatlantic subsidiaries offer reinsurance capacity on both a treaty and facultative basis both in the U.S. and abroad. Transatlantic structures programs for a full range of property and casualty products with an emphasis on specialty risk.

AIG's Personal Lines operations provide automobile insurance through AIG Direct, the mass marketing operation of

AIG, Agency Auto Division and 21st Century, as well as a broad range of coverages for high net-worth individuals through the AIG Private Client Group.

The main business of the UGC subsidiaries is the issuance of residential mortgage guaranty insurance on conventional first lien mortgages for the purchase or refinance of 1-4 family residences. This type of insurance protects lenders in both domestic and international markets against loss if borrowers default. Other UGC subsidiaries write second lien and private student loan guaranty insurance. The second lien coverage protects lenders against loss from default on home equity and closed-end second mortgages used to finance home improvements, repairs or other expenses not directly related to the purchase of a borrower's home. Private student loan guaranty insurance protects lenders against loss if the student, or in many cases the student's parent, defaults on their education loan. UGC had approximately \$23 billion of guaranty risk in force at December 31, 2005.

AIG's Foreign General Insurance group accepts risks primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance group also includes business written by AIG's foreign-based insurance subsidiaries. The Foreign General group uses various marketing methods and multiple distribution channels to write both commercial and consumer lines insurance with certain refinements for local laws, customs and needs. AIU operates in Asia, the Pacific Rim, the United Kingdom, Europe, Africa, the Middle East and Latin America. See also Note 2 of Notes to Consolidated Financial Statements.

During 2005, DBG and the Foreign General Insurance group accounted for 55 percent and 24 percent, respectively, of AIG's General Insurance net premiums written.

AIG's General Insurance company subsidiaries worldwide operate primarily by underwriting and accepting risks for their direct account and securing reinsurance on that portion of the risk in excess of the limit which they wish to retain. This operating policy differs from that of many insurance companies that will underwrite only up to their net retention limit, thereby requiring the broker or agent to secure commitments from other underwriters for the remainder of the gross risk amount.

Certain of DBG's commercial insurance is reinsured on a quota share basis by AIRCO. Various AIG profit centers, including AIU, AIG Reinsurance Advisors, Inc. and AIG Risk Finance, use AIRCO as a reinsurer for certain of their businesses, and AIRCO also receives premiums from offshore fronting arrangements for clients of AIG subsidiaries. In accordance with permitted accounting practices in Bermuda, AIRCO discounts reserves attributable to certain classes of business assumed from other AIG subsidiaries. See Management's Discussion and Analysis of Financial Condition and Results of Operations – "Operating Review – Reserve for Losses and Loss Expenses."

The utilization of reinsurance is closely monitored by senior management and AIG's Credit Risk Committee. AIG believes that no exposure to a single reinsurer represents an inappropriate concentration of risk to AIG, nor is AIG's business substantially dependent upon any reinsurance contract. See also Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 5 of Notes to Consolidated Financial Statements.

AIG is diversified both in terms of classes of business and geographic locations. In General Insurance, approximately 15 percent of net premiums written for the year ended December 31, 2005 represented workers compensation business. During 2005, of the direct General Insurance premiums written (gross premiums less return premiums and cancellations, excluding reinsurance assumed and before deducting reinsurance ceded), 11 percent and 7 percent were written in California and New York, respectively. No other state accounted for more than five percent of such premiums.

The majority of AIG's General Insurance business is in the casualty classes, which tend to involve longer periods of time for the reporting and settling of claims. This may increase the risk and uncertainty with respect to AIG's loss reserve development. See also the Discussion and Analysis of Consolidated Net Losses and Loss Expense Reserve Development in this Item 1. Business and Management's Discussion and Analysis of Financial Condition and Results of Operations.

A significant portion of AIG's General Insurance operating revenue is derived from AIG's insurance investment operations. For a table summarizing the investment results of General Insurance see "Insurance Investments Operations" below. See also Management's Discussion and Analysis of Financial Conditions and Results of Operations and Notes 1, 2 and 8 of Notes to Consolidated Financial Statements.

Discussion and Analysis of Consolidated Net Losses and Loss Expense Reserve Development

The reserve for net losses and loss expenses represents the accumulation of estimates for reported losses (case basis reserves) and provisions for losses incurred but not reported (IBNR), both reduced by applicable reinsurance recoverable and the discount for future investment income. Losses and loss expenses are charged to income as incurred.

Loss reserves established with respect to foreign business are set and monitored in terms of the respective local or functional currency. Therefore, no assumption is included for changes in currency rates. See also Note 1(bb) of Notes to Consolidated Financial Statements.

Management reviews the adequacy of established loss reserves through the utilization of a number of analytical reserve development techniques. Through the use of these techniques, management is able to monitor the adequacy of AIG's established reserves and determine appropriate assumptions for inflation. Also, analysis of emerging specific development patterns, such as case reserve redundancies or deficiencies and IBNR emergence, allows management to determine any required adjustments. See also Management's Discussion and Analysis of Financial Condition and Results of Operations.

The "Analysis of Consolidated Net Losses and Loss Expense Reserve Development" table presents the development of net losses and loss expense reserves for calendar years 1995 through 2005. Immediately following this table is a second table that presents all data on a basis that excludes asbestos and environmental net losses and loss expense reserve development. The opening reserves held are shown at the top of the table for each year end date. The amount of loss reserve discount included in the opening reserve at each date is shown immediately below the reserves held for each year. The undiscounted reserve at each date is thus the sum of the discount and the reserve held. The upper half of the table shows the cumulative amounts paid during successive years related to the undiscounted opening loss reserves. For example, in the table that excludes asbestos and environmental losses, with respect to the net losses and loss expense reserve of \$24.55 billion as of December 31, 1998, by the end of 2005 (seven years later) \$24.75 billion had actually been paid in settlement of these net loss reserves. In addition, as reflected in the lower section of the table, the original reserve of \$25.45 billion was reestimated to be \$30.64 billion at December 31, 2005. This increase from the original estimate would generally result from a combination of a number of factors, including reserves being settled for larger amounts than originally estimated. The original estimates will also be increased or decreased as more information becomes known about the individual claims and overall claim frequency and severity patterns. The redundancy (deficiency) depicted in the table, for any particular calendar year, shows the aggregate change in estimates over the period of years subsequent to the calendar year reflected at the top of the respective column heading. For example, the deficiency of \$3.75 billion at December 31, 2005 related to December 31, 2004 net losses and loss expense reserves of \$47.30 billion represents the cumulative amount by which reserves for 2004 and prior years have developed deficiently during 2005. The deficiency that has emerged in the last year can be attributed primarily to the excess casualty, excess workers compensation, and D&O and related management liability classes of business. These classes in total produced approximately \$4 billion of adverse development in 2005, primarily related to claims from accident years 2002 and prior. For most other classes, accident years 2002 and prior generally produced adverse development in 2005, whereas accident year 2004 generally produced favorable development. In total, the favorable development for all classes of business for accident year 2004 was approximately \$3.85 billion. The accident year emergence can be seen by comparing the respective development in 2005 for each column's loss reserve in the table that follows. Loss development patterns utilized to test the reserves generally rely on the actual historical loss development patterns of prior accident years for each class of business. See also Management's Discussion and Analysis of Financial Condition and Results of Operations for further discussion of loss development in 2005.

The bottom of each table below shows the remaining undiscounted and discounted net loss reserve for each year. For example, in the table that excludes asbestos and environmental losses, for the 2000 year-end, the remaining undiscounted reserves held as of December 31, 2005 are \$10.01 billion, with a corresponding discounted net reserve of \$9.32 billion.

The reserves for net losses and loss expenses with respect to Transatlantic and 21st Century are included only in consoli-

dated net losses and loss expenses commencing with the year ended December 31, 1998, the year they were first consolidated in AIG's financial statements. Reserve development for these operations is included only for 1998 and subsequent periods. Thus, the presentation for 1997 and prior year ends is not fully comparable to that for 1998 and subsequent years in the tables below.

Analysis of Consolidated Losses and Loss Expense Reserve Development

The following table presents for each calendar year the losses and loss expense reserves and the development thereof including those with respect to asbestos and environmental claims. See also Management's Discussion and Analysis of Financial Condition and Results of Operations.

(in millions)	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005

Reconciliation of Net Reserves for Losses and Loss Expenses

(in millions)	2005	2004	2003
Net reserve for losses and loss expenses at beginning of year	\$47,254	\$36,228	\$29,347
Foreign exchange effect	(628)	524	580
Acquisition	-	-	391 ^(a)
Losses and loss expenses incurred:			
Current year	28,426	26,793	20,509
Prior years ^(b)	4,665	3,564	2,363
	33,091	30,357	22,872
Losses and loss expenses paid:			
Current year	7,331	7,692	6,187
Prior years	14,910	12,163	10,775
	22,241	19,855	16,962
Net reserve for losses and loss expenses at end of year ^(c)	\$57,476	\$47,254	\$36,228

(a) Reflects the opening balances with respect to the GE U.S.-based auto and home insurance business acquired in 2003.

(b) Includes accretion of discount of \$(15) million in 2005, including an increase of \$375 million in the discount recorded in 2005; \$377 million in 2004 and \$296 million in 2003. Additionally, includes \$269 million in 2005, \$317 million in 2004 and \$323 million in 2003 for the general reinsurance operations of Transatlantic, and \$197 million of additional losses incurred in 2005 resulting from increased labor and material costs related to the 2004 Florida hurricanes.

(c) See also Note 6(a) of Notes to Consolidated Financial Statements.

The reserve for losses and loss expenses as reported in AIG's Consolidated Balance Sheet at December 31, 2005 differs from the total reserve reported in the Annual Statements filed with state insurance departments and, where appropriate, with foreign regulatory authorities. The differences at December 31, 2005 relate primarily to reserves for certain foreign operations not required to be reported in the United States for statutory reporting purposes.

The reserve for gross losses and loss expenses is prior to reinsurance and represents the accumulation for reported losses and IBNR. Management reviews the adequacy of established gross loss reserves in the manner previously described for net loss reserves.

For further discussion regarding net reserves for losses and loss expenses, see Management's Discussion and Analysis of Financial Condition and Results of Operations.

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad. Insurance-oriented products consist of individual and group life, payout annuities, endowment and accident and health policies. Retirement savings products consist generally of fixed and variable annuities. See also Management's Discussion and Analysis of Financial Condition and Results of Operations.

Life Insurance & Retirement Services operations in foreign countries comprised 78 percent of Life Insurance & Retirement Services GAAP premiums and 59 percent of Life Insurance & Retirement Services operating income in 2005. AIG operates overseas principally through ALICO, AIA, Nan Shan, Philamlife, AIG Star Life, and AIG Edison Life. ALICO is incorporated in Delaware and all of its business is written

outside of the United States. ALICO has operations either directly or through subsidiaries in Europe, Latin America, the Caribbean, the Middle East, South Asia and the Far East, with Japan being the largest territory. AIG added significantly to its presence in Japan with the acquisition of GE Edison Life Insurance Company (now AIG Edison Life), which was consolidated beginning with the fourth quarter of 2003. AIA operates primarily in China (including Hong Kong), Singapore, Malaysia, Thailand, Korea, Australia, New Zealand, Vietnam, and India. The operations in India are conducted through a joint venture, Tata AIG Life Insurance Company Limited. Nan Shan operates in Taiwan. Philamlife is the largest life insurer in the Philippines. AIG Star Life operates in Japan. See also Note 2 of Notes to Consolidated Financial Statements.

AIRCO acts primarily as an internal reinsurance company for AIG's foreign life operations. This facilitates insurance risk management (retention, volatility, concentrations) and capital planning locally (branch and subsidiary). It also allows AIG to pool its insurance risks and purchase reinsurance more efficiently at a consolidated level, manage global counterparty risk and relationships and manage global life catastrophe risks.

AIG's principal domestic Life Insurance & Retirement Services operations include AGLA, AIG American General, AIG Annuity, USLIFE, VALIC and SunAmerica Life. These companies utilize multiple distribution channels including independent producers, brokerage, career agents and banks to offer life insurance, annuity and accident and health products and services, as well as financial and other investment products. The domestic Life Insurance & Retirement Services operations comprised 22 percent of total Life Insurance & Retirement Services GAAP premiums and 41 percent of Life Insurance & Retirement Services operating income in 2005.

There was no significant adverse effect on AIG's Life Insurance & Retirement Services results of operations from

economic conditions in any one state, country or geographic region for the year ended December 31, 2005. See also Management's Discussion and Analysis of Financial Condition and Results of Operations.

Life insurance products such as whole life and endowment continue to be significant in the overseas companies, especially in Southeast Asia, while a mixture of life insurance, accident and health and retirement services products are sold in Japan.

In addition to the above, AIG also has subsidiary operations in Canada, Egypt, Mexico, Poland, Switzerland and Puerto Rico, and conducts life insurance business through a joint venture in Brazil and through an AIUO subsidiary company in Russia, and in certain countries in Central and South America.

The Foreign Life Insurance & Retirement Services companies have over 270,000 full and part-time agents, as well as

independent producers, and sell their products largely to indigenous persons in local and foreign currencies. In addition to the agency outlets, these companies also distribute their products through direct marketing channels, such as mass marketing, and through brokers and other distribution outlets, such as financial institutions.

Insurance Investment Operations

A significant portion of AIG's General Insurance and Life Insurance & Retirement Services operating revenues are derived from AIG's insurance investment operations. See also Management's Discussion and Analysis of Financial Condition and Results of Operations and Notes 1, 2 and 8 of Notes to Consolidated Financial Statements.

The following table summarizes the investment results of the General Insurance operations. See also Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 8 of Notes to Consolidated Financial Statements.

Years Ended December 31, (in millions)	Annual Average Cash and Invested Assets			Return on Average Cash and Assets ^(b)	Return on Average Assets ^(c)

(b) Net investment income divided by the annual average sum of cash and invested assets.

(c) Net investment income divided by the annual average invested assets.

AIG's worldwide insurance investment policy places primary emphasis on investments in government and other high quality, fixed income securities in all of its portfolios and, to a lesser extent, investments in high yield bonds, common stocks, real estate, hedge funds and partnerships, in order to enhance returns on policyholders' funds and generate net investment income. The ability to implement this policy is somewhat limited in certain territories as there may be a lack of adequate long-term investments or investment restrictions may be

imposed by the local regulatory authorities. See also Management's Discussion and Analysis of Financial Condition and Results of Operations.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets transactions, consumer finance and insurance premium financing.

AIG's Aircraft Finance operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to domestic and foreign airlines. Revenues also result from the remarketing of commercial jets for its own account, for airlines and for financial institutions. See also Note 2 of Notes to Consolidated Financial Statements.

The Capital Markets operations of AIG are conducted primarily through AIGFP, which engages as principal in standard and customized interest rate, currency, equity, commodity, energy and credit products with top-tier corporations, financial institutions, governments, agencies, institutional investors, and high-net-worth individuals throughout the world. AIGFP also raises funds through municipal reinvestment contracts and other private and public security offerings, investing the proceeds in a diversified portfolio of high grade securities and derivative transactions. See also Note 2 of Notes to Consolidated Financial Statements.

Consumer Finance operations include AGF as well as AIG Consumer Finance Group, Inc. (AIGCFG). AGF provides a wide variety of consumer finance products, including real estate mortgages, consumer loans, retail sales finance and credit-related insurance to customers in the United States. AIGCFG, through its subsidiaries, is engaged in developing a multi-product consumer finance business with an emphasis on emerging markets. See also Note 2 of Notes to Consolidated Financial Statements.

Together, the Aircraft Finance, Capital Markets and Consumer Finance operations generate the vast majority of the revenues produced by AIG's consolidated Financial Services operations.

Imperial A.I. Credit Companies also contribute to Financial Services income. This operation engages principally in insurance premium financing for both AIG's customers and those of other insurers. See Note 1 of Notes to Consolidated Financial Statements.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products, including institutional and retail asset management, broker dealer services and spread-based investment business from the sale of guaranteed investment contracts, also known as funding agreements (GICs). Such products and services are offered to individuals and institutions both domestically and overseas.

AIG's principal Asset Management operations are conducted through certain subsidiaries of AIG Retirement Services, Inc. (AIG SunAmerica), including SAAMCo and the AIG Advisor Group broker dealers and AIG Global Investment Group. AIG SunAmerica sells and manages mutual funds and provides financial advisory services through independent-contractor registered representatives. AIG Global Investment Group manages invested assets on a global basis for third-party institutional, retail, private equity and real estate investment funds, provides securities lending and custodial services and organizes and manages the invested assets of institutional private

equity investment funds. Each of these subsidiary operations receives fees for investment products and services provided. See also Management's Discussion and Analysis of Financial Condition and Results of Operations and Note 2 of Notes to Consolidated Financial Statements.

Other Operations

Certain other AIG subsidiaries provide insurance-related services such as adjusting claims and marketing specialized products. Several wholly owned foreign subsidiaries of AIG operating in countries or jurisdictions such as Ireland, Bermuda, Barbados and Gibraltar provide insurance and related administrative and back office services to a variety of insurance and reinsurance companies. These companies include captive insurance companies unaffiliated with AIG, subsidiaries of AIG and the subsidiaries of holding companies in which AIG holds an interest, such as IPC Holdings, Ltd (IPC) and Allied World Assurance Holdings, Ltd. (AWAC). AIG also has several other subsidiaries which engage in various businesses. Mt. Mansfield Company, Inc. owns and operates the ski slopes, lifts, school and an inn located at Stowe, Vermont. Also included in other operations are unallocated corporate expenses, including the settlement costs more fully described in Item 3. Legal Proceedings and Note 12(i) of Notes to Consolidated Financial Statements.

Additional Investments

AIG holds a 24.3 percent interest in IPC, a reinsurance holding company, a 23.4 percent interest in AWAC, a property-casualty insurance holding company, and a 24.5 percent interest in The Fuji Fire and Marine Insurance Co., Ltd., a general insurance company. See also Note 1(s) of Notes to Consolidated Financial Statements.

Locations of Certain Assets

As of December 31, 2005, approximately 34 percent of the consolidated assets of AIG were located in foreign countries (other than Canada), including \$4.4 billion of cash and securities on deposit with foreign regulatory authorities. Foreign operations and assets held abroad may be adversely affected by political developments in foreign countries, including such possibilities as tax changes, nationalization, and changes in regulatory policy, as well as by consequence of hostilities and unrest. The risks of such occurrences and their overall effect upon AIG vary from country to country and cannot easily be predicted. If expropriation or nationalization does occur, AIG's policy is to take all appropriate measures to seek recovery of such assets. Certain of the countries in which AIG's business is conducted have currency restrictions which generally cause a delay in a company's ability to repatriate assets and profits. See also Notes 1 and 2 of Notes to Consolidated Financial Statements and "Risk Factors — Foreign Operations" in Item 1A. Risk Factors.

Regulation

AIG's operations around the world are subject to regulation by many different types of regulatory authorities, including insurance, securities, investment advisory, banking and thrift regulators in the United States and abroad. The regulatory environment can have a significant effect on AIG and its business. AIG's operations have become more diverse and consumer-oriented, increasing the scope of regulatory supervision and the possibility of intervention. In addition, the investigations into financial accounting practices that led to the Restatements of AIG's financial statements have heightened regulatory scrutiny of AIG worldwide.

Certain states require registration and periodic reporting by insurance companies that are licensed in such states and are controlled by other corporations. Applicable legislation typically requires periodic disclosure concerning the corporation that controls the registered insurer and the other companies in the holding company system and prior approval of intercorporate services and transfers of assets (including in some instances payment of dividends by the insurance subsidiary) within the holding company system. AIG's subsidiaries are registered under such legislation in those states that have such requirements. See also Note 11 of Notes to Consolidated Financial Statements.

AIG's insurance subsidiaries, in common with other insurers, are subject to regulation and supervision by the states and by other jurisdictions in which they do business. Within the United States, the method of such regulation varies but generally has its source in statutes that delegate regulatory and supervisory powers to an insurance official. The regulation and supervision relate primarily to approval of policy forms and rates, the standards of solvency that must be met and maintained, including risk-based capital measurements, the licensing of insurers and their agents, the nature of and limitations on investments, restrictions on the size of risks that may be insured under a single policy, deposits of securities for the benefit of policyholders, requirements for acceptability of reinsurers, periodic examinations of the affairs of insurance companies, the form and content of reports of financial condition required to be filed, and reserves for unearned premiums, losses and other purposes. In general, such regulation is for the protection of policyholders rather than the equity owners of these companies. See also Management's Discussion and Analysis of Financial Condition and Results of Operations.

In connection with the Restatements, AIG undertook to examine and evaluate each of the items that have been restated or adjusted in its consolidated GAAP financial statements to determine whether restatement of the previously filed statutory financial statements of its insurance company subsidiaries would be required. AIG completed its 2004 audited statutory financial statements for all of the Domestic General Insurance companies in late 2005. The statutory accounting treatment of the various items requiring adjustment or restatement were reviewed and agreed to with the relevant state insurance regulators in advance of the filings. Adjustments necessary to reflect the cumulative effect on statutory surplus of

adjustments relating to years prior to 2004 were made to 2004 opening surplus, and 2004 statutory net income was restated accordingly. Previously reported General Insurance statutory surplus at December 31, 2004 was reduced by approximately \$3.5 billion to approximately \$20.6 billion.

AIG also recently completed its 2005 unaudited statutory financial statements for all of the Domestic General Insurance companies, again after reviewing and agreeing with the relevant state insurance regulators the statutory accounting treatment of various items. The state regulators have permitted the Domestic General Insurance companies to record a \$724 million reduction to opening statutory surplus as of January 1, 2005, to reflect the effects of the Second Restatement. See also Management's Discussion and Analysis of Financial Condition and Results of Operations — "Capital Resources — Regulation and Supervision" herein.

AIG has taken various steps to enhance the capital positions of the Domestic General Insurance companies. AIG entered into capital maintenance agreements with the Domestic General Insurance companies that set forth procedures through which AIG will provide ongoing capital support. Dividends from the Domestic General Insurance companies were suspended in the fourth quarter of 2005. AIG contributed an additional \$750 million of capital into American Home effective September 30, 2005, and contributed a further \$2.25 billion of capital in February 2006 for a total of approximately \$3 billion of capital into Domestic General Insurance subsidiaries effective December 31, 2005. Furthermore, in order to allow the Domestic General Insurance companies to record as an admitted asset at December 31, 2005 certain reinsurance ceded to non-U.S. reinsurers (which has the effect of increasing the statutory surplus of such Domestic General Insurance companies), AIG has obtained, and entered into reimbursement agreements for \$1.5 billion of letters of credit issued by several commercial banks in favor of certain Domestic General Insurance companies.

AIG's insurance operations are currently under review by various state regulatory agencies. See Item 3. Legal Proceedings for a further description of these investigations and see "Risk Factors – Regulatory Investigations" in Item 1A. Risk Factors for more information on their application to AIG's insurance businesses.

Risk-Based Capital (RBC) is designed to measure the adequacy of an insurer's statutory surplus in relation to the risks inherent in its business. Thus, inadequately capitalized general and life insurance companies may be identified.

The RBC formula develops a risk adjusted target level of statutory surplus by applying certain factors to various asset, premium and reserve items. Higher factors are applied to more risky items and lower factors are applied to less risky items. Thus, the target level of statutory surplus varies not only as a result of the insurer's size, but also on the risk profile of the insurer's operations.

The RBC Model Law provides for four incremental levels of regulatory attention for insurers whose surplus is below the calculated RBC target. These levels of attention range in severity from requiring the insurer to submit a plan for

corrective action to placing the insurer under regulatory control.

The statutory surplus of each of AIG's domestic general and life insurance subsidiaries exceeded their RBC standards as of December 31, 2005.

To the extent that any of AIG's insurance entities would fall below prescribed levels of surplus, it would be AIG's intention to infuse necessary capital to support that entity.

A substantial portion of AIG's General Insurance business and a majority of its Life Insurance business is carried on in foreign countries. The degree of regulation and supervision in foreign jurisdictions varies. Generally, AIG, as well as the underwriting companies operating in such jurisdictions, must satisfy local regulatory requirements. Licenses issued by foreign authorities to AIG subsidiaries are subject to modification or revocation by such authorities, and AIU or other AIG subsidiaries could be prevented from conducting business in certain of the jurisdictions where they currently operate. In the past, AIU has been allowed to modify its operations to conform with new licensing requirements in most jurisdictions.

In addition to licensing requirements, AIG's foreign operations are also regulated in various jurisdictions with respect to currency, policy language and terms, amount and type of security deposits, amount and type of reserves, amount and type of local investment and the share of profits to be returned to policyholders on participating policies. Some foreign countries regulate rates on various types of policies. Certain countries have established reinsurance institutions, wholly or partially owned by the state, to which admitted insurers are obligated to cede a portion of their business on terms which may not always allow foreign insurers, including AIG, full compensation. In some countries, regulations governing constitution of technical reserves and remittance balances may hinder remittance of profits and repatriation of assets.

In 1999, AIG became a unitary thrift holding company when the Office of Thrift Supervision (OTS) granted AIG approval to organize AIG Federal Savings Bank. Annually, the OTS conducts an examination of AIG. The OTS examination involves assessing the organization's overall risk profile.

Competition

AIG's Insurance, Financial Services and Asset Management businesses operate in a highly competitive environment, both domestically and overseas. Principal sources of competition are insurance companies, banks, investment banks and other non-bank financial institutions.

The insurance industry in particular is highly competitive. Within the United States, AIG's General Insurance subsidiaries compete with approximately 3,100 other stock companies, specialty insurance organizations, mutual companies and other underwriting organizations. AIG's subsidiaries offering Life Insurance and Retirement Services compete in the United States with approximately 2,000 life insurance companies and other participants in related financial services fields. Overseas, AIG subsidiaries compete for business with foreign insurance operations of the larger U.S. insurers, global insurance groups,

and local companies in particular areas in which they are active.

AIG's strong ratings have historically provided a competitive advantage. The effect on the business of AIG of recent regulatory investigations, the Restatements, and subsequent ratings actions is currently unknown, but these developments may adversely affect the competitive position of AIG and its subsidiaries. See "Risk Factors — AIG Credit Ratings" in Item 1A. Risk Factors.

ITEM 1A.

Risk Factors

AIG's Credit Ratings

The downgrades in AIG's credit ratings will increase AIG's borrowing costs, may lessen AIG's ability to compete in certain businesses and will require AIG to post additional collateral.

From March through June of 2005, the major rating agencies downgraded AIG's ratings in a series of actions. Standard & Poor's, a division of The McGraw-Hill Companies, Inc. (S&P), lowered the long-term senior debt and counterparty ratings of AIG from 'AAA' to 'AA' and changed the rating outlook to negative. Moody's Investors Service (Moody's) lowered AIG's long-term senior debt rating from 'Aaa' to 'Aa2' and changed the outlook to stable. Fitch Ratings (Fitch) downgraded the long-term senior debt ratings of AIG from 'AAA' to 'AA' and placed the ratings on Rating Watch Negative.

The agencies also took rating actions on AIG's insurance subsidiaries. S&P and Fitch lowered to 'AA+' the insurance financial strength ratings of most of AIG's insurance companies. Moody's lowered the insurance financial strength ratings generally to either 'Aa1' or 'Aa2'. A.M. Best downgraded the financial strength ratings for most of AIG's insurance subsidiaries from 'A++' to 'A+' and the issuer credit ratings from 'aa+' to 'aa-'. Many of these companies' ratings remain on a negative watch.

In addition, S&P changed the outlook on ILFC's 'AA-' long-term senior debt rating to negative. Moody's affirmed ILFC's long-term and short-term senior debt ratings ('A1'/P-1'). Fitch downgraded ILFC's long-term senior debt rating from 'AA-' to 'A+' and placed the rating on Rating Watch Negative and downgraded ILFC's short-term debt rating from 'F1+' to 'F1'. Fitch also placed the 'A+' long-term senior debt ratings of American General Finance Corporation and American General Finance, Inc. on Rating Watch Negative. S&P and Moody's affirmed the long-term and short-term senior debt ratings of American General Finance Corporation at 'A+'/'A-1' and 'A1'/P-1', respectively.

These debt and financial strength ratings are current opinions of the rating agencies. As such, they may be changed, suspended or withdrawn at any time by the rating agencies as a result of changes in, or unavailability of, information or based on other circumstances. Ratings may also be withdrawn at AIG management's request. This discussion of ratings is not a complete list of ratings of AIG and its subsidiaries.

These ratings actions have affected and will continue to affect AIG's business and results of operations in a number of ways.

- **Downgrades in AIG's debt ratings will adversely affect AIG's results of operations.** AIG relies on external sources of financing to fund several of its operations. The cost and availability of unsecured financing are generally dependent on the issuer's long-term and short-term debt ratings. These downgrades and any future downgrades in AIG's debt ratings may adversely affect AIG's borrowing costs and therefore adversely affect AIG's results of operations.
- **The downgrade in AIG's long-term senior debt ratings will adversely affect AIGFP's ability to compete for certain businesses.** Credit ratings are very important to the ability of financial institutions to compete in the derivative and structured transaction marketplaces. Historically, AIG's triple-A ratings provided AIGFP a competitive advantage. The downgrades have reduced this advantage and, for specialized financial transactions that generally are conducted only by triple-A rated financial institutions, counterparties may be unwilling to transact business with AIGFP except on a secured basis. This could require AIGFP to post more collateral to counterparties in the future. See below for a further discussion of the effect that posting collateral may have on AIG's liquidity.
- **Although the financial strength ratings of AIG's insurance company subsidiaries remain high compared to many of their competitors, the downgrades have reduced the previous ratings differential.** The competitive advantage of the ratings to AIG's insurance company subsidiaries may be lessened accordingly.
- **As a result of the downgrades of AIG's long-term senior debt ratings, AIG was required to post approximately \$1.16 billion of collateral with counterparties to municipal guaranteed investment contracts and financial derivatives transactions.** In the event of a further downgrade, AIG will be required to post additional collateral. It is estimated that, as of the close of business on February 28, 2006 based on AIG's outstanding municipal guaranteed investment agreements and financial derivatives transactions as of such date, a further downgrade of AIG's long-term senior debt ratings to 'Aa3' by Moody's or 'AA-' by S&P would permit counterparties to call for approximately \$962 million of additional collateral. Further, additional downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIG manages its liquidity. The actual amount of additional collateral that AIG would be required to post to counterparties in the event of such downgrades depends on market conditions, the market value of the outstanding affected transactions and other factors prevailing at the time of the downgrade. Any additional obligations to post collateral will increase the demand on AIG's liquidity.

Regulatory Investigations

Significant legal proceedings have adversely affected AIG's results of operations for 2005. As a result of the settlements

discussed below under Item 3. Legal Proceedings, AIG recorded an after-tax charge of approximately \$1.15 billion in the fourth quarter of 2005. AIG is party to numerous other legal proceedings and regulatory investigations. It is possible that the effect of the unresolved matters could be material to AIG's consolidated results of operations for an individual reporting period. For a discussion of these unresolved matters, see Item 3. Legal Proceedings.

Significant investigations into AIG's business are continuing and the commencement of additional investigations is possible. Broad-ranging investigations into AIG's business practices continue. These investigations are being conducted by a number of regulators, and related actions by regulators both within and outside the United States may be undertaken in response. The review of large amounts of information by various regulatory authorities may result in the commencement of new areas of inquiry and, possibly, new significant legal proceedings.

The Relationships Between AIG and Starr and SICO

The relationships between AIG and Starr and SICO may take an extended period of time to unwind and/or resolve, and the consequences of such resolution are uncertain. Although AIG is currently working on unwinding and resolving its relationships with C.V. Starr & Co, Inc. (Starr) and Starr International Company, Inc. (SICO), AIG cannot predict what its future relationship with Starr and SICO will be. AIG subsidiaries are in the process of terminating their agency relationships with the Starr agencies and are beginning to write the business previously produced by those agencies on a direct basis. AIG also continues to address the issues posed by compensation plans and programs previously provided to AIG executives by Starr and SICO, as AIG is providing compensation programs that recognize those plans and programs. In January 2006, Starr announced that it had completed its tender offers to purchase interests in Starr and that all eligible shareholders had tendered their shares. As a result of completion of the tender offers, no AIG executive currently holds any Starr interest. AIG has entered into agreements pursuant to which AIG agrees, subject to certain conditions, to assure AIG's current employees that all payments are made under a series of two-year Deferred Compensation Profit Participation Plans provided by SICO (SICO Plans). See Note 12(f) and Note 16 of Notes to Consolidated Financial Statements. Nevertheless, there can be no assurance that AIG will be able to effectively address the consequences for its executives of the unwinding of their participation in the Starr and SICO plans and programs. Nor can there be any assurance that AIG will compete successfully for the business previously produced by the Starr agencies.

Finally, litigation between AIG and Starr and SICO remains pending, and the timing and terms of any resolution cannot currently be predicted. As a result of the foregoing, there can be no assurance that the ultimate resolution of AIG's relationships with Starr and SICO will not be adverse to AIG. For further information about litigation between AIG and Starr and SICO, see Item 3. Legal Proceedings.

Certain Material Weaknesses

Management identified three remaining material weaknesses in AIG's internal control over financial reporting. Remediation of these material weaknesses is ongoing. Until these weaknesses are remediated, the weaknesses could affect the accuracy or timing of future filings with the SEC and other regulatory authorities. A discussion of these material weaknesses and AIG's remediation efforts can be found in Item 9A of Part II of this Annual Report on Form 10-K.

Access to Capital Markets

AIG's access to the U.S. public capital markets may be delayed by the SEC registration process. Although AIG is able to access the Rule 144A and Euro markets, AIG will be unable to access the U.S. public securities markets until it has filed and the SEC has declared effective a new registration statement under the Securities Act of 1933. Depending upon the SEC's review of these filings, this process may take several months or more.

Unless relief is granted by the SEC, AIG will not be able to avail itself of certain favorable provisions of the Securities Act. AIG will not, for a period of three years, be a "well-known seasoned issuer". During this period, AIG's ability to communicate with respect to new product offerings and to structure client products will be more limited than they otherwise would. In addition, during this period, AIG will not be able to avail itself of provisions that allow for an automatically effective shelf registration statement or rely on the "forward-looking statements" safe harbor under the securities laws in providing forward-looking information to investors.

Foreign Operations

Foreign operations expose AIG to risks that may affect its operations, liquidity and financial conditions. AIG provides insurance and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. A substantial portion of AIG's General Insurance business and a majority of its Life Insurance & Retirement Services businesses are conducted outside the United States. Operations outside of the United States may be affected by regional economic downturns, political upheaval, nationalization and other restrictive government actions, which could also affect other AIG operations.

The degree of regulation and supervision in foreign jurisdictions varies. Generally, AIG, as well as the underwriting companies operating in such jurisdictions, must satisfy local regulatory requirements. Licenses issued by foreign authorities to AIG subsidiaries are subject to modification and revocation. Thus, AIG's insurance subsidiaries could be prevented from

conducting future business in certain of the jurisdictions where they currently operate. AIG's international operations include operations in various developing nations. Both current and future foreign operations could be adversely affected by unfavorable political developments including tax changes, regulatory restrictions and nationalization of AIG's operations without compensation. Adverse affects resulting from any one country may affect AIG's results of operations, liquidity and financial condition depending on the magnitude of the event and AIG's net financial exposure at that time in that country.

Liquidity

Payments from subsidiaries may be limited by regulators. AIG depends on dividends, distributions and other payments from AIG's subsidiaries to fund dividend payments and to fund payments on AIG's obligations, including debt obligations. Regulatory and other legal restrictions may limit AIG's ability to transfer funds freely, either to or from AIG's subsidiaries. In particular, many of AIG's subsidiaries, including AIG's insurance subsidiaries, are subject to laws and regulations that authorize regulatory bodies to block or reduce the flow of funds to the parent holding company, or that prohibit such transfer altogether in certain circumstances. These laws and regulations may hinder AIG's ability to access funds that AIG may need to make payments on AIG's obligations.

Regulation

AIG is subject to extensive regulation in the jurisdictions in which it conducts its businesses. AIG's operations around the world are subject to regulation by different types of regulatory authorities, including insurance, securities, investment advisory, banking and thrift regulators in the United States and abroad. AIG's operations have become more diverse and consumer-oriented, increasing the scope of regulatory supervision and the possibility of intervention. In particular, AIG's consumer lending business is subject to a broad array of laws and regulations governing lending practices and permissible loan terms, and AIG would expect increased regulatory oversight relating to this business.

The regulatory environment could have a significant effect on AIG and its businesses. Among other things, AIG could be fined, prohibited from engaging in some of its business activities or subject to limitations or conditions on its business activities. Significant regulatory action against AIG could have material adverse financial effects, cause significant reputational harm, or harm business prospects. New laws or regulations or changes in the enforcement of existing laws or regulations applicable to clients may also adversely affect AIG and its businesses. See Item 1. Business — "Regulation."

Casualty Insurance Underwriting and Reserves

Casualty insurance liabilities are difficult to predict and may exceed the related reserves for losses and loss expenses.

Although AIG annually reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, D&O, professional liability, medical malpractice, workers compensation, general liability, products liability and related classes, as well as for asbestos and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss trends or loss development factors could be attributable to changes in inflation in labor and material costs or in the judicial environment, or in other social or economic phenomena affecting claims. See "Management's Discussion and Analysis of Financial Condition and Results of Operations — Operating Review — Reserve for Losses and Loss Expenses."

Natural Disasters and Pandemic Diseases

Natural disasters and pandemic disease could adversely affect AIG's operating results. Natural disasters such as hurricanes, earthquakes and other catastrophes have the potential to adversely affect AIG's operating results. Other risks, such as an outbreak of a pandemic disease, such as the Avian Influenza A Virus (H5N1), could adversely affect AIG's business and operating results to an extent that may be only minimally offset by reinsurance programs.

While to date outbreaks of the Avian Flu continue to occur among poultry or wild birds in a number of countries in Asia, parts of Europe, and recently in Africa, transmission to humans has been rare. If the virus mutates to a form that can be transmitted from human to human, it has the potential to spread rapidly worldwide. If such an outbreak were to take place, early quarantine and vaccination could be critical to containment.

Both the contagion and mortality rate of any mutated H5N1 virus that can be transmitted from human to human are highly speculative. AIG continues to monitor the developing facts. A significant global outbreak could have a material adverse effect on AIG's life insurance business operating results and liquidity from increased mortality and morbidity rates.

ITEM 1B.

Unresolved Staff Comments

There are no material unresolved written comments that were received from the SEC staff 180 days or more before the end of AIG's fiscal year relating to AIG's periodic or current reports under the Securities Exchange Act of 1934 (Exchange Act).

ITEM 2.

Properties

AIG and its subsidiaries operate from approximately 2,200 offices in the United States, 8 offices in Canada and numerous offices in approximately 100 foreign countries. The offices in Montgomery, Alabama; Greensboro, North Carolina; Springfield, Illinois; Amarillo, Ft. Worth and Houston, Texas; Wilmington, Delaware; San Juan, Puerto Rico; Tampa, Florida; Livingston, New Jersey; Evansville, Indiana; Nashville, Tennessee; 70 Pine Street, 72 Wall Street and 175 Water Street in New York City; and offices in more than 30 foreign countries and jurisdictions including Bermuda, Chile, Hong Kong, the Philippines, Japan, United Kingdom, Singapore, Switzerland, Taiwan and Thailand are located in buildings owned by AIG and its subsidiaries. The remainder of the office space utilized by AIG subsidiaries is leased.

ITEM 3.

Legal Proceedings

General

AIG and its subsidiaries, in common with the insurance industry in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. See Notes 12(d), 12(g), 12(h) and 12(i) of Notes to Consolidated Financial Statements, as well as the Discussion and Analysis of Consolidated Net Losses and Loss Expense Reserve Development and Management's Discussion and Analysis of Financial Condition and Results of Operations.

2006 Regulatory Settlements

In February 2006, AIG reached a final settlement with the SEC, the United States Department of Justice (DOJ), the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). The settlements resolved outstanding litigation filed by the SEC, NYAG and DOI against AIG and concluded negotiations with these authorities and the DOJ in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. The 2005 financial statements included in this Annual Report on Form 10-K include a fourth quarter after-tax charge of \$1.15 billion recording the settlements.

As part of the settlement with the SEC, the SEC filed a civil complaint, alleging that from 2000 until 2005, AIG materially falsified its financial statements through a variety of transactions and entities in order to strengthen the appearance of its financial results to analysts and investors.

AIG, without admitting or denying the allegations in the SEC complaint, consented to the issuance of a final judgment on February 9, 2006: (a) permanently restraining and enjoining AIG from violating Section 17(a) of the Securities Act of 1933 (Securities Act) and Sections 10(b), 13(a), 13(b)(2) and 13(b)(5) and Rules 10b-5, 12b-20, 13a-1, 13a-13 and 13b2-1 of the Exchange Act; (b) ordering AIG to pay disgorgement in the amount of \$700 million; and (c) ordering AIG to pay a civil penalty in the amount of \$100 million. These amounts have been paid into a fund under the supervision of the SEC to be available to resolve claims asserted in various civil proceedings, including shareholder lawsuits.

In February 2006, AIG and the DOJ entered into a letter agreement. In the letter agreement, the DOJ notified AIG that in its view, AIG, acting through some of its employees, violated federal criminal law in connection with misstatements in periodic financial reports that AIG filed with the SEC between 2000 and 2004 relating to certain transactions. The settlement with the DOJ consists of, among other things, AIG's cooperating with the DOJ in the DOJ's ongoing criminal investigation, accepting responsibility for certain of its actions and those of its employees relating to these transactions and paying \$25 million.

Effective February 9, 2006, AIG entered into agreements with the NYAG and the DOI, settling claims under New York's Martin Act and insurance laws, among other provisions, which were originally brought by the NYAG and the DOI in a civil complaint filed on May 26, 2005. Under the agreements, \$375 million was paid into a fund under the supervision of the NYAG and the DOI to be available principally to pay certain AIG insureds who purchased excess casualty policies through Marsh & McLennan Companies, Inc. or Marsh Inc. In addition, approximately \$343 million will be used to compensate participating state funds in connection with the underpayment of certain workers compensation premium taxes and other assessments. In addition, AIG paid \$100 million as a fine to the State of New York.

As part of these settlements, AIG has agreed to retain for a period of three years an independent consultant who will conduct a review that will include the adequacy of AIG's internal controls over financial reporting and the remediation plan that AIG has implemented as a result of its own internal review.

PNC Settlement

In November 2004, AIG and AIGFP reached a final settlement with the SEC, the Fraud Section of the DOJ and the United States Attorney for the Southern District of Indiana with respect to issues arising from certain structured transactions entered into with Brightpoint, Inc. and The PNC Financial Services Group, Inc. (PNC), the marketing of transactions similar to the PNC transactions and related matters.

As part of the settlement, the SEC filed against AIG a civil complaint, based on the conduct of AIG primarily through AIGFP, alleging violations of certain antifraud provisions of the federal securities laws and for aiding and abetting violations of reporting and record keeping provisions of those

laws. AIG, without admitting or denying the allegations in the SEC complaint, consented to the issuance of a final judgment permanently enjoining it and its employees and related persons from violating certain provisions of the Exchange Act, Exchange Act Rules and the Securities Act, ordering disgorgement of fees it received in the PNC transactions and providing for AIG to establish a transaction review committee to review the appropriateness of certain future transactions and to retain an independent consultant to examine certain transactions entered into between 2000 and 2004 and review the policies and procedures of the transaction review committee. The independent consultant has a broad mandate to review transactions entered into by AIG during this period. The review of the independent consultant is now ongoing and AIG cannot at this time predict the outcome of this review.

The DOJ filed against AIGFP PAGIC Equity Holding Corp. (AIGFP PAGIC), a wholly-owned subsidiary of AIGFP, a criminal complaint alleging that AIGFP PAGIC violated federal securities laws by aiding and abetting securities law violations by PNC, in connection with a transaction entered into in 2001 with PNC that was intended to enable PNC to remove certain assets from its balance sheet.

The settlement with the DOJ consists of separate agreements with AIG and AIGFP and a complaint filed against, and deferred prosecution agreement with, AIGFP PAGIC. Under the terms of the settlement, AIGFP paid a monetary penalty of \$80 million. On January 17, 2006, the court approved an order dismissing the complaint with prejudice. The obligations of AIG, AIGFP and AIGFP PAGIC under the DOJ agreements relate principally to cooperating with the DOJ and other federal agencies in connection with their related investigations.

Investigations of Insurance Practices

Regulators from several states have commenced investigations into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Various parties, including insureds and shareholders, have also asserted putative class action and other claims against AIG or its subsidiaries alleging, among other things, violations of the antitrust and federal securities laws, and AIG expects that additional claims may be made. Pursuant to the settlements with the NYAG and the DOI, \$375 million was paid into a fund under the supervision of the NYAG and the DOI to be available principally to pay certain AIG insureds who purchased excess casualty policies through Marsh Inc. In addition, approximately \$343 million will be used to compensate participating states in connection with the underpayment of certain workers compensation premium taxes and other assessments. It is likely that many of the claims arising from state investigations, as well as claims made by insureds, will be settled using these funds.

Various federal and state regulatory agencies are reviewing certain other transactions and practices of AIG and its subsidiaries in connection with industry-wide and other inquiries. AIG has cooperated, and will continue to cooperate, with all these investigations, including by producing documents and other information in response to the subpoenas.

Pending Litigation

A number of lawsuits have been filed regarding the subject matter of the investigations of insurance brokerage practices, including derivative actions, individual actions and class actions under the federal securities laws, Racketeering Influenced and Corrupt Organizations Act (RICO), Employee Retirement Income Security Act (ERISA) and state common and corporate laws in both federal and state courts, including the federal district court in the United States District Court for the Southern District of New York (Southern District of New York), in the Commonwealth of Massachusetts Superior Court and in the Delaware Chancery Court. All of these actions generally allege that AIG and its subsidiaries violated the law by allegedly concealing a scheme to “rig bids” and “steer” business between insurance companies and insurance brokers.

Since October 19, 2004, AIG or its subsidiaries have been named as a defendant in fifteen complaints that were filed in federal court and two that were originally filed in state court (Massachusetts and Florida) and removed to federal court. These cases generally allege that AIG and its subsidiaries violated federal and various state antitrust laws, as well as federal RICO laws, various state deceptive and unfair practice laws and certain state laws governing fiduciary duties. The alleged basis of these claims is that there was a conspiracy between insurance companies and insurance brokers with regard to the use of contingent commission agreements, bidding practices, and other broker-related conduct concerning coverage in certain sectors of the insurance industry. The Judicial Panel on Multidistrict Litigation entered an order on February 17, 2005, consolidating most of these cases and transferring them to the United States District Court for the District of New Jersey (District of New Jersey). The remainder of these cases have been transferred to the District of New Jersey. On August 15, 2005, the plaintiffs in the multidistrict litigation filed a Corrected First Consolidated Amended Commercial Class Action Complaint, which, in addition to the previously named AIG defendants, names new AIG subsidiaries as defendants. Also on August 15, 2005, AIG and two subsidiaries were named as defendants in a Corrected First Consolidated Amended Employee Benefits Class Action Complaint filed in the District Court of New Jersey, which asserts similar claims with respect to employee benefits insurance and a claim under ERISA on behalf of putative classes of employers and employees. On November 29, 2005, the AIG defendants, along with other insurer defendants and the broker defendants filed motions to dismiss both the Commercial and Employee Benefits Complaints. Plaintiffs have filed a motion for class certification in the consolidated action. In addition, complaints were filed against AIG and several of its subsidiaries in Massachusetts and Florida state courts, which have both been stayed. In the Florida action, the plaintiff has filed a petition for a writ of certiorari with the District Court of Appeals of the State of Florida, Fourth District with respect to the stay order. On February 9, 2006, a complaint against AIG and several of its subsidiaries was filed in Texas state court, making claims similar to those in the federal cases above.

In April and May 2005, amended complaints were filed in the consolidated derivative and securities cases, as well as in one of the ERISA lawsuits, pending in the Southern District of New York adding allegations concerning AIG’s accounting treatment for non-traditional insurance products. In September 2005, a second amended complaint was filed in the consolidated securities cases adding allegations concerning AIG’s First Restatement. Also in September 2005, a new securities action complaint was filed in the Southern District of New York, asserting claims premised on the same allegations made in the consolidated cases. Motions to dismiss have been filed in the securities actions. In September 2005, a consolidated complaint was filed in the ERISA case pending in the Southern District of New York. Motions to dismiss have been filed in that ERISA case. Also in April 2005, new derivative actions were filed in the Delaware Chancery Court, and in July and August 2005, two new derivative actions were filed in the Southern District of New York asserting claims duplicative of the claims made in the consolidated derivative action.

In July 2005, a second amended complaint was filed in the consolidated derivative case in the Southern District of New York, expanding upon accounting-related allegations based upon AIG’s First Restatement and, in August 2005, an amended consolidated complaint was filed. In June 2005, the derivative cases in Delaware were consolidated. AIG’s Board of Directors has appointed a special committee of independent directors to review the matters asserted in the derivative complaints. The courts have approved agreements staying the derivative cases pending in the Southern District of New York and in the Delaware Chancery Court while the special committee of independent directors performs its work. In September 2005, a shareholder filed suit in Delaware Chancery Court seeking documents relating to some of the allegations made in the derivative suits. AIG filed a motion to dismiss in October 2005.

In late 2002, a derivative action was filed in the Delaware Chancery Court in connection with AIG’s transactions with certain entities affiliated with Starr and SICO. In May 2005, the plaintiff filed an amended complaint which adds additional claims premised on allegations relating to insurance brokerage practices and AIG’s non-traditional insurance products. Plaintiffs in that case have agreed to dismiss newly added allegations unrelated to transactions with entities affiliated with Starr and SICO without prejudice to pursuit of these claims in the separate derivative actions described above. On February 16, 2006, the Delaware Chancery Court entered an order dismissing the litigation with prejudice with respect to AIG’s outside directors and dismissing the claims against the remaining AIG defendants without prejudice.

On July 8, 2005, SICO filed a complaint against AIG in the Southern District of New York. The complaint alleges that AIG is in the possession of items, including artwork, which SICO claims it owns, and seeks an order causing AIG to release those items as well as actual, consequential, punitive and exemplary damages. On September 27, 2005, AIG filed its answer to SICO’s complaint denying SICO’s allegations and asserting counter-claims for breach of contract, unjust enrichment, conversion and breach of fiduciary duty relating to

SICO's breach of its commitment to use its AIG shares for the benefit of AIG and its employees. On October 17, 2005, SICO replied to AIG's counter-claims and additionally sought a judgment declaring that SICO is neither a control person nor an affiliate of AIG for the purposes of Schedule 13D under the Exchange Act, and Rule 144 under the Securities Act, respectively. AIG responded to the SICO claims on November 7, 2005.

Effect on AIG

In the opinion of AIG management, AIG's ultimate liability for the unresolved matters referred to above is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

ITEM 4.

Submission of Matters to a Vote of Security Holders

There were no matters submitted to a vote of security holders during the fourth quarter of 2005.

Directors and Executive Officers of the Registrant

Set forth below is information concerning the directors and executive officers of AIG. All directors are elected for one-year terms at the annual meeting of shareholders. All officers serve at the pleasure of the Board of Directors, but subject to the foregoing, are elected to one-year terms.

Except as hereinafter noted, each of the executive officers has, for more than five years, occupied an executive position with AIG or companies that are now its subsidiaries. There are no other arrangements or understandings between any officer and any other person pursuant to which the officer was elected to such position. From January 2000 until joining AIG in May

2004, Mr. Frenkel served as Chairman of Merrill Lynch International, Inc. Between 1991 and 2001, Mr. Frenkel served for two consecutive terms as the Governor of the Bank of Israel. Prior to joining AIG in September 2002, Mr. Bensinger was Executive Vice President and Chief Financial Officer of Combined Specialty Group, Inc. (a division of Aon Corporation) commencing in March 2002, and served as Executive Vice President of Trenwick Group, Ltd. from October 1999 through December 2001. Prior to joining AIG in February 2005, Mr. Winans was a Vice President at Lehman Brothers Equity Research covering property-casualty insurers. Prior to joining Lehman Brothers in June 2003, he held a similar position at Williams Capital, following three years as an equity analyst covering the property-casualty sector at Morgan Stanley and previously at Paine Webber, which he joined in late 1999. From May 1985 until joining AIG, Mr. Roemer was employed by JPMorgan Chase, most recently as Senior Vice President – Internal Audit.

Part II

ITEM 5.

Market for the Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

- (a) AIG's common stock is listed in the U.S. on the New York Stock Exchange, as well as the stock exchanges in London, Paris, Switzerland and Tokyo.

The table below shows the high and low closing sales prices per share of AIG's common stock on the New York Stock Exchange Composite Tape, for each quarter of 2005 and 2004.

	2005		2004	
	High	Low	High	Low
First quarter	\$73.46	\$54.18	\$75.12	\$66.79
Second quarter	58.94	49.91	76.77	69.39
Third quarter	63.73	56.00	72.66	66.48
Fourth quarter	64.40	60.43	68.72	54.70

- (b) In 2005, AIG paid a quarterly dividend of 12.5 cents in March and June and 15.0 cents in September and December for a total cash payment of 55.0 cents per share of common stock. In 2004, AIG paid a quarterly dividend of 6.5 cents in March and June and 7.5 cents in September and December for a total cash payment of 28.0 cents per share of common stock. Subject to the dividend preference of any of AIG's serial preferred stock which may be outstanding, the holders of shares of common stock are entitled to receive such dividends as may be declared by the Board of Directors from funds legally available therefor.

See Note 11(a) of Notes to Financial Consolidated Statements for a discussion of certain restrictions on the payment of dividends to AIG by some of its insurance subsidiaries.

- (c) The approximate number of holders of common stock as of January 31, 2006, based upon the number of record holders, was 56,000.
- (d) The following table summarizes AIG's stock repurchases for the three month period ended December 31, 2005:

Period	Total Number of Shares Purchased(a)(b)	Average Price Paid per Share	Number of Shares as Part of Publicly Announced Plans or Programs	Maximum
				Number of Shares that May Yet Be Purchased Under the Plans or Programs at End of Month(b)
October 1 - 31, 2005	-	\$ -	-	36,542,700
November 1 - 30, 2005	-	-	-	36,542,700
December 1 - 31, 2005	-	-	-	36,542,700
Total	-	\$ -	-	-

- (a) Does not include 76,829 shares delivered or attested to in satisfaction of the exercise price by holders of AIG employee stock options exercised during the three months ended December 31, 2005.
- (b) On July 19, 2002, AIG announced that its Board of Directors had authorized the open market purchase of up to 10 million shares of common stock. On February 13, 2003, AIG announced that the Board had expanded the existing program through the authorization of an additional 50 million shares. The purchase program has no set expiration or termination date.

(a) Represents the sum of General Insurance net premiums earned, Life Insurance & Retirement Services GAAP premiums, net investment income, Financial Services interest, lease and finance charges, Asset Management advisory and management fees and net investment income from guaranteed investment contracts, and realized capital gains (losses).

(b) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For 2005, 2004, 2003, 2002 and 2001, respectively, the amounts included are \$2.01 billion, \$(122) million, \$(1.01) billion, \$220 million and \$56 million.

(c) Includes catastrophe losses of \$3.28 billion in 2005, \$1.16 billion in 2004, \$83 million in 2003, \$61 million in 2002 and World Trade Center losses of \$900 million in 2001.

(d) Assumes conversion of contingently convertible bonds due to the adoption of EITF Issue No. 04-8 "Accounting Issues Related to Certain Features of Contingently Convertible Debt and the Effect on Diluted Earnings per Share."

(e) Dividends have not been restated to reflect dividends paid by AGC which was acquired by AIG on August 29, 2001.

(f) Including that portion of long-term debt maturing in less than one year. See also Note 9 of Notes to Consolidated Financial Statements.

(g) Includes \$2.1 billion and \$2.2 billion for the years ended 2002 and 2001, respectively, of other liabilities connected to the consolidation of the Muni Tender Option Bond Program trusts.

Management's Discussion and Analysis of Financial Condition and Results of Operations

ITEM 7.

Management's Discussion and Analysis of Financial Condition and Results of Operations

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG presents its operations in the way it believes will be most meaningful. Statutory underwriting profit (loss) and combined ratios are

presented in accordance with accounting principles prescribed by insurance regulatory authorities because these are standard measures of performance used in the insurance industry and thus allow more meaningful comparisons with AIG's insurance competitors. AIG has also incorporated into this discussion a number of cross-references to additional information included throughout this Annual Report on Form 10-K to assist readers seeking related information on a particular subject.

Management's Discussion and Analysis of Financial Condition and Results of Operations

Management's Discussion and Analysis of Financial Condition and Results of Operations is designed to provide the reader a narrative with respect to AIG's operations, financial condition and liquidity and certain other significant matters.

Cautionary Statement Regarding Projections and Other Information About Future Events

This Annual Report on Form 10-K and other publicly available documents may include, and AIG's officers and representatives may from time to time make, projections concerning financial information and statements concerning future economic performance and events, plans and objectives relating to management, operations, products and services, and assumptions underlying these projections and statements. These projections and statements are not historical facts but instead represent only AIG's belief regarding future events, many of which, by their nature, are inherently uncertain and outside AIG's control. These projections and statements may address, among other things, the status and potential future outcome of the current regulatory and civil proceedings against AIG and their potential effect on AIG's businesses, financial position, results of operations, cash flows and liquidity, the effect of the credit rating downgrades on AIG's businesses and competitive position, the unwinding and resolving of various relationships between AIG and Starr and SICO and AIG's strategy for growth, product development, market position, financial results and reserves. It is possible that AIG's actual results and financial condition may differ, possibly materially, from the anticipated results and financial condition indicated in these projections and statements. Factors that could cause AIG's actual results to differ, possibly materially, from those in the specific projections and statements are discussed throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations and in "Risk Factors" in Item 1A, Part I of this Annual Report on Form 10-K. AIG is not under any obligation (and expressly disclaims any such obligations) to update or alter any projection or other statement, whether written or oral, that may be made from time to time, whether as a result of new information, future events or otherwise.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Overview of Operations and Business Results

In 2003 and prior years, AIG's operations were conducted by its subsidiaries principally through four operating segments: General Insurance, Life Insurance, Financial Services and Retirement Services & Asset Management. Beginning with the first quarter of 2004, AIG reports Retirement Services results in the same segment as Life Insurance, reflecting the convergence of protective financial and retirement products and AIG's current management of these operations. All financial information herein gives effect to the Restatements described in "The Restatements" under Item 1. Business. Information for years prior to 2005 included herein has been reclassified to show AIG's results of operations and financial position on a comparable basis with the 2005 presentation.

Through these segments, AIG provides insurance and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. This geographic, product and service diversification is one of AIG's major strengths and sets it apart from its competitors. The importance of this diversification was especially evident in 2005, when record catastrophe losses, settlements of legal proceedings and charges for increases in reserves for loss and loss expenses, were more than offset by profitability in other segments and product lines. Although regional economic downturns or political upheaval could negatively affect parts of AIG's operations, AIG believes that its diversification makes it unlikely that regional difficulties would have a material effect on its operating results, financial condition or liquidity.

AIG's subsidiaries serve commercial, institutional and individual customers through an extensive property-casualty and life insurance and retirement services network. In the United States, AIG companies are the largest underwriters of commercial and industrial insurance and one of the largest life insurance and retirement services operations as well. AIG's Financial Services businesses include commercial aircraft and equipment leasing, capital markets operations and consumer finance, both in the United States and abroad. AIG also provides asset management services and offers guaranteed investment contracts (GICs) to institutions and individuals.

A primary goal of AIG in managing its General Insurance operations is to achieve an underwriting profit. To achieve this goal, AIG must be disciplined in its risk selection and premiums must be adequate and terms and conditions appropriate to cover the risk accepted. AIG believes in strict control of expenses.

AIG's 2005 operating performance reflects continuing implementation of various long-term strategies in its various operating segments.

A central focus of AIG operations in recent years is the development and expansion of new distribution channels. In 2005, AIG continued to expand its distribution channels in many Asian countries, which now include banks, credit card companies and television-media home shopping. In late 2003, AIG entered into an agreement with PICC Property and Casualty Company, Limited (PICC), which will enable the marketing of accident and health products throughout China through PICC's branch networks and agency system. AIG

participates in the underwriting results through a reinsurance agreement and also holds a 9.9 percent ownership interest in PICC. Other examples of new distribution channels used both domestically and overseas include banks, affinity groups, direct response and e-commerce.

AIG patiently builds relationships in markets around the world where it sees long-term growth opportunities. For example, the fact that AIG has the only wholly-owned foreign life insurance operations in eight cities in China is the result of relationships developed over nearly 30 years. AIG's more recent expansion of operations into India, Vietnam, Russia and other emerging markets reflect the same growth strategy. Moreover, AIG believes in investing in the economies and infrastructures of these countries and growing with them. When AIG companies enter a new jurisdiction, they typically offer both basic protection and savings products. As the economies evolve, AIG's products evolve with them, to more complex and investment-oriented models.

Growth for AIG may be generated both internally and through acquisitions which both fulfill strategic goals and offer adequate return on investment. In recent years, the acquisitions of AIG Star Life and AIG Edison Life have broadened AIG's penetration of the Japanese market through new distribution channels and will result in operating efficiencies as they are integrated into AIG's previously existing companies operating in Japan.

AIG provides leadership on issues of concern to the global and local economies as well as the insurance and financial services industries. In recent years, efforts to reform the tort system and class action litigation procedures, legislation to deal with the asbestos problem and the renewal of the Terrorism Risk Insurance Act have been key issues, while in prior years trade legislation and Superfund had been issues of concern.

The following table summarizes AIG's revenues, income before income taxes, minority interest and cumulative effect of accounting changes and net income for the twelve months ended December 31, 2005, 2004 and 2003:

Years Ended December 31, (in millions)	2005	2004	2003
Total revenues	\$108,905	\$97,666	\$79,421
Income before income taxes, minority interest and cumulative effect of accounting changes	15,213	14,845	11,907
Net income	\$ 10,477	\$ 9,839	\$ 8,108

Consolidated Results

The 12 percent growth in revenues in 2005 and 23 percent growth in revenues in 2004 were primarily attributable to the growth in net premiums earned from global General Insurance operations as well as growth in both General Insurance and Life Insurance & Retirement Services net investment income and Life Insurance & Retirement Services GAAP premiums. An additional factor was the capital gains realized in 2004 rather than the capital losses realized in 2003.

AIG's income before income taxes, minority interest and cumulative effect of accounting changes increased 2 percent in 2005 when compared to 2004 and 25 percent in 2004 when compared to 2003. Life Insurance & Retirement Services, Financial Services and Asset Management operating income gains accounted for the increase over 2004 and 2003 in both pretax income and net income. Somewhat offsetting these gains in 2005 was the effect of the charges related to regulatory settlements, as described in Item 3. Legal Proceedings.

The following table summarizes the net effect of catastrophe losses for December 31, 2005, 2004 and 2003.

(in millions)	2005	2004	2003
Pretax(*)	\$ 3,280	\$ 1,155	\$ 83
Net of tax and minority interest	2,109	729	53

(*) Includes \$312 million and \$96 million in catastrophe losses from partially owned companies in 2005 and 2004, respectively.

The following table summarizes the operations of each principal segment for the twelve months ended December 31, 2005, 2004 and 2003. See also Note 2 of Notes to Consolidated Financial Statements.

(in millions)	2005	2004	2003
Revenues ^(a) :

Financial Services	4,276	2,180	1,182
Asset Management	2,253	2,125	1,316
Other ^{(h)(i)}	(2,475)	(560)	(1,900)
Total	\$ 15,213	\$14,845	\$11,907

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For 2005, 2004 and 2003, the effect was \$(34) million, \$(27) million and \$49 million, respectively, in operating income for Aircraft Finance and \$2.01 billion, \$(122) million and \$(1.01) billion in revenues and operating income, respectively, for Capital Markets (AIGFP).

(b) Represents the sum of General Insurance net premiums earned, net investment income and realized capital gains (losses).

(c) Represents the sum of Life Insurance & Retirement Services GAAP premiums, net investment income and realized capital gains (losses). Included in realized capital gains (losses) is the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 and the application of FAS 52 of \$(437) million, \$(140) million and \$78 million.

(d) Represents interest, lease and finance charges.

(e) Represents management and advisory fees, and net investment income with respect to GICs.

(f) Represents income before income taxes, minority interest, and cumulative effect of accounting changes.

(g) Catastrophe losses were \$3.28 billion, \$1.16 billion and \$83 million in 2005, 2004 and 2003, respectively.

(h) Represents unallocated corporate expenses and other realized capital gains (losses) and includes the NYAG, DOI, SEC and DOJ settlement costs in 2005.

(i) Includes \$312 million and \$96 million in catastrophe related losses from partially owned companies in 2005 and 2004, respectively, and approximately \$1.6 billion of regulatory settlement charges in 2005.

General Insurance

AIG's General Insurance operations provide property and casualty products and services throughout the world. The decrease in General Insurance operating income in 2005 compared to 2004 was primarily attributable to catastrophe related losses, increases in the reserve for losses and loss expenses and changes in estimates related to the remediation of AIG's material weakness in control over certain balance sheet reconciliations, partially offset by profitable growth in Foreign General's underwriting results and DBG's and Foreign General's net investment income. In addition, realized capital gains increased in 2005 compared to 2004. General Insurance operating income includes \$2.89 billion, \$1.05 billion and \$83 million in catastrophe related losses in 2005, 2004 and 2003, respectively. DBG's operating income included \$197 million of additional losses in 2005 resulting from increased labor and material costs related to the 2004 Florida hurricanes.

Life Insurance & Retirement Services

AIG's Life Insurance & Retirement Services operations provide insurance, financial and investment products throughout the world. Foreign operations provided approximately 59 percent and 61 percent of AIG's Life Insurance & Retirement Services operating income in 2005 and 2004, respectively.

Life Insurance & Retirement Services operating income increased 12 percent in 2005 and 16 percent in 2004 when compared to 2003. Foreign Life Insurance & Retirement Services operating income grew 8 percent in 2005. Realized capital gains included in operating income was \$84 million in 2005 compared to \$372 million in 2004 and \$486 million in 2003. The decline in realized capital gains in 2005 includes the effect of hedging activities that do not qualify for hedge accounting under FAS 133, including the related foreign exchange gains and losses under FAS 52. For 2005, the foreign Life & Retirement Service segment also incurred higher policy benefit costs for contributions to the participating policyholder fund in Singapore, totaling \$137 million related to the settlement of a long disputed local tax issue. The domestic Life Insurance & Retirement Services segment operating income grew by 17 percent in 2005. Realized capital losses included in operating income was \$(302) million in 2005 compared to \$(329) million in 2004 and \$(246) million in 2003. The 2004 results include increased policy benefits of \$178 million associated with the workers compensation arbitration with Superior National. The domestic Life Insurance & Retirement

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Services segment also includes \$12 million and \$5 million in catastrophe related losses in 2005 and 2004, respectively.

Financial Services

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets transactions, consumer finance and insurance premium financing.

Financial Services operating income increased significantly in 2005 compared to 2004 and in 2004 compared to 2003, primarily due to the fluctuation in earnings resulting from not qualifying for hedge accounting treatment under FAS 133. Offsetting this increase in 2004 when compared to 2003 is the effect of ILFC's disposition of approximately \$2 billion in aircraft through securitizations in the third quarter of 2003 and the first quarter of 2004. Fluctuations in revenues and operating income from quarter to quarter are not unusual because of the transaction-oriented nature of Capital Markets operations and the effect of not qualifying for hedge accounting treatment under FAS 133 for hedges on securities available for sale and borrowings. The increase in 2005 when compared to 2004 was partially offset by \$62 million in catastrophe related losses in the Consumer Finance operations in 2005. The charge relating to the PNC settlement, see Item 3. Legal Proceedings, had a significant negative effect on results in 2004. Consumer Finance operations increased revenues and operating income, both domestically and internationally.

Asset Management

AIG's Asset Management operations include institutional and retail asset management and broker dealer services and spread-based investment business from the sale of GICs. These products and services are offered to individuals and institutions, both domestically and overseas.

Asset Management operating income increased 6 percent in 2005 when compared to 2004 as a result of the upturn in worldwide financial markets and a strong global product portfolio; operating income also increased 61 percent in 2004 when compared to 2003 as a result of the same factors.

Capital Resources

At December 31, 2005, AIG had total consolidated shareholders' equity of \$86.32 billion and total consolidated borrowings of \$109.85 billion. At that date, \$99.42 billion of such borrowings were either not guaranteed by AIG or were matched borrowings under obligations of guaranteed investment agreements (GIAs), liabilities connected to trust preferred stock, or matched notes and bonds payable.

During 2005, AIG repurchased in the open market 2,477,100 shares of its common stock.

Liquidity

At December 31, 2005, AIG's consolidated invested assets included \$17.24 billion in cash and short-term investments. Consolidated net cash provided from operating activities in 2005 amounted to \$25.14 billion. AIG believes that its liquid

assets, cash provided by operations and access to short term funding through commercial paper and bank credit facilities will enable it to meet any anticipated cash requirements.

Outlook

From March through June of 2005, the major rating agencies downgraded AIG's ratings in a series of actions. S&P lowered the long-term senior debt and counterparty ratings of AIG from 'AAA' to 'AA' and changed the rating outlook to negative. Moody's lowered AIG's long-term senior debt rating from 'Aaa' to 'Aa2' and changed the outlook to stable. Fitch downgraded the long-term senior debt ratings of AIG from 'AAA' to 'AA' and placed the ratings on Rating Watch Negative.

The agencies also took rating actions on AIG's insurance subsidiaries. S&P and Fitch lowered to 'AA+' the insurance financial strength ratings of most of AIG's insurance companies. Moody's lowered the insurance financial strength ratings generally to either 'Aa1' or 'Aa2'. A.M. Best downgraded the financial strength ratings for most of AIG's insurance subsidiaries from 'A++' to 'A+' and the issuer credit ratings from 'aa+' to 'aa-'. Many of these companies' ratings remain on a negative watch.

In addition, S&P changed the outlook on ILFC's 'AA-' long-term senior debt rating to negative. Moody's affirmed ILFC's long-term and short-term senior debt ratings ('A1'/P-1'). Fitch downgraded ILFC's long-term senior debt rating from 'AA-' to 'A+' and placed the rating on Rating Watch Negative and downgraded ILFC's short-term debt rating from 'F1+' to 'F1'. Fitch also placed the 'A+' long-term senior debt ratings of American General Finance Corporation and American General Finance, Inc. on Rating Watch Negative. S&P and Moody's affirmed the long-term and short-term senior debt ratings of American General Finance Corporation at 'A+'/'A-1' and 'A1'/P-1', respectively.

These debt and financial strength ratings are current opinions of the rating agencies. As such, they may be changed, suspended or withdrawn at any time by the rating agencies as a result of changes in, or unavailability of, information or based on other circumstances. Ratings may also be withdrawn at AIG management's request. This discussion of ratings is not a complete list of ratings of AIG and its subsidiaries. For a discussion of the effect of these ratings downgrades on AIG's businesses, see "Risk Factors — AIG's Credit Ratings" in Item 1A. Risk Factors.

Despite industry price erosion in some classes of general insurance, AIG expects to continue to identify profitable opportunities and build attractive new General Insurance businesses as a result of AIG's broad product line and extensive distribution networks. In December 2005, AIUO received a license from the government of Vietnam to operate a wholly owned general insurance company in Vietnam. This license, the first general insurance license granted by Vietnam to a U.S.-based insurance organization, permits AIG to operate a general insurance company throughout Vietnam. In early 2006, AIG announced plans to acquire a leading general insurance company in Taiwan.

In China, AIG has wholly-owned life insurance operations in eight cities. These operations should benefit from China's rapid rate of economic growth and growing middle class, a segment that is a prime market for life insurance. AIG believes that it may also have opportunities in the future to grow by entering the group insurance business. However, in March 2005 it withdrew its application to serve the group insurance market until certain regulatory issues are resolved. Among the regulatory issues to be addressed is the response to AIG's acknowledgment that certain of its Hong Kong based agents sold life insurance to customers on the Chinese mainland in contravention of applicable regulations.

AIG Edison Life, acquired in August 2003, adds to the current agency force in Japan, and provides alternative distribution channels including banks, financial advisers, and corporate and government employee relationships. In January 2005, AIG Star Life entered into an agreement with the Bank of Tokyo Mitsubishi, one of Japan's largest banks, to market a multi-currency fixed annuity. Through ALICO, AIG Star Life and AIG Edison, AIG has developed a leadership position in the distribution of annuities through banks. AIG is also a leader in the direct marketing of insurance products through sponsors and in the broad market. AIG also expects continued growth in India, Korea and Vietnam.

Domestically, AIG anticipates continued operating growth in 2006 as distribution channels are expanded and new products are introduced. The home service operation has not met business objectives, although its cash flow has been strong, and domestic group life/health continues to be weak. The home service operation is expected to be a slow growth business. AIG American General's current ratings remain equal to or higher than many of its principal competitors. AIG American General competes with a variety of companies based on services and products, in addition to ratings. The recent rating actions appear to be having no negative long term effect on independent producer relationships or customer surrender activity.

In the airline industry, changes in market conditions are not immediately apparent in operating results. Lease rates have firmed considerably, as a result of strong demand spurred by the recovering global commercial aviation market, especially in Asia. Sales have begun to increase, and AIG expects an increasing level of interest from a variety of purchasers. AIG also expects increased contributions to Financial Services revenues and income from its consumer finance operations overseas. However, the downgrades of AIG's credit ratings may adversely affect funding costs for AIG and its subsidiaries and AIGFP's ability to engage in derivative transactions and certain structured products. See "Risk Factors – AIG's Credit Ratings" in Item 1A. Risk Factors.

GICs, which are sold domestically and abroad to both institutions and individuals, are written on an opportunistic basis when market conditions are favorable. In September 2005, AIG launched a \$10 billion matched investment program in the Euromarkets under which AIG debt securities will be issued. AIG also expects to launch a matched investment program in the domestic market which, along with

the Euro program, will become AIG's principal spread-based investment activity. However, the timing of the launch of the domestic program is uncertain. Because AIG's credit spreads in the capital markets have widened following the ratings declines, there may be a reduction in the earnings on new business in AIG's spread based funding businesses.

AIG has many promising growth initiatives underway around the world. Cooperative agreements such as those with PICC and various banks in the U.S., Japan and Korea are expected to expand distribution networks for AIG's products and provide models for future growth.

For a description of the risk factors that may affect these operations and initiatives, see Item 1A. Risk Factors.

Critical Accounting Estimates

AIG considers its most critical accounting estimates those with respect to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts, deferred policy acquisition costs, estimated gross profits for investment-oriented products, fair value determinations for certain Capital Markets assets and liabilities, other-than-temporary declines in the value of investments and flight equipment recoverability. These accounting estimates require the use of assumptions about matters, some of which are highly uncertain at the time of estimation. To the extent actual experience differs from the assumptions used, AIG's results of operations would be directly affected.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG's critical accounting estimates are discussed in detail. The major categories for which assumptions are developed and used to establish each critical accounting estimate are highlighted below.

RESERVES FOR LOSSES AND LOSS EXPENSES (GENERAL INSURANCE):

- *Loss trend factors*: used to establish expected loss ratios for subsequent accident years based on premium rate adequacy and the projected loss ratio with respect to prior accident years.
- *Expected loss ratios for the latest accident year*: in this case, accident year 2005 for the year end 2005 loss reserve analysis. For low-frequency, high-severity classes such as excess casualty and D&O, expected loss ratios generally are utilized for at least the three most recent accident years.
- *Loss development factors*: used to project the reported losses for each accident year to an ultimate amount.

FUTURE POLICY BENEFITS FOR LIFE AND ACCIDENT AND HEALTH CONTRACTS (LIFE INSURANCE & RETIREMENT SERVICES):

- *Interest rates*: which vary by geographical region, year of issuance and products.
- *Mortality, morbidity and surrender rates*: based upon actual experience by geographical region modified to allow for variation in policy form.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

ESTIMATED GROSS PROFITS (LIFE INSURANCE & RETIREMENT SERVICES):

Estimated gross profits to be realized over the estimated duration of the contracts (investment-oriented products) affect the carrying value of deferred policy acquisition costs under FAS 97. Estimated gross profits include investment income and gains and losses on investments less required interest, actual mortality and other expenses.

DEFERRED POLICY ACQUISITION COSTS (LIFE INSURANCE & RETIREMENT SERVICES):

- Recoverability based on current and future expected profitability, which is affected by interest rates, foreign exchange rates, mortality experience, and policy persistency.

DEFERRED POLICY ACQUISITION COSTS (GENERAL INSURANCE):

- Recoverability and eligibility based upon the current terms and profitability of the underlying insurance contracts.

FAIR VALUE DETERMINATIONS OF CERTAIN ASSETS AND LIABILITIES (FINANCIAL SERVICES):

- *Valuation models:* utilizing factors, such as market liquidity and current interest, foreign exchange and volatility rates.
- *Pricing data:* AIG attempts to secure reliable and independent current market price data, such as published exchange rates from external subscription services such as Bloomberg or Reuters or third-party broker quotes for use in its models. When such prices are not available, AIG uses an internal methodology, which includes interpolation and extrapolation from verifiable prices from trades occurring on dates nearest to the dates of the transactions.

OTHER-THAN-TEMPORARY DECLINES IN THE VALUE OF INVESTMENTS:

Securities are considered a candidate for other-than-temporary impairment based upon the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer).
- The occurrence of a discrete credit event resulting in the debtor defaulting or seeking bankruptcy or insolvency protection or voluntary reorganization.
- The probability of non-realization of a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

FLIGHT EQUIPMENT — RECOVERABILITY (FINANCIAL SERVICES)

- *Expected undiscounted future net cash flows:* based upon current lease rates, projected future lease rates and estimated terminal values of each aircraft based on third party information.

Operating Review

General Insurance Operations

AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of property and casualty insurance both domestically and abroad. See "General Insurance Operations" in Item 1. Business for more information relating to General Insurance subsidiaries.

As previously noted, AIG believes it should present and discuss its financial information in a manner most meaningful to its investors. Accordingly, in its General Insurance business, AIG uses certain non-GAAP measures, where AIG has determined these measurements to be useful and meaningful.

A critical discipline of a successful general insurance business is the objective to produce operating income from underwriting exclusive of investment-related income. When underwriting is not profitable, premiums are inadequate to pay for insured losses and underwriting related expenses. In these situations, the addition of general insurance related investment income and realized capital gains may, however, enable a general insurance business to produce operating income. For these reasons, AIG views underwriting profit to be critical in the overall evaluation of performance. Although in and of itself not a GAAP measurement, AIG believes that underwriting profit is a useful and meaningful disclosure. See also the discussion under "Liquidity" herein.

Underwriting profit is measured in two ways: statutory underwriting profit and GAAP underwriting profit.

Statutory underwriting profit is derived by reducing net premiums earned by net losses and loss expenses incurred and net expenses incurred. Statutory accounting generally requires immediate expense recognition and ignores the matching of revenues and expenses as required by GAAP. That is, for statutory purposes, expenses are recognized immediately, not over the same period that the revenues are earned.

GAAP accounting requires the recognition of expenses at the same time revenues are earned, the accounting principle of matching. Therefore, to convert underwriting results to a GAAP basis, acquisition expenses are deferred (deferred policy acquisition costs (DAC)) and amortized over the period the related net premiums written are earned. Accordingly, the statutory underwriting profit has been adjusted as a result of acquisition expenses being deferred as required by GAAP. DAC is reviewed for recoverability, and such review requires management judgment. See also "Critical Accounting Estimates" herein and Notes 1 and 4 of Notes to Consolidated Financial Statements.

AIG, along with most General Insurance companies, uses the loss ratio, the expense ratio and the combined ratio as measures of underwriting performance. The loss ratio is the sum of losses and loss expenses incurred divided by net premiums earned. The expense ratio is statutory underwriting expenses divided by net premiums written. The combined ratio is the sum of the loss ratio and the expense ratio. These ratios are relative measurements that describe, for every \$100 of net premiums earned or written, the cost of losses and statutory expenses, respectively. The combined ratio presents the total

cost per \$100 of premium production. A combined ratio below 100 demonstrates underwriting profit; a combined ratio above 100 demonstrates underwriting loss.

Net premiums written are initially deferred and earned based upon the terms of the underlying policies. The net unearned premium reserve constitutes deferred revenues which are generally earned ratably over the policy period. Thus, the net unearned premium reserve is not fully recognized in income as net premiums earned until the end of the policy period.

The underwriting environment varies from country to country, as does the degree of litigation activity. Regulation, product type and competition have a direct effect on pricing and consequently on profitability as reflected in underwriting profit and statutory general insurance ratios.

General Insurance operating income is comprised of underwriting profit (loss), net investment income and realized capital gains and losses. These components, as well as net premiums written, net premiums earned and statutory ratios for 2005, 2004 and 2003 were as follows:

<i>(in millions, except ratios)</i>	2005	2004	2003

- (b) Includes \$197 million of additional losses incurred resulting from increased labor and material costs related to the 2004 Florida hurricanes.
- (c) The 2005 operating loss for DBG includes \$291 million of expenses related to changes in estimates for uncollectible reinsurance and other premium balances and \$100 million of accrued expenses in connection with certain workers compensation insurance policies written between 1985 and 1996. See Note 12(i) of Notes to Consolidated Financial Statements.
- (d) Includes the fourth quarter 2005 increase in net reserves of approximately \$1.8 billion.
- (e) Includes the results of wholly owned AIU agencies.
- (f) Income statement accounts expressed in non-functional currencies are translated into U.S. dollars using average exchange rates.

General Insurance Results

General Insurance operating income in 2005 decreased after accounting for catastrophe related losses, the fourth quarter increase in reserves and changes in estimates related to remediation of the material weakness in reconciliation of balance sheet accounts. This decrease was partially offset by strong profitable growth in Foreign General's underwriting results and DBG's and Foreign General's net investment income. DBG's underwriting results also included additional losses incurred resulting from increased labor and material costs related to the 2004 Florida hurricanes. General Insurance operating income in 2004 showed positive results, even after accounting for catastrophe losses, the charge for asbestos and environmental exposures and the \$232 million charge reflecting a change in estimate for salvage and subrogation recoveries. Net investment income and the capital gains realized in 2004 rather than the capital losses realized in 2003 also benefited General Insurance results.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

DBG's net premiums written increased modestly in 2005 when compared to 2004, reflecting generally improving renewal retention rates and a modest change in the mix of business towards smaller accounts for which DBG purchases less reinsurance. DBG also continued to expand its relationships with a larger number and broader range of brokers. Recently, DBG has seen improvement in domestic property rates as well as increases in submission activity in the aftermath of the 2005 hurricanes. DBG attributes the increase in submissions to its overall financial strength in comparison to many insurers that experienced significant losses and reductions of surplus as a result of the hurricanes.

The DBG loss ratio increased in 2005 from 2004 principally as a result of adverse loss development, the third and fourth quarter 2005 catastrophe related losses and the \$197 million of additional losses resulting from increased labor and material costs related to the 2004 hurricanes.

The DBG expense ratio increased in 2005 from 2004 principally due to an increase in net commissions resulting from the replacement of certain ceded quota share reinsurance, for which DBG earns a ceding commission, with excess-of-loss reinsurance, which generally does not include a ceding commission. Increases in other underwriting expenses at DBG relate to the changes in estimates noted above, as well as unusually high expenses for Personal Lines. The Foreign General expense ratio increased in 2005 from 2004 principally because consumer lines of business, which have higher acquisition costs, have become more significant.

Transatlantic's net premiums written and net premiums earned for 2005 decreased compared to 2004, principally due to competitive market conditions and increased ceding company retentions in certain classes of business. The great majority of the premium decrease relates to Transatlantic's domestic operations. Operating income decreased principally as a result of the increased level of catastrophe losses.

Personal Lines net premiums written and net premiums earned for 2005 increased when compared to 2004 as a result of strong growth in the Private Client Group and Agency Auto divisions due to increased agent/broker appointments, greater penetration and enhanced product offerings. AIG direct premiums are down slightly from 2004 due to aggressive re-underwriting of the previously acquired GE business and the discontinuation of underwriting homeowners business. Involuntary auto premiums were down in 2005 due to the decline in the assigned risk marketplace. Underwriting profit declined in 2005 as a result of hurricane losses and related expenses, reserve strengthening, an increase in Agency Auto's current accident year physical damage loss ratio, and expenses incurred related to terminating AIG's relationship with The Robert Plan effective December 31, 2005.

Mortgage Guaranty net premiums written were up slightly for 2005 when compared to 2004, reflecting growth in the second liens and international businesses offset by higher ceded premiums. Higher acquisition costs and lower earned premiums from certain single premium product lines resulted in lower underwriting profit in 2005 compared to 2004. UGC continued to achieve expansion of its international business in 2005.

Foreign General Insurance had strong results in 2005. Growth in net premiums written for 2005 was achieved from new business as well as new distribution channels. In Japan, the purchase in February 2005 of the insurance portfolio of the Royal & SunAlliance branch operations opened new distribution channels. In the Far East, personal accident business exhibited strong growth and had excellent results for 2005. Commercial lines in Europe exhibited healthy growth and had positive results for 2005, partially offset by rate decreases in Australia and the United Kingdom. Personal lines operations in Brazil and Latin America continue to exhibit strong growth, which translated into improved underwriting results for 2005. The Lloyd's Ascot syndicate continues to grow; however, insurance losses and reinstatement premium costs relating to the hurricanes caused a significant reduction in 2005 underwriting results. Foreign General Insurance also benefited from a decrease in the fourth quarter of 2005 in net reserves for loss and loss expense for non-asbestos and environmental reserves. Approximately half of the Foreign General Insurance net premiums written is derived from commercial insurance and the remainder from consumer lines.

AIG transacts business in most major foreign currencies. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of General Insurance net premiums written.

	2005
Growth in original currency	2.6%
Foreign exchange effect	0.5
Growth as reported in U.S. dollars	3.1%

AIG's General Insurance results reflect the effects of catastrophe related losses of \$2.89 billion, \$1.05 billion and \$83 million in 2005, 2004 and 2003, respectively. Losses caused by catastrophes can fluctuate widely from year to year, making comparisons of recurring type business more difficult. With respect to catastrophe losses, AIG believes that it has taken appropriate steps, such as careful exposure selection and obtaining reinsurance coverage, to reduce the effect of the magnitude of possible future losses. The occurrence of one or more catastrophic events of unanticipated frequency or severity, such as a terrorist attack, earthquake or hurricane, that causes insured losses, however, could have a material adverse effect on AIG's results of operations, liquidity or financial condition.

General Insurance net investment income grew in 2005 when compared to 2004. AIG is benefiting from strong cash flow, higher interest rates and increased partnership income. Cash flow for Foreign General was lower in 2005 when compared to 2004 due to payments for catastrophe related losses incurred in 2005 and 2004 and for the purchase of the Royal & SunAlliance branch operations. Partnership income was particularly strong for Foreign General due to increases in market valuations of infrastructure fund investments in Africa, Asia, China, Eastern Europe and India. Additionally, net investment income was positively affected by the compounding of previously earned and reinvested net investment income. In

2004, net investment income increased when compared to 2003. See also the discussion under “Liquidity” herein and Note 8 of Notes to Consolidated Financial Statements.

Realized capital gains and losses resulted from the ongoing investment management of the General Insurance portfolios within the overall objectives of the General Insurance operations. See the discussion on “Valuation of Invested Assets” herein.

The contribution of General Insurance operating income to AIG’s consolidated income before income taxes, minority interest and cumulative effect of accounting changes was 15 percent in 2005, compared to 21 percent in 2004 and 38 percent in 2003. The decrease in contribution percentages in both 2005 and 2004 was largely the result of reserve increases and the effects of catastrophe losses.

Reinsurance

AIG is a major purchaser of reinsurance for its General Insurance operations. AIG insures risks globally, and its reinsurance programs must be coordinated in order to provide AIG the level of reinsurance protection that AIG desires. Reinsurance is an important risk management tool to manage transaction and insurance line risk retention at prudent levels set by management. AIG also purchases reinsurance to mitigate its catastrophic exposure. AIG is cognizant of the need to exercise good judgment in the selection and approval of both domestic and foreign companies participating in its reinsurance programs because one or more catastrophe losses could negatively affect AIG’s reinsurers and result in an inability of AIG to collect reinsurance recoverables. AIG’s reinsurance department evaluates catastrophic events and assesses the probability of occurrence and magnitude of catastrophic events through the use of state-of-the-art industry recognized program models among other techniques. AIG supplements these models through continually monitoring the risk exposure of AIG’s worldwide General Insurance operations and adjusting such models accordingly. Although reinsurance arrangements do not relieve AIG from its direct obligations to its insureds, an efficient and effective reinsurance program substantially limits AIG’s exposure to potentially significant losses. With respect to its property business, AIG has either renewed existing coverage or purchased new coverage that, in the opinion of management, is adequate to limit AIG’s exposures.

AIG’s consolidated general reinsurance assets amounted to \$23.59 billion at December 31, 2005 and resulted from AIG’s reinsurance arrangements. Thus, a credit exposure existed at December 31, 2005 with respect to reinsurance recoverable to the extent that any reinsurer may not be able to reimburse AIG under the terms of these reinsurance arrangements. AIG manages its credit risk in its reinsurance relationships by transacting with reinsurers that it considers financially sound, and when necessary AIG holds substantial collateral in the form of funds, securities and/or irrevocable letters of credit. This collateral can be drawn on for amounts that remain unpaid beyond specified time periods on an individual reinsurer basis. At December 31, 2005, approximately 48 percent of the general reinsurance assets were from unauthorized reinsurers. Many of these balances were collateralized, permitting statutory recogni-

tion. Additionally, with the approval of its domiciliary insurance regulators, AIG posted approximately \$1.5 billion of letters of credit issued by several commercial banks in favor of certain Domestic General Insurance companies to permit statutory recognition of balances otherwise uncollateralized at December 31, 2005. The remaining 52 percent of the general reinsurance assets were from authorized reinsurers. The terms authorized and unauthorized pertain to regulatory categories, not creditworthiness. At December 31, 2005, approximately 88 percent of the balances with respect to authorized reinsurers are from reinsurers rated A (excellent) or better, as rated by A.M. Best, or A (strong) or better, as rated by S&P. These ratings are measures of financial strength.

AIG maintains a reserve for estimated unrecoverable reinsurance. While AIG has been largely successful in its previous recovery efforts, at December 31, 2005, AIG had a reserve for unrecoverable reinsurance approximating \$992 million. At that date, AIG had no significant reinsurance recoverables due from any individual reinsurer that was financially troubled (e.g., liquidated, insolvent, in receivership or otherwise subject to formal or informal regulatory restriction).

AIG’s Reinsurance Security Department conducts ongoing detailed assessments of the reinsurance markets and current and potential reinsurers, both foreign and domestic. Such assessments include, but are not limited to, identifying if a reinsurer is appropriately licensed and has sufficient financial capacity, and evaluating the local economic environment in which a foreign reinsurer operates. This department also reviews the nature of the risks ceded and the requirements for credit risk mitigants. For example, in AIG’s treaty reinsurance contracts, AIG includes provisions that frequently require a reinsurer to post collateral when a referenced event occurs. Furthermore, AIG limits its unsecured exposure to reinsurers through the use of credit triggers, which include, but are not limited to, insurer financial strength rating downgrades, policyholder surplus declines at or below a certain predetermined level or a certain predetermined level of a reinsurance recoverable being reached. In addition, AIG’s Credit Risk Committee reviews the credit limits for and concentrations with any one reinsurer.

AIG enters into intercompany reinsurance transactions, primarily through AIRCO, for its General Insurance and Life Insurance operations. AIG enters into these transactions as a sound and prudent business practice in order to maintain underwriting control and spread insurance risk among AIG’s various legal entities. These reinsurance agreements have been approved by the appropriate regulatory authorities. All material intercompany transactions have been eliminated in consolidation. AIG generally obtains letters of credit in order to obtain statutory recognition of these intercompany reinsurance transactions. At December 31, 2005, approximately \$3.6 billion of letters of credit were outstanding to cover intercompany reinsurance transactions with AIRCO or other General Insurance subsidiaries.

At December 31, 2005, the consolidated general reinsurance assets of \$23.59 billion include reinsurance recoverables for paid losses and loss expenses of \$829 million and \$19.69 bil-

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

lion with respect to the ceded reserve for losses and loss expenses, including ceded losses incurred but not reported (IBNR) (ceded reserves) and \$3.07 billion of ceded reserve for unearned premiums. The ceded reserve for losses and loss expenses represent the accumulation of estimates of ultimate ceded losses including provisions for ceded IBNR and loss expenses. The methods used to determine such estimates and to establish the resulting ceded reserves are continually reviewed and updated by management. Any adjustments thereto are reflected in income currently. It is AIG's belief that the ceded reserve for losses and loss expenses at December 31, 2005 were representative of the ultimate losses recoverable. In the future, as the ceded reserves continue to develop to ultimate amounts, the ultimate loss recoverable may be greater or less than the reserves currently ceded.

Reserve for Losses and Loss Expenses

The table below classifies as of December 31, 2005 the components of the General Insurance gross reserve for losses and loss expenses (loss reserves) by major lines of business on a statutory Annual Statement basis*:

<i>(in millions)</i>	
Other liability occurrence	\$18,116
Other liability claims made	12,447
Workers compensation	11,630
Auto liability	6,569
Property	7,217
International	4,939
Reinsurance	2,886
Medical malpractice	2,363
Aircraft	1,844
Products liability	1,937
Commercial multiple peril	1,359
Accident and health	1,678
Fidelity/surety	1,072
Other	3,112
Total	\$77,169

* Presented by lines of business pursuant to statutory reporting requirements as prescribed by the National Association of Insurance Commissioners.

AIG's reserve for losses and loss expenses represents the accumulation of estimates of ultimate losses, including IBNR and loss expenses. The methods used to determine loss reserve estimates and to establish the resulting reserves are continually reviewed and updated by management. Any adjustments resulting therefrom are reflected in operating income currently. Because loss reserve estimates are subject to the outcome of future events, changes in estimates are unavoidable given that loss trends vary and time is often required for changes in trends to be recognized and confirmed. Reserve changes that increase previous estimates of ultimate cost are referred to as unfavorable or adverse development or reserve strengthening. Reserve changes that decrease previous estimates of ultimate cost are referred to as favorable development.

At December 31, 2005, General Insurance net loss reserves were \$57.5 billion, an increase of \$10.22 billion from the prior year-end. The net loss reserve increase includes the fourth

quarter 2005 increase in net reserves of approximately \$1.8 billion, comprised of \$960 million for non-asbestos and environmental exposures, and \$873 million for asbestos and environmental exposures. The increase in non-asbestos and environmental reserves includes an increase of \$1.44 billion for DBG and decreases of \$455 million for Foreign General Insurance and \$29 million for Mortgage Guaranty. The DBG increase of \$1.44 billion is \$140 million greater than the amount previously announced in AIG's press release of February 9, 2006 as a result of an additional change in estimate related to a commuted reinsurance agreement. The aggregate increase in asbestos and environmental reserves includes increases of \$706 million and \$167 million, respectively, for DBG and Foreign General Insurance.

As discussed in more detail below, the fourth quarter 2005 reserve increase was attributable to adverse development primarily related to 2002 and prior accident years, partially offset by favorable development for accident years 2003 through 2005. This reserve action reflects the completion of both the Milliman, Inc. (Milliman) review and AIG's own actuarial studies in the fourth quarter of 2005.

The net loss reserves represent loss reserves reduced by reinsurance recoverables, net of an allowance for unrecoverable reinsurance and applicable discount for future investment income. The table below classifies the components of the General Insurance net loss reserves by business unit as of December 31, 2005.

<i>(in millions)</i>	
DBG ^(a)	\$ 40,782
Personal Lines ^(b)	2,578
Transatlantic	5,690
Mortgage Guaranty	340
Foreign General ^(c)	8,086
Total Net Loss Reserve	\$ 57,476

(a) DBG loss reserves include approximately \$3.77 billion (\$4.26 billion before discount) related to business written by DBG but ceded to AIRCO and reported in AIRCO's statutory filings. DBG loss reserves also include approximately \$407 million related to business included in AIUO's statutory filings.

(b) Personal Lines loss reserves include \$878 million related to business ceded to DBG and reported in DBG's statutory filings.

(c) Foreign General loss reserves include approximately \$2.15 billion related to business reported in DBG's statutory filings.

The DBG net loss reserve of \$40.78 billion is comprised principally of the business of AIG subsidiaries participating in the American Home/National Union pool (11 companies) and the surplus lines pool (Lexington, Starr Excess Liability Insurance Company and Landmark Insurance Company).

Beginning in 1998, DBG ceded a quota share percentage of its other liability occurrence and products liability occurrence business to AIRCO. The quota share percentage ceded was 40 percent in 1998, 65 percent in 1999, 75 percent in 2000 and 2001, 50 percent in 2002 and 2003, 40 percent in 2004 and 35 percent in 2005 and covered all business written in these years for these lines by participants in the American Home/National Union pool. In 1998 the cession reflected only the other liability occurrence business, but in 1999 and

subsequent years included products liability occurrence. AIRCO's loss reserves relating to these quota share cessions from DBG are recorded on a discounted basis. As of year-end 2005, AIRCO carried a discount of approximately \$490 million applicable to the \$4.26 billion in undiscounted reserves it assumed from the American Home/National Union pool via this quota share cession. AIRCO also carries approximately \$440 million in net loss reserves relating to Foreign General insurance business. These reserves are carried on an undiscounted basis.

Beginning in 1997, the Personal Lines division ceded a percentage of all business written by the companies participating in the personal lines pool to the American Home/National Union pool. As noted above, the total reserves carried by participants in the American Home/National Union pool relating to this cession amounted to \$878 million as of year-end 2005.

The companies participating in the American Home/National Union pool have maintained a participation in the business written by AIU for decades. As of year-end 2005, these AIU reserves carried by participants in the American Home/National Union pool amounted to approximately \$2.15 billion. The remaining Foreign General reserves are carried by AIUO, AIRCO, and other smaller AIG subsidiaries domiciled outside the United States. Statutory filings in the U.S. by AIG companies reflect all the business written by U.S. domiciled entities only, and therefore exclude business written by AIUO, AIRCO, and all other internationally domiciled subsidiaries. The total reserves carried at year-end 2005 by AIUO and AIRCO were approximately \$3.72 billion and \$4.21 billion, respectively. AIRCO's \$4.21 billion in total general insurance reserves consist of approximately \$3.77 billion from business assumed from the American Home/National Union pool and an additional \$440 million relating to Foreign General Insurance business.

Discounting of Reserves

At December 31, 2005, AIG's overall General Insurance net loss reserves reflects a loss reserve discount of \$2.11 billion, including tabular and non-tabular calculations. The tabular workers compensation discount is calculated using a 3.5 percent interest rate and the 1979-81 Decennial Mortality Table. The non-tabular workers compensation discount is calculated separately for companies domiciled in New York and Pennsylvania, and follows the statutory regulations for each state. For New York companies, the discount is based on a five percent interest rate and the companies' own payout patterns. For Pennsylvania companies, the statute has specified discount factors for accident years 2001 and prior, which are based on a

six percent interest rate and an industry payout pattern. For accident years 2002 and subsequent, the discount is based on the yield of U.S. Treasury securities ranging from one to twenty years and the company's own payout pattern, with the future expected payment for each year using the interest rate associated with the corresponding Treasury security yield for that time period. The discount is comprised of the following: \$512 million — tabular discount for workers compensation in DBG; \$1.11 billion — non-tabular discount for workers compensation in DBG; and, \$490 million — non-tabular discount for other liability occurrence and products liability occurrence in AIRCO. The total undiscounted workers compensation loss reserve carried by DBG is approximately \$9.5 billion as of year-end 2005. The other liability occurrence and products liability occurrence business in AIRCO that is assumed from DBG is discounted based on the yield of U.S. Treasury securities ranging from one to twenty years and the DBG payout pattern for this business. The undiscounted reserves assumed by AIRCO from DBG totaled approximately \$4.26 billion at December 31, 2005.

Results of 2005 Reserving Process

It is management's belief that the General Insurance net loss reserves are adequate to cover General Insurance net losses and loss expenses as of December 31, 2005. While AIG annually reviews the adequacy of established loss reserves, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's loss reserves as of December 31, 2005. In the opinion of management, such adverse development and resulting increase in reserves is not likely to have a material adverse effect on AIG's consolidated financial position, although it could have a material adverse effect on AIG's consolidated results of operations for an individual reporting period. See "Risk Factors — Casualty Insurance and Underwriting Reserves" in Item 1A. Risk Factors.

As part of the 2005 year-end actuarial loss reserve analysis, AIG expanded its review processes and conducted additional studies. In addition, in August 2005, AIG commissioned Milliman to provide an independent, comprehensive review of the loss reserves of AIG's principal property-casualty insurance operations, including an independent ground up study of AIG's asbestos and environmental exposures. The Milliman review encompassed nearly all of AIG's carried loss reserves, other than those pertaining to the operations of Transatlantic and 21st Century. AIG's management carefully considered the analyses provided by its actuarial staff and by Milliman for each class of business in determining AIG's best estimate of its loss reserves.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

The table below presents the reconciliation of net loss reserves for 2005, 2004 and 2003 as follows:

(in millions)	2005	2004	2003
Net reserve for losses and loss expenses at beginning of year	\$47,254	\$36,228	\$29,347
Foreign exchange effect	(628)	524	580
Acquisition	-	-	391 ^(a)
Losses and loss expenses incurred:			
Current year	28,426	26,793	20,509
Prior years ^(b)	4,665^(c)	3,564 ^(d)	2,363
Losses and loss expenses incurred	33,091	30,357	22,872
Losses and loss expenses paid:			
Current year	7,331	7,692	6,187
Prior years	14,910	12,163	10,775
Losses and loss expenses paid	22,241	19,855	16,962
Net reserve for losses and loss expenses at end of year	\$57,476	\$47,254	\$36,228

(a) Reflects the opening balances with respect to the GE U.S.-based auto and home insurance business acquired in 2003.

(b) Includes accretion of discount of \$(15) million in 2005, including an increase of \$375 million in the discount recorded in 2005; \$377 million in 2004 and \$296 million in 2003. Additionally, includes \$269 million in 2005, \$317 million in 2004 and \$323 million in 2003 for the general reinsurance operations of Transatlantic, and \$197 million of additional losses incurred in 2005 resulting from increased labor and material costs related to the 2004 Florida hurricanes.

(c) Includes fourth quarter charge of \$1.8 billion.

(d) Includes fourth quarter charge of \$850 million attributable to the change in estimate for asbestos and environmental exposures.

For 2005, AIG's overall net loss reserve development from prior accident years was an increase of approximately \$4.67 billion, including approximately \$269 million from the general reinsurance operations of Transatlantic. This \$4.67 billion adverse development in 2005 was comprised of approximately \$8.60 billion for 2002 and prior accident years, partially offset by favorable development for accident years 2003 and 2004 for most lines of business, with the notable exception being D&O. The adverse loss development for 2002 and prior accident years is attributable to approximately \$4.0 billion of development from D&O and related management liability classes of business, excess casualty, and excess workers compensation, and to approximately \$873 million of development from asbestos and environmental claims. The remaining portion of the adverse development for 2002 and prior accident years includes approximately \$520 million related to Transatlantic with the balance spread across many other lines of business.

The largest contributors to the \$4.67 billion net adverse loss development were:

D&O and related management liability classes of business: The adverse development for 2002 and prior accident years totalled approximately \$1.7 billion, principally related to 2002 and prior

accident years. This adverse development resulted from significant loss cost escalation due to a variety of factors, including the following: the increase in frequency and severity of corporate bankruptcies; the increase in frequency of financial statement restatements; the sharp rise in market capitalization of publicly traded companies and the increase in the number of initial public offerings, which led to an unprecedented number of IPO allocation/laddering suits in 2001. In addition, the extensive utilization of multi-year policies during this period limited AIG's ability to respond to emerging trends as rapidly as would otherwise be the case.

AIG has experienced significant adverse loss development since 2002 as a result of these issues. AIG has taken numerous actions in response to this development, including rate increases and policy form and coverage changes to better contain future loss costs in this class of business. AIG's 2005 year-end actuarial reserve analyses for DBG exposures reflected several other noteworthy additional considerations and studies. AIG's claims staff conducted a series of ground-up claim projections covering all open claims for this class of business through accident year 2004. Given the adverse development observed for this class of business in recent years, for year-end 2005 AIG believed its reserves for this class were better estimated by benchmarking the actuarial indications to these claim projections.

Excess Casualty: The adverse development for prior years was approximately \$1.3 billion related to 2001 and prior accident years. This adverse development resulted from significant loss cost increases due to both frequency and severity of claims. The primary drivers of the increasing loss costs were medical inflation, which increased the economic loss component of tort claims; advances in medical care, which extended the life span of severely injured workers; and larger jury verdicts, which increased the value of severe tort claims. An additional factor affecting AIG's excess casualty experience in recent years has been the accelerated exhaustion of underlying primary policies for homebuilders. This has led to increasing construction defect related claim activity on AIG's excess policies. As noted above for D&O, many excess casualty policies were written on a multi-year basis in the late 1990s, which limited AIG's ability to respond to emerging trends as rapidly as would otherwise be the case. AIG responded to these emerging trends by increasing rates and effecting numerous policy form and coverage changes. This led to a significant improvement in experience beginning with accident year 2001. In response to the continuing loss development, AIG increased further the loss development factors for this class of business in its 2005 year-end actuarial reserve analysis. In addition, to more accurately estimate losses for construction defects, a separate review was performed by AIG claims staff for accounts with significant exposure to these claims.

Excess Workers Compensation: The adverse development for prior years was approximately \$1 billion related to 2002 and prior accident years. This adverse development resulted from significant loss cost increases, primarily attributable to rapidly increasing medical inflation and advances in medical care, which increased the cost of covered medical care and extended the life span of severely injured workers. The effect of these factors on excess workers compensation claims experience is leveraged, as frequency is increased by the rising number of claims that reach the excess layers.

In response to the continuing loss development, an additional study was conducted for the 2005 year-end actuarial reserve analysis for DBG pertaining to the selection of loss development factors for this class of business. Claims for excess workers compensation exhibit an exceptionally long tail of loss development, running for decades from the date the loss is incurred. Thus, the adequacy of loss reserves for this class is sensitive to the estimated loss development factors, as such factors may be applied to many years of loss experience. In order to better estimate the tail development for this class, AIG claims staff conducted a claim by claim projection of the expected ultimate paid loss for each open claim for 1998 and prior accident years as these are the primary years that drive the tail factors. The objective of the study was to provide a benchmark against which loss development factors in the tail could be evaluated.

For a discussion of the adverse development in asbestos and environmental exposures, see “Asbestos and Environmental Reserves” below.

The favorable development in 2005 referred to above was principally the result of the following: Most classes of business, with the notable exception of D&O, experienced favorable loss development for accident year 2003, and nearly all classes experienced favorable development for accident year 2004. These accident years are benefiting from the actions AIG has taken in response to the significant improvement in market conditions that occurred beginning in 2001 and that accelerated thereafter. Rates increased sharply for most classes of business, and policy terms and conditions were also improved significantly. In connection with AIG’s 2005 year-end actuarial reserve analysis and after considering the results of the Milliman review, AIG has recognized the improving results to the extent they are credible, evidenced by up to five years of favorable loss experience across many lines of business since the market conditions improved. In addition, AIG has taken this information into consideration in determining the expected loss ratios for the 2005 accident year.

Overview of Loss Reserving Process

The General Insurance loss reserves can generally be categorized into two distinct groups. One group is long-tail casualty lines of business which include excess and umbrella liability, D&O, professional liability, medical malpractice, workers compensation, general liability, products liability, and related classes. The other group is short-tail lines of business consisting principally of property lines, personal lines and certain classes of casualty lines.

Short-Tail Reserves

For operations writing short-tail coverages, such as property coverages, the process of recording quarterly loss reserve changes is geared toward maintaining an appropriate reserve level for the outstanding exposure, rather than determining an expected loss ratio for current business. For example, the IBNR reserve required for a class of property business might be expected to approximate 20 percent of the latest year’s earned premiums, and this level of reserve would generally be maintained regardless of the loss ratio emerging in the current quarter. The 20 percent factor is adjusted to reflect changes in rate levels, loss reporting patterns, known exposures to large

unreported losses, or other factors affecting the particular class of business.

Long-Tail Reserves

Estimation of ultimate net losses and loss expenses (net losses) for long-tail casualty lines of business is a complex process and depends on a number of factors, including the line and volume of the business involved. Experience in the more recent accident years of long-tail casualty lines shows limited statistical credibility in reported net losses because a relatively low proportion of net losses would be reported claims and expenses and an even smaller proportion would be net losses paid. Therefore, IBNR would constitute a relatively high proportion of net losses.

AIG’s carried net long-tail loss reserves are tested using loss trend factors that AIG considers most appropriate for each class of business. A variety of actuarial methods and assumptions is normally employed to estimate net losses for long-tail casualty lines. These methods ordinarily involve the use of loss trend factors intended to reflect the estimated annual growth in loss costs from one accident year to the next. For the majority of long-tail casualty lines, net loss trend factors approximated five percent. Loss trend factors reflect many items including changes in claims handling, exposure and policy forms; current and future estimates of monetary inflation and social inflation and increases in litigation and awards. These factors are periodically reviewed and subsequently adjusted, as appropriate, to reflect emerging trends which are based upon past loss experience. Thus, many factors are implicitly considered in estimating the year to year growth in loss costs recognized.

A number of actuarial assumptions are made in the review of reserves for each line of business. For longer tail lines of business, actuarial assumptions generally are made with respect to the following:

- Loss trend factors which are used to establish expected loss ratios for subsequent accident years based on the projected loss ratio for prior accident years.
- Expected loss ratios for the latest accident year (*i.e.*, accident year 2005 for the year end 2005 loss reserve analysis) and, in some cases, for accident years prior to the latest accident year. The expected loss ratio generally reflects the projected loss ratio from prior accident years, adjusted for the loss trend (see above) and the effect of rate changes and other quantifiable factors. For low-frequency, high-severity classes such as excess casualty and D&O, expected loss ratios generally are utilized for at least the three most recent accident years.
- Loss development factors which are used to project the reported losses for each accident year to an ultimate basis.

AIG records quarterly changes in loss reserves for each of its many General Insurance profit centers. The overall change in AIG’s loss reserves is based on the sum of these profit center level changes. For most profit centers which write longer tail classes of casualty coverage, the process of recording quarterly loss reserve changes involves determining the estimated current loss ratio for each class of coverage. This loss ratio is multiplied by the current quarter’s net earned premium for that

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

class of coverage to determine the quarter's total estimated net incurred loss and loss expense. The change in loss reserves for the quarter for each class is thus the difference between the net incurred loss and loss expense, estimated as described above, and the net paid losses and loss expenses in the quarter.

Details of the Loss Reserving Process

The process of determining the current loss ratio for each class or business segment is based on a variety of factors. These include, but are not limited to, the following considerations: prior accident year and policy year loss ratios; actual and anticipated rate changes; actual and anticipated changes in coverage, reinsurance, or mix of business; actual and anticipated changes in external factors affecting results, such as trends in loss costs or in the legal and claims environment. Each profit center's current loss ratio reflects input from actuarial, profit center and claims staff and is intended to represent management's best estimate of the current loss ratio after reflecting all of the factors described above. At the close of each quarter, the assumptions underlying the loss ratios are reviewed to determine if the loss ratios based thereon remain appropriate. This process includes a review of the actual claims experience in the quarter, actual rate changes achieved, actual changes in coverage, reinsurance or mix of business, and changes in certain other factors that may affect the loss ratio. When this review suggests that the initially determined loss ratio is no longer appropriate, the loss ratio for current business would be changed to reflect the revised assumptions.

A comprehensive annual loss reserve review is conducted in the fourth quarter of each year for each AIG General Insurance subsidiary. These reviews are conducted in full detail for each class or line of business for each subsidiary, and thus consist of literally hundreds of individual analyses. The purpose of these reviews is to confirm the appropriateness of the reserves carried by each of the individual subsidiaries, and thereby of AIG's overall carried reserves. The reserve analysis for each business class is performed by the actuarial personnel who are most familiar with that class of business. In completing these detailed actuarial reserve analyses, the actuaries are required to make numerous assumptions, including for example the selection of loss development factors and loss cost trend factors. They are also required to determine and select the most appropriate actuarial method(s) to employ for each business class. Additionally, they must determine the appropriate segmentation of data or segments from which the adequacy of the reserves can be most accurately tested. In the course of these detailed reserve reviews for each business segment, a point estimate of the loss reserve is generally determined. The sum of these point estimates for each of the individual business classes for each subsidiary provides an overall actuarial point estimate of the loss reserve for that subsidiary. The ultimate process by which the actual carried reserves are determined considers not only the actuarial point estimate but a myriad of other factors. Other crucial internal and external factors considered include a qualitative assessment of inflation and other economic conditions in the United States and abroad, changes in the legal, regulatory, judicial and social environments, underlying policy pricing, terms and conditions, and

claims handling. Loss reserve development can also be affected by commutations of assumed and ceded reinsurance agreements.

AIG's annual loss reserve review does not calculate a range of loss reserve estimates. Because a large portion of the loss reserves from AIG's General Insurance business relates to long-tail casualty lines driven by severity rather than frequency of claims, such as excess casualty and D&O, developing a range around loss reserve estimates would not be meaningful. An estimate is calculated which AIG's actuaries believe provides a reasonable estimate of the required reserve. This amount is then evaluated against actual carried reserves.

Volatility of Reserve Estimates and Sensitivity Analyses

There is potential for significant variation in the development of loss reserves, particularly for long-tail casualty classes of business such as excess casualty, when actual costs differ from the assumptions used to test the reserves. Such assumptions include those made for loss trend factors and loss development factors, as described earlier. Set forth below is a sensitivity analysis demonstrating the estimated effect on the loss reserve position of alternative loss trend or loss development factor assumptions as compared to those actually used to test the carried reserves.

For the excess casualty class of business the assumed loss cost trend was approximately six percent. A five percent change in the assumed loss cost trend from each accident year to the next would cause approximately a \$600 million change (either positively or negatively) to the net loss and loss expense reserve for this business. For the D&O and related management liability classes of business the assumed loss cost trend was four percent. A five percent change in this assumed loss cost trend would cause approximately a \$300 million change (either positively or negatively) to the net loss and loss expense reserve for such business. The effect of the loss trend assumption for the D&O class decreased in 2005 as a result of AIG's change in methodology, as described above, whereby claim projections through accident year 2004 are utilized as a benchmark for the actuarial indications. For the excess workers compensation class of business, loss costs were trended at six percent per annum. A five percent change in the assumed loss cost trend would cause approximately a \$250 million change (either positively or negatively) to the loss and loss expense reserve for this class. Actual loss cost trends in the early 1990's were negative for these classes, whereas in the late 1990's loss costs trends ran well into the double digits for each of these three classes. The sharp increase in loss costs in the late 1990's was thus much greater than the five percent changes cited above, and caused significant increases in the overall loss reserve needs for these classes. While changes in the loss cost trend assumptions can have a significant effect on the reserve needs for other smaller classes of liability business, the potential effect of these changes on AIG's overall carried reserves would be much less than for the classes noted above.

For the excess casualty class, if future loss development factors differed by five percent from those utilized in the year-end 2005 loss reserve review, there would be approximately a

\$400 million change (either positively or negatively) to the overall AIG loss reserve position. The comparable effect on the D&O and related management liability classes would be approximately \$200 million (either positively or negatively) if future loss development factors differed by five percent from those utilized in the year-end 2005 loss reserve review. For the excess workers compensation class, the effect would be approximately \$150 million (either positively or negatively). For workers compensation reserves, other than excess workers compensation reserves, the effect of a five percent deviation from the loss development factors utilized in the year-end 2005 reserve reviews would be approximately \$1.0 billion (either positively or negatively). Because loss development factors for this class have shown less volatility than higher severity classes such as excess casualty, however, actual changes in loss development factors are expected to be less than five percent. There is some degree of volatility in loss development patterns for other longer tail liability classes as well. However, the potential effect on AIG's reserves would be much less than for the classes cited above.

The calculations of the effect of the five percent change in loss development factors are made by selecting the stage of accident year development where it is believed reasonable for such a deviation to occur. For example, for workers compensation, the \$1.0 billion amount is calculated by assuming that each of the most recent eight accident years develop five percent higher than estimated by the current loss development factors utilized in the reserve study, *i.e.* the factor 1.05 is multiplied by the incurred losses (including IBNR and loss expenses) for these accident years.

AIG management believes that using a five percent change in the assumptions for loss cost trends and loss development factors provides a reasonable benchmark for a sensitivity analysis of the reserves of AIG's most significant lines of general insurance business. For excess casualty business, both the loss cost trend and the loss development factor assumptions are critical. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, as excess casualty is a long-tail class of business, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for the reserves with respect to a number of accident years to be significantly affected by changes in the loss cost trends or loss development factors that were initially relied upon in setting the reserves. These changes in loss trends or loss development factors could be attributable to changes in inflation or in the judicial environment, or in other social or economic phenomena affecting claims. For example, during the lengthy periods during which losses develop for excess casualty, actual changes in loss costs from one accident year to the next have ranged from negative values to double-digit amounts. Thus, there is the potential for significant volatility in loss costs for excess casualty and, although five percent is considered a reasonable benchmark for

sensitivity analysis for this business, there is the potential for variations far greater than this amount (either positively or negatively). Likewise, in the judgment of AIG's actuaries, five percent is considered an appropriate benchmark for sensitivity analysis with respect to the loss development factor assumptions used to test the reserves.

For D&O and related management liability classes of business, the loss cost trend assumption has been critical in past analyses, however, because of the utilization of claim projections for all claims through accident year 2004, as described above, the sensitivity of the reserves to this assumption has been reduced in 2005. The loss development factor assumption is important but less critical than for excess casualty. As this coverage is written on a claims-made basis, claims for a given accident year are all reported within that year. Actual changes in loss costs from one accident year to the next in the 1990s ranged from double digit negative values for several accident years in the early 1990s to nearly 50 percent per year for the period from accident year 1996 to accident year 1999. Thus, there is the potential for extreme volatility in loss costs for this business and, although five percent is considered a reasonable benchmark for sensitivity analysis, there is the potential for variations far greater than this amount (either positively or negatively). Five percent is also considered an appropriate benchmark for sensitivity analysis with respect to the loss development factor assumptions used to test the reserves for these classes. However, as noted above, the effect of such a deviation is less than that of a similar deviation in loss cost trends. For the excess workers compensation class, the loss development factor assumptions are critical and the loss trend assumption is important but not as critical. Excess workers compensation is an extremely long tail class of business, hence there is a much greater than normal uncertainty as to the appropriate loss development factors for the tail of the loss development. As noted above, the effect of a five percent change in the loss development factor is approximately \$150 million. It would not be uncommon for the loss development factors to deviate by greater than five percent for this class of business.

For workers compensation, the loss development factor assumptions are important. Generally, AIG's actual historical workers compensation loss development would be expected to provide a reasonably accurate predictor of future loss development. A five percent sensitivity indicator for workers compensation would thus be considered to be toward the high end of potential deviations for this class of business. The loss cost trend assumption for workers compensation is not believed to be material with respect to AIG's loss reserves. This is primarily because AIG's actuaries are generally able to use loss development projections for all but the most recent accident year's reserves, so there is limited need to rely on loss cost trend assumptions for workers compensation business.

For casualty business other than the classes noted above, there is generally some potential for deviation in both the loss cost trend and loss development factor selections. However, the effect of such deviations would not be material when compared to the effect on the classes cited above.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Asbestos and Environmental Reserves

The estimation of loss reserves relating to asbestos and environmental claims on insurance policies written many years ago is subject to greater uncertainty than other types of claims due to inconsistent court decisions as well as judicial interpretations and legislative actions that in some cases have tended to broaden coverage beyond the original intent of such policies and in others have expanded theories of liability. The insurance industry as a whole is engaged in extensive litigation over these coverage and liability issues and is thus confronted with a continuing uncertainty in its efforts to quantify these exposures.

AIG continues to receive claims asserting injuries and damages from toxic waste, hazardous substances, and other environmental pollutants and alleged claims to cover the cleanup costs of hazardous waste dump sites, referred to collectively as environmental claims, and indemnity claims asserting injuries from asbestos.

The vast majority of these asbestos and environmental claims emanate from policies written in 1984 and prior years. Commencing in 1985, standard policies contained an absolute exclusion for pollution related damage and an absolute asbestos exclusion was also implemented. However, AIG currently underwrites environmental impairment liability insurance on a claims-made basis and has excluded such claims from the analysis herein.

The majority of AIG's exposures for asbestos and environmental claims are excess casualty coverages, not primary coverages. Thus, the litigation costs are treated in the same manner as indemnity amounts. That is, litigation expenses are included within the limits of the liability AIG incurs. Individual significant claim liabilities, where future litigation costs are reasonably determinable, are established on a case basis.

Estimation of asbestos and environmental claims loss reserves is a subjective process and reserves for asbestos and environmental claims cannot be estimated using conventional reserving techniques such as those that rely on historical accident year loss development factors.

Significant factors which affect the trends that influence the asbestos and environmental claims estimation process are the inconsistent court resolutions and judicial interpretations which broaden the intent of the policies and scope of coverage. The current case law can be characterized as still evolving, and there is little likelihood that any firm direction will develop in the near future. Additionally, the exposures for cleanup costs of hazardous waste dump sites involve issues such as allocation of responsibility among potentially responsible parties and the government's refusal to release parties.

Due to this uncertainty, it is not possible to determine the future development of asbestos and environmental claims with the same degree of reliability as with other types of claims. Such future development will be affected by the extent to which courts continue to expand the intent of the policies and the scope of the coverage, as they have in the past, as well as by the changes in Superfund and waste dump site coverage and liability issues. If the asbestos and environmental reserves

develop deficiently, such deficiency would have an adverse effect on AIG's future results of operations. AIG does not discount asbestos and environmental reserves.

With respect to known asbestos and environmental claims, AIG established over a decade ago specialized toxic tort and environmental claims units, which investigate and adjust all such asbestos and environmental claims. These units evaluate these asbestos and environmental claims utilizing a claim-by-claim approach that involves a detailed review of individual policy terms and exposures. Because each policyholder presents different liability and coverage issues, AIG generally evaluates exposure on a policy-by-policy basis, considering a variety of factors such as known facts, current law, jurisdiction, policy language and other factors that are unique to each policy. Quantitative techniques have to be supplemented by subjective considerations including management judgment. Each claim is reviewed at least semi-annually utilizing the aforementioned approach and adjusted as necessary to reflect the current information.

In both the specialized and dedicated asbestos and environmental claims units, AIG actively manages and pursues early resolution with respect to these claims in an attempt to mitigate its exposure to the unpredictable development of these claims. AIG attempts to mitigate its known long-tail environmental exposures by utilizing a combination of proactive claim-resolution techniques including policy buybacks, complete environmental releases, compromise settlements, and, where indicated, litigation.

With respect to asbestos claims handling, AIG's specialized claims staff operates to mitigate losses through proactive handling, supervision and resolution of asbestos cases. Thus, while AIG has resolved all claims with respect to miners and major manufacturers (Tier One), its claims staff continues to operate under the same proactive philosophy to resolve claims involving accounts with products containing asbestos (Tier Two), products containing small amounts of asbestos, companies in the distribution process, and parties with remote, ill defined involvement in asbestos (Tiers Three and Four). Through its commitment to appropriate staffing, training, and management oversight of asbestos cases, AIG mitigates to the extent possible its exposure to these claims.

To determine the appropriate loss reserve as of December 31, 2005 for its asbestos and environmental exposures, AIG performed a series of top-down and ground-up reserve analyses. In order to ensure it had the most comprehensive analysis possible, AIG engaged Milliman to provide an analysis of these exposures including ground-up estimates for both asbestos reserves and environmental reserves. Prior to 2005, AIG's reserve analyses for asbestos and environmental exposures was focused around a report year projection of aggregate losses for both asbestos and environmental reserves. Additional tests such as market share analyses were also performed. Ground-up analyses such as those provided by Milliman take into account policyholder-specific and claim-specific information that has been gathered over many years from a variety of sources. Ground-up studies can thus more accurately assess the exposure to AIG's layers of coverage for each policyholder, and hence

for all policyholders in the aggregate provided a sufficient sample of the policyholders can be modeled in this manner.

In order to ensure its ground-up analysis was as comprehensive as possible, AIG staff produced the information required at policy and claim level detail for nearly 1,000 asbestos defendants and over 1,100 environmental defendants. This represented nearly 90 percent of all accounts for which AIG had received any claim notice of any amount pertaining to asbestos or environmental exposure. AIG did not set any minimum thresholds such as amount of case reserve outstanding, or paid losses to date, that would have served to reduce the sample size and hence the comprehensiveness of the ground-up analysis. The results of the ground-up analysis for each significant account were examined by AIG's claims staff for reasonableness, for consistency with policy coverage terms, and any claim settlement terms applicable. Adjustments were incorporated accordingly. The results from the universe of modeled accounts, which as noted above reflects the vast majority of AIG's known exposures, were then utilized to estimate the ultimate losses from accounts that could not be modeled and to determine the appropriate provision for all unreported claims.

AIG conducted a comprehensive analysis of reinsurance recoverability to establish the appropriate asbestos and environmental reserve net of reinsurance. AIG determined the amount of reinsurance that would be ceded to insolvent reinsurers or to commuted reinsurance contracts for both reported claims and for IBNR. These amounts were then deducted from the indicated amount of reinsurance recoverable.

AIG also completed a top-down report year projection of its indicated asbestos and environmental loss reserves. These projections consist of a series of tests performed separately for asbestos and for environmental exposures.

For asbestos, these tests project the expected losses to be reported over the next twenty years, i.e., from 2006 through 2025, based on the actual losses reported through 2005 and the expected future loss emergence for these claims. Three scenarios were tested, with a series of assumptions ranging from more optimistic to more conservative. In the first scenario, all carried asbestos case reserves are assumed to be within ten percent of their ultimate settlement value. The second scenario relies on an actuarial projection of report year development for asbestos claims reported from 1993 to the present to estimate case reserve adequacy as of year-end 2005. The third scenario relies on an actuarial projection of report year claims for asbestos but reflects claims reported from 1989 to the present to estimate case reserve adequacy as of year-end 2005. Based on the results of the prior report years for each of the three scenarios described above, the report year approach then

projects forward to the year 2025 the expected future report year losses, based on AIG's estimate of reasonable loss trend assumptions. These calculations are performed on losses gross of reinsurance. The IBNR (including a provision for development of reported claims) on a net basis is based on applying a factor reflecting the expected ratio of net losses to gross losses for future loss emergence.

For environmental claims, an analogous series of frequency/severity tests are produced. Environmental claims from future report years, (i.e., IBNR) are projected out ten years, i.e., through the year 2015.

At year-end 2005, AIG considered a number of factors and recent experience, in addition to the results of the respective top-down and ground-up analyses performed for asbestos and environmental reserves. Among the factors considered by AIG was the continued deterioration in its asbestos report year experience. The indication from the third scenario as described above for asbestos was approximately \$265 million greater than AIG's carried net asbestos reserve, prior to its increase in the fourth quarter of 2005. This marks a continuation of the trend of adverse report year development for asbestos that has been observed for the past several years. AIG also noted its asbestos paid losses in 2005 increased from 2004's levels. AIG considered the significant uncertainty that remains as to AIG's ultimate liability relating to asbestos and environmental claims. This uncertainty is due to several factors including:

- The long latency period between asbestos exposure and disease manifestation and the resulting potential for involvement of multiple policy periods for individual claims;
- The increase in the volume of claims by currently unimpaired plaintiffs;
- Claims filed under the non-aggregate premises or operations section of general liability policies;
- The number of insureds seeking bankruptcy protection and the effect of prepackaged bankruptcies;
- Diverging legal interpretations; and
- With respect to environmental claims, the difficulty in estimating the allocation of remediation cost among various parties.

After carefully considering the results of the ground-up analysis, which AIG now plans to update on an annual basis, as well as all of the above factors including the recent report year experience, AIG determined its best estimate was to recognize an increase of \$843 million in its carried net asbestos reserves, and an increase of \$30 million in its carried net environmental reserves at December 31, 2005. The corresponding increases in gross reserves were approximately \$1.97 billion for asbestos and \$56 million for environmental.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

A summary of reserve activity, including estimates for applicable IBNR, relating to asbestos and environmental claims separately and combined at December 31, 2005, 2004 and 2003 follows:

(in millions)	2005		2004		2003	
	Gross	Net	Gross	Net	Gross	Net
Asbestos:						
Reserve for losses and loss expenses at beginning of year	\$2,559	\$1,060	\$1,235	\$ 386	\$1,304	\$ 400
Losses and loss expenses incurred*	2,207 ^(a)	903 ^(a)	1,595 ^(a)	772 ^(a)	175	43
Losses and loss expenses paid*	(325)	(123)	(271)	(98)	(244)	(57)
Reserve for losses and loss expenses at end of year	\$4,441	\$1,840	\$2,559	\$1,060	\$1,235	\$ 386
Environmental:						
Reserve for losses and loss expenses at beginning of year	\$ 974	\$ 451	\$ 789	\$ 283	\$ 832	\$ 296
Losses and loss expenses incurred*	47 ^(b)	27 ^(b)	314 ^(b)	234 ^(b)	133	52

Reserve for losses and loss expenses at end of year	\$ 926	\$ 410	\$ 974	\$ 451	\$ 789	\$ 283
Combined:						
Reserve for losses and loss expenses at beginning of year	\$3,533	\$1,511	\$2,024	\$ 669	\$2,136	\$ 696
Losses and loss expenses incurred*	2,254 ^(c)	930 ^(c)	1,909 ^(c)	1,006 ^(c)	308	95
Losses and loss expenses paid*	(420)	(191)	(400)	(164)	(420)	(122)
Reserve for losses and loss expenses at end of year	\$5,367	\$2,250	\$3,533	\$1,511	\$2,024	\$ 669

* All amounts pertain to policies underwritten in prior years.

(a) Includes increases to gross losses and loss expense reserves of \$2.0 billion and \$1.2 billion in the fourth quarter of 2005 and 2004, respectively, and increases to net losses and loss expense reserves of \$843 million and \$650 million for the fourth quarter of 2005 and 2004, respectively.

(b) Includes increases to gross losses and loss expense reserves of \$56 million and \$250 million in the fourth quarter of 2005 and 2004, respectively, and increases to net losses and loss expense reserves of \$30 million and \$200 million for the fourth quarter of 2005 and 2004, respectively.

(c) Includes increases to gross losses and loss expense reserves of \$2.0 billion and \$1.5 billion in the fourth quarter of 2005 and 2004, respectively, and increases to net losses and loss expense reserves of \$873 million and \$850 million for the fourth quarter of 2005 and 2004, respectively.

The gross and net IBNR included in the reserve for losses and loss expenses, relating to asbestos and environmental claims separately and combined, at December 31, 2005, 2004 and 2003 were estimated as follows:

(in millions)	2005		2004		2003	
	Gross	Net	Gross	Net	Gross	Net
Asbestos	\$3,401	\$1,465	\$2,033	\$ 876	\$ 695	\$200
Environmental	586	266	606	284	347	80
Combined	\$3,987	\$1,731	\$2,639	\$1,160	\$1,042	\$280

A summary of asbestos and environmental claims count activity for the years ended December 31, 2005, 2004 and 2003 was as follows:

	2005			2004			2003		
	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined
Claims at beginning of year	7,575	8,216	15,791	7,474	8,852	16,326	7,085	8,995	16,080
Claims during year:									
Opened	854	5,253*	6,107	909	2,592	3,501	669	2,106	2,775
Settled	(67)	(219)	(286)	(100)	(279)	(379)	(86)	(244)	(330)
Dismissed or otherwise resolved	(1,069)	(3,377)	(4,446)	(708)	(2,949)	(3,657)	(194)	(2,005)	(2,199)
Claims at end of year	7,293	9,873	17,166	7,575	8,216	15,791	7,474	8,852	16,326

* The opened claims count increased substantially during 2005 because a court ruling led AIG to report separate opened claims for previously pending cases relating to alleged MTBE exposures that AIG previously had counted in the aggregate as only a single claim on the assumption that the cases would be consolidated into a single federal court proceeding.

The table below presents AIG's survival ratios for asbestos and environmental claims for year end 2005, 2004 and 2003. The survival ratio is derived by dividing the year end carried loss reserve by the average payments for the three most recent calendar years for these claims. Therefore the survival ratio is a simplistic measure estimating the number of years it would be

before the current ending loss reserves for these claims would be paid off using recent year average payments. Many factors, such as aggressive settlement procedures, mix of business and level of coverage provided, have a significant effect on the amount of asbestos and environmental reserves and payments and the resultant survival ratio. Thus, caution should be

exercised in attempting to determine reserve adequacy for these claims based simply on this survival ratio.

AIG's survival ratios for asbestos and environmental claims, separately and combined were based upon a three-year average payment. These ratios for the years ended December 31, 2005, 2004 and 2003 were as follows:

	Gross	Net
2005		
Survival ratios:		
Asbestos	15.9	19.8
Environmental	6.9	6.2
Combined	13.0	14.2
2004		
Survival ratios:		
Asbestos	10.7	13.5
Environmental	6.5	6.8
Combined	9.1	10.5
2003		
Survival ratios:		
Asbestos	4.7	4.5
Environmental	4.7	4.1
Combined	4.7	4.3

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad. Insurance-oriented products consist of individual and group life, payout annuities, endowment and accident and health policies. Retirement savings products consist generally of fixed and variable annuities. See also Note 2 of Notes to Consolidated Financial Statements.

Domestically, AIG's Life Insurance & Retirement Services operations offer a broad range of protection products, including life insurance, group life and health products, including disability income products and payout annuities, which include single premium immediate annuities, structured settlements and terminal funding annuities. Home service operations include an array of life insurance, accident and health and annuity products sold through career agents. In addition, home service includes a small block of run-off property and casualty coverage. Retirement services include group retirement products, individual fixed and variable annuities sold through banks, broker dealers and exclusive sales representatives, and annuity runoff operations which include previously-acquired "closed blocks" and other fixed and variable annuities largely sold through distribution relationships that have been discontinued.

Overseas, AIG's Life Insurance & Retirement Services operations include insurance and investment-oriented products such as whole and term life, investment linked, universal life and endowments, personal accident and health products, group products including pension, life and health, and fixed and variable annuities.

Life Insurance & Retirement Services operations presented on a major product basis for 2005, 2004 and 2003 were as follows:

(a) Adjusted to conform to 2005 presentation.

(b) Includes structured settlements, single premium immediate annuities and terminal funding annuities.

(c) Primarily represents runoff annuity business sold through discontinued distribution relationships.

(d) Revenues in 2004 includes approximately \$640 million of single premium from a reinsurance transaction involving terminal funding business, which is offset by a similar increase of benefit reserves.

(e) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 and the application of FAS 52. For 2005, 2004, and 2003, respectively, the amounts included are \$63 million, \$(6) million, and \$19 million.

(f) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 and the application of FAS 52. For 2005, 2004, and 2003, respectively, the amounts included are \$(500) million, \$(134) million, and \$59 million.

(g) For purposes of this presentation, pricing net investment gains are segregated as a component of total realized gains (losses). They represent certain amounts of realized capital gains where gains are an inherent element in pricing certain life products in some foreign countries.

(h) Operating income includes the effect on deferred policy acquisition cost amortization for FAS 97 products related to realized capital gains (losses) and has reduced amortization costs totaling \$59 million, \$44 million and \$54 million for 2005, 2004 and 2003, respectively.

(i) Domestic in-force for 2005 includes the effect of the non-renewal of a single large group life case of \$36 billion.

AIG's Life Insurance & Retirement Services subsidiaries report their operations through the following operating units: Domestic Life — AIG American General, including American General Life Insurance Company (AG Life), USLIFE and AGLA; Domestic Retirement Services — VALIC, AIG Annuity and AIG SunAmerica; Foreign Life — ALICO, AIRCO, AIG Edison Life, AIG Star Life, AIA, Nan Shan and Philamlife.

Life Insurance & Retirement Services Results

The increase in operating income in 2005 compared to 2004 was caused by growth in both domestic and overseas operations. Similarly, the increase in operating income in 2004 compared to 2003 was due to strong growth, particularly overseas.

Life Insurance & Retirement Services GAAP premiums grew in 2005 when compared with 2004 as well as 2004 when compared with 2003. AIG's Domestic Life operations had continued growth in term and universal life sales with good performance from the independent distribution channels. GAAP premiums for life insurance grew 12 percent in 2005 reflecting consistently strong sales from the independent distribution channels. Retail periodic life sales increased 18 percent in 2005, representing a compound rate of growth of 16 percent since 2001, compared to modest growth in the industry. Profit margins have been maintained through strict underwriting discipline and low cost. In addition, increases in product prices and retention have offset price increases by reinsurers. Payout annuities declined slightly due to the low interest rate environment and the competitive market conditions for structured settlement and single premium individual annuity business. The domestic group business is below AIG's growth standards, largely because several accounts where pricing was unacceptable were not renewed and loss experience was higher than anticipated. Restructuring efforts in this business are focused on new product introductions, cross selling and other growth strategies. AGLA, the home service business, is diversifying product offerings, enhancing the capabilities and quality of the sales force, and broadening the markets served beyond those historically serviced in an effort to accelerate growth, although it is expected to remain a slow growth business.

Domestic Retirement Services businesses faced a challenging environment in 2005 and 2004, as deposits declined approximately 17 percent for 2005 compared to 2004 and 1 percent for 2004 compared to 2003. The decrease in AIG's individual variable annuity product sales in 2005 was largely attributable to significant variable annuity sales declines at several of AIG's largest distribution firms due to lackluster equity markets, more

intense industry competition with regard to living benefit product features and heightened compliance procedures over selling practices. AIG's introduction of more competitive guaranteed minimum withdrawal features was delayed until late in the fourth quarter due to filing delays associated with the Restatements. During 2005, the interest yield curve flattened and, as a result, competing bank products such as certificates of deposit and other money market instruments with shorter durations than AIG's individual fixed annuity products became more attractive. The following table reflects deposit amounts for Domestic Retirement Services:

Domestic Retirement Services — Deposits

December 31, (in millions)	2005	2004	2003
Group retirement products*	\$ 6,436	\$ 6,502	\$ 5,918
Individual fixed annuities	7,337	9,947	11,384
Individual variable annuities	3,319	4,126	3,412
Individual fixed annuities - runoff	200	253	350
Total	\$ 17,292	\$ 20,828	\$ 21,064

* Includes mutual funds.

In 2005, AIG experienced a significant increase in surrender rates in all product lines. Group retirement products experienced higher surrenders as the average participant age increased and a greater percentage of these participants are near retirement age and/or termination of service from their employers. Individual fixed annuities surrender rates are higher in 2005 primarily due to the shape of the interest yield curve and the general aging of the in-force reserves. However, less than 20 percent of the individual fixed annuity reserves are available to surrender without charge. The increase in individual variable annuity surrender rates primarily reflects the higher shock-lapse that occurred following expiration of the surrender charge period on certain 3-year and 7-year contracts (including a large closed block of acquired business). Reflecting a widespread industry phenomenon, this lapse rate, much of which was anticipated when the products were issued, has recently been affected by investor demand to exchange existing policies for new-generation contracts with living benefits or lower fees. In addition, partial withdrawals on certain variable annuity products have increased as AIG has introduced features designed to generate a stream of income to the participants. The following chart shows the amount of reserves by surrender charge category as of December 31, 2005.

Domestic Retirement Services
Reserves Subject to Surrender Charges

(in millions)	Group Retirement Products*	Individual Fixed Annuities	Individual Variable Annuities
Zero or no surrender charge	\$39,831	\$ 9,324	\$ 9,765
Greater than 0% - 4%	11,248	10,815	8,386
Greater than 4%	2,648	31,183	10,035
Non-Surrenderable	892	3,148	81
Total	\$54,619	\$54,470	\$28,267

* Excludes mutual funds.

A continued increase in the level of surrenders in any of these businesses could increase the amortization of deferred acquisition costs in future years and will negatively affect fee income earned on assets under management. The combination of reduced sales and increased surrenders and withdrawals

resulted in significantly lower net flows for total domestic Retirement Services than in the prior year. AIG expects that net flows will remain lower than in prior years as long as an environment of lackluster equity market performance persists and the yield curve remains flat. The following table reflects the net flows for Domestic Retirement Services:

Domestic Retirement Services — Net Flows^(a)

December 31, (in millions)	2005	2004	2003
Group retirement products ^(b)	\$ 628	\$ 1,706	\$ 2,756
Individual fixed annuities	1,759	6,169	8,679
Individual variable annuities	(336)	1,145	927
Individual fixed annuities - runoff	(2,508)	(2,084)	(1,967)
Total	\$ (457)	\$ 6,936	\$ 10,395

(a) Net flows are defined as deposits received, less benefits, surrenders, withdrawals and death benefits.

(b) Includes mutual funds.

The majority of the growth in Life Insurance & Retirement Services GAAP premiums in Foreign Life operations was attributable to the life insurance and personal accident & health lines of business. Globally, AIG's deep and diverse distribution, which includes bancassurance, worksite marketing, direct marketing, and strong agency organizations, provides a powerful platform for growth. This growth was most significant in Japan, where AIG has benefited from a flight to quality and development of multiple distribution channels. In Southeast Asia, AIG maintains significant market share by offering an attractive and diverse product line, distributed by its strong agency force. There has been a continuing trend in Southeast Asia, as the insurance market continues to develop, for clients to purchase investment-oriented products at the expense of traditional term or whole life products. For GAAP reporting purposes, only revenues from policy charges for insurance, administration, and surrender charges are reported as GAAP premiums. This product mix shift contributed to the single digit growth rate in Foreign Life Insurance & Retirement Services GAAP premiums.

Also in Japan, AIG Edison Life has improved the quality and productivity of its sales force resulting in higher sales and improved new business persistency. AIG Star Life is growing first year premiums as a result of new product introductions and an expanded agency force, and is benefiting from growth in the bank annuity market.

However, in March of 2006, Japanese tax authorities are expected to announce a reduction in the amount of premium policyholders may deduct from their Japanese tax returns for certain accident and health products. These products are generally sold by independent agents to corporate clients and thus represent a specific niche market segment and not the mainstream accident and health products sold by AIG in Japan. A reduction in the amount of tax deduction related to these products will make them less attractive to the market and will reduce the level of future sales. In addition, a portion of existing policies may be canceled, and depending on the duration of those policies and other factors, could result in a write-off of deferred acquisition costs. At the current time, management does not believe that such losses, should they

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

occur, would be material to AIG's consolidated financial condition, results of operations or liquidity.

The Foreign Retirement Services business continues its strong growth based upon its success in Japan and Korea by expanding its extensive distribution network and leveraging AIG's product expertise. Somewhat offsetting this growth were the negative effects on customer demand for certain multi-currency fixed annuity products in Japan stemming from currency exchange rate fluctuations. AIG is introducing annuity products in new markets. In January 2005, AIG Star Life entered into an agreement with the Bank of Tokyo Mitsubishi, one of Japan's largest banks, to market a multi-currency fixed annuity.

Foreign Life Insurance & Retirement Services operations produced 78 percent, 78 percent and 76 percent of Life Insurance & Retirement Services GAAP premiums in 2005, 2004 and 2003, respectively.

AIG transacts business in most major foreign currencies. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of Life Insurance & Retirement Services GAAP premiums.

	2005
Growth in original currency	2.7%
Foreign exchange effect	2.0
Growth as reported in U.S. dollars	4.7%

The growth in net investment income in 2005 and 2004 parallels the growth in general account reserves and surplus for both Foreign and Domestic Life Insurance & Retirement Services companies. Also, net investment income was positively affected by the compounding of previously earned and reinvested net investment income along with the addition of new cash flow from operations available for investment. The global flattening of the yield curve put additional pressure on yields and spreads, which was partially offset with income generated from other investment sources, including income from partnerships. Partnership income was \$273 million and \$192 million for 2005 and 2004, respectively. As of first quarter 2004, foreign separate accounts were transferred to the general account per Statement of Position 03-1, resulting in increased net investment income volatility. The positive effect of Statement of Position 03-1 on Foreign Life Insurance & Retirement Services net investment income was \$1.34 billion and \$271 million for 2005 and 2004, respectively. These amounts do not affect operating income as they are offset in incurred policy benefits.

AIG's domestic subsidiaries invest in certain limited liability companies that invest in synthetic fuel production facilities as a means of generating income tax credits. Net investment income includes operating losses of approximately \$143 million, \$121 million and \$108 million, respectively, for 2005, 2004 and 2003 and income taxes includes tax credits and benefits of approximately \$203 million, \$160 million and \$155 million, respectively, for 2005, 2004 and 2003 from these investments. See also Note 12(k) of Notes to Consolidated Financial Statements "Commitments and Contingent Liabilities."

Life Insurance & Retirement Services operating income grew by 12 percent in 2005. Operating income for the AIG Domestic Life insurance line of business was up 8 percent and in line with the growth in GAAP premiums for the current year, due in part to growth in the business base and improved mortality results, offset by higher losses recorded in 2005 from limited partnership investments in synthetic fuel production facilities. Operating income for the home service line of business declined as a result of the continued decline in premiums in force and higher insurance and acquisition expenses, combined with an increase in property casualty losses related to hurricanes. The group life/health business and operating income were affected by non-renewal of cases where acceptable margins could not be achieved. In addition, 2005 results were affected by reserve strengthening related to disability income products totaling \$12 million compared to reserve strengthening of \$178 million for Superior National and \$68 million for all other items in 2004. Operating income for the payout annuities line of business increased 22 percent in line with the growth in policy benefit reserves. The group retirement products business recorded a modest increase in operating income due primarily to higher variable annuity fee income and growth in average reserves. Individual fixed annuity results are higher than last year due primarily to 13 percent growth in average reserves, higher surrender charges and reductions in acquisition cost amortization expense resulting from increased capital losses realized on bonds. Individual variable annuity earnings are lower in 2005 when compared to 2004 principally due to favorable deferred acquisition cost amortization variances attributable to changes in assumptions and realized capital loss activity in 2004.

Foreign Life Insurance & Retirement Services operating income of \$5.25 billion for 2005 included \$84 million of realized capital gains, and for 2004, operating income of \$4.85 billion included \$372 million of realized capital gains. Underwriting and investment results before the effects of realized capital gains (losses) increased for all lines of business. On this basis, the life insurance line of business benefited in part from lower amortization of acquisition costs for FAS 97 products, reflective of the increasing investment yields for those portfolios, particularly in Japan. In Southeast Asia, operating income growth attributable to life insurance and deposit-based businesses was partially offset by higher incurred policy benefit costs for contributions to the participating policyholder fund in Singapore, totaling \$137 million, related to the settlement of a long disputed local tax issue. Growth in the personal accident & health line of business is generally in line with the growth in premiums and reflects stable profit margins. The group products business grew across all segments and maintained profit margins. The largest contributor to the growth in group products is the pension profit center which enjoyed higher fee income emanating from higher assets under management in Brazil and Southeast Asia. Growth in individual fixed annuities, emanating primarily from Japan, is generally in line with the growth in reserves and net spread rates were maintained. The individual variable annuity line of business also grew in line with the growth in reserves.

The contribution of Life Insurance & Retirement Services operating income to AIG's consolidated income before income taxes, minority interest and cumulative effect of accounting changes amounted to 58 percent in 2005, compared to 53 percent in 2004 and 57 percent in 2003.

Underwriting and Investment Risk

The risks associated with the life and accident & health products are underwriting risk and investment risk. The risk associated with the financial and investment contract products is primarily investment risk.

Underwriting risk represents the exposure to loss resulting from the actual policy experience adversely emerging in comparison to the assumptions made in the product pricing associated with mortality, morbidity, termination and expenses. The emergence of significant adverse experience would require an adjustment to DAC and benefit reserves that could have a substantial effect on AIG's results of operations.

Natural disasters such as hurricanes, earthquakes and other catastrophes have the potential to adversely affect AIG's operating results. Other risks, such as an outbreak of a pandemic disease, such as the Avian Influenza A Virus (H5N1), could adversely affect AIG's business and operating results to an extent that may be only minimally offset by reinsurance programs.

While to date, outbreaks of the Avian Flu continue to occur among poultry or wild birds in a number of countries in Asia, parts of Europe, and recently in Africa, transmission to humans has been rare. If the virus mutates to a form that can be transmitted from human to human, it has the potential to spread rapidly worldwide. If such an outbreak were to take place, early quarantine and vaccination could be critical to containment.

Both the contagion and mortality rate of any mutated H5N1 virus that can be transmitted from human to human are highly speculative. AIG continues to monitor the developing facts. A significant global outbreak could have a material adverse effect on Life Insurance & Retirement Services operating results and liquidity from increased mortality and morbidity rates.

AIG's Foreign Life Insurance & Retirement Services companies generally limit their maximum underwriting exposure on life insurance of a single life to approximately \$1.7 million of coverage. AIG's Domestic Life Insurance & Retirement Services companies limit their maximum underwriting exposure on life insurance of a single life to \$10 million of coverage in certain circumstances by using yearly renewable term reinsurance. See the discussion under "Liquidity" herein and Note 6 of Notes to Consolidated Financial Statements.

AIRCO acts primarily as an internal reinsurance company for AIG's foreign life operations. This facilitates insurance risk management (retention, volatility, concentrations) and capital planning locally (branch and subsidiary). It also allows AIG to pool its insurance risks and purchase reinsurance more efficiently at a consolidated level, manage global counterparty risk and relationships and manage global life catastrophe risks.

AIG's domestic Life Insurance & Retirement Services operations utilize internal and third-party reinsurance relationships to manage insurance risks and to facilitate capital management strategies. Pools of highly-rated third-party reinsurers are utilized to manage net amounts at risk in excess of retention limits. AIG's domestic life insurance companies also cede excess, non-economic reserves carried on a statutory-basis only on certain term and universal life insurance policies and certain fixed annuities to AIG Life of Bermuda Ltd., a wholly owned Bermuda reinsurer.

AIG generally obtains letters of credit in order to obtain statutory recognition of these intercompany reinsurance transactions. For this purpose, AIG entered into a \$2.5 billion syndicated letter of credit facility in December 2004. Letters of credit totaling \$2.17 billion were outstanding as of December 31, 2004, and letters of credit for all \$2.5 billion were outstanding as of December 31, 2005, all of which relate to life intercompany reinsurance transactions. The letter of credit facility has a ten-year term, but the facility can be reduced or terminated by the lenders beginning after seven years.

In November 2005, AIG entered into a revolving credit facility for an aggregate amount of \$3 billion. The facility can be drawn in the form of letters of credit with terms of up to ten years. As of December 31, 2005 and as of the date hereof, \$1.86 billion principal amount of letters of credit are outstanding under this facility, of which approximately \$494 million relates to life intercompany reinsurance transactions. AIG also obtained approximately \$212 million letters of credit on a bilateral basis.

The investment risk represents the exposure to loss resulting from the cash flows from the invested assets, primarily long-term fixed rate investments, being less than the cash flows required to meet the obligations of the expected policy and contract liabilities and the necessary return on investments. See also the discussion under "Liquidity" herein.

To minimize its exposure to investment risk, AIG tests the cash flows from invested assets and policy and contract liabilities using various interest rate scenarios to evaluate investment risk and to confirm that assets are sufficient to pay these liabilities.

AIG actively manages the asset-liability relationship in its foreign operations, as it has been doing throughout AIG's history, even though certain territories lack qualified long-term investments or certain local regulatory authorities may impose investment restrictions. For example, in several Asian countries, the duration of the investments is shorter than the effective maturity of the related policy liabilities. Therefore, there is a risk that the reinvestment of the proceeds at the maturity of the initial investments may be at a yield below that of the interest required for the accretion of the policy liabilities. Additionally, there exists a future investment risk associated with certain policies currently in force which will have premium receipts in the future. That is, the investment of these future premium receipts may be at a yield below that required to meet future policy liabilities.

In 2005, new money investment yields increased in some markets and continued to decrease in others, leading to more frequent adjustments in new business premium rates, credited

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

rates, and discontinuance of some products. In regard to the inforce business, to maintain an adequate yield to match the interest necessary to support future policy liabilities, management focus is required in both the investment and product management process. Business strategies continue to evolve to maintain profitability of the overall business. As such, in some countries, sales growth may slow for some product lines and accelerate for others.

The investment of insurance cash flows and reinvestment of the proceeds of matured securities and coupons requires active management of investment yields while maintaining satisfactory investment quality and liquidity.

AIG may use alternative investments in certain foreign jurisdictions where interest rates remain low and there are limited long-dated bond markets, including equities, real estate and foreign currency denominated fixed income instruments to extend the duration or increase the yield of the investment portfolio to more closely match the requirements of the policyholder liabilities and DAC recoverability. This strategy has been effectively used in Japan and more recently by Nan Shan in Taiwan. Foreign assets comprised approximately 33 percent of Nan Shan's invested assets at December 31, 2005, slightly below the maximum allowable percentage under current regulation. In response to continued declining interest rates and the volatile exchange rate of the NT dollar, Nan Shan is emphasizing new products with lower implied guarantees, including participating endowments and variable universal life. Although the risks of a continued low interest rate environment coupled with a volatile NT dollar could increase net liabilities and require additional capital to maintain adequate local solvency margins, Nan Shan currently believes it has adequate resources to meet all future policy obligations.

AIG actively manages the asset-liability relationship in its domestic operations. This relationship is more easily managed through the ample supply of appropriate long-term investments.

AIG uses asset-liability matching as a management tool worldwide to determine the composition of the invested assets and appropriate marketing strategies. As a part of these strategies, AIG may determine that it is economically advantageous to be temporarily in an unmatched position due to anticipated interest rate or other economic changes. In addition, the absence of long-dated fixed income instruments in certain markets may preclude a matched asset-liability position in those markets.

A number of guaranteed benefits, such as living benefits or guaranteed minimum death benefits, are offered on certain variable life and variable annuity products. AIG manages its exposure resulting from these long-term guarantees through reinsurance or capital market hedging instruments. See Note 21 of Notes to Consolidated Financial Statements for a discussion of new accounting guidance for these benefits.

DAC for Life Insurance & Retirement Services products arises from the deferral of those costs that vary with, and are directly related to, the acquisition of new or renewal business. Policy acquisition costs for life insurance products are generally deferred and amortized over the premium paying period of the policy. Policy acquisition costs which relate to universal life and investment-type products, including variable and fixed annuities

(investment-oriented products) are deferred and amortized, with interest, as appropriate, in relation to the historical and future incidence of estimated gross profits to be realized over the estimated lives of the contracts. Amortization expense includes the effects of current period realized capital gains and losses. With respect to universal life and investment-oriented products, AIG's policy, as appropriate, has been to adjust amortization assumptions for DAC when estimates of current or future gross profits to be realized from these contracts are revised. With respect to variable annuities sold domestically (representing the vast majority of AIG's variable annuity business), the assumption for the long-term annual net growth rate of the equity markets used in the determination of DAC amortization is approximately ten percent. A methodology referred to as "reversion to the mean" is used to maintain this long-term net growth rate assumption, while giving consideration to short-term variations in equity markets. Estimated gross profits include investment income and gains and losses on investments less interest required as well as other charges in the contract less actual mortality and expenses. Current experience and changes in the expected future gross profits are analyzed to determine the effect on the amortization of DAC. The estimation of projected gross profits requires significant management judgment. The elements with respect to the current and projected gross profits are reviewed and analyzed quarterly and are adjusted accordingly.

AIG's variable annuity earnings will be affected by changes in market returns because separate account revenues, primarily composed of mortality and expense charges and asset management fees, are a function of asset values.

DAC for both insurance-oriented and investment-oriented products as well as retirement services products are reviewed for recoverability, which involve estimating the future profitability of current business. This review also involves significant management judgment. If the actual emergence of future profitability were to be substantially different than that estimated, AIG's results of operations could be significantly affected in future periods. See also Note 4 of Notes to Consolidated Financial Statements.

Insurance and Asset Management Invested Assets

AIG's investment strategy is to invest primarily in high quality securities while maintaining diversification to avoid significant exposure to issuer, industry and/or country concentrations. With respect to Domestic General Insurance, AIG's strategy is to invest in longer duration fixed maturity investments to maximize the yields at the date of purchase. With respect to Life Insurance & Retirement Services, AIG's strategy is to produce cash flows required to meet maturing insurance liabilities. See also the discussion under "Operating Review: Life Insurance & Retirement Services Operations" herein. AIG invests in equities for various reasons, including diversifying its overall exposure to interest rate risk. Available for sale bonds and equity securities are subject to declines in fair value. Such changes in fair value are presented in unrealized appreciation or depreciation of investments, net of taxes, as a component of accumulated other comprehensive income. Generally, insurance

regulations restrict the types of assets in which an insurance company may invest. When permitted by regulatory authorities and when deemed necessary to protect insurance assets, including invested assets, from adverse movements in foreign currency exchange rates, interest rates and equity prices, AIG and its insurance subsidiaries may enter into derivative

transactions as end users. See also the discussion under “Derivatives” herein.

In certain jurisdictions, significant regulatory and/or foreign governmental barriers exist which may not permit the immediate free flow of funds between insurance subsidiaries or from the insurance subsidiaries to AIG parent.

The following tables summarize the composition of AIG’s insurance and asset management invested assets by segment, at December 31, 2005 and 2004:

<i>(dollars in millions)</i>	General Insurance	Life Insurance & Retirement Services	Asset Management	Total	Percent of Total	Percent Distribution	
						Domestic	Foreign
2005							
Fixed maturities:							
Available for sale, at market value	\$ 50,870	\$ 273,165	\$ 34,174	\$ 358,209	66.2%	59.2%	40.8%

Total	\$82,518	\$343,457	\$74,870	\$500,845	100.0%	63.8%	36.2%

Credit Quality

At December 31, 2005, approximately 61 percent of the fixed maturities investments were domestic securities. Approximately 35 percent of such domestic securities were rated AAA by one or more of the principal rating agencies. Approximately six percent were below investment grade or not rated.

A significant portion of the foreign fixed income portfolio is rated by Moody’s, S&P or similar foreign services. Similar credit quality rating services are not available in all overseas locations. AIG reviews the credit quality of the foreign portfolio nonrated fixed income investments, including mortgages. At December 31, 2005, approximately 19 percent of the foreign fixed income investments were either rated AAA or,

on the basis of AIG’s internal analysis, were equivalent from a credit standpoint to securities so rated. Approximately five percent were below investment grade or not rated at that date. A large portion of the foreign fixed income portfolio are sovereign fixed maturity securities supporting the policy liabilities in the country of issuance.

Any fixed income security may be subject to downgrade for a variety of reasons subsequent to any balance sheet date.

Valuation of Invested Assets

AIG has the ability to hold any fixed maturity security to its stated maturity, including those fixed maturity securities classified as available for sale. Therefore, the decision to sell

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

any such fixed maturity security classified as available for sale reflects the judgment of AIG's management that the security sold is unlikely to provide, on a relative value basis, as attractive a return in the future as alternative securities entailing comparable risks. With respect to distressed securities, the sale decision reflects management's judgment that the risk-discounted anticipated ultimate recovery is less than the value achievable on sale.

The valuation of invested assets involves obtaining a market value for each security. The source for the market value is generally from market exchanges or dealer quotations, with the exception of nontraded securities.

If AIG chooses to hold a security, it evaluates the security for an other-than-temporary impairment in valuation. As a matter of policy, the determination that a security has incurred an other-than-temporary decline in value and the amount of any loss recognition requires the judgment of AIG's management and a continual review of its investments.

In general, a security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer);
- The occurrence of a discrete credit event resulting in (i) the issuer defaulting on a material outstanding obligation; or (ii) the issuer seeking protection from creditors under the bankruptcy laws or any similar laws intended for the court supervised reorganization of insolvent enterprises; or (iii) the issuer proposing a voluntary reorganization pursuant to which creditors are asked to exchange their claims for cash or securities having a fair value substantially lower than par value of their claims; or
- In the opinion of AIG's management, it is probable that AIG may not realize a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

Once a security has been identified as other-than-temporarily impaired, the amount of such impairment is determined by reference to that security's contemporaneous market price and recorded as a charge to earnings.

As a result of these policies, AIG recorded other-than-temporary impairment losses net of taxes of approximately \$389 million, \$369 million and \$1.0 billion in 2005, 2004 and 2003, respectively.

No impairment charge with respect to any one single credit was significant to AIG's consolidated financial condition or results of operations, and no individual impairment loss exceeded 1.0 percent of consolidated net income for 2005.

Excluding the other-than-temporary impairments noted above, the changes in market value for AIG's available for sale portfolio, which constitutes the vast majority of AIG's investments, were recorded in accumulated other comprehensive income as unrealized gains or losses, net of tax.

At December 31, 2005, the fair value of AIG's fixed maturities and equity securities aggregated to \$409.8 billion. At December 31, 2005, aggregate unrealized gains after taxes for fixed maturity and equity securities were \$10.5 billion. At December 31, 2005, the aggregate unrealized losses after taxes of fixed maturity and equity securities were approximately \$2.6 billion.

The effect on net income of unrealized losses after taxes will be further mitigated upon realization, because certain realized losses will be charged to participating policyholder accounts, or realization will result in current decreases in the amortization of certain deferred policy acquisition costs.

At December 31, 2005, unrealized losses for fixed maturity securities and equity securities did not reflect any significant industry concentrations.

The amortized cost of fixed maturities available for sale in an unrealized loss position at December 31, 2005, by contractual maturity, is shown below:

<i>(in millions)</i>	Amortized Cost
Due in one year or less	\$ 3,882
Due after one year through five years	25,919
Due after five years through ten years	56,204
Due after ten years	56,786
Total	\$142,791

In the twelve months ended December 31, 2005, the pretax realized losses incurred with respect to the sale of fixed maturities and equity securities were \$1.6 billion. The aggregate fair value of securities sold was \$51.7 billion, which was approximately 97 percent of amortized cost. The average period of time that securities sold at a loss during the twelve months ended December 31, 2005 were trading continuously at a price below book value was approximately three months.

At December 31, 2005, aggregate pretax unrealized gains were \$16.1 billion, while the pretax unrealized losses with respect to investment grade bonds, below investment grade bonds and equity securities were \$3.3 billion, \$404 million and \$257 million, respectively. Aging of the pretax unrealized losses with respect to these securities, distributed as a percentage of cost relative to unrealized loss (the extent by which the market value is less than amortized cost or cost), including the number of respective items, was as follows:

Aging (dollars in millions)	Less than or equal to 20% of Cost ^(a)			Greater than 20% to 50% of Cost ^(a)			Greater than 50% of Cost ^(a)			Total		
	Cost ^(a)	Unrealized Loss	Items	Cost ^(a)	Unrealized Loss	Items	Cost ^(a)	Unrealized Loss	Items	Cost ^(a)	Unrealized Loss ^(b)	Items

(a) For bonds, represents amortized cost.

(b) As more fully described above, upon realization, certain realized losses will be charged to participating policyholder accounts, or realization will result in a current decrease in the amortization of certain deferred policy acquisition costs.

As stated previously, the valuation for AIG's investment portfolio comes from market exchanges or dealer quotations, with the exception of nontraded securities. AIG considers nontraded securities to mean certain fixed income investments, certain structured securities, direct private equities, limited partnerships, and hedge funds. The aggregate carrying value of these securities at December 31, 2005 was approximately \$62 billion.

The methodology used to estimate fair value of nontraded fixed income investments is by reference to traded securities with similar attributes and using a matrix pricing methodology. This technique takes into account such factors as the industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, and other relevant factors. The change in fair value is recognized as a component of accumulated other comprehensive income, net of tax.

For certain structured securities, the carrying value is based on an estimate of the security's future cash flows pursuant to the requirements of Emerging Issues Task Force Issue No. 99-20, "Recognition of Interest Income and Impairment on Purchased and Retained Beneficial Interests in Securitized Financial Assets." The change in carrying value is recognized in income.

Hedge funds and limited partnerships in which AIG holds in the aggregate less than a five percent interest are carried at fair value. The change in fair value is recognized as a component of accumulated other comprehensive income, net of tax.

With respect to hedge funds and limited partnerships in which AIG holds in the aggregate a five percent or greater interest, AIG uses the equity method to record these investments. The changes in such net asset values are recorded in income.

AIG obtains the fair value of its investments in limited partnerships and hedge funds from information provided by the general partner or manager of each of these investments, the accounts of which are generally audited on an annual basis.

Each of these investment categories is tested to determine if impairment in value exists. Various valuation techniques are used with respect to each category in this determination.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets transactions, consumer finance and insurance premium financing. See also Note 2 of Notes to Consolidated Financial Statements.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Aircraft Finance

AIG's Aircraft Finance operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to domestic and foreign airlines. Revenues also result from the remarketing of commercial jets for its own account, for airlines and for financial institutions.

ILFC finances its purchases of aircraft primarily through the issuance of a variety of debt instruments. The composite borrowing rates at December 31, 2005, 2004 and 2003 were 5.00 percent, 4.34 percent and 4.53 percent, respectively. See also the discussions under "Capital Resources" and "Liquidity" herein and Notes 2 and 9 of Notes to Consolidated Financial Statements.

ILFC's sources of revenue are principally from scheduled and charter airlines and companies associated with the airline industry. The airline industry is sensitive to changes in economic conditions, cyclical and highly competitive. Airlines and related companies may be affected by political or economic instability, terrorist activities, changes in national policy, competitive pressures on certain air carriers, fuel prices and shortages, labor stoppages, insurance costs, recessions, and other political or economic events adversely affecting world or regional trading markets. ILFC's revenues and income will be affected by its customers' ability to react and cope with the volatile competitive environment in which they operate, as well as ILFC's own competitive environment.

ILFC is exposed to operating loss and liquidity strain through nonperformance of aircraft lessees, through owning aircraft which it would be unable to sell or re-lease at acceptable rates at lease expiration and, in part, through committing to purchase aircraft which it would be unable to lease.

ILFC manages the risk of nonperformance by its lessees with security deposit requirements, through repossession rights, overhaul requirements, and closely monitoring industry conditions through its marketing force. However, there can be no assurance that ILFC would be able to successfully manage the risks relating to the effect of possible future deterioration in the airline industry. Approximately 90 percent of ILFC's fleet is leased to non-U.S. carriers, and this fleet, comprised of the most efficient aircraft in the airline industry, continues to be in high demand from such carriers.

ILFC typically contracts to re-lease aircraft before the end of the existing lease term. For aircraft returned before the end of the lease term, ILFC has generally been able to re-lease such aircraft within two to six months of its return. As a lessor, ILFC considers an aircraft "idle" or "off lease" when the aircraft is not subject to a signed lease agreement or signed letter of intent. ILFC had no aircraft off lease at December 31, 2005. As of March 10, 2006, all new aircraft deliveries in 2006 have been leased, and 76 percent of 2007 new aircraft deliveries have been leased. See also the discussions under "Capital Resources" and "Liquidity" herein.

ILFC sold two portfolios consisting of 34 and 37 aircraft in 2004 and 2003, respectively, to two trusts connected to securitization transactions. Certain of AIG's Life Insurance &

Retirement Services businesses purchased a large share of the securities issued in connection with these securitizations, which included both debt and equity securities.

Management formally reviews regularly, and no less frequently than quarterly, issues affecting ILFC's fleet, including events and circumstances that may cause impairment of aircraft values. Management evaluates aircraft in the fleet as necessary, based on these events and circumstances in accordance with Statement of Financial Accounting Standards No. 144 — "Accounting for the Impairment or Disposal of Long-Lived Assets" (FAS 144). ILFC has not recognized any impairment related to its fleet, as the existing service potential of the aircraft in ILFC's portfolio has not been diminished. Further, ILFC has been able to re-lease the aircraft without diminution in lease rates to an extent that would require an impairment write-down. See also the discussions under "Liquidity" herein.

Capital Markets

Capital Markets represents the operations of AIGFP, which engages in a wide variety of financial transactions, including standard and customized interest rate, currency, equity, commodity and credit products and structured borrowings through notes, bonds and guaranteed investment agreements. AIGFP also engages in various commodity and foreign exchange trading, and market-making activities.

As Capital Markets is a transaction-oriented operation, current and past revenues and operating results may not provide a basis for predicting future performance. Also, AIG's Capital Markets operations may be adversely affected by the downgrades in AIG's credit ratings. See "Risk Factors — AIG's Credit Ratings," in Item 1A. Risk Factors for a further discussion of the potential effect of the rating downgrades on AIG's Capital Markets businesses.

AIG's Capital Markets operations derive substantially all their revenues from hedged financial positions entered in connection with counterparty transactions rather than from speculative transactions. AIGFP participates in the derivatives and financial transactions dealer markets conducting, primarily as principal, an interest rate, currency, equity, commodity, energy and credit products business.

As a dealer in financial derivatives, AIGFP marks all derivative and trading transactions to fair value daily. Thus, a gain or loss on each transaction is recognized daily. Under GAAP, in certain instances, gains and losses are required to be recorded in earnings immediately, whereas in other instances, they are required to be recognized over the life of the underlying instruments. AIGFP economically hedges the market risks arising from its transactions, although hedge accounting is not currently being applied to any of the derivatives and related assets and liabilities. Accordingly, revenues and operating income are exposed to volatility resulting from differences in the timing of revenue recognition between the derivatives and the hedged assets and liabilities. Revenues and operating income of the Capital Markets operations and the percentage change in these amounts for any given period are also significantly affected by the number, size and profitability of transactions entered into by these subsidiaries during that

period relative to those entered into during the prior period. Generally, the realization of trading revenues as measured by the receipt of funds is not a significant reporting event as the gain or loss on AIGFP's trading transactions is currently reflected in operating income as the fair values change from period to period.

Derivative transactions are entered into in the ordinary course of Capital Markets operations. Therefore, income on interest rate, currency, equity, commodity, energy and credit derivatives is recorded at fair value, determined by reference to the mark to market value of the derivative or their estimated fair value where market prices are not readily available. The resulting aggregate unrealized gains or losses from the derivative are reflected in the income statement in the current year. Where Capital Markets cannot verify significant model inputs to observable market data and verify the model value to market transactions, Capital Markets values the contract at the transaction price at inception and, consequently, records no initial gain or loss in accordance with Emerging Issues Task Force Issue No. 02-03, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities" (EITF 02-03). Such initial gain or loss is recognized over the life of the transaction. Capital Markets periodically reevaluates its revenue recognition under EITF 02-03 based on the observability of market parameters. The mark to fair value of derivative transactions is reflected in the balance sheet in the captions "Unrealized gain on swaps, options and forward transactions," "Unrealized loss on swaps, options and forward transactions," "Trading assets" and "Trading liabilities." Unrealized gains represent the present value of the aggregate of each net receivable by counterparty, and the unrealized losses represent the present value of the aggregate of each net payable by counterparty as of December 31, 2005. These amounts will change from one period to the next due to changes in interest rates, currency rates, equity and commodity prices and other market variables, as well as cash movements, execution of new transactions and the maturing of existing transactions. See also the discussion under "Derivatives" herein and Note 20 of Notes to Consolidated Financial Statements.

Spread income on investments and borrowings is recorded on an accrual basis over the life of the transaction. Investments are classified as securities available for sale and are marked to market with the resulting unrealized gains or losses reflected in accumulated other comprehensive income. U.S. dollar denominated borrowings are carried at cost, while borrowings in any currency other than the U.S. dollar result in unrealized foreign exchange gains or losses reported in income. AIGFP hedges the economic exposure on its investments and

borrowings through its derivatives portfolio. The requirements under FAS 133 hedge accounting were not met for these hedge transactions for the years ending December 31, 2005, 2004 and 2003. Thus, these hedges are marked to fair value with the unrealized gains or losses reported in income.

Consumer Finance

Domestically, AIG's Consumer Finance operations are principally conducted through AGF. AGF derives a substantial portion of its revenues from finance charges assessed on outstanding mortgages, home equity loans, secured and unsecured consumer loans and retail merchant financing. The real estate loans include first or second mortgages on residential real estate generally having a maximum term of 360 months, and are considered non-conforming. These loans may be closed-end accounts or open-end home equity lines of credit and may be fixed-rate or adjustable rate products. The secured consumer loans are secured by consumer goods, automobiles, or other personal property. Both secured and unsecured consumer loans generally have a maximum term of 60 months. The core of AGF's originations are sourced through its branches. However, a significant volume of real estate loans are also originated through broker relationships, and to lesser extents, through correspondent relationships and direct mail solicitations.

Many of AGF's borrowers are non-conforming, non-prime or sub-prime. Current economic conditions, such as interest rate and employment, have a direct effect on the borrowers' ability to repay these loans. AGF manages the credit risk inherent in its portfolio by using credit scoring models at the time of credit applications, established underwriting criteria, and in certain cases, individual loan reviews. AGF's Credit Strategy and Policy Committee monitors the quality of the finance receivables portfolio on a monthly basis when determining the appropriate level of the allowance for finance receivable losses. The Credit Strategy and Policy Committee bases its conclusions on quantitative analyses, qualitative factors, current economic conditions and trends, and each committee member's experience in the consumer finance industry. Through 2005, the credit quality of AGF's finance receivables continues to be strong.

Overseas operations, particularly those in emerging markets, provide credit cards, personal and auto loans, term deposits, savings accounts, sales finance and mortgages.

Consumer Finance operations are exposed to loss when contractual payments are not received. Credit loss exposure is managed through tight underwriting controls, mix of loans, collateral, and collection efficiency.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Financial Services operations for 2005, 2004 and 2003 were as follows:

(in millions)	2005	2004	2003
Revenues ^(a) :			
Aircraft Finance ^(b)	\$ 3,578	\$ 3,136	\$ 2,897
Capital Markets ^{(c)(d)}	3,260	1,278	595
Consumer Finance ^(e)	3,613	2,978	2,642
Other	74	103	108
Total	\$ 10,525	\$ 7,495	\$ 6,242
Operating income (loss) ^(a) :			
Aircraft Finance	\$ 679	\$ 642	\$ 672
Capital Markets ^(d)	2,661	662	(188)
Consumer Finance ^(f)	901	808	623
Other, including intercompany adjustments	35	68	75
Total	\$ 4,276	\$ 2,180	\$ 1,182

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For 2005, 2004 and 2003, the effect was \$(34) million, \$(27) million and \$49 million, respectively, in operating income for Aircraft Finance and \$2.01 billion, \$(122) million and \$(1.01) billion in both revenues and operating income for Capital Markets.

(b) Revenues are primarily from ILFC aircraft lease rentals.

(c) Revenues, shown net of interest expense, are primarily from hedged financial positions entered into in connection with counterparty transactions and the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 described in (a) above.

(d) Certain transactions entered into by AIGFP generate tax credits and benefits which are included in income taxes in the consolidated statement of income. The amount of such tax credits and benefits for the years ended December 31, 2005, 2004 and 2003 are \$67 million, \$107 million and \$123 million, respectively.

(e) Revenues are primarily finance charges.

(f) Includes \$62 million of catastrophe related losses for 2005.

Financial Services Results

Financial Services operating income increased in 2005 compared to 2004 as well as 2004 compared to 2003. Fluctuations in revenues and operating income from quarter to quarter are not unusual because of the transaction-oriented nature of Capital Markets operations and the effect of hedging activities that do not qualify for hedge accounting under FAS 133. Capital Markets operating income was also negatively affected in 2004 by the costs of the PNC settlement. See Item 3. Legal Proceedings.

To the extent the Financial Services subsidiaries, other than AIGFP, use derivatives to economically hedge their assets or liabilities with respect to their future cash flows, and such hedges do not qualify for hedge accounting treatment under FAS 133, the changes in fair value of such derivatives are recorded in realized capital gains (losses) or other revenues.

Financial market conditions in 2005 compared with 2004 were characterized by a general flattening of interest rate yield curves across fixed income markets globally, some tightening of credit spreads and equity valuations that were slightly higher.

AIGFP's 2005 results were adversely affected by customer uncertainty surrounding the negative actions of the rating agencies and the ongoing investigations, as well as the negative effect on its structured notes business of AIG being unable to fully access the capital markets during 2005.

Financial market conditions in 2004 compared with 2003 were characterized by interest rates which were broadly unchanged across fixed income markets globally, a tightening of credit spreads and higher equity valuations. Capital Markets results in 2004 compared with 2003 reflected a shift in product activity to respond to these conditions.

The most significant component of Capital Markets operating expenses is compensation, which was approximately \$481 million, \$497 million and \$616 million in 2005, 2004 and 2003, respectively. The amount of compensation was not affected by gains and losses not qualifying for hedge accounting treatment under FAS 133.

ILFC continued to see net improvements in lease rates, an increase in demand for the newer, modern, fuel efficient aircraft comprising the bulk of ILFC's fleet, and an increasing level of interest from traditional buyers, third-party investors and debt providers for the purchase of aircraft from ILFC's extensive lease portfolio. During 2005, ILFC's revenues and operating income also increased as a result of adding more aircraft to its fleet and earning higher revenues on existing aircraft. However, these increases were offset by increasing interest rates, fewer aircraft sales, and leasing related and other reserves.

During the fourth quarter of 2004, ATA Airlines and related entities (ATA) filed for protection under Chapter 11 of the U.S. Bankruptcy Code. On the basis of estimates of the probable outcome of the ATA bankruptcy, ILFC recorded pre-tax charges aggregating \$54 million in the fourth quarter of 2004 to write down the value of the ATA securities and guarantees.

Consumer Finance operations, both domestically and internationally, did very well with increased revenues and operating income. Domestically, the Consumer Finance operations had a record year in 2005. The relatively low interest rate environment contributed to a high level of mortgage refinancing activity. Real estate finance receivables increased 21 percent during 2005. Despite high energy costs, the U.S. economy continued to expand during the year improving consumer credit quality. Both AGF's charge-off ratio and delinquency ratio improved over prior years. However, AGF incurred charges of approximately \$62 million for the estimated effect of Hurricane Katrina on customers in the Gulf Coast areas affected by the storm. A new bankruptcy law went into effect in October 2005. Consumers, including some of AGF's customers, filed for personal bankruptcy protection under the old law in record numbers in third quarter 2005 ahead of the new law's effective date. AGF does not anticipate a significant effect on its earnings from this new law because 80 percent of its finance receivables are real estate loans with adequate collateral and conservative loan-to-value ratios.

Foreign Consumer Finance operations performed well, as the operations in Poland, Argentina and AIG Federal Savings Bank recorded strong earnings growth. The Hong Kong

businesses experienced solid loan and earnings growth in a strengthening economy.

Financial Services operating income represented 28 percent of AIG's consolidated income before income taxes, minority interest and cumulative effect of accounting changes in 2005. This compares to 15 percent and 10 percent in 2004 and 2003,

respectively. The increase in contribution percentage in 2005 compared to 2004 and 2003 was primarily due to the fluctuation in earnings resulting from derivatives that did not qualify for hedge accounting under FAS 133 and the reduction in General Insurance operating income in 2005.

Financial Services Invested Assets

The following table is a summary of the composition of AIG's Financial Services invested assets at December 31, 2005 and 2004. See also the discussions under "Operating Review — Financial Services Operations", "Capital Resources" and "Derivatives" herein.

	2005		2004	
	Invested Assets	Percent of Total	Invested Assets	Percent of Total
<i>(dollars in millions)</i>				
Flight equipment primarily under operating leases, net of accumulated depreciation	\$ 36,245	24.1%	\$ 32,130	21.6%
Finance receivables, net of allowance	27,995	18.6	23,574	15.9
Unrealized gain on swaps, options and forward transactions	18,695	12.4	22,670	15.3
Securities available for sale, at market value	37,511	24.9	31,225	21.0
Trading securities, at market value	6,499	4.3	2,746	1.8
Securities purchased under agreements to resell, at contract value	14,519	9.7	26,272	17.7
Trading assets	1,204	0.8	3,433	2.3
Spot commodities	92	0.1	534	0.4
Other, including short-term investments	7,615	5.1	5,982	4.0
Total	\$150,375	100.0%	\$148,566	100.0%

As previously discussed, the cash used for the purchase of flight equipment is derived primarily from the proceeds of ILFC's debt financings. The primary sources for the repayment of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. During 2005, ILFC acquired flight equipment costing \$6.19 billion. See also the discussion under "Operating Review — Financial Services Operations" and "Capital Resources" herein.

At December 31, 2005, ILFC had committed to purchase 338 new and used aircraft deliverable from 2006 through 2015 at an estimated aggregate purchase price of \$23.3 billion and had options to purchase 16 new aircraft at an estimated aggregate purchase price of \$1.5 billion. As of March 10, 2006, ILFC has entered into leases for all of the new aircraft to be delivered in 2006, 65 of 85 of the new aircraft to be delivered in 2007 and 11 of 155 of the new aircraft to be delivered subsequent to 2007. ILFC will be required to find customers for any aircraft currently on order and any aircraft to be ordered, and it must arrange financing for portions of the purchase price of such equipment. ILFC has been successful to date both in placing its new aircraft on lease or under sales contract and obtaining adequate financing, but there can be no assurance that such success will continue in future environments.

AIG's Consumer Finance operations provide a wide variety of consumer finance products, including real estate mortgages, credit cards, consumer loans, retail sales finance and credit-related insurance to customers both domestically and overseas, particularly in emerging markets. These products are funded through a combination of deposits and various borrowings including commercial paper and medium term notes. AIG's Consumer Finance operations are exposed to credit risk and

risk of loss resulting from adverse fluctuations in interest rates. Over half of the loan balance is related to real estate loans which are substantially collateralized by the related properties.

With respect to credit losses, the allowance for finance receivable losses is maintained at a level considered adequate to absorb anticipated credit losses existing in that portfolio.

Capital Markets derivative transactions are carried at market value or at estimated fair value when market prices are not readily available. AIGFP reduces its economic risk exposure through similarly valued offsetting transactions including swaps, trading securities, options, forwards and futures. The estimated fair values of these transactions represent assessments of the present value of expected future cash flows. These transactions are exposed to liquidity risk if AIGFP were required to sell or close out the transactions prior to maturity. AIG believes that the effect of any such event would not be significant to AIG's financial condition or its overall liquidity. See also the discussion under "Operating Review — Financial Services Operations" and "Derivatives" herein.

AIGFP uses the proceeds from the issuance of notes, bonds and GIA borrowings to invest in a diversified portfolio of securities, including securities available for sale, at market, and derivative transactions. The funds may also be temporarily invested in securities purchased under agreements to resell. The proceeds from the disposal of the aforementioned securities available for sale and securities purchased under agreements to resell have been used to fund the maturing GIAs or other AIGFP financings, or invest in new assets. See also the discussion under "Capital Resources" herein.

Securities available for sale is predominately a portfolio of fixed income securities, where the individual securities have

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

varying degrees of credit risk. At December 31, 2005, the average credit rating of this portfolio was AA+ or the equivalent thereto as determined through rating agencies or internal review. AIGFP has also entered into credit derivative transactions to economically hedge its credit risk associated with \$125 million of these securities. Securities deemed below investment grade at December 31, 2005 amounted to approximately \$166 million in fair value representing 0.4 percent of the total AIGFP securities available for sale. There have been no significant downgrades through March 1, 2006. If its securities available for sale portfolio were to suffer significant default and the collateral held declined significantly in value with no replacement or the credit default swap counterparty failed to perform, AIGFP could have a liquidity strain. AIG guarantees AIGFP's payment obligations, including its debt obligations.

AIGFP's risk management objective is to minimize interest rate, currency, commodity and equity risks associated with its securities available for sale. That is, when AIGFP purchases a security for its securities available for sale investment portfolio, it simultaneously enters into an offsetting internal hedge such that the payment terms of the hedging transaction offset the payment terms of the investment security, which achieves the economic result of converting the return on the underlying security to U.S. dollar LIBOR plus or minus a spread based on the underlying profit on each security on the initial trade date. The market risk associated with such internal hedges is managed on a portfolio basis, with third-party hedging transactions executed as necessary. As hedge accounting treatment is not achieved in accordance with FAS 133, the unrealized gains and losses on the securities related economic hedges are reflected in operating income, whereas the unrealized gains and losses on the underlying securities resulting from changes in interest rates, currency rates, commodity and equity prices, are recorded in accumulated other comprehensive income. When a security is sold, the related hedging transaction is terminated, and the realized gain or loss with respect to this security is then recorded in operating income.

Securities purchased under agreements to resell are treated as collateralized financing transactions. AIGFP takes possession of or obtains a security interest in securities purchased under agreements to resell. AIGFP further minimizes its credit risk by monitoring counterparty credit exposure and, when it deems necessary, it requires additional collateral to be deposited.

AIGFP also conducts, as principal, trading activities in foreign exchange, and commodities, primarily precious metals. AIGFP owns inventories in the commodities, which it records at the lower of cost or market, in which it trades and may reduce the exposure to market risk through the use of swaps, forwards, futures, and option contracts. AIGFP uses derivatives to manage the economic exposure of its various trading positions and transactions from adverse movements of interest rates, foreign currency exchange rates and commodity prices. AIGFP supports its trading activities largely through trading liabilities, unrealized losses on swaps, short-term borrowings, securities sold under agreements to repurchase and securities and commodities sold but not yet purchased. See also the

discussions under "Capital Resources" herein and Note 20 of Notes to Consolidated Financial Statements.

Trading securities, at market value, and securities and spot commodities sold but not yet purchased, at market value, are marked to market daily with the unrealized gain or loss being recognized in income at that time. These trading securities are held to meet the short-term risk management objectives of Capital Markets operations.

The gross unrealized gains and gross unrealized losses of Capital Markets operations included in the financial services assets and liabilities at December 31, 2005 were as follows:

<i>(in millions)</i>	Gross Unrealized Gains	Gross Unrealized Losses
Securities available for sale, at market value ^(a)	\$ 802	\$ 863
Unrealized gain/loss on swaps, options and forward transactions ^(b)	18,695	12,740

(a) See also Note 8(h) of Notes to Consolidated Financial Statements.

(b) These amounts are also presented as the respective balance sheet amounts.

The senior management of AIG defines the policies and establishes general operating parameters for Capital Markets operations. AIG's senior management has established various oversight committees to review the various financial market, operational and credit issues of the Capital Markets operations. The senior management of AIGFP reports the results of its operations to and reviews future strategies with AIG's senior management.

AIGFP actively manages the exposures to limit potential losses, while maximizing the rewards afforded by these business opportunities. In doing so, AIGFP must continually manage a variety of exposures including credit, market, liquidity, operational and legal risks.

AIGFP held a large portfolio of privately negotiated financing transactions with institutional counterparties in the United Kingdom. Certain provisions in the UK Finance Bill that was published by the House of Commons on March 22, 2005 caused AIGFP's counterparties to exercise early unwind rights and terminate these transactions during the first and second quarters of 2005. Although the unwinding of these transactions did not cause AIGFP to suffer any losses, the unwinds did result in AIGFP not realizing spread income that AIGFP expected it would have realized had the transactions remained outstanding. The aggregate reduction in 2005 operating income attributable to such foregone accrual earnings was approximately \$75 million.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products including institutional and retail asset management, broker dealer services and spread-based investment business from the sale of GICs. Such services and products are offered to individuals and institutions both domestically and overseas.

As discussed above, AIG Retirement Services operations are reported with Life Insurance operations. Therefore, Asset Management operations represent the results of AIG's asset management and brokerage services operations, mutual fund operations and the foreign and domestic GIC operations.

Asset Management revenues and operating income for 2005, 2004 and 2003 were as follows:

(in millions)	2005	2004	2003
Revenues:			
Guaranteed Investment Contracts	\$3,547	\$3,192	\$2,619
Institutional Asset Management	1,195	1,049	671
Brokerage Services and Mutual Funds	257	249	206
Other	326	224	155
Total	\$5,325	\$4,714	\$3,651
Operating income:			
Guaranteed Investment Contracts ^(a)	\$1,185	\$1,328	\$ 885
Institutional Asset Management ^(b)	686	515	227
Brokerage Services and Mutual Funds	66	70	60
Other	316	212	144
Total	\$2,253	\$2,125	\$1,316

(a) The effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 was \$149 million, \$313 million and \$230 million for 2005, 2004 and 2003, respectively.

(b) Includes the results of certain AIG managed private equity and real estate funds that are consolidated effective December 31, 2003 pursuant to FIN46R, "Consolidation of Variable Interest Entities". For 2005 and 2004, operating income includes \$261 million and \$195 million of third-party limited partner earnings offset in Minority interest expense.

Asset Management Results

Asset Management operating income increased in 2005 as a result of a diversified global product portfolio. The operating income growth was driven by growth in institutional assets under management and the associated fee revenue along with strong realized gains on sales of real estate investments and performance fees earned on various private equity investments. The level of gains and performance based fees are contingent upon various fund closings, maturity levels and market conditions, and by their nature, are not predictable. Therefore, the effect on the segment's future earnings may vary from period to period. The revenues and operating income with respect to the segment are largely affected by the general conditions in the equity and credit markets. The increases in full year segment results were achieved despite the run-off of the existing GIC portfolio and the delay in launching AIG's domestic matched investment program. GICs are sold domestically and abroad to both institutions and individuals. These products are written on an opportunistic basis when market conditions are favorable. A significant portion of the GIC portfolio consists of floating rate obligations. AIG has entered

into hedges to manage against increases in short-term interest rates. AIG continues to believe these hedges are economically effective but do not qualify for hedge accounting under FAS 133. As a result, continued increases in short-term interest rates will negatively affect operating income in this segment. A positive benefit to realized capital gains (losses) will offset any negative trend in operating income. GIC revenues include income from SunAmerica partnerships supporting the GIC line of business and are significantly affected by performance in the equity markets. Thus, revenues, operating income and cash flow attributable to GICs will vary from one reporting period to the next. The decline in GIC operating income compared to 2004 reflects tighter spreads in the GIC portfolio, partially offset by improved partnership returns. Spread compression has occurred as the base portfolio yield declined due to an increase in the cost of funds in the short-term floating rate portion of the GIC portfolio, only partially offset by increased investment income from the floating rate assets backing the portfolio.

In September 2005, AIG launched a \$10 billion matched investment program in the Euromarkets under which AIG debt securities will be issued. AIG also expects to launch a matched investment program in the domestic market which, along with the Euro program, will become AIG's principal spread-based investment activity. However, in light of recent developments, the timing of the launch of the domestic program is uncertain. Because AIG's credit spreads in the capital markets have widened following the ratings declines, there may be a reduction in the earnings on new business in AIG's institutional spread based funding business.

Asset Management operating income represented 15 percent of AIG's consolidated income before income taxes, minority interest and cumulative effect of accounting changes in 2005. This compares to 14 percent and 11 percent in 2004 and 2003, respectively.

At December 31, 2005, AIG's third-party assets under management, including both retail mutual funds and institutional accounts, was approximately \$62 billion compared to \$51 billion at year end 2004. The aggregate GIC reserve was \$48.8 billion at December 31, 2005 compared to \$53.8 billion at year end 2004.

Other Operations

Other operations include AIG's equity in certain partially owned companies, the distributions on the liabilities connected to trust preferred stock, as well as the unallocated corporate expenses of the parent holding company and other miscellaneous income and expenses. Other income (loss) amounted to \$(2.48) billion, \$(560) million and \$(1.90) billion in 2005, 2004 and 2003, respectively. AIG's equity in certain partially owned subsidiaries includes \$312 million and \$96 million in catastrophe losses in 2005 and 2004, respectively. Included in the 2005 amount is approximately \$1.6 billion for the settlements described under Item 3. Legal Proceedings. See also Notes 12(i) and 24 of Notes to Consolidated Financial Statements.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Other realized capital gains (losses) amounted to \$225 million, \$(227) million and \$(643) million for 2005, 2004 and 2003, respectively.

Capital Resources

At December 31, 2005, AIG had total consolidated shareholders' equity of \$86.32 billion and total consolidated borrowings of \$109.85 billion. At that date, \$99.42 billion of such borrowings were either not guaranteed by AIG or were matched borrowings under obligations of guaranteed investment agreements (GIAs), liabilities connected to trust preferred stock, or matched notes and bonds payable.

Borrowings

At December 31, 2005, AIG's net borrowings were \$10.43 billion after reflecting amounts that were matched borrowings under AIGFP's obligations of GIAs, matched notes and bonds payable, amounts not guaranteed by AIG and liabilities connected to trust preferred stock. The following table summarizes borrowings outstanding at December 31, 2005 and 2004:

December 31, (in millions)	2005	2004
AIG's net borrowings	\$ 10,425	\$ 8,498
Liabilities connected to trust preferred stock	1,391	1,489
AIGFP		
GIAs	20,811	18,919
Matched notes and bonds payable	24,950	22,257
Borrowings not guaranteed by AIG	52,272	45,736
Total debt	\$109,849	\$96,899

Borrowings issued or guaranteed by AIG and those borrowings not guaranteed by AIG at December 31, 2005 and 2004 were as follows:

December 31, (in millions)	2005	2004
AIG borrowings:		
Medium term notes	\$ 112	\$ 667
Notes and bonds payable	4,495	2,980
Loans and mortgages payable	814	349
Total	5,421	3,996
Borrowings guaranteed by AIG:		
AIGFP		
GIAs	20,811	18,919
Notes and bonds payable	26,463	22,695
Total	47,274	41,614
AIG Funding, Inc. commercial paper	2,694	2,969
AGC Notes and bonds payable	797	1,095
Liabilities connected to trust preferred stock	1,391	1,489
Total borrowings issued or guaranteed by AIG	57,577	51,163

December 31, (in millions)	2005	2004
Borrowings not guaranteed by AIG:		
ILFC

Total borrowings not guaranteed by AIG	52,272	45,736
Total debt	\$109,849	\$96,899

(a) Includes borrowings under Export Credit Facility of \$2.6 billion.

(b) Represents capital lease obligations.

For a description of the effects on AIG's capital resources, including the cost of borrowing, of recent downgrades and rating actions by the major rating agencies, see the discussion under "Outlook" herein and "Risk Factors — AIG's Credit Ratings," in Item 1A. Risk Factors as well as Note 9 of Notes to Consolidated Financial Statements.

During 2005, AIG did not issue any medium term notes, and \$555 million of previously issued notes matured.

On September 30, 2005, AIG sold \$1.5 billion principal amount of notes in a Rule 144A/Regulation S offering, \$500 million of which bear interest at a rate of 4.700 percent per annum and mature in 2010 and \$1.0 billion of which bear interest at a rate of 5.05 percent per annum and mature in 2015. The notes are senior unsecured obligations of AIG and rank equally with all of AIG's other senior debt outstanding. AIG has agreed to use commercially reasonable efforts to consummate an exchange offer for the notes pursuant to an effective registration statement within 360 days of the date on which the notes were issued.

AIG intends to continue its customary practice of issuing debt securities from time to time to meet its financing needs

and those of certain of its subsidiaries for general corporate purposes, as well as for a matched investment program.

In September 2005, AIG entered into loan agreements with third-party banks and borrowed a total of \$600 million under the loan agreements on an unsecured basis, \$500 million of which matures in August 2006 but can be extended by AIG for an additional seven-month period and \$100 million of which matures in September 2006.

AIGFP uses the proceeds from the issuance of notes and bonds and GIA borrowings to invest in a diversified portfolio of securities and derivative transactions. The borrowings may also be temporarily invested in securities purchased under agreements to resell. AIG guarantees the obligations of AIGFP under AIGFP's notes and bonds and GIA borrowings. See also the discussions under "Operating Review," "Liquidity" and "Derivatives" herein and Notes 1, 8, 9 and 20 of Notes to Consolidated Financial Statements.

AIGFP has a Euro Medium Term Note Program under which an aggregate nominal amount of up to \$10.0 billion of notes may be outstanding at any one time. The program provides that additional notes may be issued to replace matured or redeemed notes. As of December 31, 2005, \$3.48 billion of notes were outstanding under the program, including \$221 million resulting from foreign exchange translation into U.S. dollars. Notes issued under this program are included in Notes and Bonds Payable in the preceding table of borrowings.

AIG Funding, Inc. (AIG Funding), through the issuance of commercial paper, helps fulfill the short-term cash requirements of AIG and its subsidiaries. AIG Funding intends to continue to meet AIG's funding requirements through the issuance of commercial paper guaranteed by AIG. The issuance of AIG Funding's commercial paper is subject to the approval of AIG's Board of Directors.

AIG and AIG Funding are parties to unsecured syndicated revolving credit facilities aggregating \$2.75 billion, consisting of \$1.375 billion in a 364-day revolving credit facility that expires in July of 2006 and \$1.375 billion in a five-year revolving credit facility that expires in July of 2010. The 364-day facility allows for the conversion by AIG of any outstanding loans at expiration into one-year term loans. The facilities can be used for general corporate purposes and also to provide backup for AIG's commercial paper programs administered by AIG Funding. AIG expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings outstanding under these facilities, nor were any borrowings outstanding as of December 31, 2005.

In November 2005, AIG and AIG Funding entered into a 364-day revolving credit facility for an aggregate amount of \$3 billion, which can be drawn in the form of loans or letters of credit. The credit facility expires in November 2006 but allows for the issuance of letters of credit with terms of up to ten years and provides for the conversion by AIG of any outstanding loans at expiration into one-year term loans. The facility can be used for general corporate purposes, including providing backup for AIG's commercial paper programs administered by AIG Funding and obtaining letters of credit to secure obligations under insurance and reinsurance transac-

tions. There are currently no loans outstanding under the facility, nor were any loans outstanding as of December 31, 2005. As of such dates, \$1.14 billion was available to be drawn under the facility, with the remainder having been drawn in the form of letters of credit.

AIG is also a party to an unsecured 364-day inter-company revolving credit facility provided by certain of its subsidiaries aggregating \$2 billion that expires in October of 2006. The facility allows for the conversion of any outstanding loans at expiration into one-year term loans. The facility can be used for general corporate purposes and also to provide backup for AIG's commercial paper programs. AIG expects to replace or extend this credit facility on or prior to its expiration. There are currently no borrowings outstanding under the inter-company facility, nor were any borrowings outstanding as of December 31, 2005.

As of November 2001, AIG guaranteed the notes and bonds of AGC. During 2005, \$300 million of previously issued notes matured.

ILFC fulfills its short term cash requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of ILFC's Board of Directors. The commercial paper issued by ILFC is not guaranteed by AIG. ILFC is a party to unsecured syndicated revolving credit facilities aggregating \$6.0 billion at December 31, 2005. The facilities can be used for general corporate purposes and also to provide backup for ILFC's commercial paper program. They consist of \$2.0 billion in a 364-day revolving credit facility that expires in October 2006, with a one-year term out option, \$2.0 billion in a five-year revolving credit facility that expires in October 2009 and \$2.0 billion in a five-year revolving credit facility that expires in October 2010. ILFC expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings outstanding under these facilities, nor were any borrowings outstanding as of December 31, 2005.

ILFC was a party to two 180-day revolving credit facilities aggregating to \$1.0 billion, each of which expired in 2005.

At December 31 2005, ILFC had increased the aggregate principal amount outstanding of its medium term and long-term notes. The foreign exchange adjustment for the foreign currency denominated debt was \$197 million at December 31, 2005 and \$1.2 billion at December 31, 2004. ILFC had \$13.13 billion of debt securities registered for public sale at December 31, 2005. As of December 31, 2005, \$8.66 billion of debt securities were issued. In addition, ILFC has a Euro Medium Term Note Program for \$7.0 billion, under which \$4.98 billion in notes were sold through December 31, 2005. ILFC has substantially eliminated the currency exposure arising from foreign-currency denominated notes by economically hedging that portion of the note exposure not already offset by Euro denominated operating lease payments, although such hedges do not qualify for hedge accounting treatment under FAS 133. Notes issued under this program are included in Notes and Bonds Payable in the preceding table of borrowings.

ILFC had a \$4.3 billion Export Credit Facility (ECA) for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At December 31, 2005, ILFC had \$1.2 billion outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured ECA for up to a maximum of \$2.64 billion for Airbus aircraft to be delivered through May 31, 2005. The facility has since been extended to include aircraft to be delivered through May 31, 2006. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a six-month forward-looking calendar, and the interest rate is determined through a bid process. At December 31, 2005, ILFC had \$1.4 billion outstanding under this facility. Borrowings with respect to these facilities are included in Notes and Bonds Payable in the preceding table of borrowings.

In August 2004, ILFC received a commitment for an Ex-Im Bank comprehensive guarantee in the amount of \$1.68 billion to support the financing of up to 30 new Boeing aircraft. The initial delivery period from September 1, 2004 through August 31, 2005 has been extended by ILFC to August 31, 2006. ILFC did not have any borrowings outstanding under this facility at December 31, 2005. From time to time, ILFC enters into various bank financings. As of December 31, 2005 the total funded amount was \$1.4 billion. The financings mature through 2010. One tranche of one of the loans totaling \$410 million was funded in Japanese yen and swapped to U.S. dollars.

In December of 2005, ILFC entered into two tranches of junior subordinated debt totaling \$1.0 billion. Both mature on December 21, 2065, but each tranche has a different call option. The \$600 million tranche has a call date of December 21, 2010 and the \$400 million tranche has a call date of December 21, 2015. The note with the 2010 call date has a fixed interest rate of 5.90 percent for the first five years. The note with the 2015 call date has a fixed interest rate of 6.25 percent for the first ten years. Both tranches have interest rate adjustments if the call option is not exercised. The new interest rate is a floating quarterly reset rate based on the initial credit spread plus the highest of (i) 3 month LIBOR, (ii) 10-year constant maturity treasury and (iii) 30-year constant maturity treasury.

The proceeds of ILFC's debt financing are primarily used to purchase flight equipment, including progress payments during the construction phase. The primary sources for the repayment

of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. AIG does not guarantee the debt obligations of ILFC. See also the discussions under "Operating Review" and "Liquidity" herein.

AGF fulfills its short term cash requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of AGF's Board of Directors. The commercial paper issued by AGF is not guaranteed by AIG. AGF is a party to unsecured syndicated revolving credit facilities which, as of December 31, 2005 aggregated to \$4.25 billion, consisting of \$2.125 billion in a 364-day revolving credit facility that expires in July 2006 and \$2.125 billion in a five-year revolving credit facility that expires in July 2010. The 364-day facility allows for the conversion by AGF of any outstanding loan at expiration into a one-year term loan. The facilities can be used for general corporate purposes and also to provide backup for AGF's commercial paper programs. AGF expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings under these AGF facilities, nor were any borrowings outstanding as of December 31, 2005.

During 2005, AGF issued \$5.44 billion of fixed rate and variable rate medium term notes ranging in maturities from two to ten years. As of December 31, 2005, notes aggregating \$17.74 billion were outstanding with maturity dates ranging from 2006 to 2015 at interest rates ranging from 1.65 percent to 7.50 percent. To the extent deemed appropriate, AGF may enter into swap transactions to manage its effective borrowing with respect to these notes.

AGF's other funding sources include private placement debt, retail note issuances and bank financings. In addition, AGF has become an established issuer of long-term debt in the international capital markets.

In addition to debt refinancing activities, proceeds from the collection of finance receivables will be used to pay the principal and interest with respect to AGF's debt. AIG does not guarantee any of the debt obligations of AGF. See also the discussion under "Operating Review — Financial Services Operations" and "Liquidity" herein.

AIG Credit Card Company (Taiwan) and AIG Finance (Taiwan) Limited, both consumer finance subsidiaries in Taiwan, have issued commercial paper for the funding of their own operations. AIG does not guarantee the commercial paper issued by these subsidiaries. See also the discussion under "Derivatives" herein and Note 9 of Notes to Consolidated Financial Statements.

Contractual Obligations and Other Commercial Commitments

The maturity schedule of AIG's contractual obligations at December 31, 2005 was as follows:

(in millions)	Total Payments	Payments due by Period			
		Less Than One Year	One Through Three Years	Four Through Five Years	After Five Years
Borrowings ^(a)	\$ 99,291	\$31,504	\$20,717	\$16,886	\$30,184
Loss reserves ^(b)	77,169	21,221	23,537	11,191	21,220
Insurance and investment contract liabilities ^(c)	47,956	8,639	16,019	9,855	13,443
Operating leases	2,734	573	761	468	932
Aircraft purchase commitments	23,320	6,037	10,524	3,775	2,984
Total	\$250,470	\$67,974	\$71,558	\$42,175	\$68,763

(a) Excludes commercial paper and obligations included as debt pursuant to FIN46R. See also Note 9 of Notes to Consolidated Financial Statements.

(b) Represents future loss and loss adjustment expense payments estimated based on historical loss development payment patterns.

(c) Insurance and investment contract liabilities include various investment-type products with contractually scheduled maturities including periodic payments of a term certain nature and guaranteed maturities under guaranteed investment contracts. Items excluded from the table include (i) liabilities for future policy benefits of approximately \$109 billion, and (ii) policyholder contract deposits of approximately \$182 billion. Amounts excluded from the table are generally comprised of policies or contracts where (i) AIG is currently not making payments until the occurrence of an insurable event, such as death or disability, (ii) payments are conditional on survivorship, or (iii) the occurrence of a payment due to a surrender or other non-scheduled event out of AIG's control. The determination of these liability amounts and timing of payment are not reasonably fixed and determinable. Significant uncertainties relating to these liabilities include mortality, morbidity, expenses, persistency, investment returns, inflation, and future policyholder elections as to benefits.

The maturity schedule of AIG's other commercial commitments by segment at December 31, 2005 was as follows:

(in millions)	Total Amounts Committed	Amount of Commitment Expiration			
		Less Than One Year	One Through Three Years	Four Through Five Years	After Five Years
Letters of credit:					
Life Insurance & Retirement Services	\$ 185	\$ 53	\$ 9	\$ 22	\$ 101
DBG	188	188	—	—	—
Standby letters of credit:					
Capital Markets	1,758	8	52	70	1,628
Guarantees:					
Life Insurance & Retirement Services ^(a)	3,456	109	400	—	2,947
Aircraft Finance	147	51	14	—	82
Asset Management	82	27	9	46	—
Parent Company ^(b)	393	392	1	—	—
Other commercial commitments ^(c) :					
Capital Markets ^(d)	10,932	2,241	1,734	789	6,168
Aircraft Finance ^(e)	1,883	—	131	868	884
Life Insurance & Retirement Services ^(f)	3,505	626	1,286	748	845
Asset Management	607	437	155	15	—
DBG ^(g)	1,334	—	—	—	1,334
Total	\$ 24,470	\$4,132	\$3,791	\$2,558	\$13,989

(a) Primarily AIG SunAmerica construction guarantees connected to affordable housing investments.

(b) Represents reimbursement obligations under letters of credit issued by commercial banks.

(c) Excludes commitments with respect to pension plans. The annual pension contribution for 2006 is expected to be approximately \$70 million for U.S. and non-U.S. plans. See also Note 15 of Notes to Consolidated Financial Statements.

(d) Primarily liquidity facilities provided in connection with certain municipal swap transactions and collateralized bond obligations.

(e) Primarily in connection with options to acquire aircraft.

(f) Primarily AIG SunAmerica commitments to invest in partnerships.

(g) Primarily commitments to invest in limited partnerships.

“Rating triggers” have been defined by one independent rating agency to include clauses or agreements the outcome of which depends upon the level of ratings maintained by one or more rating agencies. Rating triggers generally relate to events

which (i) could result in the termination or limitation of credit availability, or require accelerated repayment, (ii) could result in the termination of business contracts or (iii) could require a company to post collateral for the benefit of counterparties.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

AIG believes that any of its or its subsidiaries' contractual obligations that are subject to "ratings triggers" or financial covenants relating to "ratings triggers" would not have a material adverse effect on its financial condition or liquidity.

As a result of the downgrades of AIG's long-term senior debt ratings, AIG was required to post approximately \$1.16 billion of collateral with counterparties to municipal guaranteed investment contracts and financial derivatives transactions. In the event of a further downgrade, AIG will be required to post additional collateral. It is estimated that, as of the close of business on February 28, 2006, based on AIG's outstanding municipal guaranteed investment agreements and financial derivatives transactions as of such date, a further downgrade of AIG's long-term senior debt ratings to 'Aa3' by Moody's or 'AA-' by S&P would permit counterparties to call for approximately \$962 million of additional collateral. Further, additional downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIG manages its liquidity. The actual amount of additional collateral that AIG would be required to post to counterparties in the event of such downgrades depends on market conditions, the market value of the outstanding affected transactions and other factors prevailing at the time of the downgrade. Additional obligations to post collateral will increase the demand on AIG's liquidity.

Shareholders' Equity

AIG's consolidated shareholders' equity increased \$6.64 billion during 2005. During 2005, retained earnings increased \$8.86 billion, resulting from net income less dividends. Unrealized appreciation of investments, net of taxes, decreased \$1.98 billion and the cumulative translation adjustment loss, net of taxes, increased \$540 million. During 2005, there was a gain of \$28 million, net of taxes, relating to derivative contracts designated as cash flow hedging instruments. See also the discussion under "Operating Review" and "Liquidity" herein, Notes 1(ee), 8(d) and 20 of Notes to Consolidated Financial Statements and the Consolidated Statement of Comprehensive Income.

AIG has in the past reinvested most of its unrestricted earnings in its operations and believes such continued reinvestment in the future will be adequate to meet any foreseeable capital needs. However, AIG may choose from time to time to raise additional funds through the issuance of additional securities.

Stock Purchase

During 2005, AIG purchased in the open market 2,477,100 shares of its common stock. AIG from time to time may buy shares of its common stock in the open market for general corporate purposes, including to satisfy its obligations under various employee benefit plans. At December 31, 2005, an additional 36,542,700 shares could be purchased under the then current authorization by AIG's Board of Directors.

Dividends from Insurance Subsidiaries

Payments of dividends to AIG by its insurance subsidiaries are subject to certain restrictions imposed by regulatory authorities. With respect to AIG's domestic insurance subsidiaries, the payment of any dividend requires formal notice to the insurance department in which the particular insurance subsidiary is domiciled. Under the laws of many states, an insurer may pay a dividend without prior approval of the insurance regulator when the amount of the dividend is below certain regulatory thresholds. Largely as a result of the restrictions, approximately 89 percent of consolidated shareholders' equity was restricted from immediate transfer to AIG parent at December 31, 2005. To enhance their current capital positions, dividends from the DBG companies were suspended in the fourth quarter of 2005, and AIG has taken various other actions. See "Regulation and Supervision" below. Furthermore, AIG cannot predict how recent regulatory investigations may affect the ability of its regulated subsidiaries to pay dividends. See "Risk Factors — Regulatory Investigations" in Item 1A. Risk Factors.

With respect to AIG's foreign insurance subsidiaries, the most significant insurance regulatory jurisdictions include Bermuda, Japan, Hong Kong, Taiwan, the United Kingdom, Thailand and Singapore.

AIG cannot predict whether the regulatory investigations currently underway or future regulatory issues will impair AIG's financial condition, results of operations or liquidity. To AIG's knowledge, no AIG company is currently on any regulatory or similar "watch list" with regard to solvency. See also the discussion under "Liquidity" herein and Note 11 of Notes to Consolidated Financial Statements, as well as "Risk Factors" in Item 1A. Risk Factors.

Regulation and Supervision

AIG's insurance subsidiaries, in common with other insurers, are subject to regulation and supervision by the states and jurisdictions in which they do business. In the U.S. the National Association of Insurance Commissioners (NAIC) has developed Risk-Based Capital (RBC) requirements. RBC relates an individual insurance company's statutory surplus to the risk inherent in its overall operations.

In connection with its Restatements, AIG examined and evaluated each of the items that have been restated or adjusted in its consolidated GAAP financial statements to determine whether restatement of the previously filed statutory financial statements of its insurance company subsidiaries would be required. In October and early November 2005, AIG completed its audited statutory financial statements for 2004 for all of the Domestic General Insurance companies. The statutory accounting treatment of the various items requiring adjustment or restatement was reviewed and agreed to with the relevant state insurance regulators in advance of the filings. Adjustments necessary to reflect the cumulative effect on statutory surplus of adjustments relating to years prior to 2004 were made to 2004 opening surplus, and 2004 statutory net income was restated accordingly. Previously reported General Insurance

statutory surplus at December 31, 2004 was reduced by approximately \$3.5 billion to approximately \$20.6 billion.

AIG also recently completed its 2005 unaudited statutory financial statements for all of its Domestic General Insurance subsidiaries, again after reviewing and agreeing with the relevant state insurance regulators the statutory accounting treatment of various items. The state regulators have permitted the Domestic General Insurance companies to record a \$724 million reduction to opening statutory surplus as of January 1, 2005 to reflect the effects of the Second Restatement.

Statutory capital of each company continued to exceed minimum company action level requirements following the adjustments, but AIG nonetheless contributed an additional \$750 million of capital into American Home effective September 30, 2005 and contributed a further \$2.25 billion of capital in February 2006 for a total of approximately \$3 billion of capital into Domestic General Insurance subsidiaries effective December 31, 2005. To enhance their current capital positions, dividends from the DBG companies were suspended in the fourth quarter of 2005. AIG believes it has the capital resources and liquidity to fund any necessary statutory capital contributions. AIG will review the capital position of its insurance company subsidiaries with various rating agencies and regulators to determine if additional capital contributions or other actions are warranted.

As discussed above, various regulators have commenced investigations into certain insurance business practices. In addition, the OTS and other regulators routinely conduct examinations of AIG and its subsidiaries, including AIG's consumer finance operations. AIG cannot predict the ultimate effect that these investigations and examinations, or any additional regulation arising therefrom, might have on its business. Federal, state or local legislation may affect AIG's ability to operate and expand its various financial services businesses, and changes in the current laws, regulations or interpretations thereof may have a material adverse effect on these businesses. See "Risk Factors — Regulatory Investigations" in Item 1A. Risk Factors for a further discussion of the effect these investigations may have on AIG's businesses.

AIG's U.S. operations are negatively affected under guarantee fund assessment laws which exist in most states. As a result of operating in a state which has guarantee fund assessment laws, a solvent insurance company may be assessed for certain obligations arising from the insolvencies of other insurance companies which operated in that state. AIG generally records these assessments upon notice. Additionally, certain states permit at least a portion of the assessed amount to be used as a credit against a company's future premium tax liabilities. Therefore, the ultimate net assessment cannot reasonably be estimated. The guarantee fund assessments net of credits for 2005, 2004, and 2003 were \$124 million, \$118 million and \$77 million, respectively.

AIG is also required to participate in various involuntary pools (principally workers compensation business) which provide insurance coverage for those not able to obtain such coverage in the voluntary markets. This participation is also

recorded upon notification, as these amounts cannot reasonably be estimated.

A substantial portion of AIG's General Insurance business and a majority of its Life Insurance & Retirement Services business are conducted in foreign countries. The degree of regulation and supervision in foreign jurisdictions varies. Generally, AIG, as well as the underwriting companies operating in such jurisdictions, must satisfy local regulatory requirements. Licenses issued by foreign authorities to AIG subsidiaries are subject to modification and revocation. Thus, AIG's insurance subsidiaries could be prevented from conducting future business in certain of the jurisdictions where they currently operate. AIG's international operations include operations in various developing nations. Both current and future foreign operations could be adversely affected by unfavorable political developments up to and including nationalization of AIG's operations without compensation. Adverse effects resulting from any one country may affect AIG's results of operations, liquidity and financial condition depending on the magnitude of the event and AIG's net financial exposure at that time in that country.

Foreign insurance operations are individually subject to local solvency margin requirements that require maintenance of adequate capitalization, which AIG complies with by country. In addition, certain foreign locations, notably Japan, have established regulations that can result in guarantee fund assessments. These have not had a material effect on AIG's results of operations.

Liquidity

AIG's liquidity is primarily derived from the operating cash flows of its General and Life Insurance & Retirement Services operations. Management believes that AIG's liquid assets, its net cash provided by operations, and access to short term funding through commercial paper and bank credit facilities will enable it to meet any anticipated cash requirements. See "Risk Factors — Access to Capital Markets" in Item 1A. Risk Factors.

At December 31, 2005, AIG's consolidated invested assets included \$17.24 billion of cash and short-term investments. Consolidated net cash provided from operating activities in 2005 amounted to \$25.14 billion.

The liquidity of the combined insurance operations is derived both domestically and abroad. The combined insurance operating cash flow is derived from two sources, underwriting operations and investment operations. Cash flow includes periodic premium collections, including policyholders' contract deposits, cash flows from investment operations and paid loss recoveries less reinsurance premiums, losses, benefits, and acquisition and operating expenses. Generally, there is a time lag from when premiums are collected and, when as a result of the occurrence of events specified in the policy, the losses and benefits are paid. Investment income cash flow is primarily derived from interest and dividends received and includes realized capital gains net of realized capital losses. See also the discussions under "Operating Review — General Insurance

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Operations" and "Life Insurance & Retirement Services Operations" herein.

With respect to General Insurance operations, if paid losses accelerated beyond AIG's ability to fund such paid losses from current operating cash flows, AIG might need to liquidate a portion of its General Insurance investment portfolio and/or arrange for financing. Potential events causing such a liquidity strain could be the result of several significant catastrophic events occurring in a relatively short period of time. Additional strain on liquidity could occur if the investments sold to fund such paid losses were sold into a depressed market place and/or reinsurance recoverable on such paid losses became uncollectible or collateral supporting such reinsurance recoverable significantly decreased in value. See also the discussions under "Operating Review — General Insurance Operations" herein.

With respect to Life Insurance & Retirement Services operations, if a substantial portion of the Life Insurance & Retirement Services operations bond portfolio diminished significantly in value and/or defaulted, AIG might need to liquidate other portions of its Life Insurance & Retirement Services investment portfolio and/or arrange financing. Potential events causing such a liquidity strain could be the result of economic collapse of a nation or region in which AIG Life Insurance & Retirement Services operations exist, nationalization, terrorist acts, or other such economic or political upheaval. In addition, a significant rise in interest rates leading to a significant increase in policyholder surrenders could also create a liquidity strain. See also the discussions under "Operating Review — Life Insurance & Retirement Services Operations" herein.

In addition to the combined insurance pretax operating cash flow, AIG's insurance operations held \$9.63 billion in cash and short-term investments at December 31, 2005. Operating cash flow and the cash and short-term balances held provided AIG's insurance operations with a significant amount of liquidity. AIG subsidiaries have also issued debt securities to fund insurance needs. In December 2005, Transatlantic issued \$750 million of debt securities in a public offering, of which \$450 million were purchased by other AIG subsidiaries. Transatlantic contributed the proceeds of the offering to a reinsurance company subsidiary.

This liquidity is available, among other things, to purchase predominately high quality and diversified fixed income securities and, to a lesser extent, marketable equity securities, and to provide mortgage loans on real estate, policy loans, and collateral loans. This cash flow coupled with proceeds of approximately \$139 billion from the maturities, sales and redemptions of fixed income securities and from the sale of equity securities was used to purchase approximately \$165 billion of fixed income securities and marketable equity securities during 2005.

AIG's major Financial Services operating subsidiaries consist of AIGFP, ILFC, AGF and AIGCFG. Sources of funds considered in meeting the liquidity needs of AIGFP's operations include guaranteed investment agreements, issuance of long-term and short-term debt, proceeds from maturities and sales of securities available for sale, securities sold under

repurchase agreements, and securities and spot commodities sold but not yet purchased. ILFC, AGF and AIGCFG all utilize the commercial paper markets, retail and wholesale deposits, bank loans and bank credit facilities as sources of liquidity. ILFC and AGF also fund in the domestic and international capital markets without reliance on any guarantee from AIG. An additional source of liquidity for ILFC is the use of export credit facilities. AIGCFG also uses wholesale and retail bank deposits as sources of funds. On occasion, AIG has provided equity capital to ILFC, AGF and AIGCFG and provides intercompany loans to AIGCFG. An AIG subsidiary purchased additional shares of ILFC in the amount of \$400 million during the third quarter of 2005. Cash flow provided from operations is a major source of liquidity for AIG's primary Financial Services operating subsidiaries.

AIG, the parent company, funds its short-term working capital needs through commercial paper issued by AIG Funding. As of December 31, 2005, AIG Funding had \$2.69 billion of commercial paper outstanding with an average maturity of 32 days. At February 28, 2006, AIG Funding had \$5.3 billion of commercial paper outstanding with an average maturity of 24 days. As additional liquidity, AIG parent has a \$2 billion inter-company revolving credit facility provided by certain of its subsidiaries, a \$1.375 billion 364-day revolving bank credit facility that expires in July 2006, a \$1.375 billion five year revolving bank credit facility that expires in July 2010 and a \$3 billion 364-day revolving credit facility that expires in November 2006, of which \$1.14 billion is currently available as back-up liquidity. AIG parent's primary sources of cash flow are dividends and loans from its subsidiaries. Largely as a result of regulatory restrictions, approximately 89 percent of consolidated shareholders' equity was restricted from immediate transfer to AIG parent at December 31, 2005. AIG cannot predict how recent regulatory investigations may affect the ability of its regulated subsidiaries to pay dividends. See "Risk Factors — Regulatory Investigations" in Item 1A. Risk Factors. AIG parent's primary uses of cash flow are for debt service, capital contributions to subsidiaries and the payment of dividends to shareholders. See also Note 9 of Notes to Consolidated Financial Statements for additional information on debt maturities for AIG and its subsidiaries.

The capital contributions referred to under Item 1. Business — Regulation and the settlements described under Item 3. Legal Proceedings were funded using existing capacity from internal and external sources, including the issuance of commercial paper.

Special Purpose Vehicles and Off Balance Sheet Arrangements

AIG uses special purpose vehicles (SPVs) and off balance sheet arrangements in the ordinary course of business. As a result of recent changes in accounting, a number of SPVs and off balance sheet arrangements have been reflected in AIG's consolidated financial statements. In January 2003, FASB issued Interpretation No. 46, "Consolidation of Variable Interest Entities" (FIN 46). FIN 46 addressed the consolidation and disclosure rules for nonoperating entities that are now

defined as Variable Interest Entities (VIEs). In December 2003, FASB issued a revision to Interpretation No. 46 (FIN 46R).

AIG has guidelines with respect to the formation of and investment in SPVs and off balance sheet arrangements. In addition, AIG has expanded the responsibility of its Complex Structured Financial Transaction Committee (CSFT) to include the review of any transaction that could subject AIG to heightened legal, reputational, regulatory, accounting or other risk. See “Management’s Report on Internal Control Over Financial Reporting” in Item 9A of Part II for a further discussion of the CSFT.

For additional information related to AIG’s activities with respect to VIEs and certain guarantees see “Recent Accounting Standards” herein and also Notes 1 and 19 of Notes to Consolidated Financial Statements. Also, for additional disclosure regarding AIG’s commercial commitments (including guarantors), see “Contractual Obligations and Other Commercial Commitments” herein.

Derivatives

Derivatives are financial instruments among two or more parties with returns linked to or “derived” from some underlying equity, debt, commodity or other asset, liability, or index. Derivatives payments may be based on interest rates and exchange rates and/or prices of certain securities, commodities, financial or commodity indices, or other variables. The more significant types of derivative arrangements in which AIG transacts are swaps, forwards, futures and options. In the normal course of business, with the agreement of the original counterparty, these contracts may be terminated early or assigned to another counterparty.

The overwhelming majority of AIG’s derivatives activities are conducted by the Capital Markets operations, thus permitting AIG to participate in the derivatives dealer market acting primarily as principal. In these derivative operations, AIG structures transactions that generally allow its counterparties to obtain, or hedge, exposure to changes in interest and foreign currency exchange rates, credit events, securities’ prices and certain commodities and financial or commodity indices. AIG’s customers — such as corporations, financial institutions, multinational organizations, sovereign entities, government agencies and municipalities — use derivatives to hedge their own market exposures. For example, a futures, forward or option contract can be used to protect the customers’ assets or liabilities against price fluctuations.

A counterparty may default on any obligation to AIG, including a derivative contract. Credit risk is a consequence of extending credit and/or carrying trading and investment positions. Credit risk exists for a derivative contract when that contract has a positive fair value to AIG. To help manage this risk, AIGFP’s credit department operates within the guidelines set by the AIG Credit Risk Committee. This committee establishes the credit policy, sets limits for counterparties and provides limits for derivative transactions with counterparties having different credit ratings. In addition to credit ratings, this committee takes into account other factors, including the industry and country of the counterparty. Transactions which

fall outside these pre-established guidelines require the specific approval of the AIG Credit Risk Committee. It is also AIG’s policy to establish reserves for potential credit impairment when necessary.

In addition, AIGFP utilizes various credit enhancements, including letters of credit, guarantees, collateral, credit triggers, credit derivatives, and margin agreements to reduce the credit risk relating to its outstanding financial derivative transactions. AIGFP requires credit enhancements in connection with specific transactions based on, among other things, the creditworthiness of the counterparties, and the transaction’s size and maturity.

AIG’s Derivatives Review Committee provides an independent review of any proposed derivative transaction or program except those derivative transactions entered into by AIGFP with third parties. The committee examines, among other things, the nature and purpose of the derivative transaction, its potential credit exposure, if any, and the estimated benefits.

FAS 133 requires that third-party derivatives used for hedging must be specifically matched with the underlying exposures to an outside third party and documented contemporaneously to qualify for hedge accounting treatment. In most cases, AIG did not meet these hedging requirements with respect to certain hedging transactions. Not meeting the requirements of FAS 133 does not result in any changes in AIG’s liquidity or its overall financial condition even though inter-period volatility of earnings is increased.

See also Note 20 of Notes to Consolidated Financial Statements for detailed information relating to AIG’s derivative activities, and Note 1(ee) of Notes to Consolidated Financial Statements for AIG’s derivative accounting policies.

Managing Market Risk

Market risk is the risk of loss of fair value resulting from adverse fluctuations in interest rates, foreign currencies, equities and commodity prices. AIG has exposures to these risks.

AIG analyzes market risk using various statistical techniques including Value at Risk (VaR). VaR is a summary statistical measure that applies the estimated volatility and correlation of market factors to AIG’s market positions. The output from the VaR calculation is the maximum loss that could occur over a defined period of time given a certain probability. While VaR models are relatively sophisticated, the quantitative market risk information generated is limited by the assumptions and parameters established in creating the related models. AIG believes that statistical models alone do not provide a reliable method of monitoring and controlling market risk. Therefore, such models are tools and do not substitute for the experience or judgment of senior management.

Insurance

AIG has performed a separate VaR analysis for the General Insurance and Life Insurance & Retirement Services segments and for each market risk within each segment. For purposes of the VaR calculation, the insurance assets and liabilities from GICs are included in the Life Insurance & Retirement Services

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

segment. For the calculations in the analyses the financial instrument assets included are the insurance segments' invested assets, excluding real estate and investment income due and accrued, and the financial instrument liabilities included are reserve for losses and loss expenses, reserve for unearned premiums, future policy benefits for life and accident and health insurance contracts and other policyholders' funds.

AIG calculated the VaR with respect to the net fair value of each of AIG's insurance segments as of December 31, 2005 and December 31, 2004. The VaR number represents the maximum potential loss as of those dates that could be incurred with a 95 percent confidence (i.e., only five percent of historical scenarios show losses greater than the VaR figure) within a one-month holding period. AIG uses the historical simulation methodology that entails repricing all assets and liabilities under explicit changes in market rates within a specific historical time period. AIG uses the most recent three years of historical market information for interest rates, foreign exchange rates, and equity index prices. For each scenario,

each transaction was repriced. Portfolio, business unit and finally AIG-wide scenario values are then calculated by netting the values of all the underlying assets and liabilities.

The following table presents the VaR on a combined basis and of each component of market risk for each of AIG's insurance segments as of December 31, 2005 and 2004. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

(in millions)	General Insurance		Life Insurance & Retirement Services	
	2005	2004	2005	2004
Market risk:				
Combined	\$1,617	\$1,396	\$4,515	\$5,024
Interest rate	1,717	1,563	4,382	4,750
Currency	130	139	541	478
Equity	535	727	762	1,024

The following table presents the average, high and low VaRs on a combined basis and of each component of market risk for each of AIG's insurance segments for the years 2005 and 2004. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

(in millions)	2005			2004		
	Average	High	Low	Average	High	Low
General Insurance:						
Market risk:						
Combined	\$1,585	\$1,672	\$1,396	\$1,299	\$1,497	\$1,100
Interest rate	1,746	1,931	1,563	1,407	1,591	1,173
Currency	125	139	111	111	139	88
Equity	651	727	535	744	797	688
Life Insurance & Retirement Services:						
Market risk:						
Combined	\$4,737	\$5,024	\$4,515	\$4,021	\$5,024	\$3,075
Interest rate	4,488	4,750	4,382	3,831	4,750	2,967
Currency	511	560	442	326	478	257
Equity	953	1,024	762	884	1,024	758

The Combined VaR and Interest Rate VaR for Life Insurance & Retirement Services trended higher during 2004 because of growth in the Asian life businesses. The December 2004 VaR results are equal to the maximum values observed during the year.

During 2005, the Combined VaR and Interest Rate VaR for Life Insurance & Retirement Services remained in a narrower range. The December 2005 VaR results are somewhat lower than the December 2004 figures because long-term interest rates in Asia declined during the year.

In addition, the increase in Combined and Interest Rate VaRs from 2004 to 2005 in the General Insurance division was caused by growth in this business.

Financial Services

AIG generally manages its market exposures within Financial Services by maintaining offsetting positions. Capital Markets seeks to minimize or set limits for open or uncovered market

positions. Credit exposure is managed separately. See the discussion on the management of credit risk above.

AIG's Market Risk Management Department provides detailed independent review of AIG's market exposures, particularly those market exposures of the Capital Markets operations. This department determines whether AIG's market risks, as well as those market risks of individual subsidiaries, are within the parameters established by AIG's senior management. Well established market risk management techniques such as sensitivity analysis are used. Additionally, this department verifies that specific market risks of each of certain subsidiaries are managed and hedged by that subsidiary.

ILFC is exposed to market risk and the risk of loss of fair value and possible liquidity strain resulting from adverse fluctuations in interest rates. As of December 31, 2005 and December 31, 2004, AIG statistically measured the loss of fair value through the application of a VaR model. In this analysis, the net fair value of Aircraft Finance operations was determined using the financial instrument assets which included the

tax adjusted future flight equipment lease revenue, and the financial instrument liabilities which included the future servicing of the current debt. The estimated effect of the current derivative positions was also taken into account.

AIG calculated the VaR with respect to the net fair value of Aircraft Finance operations using the historical simulation methodology, as previously described. For the years 2005 and 2004, the average VaR with respect to the net fair value of Aircraft Finance operations was approximately \$135 million and \$70 million, respectively.

Capital Markets operations are exposed to market risk due to changes in the level and volatility of interest rates, foreign currency exchange rates, equity prices and commodity prices. AIGFP hedges its exposure to these risks primarily through swaps, options, forwards, and futures. To economically hedge interest rate risks, AIGFP may also purchase U.S. and foreign government obligations.

AIGFP does not seek to manage the market risk of each transaction through an individual third-party offsetting transaction. Rather, AIGFP takes a portfolio approach to the management of its market risk exposures. AIGFP values the predominant portion of its market-sensitive transactions by marking them to market currently through income. A smaller portion is priced by estimated fair value based upon an extrapolation of market factors. There is another limited portion of transactions where the initial fair value is not recorded through income currently and gains or losses are recognized over the life of the transactions. These valuations represent an assessment of the present values of expected future cash flows and may include reserves for such risks as are deemed appropriate by AIGFP and AIG management.

The recorded values of these transactions may be different from the values that might be realized if AIGFP were required to sell or close out the transactions prior to maturity. AIG believes that such differences are not significant to financial condition or liquidity. Such differences would be immediately recognized when the transactions are sold or closed out prior to maturity.

AIGFP attempts to secure reliable and independent current market prices, such as published exchange prices, external subscription services such as from Bloomberg or Reuters or third-party broker quotes for use in this model. When such prices are not available, AIGFP uses an internal methodology which includes extrapolation from observable and verifiable prices nearest to the dates of the transactions. Historically, actual results have not materially deviated from these models in any material respect.

Systems used by Capital Markets operations can monitor each unit's respective market positions on an intraday basis. AIGFP operates in major business centers overseas and therefore is open for business essentially 24 hours a day. Thus, the market exposure and offset strategies are monitored, reviewed and coordinated around the clock.

AIGFP applies various testing techniques which reflect significant potential market movements in interest rates, foreign exchange rates, commodity and equity prices, volatility levels, and the effect of time. These techniques vary by currency and are regularly changed to reflect factors affecting

the derivatives portfolio. The results from these analyses are regularly reviewed by AIG management.

As described above, Capital Markets operations are exposed to the risk of loss of fair value from adverse fluctuations in interest rate and foreign currency exchange rates and equity and commodity prices as well as implied volatilities thereon. AIG statistically measures the losses of fair value through the application of a VaR model across Capital Markets.

Capital Markets asset and liability portfolios for which the VaR analyses were performed included over the counter and exchange traded investments, derivative instruments and commodities. Because the market risk with respect to securities available for sale, at market, is substantially hedged, segregation of market sensitive instruments into trading and other than trading was not deemed necessary. The VaR calculation is unaffected by the accounting treatment of hedged transactions under FAS 133.

In the calculation of VaR for Capital Markets operations, AIG uses the same historical simulation methodology, described under Insurance above, which entails repricing all assets and liabilities under explicit changes in market rates within a specific historical time period. In 2004, AIGFP enhanced its library of factors by including implied option volatilities to construct the historical scenarios for simulation.

The following table presents the VaR on a combined basis and of each component of market risk for Capital Markets operations as of December 31, 2005 and 2004. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

<i>(in millions)</i>	2005	2004
Combined	\$22	\$17
Interest rate	9	11
Currency	3	4
Equity	14	16
Commodity	9	7

The following table presents the average, high, and low VaRs on a combined basis and of each component of market risk for Capital Markets operations for the years 2005 and 2004. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

<i>(in millions)</i>	2005			2004		
	Average	High	Low	Average	High	Low

Recent Accounting Standards

In December 2003, FASB issued a revision to Interpretation No. 46 (FIN46R). In March 2005, FASB issued FSP FIN46R-5, "Implicit Variable Interests under FASB Interpretation No. 46 (revised December 2003), Consolidation

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

of Variable Interest Entities." See also Note 19 of Notes to Consolidated Financial Statements.

In July 2003, the American Institute of Certified Public Accountants issued SOP 03-1. See also Note 21 of Notes to Consolidated Financial Statements.

In December 2003, FASB issued Statement of Financial Accounting Standards No. 132 (Revised), "Employers' Disclosures About Pensions and Other Post Retirement Benefits," which revised disclosure requirements with respect to defined benefit plans. See also Note 15 herein.

At the March 2004 meeting, the Emerging Issue Task Force (EITF) reached a consensus with respect to Issue No. 03-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments." On September 30, 2004, the FASB issued FASB Staff Position (FSP) EITF Issue 03-1-1, Effective Date of Paragraphs 10-20 of EITF Issue No. 03-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments." In November 2005, FASB issued FSP FAS 115-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments," which replaces the measurement and recognition guidance set forth in Issue No. 03-1 and codifies certain existing guidance on impairment.

At the September 2004 meeting, the EITF reached a consensus with respect to Issue No. 04-8, "Accounting Issues Related to Certain Features of Contingently Convertible Debt and the Effect on Diluted Earnings per Share."

In December 2004, the FASB issued Statement No. 123 (revised 2004) (FAS 123R), "Share Based Payment." In April 2005, the SEC delayed the effective date for the revised FAS No. 123.

On December 16, 2004, the FASB issued Statement No. 153, "Exchanges of Nonmonetary Assets — An Amend-

ment of APB Opinion No. 29" (FAS 153). FAS 153 amends APB Opinion No. 29, "Accounting for Nonmonetary Transactions."

On June 1, 2005, the FASB issued Statement No. 154, "Accounting Changes and Error Corrections" (FAS 154). FAS 154 replaces APB Opinion No. 20, "Accounting Changes" and FASB Statement No. 3, "Reporting Accounting Changes in Interim Financial Statements."

At the June 2005 meeting, the EITF reached a consensus with respect to Issue No. 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights".

On June 29, 2005, FASB issued Statement 133 Implementation Issue No. B38, "Embedded Derivatives: Evaluation of Net Settlement with Respect to the Settlement of a Debt Instrument through Exercise of an Embedded Put Option or Call Option."

On June 29, 2005, FASB issued Statement 133 Implementation Issue No. B39, "Application of Paragraph 13(b) to Call Options That Are Exercisable Only by the Debtor."

On September 19, 2005, FASB issued Statement of Position 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts."

On February 16, 2006, FASB issued Statement No. 155, "Accounting for Certain Hybrid Financial Instruments."

For further discussion of these recent accounting standards and their application to AIG, see Note 1(gg) of Notes to Consolidated Financial Statements.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of
American International Group, Inc.:

We have completed integrated audits of American International Group, Inc.'s 2005 and 2004 consolidated financial statements and of its internal control over financial reporting as of December 31, 2005, and an audit of its 2003 consolidated financial statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Our opinions, based on our audits, are presented below.

Consolidated financial statements and financial statement schedules

In our opinion, the consolidated financial statements listed in the accompanying index present fairly, in all material respects, the financial position of American International Group, Inc. and its subsidiaries (AIG) at December 31, 2005 and 2004, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2005 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedules listed in the accompanying index present fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. These financial statements and financial statement schedules are the responsibility of AIG's management. Our responsibility is to express an opinion on these financial statements and financial statement schedules based on our audits. We conducted our audits of these statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit of financial statements includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As described in Note 21 to the consolidated financial statements, AIG changed its accounting for certain non-traditional long duration contracts and for separate accounts as of January 1, 2004.

Internal control over financial reporting

Also, we have audited management's assessment, included in Management's Report on Internal Control Over Financial Reporting appearing under Item 9A, that AIG did not maintain effective internal control over financial reporting as of December 31, 2005 because of the effect of the material weaknesses relating to (1) controls over certain balance sheet reconciliations, (2) controls over the accounting for certain derivative transactions and (3) controls over income tax accounting, based on criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring

Organizations of the Treadway Commission (COSO). AIG's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express opinions on management's assessment and on the effectiveness of AIG's internal control over financial reporting based on our audit.

We conducted our audit of internal control over financial reporting in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. An audit of internal control over financial reporting includes obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we consider necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

A material weakness is a control deficiency, or a combination of control deficiencies, that results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected. As of December 31, 2005, the following material weaknesses have been identified and included in management's assessment.

Controls over certain balance sheet reconciliations: AIG did not maintain effective controls to ensure the accuracy of certain balance sheet accounts in certain key segments of AIG's operations, principally in the Domestic Brokerage Group. Specifically, accounting personnel did not perform timely reconciliations and did not properly resolve reconciling items for premium receivables, reinsurance recoverables and in-

tercompany accounts. As a result, premiums and other considerations, incurred policy losses and benefits, insurance acquisition and other operating expenses, premiums and insurance balances receivable, reinsurance assets, reserve for losses and loss expenses, reserve for unearned premiums, other assets and retained earnings were misstated under GAAP.

Controls over the accounting for certain derivative transactions: AIG did not maintain effective controls over the evaluation and documentation of whether certain derivative transactions qualified under GAAP for hedge accounting. As a result, net investment income, realized capital gains (losses), other revenues, accumulated other comprehensive income (loss) and related balance sheet accounts were misstated under GAAP.

Controls over income tax accounting: AIG did not maintain effective controls over the determination and reporting of certain components of the provision for income taxes and related deferred income tax balances. Specifically, AIG did not maintain effective controls to review and monitor the accuracy of the components of the income tax provision calculations and related income tax balances and to monitor the differences between the income tax basis and the financial reporting basis of assets and liabilities to effectively reconcile the differences to the deferred income tax balances. As a result, income tax expense, income taxes payable, deferred income tax assets and liabilities, retained earnings and accumulated other comprehensive income were misstated under GAAP.

The control deficiencies described above resulted in the restatement in 2005 of AIG's 2004, 2003 and 2002 annual consolidated financial statements and financial statement schedules and the interim consolidated financial statements for each quarter in 2004 and 2003 and for each of the first three

quarters in 2005. In addition, these control deficiencies could result in other misstatements to the aforementioned financial statement accounts and disclosures that would result in a material misstatement to the annual or interim AIG consolidated financial statements that would not be prevented or detected. Accordingly, AIG management has concluded that these control deficiencies constitute material weaknesses. These material weaknesses were considered in determining the nature, timing, and extent of audit tests applied in our audit of the 2005 consolidated financial statements, and our opinion regarding the effectiveness of AIG's internal control over financial reporting does not affect our opinion on those consolidated financial statements.

In our opinion, management's assessment that AIG did not maintain effective internal control over financial reporting as of December 31, 2005, is fairly stated, in all material respects, based on criteria established in *Internal Control — Integrated Framework* issued by the COSO. Also, in our opinion, because of the effects of the material weaknesses described above on the achievement of the objectives of the control criteria, AIG has not maintained effective internal control over financial reporting as of December 31, 2005, based on criteria established in *Internal Control — Integrated Framework* issued by the COSO.

PricewaterhouseCoopers LLP

Notes to Consolidated Financial Statements

1. Summary of Significant Accounting Policies

(a) Principles of Consolidation: Certain of AIG's foreign subsidiaries included in the consolidated financial statements report on a fiscal year ending November 30. The consolidated financial statements include the accounts of AIG, its majority owned subsidiaries and those entities required to be consolidated under applicable accounting standards. See also Note 1(gg) herein. All material intercompany accounts and transactions have been eliminated.

(b) Basis of Presentation: The accompanying financial statements have been prepared on the basis of U.S. generally accepted accounting principles (GAAP). The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods. Actual results could differ from those estimates.

General Insurance Operations: AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of property and casualty insurance both domestically and abroad. Premiums are earned primarily on a pro rata basis over the term of the related coverage. The reserve for unearned premiums represents the portion of premiums written relating to the unexpired terms of coverage.

Acquisition costs represent those costs, including commissions and premium taxes, that vary with and are primarily related to the acquisition of new business. These costs are deferred and amortized over the period in which the related premiums written are earned. The deferred policy acquisition cost (DAC) asset is reviewed for recoverability based on the profitability of the underlying insurance contracts. Investment income is not anticipated in the recoverability of deferred policy acquisition costs.

Losses and loss expenses are charged to income as incurred. The reserve for losses and loss expenses represents the accumulation of estimates for reported losses and includes provisions for losses incurred but not reported. The methods of determining such estimates and establishing resulting reserves, including amounts relating to reserves for estimated unrecoverable reinsurance, are reviewed and updated. Adjustments resulting therefrom are reflected in income currently. AIG discounts its loss reserves relating to workers compensation business written by its U.S. domiciled subsidiaries as permitted by the domiciliary statutory regulatory authorities. As of year end 2005, this discount is \$512 million on a tabular basis and \$1.11 billion on a non-tabular basis. Additionally, AIG discounts liability business assumed by American International Reinsurance Company, Ltd. (AIRCO) from the Domestic Brokerage Group (DBG) as permitted by its domiciliary regulatory authority. As of year end 2005, this discount is \$490 million. The total amount of discount is \$2.11 billion or less than three percent of outstanding loss reserves as reflected on the accompanying consolidated balance sheet.

Life Insurance & Retirement Services Operations: AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad. Insurance-oriented products consist of individual and group life, payout annuities, endowment, and accident and health policies. Retirement savings-oriented products consist generally of fixed and variable annuities.

Premiums for life insurance products and life contingent annuities are recognized as revenues when due. Estimates for premiums due but not yet collected are accrued. Benefits and expenses are provided against such revenues to recognize profits over the estimated life of the policies. Revenues for universal life and investment-type products consist of policy charges for the cost of insurance, administration, and surrenders during the period. Policy charges collected with respect to future services are deferred and recognized in a manner similar to the deferred policy acquisition costs related to such products. Expenses include interest credited to policy account balances and benefit payments made in excess of policy account balances. Personal accident products are accounted for in a manner similar to general insurance products described above.

Policy acquisition costs for life insurance products are generally deferred and amortized over the premium paying period of the policy Statement of Financial Accounting Standards No. 60, "Accounting and Reporting by Insurance Enterprises" (FAS 60). Policy acquisition costs and policy issuance costs related to universal life and investment-type products (investment-oriented products) are deferred and amortized, with interest, in relation to the incidence of estimated gross profits to be realized over the estimated lives of the contracts under Statement of Financial Accounting Standards No. 97, "Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments" (FAS 97). Estimated gross profits are composed of net interest income, net realized investment gains and losses, fees, surrender charges, expenses, and mortality and morbidity gains and losses.

The resulting DAC asset is reviewed for recoverability based on the profitability (both current and projected future) of the underlying insurance contracts.

The deferred policy acquisition costs for investment-oriented products are adjusted with respect to estimated gross profits as a result of changes in the net unrealized gains or losses on debt and equity securities available for sale. That is, as debt and equity securities available for sale are carried at aggregate fair value, an adjustment is made to deferred policy acquisition costs equal to the change in amortization that would have been recorded if such securities had been sold at their stated aggregate fair value and the proceeds reinvested at current yields. The change in this adjustment, net of tax, is included with the change in net unrealized gains/losses on debt and equity securities available for sale that is credited or charged directly to comprehensive income. Deferred policy acquisition costs have been decreased by \$1.14 billion at December 31, 2005 and decreased by \$2.26 billion at December 31, 2004 for this adjustment. See also Note 4 herein.

Value of Business Acquired (VOBA) is determined at time of acquisition. This value is based on present value of future

1. Summary of Significant Accounting Policies*Continued*

pre-tax profits discounted at current yields applicable at time of purchase. For products accounted under FAS 60, the VOBA is amortized over the life of the business similar to that for Deferred Acquisition Costs based on the assumptions at purchase. For FAS 97 products, the VOBA is amortized in relation to the estimated gross profits to date for each period. No impairments have occurred for acquired business to date.

The liabilities for future policy benefits and policyholders' contract deposits are established using assumptions described in Note 6.

Financial Services: AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets transactions, consumer finance and insurance premium financing.

AIG's Aircraft Finance operations represent the operations of International Lease Finance Corporation (ILFC), which generates its revenues primarily from leasing new and used commercial jet aircraft to domestic and foreign airlines. Revenues also result from the remarketing of commercial jets for its own account, for airlines and for financial institutions.

ILFC, as lessor, leases flight equipment principally under operating leases. Accordingly, income is recognized over the life of the lease as rentals become receivable under the provisions of the lease or, in the case of leases with varying payments, under the straight-line method over the noncancelable term of the lease. In certain cases, leases provide for additional payments contingent on usage. Rental income is recognized at the time such usage occurs less a provision for future contractual aircraft maintenance. ILFC is also a remarketer of flight equipment for its own account and for airlines and financial institutions and provides, for a fee, fleet management services to certain third-party operators. ILFC's revenues from such operations consist of net gains on sales of flight equipment, commissions and management service fees.

The Capital Markets operations of AIG are conducted through AIG Financial Products Corp. and AIG Trading Group, Inc. and their respective subsidiaries (collectively referred to as AIGFP), which engages as principal in standard and customized interest rate, currency, equity, commodity, energy and credit products with top-tier corporations, financial institutions, governments, agencies, institutional investors, and high-net-worth individuals throughout the world. AIGFP also raises funds through municipal reinvestment contracts and other private and public securities offerings, investing the proceeds in a diversified portfolio of high grade securities and derivative transactions. AIGFP owns inventories in the commodities in which it trades and may reduce the exposure to market risk through the use of swaps, forwards, futures, and option contracts. See also Note 2 herein.

Consumer Finance operations include American General Finance, Inc. and its subsidiaries (AGF) as well as AIG Consumer Finance Group, Inc. (AIGCFG). AGF provides a wide variety of consumer finance products, including non-conforming real estate mortgages, consumer loans, retail sales finance and credit-related insurance to customers in the United

States. AIGCFG, through its subsidiaries, is engaged in developing a multi-product consumer finance business with an emphasis on emerging markets. See also Note 2 herein.

Finance charges are recognized as revenue using the interest method. Revenue ceases to be accrued when contractual payments are not received for four consecutive months for loans and retail sales contracts, and for six months for revolving retail accounts and private label receivables. Extension fees, late charges, and prepayment penalties are recognized as revenue when received.

Direct costs of originating loans, net of nonrefundable points and fees, are deferred and included in the carrying amount of the related loans. The amount deferred is recognized as an adjustment to finance charge revenues, using the interest method applied on a pool basis over a term that anticipates prepayments. If loans are prepaid, any remaining deferral is charged or credited to revenue.

The allowance for finance receivable losses is maintained at a level considered adequate to absorb estimated credit losses in the existing portfolio. The portfolio is periodically evaluated on a pooled basis and factors such as economic conditions, portfolio composition, and loss and delinquency experience are considered in the evaluation of the allowance.

Foreclosure proceedings are initiated on real estate loans when four monthly installments are past due, and these loans are charged off at foreclosure. All other finance receivables are charged off when minimal or no collections have been made for six months.

Together, the Aircraft Finance, Capital Markets and Consumer Finance operations generate the vast majority of the revenues produced by AIG's consolidated Financial Services operations.

Imperial A.I. Credit Companies also contribute to Financial Services income. This operation engages principally in insurance premium financing for both AIG's customers and those of other insurers.

Asset Management Operations: AIG's Asset Management operations comprise a wide variety of investment-related services and investment products including institutional and retail asset management, broker dealer services and spread-based investment business from the sale of guaranteed investment contracts, also known as funding agreements (GICs). Such products and services are offered to individuals and institutions both domestically and overseas. The fees generated with respect to Asset Management operations are recognized as revenues when earned. Certain costs incurred in the sale of mutual funds are deferred and subsequently amortized.

(c) Investments in Fixed Maturities and Equity Securities:

Bonds held to maturity are principally owned by the insurance subsidiaries and are carried at amortized cost where AIG has the ability and positive intent to hold these securities until maturity.

Where AIG may not have the positive intent to hold bonds and preferred stocks until maturity and not classified as trading, these securities are considered to be available for sale and carried at current market values. Interest income with respect to fixed maturity securities is accrued as earned.

1. Summary of Significant Accounting Policies

Continued

Premiums and discounts arising from the purchase of bonds are treated as yield adjustments over their estimated lives or call date, if applicable.

Bond trading securities are carried at current market values, and changes in fair value are recorded in income currently.

Common and preferred stocks are carried at current market values. Dividend income is generally recognized when receivable.

Unrealized gains and losses from investments in equity securities and fixed maturities available for sale are reflected as a separate component of comprehensive income, net of deferred income taxes in consolidated shareholders' equity currently. Unrealized gains and losses from investments in trading securities are reflected in income currently. Investments in fixed maturities and equity securities are recorded on a trade date basis.

Realized capital gains and losses are determined principally by specific identification. AIG evaluates its investments for impairment. As a matter of policy, the determination that a security has incurred an other-than-temporary decline in value and the amount of any loss recognition requires the judgment of AIG's management and a continual review of its investments.

In general, a security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer);
- The occurrence of a discrete credit event resulting in (i) the issuer defaulting on a material outstanding obligation; or (ii) the issuer seeking protection from creditors under the bankruptcy laws or any similar laws intended for the court supervised reorganization of insolvent enterprises; or (iii) the issuer proposing a voluntary reorganization pursuant to which creditors are asked to exchange their claims for cash or securities having a fair value substantially lower than par value of their claims; or
- In the opinion of AIG's management, it is probable that AIG may not realize a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

Once a security has been identified as other-than-temporarily impaired, the amount of such impairment is determined by reference to that security's contemporaneous market price and recorded as a charge to earnings.

AIG also enters into dollar roll agreements. These are agreements to sell mortgage-backed securities and to repurchase substantially similar securities at a specified price and date in the future. At December 31, 2005, 2004 and 2003, there were no dollar roll agreements outstanding.

(d) Mortgage Loans on Real Estate, Policy, and Collateral

Loans – net: Mortgage loans on real estate, policy loans, and collateral loans are carried at unpaid principal balances. Interest income on such loans is accrued as earned.

Impairment of mortgage loans on real estate and collateral loans is based upon certain risk factors and when collection of all amounts due under the contractual term is not probable. This impairment is generally measured based on the present value of expected future cash flows discounted at the loan's effective interest rate subject to the fair value of underlying collateral. Interest income on such loans is recognized as cash is received.

There is no allowance for policy loans, as these loans serve to reduce the death benefit paid when the death claim is made and the balances are effectively collateralized by the cash surrender value of the policy.

(e) Financial Services – Flight Equipment: Flight equipment is stated at cost. Major additions, modifications and interest are capitalized. Normal maintenance and repairs, airframe and engine overhauls and compliance with return conditions of flight equipment on lease are provided by and paid for by the lessee. Under the provisions of most leases for certain airframe and engine overhauls, the lessee is reimbursed for costs incurred up to but not exceeding contingent rentals paid to AIG by the lessee. AIG provides a charge to income for such reimbursements based upon the expected reimbursements during the life of the lease. Depreciation and amortization are computed on the straight-line basis to a residual value of approximately 15 percent over the estimated useful lives of the related assets but not exceeding 25 years. ILFC's management is very active in the airline industry and remains current on issues affecting its fleet, including events and circumstances that may affect impairment of aircraft values (e.g. residual values, useful life, current and future revenue generating capacity). Aircraft in the fleet are evaluated, as necessary, based on these events and circumstances in accordance with Statement of Financial Accounting Standards (FAS) No. 144 "Accounting for the Impairment or Disposal of Long-Lived Assets" (FAS 144). FAS 144 requires that long-lived assets be reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Recoverability of assets is measured by comparing the carrying amount of an asset to future undiscounted net cash flows expected to be generated by the asset. These evaluations for impairment are significantly affected by estimates of future revenues and other factors which involve some amount of uncertainty.

This caption also includes deposits for aircraft to be purchased. At the time the assets are retired or disposed of, the cost and associated accumulated depreciation and amortization are removed from the related accounts and the difference, net of proceeds, is recorded as a gain or loss.

(f) Financial Services – Securities Available for Sale, at market value:

These securities are held to meet long-term investment objectives and are accounted for as available for sale, carried at current market values and recorded on a trade-date basis. This portfolio is hedged using interest rate, foreign exchange, commodity and equity derivatives. The market risk associated with such hedges is managed on a portfolio basis, with third party hedging transactions executed as necessary. As hedge accounting treatment is not achieved in accordance with

1. Summary of Significant Accounting Policies*Continued*

FAS 133, the unrealized gains and losses on these securities resulting from changes in interest rates, currency rates and equity prices are recorded in consolidated shareholders' equity while the unrealized gains and losses on the related economic hedges are reflected in operating income.

(g) Financial Services – Trading Securities, at market value:

Trading securities are held to meet short term investment objectives, including hedging securities. These securities are recorded on a trade-date basis and carried at current market values. Unrealized gains and losses are reflected in income currently.

(h) Financial Services – Spot Commodities: Spot commodities are carried at lower of cost or market value and are recorded on a trade-date basis. The exposure to market risk may be reduced through the use of forwards, futures and option contracts. Lower of cost or market value reductions in commodity positions and unrealized gains and losses in related derivatives are reflected in income currently.

(i) Financial Services – Unrealized Gain and Unrealized Loss on Swaps, Options and Forward Transactions:

Interest rate, currency, equity and commodity swaps, swaptions, options and forward transactions are accounted for as derivatives recorded on a trade-date basis and are carried at current market values or estimated fair values when market values are not available. Unrealized gains and losses are reflected in income currently, where appropriate. In certain instances, when income is not recognized upfront under EITF 02-03, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities", (EITF 02-03), income is recognized over the life of the contract. Estimated fair values are based on the use of valuation models that utilize, among other things, current interest, foreign exchange, equity, commodity and volatility rates. AIG attempts to secure reliable and independent current market prices, such as published exchange prices, external subscription services' prices such as Bloomberg or Reuters or third-party broker quotes for use in its models. When such prices are not available, AIG uses an internal methodology which includes interpolation and extrapolation from observable and verifiable prices nearest to the dates of the transactions. These valuations represent an assessment of the present values of expected future cash flows of these transactions and reflect market and credit risk. The portfolio's discounted cash flows are evaluated with reference to current market conditions, maturities within the portfolio, and other relevant factors. Based upon this evaluation, it is determined what offsetting transactions, if any, are necessary to reduce the market risk of the portfolio. AIG manages its market risk with a variety of transactions, including swaps, trading securities, futures and forward contracts and other transactions as appropriate. Because of the limited liquidity of some of these instruments, the recorded values of these transactions may be different from the values that might be realized if AIG were to sell or close out

the transactions prior to maturity. AIG believes that such differences are not significant to the financial condition or liquidity. Such differences would be immediately recognized in income when the transactions are sold or closed out prior to maturity.

(j) Financial Services – Trading Assets and Trading Liabilities:

Trading assets and trading liabilities include option premiums paid and received and receivables from and payables to counterparties which relate to unrealized gains and losses on futures, forwards, and options and balances due from and due to clearing brokers and exchanges.

Futures, forwards, and options purchased and written are accounted for as derivatives on a trade-date basis and are carried at fair values. Unrealized gains and losses are reflected in income currently. The fair values of futures contracts are based on closing exchange quotations. Commodity forward transactions are carried at fair values derived from dealer quotations and underlying commodity exchange quotations. For long-dated forward transactions, where there are no dealer or exchange quotations, fair values are derived using internally developed valuation methodologies based on observable and available market information. Options are carried at fair values based on the use of valuation models that utilize, among other things, current interest or commodity rates, and foreign exchange and volatility rates, as applicable.

(k) Financial Services – Securities Purchased (Sold) Under Agreements to Resell (Repurchase), at contract value:

Purchases of securities under agreements to resell and sales of securities under agreements to repurchase are accounted for as collateralized borrowing or lending transactions and are recorded at their contracted resale or repurchase amounts, plus accrued interest. AIG's policy is to take possession of or obtain a security interest in securities purchased under agreements to resell.

AIG minimizes the credit risk that counterparties to transactions might be unable to fulfill their contractual obligations by monitoring customer credit exposure and collateral value and generally requiring additional collateral to be deposited with AIG when deemed necessary.

(l) Financial Services – Finance Receivables: Finance receivables are carried at amortized cost which includes accrued finance charges on interest bearing finance receivables, unamortized deferred origination costs, and unamortized net premiums and discounts on purchased finance receivables. They are net of unamortized finance charges and unamortized points and fees. The allowance for finance receivable losses is established through the provision for finance receivable losses charged to expense.

(m) Securities Lending Collateral and Securities Lending

Payable: AIG's insurance and asset management operations lend their securities and primarily take cash as collateral with respect to the securities lent. Invested collateral consists primarily of floating rate debt securities. Income earned on invested collateral, net of interest payable to the collateral provider, is recorded in net investment income.

1. Summary of Significant Accounting Policies

Continued

The market value of securities pledged under securities lending arrangements were \$59.0 billion and \$48.8 billion as of December 31, 2005 and 2004, respectively. Of these amounts, \$58.3 billion and \$48.2 billion represent securities included in bonds available for sale in AIG's consolidated balance sheet as of December 31, 2005 and 2004, respectively.

(n) Other Invested Assets: Other invested assets consist primarily of investments by AIG's insurance operations in hedge funds and limited partnerships.

Hedge funds and limited partnerships in which AIG holds in the aggregate less than a five percent interest are reported at fair value. The change in fair value is recognized as a component of other comprehensive income.

With respect to hedge funds and limited partnerships in which AIG holds in the aggregate a five percent or greater interest or less than five percent interest but AIG has more than a minor influence over the operations of the investee, AIG's carrying value is the net asset value. The changes in such net asset values accounted for under the equity method are recorded in earnings through net investment income.

AIG obtains the fair value of its investments in limited partnerships and hedge funds from information provided by the general partner or manager of each of these investments, the accounts of which are generally audited on an annual basis.

(o) Short-term investments: Short-term investments consist of interest bearing cash equivalents, time deposits, and investments maturing within one year, such as commercial paper.

(p) Reinsurance Assets: Reinsurance assets include the balances due from both reinsurance and insurance companies under the terms of AIG's reinsurance agreements for paid and unpaid losses and loss expenses, ceded unearned premiums and ceded future policy benefits for life and accident and health insurance contracts and benefits paid and unpaid. Amounts related to paid and unpaid losses and loss expenses with respect to these reinsurance agreements are substantially collateralized.

(q) Other Assets: Other assets consist of prepaid expenses, including deferred advertising costs, derivatives assets at market value, and other deferred charges. Generally, advertising costs are expensed as incurred except for certain direct response campaigns, which are deferred over the expected future benefit period in accordance with Statement of Position 93-7, "Reporting on Advertising Costs." In instances where AIG can demonstrate that its direct-response advertising, whose primary purpose is to elicit sales to customers, can be shown to have responded specifically to the advertising and that results in probable future economic benefits are capitalized. Deferred advertising costs are included in other assets, are amortized on a campaign by campaign basis over the expected economic future benefit period and reviewed regularly for recoverability. The amount reported in other assets was \$915 million and \$879 million at December 31, 2005 and 2004, respectively. The amount of expense amortized into earnings was \$272 mil-

lion, \$244 million and \$217 million, for 2005, 2004, and 2003, respectively.

(r) Deposit Liabilities: AIG has entered into certain insurance and reinsurance contracts, primarily in its general insurance segment, which do not contain sufficient amount and timing risk to be accounted for as insurance or reinsurance. Accordingly, these transactions are recorded based upon deposit accounting, and the premiums received, after deduction for certain related expenses, are recorded as deposits within Other liabilities on the consolidated balance sheet. Net proceeds of these deposits are invested and generate net investment income. As amounts are paid, consistent with the underlying contracts, the deposit liability is reduced. Periodically, AIG evaluates the expected payments to be made under each contract and adjusts the deposit liability through earnings in the current period.

(s) Investments in Partially Owned Companies: Generally, the equity method of accounting is used for AIG's investment in companies in which AIG's ownership interest approximates 20 percent but is not greater than 50 percent (minority owned companies). At December 31, 2005, AIG's significant investments in partially owned companies included its 24.3 percent interest in IPC Holdings, Ltd., its 23.4 percent interest in Allied World Assurance Holdings, Ltd., its 26 percent interest in Tata AIG Life Insurance Company, Ltd., its 26 percent interest in Tata AIG General Insurance Company, Ltd. and its 24.5 percent interest in The Fuji Fire and Marine Insurance Co., Ltd. This balance sheet caption also includes investments in less significant partially owned companies. The amounts of dividends received from unconsolidated entities where AIG's ownership interest is less than 50 percent were \$146 million, \$22 million and \$13 million in 2005, 2004 and 2003, respectively. The undistributed earnings of unconsolidated entities where AIG's ownership interest is less than 50 percent were \$179 million, \$445 million and \$320 million as of December 31, 2005, 2004 and 2003, respectively.

(t) Real Estate and Other Fixed Assets: The costs of buildings and furniture and equipment are depreciated principally on a straight-line basis over their estimated useful lives (maximum of 40 years for buildings and ten years for furniture and equipment). Expenditures for maintenance and repairs are charged to income as incurred; expenditures for betterments are capitalized and depreciated.

AIG periodically assesses the carrying value of its real estate relative to the market values of real estate within the specific local area, for the purpose of determining any asset impairment.

(u) Separate and Variable Accounts: Separate and variable accounts represent funds for which investment income and investment gains and losses accrue directly to the policyholders who predominantly bear the investment risk. Each account has specific investment objectives, and the assets are carried at market value. The assets of each account are legally segregated and are not subject to claims which arise out of any other

Notes to Consolidated Financial Statements *Continued*

1. Summary of Significant Accounting Policies

Continued

business of AIG. The liabilities for these accounts are generally equal to the account assets.

(v) Financial Services – Securities and Spot Commodities Sold but not yet Purchased, at market value: Securities and spot commodities sold but not yet purchased represent sales of securities and spot commodities not owned at the time of sale. The obligations arising from such transactions are recorded on a trade-date basis and carried at market values.

(w) Liabilities Connected to Trust Preferred Stock: Liabilities connected to trust preferred stock principally relates to outstanding securities issued by AGC, a wholly owned subsidiary of AIG. Cash distributions on such preferred stock are accounted for as interest expense.

(x) Preferred Shareholders' Equity in Subsidiary Companies: Preferred shareholders' equity in subsidiary companies relates principally to outstanding preferred stock or interest of ILFC, a wholly owned subsidiary of AIG. Cash distributions on such preferred stock or interest are accounted for as interest expense.

(y) Other Policyholders' Funds: Other policyholders' funds are reported at cost and include any policyholders' funds on deposit which encompasses premium deposits and similar items.

(z) Other Liabilities: Other liabilities consist of other funds on deposits, derivatives liabilities at market value, and other payables.

(aa) Short- and Long-Term Borrowings: AIG's funding is principally obtained from medium-term and long-term borrowings. Commercial paper, when issued at a discount, is recorded at the proceeds received and accreted to its par value. Long-term borrowings are carried at the principal amount borrowed, net of unamortized discounts or premiums. See Note 9 herein for additional information.

(bb) Translation of Foreign Currencies: Financial statement accounts expressed in foreign currencies are translated into U.S. dollars in accordance with Statement of Financial Accounting Standards No. 52, "Foreign Currency Translation" (FAS 52). Under FAS 52, functional currency assets and liabilities are translated into U.S. dollars generally using current rates of exchange prevailing at the balance sheet date of each respective subsidiary and the related translation adjustments are recorded as a separate component of comprehensive income, net of any related taxes, in consolidated shareholders' equity. Functional currencies are generally the currencies of the local operating environment. Income statement accounts expressed in functional currencies are translated using average exchange rates. The adjustments resulting from translation of financial statements of foreign entities operating

in highly inflationary economies are recorded in income. Exchange gains and losses resulting from foreign currency transactions are recorded in income currently. The exchange gain or loss with respect to utilization of qualifying foreign exchange hedging activities is recorded as a component of other comprehensive income. In the situation where the qualifying hedge is identified to an underlying foreign currency transaction, the hedging activity exchange or loss is transferred out of other comprehensive income and netted against the exchange gain or loss of the underlying in income.

(cc) Income Taxes: Deferred tax assets and liabilities are recorded for the effects of temporary differences between the tax basis of an asset or liability and its reported amount in the Consolidated Financial Statements. AIG assesses its ability to realize deferred tax assets primarily based on the earnings history, the future earnings potential, the reversal of taxable temporary differences, and the tax planning strategies available to the legal entities recognizing deferred tax assets, all through which realization of deferred tax assets will be achieved, as discussed in Statement of Financial Accounting Standards No. 109, "Accounting for Income Taxes." See Note 3 herein for further discussion of income taxes.

(dd) Earnings Per Share: Basic earnings per common share are based on the weighted average number of common shares outstanding, retroactively adjusted to reflect all stock dividends and stock splits. Diluted earnings per share are based on those shares used in basic earnings per share plus shares that would have been outstanding assuming issuance of common shares for all dilutive potential common shares outstanding, retroactively adjusted to reflect all stock dividends and stock splits.

The computation of earnings per share for December 31, 2005, 2004 and 2003 was as follows:

Years Ended December 31, (in millions, except per share data)	2005	2004	2003
Numerator for basic earnings per share:			
Income before cumulative effect of accounting changes	\$10,477	\$9,983	\$8,099
Cumulative effect of accounting changes, net of tax	–	(144)	9
Net income applicable to common stock	\$10,477	\$9,839	\$8,108
Denominator for basic earnings per share:			
Average shares outstanding used in the computation of per share earnings:			
Common stock issued	2,752	2,752	2,752
Common stock in treasury	(155)	(146)	(142)
Average shares outstanding – basic	2,597	2,606	2,610

(continued)

Cumulative effect of accounting changes, net of tax	-	(0.06)	-
Net income	\$ 3.99	\$ 3.73	\$ 3.07

(a) Assumes conversion of contingently convertible bonds due to the adoption of EITF Issue No. 04-8 "Accounting Issues Related to Certain Features of Contingently Convertible Debt and the Effect on Diluted Earnings per Share."

(b) Certain shares arising from employee stock plans were not included in the computation of diluted earnings per share where the exercise price of the options exceeded the average market price and would have been antidilutive. The number of shares excluded were 19 million, 7 million and 26 million for 2005, 2004 and 2003, respectively.

(ee) Derivatives: AIG carries all derivatives in the consolidated balance sheet at fair value. The financial statement recognition of the change in the fair value of a derivative depends on a number of factors, including the intended use of the derivative and the extent to which it is effective as part of a hedge transaction. The changes in fair value of the derivative transactions of AIGFP are currently presented as a component

of AIG's operating income. However, in certain instances, when income is not recognized upfront under EITF 02-03, income is recognized over the life of the contract, where appropriate.

The discussion below relates to the derivative activities of AIG (other than those of AIGFP) that qualify for hedge accounting treatment under FAS 133.

For derivatives designated as hedges, on the date the derivative contract is entered into, AIG designates the derivative as: (i) a hedge of the subsequent changes in the fair value of a recognized asset or liability or of an unrecognized firm commitment ("fair value" hedge); (ii) a hedge of a forecasted transaction, or the variability of cash flows to be received or paid related to a recognized asset or liability ("cash flow" hedge); or (iii) a hedge of a net investment in a foreign operation. Fair value and cash flow hedges may involve foreign currencies ("foreign currency hedges"). The gain or loss in the fair value of a derivative that is appropriately and contemporaneously documented, designated and is highly effective as a fair value hedge is recorded in current period earnings, along with the loss or gain on the hedged item attributable to the hedged risk. The gain or loss in the fair value of a derivative that is appropriately and contemporaneously documented, designated and is highly effective as a cash flow hedge is recorded in other comprehensive income, until earnings are affected by the variability of cash flows. Of the amount deferred in Other Comprehensive Income at December 31, 2005, AIG does not expect a material amount to be reclassified into earnings over the next twelve months. The portion of the gain or loss in the fair value of a derivative in a cash flow hedge that represents hedge ineffectiveness is recognized immediately in current period earnings. The amount of ineffectiveness was not material for 2005, 2004 and 2003. The gain or loss in the fair value of a derivative that is appropriately and contemporaneously documented, designated and is highly effective as a hedge of a net investment in a foreign operation is recorded in the foreign currency translation adjustments account within other comprehensive income. Changes in the fair value of derivatives used for other than hedging activities are reported in current period earnings (principally in realized capital gains and losses for AIG's insurance operations). AIG had no hedges that were considered fair value hedges at December 31, 2005. At December 31, 2005, AIG's hedge accounting was limited to cash flow hedge accounting primarily related to the hedge of forecasted transactions.

AIG assesses, both at the hedge's inception and on an ongoing basis, whether the derivatives used in hedging transactions are highly effective in offsetting changes in fair values or cash flows of hedged items.

As of January 1, 2005 and December 31, 2005, the related balance of accumulated derivative net loss arising from cash flow hedges, net of tax, was \$53 million and \$25 million, respectively. Of the change in accumulated derivative net gain, \$3 million represents current period changes in fair values of derivatives used in cash flow hedge transactions, and \$25 million represents current period reclassifications to operating income.

1. Summary of Significant Accounting Policies*Continued*

In addition to hedging activities, AIG also uses derivative instruments with respect to investment operations, which include, among other things, credit default swaps, and purchasing investments with embedded derivatives, such as equity linked notes and convertible bonds. All changes in the market value of these derivatives are recorded in earnings. AIG bifurcates an embedded derivative where: (i) the economic characteristics of the embedded instruments are not clearly and closely related to those of the remaining components of the financial instrument; (ii) the contract that embodies both the embedded derivative instrument and the host contract is not remeasured at fair value; and (iii) a separate instrument with the same terms as the embedded instrument meets the definition of a derivative under Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities." See also Note 20 herein.

(ff) Goodwill and Intangible Assets: Goodwill is reviewed for impairment on an annual basis, or more frequently if circumstances indicate that a possible impairment has occurred. The assessment of impairment involves a two-step process whereby an initial assessment for potential impairment is performed, followed by a measurement of the amount of impairment, if any. No impairment has been recorded by AIG in 2005, 2004 or 2003.

On August 29, 2003, AIG acquired 100 percent of the outstanding common shares of GE Edison Life Insurance Company in Japan and the U.S.-based auto and home insurance business of General Electric Company (GE) for \$2.1 billion. The acquisition expanded AIG's life insurance presence in Japan and AIG's auto and home insurance presence in the U.S. At the date of acquisition, the fair values of the assets acquired and liabilities assumed were \$20 billion and \$19 billion, respectively. Goodwill associated with this transaction as of December 31, 2003 amounted to \$1.3 billion, primarily related to the life business.

Other changes in the carrying amount of goodwill are primarily caused as a result of foreign currency translation adjustments and other purchase price adjustments.

(gg) Recent Accounting Standards: In December 2003, FASB issued Interpretation No. 46R, "Consolidation of Variable Interest Entities Revised" (FIN46R). See also Note 19 herein.

In March 2005, FASB issued FSP FIN46R-5 "Implicit Variable Interests under FASB Interpretation No. 46 (revised December 2003), Consolidation of Variable Interest Entities" (FSP FIN46R-5) to address whether a reporting enterprise has an implicit variable interest in a variable interest entity (VIE) or potential VIE when specific conditions exist. Although implicit variable interests are mentioned in FIN46R, the term is not defined and only one example is provided. FSP FIN46R-5 offers additional guidance, stating that implicit variable interests are implied financial interests in an entity that change with changes in the fair value of the entity's net assets exclusive of variable interests. An implicit variable interest acts the same as an explicit variable interest except it

involves the absorbing and/or receiving of variability indirectly from the entity (rather than directly). The identification of an implicit variable interest is a matter of judgment that depends on the relevant facts and circumstances. The adoption of FSP FIN46R-5 did not have a material effect on AIG's financial condition or results of operations.

In July 2003, the American Institute of Certified Public Accountants issued Statement of Position 03-1, "Accounting and Reporting by Insurance Enterprises for Certain Nontraditional Long-Duration Contracts and for Separate Accounts" (SOP 03-1). See also Note 21 herein.

In December 2003, FASB issued Statement of Financial Accounting Standards No. 132 (Revised), "Employers' Disclosures About Pensions and Other Post Retirement Benefits," which revised disclosure requirements with respect to defined benefit plans. See also Note 15 herein.

At the March 2004 meeting, the Emerging Issue Task Force (EITF) reached a consensus with respect to Issue No. 03-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments." On September 30, 2004, the FASB issued FASB Staff Position (FSP) EITF No. 03-1-1, Effective Date of Paragraphs 10-20 of EITF Issue No. 03-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments" delaying the effective date of this guidance until the FASB has resolved certain implementation issues with respect to this guidance, but the disclosures remain effective. This FSP, retitled FSP FAS 115-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments," replaces the measurement and recognition guidance set forth in Issue No. 03-1 and codifies certain existing guidance on impairment. Adoption of FSP FAS 115-1 is not expected to have a material effect on AIG's financial condition or results of operations.

At the September 2004 meeting, the EITF reached a consensus with respect to Issue No. 04-8, "Accounting Issues Related to Certain Features of Contingently Convertible Debt and the Effect on Diluted Earnings per Share." This Issue addresses when the dilutive effect of contingently convertible debt (Co-Cos) with a market price trigger should be included in diluted earnings per share (EPS). The adoption of Issue No. 04-8 did not have a material effect on AIG's diluted EPS.

In December 2004, the FASB issued Statement No. 123 (revised 2004), "Share-Based Payment" (FAS 123R). FAS 123R and its related interpretive guidance replaces FAS No. 123, "Accounting for Stock-Based Compensation" (FAS 123), and supersedes Accounting Principles Board Opinion No. 25, "Accounting for Stock Issued to Employees" (APB 25). FAS 123, as originally issued in 1995, established as preferable a fair-value-based method of accounting for share-based payment transactions with employees. On January 1, 2003, AIG adopted the recognition provisions of FAS 123. See also Note 14 herein. In April 2005, the SEC delayed the effective date for FAS 123R until the first fiscal year beginning after June 15, 2005. As a result, AIG expects to adopt the provisions of the revised FAS 123R and its related interpretive guidance in the first quarter of 2006. For its service-based awards (1999 Stock Option Plan, 2002 Stock Incentive Plan, and 1999 Employee Stock Purchase Plan), AIG recognizes

1. Summary of Significant Accounting Policies

Continued

compensation on a straight-line basis over the scheduled vesting period. Upon adoption of FAS 123R, AIG will recognize compensation expense to the scheduled retirement date for employees near retirement. AIG does not expect the effect of this change to be material to AIG's results of operations. Consistent with the requirements of FAS 123R, AIG will recognize the unvested portion of its APB 25 awards as compensation expense over the remaining vesting period.

In December, 2005 and January, 2006, C.V. Starr & Co., Inc. (Starr) made tender offers to AIG employees holding Starr common and preferred stock. In conjunction with AIG's adoption of FAS 123R, Starr is considered to be an "economic interest holder" in AIG. As a result, AIG expects to include the compensation expense related to the 2006 tender offer in its consolidated financial statements for the first quarter of 2006.

AIG is currently assessing the effect of FAS 123R and believes the effect will not be material to AIG's financial condition or results of operations.

On December 16, 2004, the FASB issued Statement No. 153, "Exchanges of Nonmonetary Assets — An Amendment of APB Opinion No. 29" (FAS 153). FAS 153 amends APB Opinion No. 29, "Accounting for Nonmonetary Transactions." The amendments made by FAS 153 are based on the principle that exchanges of nonmonetary assets should be measured based on the fair value of the assets exchanged. Further, the amendments eliminate the narrow exception for nonmonetary exchanges of similar productive assets and replace it with a broader exception for exchanges of nonmonetary assets that do not have "commercial substance." Previously, APB Opinion No. 29 required that the accounting for an exchange of a productive asset for a similar productive asset or an equivalent interest in the same or similar productive asset should be based on the recorded amount of the asset relinquished. The provisions in FAS 153 are effective for nonmonetary asset exchanges beginning July 1, 2005. The adoption of FAS 153 did not have a material effect on AIG's financial condition or results of operations.

On June 1, 2005, the FASB issued Statement No. 154, "Accounting Changes and Error Corrections" (FAS 154). FAS 154 replaces APB Opinion No. 20, "Accounting Changes" and FASB Statement No. 3, "Reporting Accounting Changes in Interim Financial Statements." FAS 154 requires that a voluntary change in accounting principle be applied retrospectively with all prior period financial statements presented on the new accounting principle, unless it is impracticable to do so. FAS 154 also provides that a correction of errors in previously issued financial statements should be termed a "restatement." The new standard is effective for accounting changes and correction of errors beginning January 1, 2006.

At the June 2005 meeting, the EITF reached a consensus with respect to Issue No. 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited

Partners Have Certain Rights". The Issue addresses what rights held by the limited partner(s) preclude consolidation in circumstances in which the sole general partner would consolidate the limited partnership in accordance with generally accepted accounting principles absent the existence of the rights held by the limited partner(s). Based on that consensus, the EITF also agreed to amend the consensus in Issue No. 96-16, "Investor's Accounting for an Investee When the Investor Has a Majority of the Voting Interest but the Minority Shareholders Have Certain Approval or Veto Rights." The guidance in this Issue is effective after June 29, 2005 for general partners of all new limited partnerships formed and for existing limited partnerships for which the partnership agreements are modified. For general partners in all other limited partnerships, the guidance in this Issue is effective beginning January 1, 2006. The effect of the adoption of this EITF Issue on existing partnerships that were modified and new partnerships entered into after June 29, 2005, was not material to AIG's financial condition or results of operations. For all other partnerships, AIG is currently assessing the effect of adopting this EITF Issue.

On June 29, 2005, FASB issued Statement 133 Implementation Issue No. B38, "Embedded Derivatives: Evaluation of Net Settlement with Respect to the Settlement of a Debt Instrument through Exercise of an Embedded Put Option or Call Option." This implementation guidance relates to the potential settlement of the debtor's obligation to the creditor that would occur upon exercise of the put option or call option, which meets the net settlement criterion in FAS 133 paragraph 9(a). The effective date of the implementation guidance is January 1, 2006. AIG is currently assessing the effect of implementing this guidance.

On June 29, 2005, FASB issued Statement 133 Implementation Issue No. B39, "Application of Paragraph 13(b) to Call Options That Are Exercisable Only by the Debtor." The conditions in FAS 133 paragraph 13(b) do not apply to an embedded call option in a hybrid instrument containing a debt host contract if the right to accelerate the settlement of the debt can be exercised only by the debtor (issuer/borrower). This guidance does not apply to other embedded derivative features that may be present in the same hybrid instrument. The effective date of the implementation guidance is January 1, 2006. AIG is currently assessing the effect of implementing this guidance.

On September 19, 2005, FASB issued Statement of Position 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts." SOP 05-1 provides guidance on accounting for deferred acquisition costs on internal replacements of insurance and investment contracts other than those specifically described in FASB Statement No. 97, "Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments." The SOP defines an internal replacement as a modification in product benefits, features, rights, or coverage that occurs by the exchange of a contract for a new contract, or by amendment, endorsement, or rider to a contract, or by the election of a feature or

1. Summary of Significant Accounting Policies

Continued

coverage within a contract. The effective date of the implementation guidance is January 1, 2007. AIG is currently assessing the effect of implementing this guidance.

On February 16, 2006, the FASB issued FAS No. 155, "Accounting for Certain Hybrid Financial Instruments" (FAS 155), an amendment of FAS 140 and FAS 133. FAS 155 permits the Company to elect to measure any hybrid financial instrument at fair value (with changes in fair value recognized in earnings) if the hybrid instrument contains an embedded derivative that would otherwise be required to be bifurcated and accounted for separately under FAS 133. The election to measure the hybrid instrument at fair value is made on an instrument-by-instrument basis and is irrevocable. FAS 155 will be effective for all instruments acquired, issued, or subject to a remeasurement event occurring after the beginning of the AIG's fiscal year that begins after September 15, 2006, with earlier adoption permitted as of the beginning of 2006, provided that financial statements for any interim period of that fiscal year have not been issued. AIG has not yet decided whether it will early adopt FAS 155 effective January 1, 2006, and is assessing the effect of this change in accounting.

(hh) Restatements: AIG has completed two restatements of its financial statements (the Restatements). In connection with the first restatement (the First Restatement) included in the Annual Report on Form 10-K for the year ended December 31, 2004 filed on May 31, 2005, AIG restated its consolidated financial statements and financial statement schedules for the years ended December 31, 2003, 2002, 2001 and 2000, the quarters ended March 31, June 30 and September 30, 2004 and 2003 and the quarter ended December 31, 2003. In the second restatement (the Second Restatement) included in the Annual Report on Form 10-K/A for the year ended December 31, 2004 filed on March 16, 2006, AIG restated its consolidated financial statements and financial statement schedules for the years ended December 31, 2004, 2003 and 2002, along with 2001 and 2000 for purposes of preparation of the Consolidated Financial Data for 2001 and 2000, the quarterly financial information for 2004 and 2003 and the first three quarters of 2005. See Note 22 herein. AIG, however, did not amend its quarterly report on Form 10-Q for the quarter ended September 30, 2005 because the adjustments to the financial statements included therein were not material to those financial statements. The consolidated financial statements included in this Annual Report on Form 10-K reflect the Restatements.

2. Segment Information

In 2003 and prior years, AIG's operations were conducted by its subsidiaries principally through four operating segments: General Insurance, Life Insurance, Financial Services and Retirement Services & Asset Management. Beginning with the first quarter of 2004, AIG reports Retirement Services results in the same segment as Life Insurance, reflecting the convergence of protective financial and retirement products and

AIG's current management of these operations. Information for years prior to 2004 included herein has been reclassified to show AIG's results of operations and financial position on a comparable basis with the 2004 presentation. These segments and their respective operations are as follows:

General Insurance: AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of property and casualty insurance both domestically and abroad. AIG's principal General Insurance operations are as follows:

DBG writes substantially all classes of business insurance in the U.S. and Canada, accepting such business mainly from insurance brokers.

Transatlantic Holdings, Inc. (Transatlantic) subsidiaries offer reinsurance capacity on both a treaty and facultative basis both in the U.S. and abroad. Transatlantic structures programs for a full range of property and casualty products with an emphasis on specialty risks.

AIG's Personal Lines operations provide automobile insurance through AIG Direct, the mass marketing operation of AIG, Agency Auto Division and 21st Century Insurance Group (21st Century), as well as a broad range of coverages for high net-worth individuals through the AIG Private Client Group.

Mortgage Guaranty operations provide guaranty insurance primarily on conventional first mortgage loans on single family dwellings and condominiums.

AIG's Foreign General Insurance group accepts risks primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance group also includes business written by AIG's foreign-based insurance subsidiaries. The Foreign General Insurance group uses various marketing methods to write both business and consumer lines insurance with certain refinements for local laws, customs and needs. AIU operates in Asia, the Pacific Rim, the United Kingdom, Europe, Africa, the Middle East and Latin America.

Life Insurance & Retirement Services: AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad. Insurance-oriented products consist of individual and group life, payout annuities, endowment and accident and health policies. Retirement savings products consist of fixed and variable annuities.

AIG's principal overseas Life Insurance & Retirement Services operations are American Life Insurance Company (ALICO), American International Assurance Company, Limited, together with American International Assurance Company (Bermuda) Limited (AIA), Nan Shan Life Insurance Company, Ltd. (Nan Shan), The Philippine American Life and General Insurance Company (PhilamLife), AIG Edison Life Insurance Company (AIG Edison Life) and AIG Star Life Insurance Co. Ltd. (AIG Star Life).

AIG's principal domestic Life Insurance & Retirement Services operations are American General Life Insurance Company (AG Life), The United States Life Insurance Company in the City of New York (USLIFE), American

2. Segment Information

Continued

General Life and Accident Insurance Company (AGLA), AIG Annuity Insurance Company (AIG Annuity), The Variable Annuity Life Insurance Company (VALIC) and AIG Retirement Services, Inc (AIG SunAmerica).

AIRCO acts as an internal reinsurance company for AIG's foreign life operations.

Financial Services: AIG's Financial Services subsidiaries engage in diversified financial products and services including aircraft and equipment leasing, capital markets transactions, consumer finance and insurance premium financing.

AIG's Aircraft Finance operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to domestic and foreign airlines. Revenues also result from the remarketing of commercial jets for its own account, for airlines and for financial institutions.

AIG's Capital Markets operations are conducted through AIGFP. As Capital Markets is a transaction-oriented operation, current and past revenues and operating results may not provide a basis for predicting future performance. Also, AIG's Capital Markets operations may be adversely affected by the downgrades in AIG's credit ratings.

AIG's Capital Markets operations derive substantially all their revenues from hedged financial positions entered in connection with counterparty transactions rather than from speculative transactions. These subsidiaries participate in the derivatives and financial transactions dealer markets conducting, primarily as principal, an interest rate, currency, equity, commodity, energy and credit products business.

Consumer Finance operations include AGF as well as AIGCFG. AGF and AIGCFG provide a wide variety of consumer finance products, including non-conforming real estate mortgages, consumer loans, retail sales finance and credit-related insurance to customers both domestically and overseas, particularly in emerging markets.

Asset Management: AIG's Asset Management operations comprise a wide variety of investment-related services and investment products including institutional and retail asset management, broker dealer services and spread-based investment business from the sale of guaranteed investment contracts, also known as funding agreements (GICs). Such products and services are offered to individuals and institutions both domestically and overseas.

Notes to Consolidated Financial Statements *Continued*

(a) The following table summarizes the operations by major operating segment for the years ended December 31, 2005, 2004 and 2003:

<i>(in millions)</i>	Operating Segments					Total	Reclassifications and Eliminations	Consolidated

(d) For Foreign General, includes the results of wholly owned AIU agencies.

(e) Includes the fourth quarter 2005 increase in net reserves of approximately \$1.8 billion.

(f) Includes \$197 million of additional losses incurred resulting from increased labor and material costs related to the 2004 Florida hurricanes.

(g) Includes \$291 million of expenses related to changes in estimates for uncollectible reinsurance and other premium balances, and \$100 million of accrued expenses in connection with certain workers compensation insurance policies written between 1985 and 1996.

(h) Income statement accounts expressed in non-functional currencies are translated into U.S. dollars using average exchange rates.

(a) Reflects acquisition of AIG Edison Life in August 2003. Revenues and operating income include realized capital gains (losses) of \$(74) million, \$(152) million and \$319 million for 2005, 2004 and 2003, respectively. The effect of FAS 133 and the application of FAS 52 included in realized capital gains (losses) are \$(339) million, \$(300) million and \$226 million for 2005, 2004 and 2003, respectively.

(b) Revenues in 2004 include approximately \$640 million of single premium from a reinsurance transaction involving terminal funding pension business, which is offset by a similar increase in benefit reserves. Revenues and operating income include realized capital gains (losses) of \$144 million, \$519 million and \$168 million for 2005, 2004 and 2003, respectively. The effect of FAS 133 and the application of FAS 52 included in realized capital gains (losses) are \$(162) million, \$166 million and \$(167) million for 2005, 2004 and 2003, respectively.

(c) Includes the life operations of AIG Life Insurance Company and American International Life Assurance Company of New York. 2004 includes a \$178 million charge related to a workers compensation quota share reinsurance agreement with Superior National Insurance Company. See Note 12(h) herein for additional information. In addition, in 2004, as part of the business review of Group life/health, approximately \$68 million was incurred for reserve strengthening and allowances for receivables. Revenues and operating income include realized capital gains (losses) of \$35 million, \$(120) million and \$(37) million for 2005, 2004 and 2003, respectively. The effect of FAS 133 and the application of FAS 52 included in realized capital gains (losses) are \$73 million, \$8 million and \$24 million for 2005, 2004 and 2003, respectively.

(d) "AIG SunAmerica" represents the annuity operations of AIG SunAmerica Life Assurance Company, as well as those of First SunAmerica Life Insurance Company and SunAmerica Life Insurance Company. Revenues and operating income include realized capital gains (losses) of \$(337) million, \$(209) million and \$(209) million for 2005, 2004 and 2003, respectively. The effect of FAS 133 and the application of FAS 52 included in realized capital gains (losses) are \$(10) million, \$(14) million and \$(5) million for 2005, 2004 and 2003, respectively.

(e) Represents the sum of Life Insurance & Retirement Services GAAP premiums, net investment income and realized capital gains (losses).

(a) Certain transactions entered into by AIGFP generate tax credits and benefits which are shown in the income tax line on the consolidated statement of income. Thus, this source of income is not reflected in the Revenue and Operating Income categories in the above table. The amount of such tax credits and benefits for the years ended December 31, 2005, 2004, and 2003 are \$67 million, \$107 million, and \$123 million, respectively.

(b) Represents primarily the sum of ILFC aircraft lease rentals, AIGFP hedged financial positions entered into in connection with counterparty transactions and finance charges from consumer finance operations.

(c) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For 2005, 2004 and 2003, the effect was \$(34) million, \$(27) million and \$49 million, respectively, in operating income for Aircraft Finance and \$2.01 billion, \$(122) million and \$(1.01) billion in both revenues and operating income for Capital Markets.

(d) Includes \$62 million of catastrophe related losses.

Flight equipment primarily under operating leases, net of accumulated depreciation ^(c)	29,870	–	–	29,870

(a) Including revenues from General Insurance operations in Canada of \$638 million, \$549 million, and \$433 million in 2005, 2004, and 2003, respectively.

(b) Represents the sum of General Insurance net premiums earned, Life Insurance & Retirement Services GAAP premiums, net investment income, Financial Services interest, lease and finance charges, Asset Management advisory and management fees and net investment income with respect to guaranteed investment contracts, and realized capital gains (losses).

(c) Approximately 90 percent of ILFC's fleet is operated by foreign airlines.

3. Federal Income Taxes

(a) AIG and its eligible domestic subsidiaries file a consolidated U.S. Federal income tax return. The AGC group of life insurance companies also files a consolidated U.S. Federal income tax return and will not be included in AIG's consolidated federal income tax return until 2007. Commencing with taxable year 2004, the AIG SunAmerica group of life insurance companies is included in AIG's consolidated tax return. Other U.S. entities included in the consolidated financial statements also file separate U.S. Federal income tax returns. Subsidiaries operating outside the U.S. are taxed, and income tax expense is recorded, based on applicable U.S. and foreign statutes.

U.S. federal income taxes have not been provided on \$750 million of undistributed earnings of certain U.S. subsidiaries that are not included in the consolidated AIG U.S. Federal income tax return because tax planning strategies are available, and would be utilized, to eliminate the tax liability related to these earnings. U.S. federal income taxes have not been provided on the undistributed earnings of certain non-U.S. subsidiaries to the extent that such earnings have been reinvested abroad for an indefinite period of time. At December 31, 2005, the cumulative amount of undistributed earnings in these subsidiaries approximated \$13.8 billion.

A component of life insurance surplus accumulated prior to 1984 is not taxable unless it exceeds certain statutory limitations or is distributed to shareholders. This surplus, accumulated in policyholder surplus accounts, totaled approximately \$253 million at December 31, 2005. AIG has not made

any provision in the accompanying financial statements for taxation of this amount as management has no intention of making any taxable distributions from this surplus. During 2004, the American Jobs Creation Act amended federal income tax law to permit life insurance companies to distribute amounts from policyholders' surplus accounts in 2005 and 2006 without incurring federal income tax on the distributions. During 2005, AIG reduced its policyholders' surplus accounts to \$253 million and expects to eliminate its exposure to federal income taxation on the remaining balance in 2006.

Revenue Agent's Reports proposing to assess additional taxes for the years 1991-1996 and 1997-1999 have been issued to AIG. Apart from some relatively minor issues, years prior to 1991 are closed. Letters of Protest contesting the proposed assessments for 1991-1996 and 1997-1999 have been filed with the Internal Revenue Service (IRS).

In addition, Revenue Agent's Reports proposing to assess additional taxes for the years ended September 30, 1993-1994, 1995-1996, and September 30, 1997-December 31, 1998 have been issued to AIG SunAmerica. Such proposed assessments relate to years prior to AIG's acquisition of SunAmerica, Inc. Letters of Protest contesting the proposed assessments have been filed with the IRS. SunAmerica Life Insurance Company (SunAmerica Life) has also received a proposed assessment, and has filed a protest, for the year ended December 31, 1999. It is management's belief that there are substantial arguments in support of the positions taken by AIG, SunAmerica and SunAmerica Life in their Letters of Protest. Although the final outcome of any issues raised in connection with these examinations is uncertain, AIG believes that any tax obliga-

3. Federal Income Taxes

Continued

tion, including interest thereon, would not be significant to

AIG's financial condition, results of operations or liquidity. American General Corporation's (AGC) tax years through 1999 have been audited and settled with the IRS.

(b) The pretax components of domestic and foreign income reflect the locations in which such pretax income was generated. The pretax domestic and foreign income was as follows for the years ended December 31, 2005, 2004 and 2003:

(in millions)	2005	2004	2003
Domestic	\$ 6,103	\$ 6,069	\$ 4,177
Foreign	9,110	8,776	7,730
Total	\$ 15,213	\$ 14,845	\$ 11,907

(c) The U.S. Federal income tax rate is 35 percent for 2005, 2004 and 2003. Actual tax expense on income differs from the "expected" amount computed by applying the Federal income tax rate because of the following:

Years Ended December 31, (dollars in millions)	2005		2004		2003	
	Amount	Percent of Pretax Income	Amount	Percent of Pretax Income	Amount	Percent of Pretax Income
"Expected" tax expense	\$5,325	35.0%	\$5,197	35.0%	\$4,167	35.0%
Adjustments:						
Tax exempt interest	(566)	(3.7)	(440)	(2.9)	(329)	(2.8)
Dividends received deduction	(117)	(0.8)	(83)	(0.6)	(83)	(0.7)
State income taxes	86	0.6	23	0.2	12	0.1
Effect of foreign operations ^(a)	(253)	(1.7)	(11)	(0.1)	(95)	(0.8)
Synthetic fuel tax credits	(274)	(1.8)	(264)	(1.8)	(278)	(2.3)
Affordable housing tax credits	(22)	(0.1)	(46)	(0.3)	(24)	(0.2)
Nondeductible compensation	83	0.5	20	0.1	96	0.8
Penalties	76	0.5	28	0.2	—	—
Other	(80)	(0.5)	(17)	(0.1)	90	0.8
Actual tax expense	\$4,258	28.0%	\$4,407	29.7%	\$3,556	29.9%
Foreign and domestic components of actual tax expense:						
Foreign ^(b) :						
Current	\$ 974		\$1,104		\$ 882	
Deferred	426		561		708	
Domestic ^(b) :						
Current	1,595		1,489		1,859	
Deferred	1,263		1,253		107	
Total	\$4,258		\$4,407		\$3,556	

(a) In 2005 and 2004, it was determined that the earnings of certain foreign subsidiaries are expected to be repatriated to the U.S., and, accordingly, the undistributed earnings of these subsidiaries are no longer considered indefinitely reinvested abroad. As a consequence of this determination, U.S. deferred taxes have been provided for the undistributed earnings of these foreign subsidiaries.

(b) Foreign tax expense reflects the expense resulting from local tax regulation. Domestic tax expense includes U.S. taxes incurred on foreign income.

(d) The components of the net deferred tax liability as of December 31, 2005 and 2004 were as follows:

(in millions)	2005	2004
Deferred tax assets*:		
Loss reserve discount	\$ 3,061	\$2,400
Unearned premium reserve reduction	1,042	1,074
Loan loss and other reserves	419	394
Investment in foreign subsidiaries and joint ventures	349	542
Adjustment to life policy reserves	2,351	3,458
Accruals not currently deductible, cumulative translation adjustment and other	1,189	1,031
Deferred tax liabilities:		
Deferred policy acquisition costs	7,573	7,956
Depreciation of flight equipment	3,196	2,766
Unrealized appreciation of investments	4,025	4,668
Other	224	97
Net deferred tax liability	\$ 6,607	\$6,588

* A valuation allowance in the amount of \$280 million related to the Connecticut net deferred tax asset at December 31, 2005 (including net operating losses that expire between 2020 through 2025) has been provided because it is remote that such amount will be realized. In addition, AIG has a \$192 million alternative minimum tax credit carryforward that does not expire.

4. Deferred Policy Acquisition Costs

The following reflects the policy acquisition costs deferred for amortization against future income and the related amortization charged to income for general and life insurance & retirement services operations:

Years Ended December 31, (in millions)	2005	2004	2003
General Insurance operations:			
Balance at beginning of year	\$ 3,998	\$ 3,619	\$ 3,072
Acquisition costs deferred	7,480	6,617	5,223
Amortization charged to Income	(7,430)	(6,238)	(4,676)
Balance at end of year	\$ 4,048	\$ 3,998	\$ 3,619
Life Insurance & Retirement Services operations:			
Balance at beginning of year	\$25,819	\$22,375	\$18,850
Value of business acquired	–	–	1,538*
Acquisition costs deferred	6,777	6,504	5,052
Amortization charged to Income	(3,379)	(3,551)	(2,778)
Change in net unrealized gains (losses) on securities	1,127	(219)	(813)
Increase (decrease) due to foreign exchange	(1,144)	710	526
Balance at end of year	\$29,200	\$25,819	\$22,375
Total deferred policy acquisition costs	\$33,248	\$29,817	\$25,994

* Relates to the acquisition of AIG Edison Life in August 2003.

Included in the above table is the value of business acquired (VOBA), an intangible asset recorded during purchase accounting, which is amortized in a manner similar to deferred acquisition costs. Amortization of VOBA was \$291 million, \$407 million and \$326 million while the unamortized balance was \$2.14 billion, \$2.52 billion and \$3.17 billion for 2005, 2004 and 2003, respectively. The percentage of the unamortized balance of VOBA at 2005 expected to be amortized for 2006 through 2011 by year is: 12.0 percent, 10.5 percent, 9.2 percent, 8.0 percent, and 6.7 percent, respectively, with 53.7 percent being amortized after five years. These projections are based on current estimates for investment, persistency, mortality, and morbidity assumptions. The DAC amortization charged to income includes the increase or decrease of amortization for FAS 97-related realized capital gains (losses), primarily in the domestic Retirement Services business. For 2005, 2004 and 2003, respectively, the rate of amortization expense has been decreased by \$57 million, \$44 million and \$54 million.

5. Reinsurance

In the ordinary course of business, AIG's General and Life Insurance companies place reinsurance with other insurance companies in order to provide greater diversification of AIG's business and limit the potential for losses arising from large risks.

General Reinsurance: General reinsurance is effected under reinsurance treaties and by negotiation on individual risks. Certain of these reinsurance arrangements consist of excess of loss contracts which protect AIG against losses over stipulated amounts. Ceded premiums are considered prepaid reinsurance premiums and are amortized into income over the contract period in proportion to the protection received. Amounts recoverable from general reinsurers are estimated in a manner consistent with the claims liabilities associated with the reinsurance and presented as a component of reinsurance assets.

General Insurance premiums written and earned were comprised of the following:

Years Ended December 31, (in millions)	Written	Earned
2005		
Gross premiums	\$ 52,725	\$ 51,715
Ceded premiums	(10,853)	(10,906)
Net premiums	\$ 41,872	\$ 40,809
2004		
Gross premiums	\$ 52,046	\$ 50,203
Ceded premiums	(11,423)	(11,666)
Net premiums	\$ 40,623	\$ 38,537
2003		
Gross premiums	\$ 46,938	\$ 42,745
Ceded premiums	(11,907)	(11,439)
Net premiums	\$ 35,031	\$ 31,306

For the years ended December 31, 2005, 2004 and 2003, reinsurance recoveries, which reduced loss and loss expenses incurred, amounted to \$20.71 billion, \$12.14 billion and \$10.09 billion, respectively.

Life Insurance: AIG Life Insurance companies generally limit exposure to loss on any single life. For ordinary insurance, AIG generally retains a maximum of approximately \$1.7 million of coverage per individual life with respect to AIG's overseas life operations and \$10 million of coverage per individual life with respect to AIG's domestic life operations. There are smaller retentions for other lines of business. Life reinsurance is effected principally under yearly renewable term treaties. The premiums with respect to these treaties are considered prepaid reinsurance premiums and are amortized into income over the

5. Reinsurance

Continued

contract period in proportion to the protection provided. Amounts recoverable from life reinsurers are estimated in a manner consistent with the assumptions used for the underlying policy benefits and are presented as a component of reinsurance assets.

Life Insurance & Retirement Services GAAP premiums were comprised of the following:

Years Ended December 31, (in millions)	2005	2004	2003
Gross GAAP premiums	\$ 30,717	\$29,202	\$24,448
Ceded premiums	(1,317)	(1,114)	(952)
GAAP premiums	\$ 29,400	\$28,088	\$23,496

Life Insurance recoveries, which reduced death and other benefits, approximated \$770 million, \$779 million and \$651 million, respectively, for the years ended December 31, 2005, 2004 and 2003.

Life Insurance in force ceded to other insurance companies was as follows:

Years Ended December 31, (in millions)	2005	2004	2003
Life Insurance in force	\$ 365,082	\$344,036	\$293,064

Life Insurance assumed represented 0.8 percent, 0.7 percent and 0.1 percent of gross Life Insurance in force at December 31, 2005, 2004 and 2003, respectively, and Life Insurance & Retirement Services GAAP premiums assumed represented 0.3 percent, 2.5 percent and 0.1 percent of gross GAAP premiums for the periods ended December 31, 2005, 2004 and 2003, respectively.

Supplemental information for gross loss and benefit reserves net of ceded reinsurance at December 31, 2005 and 2004 follows:

(in millions)	As Reported	Net of Reinsurance
2005		
Reserve for losses and loss expenses	\$ (77,169)	\$ (57,476)
Future policy benefits for life and accident and health insurance contracts	(108,807)	(107,420)
Reserve for unearned premiums	(24,243)	(21,174)
Reinsurance assets	24,978	—
2004		
Reserve for losses and loss expenses	\$ (61,878)	\$ (47,254)
Future policy benefits for life and accident and health insurance contracts	(104,740)	(103,348)
Reserve for unearned premiums	(23,400)	(20,278)
Reinsurance assets	19,613	—

AIRCO acts primarily as an internal reinsurance company for AIG's foreign life operations. This facilitates insurance risk management (retention, volatility, concentrations) and capital planning locally (branch and subsidiary). It also allows AIG to pool its insurance risks and purchase reinsurance more efficiently at a consolidated level, manage global counterparty risk and relationships and manage global life catastrophe risks.

AIG's domestic Life Insurance & Retirement Services operations utilize internal and third-party reinsurance relationships to manage insurance risks and to facilitate capital management strategies. Pools of highly-rated third-party reinsurers are utilized to manage net amounts at risk in excess of retention limits. AIG's domestic life insurance companies also cede excess, non-economic reserves carried on a statutory-basis only on certain term and universal life insurance policies and certain fixed annuities to an offshore affiliate.

AIG generally obtains letters of credit in order to obtain statutory recognition of these intercompany reinsurance transactions. For this purpose, AIG entered into a \$2.5 billion syndicated letter of credit facility in December 2004. Letters of credit totaling \$2.17 billion were outstanding as of December 31, 2004, and letters of credit for all \$2.5 billion were outstanding as of December 31, 2005, all of which relate to life intercompany reinsurance transactions. The letter of credit facility has a ten-year term, but the facility can be reduced or terminated by the lenders beginning after seven years.

In November 2005, AIG entered into a revolving credit facility for an aggregate amount of \$3 billion. The facility can be drawn in the form of letters of credit with terms of up to ten years. As of December 31, 2005 and as of the date hereof, \$1.86 billion principal amount of letters of credit are outstanding under this facility, of which approximately \$494 million relates to life intercompany reinsurance transactions. AIG also obtained approximately \$212 million letters of credit on a bilateral basis.

Reinsurance Security: AIG's reinsurance arrangements do not relieve AIG from its direct obligation to its insureds. Thus, a credit exposure exists with respect to both general and life reinsurance ceded to the extent that any reinsurer is unable to meet the obligations assumed under the reinsurance agreements. AIG holds substantial collateral as security under related reinsurance agreements in the form of funds, securities, and/or letters of credit. A provision has been recorded for estimated unrecoverable reinsurance. AIG has been largely successful in prior recovery efforts.

AIG evaluates the financial condition of its reinsurers and establishes limits per reinsurer through AIG's Credit Risk Committee. AIG believes that no exposure to a single reinsurer represents an inappropriate concentration of risk to AIG, nor is AIG's business substantially dependent upon any reinsurance contract.

6. Reserve for Losses and Loss Expenses and Future Life Policy Benefits and Policyholders' Contract Deposits

(a) The following analysis provides a reconciliation of the activity in the reserve for losses and loss expenses:

Years Ended December 31, (in millions)	2005	2004	2003
At beginning of year:			
Reserve for losses and loss expenses	\$ 61,878	\$ 51,871	\$ 46,674
Reinsurance recoverable	(14,624)	(15,643)	(17,327)
	47,254	36,228	29,347
Foreign exchange effect	(628)	524	580
Acquisitions	-	-	391 ^(a)
Losses and loss expenses incurred:			
Current year	28,426	26,793	20,509
Prior years ^(b)	4,665 ^(c)	3,564 ^(d)	2,363
Total	33,091	30,357	22,872
Losses and loss expenses paid:			
Current year	7,331	7,692	6,187
Prior years	14,910	12,163	10,775
Total	22,241	19,855	16,962
At end of year:			
Net reserve for losses and loss expenses	57,476	47,254	36,228
Reinsurance recoverable	19,693	14,624	15,643
Total	\$ 77,169	\$ 61,878	\$ 51,871

(a) Reflects the opening balances with respect to the GE U.S.-based auto and home insurance business acquired in 2003.

(b) Includes accretion of discount of \$(15) million in 2005, including an increase of \$375 million in the discount recorded in 2005; \$377 million in 2004 and \$296 million in 2003.

(c) Includes fourth quarter charge of \$1.8 billion.

(d) Includes fourth quarter charge of \$850 million attributable to the change in estimate for asbestos and environmental exposures.

(b) The analysis of the future policy benefits and policyholders' contract deposits liabilities at December 31, 2005 and 2004 follows:

(in millions)	2005	2004
Future policy benefits:		
Long duration contracts	\$105,490	\$101,584
Short duration contracts	3,317	3,156
Total	\$108,807	\$104,740
Policyholders' contract deposits:		
Annuities	\$142,057	\$130,524
Guaranteed investment contracts (GICs)	39,705	46,472
Corporate life products	2,077	2,042
Universal life	18,682	16,771
Variable products	7,799	5,960
Variable investment contracts	8,373	7,579
Other investment contracts	8,334	7,126
Total	\$227,027	\$216,474

(c) Long duration contract liabilities included in future policy benefits, as presented in the preceding table, result from life products. Short duration contract liabilities are primarily accident and health products. The liability for future life policy benefits has been established based upon the following assumptions:

(i) Interest rates (exclusive of immediate/terminal funding annuities), which vary by territory, year of issuance and products, range from 1.0 percent to 12.0 percent within the first 20 years. Interest rates on immediate/terminal funding annuities are at a maximum of 11.5 percent and grade to not greater than 6.0 percent.

(ii) Mortality and surrender rates are based upon actual experience by geographical area modified to allow for variations in policy form. The weighted average lapse rate, including surrenders, for individual and group life approximated 7.9 percent.

(iii) The portions of current and prior net income and of current unrealized appreciation of investments that can inure to the benefit of AIG are restricted in some cases by the insurance contracts and by the local insurance regulations of the countries in which the policies are in force.

(iv) Participating life business represented approximately 22 percent of the gross insurance in force at December 31, 2005 and 36 percent of gross GAAP premiums in 2005. The amount of annual dividends to be paid is determined locally by the boards of directors. Provisions for future dividend payments are computed by jurisdiction, reflecting local regulations.

(d) The liability for policyholders' contract deposits has been established based on the following assumptions:

(i) Interest rates credited on deferred annuities, which vary by territory and year of issuance, range from 1.0 percent to, including bonuses, 13.4 percent. Less than 1.0 percent of the liabilities are credited at a rate greater than 9.0 percent. Current declared interest rates are generally guaranteed to remain in effect for a period of one year though some are guaranteed for longer periods. Withdrawal charges generally range from zero percent to 14.0 percent grading to zero over a period of zero to 19 years.

(ii) Domestically, GICs have market value withdrawal provisions for any funds withdrawn other than benefit responsive payments. Interest rates credited generally range from 1.4 percent to 9.0 percent. The vast majority of these GICs mature within ten years. Overseas, interest rates credited on GICs generally range from 1.2 percent to 5.6 percent and maturities range from one to five years.

(iii) Interest rates on corporate life insurance products are guaranteed at 4.0 percent and the weighted average rate credited in 2005 was 5.4 percent.

(iv) The universal life funds have credited interest rates of 1.5 percent to 7.0 percent and guarantees ranging from 1.5 percent to 5.5 percent depending on the year of issue. Additionally, universal life funds are subject to surrender

6. Reserve for Losses and Loss Expenses and Future Life Policy Benefits and Policyholders' Contract Deposits

Continued

charges that amount to 11.3 percent of the aggregate fund balance grading to zero over a period not longer than 20 years.

(v) For variable products and investment contracts, policy values are expressed in terms of investment units. Each unit is linked to an asset portfolio. The value of a unit increases or decreases based on the value of the linked asset portfolio. The current liability at any time is the sum of the current unit value of all investment units plus any liability for guaranteed minimum death or withdrawal benefits. A portion of these liabilities are classified in the GIC product line for segment reporting purposes.

(e) Certain products are subject to experience adjustments. These include group life and group medical products, credit life contracts, accident and health insurance contracts/riders attached to life policies and, to a limited extent, reinsurance agreements with other direct insurers. Ultimate premiums from these contracts are estimated and recognized as revenue, and the unearned portions of the premiums are held as reserves. Experience adjustments vary according to the type of contract and the territory in which the policy is in force and are subject to local regulatory guidance.

7. Statutory Financial Data

Statutory surplus and net income for General Insurance and Life Insurance & Retirement Services operations in accordance with regulatory accounting practices were as follows:

Years Ended December 31, (in millions)	2005	2004	2003
Statutory surplus ^(a) :			
General Insurance	\$24,508	\$20,632	\$20,462
Life Insurance & Retirement Services	30,739	28,609	25,501
Statutory net income ^{(a)(b)} :			
General Insurance	1,713	3,028 ^(c)	2,911
Life Insurance & Retirement Services ^(a)	4,762	4,474	3,453

(a) Statutory surplus and net income with respect to foreign operations are reported as of their respective fiscal year ends.

(b) Includes realized capital gains and losses and taxes.

(c) Includes catastrophe losses, net of tax of \$660 million.

AIG's insurance subsidiaries file financial statements prepared in accordance with statutory accounting practices pre-

scribed or permitted by domestic and foreign insurance regulatory authorities. The differences between statutory financial statements and financial statements prepared in accordance with U.S. GAAP vary between domestic and foreign by jurisdiction. The principal differences are that statutory financial statements do not reflect deferred policy acquisition costs, some bond portfolios may be carried at amortized cost, assets and liabilities are presented net of reinsurance, policyholder liabilities are valued using more conservative assumptions and certain assets are non-admitted.

AIG also recently completed its 2005 unaudited statutory financial statements for all of its Domestic General Insurance subsidiaries, after reviewing and agreeing with the relevant state insurance regulators the statutory accounting treatment of various items. The state regulators have permitted the Domestic General Insurance companies to record a \$724 million reduction to opening statutory surplus as of January 1, 2005 to reflect the effects of the Second Restatement.

Statutory capital of each company continued to exceed minimum company action level requirements following the adjustments, but AIG nonetheless contributed an additional \$750 million of capital into American Home Assurance Company (American Home) effective September 30, 2005 and contributed a further \$2.25 billion of capital in February 2006 for a total of approximately \$3 billion of capital into Domestic General Insurance subsidiaries effective December 31, 2005.

8. Investment Information

(a) **Statutory Deposits:** Cash and securities with carrying values of \$11.8 billion and \$9.6 billion were deposited by AIG's insurance subsidiaries under requirements of regulatory authorities as of December 31, 2005 and 2004, respectively.

(b) **Net Investment Income:** An analysis of the net investment income from the General and Life Insurance & Retirement Services operations follows:

Years Ended December 31, (in millions)	2005	2004	2003
Fixed maturities	\$17,685	\$15,884	\$13,710
Equity securities	1,730	621	484
Short-term investments	494	177	94
Interest on mortgage, policy and collateral loans	1,177	1,096	1,047
Other invested assets	1,905	1,444	898
Total investment income	22,991	19,222	16,233
Investment expenses	826	757	725
Net investment income	\$22,165	\$18,465	\$15,508

Notes to Consolidated Financial Statements *Continued*

(c) Investment Gains and Losses: The realized capital gains (losses) and increase (decrease) in unrealized appreciation of investments were as follows:

Years Ended December 31, (in millions)	2005	2004	2003
Realized capital gains (losses)			
on investments:			
Fixed maturities	\$ (108)	\$ 178	\$ (222)
Equity securities	588	541	(495)
Other invested assets	(139)	(675)	275
Realized capital gains (losses)	\$ 341	\$ 44	\$ (442)
Increase (decrease) in unrealized appreciation of investments:			
Fixed maturities	\$ (4,656)	\$1,436	\$2,493
Equity securities	850	445	1,354
Other invested assets	229	(13)	312
Increase (decrease) in unrealized appreciation	\$ (3,577)	\$1,868	\$4,159

The gross gains and gross losses realized on available for sale securities were as follows:

(in millions)	Gross Realized Gains	Gross Realized Losses
2005		
Bonds	\$ 1,586	\$ 1,694
Common stocks	930	409
Preferred stocks	101	34
Total	\$ 2,617	\$ 2,137
2004		
Bonds	\$1,560	\$1,382
Common stocks	774	379
Preferred stocks	173	27
Total	\$2,507	\$1,788
2003		
Bonds	\$2,470	\$2,692
Common stocks	465	827
Preferred stocks	139	272
Total	\$3,074	\$3,791

(d) Market Value of Fixed Maturities and Unrealized Appreciation of Investments: At December 31, 2005 and 2004, the balance of the unrealized appreciation of investments in equity securities (before applicable taxes) included gross gains of approximately \$2.5 billion and \$1.6 billion, and gross losses of approximately \$257 million and \$256 million, respectively.

The amortized cost and estimated market value of investments in fixed maturities held to maturity and carried at amortized cost at December 31, 2005 and December 31, 2004 follows:

(in millions)	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Market Value
2005				
Fixed maturities:				
Bonds – States *	\$ 21,528	\$ 552	\$ 33	\$ 22,047
Total	\$ 21,528	\$ 552	\$ 33	\$ 22,047

(a) Including U.S. government agencies and authorities.

(b) Including municipalities and political subdivisions.

The amortized cost and estimated market values of fixed maturities available for sale at December 31, 2005, by contractual maturity, are shown below. Actual maturities may differ from contractual maturities because certain borrowers have the right to call or prepay certain obligations with or without call or prepayment penalties.

(in millions)	Amortized Cost	Estimated Market Value
Fixed maturities available for sale:		
Due in one year or less	\$ 10,417	\$ 10,991
Due after one year through five years	68,520	70,108
Due after five years through ten years	128,353	130,446
Due after ten years	142,322	147,971
Total available for sale	\$349,612	\$359,516

8. Investment Information

Continued

(e) Fixed Maturities Below Investment Grade: At December 31, 2005, fixed maturities held by AIG that were below investment grade or not rated totaled \$20.54 billion.

(f) Non-Income Producing Invested Assets: At December 31, 2005, non-income producing invested assets were insignificant.

(g) Gross Unrealized Losses and Estimated Fair Values on Investments:

The following table summarizes the gross unrealized losses and cost basis on insurance and asset management investment securities, aggregated by major investment category and length of time that individual securities have been in a continuous unrealized loss position, at December 31, 2005 and December 31, 2004.

(in millions)	Less than 12 Months		12 Months or More		Total	
	Cost ^(a)	Unrealized Losses	Cost ^(a)	Unrealized Losses	Cost ^(a)	Unrealized Losses
2005						
Bonds ^(b)	\$121,631	\$2,715	\$21,160	\$1,009	\$142,791	\$3,724
Equity securities	3,894	246	97	11	3,991	257
Total	\$125,525	\$2,961	\$21,257	\$1,020	\$146,782	\$3,981
2004						
Bonds ^(b)	\$51,901	\$758	\$14,204	\$816	\$66,105	\$1,574
Equity securities	2,435	256	–	–	2,435	256
Total	\$54,336	\$1,014	\$14,204	\$816	\$68,540	\$1,830

(a) For bonds, represents amortized cost.

(b) Primarily relates to the "All other corporate" category.

As of December 31, 2005, AIG held 18,308 and 1,503 of individual bond and stock investments that were in an unrealized loss position, of which 3,074 individual investments were in an unrealized loss position continuously for 12 months or more.

AIG recorded impairment losses net of taxes of approximately \$389 million, \$369 million and \$1.0 billion in 2005, 2004 and 2003, respectively. See Note 1(c) herein for AIG's other-than-temporary impairment accounting policy.

The carrying value, which approximates market value, of other invested assets as of December 31, 2005 was \$27.3 billion, consisting primarily of hedge funds and limited partnerships. Of the \$27.3 billion, approximately \$5.1 billion relates to investments accounted for on an available for sale basis, with almost all of the remaining investments being accounted for on the equity method of accounting. All of the investments are subject to impairment testing (refer to Note 1(c) herein). Of the investments accounted for as available for sale, the gross unrealized loss as of December 31,

2005 was \$440 million, the majority of which represents investments that have been in a continuous unrealized loss position for less than 12 months.

(h) Hedging of Securities Available for Sale: AIGFP follows a policy of minimizing interest rate, currency, commodity, and equity risks associated with securities available for sale by entering into internal offsetting positions, on a security by security basis within its derivatives portfolio, thereby offsetting a significant portion of the unrealized appreciation and depreciation. In addition, to reduce its credit risk, AIGFP has entered into credit derivative transactions with respect to \$125 million of securities available for sale to economically hedge its credit risk. As previously discussed these economic offsets do not meet the hedge accounting requirements of FAS 133 and, as such, are recorded in other revenue in the Consolidated Statement of Income.

AIG Funding	2,694	7	2,701	4.32	32
AIGCCC – Taiwan*	476	2	478	2.08	63
Total	\$9,208	\$29	\$9,237	—	—

* Issued in Taiwan N.T. dollars at prevailing local interest rates.

At December 31, 2005, AIG did not guarantee the commercial paper of any of its subsidiaries other than AIG Funding.

(b) Borrowings under Obligations of Guaranteed Investment

Agreements: Borrowings under obligations of guaranteed investment agreements, which are guaranteed by AIG, are recorded at the amount outstanding under each contract. Obligations may be called at various times prior to maturity at the option of the counterparty. Interest rates on these borrowings are primarily fixed, vary by maturity, and range up to 9.8 percent.

Funds received from GIA borrowings are invested in a diversified portfolio of securities and derivative transactions. At December 31, 2005, the market value of securities pledged as collateral with respect to these obligations approximated \$7.0 billion.

(c) Medium Term Notes Payable:

(i) Medium Term Notes Payable Issued by AGF: AGF's Medium Term Notes are unsecured obligations which generally may not be redeemed by AGF prior to maturity and bear interest at either fixed rates set by AGF at issuance or variable rates determined by reference to an interest rate or other formula.

As of December 31, 2005, notes aggregating \$17.74 billion were outstanding with maturity dates ranging from 2006 to 2015 at interest rates ranging from 1.65 percent to 7.50 percent. To the extent deemed appropriate, AGF may enter into swap

transactions to manage its effective borrowing rates with respect to these notes.

(ii) Medium Term Notes Payable Issued by ILFC: ILFC's Medium Term Notes are unsecured obligations which generally may not be redeemed by ILFC prior to maturity and bear interest at either fixed rates set by ILFC at issuance or variable rates determined by an interest rate or other formula.

As of December 31, 2005, notes aggregating \$4.69 billion were outstanding with maturity dates from 2006 to 2013 at interest rates ranging from 2.25 percent to 6.98 percent. To the extent deemed appropriate, ILFC may enter into swap transactions to manage its effective borrowing rates with respect to these notes.

(iii) Medium Term Notes Payable Issued by AIG: AIG's Medium Term Notes are unsecured obligations which generally may not be redeemed by AIG prior to maturity and bear interest at either fixed rates set by AIG at issuance or variable rates determined by reference to an interest rate or other formula.

An analysis of AIG's Medium Term Notes for the year ended December 31, 2005 was as follows:

<i>(in millions)</i>	AIG	SAI	Total
Balance December 31, 2004	\$ 565	\$102	\$ 667
Matured during year	(500)	(55)	(555)
Balance December 31, 2005	\$ 65	\$ 47	\$ 112

The interest rate on AIG's Medium Term Note is 0.5 percent. To the extent deemed appropriate, AIG may enter into swap transactions to manage its effective borrowing rate with respect to this note.

At December 31, 2005, Medium Term Notes originally issued by SunAmerica, Inc. (SAI), which was merged into AIG on January 1, 1999, aggregating \$47 million had maturity dates ranging from 2006 to 2026 at interest rates ranging from 6.43 percent to 7.05 percent.

During 2000, AIG issued \$210 million of equity-linked Medium Term Notes due May 15, 2007. These notes accrue interest at the rate of 0.50 percent and the total return on these notes is linked to the appreciation in market value of AIG's common stock. The notes may be redeemed, at the option of AIG, as a whole but not in part, at any time on or after May 15, 2003. In conjunction with the issuance of these notes, AIG entered into a series of swap transactions which effectively converted its interest expense to a fixed rate of 7.17 percent until May 15, 2003 and a floating rate of LIBOR minus 0.50 percent thereafter and transferred the equity appreciation exposure to a third party for the life of the notes. AIG is exposed to credit risk with respect to the counterparties to these swap transactions. During 2003 and 2004, \$45 million and \$100 million of these notes were redeemed, respectively.

9. Debt Outstanding

Continued

(d) Notes and Bonds Payable:

(i) Notes and Bonds Payable Issued by AIGFP:

At December 31, 2005, AIGFP's notes and bonds outstanding, the proceeds of which are invested in a diversified portfolio of securities and derivative transactions, were as follows:

Range of Maturities (dollars in millions)	Currency	Range of Interest Rates	U.S. Dollar Carrying Value
2006-2039	U.S. dollar	0.09-8.60%	\$ 18,514
2006-2010	United Kingdom pound	4.59-4.68	2,370
2006-2024	Euro	0.29-9.25	2,922
2005-2009	New Zealand dollar	4.17-8.35	1,185
2006-2035	Japanese yen	0.01-4.00	1,050
2006-2015	Australian dollar	1.14-4.89	104
2007-2024	Swiss francs	0.25-1.38	247
2007-2015	Other	1.03-3.72	71
Total			\$ 26,463

AIGFP economically hedges its notes and bonds. AIG guarantees all of AIGFP's debt.

(ii) Notes and Bonds Payable Issued by ILFC: As of December 31, 2005, notes aggregating \$15.01 billion were outstanding with maturity dates from 2006 to 2065 and interest rates ranging from 2.95 percent to 6.63 percent. Notes aggregating \$3.52 billion are at floating interest rates and the remainder are at fixed rates.

The foreign exchange adjustment for the foreign currency denominated debt was \$197 million at December 31, 2005 and \$1.2 billion at December 31, 2004. ILFC had \$13.13 billion of debt securities registered for public sale at December 31, 2005. As of December 31, 2005, \$8.66 billion of debt securities were issued. In addition, ILFC has a Euro Medium Term Note Program for \$7.0 billion, under which \$4.98 billion in notes were sold through December 31, 2005. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging that portion of the note exposure not already offset by Euro denominated operating lease payments, although such hedges do not qualify for hedge accounting treatment under FAS 133. Notes issued under this program are included in Notes and Bonds Payable.

ILFC had a \$4.3 billion Export Credit Facility (ECA) for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At December 31, 2005, ILFC had \$1.2 billion outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured ECA for up to a maximum of \$2.64 billion for Airbus aircraft to be delivered through May 31, 2005. The facility has since been

extended to include aircraft to be delivered through May 31, 2006. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a six-month forward-looking calendar, and the interest rate is determined through a bid process. At December 31, 2005, ILFC had \$1.4 billion outstanding under this facility. Borrowings with respect to these facilities are included in Notes and Bonds Payable.

In August 2004, ILFC received a commitment for an Ex-Im Bank comprehensive guarantee in the amount of \$1.68 billion to support the financing of up to 30 new Boeing aircraft. The initial delivery period from September 1, 2004 through August 31, 2005 has been extended by ILFC to August 31, 2006. ILFC did not have any borrowings outstanding under this facility at December 31, 2005. From time to time, ILFC enters into various bank financings. As of December 31, 2005 the total funded amount was \$1.4 billion. The financings mature through 2010. One tranche of one of the loans totaling \$410 million was funded in Japanese yen and swapped to U.S. dollars.

In December of 2005, ILFC entered into two tranches of junior subordinated debt totaling \$1.0 billion. Both mature on December 21, 2065, but each tranche has a different call option. The \$600 million tranche has a call date of December 21, 2010 and the \$400 million tranche has a call date of December 21, 2015. The note with the 2010 call date has a fixed interest rate of 5.90 percent for the first five years. The note with the 2015 call date has a fixed interest rate of 6.25 percent for the first ten years. Both tranches have interest rate adjustments if the call option is not exercised. The new interest rate is a floating quarterly reset rate based on the initial credit spread plus the highest of (i) 3 month LIBOR, (ii) 10-year constant maturity treasury and (iii) 30-year constant maturity treasury.

AIG does not guarantee any of the debt obligations of ILFC.

(iii) Notes and Bonds Payable Issued by AGF: As of December 31, 2005, AGF notes aggregating \$983 million were outstanding with maturity dates ranging from 2006 to 2010 at interest rates ranging from 4.03 percent to 8.45 percent.

In 2005, AGF increased its shelf registration statement by \$10.0 billion. AGF had \$11.1 billion of debt securities registered and available for issuance at December 31, 2005. AGF uses the proceeds from the issuance of notes and bonds for the funding of its finance receivables.

AIG does not guarantee any of the debt obligations of AGF.

(iv) Notes, Bonds and Debentures Issued by AIG:

(A) Zero Coupon Convertible Senior Debentures: On November 9, 2001, AIG issued zero coupon convertible senior debentures in the aggregate principal amount at stated maturity of \$1.52 billion. The notes were offered at 65.8 percent of principal amount at stated maturity, bear no interest unless contingent interest becomes payable under certain conditions and are due November 9, 2031. The net proceeds to AIG were \$990 million. Commencing January 1, 2002, holders may

9. Debt Outstanding*Continued*

convert the debentures into shares of AIG common stock at a conversion rate of 6.0627 shares per \$1,000 principal amount of debentures on any day if AIG's common stock price exceeds 120 percent of the conversion price on the last trading day of the preceding fiscal quarter for a set period of time, and after September 30, 2031, on any day if AIG's common stock price exceeds such amount for one day, subject to certain restrictions. The debentures are redeemable by AIG on or after November 9, 2006 at specified redemption prices. Holders may require AIG to repurchase the debentures at specified repurchase prices on November 9, 2006, 2011, 2016, 2021, and 2026. At December 31, 2005, the debentures outstanding had a face value of \$1.52 billion, unamortized discount of \$460 million and a net book value of \$1.06 billion. The amortization of the original issue discount was recorded as a component of other operating expenses.

(B) Notes and Debentures Issued by SAI: As of December 31, 2005, notes and debentures originally issued by SAI aggregating \$435 million (net of unamortized discount of \$40 million) were outstanding with maturity dates from 2007 to 2097 at interest rates ranging from 5.60 percent to 9.95 percent.

(C) Term Notes: On September 30, 2005, AIG sold \$1.5 billion principal amount of notes in a Rule 144A/Regulation S offering, \$500 million of which bear interest at a rate of 4.700 percent per annum and mature in 2010 and \$1.0 billion of which bear interest at a rate of 5.050 percent per annum and mature in 2015. The notes are senior unsecured obligations of AIG and rank equally with all of AIG's other senior debt outstanding. AIG has agreed to use commercially reasonable efforts to consummate an exchange offer for the notes pursuant to an effective registration statement within 360 days of the date on which the notes were issued.

On May 15, 2003, AIG sold \$1.5 billion principal amount of notes in a Rule 144A/Regulation S offering, \$500 million of which bear interest at a rate of 2.875 percent per annum and mature in 2008 and \$1.0 billion of which bear interest at a rate of 4.250 percent per annum and mature in 2013. The notes are senior unsecured obligations of AIG and rank equally with all of AIG's other senior debt outstanding. AIG completed an exchange offer in April 2004 with respect to the Rule 144A/Regulation S Notes and issued in exchange substantially identical notes that are registered under the Securities Act.

(v) Notes and Bonds Payable Issued by AGC: As of December 31, 2005, AGC notes aggregating \$797 million were outstanding with maturity dates ranging from 2010 to 2029 at interest rates ranging up to 7.75 percent.

As of November 2001, AIG guaranteed the notes and bonds of AGC.

(e) Loans and Mortgages Payable:

Loans and mortgages payable at December 31, 2005, consisted of the following:

<i>(in millions)</i>	Uncollateralized Loans Payable	Collateralized Loans and Mortgages Payable
AIG Finance (Hong Kong)		
Limited	\$ 183	\$ –
AIGCFG	864	–
AIG	814	–
Other subsidiaries	618	309
Total	\$2,479	\$309

(f) Liabilities Connected to Trust Preferred Stock: AGC issued Junior Subordinated Debentures (liabilities) to four trusts established by AGC, which represent the sole assets of the trusts. The trusts have no independent operations. The trusts issued mandatory redeemable preferred stock to investors. The interest terms and payment dates of the liabilities correspond to those of the preferred stock. AGC's obligations with respect to the liabilities and related agreements, when taken together, constitute a full and unconditional guarantee by AGC of payments due on the preferred securities. The liabilities are redeemable, under certain conditions, at the option of AGC on a proportionate basis.

The preferred stock consists of \$300 million liquidation value of 8.5 percent preferred stock issued by American General Capital II in June 2000, \$500 million liquidation value of 8.125 percent preferred stock issued by American General Institutional Capital B in March 1997, and \$500 million liquidation value of 7.57 percent preferred stock issued by American General Institutional Capital A in December 1996.

In December 2005, \$100 million liquidation value of 8.05 percent preferred stock were redeemed by American General Capital III.

(g) Revolving Credit Facilities: AIG and AIG Funding, Inc. (AIG Funding) are parties to unsecured syndicated revolving credit facilities aggregating \$2.75 billion, consisting of \$1.375 billion in a 364-day revolving credit facility that expires in July of 2006 and \$1.375 billion in a five-year revolving credit facility that expires in July of 2010. The 364-day facility allows for the conversion by AIG of any outstanding loans at expiration into one-year term loans. The facilities can be used for general corporate purposes and also to provide backup for AIG's commercial paper programs administered by AIG Funding. AIG expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings outstanding under these facilities, nor were any borrowings outstanding as of December 31, 2005.

In November 2005, AIG and AIG Funding entered into a 364-day revolving credit facility for an aggregate amount of \$3 billion, which can be drawn in the form of loans or letters of credit. The credit facility expires in November 2006 but allows for the issuance of letters of credit with terms of up to ten years and provides for the conversion by AIG of any outstanding loans at expiration into one-year term loans. The facility can be used for general corporate purposes, including

9. Debt Outstanding

Continued

providing backup for AIG's commercial paper programs administered by AIG Funding and obtaining letters of credit to secure obligations under insurance and reinsurance transactions. There are currently no loans outstanding under the facility, nor were any loans outstanding as of December 31, 2005. As of such dates, \$1.14 billion was available to be drawn under the facility, with the remainder having been drawn in the form of letters of credit.

AIG is also a party to an unsecured inter-company revolving credit facility provided by certain of its subsidiaries aggregating \$2 billion that expires in October of 2006. The facility allows for the conversion of any outstanding loans at expiration into one-year term loans. The facility can be used for general corporate purposes and also to provide backup for AIG's commercial paper programs. AIG expects to replace or extend this credit facility on or prior to its expiration. There are currently no borrowings outstanding under the inter-company facility, nor were any borrowings outstanding as of December 31, 2005.

AGF is a party to unsecured syndicated revolving credit facilities aggregating \$4.25 billion, consisting of \$2.125 billion in a 364-day revolving credit facility that expires in July 2006 and \$2.125 billion in a five-year credit facility that expires in July 2010. The 364-day facility allows for the conversion by AGF of any outstanding loan at expiration into a one-year term loan. The facilities can be used for general corporate purposes and also to provide backup for AGF's commercial paper programs. AGF expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings outstanding under these facilities, nor were any borrowings outstanding as of December 31, 2005.

ILFC is a party to unsecured syndicated revolving credit facilities aggregating \$6.0 billion. The facilities can be used for general corporate purposes and also to provide backup for ILFC's commercial paper program. They consist of \$2.0 billion in a 364-day revolving credit facility that expires in October 2006, with a one-year term out option, \$2.0 billion in a five-year revolving credit facility that expires in October 2009 and \$2.0 billion in a five-year revolving credit facility that expires in October 2010. ILFC expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings outstanding under these facilities, nor were any borrowings outstanding as of December 31, 2005.

ILFC was a party to two 180-day revolving credit facilities aggregating to \$1.0 billion, each of which expired in 2005.

(h) Interest Expense for All Indebtedness: Total interest expense for all indebtedness, net of capitalized interest, aggregated \$5.67 billion in 2005, \$4.43 billion in 2004 and \$4.22 billion in 2003. Capitalized interest was \$64 million in 2005, \$59 million in 2004 and \$52 million in 2003. Cash distributions on the preferred shareholders' equity in subsidiary

companies of ILFC and liabilities connected to trust preferred stock of AGC subsidiaries are accounted for as interest expense in the consolidated statement of income. The cash distributions for ILFC were approximately \$5 million, \$4 million, and \$4 million for the years ended December 31, 2005, 2004, and 2003, respectively. The cash distributions for AGC subsidiaries were approximately \$112 million, \$123 million and \$128 million for the years ended December 31, 2005, 2004 and 2003, respectively.

10. Preferred Shareholders' Equity in Subsidiary Companies

As of December 31, 2005, preferred shareholders' equity in subsidiary companies represents preferred stocks issued by ILFC, a wholly owned subsidiary of AIG.

At December 31, 2005, the preferred stock consists of 1,000 shares of market auction preferred stock (MAPS) in two series (Series A and B) of 500 shares each. Each of the MAPS shares has a liquidation value of \$100,000 per share and is not convertible. The dividend rate, other than the initial rate, for each dividend period for each series is reset approximately every seven weeks (49 days) on the basis of orders placed in an auction. During 2001, ILFC extended the term of the Series A to five years at a dividend rate of 5.90 percent. At December 31, 2005, the dividend rate for Series B was 4.51 percent.

11. Shareholders' Equity

(a) AIG parent depends on its subsidiaries for cash flow in the form of loans, advances, reimbursement for shared expenses, and dividends. AIG's insurance subsidiaries are subject to regulatory restrictions on the amount of dividends which can be remitted to AIG parent. These restrictions vary by state. For example, unless permitted by the New York Superintendent of Insurance, general insurance companies domiciled in New York may not pay dividends to shareholders which in any twelve month period exceed the lesser of ten percent of the company's statutory policyholders' surplus or 100 percent of its "adjusted net investment income," as defined. Generally, less severe restrictions applicable to both General and Life Insurance companies exist in most of the other states in which AIG's insurance subsidiaries are domiciled. Certain foreign jurisdictions have restrictions which could delay or limit the remittance of dividends. There are also various local restrictions limiting cash loans and advances to AIG by its subsidiaries. Largely as a result of the restrictions, approximately 89 percent of consolidated shareholders' equity was restricted from immediate transfer to AIG parent at December 31, 2005.

(b) At December 31, 2005, there were 6,000,000 shares of AIG's \$5 par value serial preferred stock authorized, issuable in series, none of which were outstanding.

Notes to Consolidated Financial Statements *Continued*

11. Shareholders' Equity

Continued

(c) The common share activity for the three years ended December 31, 2005 was as follows:

	2005	2004	2003
Shares outstanding at beginning of year	2,596,423,190	2,608,447,046	2,609,600,831
Acquired during the year	(2,654,272)	(16,426,114)	(3,899,991)
Issued pursuant to performance stock unit obligations	15,757	24,025	–
Issued under stock plans	2,625,227	4,310,733	2,699,584
Issued under contractual obligations	236,870	67,500	46,622
Shares outstanding at end of year	2,596,646,772	2,596,423,190	2,608,447,046

12. Commitments and Contingent Liabilities

In the normal course of business, various commitments and contingent liabilities are entered into by AIG and certain of its subsidiaries. In addition, AIG guarantees various obligations of certain subsidiaries.

(a) AIG and certain of its subsidiaries become parties to derivative financial instruments with market risk resulting from both dealer and end user activities and to reduce currency, interest rate, equity, and commodity exposures. These instruments are carried at their estimated fair values in the consolidated balance sheet. The vast majority of AIG's derivative activity is transacted by AIGFP. See also Note 20 herein.

(b) Securities sold, but not yet purchased and spot commodities sold but not yet purchased represent obligations of AIGFP to deliver specified securities and spot commodities at their contracted prices. AIGFP records a liability to repurchase the securities and spot commodities in the market at prevailing prices.

AIG has issued unconditional guarantees with respect to the prompt payment, when due, of all present and future payment obligations and liabilities of AIGFP arising from transactions entered into by AIGFP. Net revenues for the twelve months ended December 31, 2005, 2004 and 2003 from Capital Markets operations were \$3.26 billion, \$1.28 billion and \$595 million, respectively.

(c) At December 31, 2005, ILFC had committed to purchase 338 new and used aircraft deliverable from 2006 through 2015 at an estimated aggregate price of \$23.3 billion and had options to purchase 16 new aircraft at an estimated aggregate purchase price of \$1.5 billion. ILFC will be required to find customers for any aircraft acquired, and it anticipates that it will be required to arrange financing for portions of the purchase price of such equipment.

(d) AIG and its subsidiaries, in common with the insurance industry in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. The recent trend of increasing jury awards and settlements makes it difficult to assess the ultimate outcome of such litigation.

Although AIG annually reviews the adequacy of the established reserve for losses and loss expenses, there can be no

assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, directors and officers liability (D&O), professional liability, medical malpractice, workers compensation, general liability, products liability and related classes, as well as for asbestos and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss trends or loss development factors could be attributable to changes in inflation in labor and material costs or in the judicial environment, or in other social or economic phenomena affecting claims.

(e) SAI Deferred Compensation Holdings, Inc., a wholly-owned subsidiary of AIG, has established a deferred compensation plan for registered representatives of certain AIG subsidiaries, pursuant to which participants have the opportunity to invest deferred commissions and fees on a notional basis. The value of the deferred compensation fluctuates with the value of the deferred investment alternatives chosen. AIG has provided a full and unconditional guarantee of the obligations of SAI Deferred Compensation Holdings, Inc. to pay the deferred compensation under the plan.

(f) On June 27, 2005, AIG entered into agreements pursuant to which AIG agrees, subject to certain conditions, to (i) make any payment that is not promptly paid with respect to the benefits accrued by certain employees of AIG and its subsidiaries under the SICO Plans (as defined in Note 16) and (ii) make any payment to the extent not promptly paid by Starr with respect to amounts that become payable to certain employees of AIG and its subsidiaries who are also stockholders of Starr after the giving of a notice of repurchase or redemption under Starr's organizational documents. In January 2006, Starr announced that it had completed its tender offer to

12. Commitments and Contingent Liabilities

Continued

purchase interests in Starr and that all eligible shares had tendered their shares. As a result of completion of the tender offer, no executive currently holds any Starr interests.

(g) AIG and certain of its subsidiaries have been named defendants in two putative class actions in state court in Alabama that arise out of the 1999 settlement of class and derivative litigation involving Caremark Rx, Inc. (Caremark). An excess policy issued by a subsidiary of AIG with respect to the 1999 litigation was expressly stated to be without limit of liability. In the current actions, plaintiffs allege that the judge approving the 1999 settlement was misled as to the extent of available insurance coverage and would not have approved the settlement had he known of the existence and/or unlimited nature of the excess policy. They further allege that AIG, its subsidiaries, and Caremark are liable for fraud and suppression for misrepresenting and/or concealing the nature and extent of coverage. In their complaint, plaintiffs request compensatory damages for the 1999 class in the amount of \$3.2 billion, plus punitive damages. AIG and its subsidiaries deny the allegations of fraud and suppression and have asserted, *inter alia*, that information concerning the excess policy was publicly disclosed months prior to the approval of the settlement. AIG and its subsidiaries further assert that the current claims are barred by the statute of limitations and that plaintiffs' assertions that the statute was tolled cannot stand against the public disclosure of the excess coverage. Plaintiffs, in turn, have asserted that the disclosure was insufficient to inform them of the nature of the coverage and did not start the running of the statute of limitations. On January 28, 2005, the Alabama trial court determined that one of the current actions may proceed as a class action on behalf of the 1999 classes that were allegedly defrauded by the settlement. AIG, its subsidiaries, and Caremark are seeking appellate relief from the Alabama Supreme Court. AIG cannot now estimate either the likelihood of its prevailing in these actions or the potential damages in the event liability is determined.

(h) On December 30, 2004, an arbitration panel issued its ruling in connection with a 1998 workers compensation quota share reinsurance agreement under which Superior National Insurance Company, among others, was reinsured by USLIFE, a subsidiary of American General Corporation. In its 2-1 ruling the arbitration panel refused to rescind the contract as requested by USLIFE. Instead, the panel reformed the contract to reduce USLIFE's participation by ten percent. USLIFE disagrees with the ruling and is pursuing all appropriate legal remedies. USLIFE has certain reinsurance recoverables in connection with the contract and the arbitration ruling established a second phase of arbitration in which USLIFE will present its challenges to cessions to the contract.

AIG recorded a \$178 million pre-tax charge in the fourth quarter of 2004 related to this matter and holds a reserve of approximately \$364 million as of December 31, 2005.

(i) Regulators from several states have commenced investigations into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Various parties, including insureds and shareholders, have also asserted putative class action and other claims against AIG or its subsidiaries alleging, among other things, violations of the antitrust and federal securities laws, and AIG expects that additional claims may be made.

In February 2006, AIG reached a resolution of claims and matters under investigation with the United States Department of Justice (DOJ), the Securities and Exchange Commission (SEC), the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). The settlements resolved outstanding litigation filed by the SEC, NYAG and DOI against AIG and concluded negotiations with these authorities and the DOJ in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. The 2005 financial statements include a fourth quarter after-tax charge of \$1.15 billion to record the settlements.

As a result of these settlements, AIG made payments totaling approximately \$1.64 billion, \$225 million of which represented fines and penalties. A substantial portion of the money will be available to resolve claims asserted in various regulatory and civil proceedings, including shareholder lawsuits.

Also, as part of the settlements, AIG has agreed to retain for a period of three years an independent consultant who will conduct a review that will include the adequacy of AIG's internal control over financial reporting and the remediation plan that AIG has implemented as a result of its own internal review.

Various federal and state regulatory agencies are reviewing certain other transactions and practices of AIG and its subsidiaries in connection with industry-wide and other inquiries. AIG has cooperated, and will continue to cooperate, in producing documents and other information in response to the subpoenas.

A number of lawsuits have been filed regarding the subject matter of the investigations of insurance brokerage practices, including derivative actions, individual actions and class actions under the federal securities laws, Racketeer Influenced and Corrupt Organizations Act (RICO), Employee Retirement Income Security Act (ERISA) and state common and corporate laws in both federal and state courts, including the United States District Court for the Southern District of New York (Southern District of New York), in the Commonwealth of Massachusetts Superior Court and in Delaware Chancery Court. All of these actions generally allege that AIG and its subsidiaries violated the law by allegedly concealing a scheme to "rig bids" and "steer" business between insurance companies and insurance brokers.

Since October 19, 2004, AIG or its subsidiaries have been named as a defendant in fifteen complaints that were filed in federal court and two that were originally filed in state court (Massachusetts and Florida) and removed to federal court. These cases generally allege that AIG and its subsidiaries

12. Commitments and Contingent Liabilities*Continued*

violated federal and various state antitrust laws, as well as federal RICO laws, various state deceptive and unfair practice laws and certain state laws governing fiduciary duties. The alleged basis of these claims is that there was a conspiracy between insurance companies and insurance brokers with regard to the use of contingent commission agreements, bidding practices, and other broker-related conduct concerning coverage in certain sectors of the insurance industry. The Judicial Panel on Multidistrict Litigation entered an order on February 17, 2005, consolidating most of these cases and transferring them to the United States District Court for the District of New Jersey (District of New Jersey). The remainder of these cases have been transferred to the District of New Jersey. On August 15, 2005, the plaintiffs in the multidistrict litigation filed a Corrected First Consolidated Amended Commercial Class Action Complaint, which, in addition to the previously named AIG defendants, names new AIG subsidiaries as defendants. Also on August 15, 2005, AIG and two subsidiaries were named as defendants in a Corrected First Consolidated Amended Employee Benefits Class Action Complaint filed in the District of New Jersey, which asserts similar claims with respect to employee benefits insurance and a claim under ERISA on behalf of putative classes of employers and employees. On November 29, 2005, the AIG defendants, along with other insurer defendants and the broker defendants filed motions to dismiss both the Commercial and Employee Benefits Complaints. Plaintiffs have filed a motion for class certification in the consolidated action. In addition, complaints were filed against AIG and several of its subsidiaries in Massachusetts and Florida state courts, which have both been stayed. In the Florida action, the plaintiff has filed a petition for a writ of certiorari with the District Court of Appeals of the State of Florida, Fourth District with respect to the stay order. On February 9, 2006, a complaint against AIG and several of its subsidiaries was filed in Texas state court, making claims similar to those in the federal cases above.

In April and May 2005, amended complaints were filed in the consolidated derivative and securities cases, as well as in one of the ERISA lawsuits, pending in the Southern District of New York adding allegations concerning AIG's accounting treatment for non-traditional insurance products. In September 2005, a second amended complaint was filed in the consolidated securities cases adding allegations concerning AIG's First Restatement. Also in September 2005, a new securities action complaint was filed in the Southern District of New York, asserting claims premised on the same allegations made in the consolidated cases. Motions to dismiss have been filed in the securities actions. In September 2005, a consolidated complaint was filed in the ERISA case pending in the Southern District of New York. Motions to dismiss have been filed in that ERISA case. Also in April 2005, new derivative actions were filed in Delaware Chancery Court, and in July and August 2005, two new derivative actions were filed in the Southern District of New York asserting claims duplicative of the claims made in the consolidated derivative action.

In July 2005, a second amended complaint was filed in the consolidated derivative case in the Southern District of New York, expanding upon accounting-related allegations, based upon the First Restatement and, in August 2005, an amended consolidated complaint was filed. In June 2005, the derivative cases in Delaware were consolidated. AIG's Board of Directors has appointed a special committee of independent directors to review the matters asserted in the derivative complaints. The courts have approved agreements staying the derivative cases pending in the Southern District of New York and in Delaware Chancery Court while the special committee of independent directors performs its work. In September 2005, a shareholder filed suit in Delaware Chancery Court seeking documents relating to some of the allegations made in the derivative suits. AIG filed a motion to dismiss in October 2005.

In late 2002, a derivative action was filed in Delaware Chancery Court in connection with AIG's transactions with certain entities affiliated with Starr and Starr International Company, Inc. (SICO). In May 2005, the plaintiff filed an amended complaint which adds additional claims premised on allegations relating to insurance brokerage practices and AIG's non-traditional insurance products. Plaintiffs in that case have agreed to dismiss newly added allegations unrelated to transactions with entities affiliated with Starr and SICO without prejudice to pursuit of these claims in the separate derivative actions described above. On February 16, 2006, the Delaware Chancery Court entered an order dismissing the litigation with prejudice with respect to AIG's outside directors and dismissing the claims against the remaining AIG defendants without prejudice.

AIG cannot predict the outcome of the matters described above or estimate the potential costs related to these matters and, accordingly, no reserve is being established in AIG's financial statements at this time. In the opinion of AIG management, AIG's ultimate liability for the unresolved matters referred to above is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

(j) On July 8, 2005, SICO filed a complaint against AIG in the Southern District of New York. The complaint alleges that AIG is in the possession of items, including artwork, which SICO claims it owns, and seeks an order causing AIG to release those items as well as actual, consequential, punitive and exemplary damages. On September 27, 2005, AIG filed its answer to SICO's complaint denying SICO's allegations and asserting counter-claims for breach of contract, unjust enrichment, conversion and breach of fiduciary duty relating to SICO's breach of its commitment to use its AIG shares for the benefit of AIG and its employees. On October 17, 2005, SICO replied to AIG's counter-claims and additionally sought a judgment declaring that SICO is neither a control person nor an affiliate of AIG for purposes of Schedule 13D under the Securities Exchange Act of 1934, as amended (the Exchange Act), and Rule 144 under the Securities Act of 1933, as

12. Commitments and Contingent Liabilities

Continued

amended (the Securities Act), respectively. AIG responded to the SICO claims on November 7, 2005.

(k) AIG subsidiaries own interests in certain limited liability companies (LLCs) which invested in six coal synthetic fuel production facilities. The sale of coal synthetic fuel produced by these six facilities generates income tax credits. Since acquiring the facilities, AIG has recognized approximately \$1.0 billion of synfuel tax credits through December 31, 2005. One of the conditions a taxpayer must meet to qualify for coal synfuel tax credits is that the synfuel production facility must have been “placed in service” before July 1, 1998. On July 1, 2005 IRS field agents issued notices of proposed adjustment to the LLCs proposing to disallow all of the credits taken by the LLCs during the years 2001 through 2003. The IRS field agents subsequently conceded that one of the facilities was timely placed in service, but contended that none of the other underlying production facilities were placed in service by the statutory deadline. On October 3, 2005, IRS field agents issued 60-day letters to the LLCs proposing to disallow the tax credits taken with respect to synfuel sales by the remaining five production facilities. By letters dated February 17, 2006, the IRS field agents have advised the LLCs that they have, after further review, concluded that all six production facilities were placed in service before July 1, 1998 and that they will withdraw the 60-day letters issued to the LLCs.

Tax credits generated from the production and sale of synthetic fuel under section 29 of the Internal Revenue Code are subject to an annual phase-out provision that is based on the average wellhead price of domestic crude oil. The price range within which the tax credits are phased-out was originally established in 1980 and is adjusted annually for inflation. Depending on the price of domestic crude oil for a particular year, all or a portion of the tax credits generated in that year might be eliminated. Although AIG cannot predict the future price of domestic crude oil for the years 2006 and 2007 (the final year the tax credits are available), AIG does not expect the phase-out provision to affect tax credits generated in 2005. AIG has also entered into hedges designed to mitigate a portion of its future exposure to a sustained high price of oil. However, no assurance can be given as to the effectiveness of the hedging in actually reducing such exposure or whether such hedging will continue.

(l) AIG understands that some of its employees have received Wells notices in connection with previously disclosed SEC investigations of certain of AIG’s transactions or accounting practices. Under SEC procedures, a Wells notice is an indication that the SEC staff has made a preliminary decision to recommend enforcement action that provides recipients with an opportunity to respond to the SEC staff before a formal recommendation is finalized. AIG anticipates that additional current and former employees could receive similar notices in the future as the regulatory investigations proceed.

(m) In August 2005, the Bureau of Labor Insurance in Taiwan began to levy a monthly administrative penalty against Nan

Shan for not providing its agency leaders a choice between alternative government pension plans. Nan Shan has reached an agreement with the agency union and the ultimate liability is not material to AIG’s consolidated financial condition or results of operations.

13. Fair Value of Financial Instruments

Statement of Financial Accounting Standards No. 107, “Disclosures about Fair Value of Financial Instruments” (FAS 107), requires disclosure of fair value information about financial instruments, as defined therein, for which it is practicable to estimate such fair value. In the measurement of the fair value of certain financial instruments, where quoted market prices are not available, other valuation techniques are utilized. These fair value estimates are derived using internally developed valuation methodologies based on available and observable market information. FAS 107 excludes certain financial instruments, including those related to insurance contracts.

The following methods and assumptions were used by AIG in estimating the fair value of the financial instruments presented:

Cash and short-term investments: The carrying amounts approximate fair values.

Fixed maturity securities: Fair values were generally based upon quoted market prices. For certain fixed maturity securities for which market prices were not readily available, fair values were estimated using values obtained from independent pricing services.

Equity securities: Fair values were based upon quoted market prices.

Mortgage loans on real estate, policy and collateral loans: Where practical, the fair values of loans on real estate and collateral loans were estimated using discounted cash flow calculations based upon AIG’s current incremental lending rates for similar type loans. The fair values of the policy loans were not calculated as AIG believes it would have to expend excessive costs for the benefits derived.

Trading assets and trading liabilities: Fair values approximate the carrying values.

Finance receivables: Fair values were estimated using discounted cash flow calculations based upon the weighted average rates currently being offered for similar finance receivables.

Securities available for sale: Fair values were based on quoted market prices. Where market prices were not readily available, fair values were estimated using quoted market prices of comparable investments.

Securities lending collateral and securities lending payable: The contract values of these financial instruments approximate fair value.

Trading securities: Fair values were based on current market value where available. For securities for which market values

13. Fair Value of Financial Instruments

Continued

were not readily available, fair values were estimated using quoted market prices of comparable investments.

Spot commodities: Fair values are based on current market prices.

Unrealized gains and losses on swaps, options and forward transactions: Fair values were based on the use of valuation models that utilize, among other things, current interest, foreign exchange commodity, equity and volatility rates, as applicable.

Securities purchased (sold) under agreements to resell (repurchase), at contract value: As these securities (obligations) are short-term in nature, the contract values approximate fair values.

Other invested assets: Consisting principally of hedge funds and limited partnerships. Fair values are provided by the general partner or manager of each investment.

Policyholders' contract deposits: Fair values were estimated using discounted cash flow calculations based upon interest rates currently being offered for similar contracts with maturities consistent with those remaining for the contracts being valued.

GIAs: Fair values of AIG's obligations under investment type agreements were estimated using discounted cash flow calculations based on interest rates currently being offered for similar agreements with maturities consistent with those remaining for the agreements being valued.

Securities and spot commodities sold but not yet purchased: The carrying amounts for the securities and spot commodities sold but not yet purchased approximate fair values. Fair values for spot commodities sold short were based on current market prices.

Trust deposits and deposits due to banks and other depositors: To the extent certain amounts are not demand deposits or certificates of deposit which mature in more than one year, fair values were not calculated as AIG believes it would have to expend excessive costs for the benefits derived.

Commercial paper: The carrying amount approximates fair value.

Notes, bonds, loans and mortgages: Where practical, the fair values of these obligations were estimated using discounted cash flow calculations based upon AIG's current incremental borrowing rates for similar types of borrowings with maturities consistent with those remaining for the debt being valued.

13. Fair Value of Financial Instruments

Continued

The carrying values and fair values of AIG's financial instruments at December 31, 2005 and 2004 were as follows:

(in millions)	2005		2004	
	Carrying Value*	Fair Value	Carrying Value*	Fair Value
Assets:				
Fixed maturities	\$385,680	\$386,199	\$365,677	\$366,174
Equity securities	23,588	23,588	17,706	17,706
Mortgage loans on real estate, policy and collateral loans	24,909	26,352	23,484	23,980
Securities available for sale	37,511	37,511	31,225	31,225
Trading securities	6,499	6,499	2,746	2,746
Spot commodities	92	96	534	534
Unrealized gain on swaps, options and forward transactions	18,695	18,695	22,670	22,670

Commercial paper	9,208	9,208	9,693	9,693
Notes, bonds, loans and mortgages payable	78,439	79,518	66,798	68,700
Securities lending payable	60,409	60,409	49,972	49,972

* The carrying value of all other financial instruments approximates fair value.

14. Stock Compensation Plans

At December 31, 2005, AIG had five types of stock-based compensation plans: (i) a stock option plan; (ii) an incentive stock plan under which restricted stock units had been issued; (iii) an employee stock purchase plan; (iv) SICO's Deferred Compensation Profit Participation Plan (SICO DCPPP) (consistent with SICO's change to equity settlement of selected awards); and (v) AIG's Deferred Compensation Profit Participation Plan (AIG DCPPP) which is the replacement for the SICO DCPPP.

Effective January 1, 2003, AIG adopted the recognition provision of Statement of Financial Accounting Standards No. 123, "Accounting for Stock-Based Compensation" (FAS 123). This statement establishes the financial accounting and reporting standards for stock-based employee compensation plans, such as AIG's stock purchase plan, stock option plan, stock incentive plan, SICO DCPPP, and AIG DCPPP. Under the recognition provisions of FAS 123, costs with respect to stock compensation are measured using the fair value of the shares subscribed or granted as at the date of grant recognized ratably over the vesting period. Such fair value is derived through an option pricing model or the fair value of AIG's common stock, as applicable. See Note 1(gg) herein for

discussion of prospective change to AIG's accounting for retiree eligibility provisions.

Statement of Financial Accounting Standards No. 148, "Accounting for Stock-Based Compensation – Transition and Disclosure, an amendment to FASB Statement No. 123" (FAS 148), was issued in 2002. This statement amended FAS 123 and provides alternative methods of transition for a voluntary change to the recognition provisions of FAS 123. Also, FAS 148 amended certain of the disclosure requirements of FAS 123.

AIG elected the "Prospective Method" in the application of the recognition provisions as prescribed by FAS 123. Such method provides for the recognition of the fair value with respect to stock-based compensation for shares subscribed for or granted on or after January 1, 2003.

Prior to adoption of the recognition provisions of FAS 123, as amended, AIG recognized stock compensation in accordance with the provisions of APB Opinion No. 25 "Accounting for Stock Issued to Employees." Shares subscribed for or granted prior to January 1, 2003 continue to be accounted for pursuant to APB Opinion No. 25. See Note 1(gg) herein for discussion of AIG's accounting for the unvested portion of its APB 25 awards according to the requirements of FAS 123R.

14. Stock Compensation Plans*Continued*

With respect to net income for December 31, 2005, 2004, and 2003, the following table provides a pro forma reconciliation as if AIG had adopted the recognition provisions of FAS 123 at the awards inception:

<i>(in millions, except per share data)</i>	2005	2004	2003
Net income, as reported	\$10,477	\$9,839	\$8,108
Add back interest on contingently convertible bonds, net of tax	11	11	11
	10,488	9,850	8,119
Actual stock-based compensation recognized, net of tax	53	40	16
	10,541	9,890	8,135
Fair Value for Grants			
Issued prior to January 1, 2003, net of tax	39	49	56
Actual stock-based compensation recognized, net of tax	53	40	16
Net income, pro forma	\$10,449	\$9,801	\$8,063
Earnings per common share:			
Basic:			
Net income, as reported	\$ 4.03	\$ 3.77	\$ 3.10
Stock-based compensation, net of tax	(0.01)	(0.02)	(0.02)
Net income, pro forma	\$ 4.02	\$ 3.75	\$ 3.08
Diluted:			
Net income, as reported	\$ 3.99	\$ 3.73	\$ 3.07
Stock-based compensation, net of tax	(0.01)	(0.02)	(0.02)
Net income, pro forma	\$ 3.98	\$ 3.71	\$ 3.05
Average shares outstanding:			
Basic	2,597	2,606	2,610
Diluted	2,627	2,637	2,637

AIG uses a binomial model to calculate the fair value of stock option grants. The model uses ten years of historical exercise behavior to account for the early exercise of employee options and five years of historical stock price data to infer the implied volatility. The fair-value model has been refined from time to time since AIG adopted FAS 123 on January 1, 2003, but valuation results have been consistent from one reporting period to the next.

The fair values of stock options granted during the three years ended December 31, 2005, 2004, and 2003 were approximately \$100 million, \$80 million and \$180 million, respectively.

The following weighted average assumptions were used for stock options granted in 2005, 2004 and 2003, respectively: dividend yields of 0.71 percent, 0.36 percent and 0.32 percent; expected volatility of 27.3 percent, 34.4 percent and 34.0 percent; risk-free interest rates of 4.17 percent, 3.87 percent and 3.57 percent; and expected terms of seven years in each year.

Also included in the above table is the compensation expense with respect to AIG's employee stock purchase plan.

The fair value calculated was derived by using the Black-Scholes model. The pro forma recognition of such fair value had an insignificant effect on the pro forma amounts disclosed above.

The fair values of purchase privileges granted during the years ended December 31, 2005, 2004 and 2003 were \$13 million, \$12 million and \$12 million, respectively. The weighted average fair values per share of those purchase rights granted in 2005, 2004, and 2003 were \$12.24, \$14.82, and \$11.64, respectively. The fair value of each purchase right was derived at the date of the subscription using the AIG model.

The following weighted average assumptions were used for purchase privileges granted in 2005, 2004 and 2003, respectively: dividend yields of 0.71 percent, 0.36 percent and 0.32 percent; expected volatilities of 27.3 percent, 34.4 percent and 34.0 percent; risk-free interest rates of 3.37 percent, 1.60 percent and 1.10 percent; and terms of one year.

(a) Stock Option Plan: The AIG 1999 Stock Option Plan, as amended (the 1999 Plan), provides that options to purchase a maximum of 45,000,000 shares of common stock can be granted to certain key employees and members of the Board of Directors at prices not less than fair market value at the date of grant. The 1999 Plan limits the maximum number of shares as to which stock options may be granted to any employee in any one year to 900,000 shares. Options granted under this Plan expire not more than ten years from the date of the grant. Options with respect to 32,500 shares, 25,000 shares, 25,000 shares, and 25,000 shares were granted to nonemployee members of the Board of Directors on August 11, 2005, May 19, 2004, May 14, 2003 and February 10, 2003, respectively. These options become exercisable on the first anniversary of the date of grant, expire ten years from the date of grant, and do not qualify for Incentive Stock Option Treatment under the Section 422 of the Internal Revenue Code (ISO Treatment). The 1999 Plan, and the options previously granted thereunder, were approved by the shareholders at the 2000 Annual Meeting of Shareholders, and certain amendments were approved at the 2003 Annual Meeting of Shareholders. At December 31, 2005, 20,130,562 shares were reserved for future grants under the 1999 Plan. The 1999 Plan superseded the 1991 employee stock option plan (the 1991 Plan) and the previously superseded 1987 employee stock option plan, although outstanding options granted under the 1991 Plan continue in force until exercise or expiration. At December 31, 2005, there were 29,524,565 shares reserved for issuance under the 1999 Plan and the 1991 Plan.

During 2003, AIG granted options with respect to 137,300 shares which become exercisable on the fifth anniversary of the date of grant and expire ten years from the date of grant. These options do not qualify for ISO Treatment. The agreements with respect to all other options granted to employees under these plans in 2004 and 2003 provide that 25 percent of the options granted become exercisable on the anniversary of the date of grant in each of the four years following that grant and expire 10 years from the date of the grant. As of December 31, 2005, outstanding options granted with respect to 12,009,898 shares qualified for ISO Treatment.

14. Stock Compensation Plans

Continued

At January 1, 1999, the date of the AIG/SAI merger, SAI had five stock-based compensation plans pursuant to which options, restricted stock, and deferred share and share unit obligations had been issued and remained outstanding. Options granted under these plans had an exercise price equal to the market price on the date of grant, had a maximum term of ten years, and generally became exercisable ratably over a five-year period. Substantially all of the SAI options outstanding at the merger date became fully vested on that date and were converted into options to purchase AIG common stock at the exchange ratio of 0.855 shares of AIG common stock for each share of SAI common stock. No further options can be granted under the SAI plans, but outstanding options so converted continue in force until exercise or expiration. At December 31, 2005, there were 11,526,992 shares of AIG common stock reserved for issuance on exercise of options under these plans. None of these options qualified for ISO Treatment as of December 31, 2005.

During 2005, 2004 and 2003, deferred share and share unit obligations with respect to 1,895 shares, 1,895 shares and 1,895 shares, respectively, of AIG common stock vested and were issued. No additional deferred share or share unit obligations may be granted under the SAI plans. As of December 31, 2005, deferred share and share unit obligations with respect to 59,972 shares remained outstanding under the SAI plans.

The AIG Board of Directors has construed the AIG stock option plans to allow, at the request of an optionee, the deferral of delivery of AIG shares otherwise deliverable upon the exercise of an option to a date or dates specified by the optionee. During 2005, options with respect to 1,731,471 shares were exercised with delivery deferred. At December 31, 2005, optionees had made valid elections to defer delivery of

2,067,643 shares of AIG common stock upon exercise of options expiring during 2006. In addition, nonemployee directors of AIG made valid elections to defer delivery of 21,093 shares of AIG common stock upon exercise of options expiring during 2006.

As a result of the acquisition of the Hartford Steam Boiler Inspection and Insurance Company (HSB) in November 2000, HSB options outstanding at the acquisition date were fully vested and were converted into options to purchase AIG common stock at the exchange ratio of 0.4178 shares of AIG common stock for each share of HSB common stock. No further options can be granted under the HSB option plans, but outstanding options so converted continue in force until exercise or expiration. At December 31, 2005, there were 688,648 shares of AIG common stock reserved for issuance under the HSB option plans, none of which qualified for ISO Treatment.

At August 29, 2001, AGC had stock-based compensation plans pursuant to which options and restricted share units had been issued and remained outstanding. Options granted under these plans had an exercise price equal to the market price on the date of the grant, had a maximum term of ten years, and generally became exercisable ratably over a three-year period. All of the AGC options outstanding at the acquisition date became fully vested on that date and were converted into options to purchase AIG common stock at an exchange ratio of 0.5790 shares of AIG common stock for each share of AGC common stock. No further options can be granted under the AGC plans, but outstanding options so converted continue in force until exercise or expiration. At December 31, 2005, there were 10,805,219 shares of AIG common stock reserved for issuance on exercise of options under these plans. Options with respect to 1,250,221 of these shares qualified for ISO Treatment as of December 31, 2005.

Additional information with respect to AIG's plans at December 31, 2005, and changes for the three years then ended, were as follows:

	2005		2004		2003	
	Shares	Weighted Average Exercise Price	Shares	Weighted Average Exercise Price	Shares	Weighted Average Exercise Price
Shares Under Option:						
Outstanding at beginning of year	54,463,003	\$51.94	59,253,166	\$48.00	54,214,016	\$45.63
Granted	4,397,500	62.69	3,474,100	64.65	8,602,909	56.15
Exercised	(2,263,377)	27.22	(3,387,734)	34.02	(2,182,680)	22.69
Exercised, delivery deferred	(1,731,471)	11.29	(3,397,999)	5.98	(495,787)	8.46
Forfeited	(2,320,230)	60.97	(1,478,530)	70.69	(885,292)	66.37

(b) 2002 Stock Incentive Plan: AIG's 2002 Stock Incentive Plan was adopted at its 2002 shareholders' meeting and amended and restated by the AIG Board of Directors on September 18, 2002. This plan provides that equity-based or equity-related awards with respect to shares of common stock can be issued to officers, employees or members of the Board of Directors of AIG in any year up to a maximum of that number of shares equal to (a) 1,000,000 shares plus (b) the number of shares available but not issued in the prior calendar year. Under the Plan, no grantee may receive awards covering more than 250,000 shares of common stock. During 2005 and 2004, AIG granted restricted stock units (RSUs) relating to 3,055,835 shares and 992,481 shares of common stock to employees, respectively. These RSUs will vest on the fourth anniversary of the date of grant assuming continued employment through such date. See Note 1(gg) herein for discussion of prospective change in AIG's accounting for retiree eligibility provisions. AIG reserves the right to make payment for the RSUs in shares of common stock or the cash equivalent on the date of vesting. AIG shares delivered under the AIG DCPPP will be issued pursuant to the 2002 Stock Incentive Plan. At December 31, 2005, there were 14,675,635 shares of common stock reserved for issuance in connection with future grants of awards under the Plan.

(c) Employee Stock Purchase Plan: AIG's 1996 Employee Stock Purchase Plan, as amended and approved by AIG shareholders in 2003 (the 1996 Plan), provides that eligible employees (those employed at least one year) may receive privileges to purchase up to an aggregate of 10,000,000 shares of AIG common stock, at a price equal to 85 percent of the fair market value on the date of the grant of the purchase privilege. Purchase privileges are granted annually and are limited to the number of whole shares that can be purchased

by an amount equal to 10 percent of an employee's annual salary or \$10,000, whichever is less. There were 359,750 shares, 922,999 shares and 516,904 shares issued under the 1996 plan at weighted average prices of \$57.06, \$46.41 and \$48.03 for the years ended December 31, 2005, 2004 and 2003, respectively. The excess or deficit of the proceeds over the par value or cost of the common stock issued was credited or charged to additional paid-in capital.

As of December 31, 2005, there were 1,045,329 shares of common stock subscribed to at a weighted average price of \$50.91 per share pursuant to grants of privileges under the 1996 plan. There were 3,689,063 shares available for the grant of future purchase privileges under the 1996 Plan at December 31, 2005.

As a result of its changing relationship with Starr and SICO, AIG is establishing new executive compensation plans which replace existing investment opportunities and deferred compensation plans provided by Starr and SICO. The replacement plans include both share-based plans as well as cash-based plans. The share-based plans generally include performance as well as service conditions.

15. Employee Benefits

(a) Pension Plans: Employees of AIG, its subsidiaries and certain affiliated companies, including employees in foreign countries, are generally covered under various funded, unfunded and insured pension plans. Eligibility for participation in the various plans is based on either completion of a specified period of continuous service or date of hire, subject to age limitations. Some AIG subsidiaries provide retirement benefits through defined benefit plans, others employ defined contribution plans and some use both.

15. Employee Benefits

Continued

AIG's U.S. retirement plan is a qualified, noncontributory defined benefit plan which is subject to the provisions of ERISA. All employees of AIG and most of its subsidiaries and affiliates who are regularly employed in the United States, including certain U.S. citizens employed abroad on a U.S. dollar payroll, and who have attained age 21 and completed twelve months of continuous service are eligible to participate in this plan. An employee with 5 or more years of plan participation is entitled to pension benefits beginning at normal retirement at age 65. Benefits are based upon a percentage of average final compensation multiplied by years of credited service limited to 44 years of credited service. The average final compensation is subject to certain limitations. Employees may elect certain options with respect to receipt of their pension benefits including a joint and survivor annuity. An employee with 10 or more years of plan participation may retire early from age 55 to 64. An early retirement factor is applied resulting in a reduced benefit. If an employee terminates with less than five years of plan participation, the employee forfeits the right to receive any pension benefits accumulated to that time. Annual funding requirements are determined based on the "projected unit credit" cost method, which attributes a pro rata portion of the total projected benefit payable at normal retirement to each year of credited service.

The HSB retirement plan was merged into the AIG U.S. retirement plan effective April 1, 2001. Benefits for HSB participants were changed effective January 1, 2005 to be substantially similar to the AIG U.S. retirement plan benefit subject to a grandfathering agreement. The AGC retirement plan was merged into the AIG U.S. retirement plan effective January 1, 2002. Benefits for AGC participants were changed effective January 1, 2003 to be substantially similar to the AIG U.S. retirement plan benefits subject to grandfathering requirements.

AIG SunAmerica employees began participation and accruing benefits in the AIG plan on January 1, 2003. Vesting with respect to AIG SunAmerica employees in the AIG plan begins on the later of January 1, 1999, the date of acquisition or the date of hire.

21st Century sponsors its own benefit plans for its eligible employees. Assets, obligations and costs with respect to 21st Century's plans are included herein. The assumptions used in its plans were not significantly different from those used by AIG in AIG's U.S. plans.

The AIG Excess Retirement Income Plan provides a benefit equal to the reduction in benefits payable under the AIG U.S. retirement plan as a result of federal tax limitations on compensation and benefits payable thereunder. AIG has adopted a Supplemental Executive Retirement Plan (Supplemental Plan) to provide additional retirement benefits to designated executives. Under the Supplemental Plan, an annual benefit accrues at a percentage of final average pay multiplied by each year of credited service, not greater than 60 percent of final average pay, reduced by any benefits from the

current and any predecessor retirement plans (including the AIG Excess Retirement Income Plan and any comparable plans), Social Security, if any, and from any qualified pension plan of prior employers. Currently, each of these plans is unfunded. AGC and HSB have adopted similar supplemental type plans. These plans are also unfunded.

Where non-U.S. retirement plans are defined benefit plans, they are generally either based on the employees' years of credited service and compensation in the years preceding retirement, or on points accumulated based on the employee's job grade and other factors during each year of service.

(b) Postretirement Plans: In addition to AIG's defined benefit pension plan, AIG and its subsidiaries provide a postretirement benefit program for medical care and life insurance domestically and in certain foreign countries. Eligibility in the various plans is generally based upon completion of a specified period of eligible service and attaining a specified age. Overseas, benefits vary by geographic location.

AIG's U.S. postretirement medical and life insurance benefits are based upon the employee electing immediate retirement and having a minimum of ten years of service. Retirees who were age 65 by May 1, 1989 and their dependents participate in the medical plan at no cost. Employees who retired after May 1, 1989 and prior to January 1, 1993 pay 50 percent of the active employee premium. Retiree contributions are subject to adjustment annually. Other cost sharing features of the medical plan include deductibles, coinsurance and Medicare coordination and a lifetime maximum benefit of \$2.0 million. The maximum life insurance benefit prior to age 70 is \$32,500, with a maximum of \$25,000 thereafter.

Effective January 1, 1993, both plans' provisions were amended. Employees who retire after January 1, 1993 are required to pay the actual cost of the medical benefits premium reduced by a credit of a certain amount, based on years of service at retirement. The life insurance benefit varies by age at retirement from \$5,000 for retirement at ages 55 through 59; \$10,000 for retirement at ages 60 through 64 and \$15,000 for retirement at ages 65 and over.

(c) Voluntary Savings Plans: AIG sponsors a voluntary savings plan for domestic employees (the AIG Incentive Savings plan), which, during the three years ended December 31, 2005, provided for salary reduction contributions by employees and matching contributions by AIG of up to seven percent of annual salary depending on the employees' years of service. Contributions are funded currently.

AGC sponsored a voluntary savings plan for its employees, which was merged into the AIG Incentive Savings plan on January 1, 2003.

HSB sponsored a voluntary savings plan for its employees, which was merged into the AIG Incentive Savings plan on January 1, 2002.

AIG SunAmerica sponsored a voluntary savings plan for its employees, which was merged into the AIG Incentive Savings plan on January 1, 2003. Under an AIG SunAmerica Executive Savings Plan, designated AIG SunAmerica executives also could defer up to 90 percent of cash compensation

Notes to Consolidated Financial Statements *Continued*

15. Employee Benefits

Continued

and AIG SunAmerica matched four percent of the participants' base salaries deferred. The Plan was frozen to new contributions on March 31, 2003.

(d) Post Employment Benefits: AIG provides certain benefits to inactive employees who are not retirees. Certain of these benefits are insured and expensed currently; other expenses are provided for currently. Such uninsured expenses include medical and life insurance continuation, and COBRA medical subsidies.

(e) Benefit Obligations: Accumulated benefit obligations represent the present value of pension benefits earned as of December 31, 2005 based on service and compensation as of December 31, 2005. Projected benefit obligations for defined benefit plans represent the present value of pension benefits

earned as of December 31, 2005 projected for estimated salary increases to an assumed date with respect to retirement, termination, disability or death. Projected benefit obligations for postretirement plans represent the present value of postretirement medical and life insurance benefits deemed earned as of December 31, 2005 projected for estimated salary and medical claim rate increases to an assumed date with respect to retirement, termination, disability, or death.

The accumulated benefit obligations with respect to both non-U.S. and U.S. pension benefit plans as of December 31, 2005 and 2004 were as follows:

<i>(in millions)</i>	2005	2004
Non-U.S. pension benefit plans	\$1,210	\$1,260
U.S. pension benefit plans	\$2,704	\$2,367

The following table sets forth the change in the projected benefit obligation of the defined benefit pension plans, including the supplemental plans, and postretirement benefit plans as of December 31, 2005 and 2004:

<i>(in millions)</i>	Pension			Postretirement		
	Non-U.S. Plans	U.S. Plans ^(a)	Total	Non-U.S. Plans	U.S. Plans	Total

Plan amendments and mergers	(92)	(42)	(134)	-	-	-
Benefits paid:						
AIG assets	(48)	(8)	(56)	(1)	(16)	(17)
Plan assets	(27)	(71)	(98)	-	-	-
Effect of foreign currency fluctuation	67	-	67	1	-	1
Other ^(b)	(99)	(38)	(137)	3	(2)	1
Benefit obligation at end of year	\$ 1,376	\$ 2,750	\$ 4,126	\$ 35	\$ 243	\$ 278

(a) Includes excess retirement income type plans and supplemental executive type plans.

(b) With respect to AIG's non-U.S. plans obligations, the reduction resulted from transferring to the Japanese government certain Japanese plan obligations approximating \$50 million. Additionally, the Japanese government also provided a subsidy with respect to certain Japanese plan obligations approximating \$50 million.

15. Employee Benefits

Continued

The weighted average assumptions used to determine the benefit obligations at December 31, 2005 and 2004 were as follows:

	Pension		Postretirement	
	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans	U.S. Plans
2005				
Discount rate	1.75 - 12.00%	5.50%	4.50 - 5.50%	5.50%
Rate of compensation increase	1.50 - 10.00%	4.25%	2.50 - 3.00%	4.25%
2004				
Discount rate	1.75 - 12.00%	5.75%	4.50 - 6.00%	5.75%
Rate of compensation increase	1.50 - 10.00%	4.25%	3.00%	4.25%

The benefit obligations outside the United States reflect those assumptions that were most appropriate for the local economic environments of each of the subsidiaries providing such benefits.

To measure the obligations at December 31, 2004, a 9.0 percent annual rate of increase in the per capita cost of covered healthcare benefits for AIG's U.S. plans was used for 2005. This rate was assumed to decrease gradually to 5.0 percent in 2009 and remain at that level thereafter. To measure the obligations at December 31, 2005 for AIG's U.S. plans, a 9.0 percent annual rate of increase in the per capita cost of covered medical benefits for pre-age-65 retirees, a 7.0 percent annual rate of increase in the per capita cost of covered medical benefits for post-age-65 retirees and an 11.0 percent annual rate of increase in the per capita cost of retiree prescription drug coverage was used for 2006. These rates were assumed to decrease gradually to 5.0 percent in 2013 and remain at that level thereafter.

The assumed range for 2006 with respect to the annual rates of increase in the per capita cost of covered healthcare benefits of AIG's non-U.S. plans is 7.0 to 9.0 percent. These rates are assumed to decrease gradually to 4.0 to 5.0 percent after three to four years and remain at that level thereafter.

A one percent point change in the assumed healthcare cost trend rate would have the following effect on AIG's postretirement benefit obligations at December 31, 2005:

(in millions)	One Percentage Point	
	Increase	Decrease
Non-U.S. plans	\$ 8	\$(6)
U.S. plans	\$(2)	\$ 2

Discount Rate Methodology

The projected benefit cash flows under the AIG Retirement Plan (the main US plan) were discounted using the spot rates

derived from the Citigroup Pension Discount Curve as of December 31, 2005 and an equivalent single discount rate was derived resulting in the same liability. This single discount rate was rounded to the nearest 25 basis points, namely 5.5 percent, and applied to all U.S. plans.

Prior to using the Citigroup Pension Discount Curve in 2005, the discount rate assumptions were based on the yield of the Moody's Investor Service (Moody's) Aa long-term corporate bond index.

Japan represents over 70 percent of the liabilities of the non-U.S. pension plans. The discount rate for Japan was selected by reference to the published Moody's/S&P AA Corporate Bond Universe at the measurement date having regard to the duration of the plans' liabilities.

The mortality assumption for AIG's U.S. plans has been revised for the December 31, 2005 obligations. The 2004 and 2005 expense and the obligations at December 31, 2004 were based on the 1983 Group Annuity Mortality Table. The December 31, 2005 obligations were based on the RP2000 White Collar Combined Mortality Table projected to 2006. Due to continued improvements in life expectancy, the updated table is expected to better represent AIG's anticipated future experience under the plans. The mortality assumptions for AIG's non-U.S. plans vary by country. No changes have been made for the December 31, 2005 obligations. The assumptions used are expected to reasonably anticipate future mortality experience.

(f) Funded Status: The funded status of the AIG defined benefit plans is a comparison of the pension benefit obligations to the assets related to the respective plan, if any. The difference between the two represents amounts that have been appropriately recognized as expenses in prior periods or represent amounts that will be recognized as expenses in the future.

Notes to Consolidated Financial Statements *Continued*

15. Employee Benefits

Continued

The following table sets forth the funded status of the plans, reconciled to the amount reported on the consolidated balance sheet at December 31, 2005 and 2004:

<i>(in millions)</i>	Pension			Postretirement ^(b)

(a) A significant portion of these plans, particularly those in Japan, are not required by local regulation to be funded currently. With respect to the funded status of these Japanese plans, the projected benefit obligation amounts to approximately \$410 million and \$480 million and approximately \$360 million and \$400 million has been recognized at December 31, 2005 and December 31, 2004, respectively.

(b) AIG does not currently fund postretirement benefits.

(c) Actuarial (gains)/losses are amounts included in the projected benefit obligations but not yet recognized in the financial statements.

Defined benefit pension plan obligations where the projected benefit obligation was in excess of the related plan assets at December 31, 2005 and 2004 were as follows:

<i>(in millions)</i>	2005		2004	
	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans	U.S. Plans

Debt securities	0-100	27	14
Other	0-100	27	54
Total	100%	100%	100%

The "Other" includes alternative asset classes.

Included in equity securities at December 31, 2005 and 2004 were 0.6 million and 1.2 million shares of AIG common stock, with values of \$41.1 million and \$79.3 million, respectively.

The investment strategy with respect to AIG's pension plan assets is to preserve capital and to seek investment returns with a goal of fully funding the plan.

The expected rate of return with respect to AIG's domestic pension plan was 8.0 percent and 8.25 percent for the

twelve months ended December 31, 2005 and 2004, respectively. These rates of return are an aggregation of expected returns within each asset category. The return with respect to each asset class considers both historical returns and the future expectations for such returns.

(h) Expected Cash Flows: With respect to AIG's U.S. pension plan, the actuarially prepared funding amount ranges from the minimum amount AIG would be required to contribute to the maximum amount that would be deductible for U.S. tax purposes. This range is generally not determined until the fourth quarter with respect to the contribution year. Contributed amounts in excess of the minimum amounts are deemed voluntary. Amounts in excess of the maximum amount would be subject to an excise tax and may not be deductible under the Internal Revenue Code. Supplemental and excess plans' payments and postretirement plan payments are deductible when paid.

AIG contributed \$393 million during 2005 to its U.S. and non-U.S. pension plans. The annual pension contribution for 2006 is expected to be approximately \$70 million for U.S. and non-U.S. plans.

The expected future benefit payments, net of participants' contributions with respect to the defined benefit pension plans and other postretirement benefit plans, are as follows:

<i>(in millions)</i>	Pension		Postretirement	
	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans	U.S. Plans
2006	\$ 61	\$102	\$1	\$16
2007	63	111	1	17
2008	68	119	1	17
2009	76	128	1	18
2010	73	137	1	18
2011-2015	401	885	6	98

Expected return on assets	2.50 - 10.00%	8.25%	N/A	N/A
2003				
Discount rate	2.00 - 8.00%	6.75%	5.50 - 6.00%	6.75%
Rate of compensation increase	1.50 - 7.00%	4.50%	5.50%	4.50%
Expected return on assets	3.00 - 10.00%	8.75%	N/A	N/A

* The benefit obligations outside the United States reflect those assumptions that were most appropriate for each local economic environment of the subsidiaries providing such benefits.

AIG's postretirement plans provide benefits primarily in the form of defined employer contributions as opposed to defined employer benefits. As such, a change in the assumed health-care cost trend rate has little effect on postretirement expense.

16. Benefits Provided by Starr International Company, Inc.

SICO has provided a series of two-year Deferred Compensation Profit Participation Plans (SICO Plans) to certain AIG employees. The SICO Plans came into being in 1975 when the voting shareholders and Board of Directors of SICO, a private holding company whose principal asset is AIG common stock, decided that a portion of the capital value of SICO should be used to provide an incentive plan for the current and succeeding managements of all American International companies, including AIG.

None of the costs of the various benefits provided under the SICO Plans has been paid by AIG, although AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting entry to additional paid-in capital reflecting amounts deemed contributed by SICO. The SICO Plans provide that shares currently owned by SICO may be set aside by SICO for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with

respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's voluntary termination of employment with AIG prior to normal retirement age. Under the SICO Plans, SICO's Board of Directors may elect to pay a participant cash in lieu of shares of AIG common stock. Following notification from SICO to participants in the SICO Plans that it will settle specific future awards under the SICO Plans with shares rather than cash, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. AIG gave effect to this change in settlement method beginning on December 9, 2005, the date of SICO's notice to the SICO Plans' participants. See also Note 12(f) herein.

Prior to 2005, SICO also provided certain personal benefits to AIG employees. The cost of such benefits, primarily attributable to personal use of corporate aircraft, has not been included in compensation expense.

Compensation expense with respect to the SICO Plans aggregated \$205 million, \$62 million and \$280 million for 2005, 2004 and 2003, respectively.

As a result of its changing relationship with Starr and SICO, AIG is establishing new executive compensation plans to replace the SICO plans and investment opportunities previously provided by Starr. The replacement plans include both share-based plans and cash-based plans. In addition, these replacement plans generally include performance as well as service conditions.

17. Leases

(a) AIG and its subsidiaries occupy leased space in many locations under various long-term leases and have entered into various leases covering the long-term use of data processing equipment.

At December 31, 2005, the future minimum lease payments under operating leases were as follows:

<i>(in millions)</i>	
2006	\$ 573
2007	436
2008	325
2009	253
2010	215
Remaining years after 2010	932
Total	\$2,734

Rent expense approximated \$597 million, \$568 million, and \$524 million for the years ended December 31, 2005, 2004, and 2003 respectively.

(b) Minimum future rental income on noncancelable operating leases of flight equipment which have been delivered at December 31, 2005 was as follows:

<i>(in millions)</i>	
2006	\$ 3,227
2007	2,813
2008	2,296
2009	1,820
2010	1,490
Remaining years after 2010	3,740
Total	\$15,386

Flight equipment is leased, under operating leases, with remaining terms ranging from 1 to 16 years.

18. Ownership and Transactions With Related Parties

(a) Ownership: According to the Schedule 13D filed on March 7, 2006 by Starr, SICO, Edward E. Matthews, Maurice R. Greenberg, the Maurice R. and Corinne P. Greenberg Family Foundation, Inc. and the Universal Foundation, Inc., these reporting persons may be deemed to beneficially own 396,124,637 shares of common stock. Based on the shares of common stock outstanding as of December 31, 2005, this ownership represents approximately 15 percent of the voting stock of AIG.

(b) Transactions with Related Parties: During the ordinary course of business during 2005, AIG and its subsidiaries paid

commissions to Starr and its subsidiaries for the production and management of insurance business. There are no significant receivables from/payables to related parties at December 31, 2005. Payment for the production of insurance business to Starr aggregated approximately \$214 million in 2005, \$205 million in 2004, and \$173 million in 2003, from which Starr generally is required to pay commissions due to originating brokers and its operating expenses. AIG also received approximately \$23 million in 2005, \$24 million in 2004, and \$24 million in 2003 from Starr and paid approximately \$20,000 in 2005, \$39,000 in 2004, and \$114,000 in 2003 to Starr in rental fees and for services none in 2005, \$262,000 in 2004 and 2003. AIG also received approximately \$2 million in 2005, \$1 million in 2004, and \$2 million in 2003, respectively, from SICO and paid approximately \$1 million in each of the years 2005, 2004 and 2003 to SICO as reimbursement for services rendered at cost. AIG also paid to SICO \$3 million in 2005, \$4 million in 2004, and \$4 million in 2003 in rental fees.

19. Variable Interest Entities

In January 2003, FASB issued FIN46. FIN46 changed the method of determining whether certain entities should be consolidated in AIG's consolidated financial statements. An entity is subject to FIN46 and is called a Variable Interest Entity (VIE) if it has (i) equity that is insufficient to permit the entity to finance its activities without additional subordinated financial support from other parties, or (ii) equity investors that cannot make significant decisions about the entity's operations, or that do not absorb the expected losses or receive the expected returns of the entity. A VIE is consolidated by its primary beneficiary, which is the party that has a majority of the expected losses or a majority of the expected residual returns of the VIE, or both. All other entities not considered VIEs are evaluated for consolidation under other guidance. In December 2003, FASB issued a revision to Interpretation No. 46 (FIN46R).

The provisions of FIN46R had to be applied immediately to VIEs created after January 31, 2003, and to VIEs in which AIG obtains an interest after that date. For VIEs in which AIG held a variable interest that it acquired before February 1, 2003, FIN46R was applied as of December 31, 2003. For any VIEs that were consolidated under FIN46R that were created before February 1, 2003, the assets, liabilities and noncontrolling interest of the VIEs were initially measured at their fair values with any difference between the net amount added to the balance sheet and any previously recognized interest being recognized as the cumulative effect of an accounting change. In accordance with the transition provisions of FIN46R, AIG recorded a gain of \$9 million (\$14 million before tax) reported as a cumulative effect of an accounting change for the fourth

19. Variable Interest Entities*Continued*

quarter of 2003 and added approximately \$4.7 billion of assets and liabilities to its consolidated balance sheet at December 31, 2003.

Of the \$4.7 billion, approximately \$4.2 billion relates to assets and liabilities arising from AIG's real estate partnerships, principally affordable housing transactions involving AIG SunAmerica subsidiaries, and private equity partnerships managed by AIG Global Investment Group and AIG Capital Partners.

SunAmerica Affordable Housing Partners, Inc. (SAAHP) organizes limited partnerships that are considered to be VIEs, and that are consolidated by AIG. The partnerships invest as limited partners in operating partnerships that develop and operate low income housing and a smaller number of market rate properties across the United States. The general partners in the operating partnerships are almost exclusively unaffiliated third-party developers. AIG does not generally consolidate an operating partnership if the general partner is an unaffiliated person. Through approximately 1,000 partnerships, SAAHP has invested in developments with approximately 147,000 apartment units nationwide, and has syndicated over \$5 billion in partnership equity since 1991 to other investors who will receive, among other benefits, tax credits under certain sections of the Internal Revenue Code. AIG Retirement Services, Inc. functions as the general partner in certain limited partnerships and acts as both a credit enhancer in certain transactions, through differing structures with respect to funding development costs for the operating partnerships, and as guarantor that investors will receive the tax benefits projected at the time of syndication. As part of their incentive compensation, certain key SAAHP employees have been awarded residual cash flow interests in the partnerships, subject to certain vesting requirements. The operating income of SAAHP is reported, along with other SunAmerica partnership income, as a component of AIG's Asset Management segment.

The remaining approximately \$500 million involves ILFC, and arises principally from a sale-leaseback transaction which expired during 2004.

AIGFP is involved with various special purpose vehicles in the ordinary course of business that may be deemed VIEs and may hold variable interests therein. The variable interests that AIGFP may hold include debt securities, equity interests, loans, derivative instruments and other credit support arrangements. Transactions associated with these entities include an asset-backed commercial paper conduit, asset securitizations, collateralized debt obligations, investment vehicles and other structured financial transactions. AIGFP engages in these transactions to facilitate client needs, for investment purposes and to obtain attractive funding.

As of December 31, 2005, AIGFP was the primary beneficiary in the following VIEs:

- An asset-backed commercial paper conduit, with which it entered into several total return swaps covering all the conduit's assets that absorb the majority of the expected losses of the entity. The total assets of the conduit that

serve as collateral to the conduit's obligations that are reflected in AIG's consolidated balance sheet at December 31, 2005 were \$5.9 billion.

- Several structured financing transactions in which AIGFP held the first loss position either by investing in the equity of the entity or implicitly through a lending or derivative arrangement. The total assets of these entities that are reflected in AIG's consolidated balance sheet at December 31, 2005 were \$1.6 billion. The obligations of these entities are paid solely from the cash flows of the assets held by the VIEs.

As of December 31, 2005 and 2004, AIG's consolidated balance sheet included approximately \$11.8 billion and \$8.1 billion of assets and liabilities connected to entities consolidated under FIN46R.

The following VIE activities are not consolidated by AIG under FIN46R:

- AIG uses VIEs primarily in connection with certain guaranteed investment contract programs (GIC Programs) written by its Life Insurance & Retirement Services subsidiaries. In the GIC Programs, AIG's Life Insurance subsidiaries (principally SunAmerica Life Insurance Company) provide guaranteed investment contracts to VIEs which are not controlled by AIG, and in which AIG does not have a direct variable interest, as defined under FIN46R, in the entity. The VIE issues notes or bonds which are sold to third-party institutional investors. Neither AIG nor the insurance company issuing the GICs has any obligation to the investors in the notes or bonds. The proceeds from the securities issued by the VIE are invested by the VIE in the GICs. The insurance company subsidiaries use the proceeds to invest in a diversified portfolio of securities, primarily investment grade bonds. Both the assets and the liabilities of the insurance companies arising from these GIC Programs are presented in AIG's consolidated balance sheet. Thus, at December 31, 2005, approximately \$37 billion of policyholders' contract deposits represented liabilities from issuances of GICs included in these GIC Programs, the proceeds of which are used to invest in insurance invested assets.
- AIG manages Collateralized Bond and Loan Obligation trusts (collectively, Collateralized Debt Obligation trusts or CDO trusts). As asset manager, AIG receives fees for management of the assets held in the CDO trust, which support the issuance of securities sold by the CDO trust. AIG may take minority equity and/or fixed-income security interests in the CDO trust. AIG has entered into such arrangements to expand its asset management activities. Third-party investors have recourse only to the CDO trust and have no recourse to AIG.
- AIG's insurance operations also invest in obligations of VIEs. These VIEs are established by unrelated third parties. Investments include collateralized mortgage backed securities and similar securities backed by pools of mortgages, consumer receivables, or other assets. The investment in these VIEs allows AIG's insurance entities to purchase assets permitted by insurance regulations while maximizing their return on these assets.

19. Variable Interest Entities

Continued

AIGFP has significant variable interests in various transactions where AIGFP is not the primary beneficiary. These transactions consist principally of structured financings, in which AIGFP owns an investment interest or is a lender, financial derivatives or credit support provider. At December 31, 2005 and 2004, the total assets of these entities were \$29.9 billion and \$18.1 billion, respectively. AIGFP's maximum exposure to loss in these transactions, at December 31, 2005, was \$15.1 billion in the aggregate.

20. Derivatives

Derivatives are financial arrangements among two or more parties with returns linked to or "derived" from some underlying equity, debt, commodity or other asset, liability, or index. Derivative payments may be based on interest rates and exchange rates and/or prices of certain securities, commodities, or financial or commodity indices or other variables. These instruments are carried at fair value in the consolidated balance sheet. Collateral is required, at the discretion of AIG, on certain transactions based on the creditworthiness of the counterparty.

The overwhelming majority of AIG's derivatives activities are conducted by the Capital Markets operations. AIGFP becomes a party to derivative financial instruments in the normal course of business and to reduce currency, interest rate, commodity, and equity exposures. Interest rate, currency, commodity, and equity risks related to such instruments are reflected in the consolidated financial statements and are carried at a market or a fair value, whichever is appropriate. The recorded estimated fair values of such instruments may be different from the values that might be realized if AIGFP was required to sell or close out the transactions prior to maturity.

AIGFP, in the ordinary course of operations and as principal, structures and enters into derivative transactions to

meet the needs of counterparties who may be seeking to hedge certain aspects of such counterparties' operations or obtain a desired financial exposure. AIGFP also enters into derivative transactions to hedge the financial exposures arising from its counterparty transactions. Such derivative transactions include interest rate, currency, commodity, credit and equity swaps, swaptions, and forward commitments. Interest rate swap transactions generally involve the exchange of fixed and floating rate interest payment obligations without the exchange of the underlying principal amounts. AIGFP typically becomes a principal in the exchange of interest payments between the parties and, therefore, is exposed to counterparty credit risk and may be exposed to loss, if counterparties default. Currency, commodity, and equity swaps are similar to interest rate swaps, but involve the exchange of specific currencies or cashflows based on the underlying commodity, equity securities or indices. Also, they may involve the exchange of principal amounts at the beginning and end of the transaction. Swaptions are options where the holder has the right but not the obligation to enter into a swap transaction or cancel an existing swap transaction. At December 31, 2005, the aggregate notional principal amount of AIGFP's outstanding swap transactions approximated \$1,224 billion, primarily related to interest rate swaps of approximately \$837.4 billion.

Notional amount represents a standard of measurement of the volume of swaps business of Capital Markets operations. Notional amount is not a quantification of market risk or credit risk and is not recorded on the consolidated balance sheet. Notional amounts generally represent those amounts used to calculate contractual cash flows to be exchanged and are not paid or received, except for certain contracts such as currency swaps.

The timing and the amount of cash flows relating to Capital Markets foreign exchange forwards and exchange traded futures and options contracts are determined by each of the respective contractual agreements.

The following table presents the contractual and notional amounts by maturity and type of derivative of Capital Markets derivatives portfolio at December 31, 2005 and 2004:

(in millions)	Remaining Life of Notional Amount*				Total 2005	Total 2004
	One Year	Two Through Five Years	Six Through Ten Years	After Ten Years		
Capital Markets interest rate, currency and equity swaps and swaptions:						
Notional amount:						
Interest rate swaps	\$235,255	\$440,686	\$141,482	\$19,966	\$ 837,389	\$ 858,733
Currency swaps	57,555	103,483	35,886	14,595	211,519	275,466
Swaptions, equity and commodity swaps	84,960	52,566	22,148	15,423	175,097	151,789
Total	\$377,770	\$596,735	\$199,516	\$49,984	\$1,224,005	\$1,285,988

* Notional amount is not representative of either market risk or credit risk and is not recorded on the consolidated balance sheet.

Futures and forward contracts are contracts that obligate the holder to sell or purchase foreign currencies, commodities or financial indices in which the seller/purchaser agrees to make/take delivery at a specified future date of a specified instru-

ment, at a specified price or yield. Options are contracts that allow the holder of the option to purchase or sell the underlying commodity, currency or index at a specified price and within, or at, a specified period of time. As a writer of

Notes to Consolidated Financial Statements *Continued*

20. Derivatives

Continued

options, AIGFP generally receives an option premium and then manages the risk of any unfavorable change in the value of the underlying commodity, currency or index by entering into offsetting transactions with third-party market participants.

Risks arise as a result of movements in current market prices from contracted prices, and the potential inability of the counterparties to meet their obligations under the contracts. At December 31, 2005, the contractual amount of Capital Markets futures, forward and option contracts approximated \$321.1 billion.

The following table presents Capital Markets futures, forward and option contracts portfolio by maturity and type of derivative at December 31, 2005 and 2004:

(in millions)	Remaining Life				Total 2005	Total 2004
	One Year	Two Through Five Years	Six Through Ten Years	After Ten Years		
Futures, forward and options contracts:						
Exchange traded futures and options contracts contractual amount	\$ 19,182	\$ 4,768	\$1,287	\$61	\$ 25,298	\$ 27,456
Over the counter forward contracts contractual amount	287,894	7,017	867	–	295,778	277,935
Total	\$307,076	\$11,785	\$2,154	\$61	\$321,076	\$305,391

AIGFP enters into credit derivative transactions in the ordinary course of its business. The majority of AIGFP's credit derivatives require AIGFP to provide credit protection on a designated portfolio of loans or debt securities. AIGFP provides such credit protection on a "second loss" basis, under which AIGFP's payment obligations arise only after credit losses in the designated portfolio exceed a specified threshold amount or level of "first losses." The threshold amount of credit losses that must be realized before AIGFP has any payment obligation is negotiated by AIGFP for each transaction to provide that the likelihood of any payment obligation by AIGFP under each transaction is remote, even in severe recessionary market scenarios.

In certain cases, the credit risk associated with a designated portfolio is tranching into different layers of risk, which are then analyzed and rated by the credit rating agencies. Typically, there will be an equity layer covering the first credit losses in respect of the portfolio up to a specified percentage of the total portfolio, and then successive layers that are rated, generally a BBB-rated layer, an A-rated layer, an AA-rated layer, and an AAA-rated layer. In transactions that are rated, the risk layer or tranche that is immediately junior to the threshold level above which AIGFP's payment obligation would generally arise is rated AAA by the rating agencies. In transactions that are not rated, AIGFP applies the same risk criteria for setting the threshold level for its payment obligations. Therefore the risk layer assumed by AIGFP with respect to the designated portfolio in these transactions is often called the "super senior" risk layer, defined as the layer of credit risk senior to a risk layer that has been rated AAA by the credit rating agencies or if the transaction is not rated, equivalent thereto. For example, in a transaction with an equity layer covering credit losses from zero to two percent of the total portfolio, a BBB-rated layer covering credit losses from two to four percent, an A-rated layer from four to six percent, an AA-rated layer from six to eight percent, and a AAA-rated layer from eight to 11 percent. AIGFP would cover credit losses arising in respect of the portfolio that exceeded an

11 percent first loss threshold amount and thereby bear risk that is senior to the AAA-rated risk layer.

AIGFP continually monitors the underlying portfolios to determine whether the credit loss experience for any particular portfolio has caused the likelihood of AIGFP having a payment obligation under the transaction to be greater than super senior risk. AIGFP maintains the ability opportunistically to economically hedge specific securities in a portfolio and thereby further limit its exposure to loss and has hedged outstanding transactions in this manner on occasion. AIGFP has never had a payment obligation under these credit derivatives transactions where AIGFP is providing credit protection on the super senior risk. Furthermore, based on portfolio credit losses experienced as of December 31, 2005 under all such outstanding transactions, no transaction has experienced credit losses in an amount that has made the likelihood of AIGFP having to make a payment, in AIGFP's view, to be greater than remote, even in severe recessionary market scenarios. At December 31, 2005, the notional amount with respect to the Capital Markets credit derivative portfolio (including the super senior transactions) was \$387.2 billion.

AIGFP utilizes various credit enhancements, including letters of credit, guarantees, collateral, credit triggers, credit derivatives, and margin agreements to reduce the credit exposure relating to derivative financial instruments. AIGFP requires credit enhancements in connection with specific transactions based on, among other things, the creditworthiness of the counterparties, and the transaction's size and maturity. In addition, Capital Markets derivative transactions are generally documented under ISDA Master Agreements. Management believes that such agreements provide for legally enforceable set-off and close-out netting of exposures to specific counterparties. Under such agreements, in connection with an early termination of a transaction, AIGFP is permitted to set-off its receivables from a counterparty against its payables to the same counterparty arising out of all included transactions. As a result, the fair value represents the net sum of estimated positive fair values after the application of such strategies and

20. Derivatives

Continued

agreements. After consideration of these credit enhancements, the fair value of AIGFP's interest rate, currency, commodity and equity swaps, options, swaptions, and forward commitments, futures, and forward contracts approximated \$18.70 billion at December 31, 2005 and \$22.67 billion at December 31, 2004. These amounts have been determined in accordance with the respective close-out netting provisions under the applicable ISDA Master Agreements. The fair value represents the maximum potential loss to AIGFP.

AIGFP independently evaluates the creditworthiness of its counterparties, taking into account credit ratings assigned by recognized statistical rating organizations. In addition, AIGFP's credit approval process involves pre-set counterparty and country credit exposure limits and, for particularly credit intensive transactions, obtaining approval from AIG's Credit Risk Committee. AIGFP estimates that the average credit rating of Capital Markets derivatives counterparties, measured by reference to the fair value of its derivative portfolio as a whole, is equivalent to the AA rating category. The maximum potential loss will increase or decrease during the life of the derivative commitments as a function of maturity and market conditions.

Capital Markets determines counterparty credit quality by reference to ratings from independent rating agencies or, where such ratings are not available, by internal analysis. At December 31, 2005 and 2004, the counterparty credit quality with respect to the fair value of Capital Markets derivatives portfolios were as follows:

(in millions)	Fair Value	
	Total 2005	Total 2004
Counterparty credit quality:		
AAA	\$ 4,568	\$ 9,185
AA	8,057	7,244
A	3,838	4,448
BBB	1,709	1,193
Below investment grade	523	600
Total	\$18,695	\$22,670

At December 31, 2005 and 2004, the counterparty breakdown by industry with respect to the fair value of Capital Markets derivatives portfolio was as follows:

(in millions)	Fair Value	
	Total 2005	Total 2004
Non-U.S. banks	\$ 6,182	\$ 7,163
Insured municipalities	387	543
U.S. industrials	1,434	2,139
Governmental	2,158	1,387
Non-U.S. financial service companies	873	1,511
Non-U.S. industrials	2,287	2,377
Special purpose	2,529	4,937
U.S. banks	1,147	773
U.S. financial service companies	1,618	1,726
Supranationals	51	114
Utility	29	-
Total	\$18,695	\$22,670

FAS 133 requires that third-party derivatives used for hedging must be specifically matched with the underlying exposures to an outside third party and documented contemporaneously to qualify for hedge accounting treatment. In many cases, AIG did not meet these hedging requirements with respect to certain hedging transactions. Not meeting the requirements of FAS 133 does not result in any changes in AIG's liquidity or its overall financial condition even though inter-period volatility of earnings is increased.

AIG and its subsidiaries also use derivatives and other instruments as part of its financial risk management programs. Interest rate derivatives (such as interest rate swaps) are used to manage interest rate risk associated with its investments in fixed income securities, commercial paper issuances, medium and long-term note offerings, and other interest rate sensitive assets and liabilities. In addition, foreign exchange derivatives (principally cross currency swaps, forwards and options) are used to economically hedge non-U.S. dollar denominated debt, net capital exposures and foreign exchange transactions. The derivatives are effective economic hedges of the exposures they are meant to offset. For accounting purposes, a limited number of these derivatives have been designated as hedging instruments under FAS 133. The effect on earnings from those derivatives that have been designated as hedges is insignificant for 2005 and 2004.

21. Variable Life and Annuity Contracts

In July 2003, the American Institute of Certified Public Accountants issued Statement of Position 03-1, "Accounting and Reporting by Insurance Enterprises for Certain Nontraditional Long-Duration Contracts and for Separate Accounts" (SOP 03-1). This Statement was effective January 1, 2004, and requires AIG to recognize a liability for guaranteed minimum death benefits and other living benefits related to its variable annuity and variable life contracts and modifies certain disclosures and financial statement presentations for these products. AIG reported for the first quarter of 2004 a one-time

21. Variable Life and Annuity Contracts

Continued

cumulative accounting charge upon adoption of \$144 million to reflect the liability as of January 1, 2004.

As of January 1, 2004, approximately \$11 billion of assets and liabilities representing most of the non-U.S. portion of AIG's separate and variable account assets and liabilities were reclassified in accordance with SOP 03-1 to several invested asset captions and to the Policyholders' contract deposits liability caption, respectively. Approximately \$11 billion of separate and variable account assets were reclassified as follows: \$4 billion to Short-term investments; \$4 billion to Equity securities – common stocks trading; \$2 billion to Fixed maturities – bond trading securities; and \$1 billion to various other asset captions.

Except as noted above, AIG reports variable contracts through separate and variable accounts when investment income and investment gains and losses accrue directly to, and investment risk is borne by, the contract holder (traditional variable annuities). AIG also reports variable annuity and life contracts through separate and variable accounts where AIG contractually guarantees to the contract holder (variable contracts with guarantees) either (a) total deposits made to the contract less any partial withdrawals plus a minimum return (and in minor instances, no minimum returns) (Net Deposits Plus a Minimum Return) or (b) the highest contract value attained, typically on any anniversary date minus any subsequent withdrawals following the contract anniversary (Highest Contract Value Attained). These guarantees include benefits that are payable in the event of death, annuitization, or, in other instances, at specified dates during the accumulation period. Such benefits are referred to as guaranteed minimum death benefits (GMDB), guaranteed minimum income benefits (GMIB), and guaranteed minimum withdrawal benefit (GMWB), or guaranteed minimum account value benefits (GMAV), respectively. For AIG, GMDB is by far the most widely offered benefit.

The assets supporting the variable portion of both traditional variable annuities and variable contracts with guarantees are carried at fair value and reported as summary total separate and variable account assets with an equivalent summary total reported for liabilities. Amounts assessed against the contract holders for mortality, administrative, and other services are included in revenue and changes in liabilities for minimum guarantees are included in policyholder benefits in the Consolidated Statement of Income. Separate and variable account net investment income, net investment gains and losses, and the related liability changes are offset within the same line item in the Consolidated Statement of Income.

The vast majority of AIG's exposure on guarantees made to variable contract holders arises from GMDB. Details concerning AIG's GMDB exposures as of December 31, 2005 and 2004 are as follows:

<i>(dollars in billions)</i>	Net Deposits Plus a Minimum Return	Highest Contract Value Attained
2005		
Account Value ^(a)	\$59	\$13
Amount at Risk ^(b)	7	1
Average Attained Age of Contract Holders by Product	51-70 years	57-70 years
Range of Guaranteed Minimum Return Rates	0-10%	
2004		
Account Value ^(a)	\$57	\$12
Amount at Risk ^(b)	8	2
Average Attained Age of Contract Holders by Product	49-70 years	52-68 years
Range of Guaranteed Minimum Return Rates	0-10%	

(a) Included in Policyholders' Contract Deposits in the Consolidated Balance Sheet.

(b) Represents the amount of death benefit currently in excess of Account Value.

The following summarizes GMDB liabilities for guarantees on variable contracts reflected in the general account.

<i>(in millions)</i>	2005	2004
Balance at January 1	\$485	\$479*
Reserve increase	33	86
Benefits paid	(76)	(80)
Balance at December 31	\$442	\$485

* Includes amounts from the one-time cumulative accounting charge resulting from the adoption of SOP 03-1.

The GMDB liability is determined each period end by estimating the expected value of death benefits in excess of the projected account balance and recognizing the excess ratably over the accumulation period based on total expected assessments. AIG regularly evaluates estimates used and adjusts the additional liability balance, with a related charge or credit to benefit expense, if actual experience or other evidence suggests that earlier assumptions should be revised.

The following assumptions and methodology were used to determine the domestic and foreign GMDB liability as of December 31, 2005:

- Data used was up to 5,000 stochastically generated investment performance scenarios.
- Mean investment performance assumptions ranged from approximately three percent to ten percent depending on the block of business.
- Volatility assumptions ranged from 10 percent to 30 percent depending on the block of business.
- Mortality was assumed at between 60 percent and 103 percent of various life and annuity mortality tables.

21. Variable Life and Annuity Contracts

Continued

- For domestic contracts, lapse rates vary by contract type and duration and ranged from zero percent to 40 percent. For Japan, lapse rates ranged from zero percent to 20 percent depending on the type of contract.
- For domestic contracts, the discount rate ranged from 3.25 percent to 11 percent. For Japan, the discount rate ranged from zero percent to seven percent.

In addition to GMDB, AIG's contracts currently include to a lesser extent GMIB. The GMIB liability is determined each period end by estimating the expected value of the annuitization benefits in excess of the projected account balance at the date of annuitization and recognizing the excess ratably over

the accumulation period based on total expected assessments. AIG regularly evaluates estimates used and adjusts the additional liability balance, with a related charge or credit to benefit expense, if actual experience or other evidence suggests that earlier assumptions should be revised. As of December 31, 2005, most of AIG's GMIB exposure was transferred via reinsurance agreements. Contracts with GMIB not reinsured have account values of \$2.8 billion with a corresponding reserve of less than \$1 million.

AIG contracts currently include a minimal amount of GMAV and GMWB. GMAV and GMWB are considered to be derivatives and are recognized at fair value through earnings. AIG enters into derivative contracts to partially hedge the economic exposure that arises from GMAV and GMWB.

Notes to Consolidated Financial Statements *Continued*

22. Restated Quarterly Financial Information (Unaudited)

The following quarterly financial information for each of the three months ended March 31, June 30, September 30 and December 31, 2005 and 2004 is unaudited and was restated as described in Note 2(b) of Notes to Consolidated Financial Statements in AIG's Annual Report on Form 10-K/A for the year ended December 31, 2004 and Note 1(hh) herein. In the opinion of management, all adjustments (consisting of normal recurring adjustments) necessary to present fairly the results of operations for such periods, have been made for a fair presentation of the results shown.

Part II – Other Information

ITEM 9.

Changes and Disagreements with Accountants on Accounting and Financial Disclosure

There have been no changes in accountants during the twenty-four months ended December 31, 2005.

ITEM 9A.

Controls and Procedures

Evaluation of Disclosure Controls and Procedures

In connection with the preparation of this Annual Report on Form 10-K, an evaluation was carried out by AIG's management, with the participation of AIG's Chief Executive Officer and Chief Financial Officer, of the effectiveness of AIG's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (Exchange Act)) as of December 31, 2005. Disclosure controls and procedures are designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms and that such information is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial Officer, to allow timely decisions regarding required disclosures.

During the evaluation of disclosure controls and procedures as of December 31, 2004 conducted during the preparation of AIG's financial statements to be included in the 2004 Form 10-K, five material weaknesses in internal control over financial reporting were identified, relating to control environment, controls over the evaluation of risk transfer, controls over certain balance sheet reconciliations, controls over the accounting for certain derivative transactions and controls over income tax accounting. As a result, AIG's new Chief Executive Officer and Chief Financial Officer concluded that, as of December 31, 2004, AIG's disclosure controls and procedures were ineffective.

Upon identification of the material weaknesses and under the direction of its Chief Executive Officer and Chief Financial Officer, AIG developed a comprehensive plan to remediate the material weaknesses.

AIG's remediation efforts were governed by a Steering Committee, under the direction of AIG's Chief Risk Officer and also including AIG's Chief Executive Officer, Chief Financial Officer, Comptroller and Senior Vice President for Strategic Planning. The status of remediation of each material weakness was reviewed with the Audit Committee and this Committee was advised of issues encountered and key decisions reached by AIG management relating to the remediation efforts.

On November 9, 2005, AIG announced that it had identified certain errors, the preponderance of which were identified during the remediation of the material weaknesses in internal control over financial reporting described above, principally relating to controls over accounting for certain derivative transactions and related assets and liabilities under FAS 133, reconciliation of certain balance sheet accounts and

income tax accounting. Subsequent to that announcement, and in connection with its ongoing remediation efforts, AIG identified certain additional errors principally relating to internal controls over reconciliation of certain balance sheet accounts in the Domestic Brokerage Group. Due to the significance of these additional errors, AIG restated its consolidated financial statements and financial statement schedules for the years ended December 31, 2004, 2003 and 2002, along with 2001 and 2000 for purposes of preparation of the Selected Consolidated Financial Data for 2001 and 2000, and quarterly financial information for 2004 and 2003 and will restate the first three quarters of 2005 (the Second Restatement). AIG's September 2005 Form 10-Q will not be amended because the adjustments to correct the additional errors to the financial statements included therein are not material to those financial statements.

As of December 31, 2005 and as described under Remediation of Material Weaknesses in Internal Control Over Financial Reporting below, the material weaknesses relating to the control environment and controls over the evaluation of risk transfer were remediated, and the material weaknesses relating to controls over certain balance sheet reconciliations, controls over the accounting for certain derivative transactions and controls over income tax accounting remained, as they were not fully remediated.

As a result of these remaining material weaknesses in internal control over financial reporting, described more fully below, AIG's Chief Executive Officer and Chief Financial Officer concluded that, as of December 31, 2005, AIG's disclosure controls and procedures were ineffective.

Notwithstanding the existence of these three remaining material weaknesses, AIG believes that the consolidated financial statements in this Annual Report on Form 10-K fairly present, in all material respects, AIG's financial condition as of December 31, 2005 and 2004, and results of its operations and cash flows for the years ended December 31, 2005, 2004 and 2003, in conformity with U.S. generally accepted accounting principles (GAAP).

Management's Report on Internal Control Over Financial Reporting

Management of AIG is responsible for establishing and maintaining adequate internal control over financial reporting. AIG's internal control over financial reporting is a process, under the supervision of AIG's Chief Executive Officer and Chief Financial Officer, designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of AIG's financial statements for external purposes in accordance with GAAP.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions or that the degree of compliance with the policies or procedures may deteriorate.

AIG management conducted an assessment of the effectiveness of AIG's internal control over financial reporting as of

December 31, 2005 based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

A material weakness is a control deficiency, or a combination of control deficiencies, that results in more than a remote likelihood that a material misstatement of AIG's annual or interim financial statements will not be prevented or detected. AIG management has concluded that, as of December 31, 2005, the following material weaknesses in internal control over financial reporting remained:

Controls over certain balance sheet reconciliations: AIG did not maintain effective controls to ensure the accuracy of certain balance sheet accounts in certain key segments of AIG's operations, principally in the Domestic Brokerage Group. Specifically, accounting personnel did not perform timely reconciliations and did not properly resolve reconciling items for premium receivables, reinsurance recoverables and intercompany accounts. As a result, premiums and other considerations, incurred policy losses and benefits, insurance acquisition and other operating expenses, premiums and insurance balances receivable, reinsurance assets, reserves for losses and loss expenses, reserve for unearned premiums, other assets and retained earnings were misstated under GAAP.

Controls over the accounting for certain derivative transactions: AIG did not maintain effective controls over the evaluation and documentation of whether certain derivative transactions qualified under GAAP for hedge accounting. As a result, net investment income, realized capital gains (losses), other revenues, accumulated other comprehensive income (loss) and related balance sheet accounts were misstated under GAAP.

Controls over income tax accounting: AIG did not maintain effective controls over the determination and reporting of certain components of the provision for income taxes and related income tax balances. Specifically, AIG did not maintain effective controls to review and monitor the accuracy of the components of the income tax provision calculations and related income tax balances and to monitor the differences between the income tax basis and the financial reporting basis of assets and liabilities to effectively reconcile the differences to the deferred income tax balances. As a result, income tax expense, income taxes payable, deferred income tax assets and liabilities, retained earnings and accumulated other comprehensive income were misstated under GAAP.

The control deficiencies described above resulted in the Second Restatement. In addition, these control deficiencies could result in other misstatements to the aforementioned financial statement accounts and disclosures that would result in a material misstatement to the annual or interim AIG consolidated financial statements that would not be prevented or detected. Accordingly, AIG management has concluded that these control deficiencies constitute material weaknesses.

As a result of the material weaknesses in internal control over financial reporting described above, AIG management has concluded that, as of December 31, 2005, AIG's internal control over financial reporting was not effective based on the criteria in *Internal Control — Integrated Framework* issued by the COSO.

Management's assessment of the effectiveness of AIG's internal control over financial reporting as of December 31, 2005 has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report, which is included in this Annual Report on Form 10-K.

Remediation of Material Weaknesses in Internal Control Over Financial Reporting

Throughout 2005 and continuing in 2006, AIG has been actively engaged in the implementation of remediation efforts to address the five material weaknesses in existence at December 31, 2004 and disclosed in its 2004 Form 10-K. These remediation efforts, outlined below, are specifically designed to address the material weaknesses identified by AIG management. As a result of its assessment of the effectiveness of internal control over financial reporting, AIG management determined that as of December 31, 2005, two material weaknesses, relating to the control environment and controls over the evaluation of risk transfer, had been remediated, and three material weaknesses, relating to the controls over certain balance sheet reconciliations, controls over the accounting for certain derivative transactions and controls over income tax accounting, had not been remediated.

Completed Remediation

Control environment: As of December 31, 2004, certain of AIG's controls within its control environment were not effective to prevent certain members of senior management, including the former Chief Executive Officer and former Chief Financial Officer, from having the ability, which in certain instances was utilized, to override certain controls and effect certain transactions and accounting entries.

AIG has taken several significant actions to improve its control environment, starting with the appointment of new senior management with a new tone and philosophy. AIG's Chief Executive Officer and Chief Financial Officer, together with other senior executives, are committed to achieving transparency and clear communication with all stakeholders through effective corporate governance, a strong control environment, high ethical standards and financial reporting integrity. To strengthen and enhance its overall financial reporting and internal control environment, AIG has increased resources for technical accounting, internal audit, enterprise risk management and compliance functions, hired additional staff with specialized financial and accounting expertise, and established stronger reporting lines within the financial reporting function.

Among the specific actions taken by AIG to remediate this material weakness and to further strengthen overall controls over financial reporting were the following:

AIG has established a Financial Disclosure Committee to assist the Chief Executive Officer and the Chief Financial Officer in fulfilling their responsibilities for oversight of the accuracy and timeliness of the disclosures made by AIG.

AIG has implemented new controls, including specific procedures with respect to post-closing adjustments and consolidating entries.

AIG has taken remedial actions with respect to certain employees in management and in the underwriting, accounting, auditing, actuarial and financial reporting functions. Such remedial actions included further training and supervision, reassignment outside areas of involvement with financial reporting, or termination. Employees identified as needing further training and supervision underwent formal ethics training and recertified their compliance with AIG's Code of Conduct.

AIG now requires that all employees complete formal ethics training developed and monitored by AIG Corporate Compliance. AIG has implemented a *Director, Executive Officer and Senior Financial Officer Code of Business Conduct and Ethics*, and requires all members of the Board of Directors, executive officers and senior financial officers to confirm that they adhere to the stated principles and procedures set forth in that Code.

AIG has strengthened the position of Chief Risk Officer, responsible for enterprise-wide credit, market, and operational risk management and oversight of the corresponding functions at the business unit level and has empowered the Chief Risk Officer to work more closely with top executives at the corporate and major business unit levels to identify, assess, quantify, manage and mitigate risks to AIG.

AIG has established an Operational Risk Management department, reporting to the Chief Risk Officer, to engage in expanded risk self-assessment processes for more effective identification and management of operational and reputational risks.

The AIG Board of Directors has established the Regulatory, Compliance and Legal Committee to provide oversight of AIG's compliance with applicable laws and regulations. AIG's Chief Compliance Officer, who reports directly to this Committee, has implemented a corporate level, centrally-managed compliance function and developed a compliance framework, within which AIG is implementing consistent compliance policies and procedures for all major business units.

AIG has expanded the scope and activities of the corporate level Complex Structured Finance Transaction Committee, to review and approve transactions that could subject AIG to heightened legal, reputational, regulatory or other risk or enable a third party to achieve an accounting or financial reporting result inconsistent with applicable accounting principles, to include the review and approval of AIG's accounting and financial reporting of identified transactions, including related party transactions. Also, AIG's major business units have implemented their own committees and processes to enhance their ability to identify, analyze and present for approval complex structured finance transactions to AIG's corporate level committee.

Although AIG continues to develop further enhancements to its control environment, based upon the significant actions taken, as listed above, and the testing and evaluation of the effectiveness of the controls, AIG management has concluded that remediation of the material weakness in AIG's control environment has been achieved as of December 31, 2005.

Controls over the evaluation of risk transfer: As of December 31, 2004, AIG did not maintain effective controls over the proper evaluation, documentation and disclosure of whether certain insurance and reinsurance transactions in the General Insurance segment involved sufficient risk transfer to qualify for insurance and reinsurance accounting.

To remediate this material weakness, AIG has developed a formal risk transfer policy for direct insurance, assumed reinsurance and ceded reinsurance in the General Insurance segment. This policy establishes guidelines for the assessment by the underwriting, and if appropriate, actuarial functions, of the adequacy of risk transfer to support insurance accounting, and requires that appropriate documentation of the assessment be provided to the accounting function to allow proper accounting for the transaction.

AIG has also established procedures to incorporate risk transfer assessments into its underwriting and financial audit processes. Although AIG continues to refine and enhance its controls over the evaluation of risk transfer, including developing a process for updating the risk transfer policy to reflect changes in accounting pronouncements, based upon the significant actions taken, as listed above, and the testing and evaluation of the effectiveness of the controls, AIG management has concluded that remediation of this material weakness has been achieved as of December 31, 2005.

Continuing Remediation

AIG has devoted significant efforts towards remediation of its three remaining material weaknesses, and remediation of AIG's control environment has aided in these efforts. Nonetheless, these material weaknesses are not yet fully remediated as of December 31, 2005. AIG management continues to assign the highest priority to AIG's remediation efforts in these areas, with the goal of remediating these material weaknesses by year-end 2006. However, due to the nature of the remediation process and the need to allow adequate time after implementation to evaluate and test the effectiveness of the controls, no assurance can be given as to the timing of achievement of remediation. AIG recognizes that further improvement in its internal control over financial reporting and consolidation processes is essential. Over time, AIG intends to reduce its reliance on the utilization of consultants to supplement current resources and the manual controls that have been established. As part of its remediation efforts, AIG intends to develop new systems and processes which will allow it to rely on front end preventative controls which will be more sustainable over the long term. AIG recognizes that to accomplish its goals, further strengthening and investment are needed in accounting and tax personnel, as well as in systems and processes. AIG is committed to making the investments necessary to make these improvements.

AIG has taken specific remediation steps with respect to its three remaining material weaknesses.

Controls over certain balance sheet reconciliations: AIG has implemented the following measures to enhance its ability to

identify, assess, measure and help to ensure the accuracy of its balance sheet accounts:

- adoption and implementation of new corporate guidelines on balance sheet reconciliations;
- implementation of new programs to train staff on the requirements of the new guidelines;
- enhancement of the oversight of the balance sheet reconciliation function by adding qualified staff and engaging outside resources; and
- enhancement of processes for evaluating and monitoring financial statement exposures related to balance sheet reconciliations.

AIG's remediation efforts during 2005 with respect to its controls over certain balance sheet reconciliations identified additional errors, contributing to the Second Restatement. Thus, AIG management believes that full remediation has not yet been achieved.

Controls over the accounting for certain derivative transactions: AIG has taken the following actions to remediate this material weakness:

- enhancement of systems and implementation of new controls over the accounting for derivatives and related assets and liabilities;
- implementation of new procedures and controls to ensure technical compliance with the provisions of FAS 133, including specific documentation requirements, prior to application of hedge accounting by AIG subsidiaries; and
- establishment of improved oversight, monitoring and supervision of derivative accounting issues in part, through the hiring of additional personnel with expertise in FAS 133.

AIG's remediation efforts with respect to its controls over the accounting for certain derivative transactions resulted in identification of previously undetected errors that contributed to the Second Restatement. Thus, AIG management believes that full remediation has not yet been achieved, and testing will continue to ensure that processes and controls over the

accounting for derivative transactions are operating effectively before hedge accounting is applied again.

Controls over income tax accounting: AIG has taken the following actions to remediate this material weakness:

- implementation of new controls over its accounting for income taxes;
- enhancement of its oversight over income tax accounting through hiring of additional qualified staff;
- engagement of an outside accounting firm to assist in the analysis of its income tax accounting; and
- enhancement of processes for evaluating and monitoring financial statement exposure related to income tax accounting.

AIG's remediation efforts during 2005 with respect to its controls over income tax accounting identified additional errors, contributing to the Second Restatement. Thus, AIG management believes that remediation has not yet been achieved.

Changes in Internal Control Over Financial Reporting

Changes in AIG's internal control over financial reporting during the quarter ended December 31, 2005 that have materially affected, or are reasonably likely to materially affect, AIG's internal control over financial reporting have been described above.

ITEM 9B.

Other Information

On March 15, 2006, AIG adopted the AIG Partners Plan and amendments to the AIG Senior Partners Plan. In addition, AIG adopted amendments to its by-laws. The aforementioned compensation plans and AIG's amended and restated by-laws are filed as exhibits to this Annual Report on Form 10-K and are incorporated by reference into this Item 9B.

Part III

ITEM 10.***Directors and Executive Officers of the Registrant***

Except for the information provided in Part I under the heading “Directors and Executive Officers of the Registrant”, this item, including information regarding AIG’s audit committee and audit committee financial expert and information relating to AIG’s code of ethics that applies to its directors, executive officers and senior financial officers, is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

ITEM 11.***Executive Compensation***

This item is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

ITEM 12.***Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters***

This item is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

ITEM 13.***Certain Relationships and Related Transactions***

This item is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

ITEM 14.***Principal Accountant Fees and Services***

This item is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

Computation of Ratios of Earnings to Fixed Charges

Exhibit 12

Years Ended December 31, (in millions, except ratios)	2005	2004	2003	2002	2001
Income before income taxes, minority interest and cumulative effect of accounting changes	\$15,213	\$14,845	\$11,907	\$ 7,808	\$ 5,917
Less – Equity income of less than 50% owned persons	(129)	164	146	168	14
Add – Dividends from less than 50% owned persons	146	22	13	13	2
	15,488	14,703	11,774	7,653	5,905
Add – Fixed charges	7,663	6,049	5,762	4,893	5,695
Less – Capitalized interest	64	59	52	61	71
Income before income taxes, minority interest, cumulative effect of accounting changes and fixed charges	\$23,087	\$20,693	\$17,484	\$12,485	\$11,529
Fixed charges:					
Interest costs	\$ 7,464	\$ 5,860	\$ 5,588	\$ 4,725	\$ 5,538
Rental expense*	199	189	174	168	157
Total fixed charges	\$ 7,663	\$ 6,049	\$ 5,762	\$ 4,893	\$ 5,695
Ratio of earnings to fixed charges	3.01	3.42	3.03	2.55	2.02
Secondary Ratio					
Interest credited to GIC and GIA policy and contract holders	\$ (4,760)	\$ (3,674)	\$ (3,578)	\$ (2,702)	\$ (3,196)
Total fixed charges excluding interest credited to GIC and GIA policy and contract holders	\$ 2,903	\$ 2,375	\$ 2,184	\$ 2,191	\$ 2,499
Secondary ratio of earnings to fixed charges	6.31	7.17	6.37	4.47	3.33

* The proportion deemed representative of the interest factor.

The secondary ratio is disclosed for the convenience of fixed income investors and the rating agencies that serve them and is more comparable to the ratios disclosed by all issuers of fixed income securities. The secondary ratio removes interest credited to guaranteed investment contract (GIC) policyholders and guaranteed investment agreement (GIA) contractholders. Such expenses are also removed from earnings used in this calculation. GICs and GIAs are entered into by

AIG's insurance subsidiaries, principally SunAmerica Life Insurance Company and AIG Financial Products Corp. and its subsidiaries, respectively. The proceeds from GICs and GIAs are invested in a diversified portfolio of securities, primarily investment grade bonds. The assets acquired yield rates greater than the rates on the related policyholders obligation or contract, with the intent of earning a profit from the spread.

CERTIFICATIONS

I, Martin J. Sullivan, certify that:

1. I have reviewed this Annual Report on Form 10-K of American International Group, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

Form 10-Q

(Mark One)

- QUARTERLY REPORT UNDER SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the quarterly period ended March 31, 2006

or

- TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission File Number 1-8787

American International Group, Inc.

(Exact name of registrant as specified in its charter)

Delaware

(State or other jurisdiction of
incorporation or organization)

13-2592361

(I.R.S. Employer
Identification No.)

70 Pine Street, New York, New York

(Address of principal executive offices)

10270

(Zip Code)

Registrant's telephone number, including area code: (212) 770-7000

Former name, former address and former fiscal year, if changed since last report: None

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of accelerated filer and large accelerated filer in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer

Accelerated filer

Non-accelerated filer

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

Indicate the number of shares outstanding of each of the issuer's classes of common stock, as of March 31, 2006: 2,597,469,137.

CONSOLIDATED BALANCE SHEET*(in millions) (unaudited)*

	March 31, 2006	December 31, 2005
Assets:		
Investments and financial services assets:		
Fixed maturities:		
Bonds available for sale, at market value (amortized cost: 2006 – \$358,275; 2005 – \$349,612) (includes hybrid financial instruments: 2006 – \$512)	\$364,510	\$359,516

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. Financial Statement Presentation

These statements are unaudited. In the opinion of management, all material adjustments including normal recurring accruals have been made for a fair statement of the results presented herein. All material intercompany accounts and transactions have been eliminated. Certain accounts have

been reclassified in the 2005 financial statements to conform to their 2006 presentation. For further information, refer to the Annual Report on Form 10-K of American International Group, Inc. (AIG) for the year ended December 31, 2005 (2005 Annual Report on Form 10-K).

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

2. Segment Information

AIG identifies its reportable segments by product line consistent with its management structure. AIG's major product and service groupings are general insurance, life insurance & retirement services, financial services and asset management. **The following table summarizes the operations by the major operating segments for the three months ended March 31, 2006 and 2005:**

Operating Segments (in millions) (unaudited)	2006	2005
Revenues ^(a) :		
General Insurance ^(b)	\$11,656	\$11,219
Life Insurance & Retirement Services ^(c)	12,639	11,775
Financial Services ^(d)	1,615	2,436
Asset Management ^(e)	1,239	1,377
Other	110	395
Consolidated	\$27,259	\$27,202
Operating income (loss) ^{(a)(f)} :		
General Insurance	\$ 2,331	\$ 1,642
Life Insurance & Retirement Services ^(g)	2,555	2,181
Financial Services ^(g)	(159)	1,045
Asset Management	461	590
Other ^(h)	(395)	191
Consolidated	\$ 4,793	\$ 5,649

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the first three months of 2006 and 2005, the effect was \$0 and \$15 million, respectively, in operating income for Aircraft Finance and \$(678) million and \$468 million in revenues and operating income, respectively, for Capital Markets. These amounts result primarily from interest rate and foreign currency derivatives hedging available for sale securities and borrowings.

(b) Represents the sum of General Insurance net premiums earned, net investment income and realized capital gains (losses).

(c) Represents the sum of Life Insurance & Retirement Services GAAP premiums, net investment income and realized capital gains (losses). Included in realized capital gains (losses) is the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 and the application of FAS 52 of \$278 million and \$(79) million in the first three months of 2006 and 2005, respectively.

(d) Represents interest, lease and finance charges.

(e) Represents management and advisory fees and net investment income with respect to GICs.

(f) Represents income before income taxes, minority interest and cumulative effect of an accounting change.

(g) Results of operations of AIG Credit Card Company (Taiwan) are shared equally by the Life Insurance & Retirement Services segment and the Financial Services segment. In 2006, additional allowances of \$44 million were recorded by each segment for losses in these credit card operations.

(h) Represents unallocated corporate expenses, relating primarily to interest expense and certain compensation related expenses, and other realized capital gains (losses) of \$(57) million and \$155 million in the first three months of 2006 and 2005, respectively.

The following table summarizes AIG's General Insurance operations by major internal reporting unit for the three months ended March 31, 2006 and 2005:

General Insurance (in millions) (unaudited)	2006	2005
Revenues:		
Domestic Brokerage Group	\$ 6,555	\$ 6,289
Transatlantic	1,016	982
Personal Lines	1,215	1,171
Mortgage Guaranty	198	169
Foreign General	2,670	2,602
Reclassifications and Eliminations	2	6
Total General Insurance	\$11,656	\$11,219
Operating Income*:		
Domestic Brokerage Group	\$ 1,357	\$ 713
Transatlantic	141	114
Personal Lines	101	109
Mortgage Guaranty	109	104
Foreign General	621	596
Reclassifications and Eliminations	2	6
Total General Insurance	\$ 2,331	\$ 1,642

* Includes \$103 million and \$171 million of additional losses incurred and net reinstatement premium costs in 2006 and 2005, respectively, related primarily to prior year catastrophes.

The following table summarizes AIG's Life Insurance & Retirement Services operations by major internal reporting unit for the three months ended March 31, 2006 and 2005:

Life Insurance & Retirement Services (in millions) (unaudited)	2006	2005
Revenues ^(a) :		
Foreign:		
AIA, AIRCO and Nan Shan ^(b)	\$ 4,352	\$ 4,066
ALICO, AIG Star Life and AIG Edison Life ^(c)	4,095	3,519
Philamlife and Other	124	130
Domestic:		
AGLA and AG Life ^(d)	2,367	2,388
VALIC, AIG Annuity and AIG SunAmerica ^(e)	1,701	1,672
Total Life Insurance & Retirement Services	\$12,639	\$11,775
Operating Income:		
Foreign:		
AIA, AIRCO and Nan Shan ^(b)	\$ 700	\$ 588
ALICO, AIG Star Life and AIG Edison Life ^(c)	958	596
Philamlife and Other	11	16
Domestic:		
AGLA and AG Life ^(d)	366	466
VALIC, AIG Annuity and AIG SunAmerica ^(e)	520	515
Total Life Insurance & Retirement Services	\$ 2,555	\$ 2,181

(a) Represents the sum of Life Insurance & Retirement Services GAAP premiums, net investment income and realized capital gains (losses).

(b) Represents the operations of American International Assurance Company, Limited together with American International Assurance Company (Bermuda) Limited (AIA), American International Reinsurance Company, Ltd. (AIRCO), and Nan Shan Life Insurance Company, Ltd. (Nan Shan). Revenues and operating income include realized capital gains (losses) of \$213 million and \$66 million for the first three months of 2006 and 2005, respectively. The effects of FAS 133 and the application of FAS 52 included in realized capital gains (losses) are gains of \$173 million and

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (continued)**2. Segment Information** (continued)

\$10 million for the first three months of 2006 and 2005, respectively. Includes \$44 million in additional allowances for losses in AIG Credit Card Company (Taiwan) in 2006.

(c) Represents the operations of American Life Insurance Company (ALICO), AIG Star Life Insurance Co., Ltd. (AIG Star Life), and AIG Edison Life Insurance Company (AIG Edison Life). Revenues and operating income include realized capital gains of \$149 million and losses of \$(139) million for the first three months of 2006 and 2005, respectively. The effects of FAS 133 and the application of FAS 52 included in realized capital gains (losses) are gains of \$40 million and losses of \$(213) million for the first three months of 2006 and 2005, respectively.

(d) Includes the life operations of American General Life Insurance Company (AG Life), AIG Life Insurance Company and American International Life Assurance Company of New York. Also includes the operations of American General Life and Accident Insurance Company (AGLA). Revenues and operating income include realized capital gains of \$8 million and \$72 million for the first three months of 2006 and 2005, respectively. The effects of FAS 133 and the application of FAS 52 included in realized capital gains (losses) are gains of \$86 million and \$104 million for the first three months of 2006 and 2005, respectively.

(e) "AIG SunAmerica" represents the annuity operations of AIG SunAmerica Life Assurance Company, as well as those of First SunAmerica Life Insurance Company and SunAmerica Life Insurance Company. Also includes the operations of The Variable Annuity Life Insurance Company (VALIC) and AIG Annuity Insurance Company (AIG Annuity). Revenues and operating income include realized capital losses of \$(202) million and \$(79) million for the first three months of 2006 and 2005, respectively. The effects of FAS 133 and the application of FAS 52 included in realized capital gains (losses) are gains of \$3 million and \$20 million for the first three months of 2006 and 2005, respectively.

The following table summarizes AIG's Financial Services operations by major internal reporting unit for the three months ended March 31, 2006 and 2005:

Financial Services (in millions) (unaudited)	2006	2005
Revenues ^(a) :		
Aircraft Finance ^(b)	\$ 965	\$ 827

Other	26	20
Total Financial Services	\$1,615	\$2,436
Operating income (loss) ^(a) :		
Aircraft Finance	\$ 129	\$ 187
Capital Markets ^(d)	(470)	620
Consumer Finance ^(f)	175	221
Other	7	17
Total Financial Services	\$ (159)	\$1,045

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the first three months of 2006 and 2005, the effect was \$0 and \$15 million, respectively, in operating income for Aircraft Finance and \$(678) million and \$468 million in both revenues and operating income for Capital Markets. These amounts result primarily from interest rate and foreign currency derivatives hedging available for sale securities and borrowings.

(b) Revenues are primarily from International Lease Finance Corporation (ILFC) aircraft lease rentals.

(c) Revenues, shown net of interest expense, are primarily from hedged financial positions entered into in connection with counterparty transactions and the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 described in (a) above.

(d) Certain transactions entered into by AIGFP generate tax credits and benefits which are included in income taxes in the consolidated statement of income. The amount of such tax credits and benefits for the first three months of 2006 and 2005 are \$18 million, and \$19 million, respectively.

(e) Revenues are primarily finance charges.

(f) Includes \$44 million in additional allowances for losses in AIG Credit Card Company (Taiwan) in 2006.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (continued)**2. Segment Information** (continued)

The following table summarizes AIG's Asset Management revenues and operating income for the three months ended March 31, 2006 and 2005:

Asset Management (in millions) (unaudited)	2006	2005
Revenues:		
Guaranteed Investment Contracts	\$ 822	\$ 896
Institutional Asset Management	279	319
Brokerage Services and Mutual Funds	73	63
Other	65	99
Total Asset Management	\$1,239	\$1,377
Operating income:		
Guaranteed Investment Contracts ^(a)	\$ 218	\$ 319
Institutional Asset Management ^{(b)(c)}	159	161
Brokerage Services and Mutual Funds	23	13
Other	61	97
Total Asset Management	\$ 461	\$ 590

(a) The effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 was \$0 and \$62 million for the first three months of 2006 and 2005, respectively.

(b) Includes the full results of certain AIG managed private equity and real estate funds that are consolidated effective December 31, 2003 pursuant to FIN46R, "Consolidation of Variable Interest Entities". For the first three months of 2006 and 2005, operating income includes \$27 million and \$75 million, respectively, of third-party limited partner earnings offset in minority interest expense.

(c) Includes the full results of certain AIG managed partnerships that are consolidated effective January 1, 2006 pursuant to EITF 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights." For the first three months of 2006, operating income includes \$69 million of third-party limited partner earnings offset in minority interest expense.

3. Earnings Per Share

Earnings per share of AIG are based on the weighted average number of common shares outstanding during the period. See also Note 10 herein.

Computation of Earnings Per Share:

Three Months Ended March 31, (in millions, except per share data) (unaudited)	2006	2005
Numerator for basic earnings per share:		
Income before cumulative effect of an accounting change	\$3,161	\$3,799
Cumulative effect of an accounting change, net of tax	34	-
Net income applicable to common stock	\$3,195	\$3,799
Denominator for basic earnings per share:		
Average shares outstanding used in the computation of per share earnings:		
Common stock issued	2,752	2,752
Common stock in treasury	(154)	(155)
Deferred shares	7	-
Average shares outstanding – basic	2,605	2,597

Three Months Ended March 31, (in millions, except per share data) (unaudited)	2006	2005
Numerator for diluted earnings per share:		
Income before cumulative effect of an accounting change	\$3,161	\$3,799
Cumulative effect of an accounting change, net of tax	34	-
Net income applicable to common stock	3,195	3,799
Interest on contingently convertible bonds, net of tax ^(a)	3	3
Adjusted net income applicable to common stock^(a)	\$3,198	\$3,802
Denominator for diluted earnings per share:		
Average shares outstanding	2,605	2,597
Incremental shares from potential common stock:		
Average number of shares arising from outstanding employee stock plans (treasury stock method) ^(b)	10	18
Contingently convertible bonds ^(a)	9	9
Adjusted average shares outstanding – diluted^(b)	2,624	2,624

Earnings per share:

Basic:		
Income before cumulative effect of an accounting change	\$ 1.21	\$ 1.46
Cumulative effect of an accounting change, net of tax	0.01	-
Net income	\$ 1.22	\$ 1.46
Diluted:		
Income before cumulative effect of an accounting change	\$ 1.21	\$ 1.45
Cumulative effect of an accounting change, net of tax	0.01	-
Net income	\$ 1.22	\$ 1.45

(a) Assumes conversion of contingently convertible bonds due to the adoption of EITF Issue No. 04-8 "Accounting Issues Related to Certain Features of Contingently Convertible Debt and the Effect on Diluted Earnings per Share."

(b) Certain shares arising from employee stock plans were not included in the computation of diluted earnings per share where the exercise price of the options exceeded the average market price and would have been antidilutive. The number of shares excluded were 7 million and 22 million for the first three months of 2006 and 2005, respectively.

During the three months ended March 31, 2005, AIG purchased in the open market 2,477,100 shares of its common stock. From time to time, AIG may buy shares of its common stock in the open market for general corporate purposes, including to satisfy its obligations under various employee benefit plans. At March 31, 2006 and December 31, 2005, an additional 36,542,700 shares could be purchased under the then current authorization by AIG's Board of Directors. Although AIG has authorization to purchase additional shares, AIG has not repurchased shares in 2006.

The quarterly dividend rate per common share, commencing with the dividend declared in May 2005 and paid on

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)*

3. Earnings Per Share *(continued)*

September 16, 2005, is \$0.15. The declared dividend amount of \$0.175 for the first three months of 2005 includes a \$0.05 increase to the amount previously declared in the fourth quarter of 2004 for payment in March 2005 as well as the \$0.125 dividend declared in March 2005 for payment in June 2005. See also Note 10 herein.

4. Benefits Provided by Starr International Company, Inc. and C.V. Starr & Co., Inc.

Starr International Company, Inc. (SICO) has provided a series of two-year Deferred Compensation Profit Participation Plans (SICO Plans) to certain AIG employees. The SICO Plans came into being in 1975 when the voting shareholders and Board of Directors of SICO, a private holding company whose principal asset is AIG common stock, decided that a portion of the capital value of SICO should be used to provide an incentive plan for the current and succeeding managements of all American International companies, including AIG.

None of the costs of the various benefits provided under the SICO Plans has been paid by AIG, although AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts deemed contributed by SICO. The SICO Plans provide that shares currently owned by SICO are set aside by SICO for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's voluntary termination of employment with AIG prior to normal retirement age. Under the SICO Plans, SICO's Board of Directors may elect to pay a participant cash in lieu of shares of AIG common stock. Following notification from SICO to participants in the SICO Plans that it will settle specific future awards under the SICO Plans with shares rather than cash, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting, although variable accounting will continue to be applied where SICO makes cash payments pursuant to elections made prior to March 2005. AIG gave effect to this change in settlement method beginning on December 9, 2005, the date of SICO's notice to participants in the SICO Plans. See also Note 6(f) herein.

Compensation expense with respect to the SICO Plans aggregated \$76 million, including various adjustments totaling \$61 million, primarily relating to stock-split adjustments and other miscellaneous items, and \$7 million for the first

three months of 2006 and 2005, respectively. See also Note 10 herein.

In January 2006, C.V. Starr & Co., Inc. (Starr) completed its tender offer to purchase Starr interests from AIG employees. In conjunction with AIG's adoption of FAS 123R, Starr is considered to be an "economic interest holder" in AIG. As a result, compensation expense of \$54 million with respect to the Starr offer was included in the first three months of 2006.

As a result of its changing relationship with Starr and SICO, AIG has established new executive compensation plans to replace the SICO plans and investment opportunities previously provided by Starr. The replacement plans include both share-based plans and cash-based plans (AIG Senior Partners Plan). In addition, these replacement plans generally include performance as well as service conditions. See also Note 10 herein.

5. Ownership and Transactions With Related Parties

(a) Ownership: According to the Schedule 13D filed on March 7, 2006 by Starr, SICO, Edward E. Matthews, Maurice R. Greenberg, the Maurice R. and Corinne P. Greenberg Family Foundation, Inc. and the Universal Foundation, Inc., these reporting persons may be deemed to beneficially own 396,124,637 shares of common stock. Based on the shares of common stock outstanding as of March 31, 2006, this ownership represents approximately 15 percent of the voting stock of AIG.

(b) Transactions with Related Parties: During the ordinary course of business, AIG and its subsidiaries pay commissions to Starr and its subsidiaries for the production and management of insurance business. There were no significant receivables from/payables to related parties at March 31, 2006.

6. Commitments and Contingent Liabilities

In the normal course of business, various commitments and contingent liabilities are entered into by AIG and certain of its subsidiaries. In addition, AIG guarantees various obligations of certain subsidiaries.

(a) AIG and certain of its subsidiaries become parties to derivative financial instruments with market risk resulting from both dealer and end user activities and to reduce currency, interest rate, equity and commodity exposures. These instruments are carried at their estimated fair values in the consolidated balance sheet. The vast majority of AIG's derivative activity is transacted by AIGFP. (See also Note 20 of Notes to Consolidated Financial Statements in AIG's 2005 Annual Report on Form 10-K.)

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)*

6. Commitments and Contingent Liabilities *(continued)*

(b) Securities sold, but not yet purchased and spot commodities sold but not yet purchased represent obligations of AIGFP to deliver specified securities and spot commodities at their contracted prices. AIGFP records a liability to repurchase the securities and spot commodities in the market at prevailing prices.

AIG has issued unconditional guarantees with respect to the prompt payment, when due, of all present and future payment obligations and liabilities of AIGFP arising from transactions entered into by AIGFP.

(c) At March 31, 2006, ILFC had committed to purchase 308 new and used aircraft deliverable from 2006 through 2015 at an estimated aggregate purchase price of \$21.4 billion and had options to purchase 16 new aircraft at an estimated aggregate purchase price of \$1.5 billion. ILFC will be required to find customers for any aircraft acquired, and it must arrange financing for portions of the purchase price of such equipment.

(d) AIG and its subsidiaries, in common with the insurance industry in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. The recent trend of increasing jury awards and settlements makes it difficult to assess the ultimate outcome of such litigation.

Although AIG regularly reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, directors and officers liability (D&O), professional liability, medical malpractice, workers compensation, general liability, products liability and related classes, as well as for asbestos and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss trends or loss development factors could be attributable to changes in inflation in labor and material costs or in the judicial environment, or in other social or economic phenomena affecting claims.

(e) SAI Deferred Compensation Holdings, Inc., a wholly-owned subsidiary of AIG, has established a deferred compensation plan for registered representatives of certain AIG subsidiaries, pursuant to which participants have the opportunity to invest deferred commissions and fees on a notional basis. The value of the deferred compensation fluctuates with the value of the deferred investment alternatives chosen. AIG has provided a full and unconditional guarantee of the obligations of SAI Deferred Compensation Holdings, Inc. to pay the deferred compensation under the plan.

(f) On June 27, 2005, AIG entered into an agreement pursuant to which AIG agrees, subject to certain conditions, to make any payment that is not promptly paid with respect to the benefits accrued by certain employees of AIG and its subsidiaries under the SICO Plans (as defined in Note 4).

(g) AIG and certain of its subsidiaries have been named defendants in two putative class actions in state court in Alabama that arise out of the 1999 settlement of class and derivative litigation involving Caremark Rx, Inc. (Caremark). An excess policy issued by a subsidiary of AIG with respect to the 1999 litigation was expressly stated to be without limit of liability. In the current actions, plaintiffs allege that the judge approving the 1999 settlement was misled as to the extent of available insurance coverage and would not have approved the settlement had he known of the existence and/or unlimited nature of the excess policy. They further allege that AIG, its subsidiaries, and Caremark are liable for fraud and suppression for misrepresenting and/or concealing the nature and extent of coverage. In their complaint, plaintiffs request compensatory damages for the 1999 class in the amount of \$3.2 billion, plus punitive damages. AIG and its subsidiaries deny the allegations of fraud and suppression and have asserted, *inter alia*, that information concerning the excess policy was publicly disclosed months prior to the approval of the settlement. AIG and its subsidiaries further assert that the current claims are barred by the statute of limitations and that plaintiffs' assertions that the statute was tolled cannot stand against the public disclosure of the excess coverage. Plaintiffs, in turn, have asserted that the disclosure was insufficient to inform them of the nature of the coverage and did not start the running of the statute of limitations. On January 28, 2005, the Alabama trial court determined that one of the current actions may proceed as a class action on behalf of the 1999 classes that were allegedly defrauded by the settlement. AIG, its subsidiaries, and Caremark are seeking appellate relief from the Alabama Supreme Court. AIG cannot now estimate either the likelihood of its prevailing in these actions or the potential damages in the event liability is determined.

(h) On December 30, 2004, an arbitration panel issued its ruling in connection with a 1998 workers compensation quota share reinsurance agreement under which Superior National Insurance Company, among others, was reinsured by

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)*

6. Commitments and Contingent Liabilities *(continued)*

The United States Life Insurance Company in the City of New York (USLIFE), a subsidiary of American General Corporation. In its 2-1 ruling the arbitration panel refused to rescind the contract as requested by USLIFE. Instead, the panel reformed the contract to reduce USLIFE's participation by ten percent. USLIFE is pursuing certain reinsurance recoverables in connection with the contract. Further, the arbitration ruling established a second phase of arbitration which is pending, in which USLIFE is presenting its challenges to certain cessions to the contract. AIG holds a reserve of approximately \$369 million related to this matter as of March 31, 2006.

(i) Regulators from several states have commenced investigations into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Various parties, including insureds and shareholders, have also asserted putative class action and other claims against AIG or its subsidiaries alleging, among other things, violations of the antitrust and federal securities laws, and AIG expects that additional claims may be made.

In February 2006, AIG reached a resolution of claims and matters under investigation with the United States Department of Justice (DOJ), the Securities and Exchange Commission (SEC), the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). The settlements resolved outstanding litigation filed by the SEC, NYAG and DOI against AIG and concluded negotiations with these authorities and the DOJ in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. In the fourth quarter of 2005 AIG recorded an after-tax charge of \$1.15 billion for the settlements.

As a result of these settlements, AIG made payments or placed amounts in escrow in the first three months of 2006 totaling approximately \$1.64 billion, \$225 million of which represented fines and penalties. Of these amounts, \$676 million held in escrow is included in other assets and other liabilities at March 31, 2006. A substantial portion of the money will be available to resolve claims asserted in various regulatory and civil proceedings, including shareholder lawsuits.

Also, as part of the settlements, AIG has agreed to retain for a period of three years an independent consultant who will conduct a review that will include the adequacy of AIG's internal control over financial reporting and the remediation plan that AIG has implemented as a result of its own internal review.

Various federal and state regulatory agencies are reviewing certain transactions and practices of AIG and its subsidiaries in connection with industry-wide and other inquiries. AIG has cooperated, and will continue to cooperate, in producing documents and other information in response to the subpoenas.

A number of lawsuits have been filed regarding the subject matter of the investigations of insurance brokerage practices, including derivative actions, individual actions and class actions under the federal securities laws, Racketeer Influenced and Corrupt Organizations Act (RICO), Employee Retirement Income Security Act (ERISA) and state common and corporate laws in both federal and state courts, including the United States District Court for the Southern District of New York (Southern District of New York), in the Commonwealth of Massachusetts Superior Court and in Delaware Chancery Court. All of these actions generally allege that AIG and its subsidiaries violated the law by allegedly concealing a scheme to "rig bids" and "steer" business between insurance companies and insurance brokers.

Since October 19, 2004, AIG or its subsidiaries have been named as a defendant in sixteen complaints that were filed in federal court and two that were originally filed in state court (Massachusetts and Florida) and removed to federal court. These cases generally allege that AIG and its subsidiaries violated federal and various state antitrust laws, as well as federal RICO laws, various state deceptive and unfair practice laws and certain state laws governing fiduciary duties. The alleged basis of these claims is that there was a conspiracy between insurance companies and insurance brokers with regard to the use of contingent commission agreements, bidding practices, and other broker-related conduct concerning coverage in certain sectors of the insurance industry. The Judicial Panel on Multidistrict Litigation entered an order on February 17, 2005, consolidating most of these cases and transferring them to the United States District Court for the District of New Jersey (District of New Jersey). The remainder of these cases have been transferred to the District of New Jersey. On August 15, 2005, the plaintiffs in the multidistrict litigation filed a Corrected First Consolidated Amended Commercial Class Action Complaint, which, in addition to the previously named AIG defendants, names new AIG subsidiaries as defendants. Also on August 15, 2005, AIG and two subsidiaries were named as defendants in a Corrected First Consolidated Amended Employee Benefits Class Action Complaint filed in the District of New Jersey, which asserts similar claims with respect to employee benefits insurance and a claim under ERISA on behalf of putative classes of employers and employees. On November 29, 2005, the AIG defendants, along with other insurer defendants and the broker defendants filed motions to dismiss both the Commercial and Employee Benefits Complaints. Plaintiffs have filed a motion for class certification in

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)***6. Commitments and Contingent Liabilities** *(continued)*

the consolidated action. Defendants have filed an opposition to the motion for class certification. On April 4, 2006, a complaint against AIG and several of its subsidiaries was filed in the United States District Court for the Northern District of Georgia alleging claims similar to what was alleged in the consolidated complaint. The defendants are seeking to transfer this case to the District of New Jersey for consolidation. In addition, complaints were filed against AIG and several of its subsidiaries in Massachusetts and Florida state courts, which have both been stayed. In the Florida action, the plaintiff has filed a petition for a writ of certiorari with the District Court of Appeals of the State of Florida, Fourth District with respect to the stay order. On February 9, 2006, a complaint against AIG and several of its subsidiaries was filed in Texas state court, making claims similar to those in the federal cases above.

In April and May 2005, amended complaints were filed in the consolidated derivative and securities cases, as well as in one of the ERISA lawsuits, pending in the Southern District of New York adding allegations concerning AIG's accounting treatment for non-traditional insurance products. In September 2005, a second amended complaint was filed in the consolidated securities cases adding allegations concerning AIG's first restatement of its financial statements described in the 2005 Annual Report on Form 10-K (the "First Restatement"), and a new securities action complaint was filed in the Southern District of New York, asserting claims premised on the same allegations made in the consolidated cases. In April 2006, motions to dismiss were denied in the securities actions. Also in September 2005, a class action complaint was filed to consolidate the ERISA cases pending in the Southern District of New York. Motions to dismiss in the consolidated action were filed in January 2006. Also in April 2005, new derivative actions were filed in Delaware Chancery Court, and in July and August 2005, two new derivative actions were filed in the Southern District of New York asserting claims duplicative of the claims made in the consolidated derivative action.

In July 2005, a second amended complaint was filed in the consolidated derivative case in the Southern District of New York, expanding upon accounting-related allegations, based upon the First Restatement. In June 2005, the derivative cases in Delaware were consolidated and, in August 2005, an amended consolidated complaint was filed. AIG's Board of Directors has appointed a special committee of independent directors to review the matters asserted in the derivative complaints. The courts have approved agreements staying the derivative cases pending in the Southern District of New York and in Delaware Chancery Court while the special committee of independent directors performs its work. In September 2005, a shareholder filed suit in Dela-

ware Chancery Court seeking documents relating to some of the allegations made in the derivative suits. AIG filed a motion to dismiss in October 2005.

In late 2002, a derivative action was filed in Delaware Chancery Court in connection with AIG's transactions with certain entities affiliated with Starr and Starr International Company, Inc. (SICO). In May 2005, the plaintiff filed an amended complaint which adds additional claims premised on allegations relating to insurance brokerage practices and AIG's non-traditional insurance products. Plaintiffs in that case have agreed to dismiss newly added allegations unrelated to transactions with entities affiliated with Starr and SICO without prejudice to pursuit of these claims in the separate derivative actions described above. On February 16, 2006, the Delaware Chancery Court entered an order dismissing the litigation with prejudice with respect to AIG's outside directors and dismissing the claims against the remaining AIG defendants without prejudice.

AIG cannot predict the outcome of the matters described above or estimate the potential costs related to these matters and, accordingly, no reserve is being established in AIG's financial statements at this time. In the opinion of AIG management, AIG's ultimate liability for the matters referred to above is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

(j) On July 8, 2005, SICO filed a complaint against AIG in the Southern District of New York. The complaint alleges that AIG is in the possession of items, including artwork, which SICO claims it owns, and seeks an order causing AIG to release those items as well as actual, consequential, punitive and exemplary damages. On September 27, 2005, AIG filed its answer to SICO's complaint denying SICO's allegations and asserting counter-claims for breach of contract, unjust enrichment, conversion and breach of fiduciary duty relating to SICO's breach of its commitment to use its AIG shares for the benefit of AIG and its employees. On October 17, 2005, SICO replied to AIG's counter-claims and additionally sought a judgment declaring that SICO is neither a control person nor an affiliate of AIG for purposes of Schedule 13D under the Securities Exchange Act of 1934, as amended (the Exchange Act), and Rule 144 under the Securities Act of 1933, as amended (the Securities Act), respectively. AIG responded to the SICO claims on November 7, 2005.

(k) AIG understands that some of its employees have received Wells notices in connection with previously disclosed SEC investigations of certain of AIG's transactions or accounting practices. Under SEC procedures, a Wells notice is an indication that the SEC staff has made a preliminary decision to recommend enforcement action that provides recipients with an opportunity to respond to the SEC staff before a

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)***6. Commitments and Contingent Liabilities** *(continued)*

formal recommendation is finalized. AIG anticipates that additional current and former employees could receive similar notices in the future as the regulatory investigations proceed.

(l) AIG generates income tax credits as a result of investing in synthetic fuel production. Tax credits generated from the production and sale of synthetic fuel under Section 29 of the Internal Revenue Code are subject to an annual phase-out provision that is based on the average wellhead price of domestic crude oil. The price range within which the tax credits

are phased-out was originally established in 1980 and is adjusted annually for inflation. Depending on the price of domestic crude oil for a particular year, all or a portion of the tax credits generated in that year might be eliminated. Tax credits reflected in the income tax provision for the first three months of 2006 have been reduced to reflect the estimated annual average oil price for 2006. Should the actual average oil price for 2006 exceed this estimate, further reductions in the tax credits could be required. Regardless of oil prices, the tax credits expire after 2007.

7. Employee Benefits

The following table presents the components of the net periodic benefit costs with respect to pensions and other benefits for the three months ended March 31, 2006 and 2005:

<i>(in millions)</i>	Pensions			Postretirement		
	Non-U.S. Plans	U.S. Plans	Total	Non-U.S. Plans	U.S. Plans	Total
2006						
Components of net period benefit cost:						
Service cost	\$ 19	\$ 31	\$ 50	\$ 1	\$ 1	\$ 2
Interest cost	9	40	49	1	3	4
Expected return on assets	(7)	(48)	(55)	–	–	–
Amortization of prior service cost	(2)	(1)	(3)	–	(2)	(2)
Recognized actuarial loss	4	19	23	–	–	–
Net period benefit cost	\$ 23	\$ 41	\$ 64	\$ 2	\$ 2	\$ 4
2005						
Components of net period benefit cost:						
Service cost	\$ 19	\$ 26	\$ 45	\$ 1	\$ 2	\$ 3
Interest cost	8	37	45	–	4	4
Expected return on assets	(5)	(41)	(46)	–	–	–
Amortization of prior service cost	(3)	(1)	(4)	–	(2)	(2)
FAS 88 loss due to settlements	1	–	1	–	–	–
Recognized actuarial loss	6	16	22	–	1	1
Net period benefit cost	\$ 26	\$ 37	\$ 63	\$ 1	\$ 5	\$ 6

8. Recent Accounting Standards

In March 2005, FASB issued FSP FIN46R-5 “Implicit Variable Interests under FASB Interpretation No. 46 (revised December 2003), Consolidation of Variable Interest Entities” (FSP FIN46R-5) to address whether a reporting enterprise has an implicit variable interest in a variable interest entity (VIE) or potential VIE when specific conditions exist. The identification of an implicit variable interest is a matter of judgment that depends on the relevant facts and circumstances. AIG’s adoption of FSP FIN46R-5 on April 1, 2005 did not have a material effect on AIG’s financial condition or results of operations.

At the March 2004 meeting, the Emerging Issue Task Force (EITF) reached a consensus with respect to Issue No. 03-1, “The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments.” On September 30, 2004, the FASB issued FASB Staff Position (FSP)

EITF No. 03-1-1, Effective Date of Paragraphs 10-20 of EITF Issue No. 03-1, “The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments” delaying the effective date of this guidance until the FASB has resolved certain implementation issues with respect to this guidance, but the disclosures remain effective. This FSP, re-titled FSP FAS 115-1, “The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments,” replaces the measurement and recognition guidance set forth in Issue No. 03-1 and codifies certain existing guidance on impairment. AIG’s adoption of FSP FAS 115-1 on January 1, 2006 did not have a material effect on AIG’s consolidated financial condition or results of operations.

In December 2004, the FASB issued Statement No. 123 (revised 2004), “Share-Based Payment” (FAS 123R). FAS 123R and its related interpretive guidance replaces FAS No. 123, “Accounting for Stock-Based Compensation” (FAS 123), supersedes Accounting Principles Board Opinion

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)***8. Recent Accounting Standards** *(continued)*

No. 25, “Accounting for Stock Issued to Employees” (APB 25) and amends FAS 95 “Statement of Cash Flows”. FAS 123, as originally issued in 1995, established as preferable a fair-value-based method of accounting for share-based payment transactions with employees. On January 1, 2003, AIG adopted the recognition provisions of FAS 123. See also Note 10 herein. In April 2005, the SEC delayed the effective date for FAS 123R until the first fiscal year beginning after June 15, 2005. As a result, AIG adopted the provisions of the revised FAS 123R and its related interpretive guidance on January 1, 2006.

For its service-based awards (e.g. 1999 Stock Option Plan, 2002 Stock Incentive Plan and 1996 Employee Stock Purchase Plan), AIG recognizes compensation on a straight-line basis over the scheduled vesting period. Unrecognized unvested compensation expense for stock option awards granted under APB 25 (i.e., before January 1, 2003) will be recognized from January 1, 2006 to the vesting date. However, for the SICO Plans and the AIG Deferred Compensation Profit Participant Plan, which contain both performance and service conditions, AIG recognizes compensation utilizing a graded vesting expense attribution method. The effect of this approach is to recognize compensation cost over the requisite service period for each separately vesting tranche of the award.

AIG’s share-based plans generally provide for accelerated vesting at retirement or after the participant turns 65. For awards granted after January 1, 2006, compensation expense is recognized ratably from the date of grant through the shorter of age 65 or the vesting period. The effect of this change was not material to AIG’s consolidated financial position or results of operations. Awards granted prior to January 1, 2006 will continue to be recognized over the vesting period with accelerated expense recognition upon an actual retirement. SICO compensation expense for participants retiring after age 65 had been reflected in prior years’ results consistent with vested status under the SICO Plans.

On June 1, 2005, FASB issued Statement No. 154, “Accounting Changes and Error Corrections” (FAS 154). FAS 154 replaces APB Opinion No. 20, “Accounting Changes” and FASB Statement No. 3, “Reporting Accounting Changes in Interim Financial Statements.” FAS 154 requires that a voluntary change in accounting principles be applied retrospectively with all prior period financial statements presented based on the new accounting principle, unless it is impracticable to do so. FAS 154 also provides that a correction of errors in previously issued financial statements should be termed a “restatement.” The new standard is effective for accounting changes and correction of errors beginning January 1, 2006.

At the June 2005 meeting, the EITF reached a consensus with respect to Issue No. 04-5, “Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights”. The Issue addresses what rights held by the limited partner(s) preclude consolidation in circumstances in which the sole general partner would consolidate the limited partnership in accordance with generally accepted accounting principles absent the existence of the rights held by the limited partner(s). Based on that consensus, the EITF also agreed to amend the consensus in Issue No. 96-16, “Investor’s Accounting for an Investee When the Investor Has a Majority of the Voting Interest but the Minority Shareholders Have Certain Approval or Veto Rights.” The guidance in this Issue is effective after June 29, 2005 for general partners of all new limited partnerships formed and for existing limited partnerships for which the partnership agreements are modified. For general partners in all other limited partnerships, the guidance in this Issue is effective beginning January 1, 2006. The effect of the adoption of this EITF Issue was not material to AIG’s consolidated financial condition or results of operations.

On June 29, 2005, FASB issued Statement 133 Implementation Issue No. B38, “Embedded Derivatives: Evaluation of Net Settlement with Respect to the Settlement of a Debt Instrument through Exercise of an Embedded Put Option or Call Option.” This implementation guidance relates to the potential settlement of the debtor’s obligation to the creditor that would occur upon exercise of the put option or call option, which meets the net settlement criterion in FAS 133. The effective date of the implementation guidance is January 1, 2006. The adoption of this guidance did not have a material effect on AIG’s consolidated financial condition or results of operations.

On June 29, 2005, FASB issued Statement 133 Implementation Issue No. B39, “Application of Paragraph 13(b) to Call Options That Are Exercisable Only by the Debtor.” The conditions in FAS 133 paragraph 13(b) do not apply to an embedded call option in a hybrid instrument containing a debt host contract if the right to accelerate the settlement of the debt can be exercised only by the debtor (issuer/borrower). This guidance does not apply to other embedded derivative features that may be present in the same hybrid instrument. The effective date of the implementation guidance is January 1, 2006. The adoption of this guidance did not have a material effect on AIG’s consolidated financial condition or results of operations.

On September 19, 2005, FASB issued Statement of Position 05-1, “Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts.” SOP 05-1 provides guidance on accounting for deferred acquisition costs on internal

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)***8. Recent Accounting Standards** *(continued)*

replacements of insurance and investment contracts other than those specifically described in FASB Statement No. 97, “Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments.” The SOP defines an internal replacement as a modification in product benefits, features, rights, or coverage that occurs by the exchange of a contract for a new contract, or by amendment, endorsement, or rider to a contract, or by the election of a feature or coverage within a contract. The effective date of the implementation guidance is January 1, 2007. AIG is currently assessing the effect of implementing this guidance.

On February 16, 2006, FASB issued FAS No. 155, “Accounting for Certain Hybrid Financial Instruments” (FAS 155), an amendment of FAS 140 and FAS 133. FAS 155 allows AIG to include changes in fair value in earnings on an instrument-by-instrument basis for any hybrid financial instrument that contains an embedded derivative that would otherwise be required to be bifurcated and accounted for separately under FAS 133. The election to measure the hybrid instrument at fair value is irrevocable at the acquisition or issuance date.

AIG has elected to early adopt FAS 155 as of January 1, 2006, and apply FAS 155 fair value measurement to certain structured note liabilities and structured investments in AIG’s available for sale portfolio that existed at December 31, 2005. The effect of this adoption resulted in an \$11 million after-tax (\$18 million pre-tax) decrease to opening retained earnings as of January 1, 2006, representing the difference between the fair value of these hybrid financial instruments and the prior carrying value as of December 31, 2005. The effect of adoption on after-tax gross gains and losses was \$218 million (\$336 million pre-tax) and \$229 million (\$354 million pre-tax), respectively.

Effective with AIG’s early adoption of FAS 155, structured note liabilities of \$6.1 billion and hybrid financial in-

struments of \$512 million at March 31, 2006 are now carried at fair value. The effect on earnings in the first three months of 2006 for changes in the fair value of hybrid financial instruments was a pre-tax gain of \$30 million and is reflected in income.

On March 27, 2006, FASB issued FSP FTB 85-4-1, “Accounting for Life Settlement Contracts by Third-Party Investors” (FSP 85-4-1), an amendment of FTB 85-4, “Accounting for Purchases of Life Insurance”. Life settlements are designed to assist life insurance policyholders in monetizing the existing value of life insurance policies. FSP 85-4-1 allows AIG to measure life settlement contracts using either the investment method or fair value method. The election is made on an instrument-by-instrument basis and is irrevocable. AIG elected to early adopt FSP 85-4-1 as of January 1, 2006 using the investment method for pre-existing investments held at December 31, 2005. The effect of this adoption resulted in a \$319 million after tax (\$487 million pre-tax) increase to opening retained earnings for its share of the life settlement contracts held in certain non-consolidated trusts.

On April 13, 2006, FASB issued FSP FIN 46(R)-6, “Determining the Variability to be Considered in Applying FASB Interpretation No. 46(R)” (FIN 46(R)-6 or FSP). The FSP affects the identification of which entities are variable interest entities through a “by design” approach in identifying and measuring the variable interests of the variable interest entity and its primary beneficiary. Under FIN 46(R), “Consolidation of Variable Interest Entities”, the requirements are to be applied to all such variable interest entities after September 30, 2006. The new requirements need not be applied to entities that have previously been analyzed under FIN 46(R) unless a reconsideration event occurs. The adoption of this guidance is not expected to have a material effect on AIG’s consolidated financial condition or results of operations.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)***9. Information Provided in Connection with Outstanding Debt**

The following condensed consolidating financial statements are provided in compliance with Regulation S-X of the Securities and Exchange Commission.

(a) American General Corporation (AGC) is a holding company and a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all outstanding debt of AGC.

American General Corporation:

10. Stock Compensation Plans

At March 31, 2006, AIG employees could receive compensation pursuant to six different stock-based compensation plan arrangements: (i) AIG 1999 Stock Option Plan, as amended (1999 Plan); (ii) AIG 1996 Employee Stock Purchase Plan, as amended (the 1996 Plan); (iii) AIG 2002 Stock Incentive Plan, as amended (2002 Plan) under which AIG has to date issued only restricted stock units (RSUs); (iv) SICO's Deferred Compensation Profit Participation Plans (SICO Plans); (v) AIG's 2005-2006 Deferred Compensation Profit Participation Plan (AIG DCPPP) and (vi) the AIG Partners Plan. The AIG DCPPP was adopted as a replacement for the SICO Plans for the 2005-2006 period, and the AIG Partners Plan will replace the AIG DCPPP for future years, although no

awards have been made under this plan as of March 31, 2006. Stock-based compensation earned under the AIG DCPPP and the AIG Partners Plan will be issued as awards under the 2002 Plan. AIG currently settles share option exercises and other share awards to participants through the issuance of shares it has previously acquired and holds in its treasury account, except for share awards made by SICO, which are settled by SICO.

At March 31, 2006, AIG's non-employee directors received stock-based compensation in two forms, options granted pursuant to the 1999 Plan and grants of AIG common stock with delivery deferred until retirement from the Board, pursuant to the AIG Director Stock Plan, which was approved by the shareholders at the 2004 Annual Meeting of Shareholders.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)***10. Stock Compensation Plans** *(continued)*

Effective January 1, 2003, AIG adopted FAS 123 utilizing the prospective method to account for awards granted after January 1, 2003. Prior to adoption of FAS 123, AIG followed the provisions of Accounting Principles Board Opinion No. 25. See Note 8 herein. Under the recognition provisions of FAS 123, costs with respect to stock compensation were measured using the fair value of the shares subscribed or granted at the date of grant recognized ratably over the vesting period. Such fair value was derived through an option pricing model or the fair value of AIG's common stock, as applicable.

Effective January 1, 2006, AIG adopted FAS 123R utilizing the modified prospective application method which pro-

vides that previously issued financial statements need not be restated. Awards granted or modified after January 1, 2006 and outstanding awards not yet vested as of January 1, 2006 will be accounted for under FAS 123R.

FAS 123R requires AIG to estimate forfeitures in calculating the expense relating to stock-based compensation, rather than recognizing these forfeitures and corresponding reductions in expense as they occur. The pre-tax cumulative effect of adoption, recognized as a reduction in stock-based compensation expense of \$46 million (\$34 million after-tax), was recorded as the cumulative effect of an accounting change, net of tax in the consolidated statement of income during the first three months of 2006.

The effect of the adoption of FAS 123R on the consolidated statements of income and cash flows was as follows:

Three Months Ended March 31, 2006 <i>(in millions, except per share data)</i>	Pre-adoption of FAS 123R	Effect of Adoption of FAS 123R	Including Effect of Adoption of FAS 123R
Income before income taxes, minority interest and cumulative effect of an accounting change	\$ 4,801	\$ (8)	\$ 4,793
Provision for income taxes	\$ 1,438	\$ (3)	\$ 1,435
Income before minority interest and cumulative effect of an accounting change	\$ 3,363	\$ (5)	3,358
Cumulative effect of an accounting change, net of tax	\$ -	\$ 34	\$ 34
Net income	\$ 3,166	\$ 29	\$ 3,195
Net cash provided by operating activities	\$ 3,068	\$ (2)	\$ 3,066
Net cash provided by financing activities	\$15,670	\$ 2	\$15,672
Basic earnings per share	\$ 1.22	\$ -	\$ 1.22
Diluted earnings per share	\$ 1.22	\$ -	\$ 1.22

The following table presents share-based compensation expenses, including the cumulative effect of adoption of FAS 123R, included in AIG's consolidated statement of income:

Three Months Ended March 31, 2006*(in millions)*

Share-based compensation expense before tax	\$154
Income tax benefit	\$ 12
After-tax compensation expense	\$142

Included in share-based compensation expense of \$154 million was approximately \$54 million related to the Starr tender offer and various adjustments totalling \$61 million, primarily relating to stock-split adjustments and other miscellaneous items for the SICO plans, offset by a \$46 mil-

lion pre-tax adjustment for the cumulative effect of the adoption of FAS 123R. See Note 4 herein for a discussion of the Starr tender offer and Note 8 herein for discussion of prospective change to the accounting for retiree eligibility provisions and forfeiture treatment.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)*

If AIG had adopted the FAS 123 provisions for recognizing compensation expense commencing at the date of grant of the awards, the effect would not have been material to net income or basic or diluted earnings per share for the three months ended March 31, 2005.

1999 Stock Option Plan

The 1999 Plan provides that options to purchase a maximum of 45,000,000 shares of common stock can be granted to certain key employees and members of the Board of Directors at prices not less than fair market value at the date of grant.

The 1999 Plan was approved by the shareholders at the 2000 Annual Meeting of Shareholders, with certain amendments approved at the 2003 Annual Meeting of Shareholders. The 1999 Plan superseded the 1991 employee stock option plan (the 1991 Plan), although outstanding options granted under the 1991 Plan continue in force until exercise or expiration. The maximum number of shares that may be granted to any employee in any one year under the 1999 Plan is 900,000. Options granted under the 1999 Plan generally vest over four years (25 percent vesting per year) and expire 10 years from the date of grant.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)***10. Stock Compensation Plans** *(continued)*

At March 31, 2006, there were 20,431,101 shares reserved for future grants under the 1999 Plan and 28,935,898 shares reserved for issuance under the 1999 and 1991 Plans.

In 2004, AIG developed a binomial lattice model to calculate the fair value of stock option grants. In prior years, a

Black-Scholes model was used. A more detailed description of the valuation methodology is provided below.

The following weighted average assumptions were used for stock options granted in the first three months of 2006:

Expected annual dividend yield ⁽¹⁾	0.71%
Expected volatility ⁽²⁾	27.3%
Risk-free interest rate ⁽³⁾	4.17%
Expected term ⁽⁴⁾	7 years

(1) *The dividend yield is based on the dividend yield over the twelve month period prior to the grant date.*

(2) *Expected volatility is the average of historical volatility (based on seven years of daily stock price changes) and the implied volatility of actively traded options on AIG shares.*

(3) *The interest rate curves used in the valuation model were the US Treasury STRIP rates with terms from 3 months to 10 years.*

(4) *The contractual term of the option is generally 10 years with an expected term of 7 years calculated based on an analysis of historical employee exercise behavior and employee turnover (post-vesting terminations). The early exercise rate is a function of time elapsed since the grant. Fifteen years of historical data was used to estimate the early exercise rate.*

Additional information with respect to AIG's stock option plans at March 31, 2006, and changes for the three months then ended, were as follows:

Options:	Shares	Weighted Average Exercise Price
Outstanding at beginning of year	52,545,425	\$54.84
Granted	41,000	\$68.65
Exercised	(538,784)	\$40.80
Forfeited or expired	(374,181)	\$69.57
Outstanding at end of period	51,673,460	\$54.89
Options exercisable at end of period	40,389,118	\$52.59
Weighted average fair value per share of options granted		\$22.38

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)***10. Stock Compensation Plans** *(continued)*

Information about stock options outstanding at March 31, 2006, is summarized as follows:

Range of Exercise Prices	Options Outstanding				Options Exercisable			
	Number Outstanding	Weighted Average Remaining Contractual Life	Weighted Average Exercise Price	Aggregate Intrinsic Values (in millions)	Number Exercisable (vested)	Weighted Average Remaining Contractual Life	Weighted Average Exercise Price	Aggregate Intrinsic Values (in millions)
\$11.28-\$27.14	6,755,947	1.06	\$21.32	\$302	6,755,947	1.06	\$21.32	\$302
\$30.44-\$41.51	5,402,644	2.29	\$36.87	158	5,402,644	2.29	\$36.87	158
\$43.31-\$53.40	7,056,736	4.61	\$48.56	124	6,234,130	4.31	\$48.77	108
\$54.11-\$59.99	8,440,050	4.86	\$57.84	70	6,324,940	3.32	\$57.34	55

\$64.01-\$69.63	8,302,783	7.56	\$65.45	6	3,837,847	5.61	\$65.66	2
\$70.35-\$98.00	6,474,029	5.16	\$83.88	–	5,733,765	5.07	\$84.48	–
Total	51,673,460	4.86	\$54.89	\$695	40,389,118	3.87	\$52.59	\$651

Vested or expected-to-vest options as of March 31, 2006 were 46,168,298 shares, of which 40,389,118 were vested, with a weighted average exercise price of \$53.70, a weighted average contractual life of 4.32 years and an aggregate intrinsic value of \$678 million, of which \$651 million is attributable to the vested options.

As of March 31, 2006, total unrecognized compensation cost (net of expected forfeitures) totalled \$204 million and \$4 million related to nonvested share-based compensation awards granted under the 1999 Plan and the 1996 Plan, respectively, with a blended weighted-average period of 1.40 years and 0.5 years, respectively. The costs of awards outstanding under these plans at March 31, 2006 is expected to be recognized over approximately three years and one year for the 1999 Plan and the 1996 Plan, respectively.

The intrinsic value of options exercised during the three months ending March 31, 2006 was approximately \$15 million. The fair value of options vesting during the period was approximately \$26 million. AIG received \$27 million and \$19 million in cash from the exercise of stock options during the three months ended March 31, 2006 and 2005, respectively. AIG did not cash-settle any share-based payment awards during the three months ended March 31, 2006 and 2005. The tax benefits realized as a result of stock option exercises were \$4 million and \$6 million for the first three months of 2006 and 2005, respectively.

2002 Stock Incentive Plan

AIG's 2002 Plan was adopted at the 2002 shareholders meeting and amended and restated by the AIG Board of Directors

on September 18, 2002 (the 2002 Plan). The 2002 Plan provides that equity-based or equity-related awards with respect to shares of common stock can be issued to employees in any year up to a maximum of that number of shares equal to (a) 1,000,000 shares plus (b) the number of shares available but not issued in the prior calendar year. The maximum award that a grantee may receive under the 2002 Plan per year is rights with respect to 250,000 shares. For the three months ended March 31, 2006 and 2005, respectively, 66,715 and 13,940 RSUs were granted by AIG. There were 14,665,260 shares reserved for issuance in connection with future awards as of March 31, 2006. Substantially all RSUs granted to date under the 2002 Plan vest on the fourth anniversary of the date of grant.

Director Stock Awards

The methodology used for valuing employee stock options is also used to value director stock options. Director stock options vest one year after the grant date, but are otherwise the same as employee stock options. Options with respect to 5,000 shares and no shares were granted during the first three months of 2006 and 2005, respectively.

AIG also granted 3,750 shares and 1,250 shares, with delivery deferred, to directors during the first three months of 2006 and 2005, respectively, under the Director Stock Plan. At March 31, 2006, there were 81,250 shares reserved for future grants under the Director Stock Plan.

Employee Stock Purchase Plan

AIG's 1996 Plan provides that eligible employees (those employed at least one year) may receive privileges to purchase

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)***10. Stock Compensation Plans** *(continued)*

up to an aggregate of 10,000,000 shares of AIG common stock, at a price equal to 85 percent of the fair market value on the date of the grant of the purchase privilege. Purchase privileges are granted quarterly and are limited to the number of whole shares that can be purchased on an annual basis by an amount equal to the lesser of 10 percent of an employee's annual salary or \$10,000.

SICO Plans

The SICO Plans provide that shares of AIG common stock currently held by SICO are set aside for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's termination of employment with AIG prior to normal retirement age.

Historically, SICO's Board of Directors could elect to pay a participant cash in lieu of shares of AIG common stock. On December 9, 2005, SICO notified participants that essentially all subsequent distributions would be made only in shares, and not cash. As of that date, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. Variable measurement accounting will still be used for those few awards for which cash elections had been made prior to March 2005. The SICO Plans are also described in Note 4 herein.

Although none of the costs of the various benefits provided under the SICO Plans has been paid by AIG, AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts deemed contributed by SICO.

As of December 9, 2005, there were 12,650,292 non-vested AIG shares under the SICO Plans with a weighted-

A summary of shares relating to outstanding awards not yet vested under the foregoing plans as of March 31, 2006, and changes during the three months ended March 31, 2006 is presented below:

	Number of Shares			Weighted Average Grant-Date Fair Value		
	2002 Plan	SICO Plan	AIG DCPPP	2002 Plan	SICO Plan	AIG DCPPP
Not yet vested at January 1, 2006	4,322,265	12,650,292	4,898,880	\$63.63	\$61.92	\$52.55
Granted	66,715	-	-	\$69.13	-	-
Vested	(3,620)	(132,511)	-	\$65.13	\$61.92	-
Forfeited	(56,340)	(209,814)	(165,450)	\$60.66	\$61.92	\$59.40
Not yet vested at March 31, 2006	4,329,020	12,307,967	4,733,430	\$63.75	\$61.92	\$52.31

average fair value per share of \$61.92. As of March 31, 2006, there were 12,307,967 non-vested AIG shares under the SICO Plans with a weighted-average fair value per share of \$61.92.

A significant portion of the awards under the SICO Plans vest upon retirement if the participant reaches age 65. The portion of the awards for which early payout is available vest on the applicable payout date.

AIG DCPPP

Effective September 21, 2005, AIG adopted the AIG DCPPP, which provides equity-based compensation to key AIG employees, including senior executive officers. The AIG DCPPP was modeled on the SICO Plans.

The AIG DCPPP will contingently allocate a fixed number of shares to each participant if AIG's cumulative adjusted earnings per share for 2005 and 2006 exceed that for 2003 and 2004. The performance period is September 21, 2005 to December 31, 2006. At the end of the performance period, common shares are contingently allocated. The service period and related vesting consists of three pre-retirement tranches and a final retirement tranche at age 65.

At March 31, 2006, there were units representing 4,898,880 shares granted to participants.

AIG Partners Plan

The AIG Partners Plan was approved on March 16, 2006 by AIG's Compensation Committee. No awards have been made under the Plan as of March 31, 2006.

VALUATION

The fair value of each award granted under the 2002 Plan, the SICO Plans, the AIG DCPPP, and the AIG Partners Plan is based on the closing price of AIG stock on the date of grant.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(continued)***10. Stock Compensation Plans** *(continued)*

At March 31, 2006, the total unrecognized compensation cost (net of expected forfeitures) related to nonvested share-based compensation awards granted under the 2002 Plan, the SICO Plans, and the AIG DCP PP and the blended weighted-average period over which that cost is expected to be recognized is as follows:

	Unrecognized Compensation Cost <i>(in millions)</i>	Blended Weighted- Average Period
2002 Plan	\$196	1.83 years
SICO Plans	\$357	6.08 years
AIG DCP PP	\$248	11.62 years

The total cost for awards outstanding as of March 31, 2006 under the 2002 Plan, the SICO Plans and the AIG

DCPP P is expected to be recognized over approximately four years, 12 years and 23 years, respectively.

The AIG Board of Directors has construed the AIG stock option plans to allow, at the request of an optionee, the deferral of delivery of AIG shares otherwise deliverable upon the exercise of an option to a date or dates specified by the optionee. During 2005, options with respect to 1,731,471 shares were exercised with delivery deferred. At December 31, 2005, optionees had made valid elections to defer delivery of 2,067,643 shares of AIG common stock upon exercise of options expiring during 2006. In addition, nonemployee directors of AIG had made valid elections to defer delivery of 21,093 shares of AIG common stock upon exercise of options expiring during 2006.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Management's Discussion and Analysis of Financial Condition and Results of Operations is designed to provide the reader a narrative with respect to AIG's operations, financial condition and liquidity and certain other significant matters.

Cautionary Statement Regarding Projections and Other Information About Future Events

This Quarterly Report and other publicly available documents may include, and AIG's officers and representatives may from time to time make, projections concerning financial information and statements concerning future economic performance and events, plans and objectives relating to management, operations, products and services, and assumptions underlying these projections and statements. These projections and statements are not historical facts but instead represent only AIG's belief regarding future events, many of which, by their nature, are inherently uncertain and outside AIG's control. These projections and statements may address, among other things, the status and potential future outcome of the current regulatory and civil proceedings against AIG and their potential effect on AIG's businesses, financial position, results of operations, cash flows and liquidity, the effect of the credit rating downgrades on AIG's businesses and competitive position, the unwinding and resolving of various relationships between AIG and Starr and SICO, and AIG's strategy for growth, product development, market position, financial results and reserves. It is possible that AIG's actual results and financial condition may differ, possibly materially, from the anticipated results and financial condition indicated in these projections and statements. Factors that could cause AIG's actual results to differ, possibly materially, from those in the specific projections and statements are discussed throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations and in "Risk Factors" in Item 1A. of Part I of AIG's 2005 Annual Report on Form 10-K and Item 1A. of Part II of this Quarterly Report. AIG is not under any obligation (and expressly disclaims any such obligations) to update or alter any projections or other statement, whether written or oral, that may be made from time to time, whether as a result of new information, future events or otherwise.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG presents its operations in the way it believes will be most meaningful. Statutory loss ratios and combined ratios are presented in accordance with accounting principles prescribed by insurance regulatory authorities because these are standard measures of performance filed with insurance regulatory authorities and used for analysis in the insurance industry and thus allow more meaningful comparisons with AIG's insurance competitors. AIG has also incorporated into this discussion a number of cross-references to additional information included throughout this Form 10-Q and its 2005 Annual Report on Form 10-K to assist readers seeking related information on a particular subject.

Overview of Operations and Business Results

AIG identifies its reportable segments by product line, consistent with its management structure. AIG's major product and service groupings are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management. AIG's operations in 2006 are conducted by its subsidiaries principally through these segments. Through these segments, AIG provides insurance and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. This geographic, product and service diversification is one of AIG's major strengths and sets it apart from its competitors.

AIG's subsidiaries serve commercial, institutional and individual customers through an extensive property-casualty and life insurance and retirement services network. In the United States, AIG companies are the largest underwriters of commercial and industrial insurance and one of the largest life insurance and retirement services operations as well. AIG's Financial Services businesses include commercial aircraft and equipment leasing, capital markets operations and consumer finance, both in the United States and abroad. AIG also provides asset management services and offers guaranteed investment contracts (GICs) to institutions and individuals.

AIG's operating performance reflects implementation of various long-term strategies and defined goals in its various operating segments. A primary goal of AIG in managing its General Insurance operations is to achieve an underwriting profit. To achieve this goal, AIG must be disciplined in its risk selection and premiums must be adequate and terms and conditions appropriate to cover the risk accepted. AIG also believes in strict control of expenses.

A central focus of AIG operations in recent years is the development and expansion of new distribution channels. In 2005 and the first three months of 2006, AIG expanded its distribution channels, which now include banks, credit card companies and television-media home shopping in many

Asian countries. Examples of new distribution channels used both domestically and overseas include banks, affinity groups, direct response and e-commerce.

AIG patiently builds relationships in markets around the world where it sees long-term growth opportunities. For example, the fact that AIG has the only wholly-owned foreign life insurance operations in eight cities in China is the result of relationships developed over nearly 30 years. AIG's more recent extensions of operations into India, Vietnam, Russia and other emerging markets reflect the same growth strategy. Moreover, AIG believes in investing in the economies and infrastructures of these countries and growing with them. When AIG companies enter a new jurisdiction, they typically offer both basic protection and savings products. As the economies evolve, AIG's products evolve with them, to more sophisticated and investment-oriented models.

Growth for AIG may be generated both internally and through acquisitions which both fulfill strategic goals and offer adequate return on capital. Recently AIG announced its acquisition of Travel Guard International, one of the nation's leading providers of travel insurance programs and emergency travel assistance, and its plans to acquire Central Insurance Co., Ltd., a leading general insurance company in Taiwan.

The following table summarizes AIG's revenues, income before income taxes, minority interest and cumulative effect of an accounting change and net income for the three months ended March 31, 2006 and 2005:

<i>(in millions)</i>	2006	2005
Total revenues	\$27,259	\$27,202
Income before income taxes, minority interest and cumulative effect of an accounting change	4,793	5,649
Net income	\$ 3,195	\$ 3,799

Consolidated Results

The small increase in revenues in the first three months of 2006 was primarily attributable to the growth in net premiums earned from global General Insurance operations as well as growth in both General Insurance and Life Insurance & Retirement Services net investment income and Life Insurance & Retirement Services GAAP premiums, offset, in part, by decreases in revenue in the Financial Services and Asset Management segments.

AIG's income before income taxes, minority interest and cumulative effect of an accounting change decreased 15 percent in the first three months of 2006 when compared to the same period of 2005. Increases in General Insurance and Life Insurance & Retirement Services operating income were offset by an operating loss in Financial Services driven by the effects of hedging activities that do not qualify for hedge accounting treatment under FAS 133 and a decrease in Asset

Management operating income. Results for the first three months of 2006 were negatively affected by the compensation expense relating to the Starr tender offer (\$54 million before tax and after tax) and an additional allowance for losses in AIG Credit Card Company (Taiwan) (\$88 million before tax and \$57 million after tax). Results were also negatively affected by certain adjustments, primarily relating to deferred advertising costs in General Insurance under SOP 93-7 (\$59 million before tax and \$38 million after tax) and various adjustments relating to the SICO Plans (\$61 million before tax and after tax).

The following table summarizes the operations of each principal segment for the three months ended March 31, 2006 and 2005. (See also Note 2 of Notes to Consolidated Financial Statements).

<i>(in millions)</i>	2006	2005
Revenues^(a):		
General Insurance ^(b)	\$11,656	\$11,219
Life Insurance & Retirement Services ^(c)	12,639	11,775
Financial Services ^(d)	1,615	2,436
Asset Management ^(e)	1,239	1,377
Other	110	395
Consolidated	\$27,259	\$27,202
Operating Income (loss)^{(a)(f)}:		
General Insurance	\$ 2,331	\$ 1,642
Life Insurance & Retirement Services ^(g)	2,555	2,181
Financial Services ^(g)	(159)	1,045
Asset Management	461	590
Other ^(h)	(395)	191
Consolidated	\$ 4,793	\$ 5,649

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the first three months of 2006 and 2005, the effect was \$0 and \$15 million, respectively, in operating income for Aircraft Finance and \$(678) million and \$468 million in revenues and operating income, respectively, for Capital Markets. These amounts result primarily from interest rate and foreign currency derivatives hedging available for sale securities and borrowings.

(b) Represents the sum of General Insurance net premiums earned, net investment income and realized capital gains (losses).

(c) Represents the sum of Life Insurance & Retirement Services GAAP premiums, net investment income and realized capital gains (losses).

(d) Represents interest, lease and finance charges.

(e) Represents management and advisory fees and net investment income with respect to GICs.

(f) Represents income before income taxes, minority interest and cumulative effect of an accounting change.

(g) Results of operations of AIG Credit Card Company (Taiwan) are shared equally by the Life Insurance & Retirement Services segment and the Financial Services segment. In 2006, additional allowances of \$44 million were recorded by each segment for losses in these credit card operations.

(h) Represents unallocated corporate expenses, relating primarily to interest expense and certain compensation related expenses, and other realized capital gains (losses) of \$(57) million and \$155 million in the first three months of 2006 and 2005, respectively.

General Insurance

AIG's General Insurance operations provide property and casualty products and services throughout the world. The

increase in General Insurance operating income in the first three months of 2006 compared to the same period of 2005 was primarily attributable to improvement in underwriting results with respect to the Domestic Brokerage Group (DBG). General Insurance operating income included adverse development in the first three months of 2006 and 2005 from catastrophes in prior years.

Life Insurance & Retirement Services

AIG's Life Insurance & Retirement Services operations provide insurance, financial and investment products throughout the world. Foreign operations provided approximately 65 percent and 55 percent of AIG's Life Insurance & Retirement Services operating income for the first three months of 2006 and 2005, respectively.

Life Insurance & Retirement Services operating income increased by 17 percent in the first three months of 2006 when compared to the same period of 2005 driven by a 39 percent increase in Foreign Life Insurance & Retirement Services operating income, offset, in part, by an approximately 10 percent decrease in the Domestic Life Insurance & Retirement Services operating income, primarily due to lower partnership income. Realized capital gains included in revenues and operating income were \$158 million in the first three months of 2006 compared to realized capital losses of \$82 million in the same period of 2005. The increase in realized capital gains in the first three months of 2006 compared to the same period of 2005 was due to the effect of hedging activities that do not qualify for hedge accounting under FAS 133 and the foreign exchange gains and losses related to the application of FAS 52, offset by other-than-temporary declines in the value of investments.

Financial Services

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital market transactions, consumer finance and insurance premium financing.

Financial Services operating income decreased in the first three months of 2006 compared to the same period of 2005, primarily due to the fluctuation in earnings resulting from the accounting effect of FAS 133. Fluctuations in revenues and operating income from quarter to quarter are not unusual because of the transaction-oriented nature of Capital Markets operations and the effect of not qualifying for hedge accounting treatment under FAS 133 for hedges on securities available for sale and borrowings. Consumer Finance revenues increased but operating income decreased, primarily as a result of increasing the allowance for losses in connection with the industry-wide credit deterioration in the Taiwan credit card market.

Asset Management

AIG's Asset Management operations include institutional and retail asset management and broker dealer services and spread-based investment business from the sale of GICs. These products and services are offered to individuals and institutions, both domestically and overseas.

Asset Management operating income decreased 22 percent in the first three months of 2006 when compared to the same period of 2005 as a result of continued run off in AIG's GIC portfolio combined with spread compression. In addition, there was a decline in realized gains on sales of real estate investments and performance fees earned on various private equity investments.

Capital Resources

At March 31, 2006, AIG had total consolidated shareholders' equity of \$88.39 billion and total consolidated borrowings of \$118.8 billion. At that date, \$104.1 billion of such borrowings were either not guaranteed by AIG or were AIGFP's matched borrowings under obligations of guaranteed investment agreements (GIAs), liabilities connected to trust preferred stock, or matched notes and bonds payable.

During the period from January 1, 2006 through March 31, 2006, AIG did not purchase any shares of its common stock under its existing common stock repurchase authorization.

Liquidity

At March 31, 2006, AIG's consolidated invested assets included \$18.59 billion in cash and short-term investments. Consolidated net cash provided from operating activities in the first three months of 2006 amounted to \$3.07 billion. AIG believes that its liquid assets, cash provided by operations and access to short term funding through commercial paper and bank credit facilities will enable it to meet any anticipated cash requirements.

Outlook

Despite industry price erosion in some classes of general insurance, AIG expects to continue to identify profitable opportunities and build attractive new General Insurance businesses as a result of AIG's broad product line and extensive distribution networks. In December 2005, American International Underwriters Overseas, Ltd. (AIUO) received a license from the government of Vietnam to operate a wholly owned general insurance company in Vietnam. This license, the first general insurance license granted by Vietnam to a U.S.-based insurance organization, permits AIG to operate a general insurance company throughout Vietnam.

In China, AIG has wholly-owned life insurance operations in eight cities. These operations should benefit from China's rapid rate of economic growth and growing middle class, a segment that is a prime market for life insurance.

Chinese insurance regulators have indicated satisfaction with the implementation of corrective measures to stop AIG's Hong Kong based agents from selling life insurance to mainland Chinese. In April 2006, applications for provincial expansion of AIG's life insurance operations in Guangdong and Jiangsu and of general insurance operations in Guangdong were approved, and AIG resubmitted its application to serve the group insurance market, a business where AIG expects future growth.

In Japan, AIG Star Life Insurance Co., Ltd. (AIG Star Life) and AIG Edison Life Insurance Company (AIG Edison Life) continue to grow new business by expanding distribution and new product offerings. AIG has developed a leadership position in the distribution of annuities through banks in both Japan and Korea. Also, American Life Insurance Company (ALICO) has launched new life products to the Japan bank market after further deregulation of banks in December 2005. AIG is a leader in direct marketing through sponsors and in the broad market in Japan and Korea. AIG also is investing in expanding distribution channels with emphasis in India, Korea and Vietnam.

Domestically, AIG anticipates its life insurance and retirement services businesses to continue growing in 2006 through distribution channel expansion and new and enhanced products. The home service operation, which is expected to be a slow growth business, has not met business objectives, although its cash flow has been strong. Domestic group life/health results continue to be weak reflecting the ongoing restructuring activities including the consideration of exiting certain product lines. AIG Retirement Services individual fixed annuities business will continue to be challenged due to the interest rate environment and increased competition from bank products.

In the airline industry, changes in market conditions are not immediately apparent in operating results. Lease rates have firmed as a result of strong demand spurred by the recovering global commercial aviation market, especially in Asia. Sales have begun to increase, and AIG expects an increasing level of interest from a variety of purchasers. However, higher interest rates are expected to continue to compress lease margins. AIG's Consumer Finance operations overseas have been negatively affected in 2006 by industry-wide credit deterioration in the Taiwan credit card market.

GICs, which are sold domestically and abroad to both institutions and individuals, are written on an opportunistic basis when market conditions are favorable. In September 2005, AIG launched a \$10 billion medium term note program in the Euromarkets under which AIG debt securities are issued primarily for a matched investment program. In April 2006, AIG issued its first debt securities under the matched investment program, selling Euro 500 million principal amount of notes. AIG also expects to launch a matched investment program in the domestic market which, along with

the Euro program, will become AIG's principal spread-based investment activity. However, the timing of the launch of the domestic program remains uncertain. Because AIG's credit spreads in the capital markets have widened following the ratings declines described in Item 1A. Risk Factors, there may be a reduction in the earnings on new business in AIG's spread based funding businesses.

AIG has many promising growth initiatives underway around the world. Cooperative agreements such as those with PICC Property and Casualty Company Limited and various banks in the U.S., Japan and Korea are expected to expand distribution networks for AIG's products and provide models for future growth.

Critical Accounting Estimates

AIG considers its most critical accounting estimates those with respect to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts, deferred policy acquisition costs, estimated gross profits for investment-oriented products, fair value determinations for certain Capital Markets assets and liabilities, other-than-temporary declines in the value of investments and flight equipment recoverability. These accounting estimates require the use of assumptions about matters, some of which are highly uncertain at the time of estimation. To the extent actual experience differs from the assumptions used, AIG's results of operations would be directly affected.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG's critical accounting estimates are discussed in detail. The major categories for which assumptions are developed and used to establish each critical accounting estimate are highlighted below.

Reserves for Losses and Loss Expenses (General Insurance):

- *Loss trend factors:* used to establish expected loss ratios for subsequent accident years based on premium rate adequacy and the projected loss ratio with respect to prior accident years.
- *Expected loss ratios for the latest accident year:* for example, accident year 2005 for the year end 2005 loss reserve analysis. For low frequency, high severity classes such as excess casualty and directors and officers liability (D&O), expected loss ratios generally are utilized for at least the three most recent accident years.
- *Loss development factors:* used to project the reported losses for each accident year to an ultimate amount.

Future Policy Benefits for Life and Accident and Health Contracts (Life Insurance & Retirement Services):

- *Interest rates:* which vary by geographical region, year of issuance and products.
- *Mortality, morbidity and surrender rates:* based upon actual experience by geographical region modified to allow for variation in policy form.

Estimated Gross Profits (Life Insurance & Retirement Services):

- *Estimated gross profits* to be realized over the estimated duration of the contracts (investment-oriented products) affect the carrying value of deferred policy acquisition costs under FAS 97. Estimated gross profits include investment income and gains and losses on investments less required interest, actual mortality and other expenses.

Deferred Policy Acquisition Costs (Life Insurance & Retirement Services):

- Recoverability based on current and future expected profitability, which is affected by interest rates, foreign exchange rates, mortality experience, and policy persistency.

Deferred Policy Acquisition Costs (General Insurance):

- Recoverability and eligibility based upon the current terms and profitability of the underlying insurance contracts.

Fair Value Determinations of Certain Assets and Liabilities (Financial Services – Capital Markets):

- *Valuation models:* utilizing factors, such as market liquidity and current interest, foreign exchange and volatility rates.
- AIG attempts to secure reliable and independent current market price data, such as published exchange rates from external subscription services such as Bloomberg or Reuters or third-party broker quotes for use in its model. When such prices are not available, AIG uses an internal methodology, which includes interpolation and extrapolation from verifiable prices from trades occurring on dates nearest to the dates of the transactions.

Other-Than-Temporary Declines in the Value of Investments:

A security is considered a candidate for other-than-temporary impairment based upon the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer).
- The occurrence of a discrete credit event resulting in the debtor defaulting or seeking bankruptcy or insolvency protection or voluntary reorganization.
- The probability of non-realization of a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

At each balance sheet date, AIG evaluates its securities holdings in an unrealized loss position. Where AIG does not intend to hold such securities until they have fully recovered their carrying value, based on the circumstances present at the date of evaluation, AIG records the unrealized loss in income. If events or circumstances change, such as unexpected changes in creditworthiness of the obligor, general interest rate environment, tax circumstances, liquidity events,

and statutory capital management considerations among others, AIG revisits its intent to determine if a loss should be recorded in income. Further, if a loss is recognized from a sale subsequent to a balance sheet date pursuant to these changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer exists.

Flight Equipment — Recoverability (Financial Services):

- *Expected undiscounted future net cash flows:* based upon current lease rates, projected future lease rates and estimated terminal values of each aircraft based on third party information.

Operating Review

General Insurance Operations

AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of property and casualty insurance both domestically and abroad.

Domestic General Insurance operations are comprised of DBG, which includes the operations of The Hartford Steam Boiler Inspection and Insurance Company (HSB); Transatlantic Holdings, Inc. (Transatlantic); Personal Lines, including 21st Century Insurance Group (21st Century); and United Guaranty Corporation (UGC).

AIG's primary domestic division is DBG. DBG's business in the United States and Canada is conducted through its General Insurance subsidiaries including American Home Assurance Company (American Home), National Union Fire Insurance Company of Pittsburgh, Pa. (National Union), Lexington Insurance Company (Lexington) and certain other General Insurance company subsidiaries of AIG.

DBG writes substantially all classes of business insurance, accepting such business mainly from insurance brokers. This provides DBG the opportunity to select specialized markets and retain underwriting control. Any licensed broker is able to submit business to DBG without the traditional agent-company contractual relationship, but such broker usually has no authority to commit DBG to accept a risk.

In addition to writing substantially all classes of business insurance, including large commercial or industrial property insurance, excess liability, inland marine, environmental, workers compensation and excess and umbrella coverages, DBG offers many specialized forms of insurance such as aviation, accident and health, equipment breakdown, directors and officers liability (D&O), difference-in-conditions, kidnap-ransom, export credit and political risk, and various types of professional errors and omissions coverages. The AIG Risk Management operation provides insurance and risk management programs for large corporate customers. The AIG Risk Finance operation is a leading provider of customized structured insurance products. Also included in DBG are the operations of AIG Environmental, which focuses specifically on

providing specialty products to clients with environmental exposures. Lexington writes surplus lines, those risks for which conventional insurance companies do not readily provide insurance coverage, either because of complexity or because the coverage does not lend itself to conventional contracts.

Certain of the products of the DBG companies include funding components or have been structured in a manner such that little or no insurance risk is actually transferred. Funds received in connection with these products are recorded as deposits and included in other liabilities, rather than premiums and incurred losses.

The AIG Worldsource Division introduces and coordinates AIG's products and services to U.S.-based multinational clients and foreign corporations doing business in the U.S.

Transatlantic subsidiaries offer reinsurance capacity on both a treaty and facultative basis both in the U.S. and abroad. Transatlantic structures programs for a full range of property and casualty products with an emphasis on specialty risk.

AIG's Personal Lines operations provide automobile insurance through AIG Direct, the mass marketing operation of AIG, Agency Auto Division and 21st Century, as well as a broad range of coverages for high net-worth individuals through the AIG Private Client Group.

The main business of the UGC subsidiaries is the issuance of residential mortgage guaranty insurance on conventional first lien mortgages for the purchase or refinance of one to four family residences. UGC subsidiaries also write second lien and private student loan guaranty insurance.

AIG's Foreign General Insurance group accepts risks primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance group also includes business written by AIG's foreign-based insurance subsidiaries. The Foreign General group uses various marketing methods and multiple distribution channels to write both commercial and consumer lines insurance with certain refinements for local laws, customs and needs. AIU operates in Asia, the Pacific Rim, the United Kingdom, Europe, Africa, the Middle East and Latin America.

As previously noted, AIG believes it should present and discuss its financial information in a manner most meaningful to its investors. Accordingly, in its General Insurance business, AIG uses certain regulatory measures, where AIG has determined these measurements to be useful and meaningful.

A critical discipline of a successful general insurance business is the objective to produce profit from underwriting activities exclusive of investment-related income. When underwriting is not profitable, premiums are inadequate to pay for insured losses and underwriting related expenses. In these situations, the addition of general insurance related investment income and realized capital gains may, however, enable a general insurance business to produce operating income. For these reasons, AIG views underwriting results to be criti-

cal in the overall evaluation of performance. (See also the discussion under “Liquidity” herein.)

Statutory underwriting profit is derived by reducing net premiums earned by net losses and loss expenses incurred and net expenses incurred. Statutory accounting generally requires immediate expense recognition and ignores the matching of revenues and expenses as required by GAAP. That is, for statutory purposes, expenses are recognized immediately, not over the same period that the revenues are earned. Thus, statutory expenses exclude changes in deferred acquisition costs (DAC).

GAAP provides for the recognition of expenses at the same time revenues are earned, the accounting principle of matching. Therefore, acquisition expenses are deferred and amortized over the period the related net premiums written are earned. DAC is reviewed for recoverability, and such review requires management judgment. (See also “Critical Accounting Estimates” herein.)

AIG, along with most General Insurance companies, uses the loss ratio, the expense ratio and the combined ratio as measures of underwriting performance. The loss ratio is the sum of losses and loss expenses incurred divided by net premiums earned. The expense ratio is statutory underwriting expenses divided by net premiums written. The combined ratio is the sum of the loss ratio and the expense ratio. These ratios are relative measurements that describe, for every \$100 of net premiums earned or written, the cost of losses and statutory expenses, respectively. The combined ratio presents the total cost per \$100 of premium production. A combined ratio below 100 demonstrates underwriting profit; a combined ratio above 100 demonstrates underwriting loss.

Net premiums written are initially deferred and earned based upon the terms of the underlying policies. The net unearned premium reserve constitutes deferred revenues which are generally earned ratably over the policy period. Thus, the net unearned premium reserve is not fully recognized in income as net premiums earned until the end of the policy period.

The underwriting environment varies from country to country, as does the degree of litigation activity. Regulation, product type and competition have a direct effect on pricing and consequently on profitability as reflected in underwriting profit and statutory general insurance ratios.

General Insurance operating income is comprised of statutory underwriting results, changes in DAC, net investment income and realized capital gains and losses. Operating income, as well as net premiums written, net premiums earned, net investment income and realized capital gains (losses) and statutory ratios for the three months ended March 31, 2006 and 2005 were as follows:

<i>(in millions, except ratios)</i>	2006	2005
Net premiums written:		
Domestic General		
DBG	\$ 5,900	\$ 5,720

Consolidated:		
Loss Ratio ^(b)	66.64	71.79
Expense Ratio	22.53	21.73
Combined Ratio	89.17	93.52

(a) Income statement accounts expressed in non-functional currencies are translated into U.S. dollars using average exchange rates.

(b) Includes \$103 million and \$171 million of additional losses incurred and net reinstatement premium costs in the first three months of 2006 and 2005, respectively, related primarily to prior year catastrophes, resulting in increases of 0.97 points and 1.66 points, respectively, in the consolidated General Insurance loss ratio.

(c) Includes the results of wholly owned AIU agencies.

(d) Includes amortization of advertising costs.

General Insurance Results

General Insurance operating income in the first three months of 2006 showed significant improvement from the prior year results. The increase in General Insurance operating income in the first three months of 2006 was primarily attributable to improvement in DBG's underwriting results and growth in overall General Insurance net investment income. Underwriting results in the first three months of 2006 and 2005 included \$103 million and \$171 million, respectively, of additional losses incurred and net reinstatement premium costs resulting primarily from increased costs related to the 2005 and 2004 catastrophes. The \$103 million of losses and net reinstatement premium costs incurred in the first three months of 2006 includes \$78 million attributable to 2005 hurricanes and \$25 million attributable to 2004 hurricanes. The losses and net reinstatement premium costs attributable to the 2004 hurricanes are primarily related to multi-event and multi-location claims that required extensive investigation to determine the full extent and value of the insured damage. The \$171 million of losses and net reinstatement premium costs incurred in the first three months of 2005 is primarily attributable to 2004 hurricanes as well as \$44 million from a January 2005 European storm. At March 31, 2006, the inception to date incurred losses and net reinstatement premium costs for 2005 hurricanes were approximately \$2.7 billion. At March 31, 2006, the inception to date incurred losses and net reinstatement premium costs for 2004 hurricanes were approximately \$1.2 billion.

DBG's net premiums written increased modestly in the first three months of 2006 when compared to the same period of 2005, reflecting generally improving renewal retention, a modest change in the mix of business towards smaller accounts and a reduction in the amount of reinsurance purchased. DBG also continued to expand its relationships with a larger number and broader range of brokers. Recently, DBG has seen improvement in domestic property rates as well as increases in submission activity in the aftermath of the 2005 hurricanes. DBG attributes the increase in submissions to its overall financial strength in comparison to many insur-

ers that experienced significant losses and reductions of surplus as a result of the hurricanes.

The improvement in DBG's underwriting results for the first three months of 2006 compared to the same period of 2005 was due to a reduction in the loss ratio of 8.1 points, primarily due to lower accident year loss ratios for 2006 compared to the loss ratios recorded in the first three months of 2005 for accident year 2005. The improvement in 2006 loss ratios is based on a comprehensive actuarial study conducted at the end of 2005 and updated as of March 31, 2006 as described below under "Quarterly Reserving Process". In addition, the first three months of 2006 includes \$28 million for losses related to prior year hurricanes compared to the first three months of 2005 which included \$118 million for losses related to prior year hurricanes.

The DBG expense ratio was approximately the same for the first three months of 2006 and 2005.

Transatlantic's net premiums written and net premiums earned for the first three months of 2006 increased compared to the same period of 2005 due largely to increased domestic specialty casualty and property premiums offset, in part, by the adverse effect of changes in foreign currency exchange rates on international premiums. Operating income in the first three months of 2006 increased due to improved underwriting profit, resulting largely from reduced significant net catastrophe losses and lower net adverse development on loss reserves, offset, in part, by higher commission costs, and increased net investment income.

Personal Lines net premiums written for the first three months of 2006 increased slightly when compared to the same period of 2005 as strong growth in the Private Client Group and Agency Auto divisions offset the runoff of the involuntary auto business and a small decline in the AIG Direct and 21st Century divisions. The reduction in the involuntary business is a result of terminating an MGA relationship. The Private Client Group and Agency Auto divisions continue to grow as they expand their agency/broker relationships with multiple product offerings. The AIG Direct and 21st Century decline is due largely to a reduction in response rates. The loss ratio improved in 2006 due to favorable loss development trends in the AIG Direct and 21st Century businesses. The expense ratio increased in 2006 over 2005 driven by an investment in people and technology in the Agency Auto Division, higher compensation expenses in 21st Century due to implementing FAS 123R, and accelerated amortization of direct response advertising costs in AIG Direct resulting from a change in estimated future premiums.

Mortgage Guaranty's net premiums written were up for the first three months of 2006 when compared to the same period of 2005. Strong growth was reported in all business segments as domestic first lien, domestic second lien and international operations grew 9 percent, 22 percent and 84 percent, respectively. Underwriting results for the first three

months of 2006 improved slightly from the same period of 2005 as strong earned premium growth was partially offset by loss development in the domestic second lien business.

Foreign General Insurance had strong results in the first three months of 2006 even after additional losses incurred related to the 2005 catastrophes and a pre-tax adjustment of \$53 million to expenses for a write-off of deferred advertising costs. Growth in net premiums written for this period was achieved in consumer lines due to new business as well as new distribution channels. Commercial lines had modest growth in net premiums written. Commercial lines in Europe exhibited strong growth and had positive results for the first three months of 2006, partially offset by rate decreases in Australia and the United Kingdom. The Ascot Lloyd's syndicate reported growth for this period due to rate increases on its U.S. book of business along with contractual terms on renewals that reflect better conditions and higher deductibles. In the Far East, personal accident business exhibited strong growth. Europe, Southeast Asia and Latin America also had strong growth in personal accident business. Personal lines operations in Latin America and Brazil continue to exhibit strong growth. For the first three months of 2006, 55 percent of Foreign General Insurance net premiums written was derived from commercial insurance and the remainder from consumer lines. The Foreign General Insurance loss ratio decreased in the first three months of 2006 from the same period of 2005 primarily due to the lower accident year loss ratio for 2006 compared to the loss ratio recorded in the first three months of 2005 for accident year 2005. The Foreign General Insurance expense ratio increased in the first three months of 2006 from the same period in 2005 principally due to the \$53 million write-off of advertising costs.

AIG transacts business in most major foreign currencies. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of General Insurance net premiums written for the first three months of 2006:

	2006
Growth in original currency	6.0%
Foreign exchange effect	(1.7)
Growth as reported in U.S. dollars	4.3%

As previously noted, General Insurance results include \$103 million and \$171 million of additional losses incurred and net reinstatement premium costs in the first three months of 2006 and 2005, respectively, related primarily to the 2005 and 2004 catastrophes. The losses attributable to the 2004 hurricanes are primarily related to multi-event and multi-location claims that required extensive investigation to determine the full extent and value of the insured damage. Losses caused by catastrophes can fluctuate widely from year to year, making comparisons of recurring type business more difficult. With respect to catastrophe losses, AIG believes that it has taken appropriate steps, such as careful exposure selec-

tion and obtaining reinsurance coverage, to reduce the effect of the magnitude of possible future losses. The occurrence of one or more catastrophic events of unanticipated frequency or severity, such as a terrorist attack, earthquake or hurricane, that causes insured losses, however, could have a material adverse effect on AIG's results of operations, liquidity or financial condition.

General Insurance net investment income grew in the first three months of 2006 when compared to the same period of 2005. AIG is benefiting from strong cash flow and higher interest rates. Additionally, net investment income was positively affected by the compounding of previously earned and reinvested net investment income. Foreign General Insurance net investment income declined in the first three months of 2006 when compared to the same period of 2005 due to lower partnership income. Market valuations by partnerships in the private equity sector did not match the increases in 2005, the results of which benefited from initial public offering activity of partnership investments.

Realized capital gains and losses resulted from the ongoing investment management of the General Insurance portfolios within the overall objectives of the General Insurance operations. (See the discussion on "Valuation of Invested Assets" herein.)

The contribution of General Insurance operating income to AIG's consolidated income before income taxes, minority interest and cumulative effect of an accounting change was 49 percent in the first three months of 2006 compared to 29 percent in the same period of 2005.

Reinsurance

AIG is a major purchaser of reinsurance for its General Insurance operations. AIG insures risks globally, and its reinsurance programs must be coordinated in order to provide AIG the level of reinsurance protection that AIG desires. Reinsurance is an important risk management tool to manage transaction and insurance line risk retention at prudent levels set by management. AIG also purchases reinsurance to mitigate its catastrophic exposure. AIG is cognizant of the need to exercise good judgment in the selection and approval of both domestic and foreign companies participating in its reinsurance programs because one or more catastrophe losses could negatively affect AIG's reinsurers and result in an inability of AIG to collect reinsurance recoverables. AIG's reinsurance department evaluates catastrophic events and assesses the probability of occurrence and magnitude of catastrophic events through the use of state-of-the-art industry recognized program models, among other techniques. AIG supplements these models through continually monitoring the risk exposure of AIG's worldwide General Insurance operations and adjusting such models accordingly. Although reinsurance ar-

rangements do not relieve AIG from its direct obligations to its insureds, an efficient and effective reinsurance program substantially limits AIG's exposure to potentially significant losses. With respect to its property business, AIG has either renewed existing coverage or purchased new coverage that, in the opinion of management, is adequate to limit AIG's exposures.

AIG's consolidated general reinsurance assets amounted to \$23.44 billion at March 31, 2006 and resulted from AIG's reinsurance arrangements. Thus, a credit exposure existed at March 31, 2006 with respect to reinsurance recoverable to the extent that any reinsurer may not be able to reimburse AIG under the terms of these reinsurance arrangements. AIG manages its credit risk in its reinsurance relationships by transacting with reinsurers that it considers financially sound, and when necessary AIG holds substantial collateral in the form of funds, securities and/or irrevocable letters of credit. This collateral can be drawn on for amounts that remain unpaid beyond specified time periods on an individual reinsurer basis. At December 31, 2005, approximately 48 percent of the general reinsurance assets were from unauthorized reinsurers. Many of these balances were collateralized, permitting statutory recognition. Additionally, with the approval of its domiciliary insurance regulators, AIG posted approximately \$1.5 billion of letters of credit issued by several commercial banks in favor of certain Domestic General Insurance companies to permit statutory recognition of balances otherwise uncollateralized at December 31, 2005. The remaining 52 percent of the general reinsurance assets were from authorized reinsurers. The terms authorized and unauthorized pertain to regulatory categories, not creditworthiness. At December 31, 2005, approximately 88 percent of the balances with respect to authorized reinsurers are from reinsurers rated A (excellent) or better, as rated by A.M. Best, or A (strong) or better, as rated by Standard & Poor's, a division of The McGraw-Hill Companies, Inc. (S&P). Through March 31, 2006, there has been no significant deterioration in the rating profile of AIG's reinsurers representing more than five percent of AIG's reinsurance assets as of December 31, 2005. These ratings are measures of financial strength.

AIG maintains an allowance for estimated unrecoverable reinsurance. Although AIG has been largely successful in its previous recovery efforts, at March 31, 2006 AIG had an allowance for unrecoverable reinsurance approximating \$979 million. At that date, AIG had no significant reinsurance recoverables due from any individual reinsurer that was financially troubled (e.g., liquidated, insolvent, in receivership or otherwise subject to formal or informal regulatory restriction).

AIG's Reinsurance Security Department conducts ongoing detailed assessments of the reinsurance markets and current and potential reinsurers, both foreign and domestic. Such assessments include, but are not limited to, identifying if a reinsurer is appropriately licensed and has sufficient financial capacity, and evaluating the local economic environment in which a foreign reinsurer operates. This department also reviews the nature of the risks ceded and the requirements for credit risk mitigants. For example, in AIG's treaty reinsurance contracts, AIG includes provisions that frequently require a reinsurer to post collateral when a referenced event occurs. Furthermore, AIG limits its unsecured exposure to reinsurers through the use of credit triggers, which include, but are not limited to, insurer financial strength rating downgrades, policyholder surplus declines at or below a certain predetermined level or a certain predetermined level of a reinsurance recoverable being reached. In addition, AIG's Credit Risk Committee reviews the credit limits for and concentrations with any one reinsurer.

AIG enters into intercompany reinsurance transactions, primarily through American International Reinsurance Company, Ltd. (AIRCO), for its General Insurance and Life Insurance operations. AIG enters into these transactions as a sound and prudent business practice in order to maintain underwriting control and spread insurance risk among AIG's various legal entities. All material intercompany transactions have been eliminated in consolidation. AIG generally obtains letters of credit in order to obtain statutory recognition of these intercompany reinsurance transactions. At March 31, 2006, approximately \$3.5 billion of letters of credit were outstanding to cover intercompany reinsurance transactions with AIRCO or other General Insurance subsidiaries.

At March 31, 2006, consolidated general reinsurance assets of \$23.44 billion include reinsurance recoverables for paid losses and loss expenses of \$1.17 billion and \$19.21 billion with respect to the ceded reserve for losses and loss expenses, including ceded losses incurred but not reported (IBNR) (ceded reserves) and \$3.07 billion of ceded reserve for unearned premiums. The ceded reserve for losses and loss expenses represent the accumulation of estimates of ultimate ceded losses including provisions for ceded IBNR and loss expenses. The methods used to determine such estimates and to establish the resulting ceded reserves are continually reviewed and updated by management. Any adjustments thereto are reflected in income currently. It is AIG's belief that the ceded reserves for losses and loss expenses at March 31, 2006 were representative of the ultimate losses recoverable. In the future, as the ceded reserves continue to develop to ultimate amounts, the ultimate loss recoverable may be greater or less than the reserves currently ceded.

Reserve for Losses and Loss Expenses

The table below classifies as of March 31, 2006 the components of the General Insurance gross reserve for losses and loss expenses (loss reserves) by major lines of business on a statutory Annual Statement basis*:

<i>(in millions)</i>	
Other liability occurrence	\$18,437
Other liability claims made	12,137
Workers compensation	11,909
Auto liability	6,274
Property	7,541
International	5,494
Reinsurance	3,039
Medical malpractice	2,173
Aircraft	1,589
Products liability	1,988
Commercial multiple peril	1,449
Accident and health	1,641
Fidelity/surety	988
Other	3,441
Total	\$78,100

*Presented by lines of business pursuant to statutory reporting requirements as prescribed by the National Association of Insurance Commissioners.

AIG's reserve for losses and loss expenses represents the accumulation of estimates of ultimate losses, including IBNR and loss expenses. The methods used to determine loss reserve estimates and to establish the resulting reserves are continually reviewed and updated by management. Any adjustments resulting therefrom are reflected in operating income currently. Because loss reserve estimates are subject to the outcome of future events, changes in estimates are unavoidable given that loss trends vary and time is often required for changes in trends to be recognized and confirmed. Reserve changes that increase previous estimates of ultimate cost are referred to as unfavorable or adverse development or reserve strengthening. Reserve changes that decrease previous estimates of ultimate cost are referred to as favorable development.

At March 31, 2006, General Insurance net loss reserves increased \$1.42 billion from the prior year end to \$58.89 billion. The net loss reserves represent loss reserves reduced by reinsurance recoverables, net of an allowance for unrecoverable reinsurance and applicable discount for future investment income. The table below classifies the components of the General Insurance net loss reserves by business unit as of March 31, 2006.

<i>(in millions)</i>	
DBG ^(a)	\$41,807
Personal Lines ^(b)	2,556
Transatlantic	5,737
Mortgage Guaranty	349
Foreign General ^(c)	8,443
Total Net Loss Reserve	\$58,892

(a) DBG loss reserves include approximately \$3.59 billion (\$4.04 billion before discount) related to business written by DBG but ceded to AIRCO and reported in AIRCO's statutory filings. DBG loss reserves also include approximately \$462 million related to business included in AIUO's statutory filings.

(b) Personal Lines loss reserves include \$885 million related to business ceded to DBG and reported in DBG's statutory filings.

(c) Foreign General loss reserves include approximately \$2.57 billion related to business reported in DBG's statutory filings.

The DBG net loss reserve of \$41.81 billion is comprised principally of the business of AIG subsidiaries participating in the American Home/National Union pool (11 companies) and the surplus lines pool (Lexington, Starr Excess Liability Insurance Company and Landmark Insurance Company).

Beginning in 1998, DBG ceded a quota share percentage of its other liability occurrence and products liability occurrence business to AIRCO. The quota share percentage ceded was 40 percent in 1998, 65 percent in 1999, 75 percent in 2000 and 2001, 50 percent in 2002 and 2003, 40 percent in 2004, 35 percent in 2005 and 20 percent in 2006 and covered all business written in these years for these lines by participants in the American Home/National Union pool. In 1998 the cession reflected only the other liability occurrence business, but in 1999 and subsequent years included products liability occurrence. AIRCO's loss reserves relating to these quota share cessions from DBG are recorded on a discounted basis. As of March 31, 2006, AIRCO carried a discount of approximately \$450 million applicable to the \$4.04 billion in undiscounted reserves it assumed from the American Home/National Union pool via this quota share cession. AIRCO also carries approximately \$465 million in net loss reserves relating to Foreign General insurance business. These reserves are carried on an undiscounted basis.

Beginning in 1997, the Personal Lines division ceded a percentage of all business written by the companies participating in the personal lines pool to the American Home/National Union pool. As noted above, the total reserves carried by participants in the American Home/National Union pool relating to this cession amounted to \$885 million as of March 31, 2006.

The companies participating in the American Home/National Union pool have maintained a participation in the business written by AIU for decades. As of March 31, 2006, these AIU reserves carried by participants in the American Home/National Union pool amounted to approximately \$2.57 billion. The remaining Foreign General reserves are carried by AIUO, AIRCO, and other smaller AIG subsidiaries domiciled outside the United States. Statutory filings in the U.S. by AIG companies reflect all the business written by U.S. domiciled entities only, and therefore exclude business written by AIUO, AIRCO, and all other internationally domiciled subsidiaries. The total reserves carried at March 31, 2006 by AIUO and AIRCO were approximately \$3.92 billion and \$4.06 billion, respectively. AIRCO's \$4.06 billion in total general insurance reserves consist of approximately \$3.59 billion from business assumed from the American Home/National Union pool and an additional \$465 million relating to Foreign General Insurance business.

Discounting of Reserves

At March 31, 2006, AIG's overall General Insurance net loss reserves reflects a loss reserve discount of \$2.11 billion, including tabular and non-tabular calculations. The tabular workers compensation discount is calculated using a 3.5 percent interest rate and the 1979-81 Decennial Mortality Table. The non-tabular workers compensation discount is calculated separately for companies domiciled in New York and Pennsylvania, and follows the statutory regulations for each state. For New York companies, the discount is based on a five percent interest rate and the companies' own payout patterns. For Pennsylvania companies, the statute has specified discount factors for accident years 2001 and prior, which are based on a six percent interest rate and an industry payout pattern. For accident years 2002 and subsequent, the discount is based on the yield of U.S. Treasury securities ranging from one to twenty years and the company's own payout pattern, with the future expected payment for each year using the interest rate associated with the corresponding Treasury security yield for that time period. The discount is comprised of the following: \$512 million – tabular discount for workers compensation in DBG; \$1.15 billion – non-tabular discount for workers compensation in DBG; and, \$450 million – non-tabular discount for other liability occurrence and products liability occurrence in AIRCO. The total undiscounted workers compensation loss reserve carried by DBG is approximately \$9.9 billion as of March 31, 2006. The other liability occurrence and products liability occurrence business in AIRCO that is assumed from DBG is discounted based on the yield of U.S. Treasury securities ranging from one to twenty years and the DBG payout pattern for this business. The undiscounted reserves assumed by AIRCO from DBG totaled approximately \$4.04 billion at March 31, 2006.

Quarterly Reserving Process

It is management's belief that the General Insurance net loss reserves are adequate to cover General Insurance net losses and loss expenses as of March 31, 2006. While AIG regularly reviews the adequacy of established loss reserves, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's loss reserves as of March 31, 2006. In the opinion of management, such adverse development and resulting increase in reserves is not likely to have a material adverse effect on AIG's consolidated financial position, although it could have a material adverse effect on AIG's consolidated results of operations for an individual reporting period.

The table below presents the reconciliation of net loss reserves for the first three months ended March 31, 2006 and 2005 as follows:

<i>(in millions)</i>	2006	2005
Net reserve for losses and loss expenses at beginning of year	\$57,476	\$47,254
Foreign exchange effect	117	28
Losses and loss expenses incurred:		
Current year	6,841	7,039
Prior years, other than accretion of discount*	35	143
Prior years, accretion of discount	101	97
Losses and loss expenses incurred	6,977	7,279
Losses and loss expenses paid	5,678	5,227
Net reserve for losses and loss expenses at end of period	\$58,892	\$49,334

* Includes \$35 million in the first three months of 2006 and \$55 million in the first three months of 2005 for the general reinsurance operations of Transatlantic and \$98 million and \$118 million of additional losses incurred in the first three months of 2006 and 2005 resulting from increased costs related to the 2005 and 2004 catastrophes.

The loss ratios recorded by AIG for the first three months of 2006 take into account the results of the comprehensive reserve reviews that were completed in the fourth quarter of 2005. As explained more fully in the 2005 Annual Report on Form 10-K, AIG's year-end 2005 reserve review reflected careful consideration of the reserve analyses prepared by AIG's internal actuarial staff with the assistance of third party actuaries. In determining the appropriate loss ratios for accident year 2006 for each class of business, AIG gave appropriate consideration to the loss ratios resulting from the reserve analyses as well as all other relevant information including rate changes, expected changes in loss costs, changes in coverage, reinsurance or mix of business, and other factors that may affect the loss ratios.

In the first three months of 2006, AIG enhanced its process of determining the quarterly loss development from prior accident years. Beginning with the first three months of 2006, additional analyses are conducted to determine the change in estimated ultimate loss for each accident year for each profit center. For example, if loss emergence for a profit center is different than expected for certain accident years in the quarter, the actuaries now take additional steps to examine the indicated effect such emergence would have on the reserves of that profit center. In some cases, the higher or lower than expected emergence may result in no clear change in the ultimate loss estimate for the accident years in question, and no adjustment would be made to the profit center's reserves for prior accident years. In other cases, the higher or lower than expected emergence may result in a larger change, either favorable or unfavorable, than the difference between the actual and expected loss emergence. Such additional analyses were conducted for each profit center, as appropriate, in the first three months of 2006 to determine the loss development from prior accident years for the first three months.

In the first three months of 2006, net loss development from prior accident years was approximately \$35 million, including approximately \$98 million pertaining to catastrophes in 2004 and 2005 and \$35 million from the general reinsurance operations of Transatlantic, but excluding approximately \$101 million pertaining to accretion of loss reserve discount applicable to accident years 2005 and prior. Excluding catastrophes and Transatlantic, as well as accretion of discount, net loss development from prior accident years in the first three months of 2006 was favorable by approximately \$98 million. The majority of the \$98 million in favorable development is attributable to shorter tail classes of business within Foreign General. Net loss development from prior accident years for DBG in the first three months of 2006 was nearly flat, excluding catastrophes and accretion of discount. Within the overall favorable development of \$98 million, accident years 2003 through 2005 experienced favorable development of approximately \$330 million, offset by approximately \$230 million of adverse development from accident years 2002 and prior.

Most classes of business throughout AIG experienced favorable loss emergence in the first three months of 2006 for accident years 2003 through 2005. The adverse development noted above from accident years 2002 and prior was primarily attributable to the excess casualty class of business, and to a lesser extent excess workers compensation. After conducting the more enhanced analyses described above, AIG determined that there was no overall adverse development in the first three months of 2006 for excess casualty, whereas there was determined to be \$35 million of prior period adverse development for excess workers compensation from accident years 2002 and prior. For excess casualty, the adverse development for accident years 2002 and prior was offset by favorable development from accident years 2003 and 2004, and to a lesser extent 2005.

In the first three months of 2005, net loss reserve development from prior accident years was approximately \$143 million, including approximately \$118 million pertaining to catastrophes in 2004 and \$55 million from the general reinsurance operations of Transatlantic, but excluding approximately \$97 million pertaining to the accretion of loss reserve discount pertaining to accident years 2004 and prior. Excluding catastrophes and Transatlantic, as well as accretion of discount, net loss development from prior accident years in the first three months of 2005 was favorable by approximately \$30 million. In the first three months of 2005, the overall favorable emergence of \$30 million was comprised of approximately \$360 million of favorable emergence from accident years 2003 and 2004, offset by approximately \$330 million of higher than expected loss emergence from accident years 2002 and prior. Most classes of business

throughout AIG contributed to the favorable emergence from accident years 2003 and 2004 in the first three months of 2005. The majority of the higher than expected emergence from accident years 2002 and prior was attributable to the directors and officers and related management liability classes of business, as well as excess casualty.

Loss Reserving Process

The General Insurance loss reserves can generally be categorized into two distinct groups. One group is long-tail casualty lines of business which include excess and umbrella liability, D&O, professional liability, medical malpractice, workers compensation, general liability, products liability, and related classes. The other group is short-tail lines of business consisting principally of property lines, personal lines and certain classes of casualty lines. These lines of business and actuarial assumptions made in the review of these lines of business are described in the 2005 Annual Report on Form 10-K.

The process of determining the current loss ratio for each class or business segment is based on a variety of factors and is described in detail in AIG's 2005 Annual Report on Form 10-K. AIG uses the process described above to update AIG's reserves on a quarterly basis. AIG's 2005 Annual Report on Form 10-K also includes a discussion and analysis of the volatility of AIG's 2005 reserve estimates and a sensitivity analysis.

Asbestos and Environmental Reserves

The estimation of loss reserves relating to asbestos and environmental claims on insurance policies written many years ago is subject to greater uncertainty than other types of claims due to inconsistent court decisions as well as judicial interpretations and legislative actions that in some cases have tended to broaden coverage beyond the original intent of such policies and in others have expanded theories of liability.

As described more fully in the 2005 Annual Report on Form 10-K, AIG's reserves relating to asbestos and environmental claims reflect the results of the comprehensive ground up analysis which was completed in the fourth quarter of 2005. AIG plans to update the ground up analysis on an annual basis. In the first three months of 2006, AIG maintained the ultimate loss estimates for asbestos and environmental claims resulting from the recently completed reserve analyses. A minor amount of incurred loss emergence pertaining to asbestos was reflected in the first three months of 2006, as depicted in the table that follows. This minor development is primarily attributable to the general reinsurance operations of Transatlantic.

A summary of reserve activity, including estimates for applicable IBNR, relating to asbestos and environmental claims separately and combined for the three months ended March 31, 2006 and 2005 follows:

<i>(in millions)</i>	2006		2005	
	Gross	Net	Gross	Net
Asbestos:				
Reserve for losses and loss expenses at beginning of year	\$4,441	\$1,840	\$2,559	\$1,060
Losses and loss expenses incurred*	5	2	78	24
Losses and loss expenses paid*	(149)	(54)	(91)	(29)
Reserve for losses and loss expenses at end of period	\$4,297	\$1,788	\$2,546	\$1,055
Environmental:				
Reserve for losses and loss expenses at beginning of year	\$ 926	\$ 410	\$ 974	\$ 451
Losses and loss expenses incurred*	-	-	(13)	(3)
Losses and loss expenses paid*	(21)	(9)	(30)	(16)
Reserve for losses and loss expenses at end of period	\$ 905	\$ 401	\$ 931	\$ 432
Combined:				
Reserve for losses and loss expenses at beginning of year	\$5,367	\$2,250	\$3,533	\$1,511
Losses and loss expenses incurred*	5	2	65	21
Losses and loss expenses paid*	(170)	(63)	(121)	(45)
Reserve for losses and loss expenses at end of period	\$5,202	\$2,189	\$3,477	\$1,487

* All amounts pertain to policies underwritten in prior years.

The gross and net IBNR included in the reserve for losses and loss expenses, relating to asbestos and environmental claims separately and combined, at March 31, 2006 and 2005 were estimated as follows:

<i>(in millions)</i>	2006		2005	
	Gross	Net	Gross	Net
Asbestos	\$3,314	\$1,425	\$1,864	\$ 786
Environmental	572	256	554	248
Combined	\$3,886	\$1,681	\$2,418	\$1,034

A summary of asbestos and environmental claims count activity for the three months ended March 31, 2006 and 2005 was as follows:

	2006			2005		
	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined
Claims at beginning of year	7,293	9,873	17,166	7,575	8,216	15,791
Claims during year:						
Opened	286	388	674	259	759	1,018
Settled	(37)	(42)	(79)	(19)	(52)	(71)
Dismissed or otherwise resolved	(295)	(296)	(591)	(130)	(879)	(1,009)
Claims at end of period	7,247	9,923	17,170	7,685	8,044	15,729

The table below presents AIG's survival ratios for asbestos and environmental claims at March 31, 2006 and 2005. The survival ratio is derived by dividing the current carried loss reserve by the average payments for the three most recent calendar years for these claims. Therefore, the survival ratio is a simplistic measure estimating the number of years it would be before the current ending loss reserves for these claims would be paid off using recent year average payments. Many factors, such as aggressive settlement procedures, mix of business and level of coverage provided, have a significant effect on the amount of asbestos and environmental reserves and payments and the resultant survival ratio. Thus, caution should be exercised in attempting to determine reserve adequacy for these claims based simply on this survival ratio.

AIG's survival ratios for asbestos and environmental claims, separately and combined were based upon a three-year average payment. These ratios at March 31, 2006 and 2005 were as follows:

<i>(number of years)</i>	Gross	Net
2006		
Survival ratios:		
Asbestos	14.7	17.8
Environmental	7.1	6.4
Combined	12.4	13.5
2005		
Survival ratios:		
Asbestos	9.8	12.7
Environmental	6.3	6.7
Combined	8.5	10.1

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad. Insurance-oriented products consist of individual and group life, payout annuities, endowment and accident and health policies. Retirement savings products consist generally of fixed and variable annuities. (See also Note 2 of Notes to Consolidated Financial Statements.)

Domestically, AIG's Life Insurance & Retirement Services operations offer a broad range of protection products, such as life insurance, group life and health products, including disability income products and payout annuities, which include single premium immediate annuities, structured settlements and terminal funding annuities. Home service operations include an array of life insurance, accident and health and annuity products sold through career agents. In addition, home service includes a small block of run-off property and casualty coverage. Retirement services include group retirement products, individual fixed and variable annuities sold

through banks, broker dealers and exclusive sales representatives, and annuity runoff operations, which include previously-acquired "closed blocks" and other fixed and variable annuities largely sold through distribution relationships that have been discontinued.

Overseas, AIG's Life Insurance & Retirement Services operations include insurance and investment-oriented products such as whole and term life, investment linked, universal life and endowments, personal accident and health products, group products including pension, life and health, and fixed and variable annuities.

Life Insurance & Retirement Services operations presented on a sub-product basis for the three months ended March 31, 2006 and 2005 were as follows:

<i>(in millions)</i>	2006	2005
GAAP premiums:		
Domestic Life:		
Life insurance ^(a)	\$ 516	\$ 497

(a) Effective January 1, 2006, the Broker/Dealer operations of the Domestic Life Insurance companies are being reported and managed within AIG Capital Advisors in Asset Management. Included in GAAP premiums were revenues of \$24 million for the first three months of 2005.

(b) Includes structured settlements, single premium immediate annuities and terminal funding annuities.

(c) Primarily represents runoff annuity business sold through discontinued distribution relationships.

(d) For purposes of this presentation, pricing net investment gains are segregated as a component of total realized gains (losses). They represent certain amounts of realized capital gains where gains are an inherent element in pricing certain life products in some foreign countries.

(e) Amounts presented were as at March 31, 2006 and December 31, 2005.

AIG's Life Insurance & Retirement Services subsidiaries report their operations through the following operating units: Domestic Life — AIG American General, including American General Life Insurance Company (AG Life), United States Life Insurance in the City of New York (USLIFE) and American General Life and Accident Insurance Company (AGLA); Domestic Retirement Services — The Variable Annuity Life Insurance Company (VALIC), AIG Annuity Insurance Company (AIG Annuity) and AIG SunAmerica; Foreign Life —

ALICO, AIRCO, AIG Edison Life, AIG Star Life, American International Assurance Company, Limited together with American International Assurance Company (Bermuda) Limited (AIA), Nan Shan Life Insurance Company, Ltd. (Nan Shan) and The Philippine American Life and General Insurance Company (Philamlife).

Life Insurance & Retirement Services Results

The increase in operating income in the first three months of 2006 when compared to the same period of 2005 is the net result of growth in domestic and foreign operations and increases in realized capital gains, somewhat offset by the negative effect of foreign exchange translation primarily related to a weaker Yen in 2006 as compared to the same period of 2005. The increase in realized capital gains in the first three months of 2006 compared to the first three months of 2005 were due to the effect of hedging activities that do not qualify for hedge accounting under FAS 133, foreign exchange gains and losses under FAS 52, offset by other-than-temporary declines in value of investments.

Life Insurance & Retirement Services GAAP premiums grew in the first three months of 2006 when compared to the same period of 2005. AIG's Domestic Life operations had continued growth of life insurance GAAP premiums. This growth reflects sustained strong periodic life sales from the independent distribution platform. Retail periodic life sales in the first three months of 2006 and 2005 were \$207 million and \$126 million, respectively. While not sustainable at this pace due to forthcoming product pricing changes, this result has positioned the Life segment to achieve another solid sales year. Strong growth of payout annuities GAAP premium emanated from sales of single premium immediate annuities. The group life/health business GAAP premium continued to decline reflecting lower growth in the credit business, and tightened pricing and underwriting in the group employer lines. Restructuring efforts in this business continue to focus on new product introductions, cross selling, other growth strategies, and exiting certain product lines. AGLA, the home service business, is diversifying product offerings, enhancing the capabilities and quality of the sales force and broadening the markets served beyond those historically serviced in an effort to accelerate growth, although it is expected to remain a slower growth business.

Domestic Retirement Services businesses faced a challenging environment in the first three months of 2006, as deposits declined approximately 7 percent compared to the same period last year. While individual variable annuity deposits grew 15 percent and group retirement deposits grew 19 percent, overall deposits declined from lower individual fixed annuity deposits. Individual fixed annuity deposits continued to decline due to the flat yield curve, which makes bank products such as certificates of deposit and other money market instruments with shorter duration more attractive than fixed annuities. Individual variable annuity deposit growth has improved since the introduction of new products in November 2005, primarily products with income and asset accumulation benefits. The following table reflects deposits for Domestic Retirement Services for the three months ended March 31, 2006 and 2005:

<i>(in millions)</i>	2006	2005
Group retirement products*	\$1,941	\$1,631
Individual fixed annuities	1,687	2,463
Individual variable annuities	1,027	891
Individual fixed annuities - runoff	43	49
Total	\$4,698	\$5,034

* Includes mutual funds.

In the first three months of 2006, surrender rates increased for individual fixed annuities, individual variable annuities and group retirement products compared to the first three months of 2005. Surrender rates for group retirement products improved modestly when compared to fourth quarter 2005. The increase in surrender rate for fixed annuities continues to be driven by the shape of the yield curve and general aging of the in-force block; however, less than 20 percent of the individual fixed annuity reserves are available to be surrendered without charge. Individual variable annuity surrenders primarily reflect the higher shock-lapse that occurs following expiration of the surrender charge period on certain 3-year and 7-year contracts (including a large closed block of acquired business). Reflecting a widespread industry phenomenon, this lapse rate, much of which was anticipated when the products were issued, has recently been affected by investor demand to exchange existing policies for new-generation contracts with living benefits or lower fees. In addition, partial withdrawals on certain variable annuity products have increased as AIG has introduced features designed to generate a stream of income to the participants. The following chart shows the amount of reserves by surrender charge category for Domestic Retirement Services as of March 31, 2006:

<i>(in millions)</i>	Group Retirement Products*	Individual Fixed Annuities	Individual Variable Annuities
Zero or no surrender charge	\$40,633	\$ 9,927	\$10,210
Between 0 percent - 4 percent	11,988	10,927	8,708
Greater than 4 percent	2,335	30,987	10,105
Non-Surrenderable	892	3,150	81
Total	\$55,848	\$54,991	\$29,104

* Excludes mutual funds.

A continued increase in the level of surrenders in any of these businesses or in the individual fixed annuities runoff block could accelerate the amortization of deferred acquisition costs in future years and will negatively affect fee income earned on assets under management. The combination of deposits and surrenders resulted in negative net flows for the first three months of 2006. The following table reflects the net flows by line of business for Domestic Retirement Services as of March 31, 2006 and 2005:

Domestic Retirement Services – Net Flows ^(a)		
<i>(in millions)</i>	2006	2005
Group retirement products ^(b)	\$ 441	\$ 279
Individual fixed annuities	(1)	1,385
Individual variable annuities	(133)	72
Individual fixed annuities - runoff	(826)	(566)
Total	\$(519)	\$1,170

(a) Net flows are defined as deposits received, less benefits, surrenders, withdrawals and death benefits.

(b) Includes mutual funds.

Foreign Life Insurance & Retirement Services GAAP premiums increased by approximately 3 percent, or approximately 8 percent in original currency. AIG transacts business in most major foreign currencies. Globally, AIG's deep and diverse distribution, which includes bancassurance, worksite marketing, direct marketing and strong agency organizations, provides a powerful distribution platform for our diverse product lines. In Japan, distribution of single premium life insurance products through banks was deregulated in December 2005 resulting in strong sales of products designed for that market during the first three months of 2006. This new distribution outlet adds to the existing multiple distribution platform in Japan where AIG remains the leading foreign provider. In Southeast Asia, there has been a continuing trend, as the market develops, for clients to purchase investment-oriented products. AIG's life operations in that region have responded to this trend by offering a wide array of investment linked products, both periodic pay and single premium, with multiple fund selection, but with minimal investment guarantees. For GAAP reporting purposes, only revenues from policy charges for insurance, administration, and surrender charges are reported as GAAP premiums for these life products. This product mix shift contributed to the single digit growth rate in Foreign Life Insurance & Retirement Services GAAP premiums, while continuing to grow total reserves by double digits.

Japanese tax authorities are expected to announce shortly a reduction in the amount of premium that policyholders may deduct from their Japanese tax returns for a certain group of accident and health products. Foreign life operations in Japan experienced a decline in sales of those specific products in the first three months of 2006; however, total accident and health sales continued to be strong overall due to growth in sales of core health products and the success of a new cancer insurance product sold by AIG Edison. In the first three months of 2006, Japan life operations launched a

new product for the corporate market and plans to launch additional products with full tax deductibility in the near future to replace those that will lose that feature. With respect to the existing products that have exposure to the change in tax regulation, the amount of first year premium reported for the full year 2005 was approximately \$129 million and the deferred acquisition cost asset at December 31, 2005 was \$267 million. To date, lapse experience has remained within pricing assumptions. Management continues to believe that any increase in policy lapses would not be material to AIG's consolidated financial condition or results of operations.

The Foreign Retirement Services business continued to grow in Japan and Korea by expanding distribution and leveraging AIG's product expertise. Reserves for individual fixed annuities continue to grow although demand for multi-currency fixed annuities in Japan has slowed due to currency rate fluctuations, and rising local interest rates and equity markets. Growth of individual variable annuities has accelerated as those products have become more popular with consumers in Japan and Europe coupled with improved performance of equity markets.

Foreign Life Insurance & Retirement Services operations produced 78 percent and 79 percent of Life Insurance & Retirement Services GAAP premiums in the first three months of 2006 and 2005, respectively.

AIG transacts business in most major foreign currencies. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of Life Insurance & Retirement Services GAAP premiums:

	2006
Growth in original currency	7.1%
Foreign exchange effect	(4.0)
Growth as reported in U.S. dollars	3.1%

The growth in net investment income in the first three months of 2006 and 2005 parallels the growth in general account reserves and surplus for both Domestic and Foreign Life Insurance & Retirement Services companies. Also, net investment income was positively affected by the compounding of previously earned and reinvested investment cash flows along with the addition of new net cash flows from operations. Investment income includes income generated from traditional fixed income investments as well as income generated from other sources. The following table summa-

rizes the components of net investment income for the three months ended March 31, 2006 and 2005:

<i>(in millions)</i>	2006	2005
Domestic		
Fixed maturities, including short term investments	\$2,308	\$2,232
Equity securities	5	-
Interest on mortgage, policy and collateral loans	189	167
Partnership income – excluding Synfuels	141	154
Partnership income – Synfuels	(37)	(36)
Other	(3)	(27)
Total investment income	2,603	2,490
Investment expenses	24	27
Net investment income	\$2,579	\$2,463
Foreign		
Fixed maturities, including short term investments	\$1,531	\$1,373
Equity securities	71	42
Interest on mortgage, policy and collateral loans	108	113

Other	70	56
Total investment income	4,788	4,391
Investment expenses	79	74
Net investment income	\$4,709	\$4,317

* Relates principally to trading and investment activity in accordance with SOP 03-1. These amounts are offset by a similar change included in incurred policy losses and benefits.

AIG generates income tax credits as a result of investing in synthetic fuel production (synfuels) related to the investment loss shown in the above table and records those benefits in its provision for income taxes. The amount of those income tax credits was \$40 million and \$54 million for the first three months of 2006 and 2005, respectively. See Note 6(l) of Notes to Consolidated Financial Statements for a further discussion of the effect of the change in oil prices on synfuel tax credits.

Realized capital gains (losses) include normal portfolio transactions as well as derivative gains (losses) for transactions that do not qualify for hedge accounting treatment under FAS 133, transactional foreign exchange gains and losses and other-than-temporary decline in the value of investments, related primarily to declines in certain high-yield credit positions. The following table summarizes realized

capital gains (losses) by major category for the three months ended March 31, 2006 and 2005:

<i>(in millions)</i>	2006	2005

Total	\$ 158	\$ (82)

Life Insurance & Retirement Services operating income grew by 17 percent in the first three months of 2006. Domestic Life operations continued to perform well in its core life insurance businesses that included growth of retail periodic sales in the first three months of 2006. Domestic Retirement Services results reflect the increase in underlying reserves which grew 6 percent over the same period last year. Foreign Life Insurance & Retirement Services operating income growth on a local currency basis was strong, but results reported in U.S. dollars were dampened by a significantly weaker Yen compared to the same period last year.

Line of business results for Domestic Life Insurance & Retirement Services exclude the effect of realized capital gains (losses), but include the related effect on the amortization of deferred acquisition costs. In addition, period to period comparisons of operating income for some lines of business are affected by yield enhancement activity, particularly partnership income. The following table summarizes Domestic Life Insurance & Retirement Services partnership income by line of business for the three months ended March 31, 2006 and 2005:

<i>(in millions)</i>	2006	2005
Domestic life – excluding Synfuels:		
Life insurance	\$ 8	\$ 79
Home service	2	1
Subtotal	10	80

<i>(in millions)</i>	2006	2005
Domestic life – Synfuels:		
Life insurance	(25)	(24)
Home service	(12)	(12)
Subtotal	(37)	(36)
Total domestic life	(27)	44
Retirement services:		
Group retirement products	42	25
Individual fixed annuities	89	49
Total retirement services	131	74
Total	\$104	\$118

Operating income for the AIG Domestic Life Insurance line of business declined 20 percent due to lower partnership income. Operating income for the home service line of business grew 12 percent in the first three months of 2006. These earnings grew due to higher investment income related to call and tender income on fixed maturity securities. The group life/health business results continue to reflect the effects of non-renewal of cases where acceptable margins could not be achieved. Payout annuities line of business increased operating income, generally in line with growth in reserves.

Group retirement products operating income grew in line with growth in underlying reserves which drives growth in fee revenues and a modest amount of additional income from yield enhancement investments. Operating income for individual fixed annuities grew as a result of growth in reserves, higher net investment income spread from partnership income and lower DAC amortization related to realized capital losses. Individual variable annuities operating income for the first three months of 2006 was negatively affected by higher deferred policy acquisition cost amortization related to increased current year surrenders. Operating income for individual fixed annuities-runoff grew 22 percent due to higher spreads from decreases in crediting rates, which have temporarily outpaced the decline in earned rates. A number of these policies will be exiting the surrender charge period in 2006.

Foreign Life Insurance & Retirement Services operating income of \$1.67 billion for the first three months of 2006 included \$352 million of realized capital gains, and for the first three months of 2005, operating income of \$1.20 billion included \$75 million of realized capital losses.

Foreign Life Insurance & Retirement Services results before the effect of realized capital gains (losses) reflects a decline of Life insurance operating income for the first three months of 2006 compared to the same period last year. The 2006 results include a \$40 million operating loss attributable to this segment's share of the losses from AIG Credit Card Company (Taiwan) compared to a gain of \$10 million in the first three months of 2005. Also, an additional provision was made to the Singapore and Malaysia participating policyholder reserve of \$18 million. These items coupled with a \$29 million positive effect from DAC unlocking in the same period in 2005 resulted in lower year-on-year operating in-

come growth. On a comparable basis, the growth in Life insurance results was generally in line with the growth in reserves. Personal accident & health results reflect continued stable profit margins, but year-on-year comparisons in U.S. dollars are affected by the weakening Yen exchange rate given the large concentration of that product line in Japan. Group results grew across all segments and were greatly improved against last year. The largest contributor to the growth in group products is the pension profit center which experienced higher growth in fee income emanating from increased assets under management. Growth of individual fixed annuities operating income, emanating primarily from Japan, is in line with the growth in average assets under management and the greater benefits from increasing scale. The growth of individual variable annuities reflects strong growth in assets under management related to the increased demand for that product in Japan.

The contribution of Life Insurance & Retirement Services operating income to AIG's consolidated income before income taxes, minority interest and cumulative effect of an accounting change amounted to 53 percent in the first three months of 2006, compared to 39 percent in the same period of 2005.

Underwriting and Investment Risk

The risks associated with life and accident and health products are underwriting risk and investment risk. The risk associated with the financial and investment contract products is primarily investment risk.

Underwriting risk represents the exposure to loss resulting from the actual policy experience adversely emerging in comparison to the assumptions made in the product pricing associated with mortality, morbidity, termination and expenses. The emergence of significant adverse experience would require an adjustment to DAC and benefit reserves that could have a substantial effect on AIG's results of operations.

Natural disasters such as hurricanes, earthquakes and other catastrophes have the potential to adversely affect AIG's operating results. Other risks, such as an outbreak of a pandemic disease, such as the Avian Influenza A Virus (H5N1), could adversely affect AIG's business and operating results to an extent that may be only minimally offset by reinsurance programs.

While outbreaks of the Avian Flu continue to occur among poultry or wild birds in a number of countries in Asia, Europe, and Africa, transmission to humans has been rare to date. If the virus mutates to a form that can be transmitted from human to human, it has the potential to spread rapidly worldwide. If such an outbreak were to take place, early quarantine and vaccination could be critical to containment.

Both the contagion and mortality rate of any mutated H5N1 virus that can be transmitted from human to human are highly speculative. AIG continues to monitor the developing facts. A significant global outbreak could have a material adverse effect on Life Insurance & Retirement Services operating results and liquidity from increased mortality and morbidity rates.

AIG's Foreign Life Insurance & Retirement Services companies generally limit their maximum underwriting exposure on life insurance of a single life to approximately \$1.7 million of coverage. AIG's Domestic Life Insurance & Retirement Services companies limit their maximum underwriting exposure on life insurance of a single life to \$10 million of coverage in certain circumstances by using yearly renewable term reinsurance. (See also the discussion under "Liquidity" herein.)

AIRCO acts primarily as an internal reinsurance company for AIG's foreign life operations. This facilitates insurance risk management (retention, volatility, concentrations) and capital planning locally (branch and subsidiary). It also allows AIG to pool its insurance risks and purchase reinsurance more efficiently at a consolidated level, manage global counterparty risk and relationships and manage global life catastrophe risks.

AIG's domestic Life Insurance & Retirement Services operations utilize internal and third-party reinsurance relationships to manage insurance risks and to facilitate capital management strategies. Pools of highly-rated third-party reinsurers are utilized to manage net amounts at risk in excess of retention limits. AIG's domestic life insurance companies also cede excess, non-economic reserves carried on a statutory-basis only on certain term and universal life insurance policies and certain fixed annuities to AIG Life of Bermuda Ltd., a wholly owned Bermuda reinsurer.

AIG generally obtains letters of credit in order to obtain statutory recognition of these intercompany reinsurance transactions. For this purpose, AIG entered into a \$2.5 billion syndicated letter of credit facility in December 2004. Letters of credit totaling \$2.50 billion were outstanding as of March 31, 2006. The letter of credit facility has a ten-year term, but the facility can be reduced or terminated by the lenders beginning after seven years.

In November 2005, AIG entered into a revolving credit facility for an aggregate amount of \$3 billion. The facility can be drawn in the form of letters of credit with terms of up to ten years. As of March 31, 2006, \$1.99 billion principal amount of letters of credit are outstanding under this facility, of which approximately \$620 million relates to life intercompany reinsurance transactions. AIG also obtained approximately \$273 million letters of credit on a bilateral basis.

Investment risk represents the exposure to loss resulting from the cash flows from the invested assets, primarily long-

term fixed rate investments, being less than the cash flows required to meet the obligations of the expected policy and contract liabilities and the necessary return on investments. (See also the discussion under “Liquidity” herein.)

To minimize its exposure to investment risk, AIG tests the cash flows from the invested assets and policy and contract liabilities using various interest rate scenarios to evaluate investment risk and to confirm that assets are sufficient to pay these liabilities.

AIG actively manages the asset-liability relationship in its foreign operations, as it has been doing throughout AIG’s history, even though certain territories lack qualified long-term investments or certain local regulatory authorities may impose investment restrictions. For example, in several Southeast Asian countries, the duration of investments is shorter than the effective maturity of the related policy liabilities. Therefore, there is risk that the reinvestment of the proceeds at the maturity of the initial investments may be at a yield below that of the interest required for the accretion of the policy liabilities. Additionally, there exists a future investment risk associated with certain policies currently in force which will have premium receipts in the future. That is, the investment of these future premium receipts may be at a yield below that required to meet future policy liabilities.

In the first three months of 2006, new money investment yields have been generally rising in some markets, such as Japan, Thailand and the U.S., which is generally favorable to AIG’s spread-based businesses. In regard to inforce business, management focus is required in both the investment and product management process to maintain an adequate yield to match the interest necessary to support future policy liabilities. Business strategies continue to evolve to maintain profitability of the overall business. As such, in some countries, new products are being introduced with minimal investment guarantees resulting in a shift toward investment linked savings products and away from traditional savings products with higher guarantees.

The investment of insurance cash flows and reinvestment of the proceeds of matured securities and coupons requires active management of investment yields while maintaining satisfactory investment quality and liquidity.

AIG may use alternative investments in certain foreign jurisdictions where interest rates remain low and there are limited long-dated bond markets, including equities, real estate and foreign currency denominated fixed income instruments to extend the duration or increase the yield of the investment portfolio to more closely match the requirements of the policyholder liabilities and DAC recoverability. This strategy has been effectively used in Japan and more recently by Nan Shan in Taiwan. Foreign assets comprised approximately 31 percent of Nan Shan’s invested assets at March 31, 2006, slightly below the maximum allowable percentage under current regulation. In response to the low interest rate

environment and the volatile exchange rate of the NT dollar, Nan Shan is emphasizing new products with lower implied guarantees, including participating endowments and variable universal life. Although the risks of a continued low interest rate environment coupled with a volatile NT dollar could increase net liabilities and require additional capital to maintain adequate local solvency margins, Nan Shan currently believes it has adequate resources to meet all future policy obligations.

AIG actively manages the asset-liability relationship in its domestic operations. This relationship is more easily managed through the ample supply of qualified long-term investments.

AIG uses asset-liability matching as a management tool worldwide to determine the composition of the invested assets and appropriate marketing strategies. As a part of these strategies, AIG may determine that it is economically advantageous to be temporarily in an unmatched position due to anticipated interest rate or other economic changes. In addition, the absence of long-dated fixed income instruments in certain markets may preclude a matched asset-liability position in those markets.

A number of guaranteed benefits, such as living benefits or guaranteed minimum death benefits, are offered on certain variable life and variable annuity products. AIG manages its exposure resulting from these long-term guarantees through reinsurance or capital market hedging instruments.

DAC for Life Insurance & Retirement Services products arises from the deferral of those costs that vary with, and are directly related to, the acquisition of new or renewal business. Policy acquisition costs for life insurance products are generally deferred and amortized over the premium paying period of the policy. Policy acquisition costs that relate to universal life and investment-type products, including variable and fixed annuities (investment-oriented products) are deferred and amortized, with interest, as appropriate, in relation to the historical and future incidence of estimated gross profits to be realized over the estimated lives of the contracts. Amortization expense includes the effects of current period realized capital gains and losses for investment type products. With respect to investment-oriented products, AIG’s policy is to adjust amortization assumptions for DAC when estimates of current or future gross profits to be realized from these contracts are revised. With respect to variable annuities sold domestically (representing the vast majority of AIG’s variable annuity business), the assumption for the long-term annual net growth rate of the equity markets used in the determination of DAC amortization is approximately ten percent. A methodology referred to as “reversion to the mean” is used to maintain this long-term net growth rate assumption, while giving consideration to short-term variations in equity markets. Estimated gross profits include investment income and gains and losses less interest required on policyholder

reserves, as well as other charges in the contract less actual mortality and expenses. Current experience and changes in the expected future gross profits are analyzed to determine the effect on the amortization of DAC. The estimation of

projected gross profits requires significant management judgment. The assumptions with respect to the current and projected gross profits are reviewed and analyzed quarterly and are adjusted accordingly.

The following table summarizes the major components of the changes in deferred acquisition costs and the value of business acquired (VOBA) for the three months ended March 31, 2006 and 2005:

<i>(in millions)</i>	2006			2005		
	DAC	VOBA	Total	DAC	VOBA	Total
Domestic Life Insurance & Retirement Services:						
Balance at beginning of year	\$10,505	\$ 865	\$11,370	\$ 8,830	\$ 836	\$ 9,666

Foreign Life Insurance & Retirement Services:						
Balance at beginning of year	\$16,552	\$1,278	\$17,830	\$14,472	\$1,681	\$16,153
Acquisition costs deferred	1,206	-	1,206	1,163	-	1,163
Amortization (charged) or credited to operating income:						
Related to realized capital gains (losses)	1	-	1	-	-	-
Related to unlocking future assumptions	17	-	17	31	-	31
All other amortization	(524)	(44)	(568)	(487)	(60)	(547)
Change in unrealized gains (losses) on securities	5	(4)	1	(81)	1	(80)
Increase (decrease) due to foreign exchange	473	41	514	149	(19)	130
Balance at end of period	\$17,730	\$1,271	\$19,001	\$15,247	\$1,603	\$16,850
Total Life Insurance & Retirement Services:						
Balance at beginning of year	\$27,057	\$2,143	\$29,200	\$23,302	\$2,517	\$25,819
Acquisition costs deferred	1,763	-	1,763	1,704	-	1,704
Amortization (charged) or credited to operating income:						
Related to realized capital gains (losses)	14	6	20	10	(2)	8
Related to unlocking future assumptions	19	-	19	31	-	31
All other amortization	(889)	(70)	(959)	(849)	(81)	(930)
Change in unrealized gains (losses) on securities	1,099	87	1,186	745	66	811
Increase (decrease) due to foreign exchange	472	41	513	147	(19)	128
Balance at end of period	\$29,535	\$2,207	\$31,742	\$25,090	\$2,481	\$27,571

AIG's variable annuity earnings will be affected by changes in market returns because separate account revenues, primarily composed of mortality and expense charges and asset management fees, are a function of asset values.

DAC for both insurance-oriented and investment-oriented products as well as retirement services products are

reviewed for recoverability, which involves estimating the future profitability of current business. This review also involves significant management judgment. If the actual emergence of future profitability were to be substantially different than that estimated, AIG's results of operations could be significantly affected in future periods.

Invested Assets

The following tables summarize the composition of AIG's invested assets by segment, at March 31, 2006 and December 31, 2005:

<i>(in millions)</i>	General Insurance	Life Insurance & Retirement Services	Asset Management	Financial Services	Other	Total
2006

Insurance and Asset Management Invested Assets

AIG's investment strategy is to invest primarily in high quality securities while maintaining diversification to avoid significant exposure to issuer, industry and/or country concentrations. With respect to Domestic General Insurance, AIG's strategy is to invest in longer duration fixed maturity investments to maximize the yields at the date of purchase. With respect to Life Insurance & Retirement Services, AIG's strategy is to produce cash flows required to meet maturing insurance liabilities. (See also the discussion under "Operating Review: Life Insurance & Retirement Services Operations" herein.) AIG invests in equities for various reasons, including diversifying its overall exposure to interest rate risk. Available for sale bonds and equity securities are subject to declines in fair value. Such declines in fair value are presented in unrealized appreciation or depreciation of investments, net of taxes as a component of accumulated other comprehensive

income. Declines that are determined to be other-than-temporary are reflected in income in the period in which the intent to hold the securities to recovery no longer exists. See "Valuation of Invested Assets". Generally, insurance regulations restrict the types of assets in which an insurance company may invest. When permitted by regulatory authorities and when deemed necessary to protect insurance assets, including invested assets, from adverse movements in foreign currency exchange rates, interest rates and equity prices, AIG and its insurance subsidiaries may enter into derivative transactions as end users. (See also the discussion under "Derivatives" herein.)

In certain jurisdictions, significant regulatory and/or foreign governmental barriers exist which may not permit the immediate free flow of funds between insurance subsidiaries or from the insurance subsidiaries to AIG parent.

The following tables summarize the composition of AIG's insurance and asset management invested assets by segment, at March 31, 2006 and December 31, 2005:

<i>(dollars in millions)</i>	General Insurance	Life Insurance & Retirement Services	Asset Management	Total	Percent of Total	<u>Percent Distribution</u> Domestic Foreign

Credit Quality

At March 31, 2006, approximately 60 percent of the fixed maturities investments were domestic securities. Approximately 36 percent of such domestic securities were rated AAA by one or more of the principal rating agencies. Approximately six percent were below investment grade or not rated.

A significant portion of the foreign fixed income portfolio is rated by Moody's Investors Service (Moody's), S&P or similar foreign services. Similar credit quality rating services are not available in all overseas locations. AIG reviews the credit quality of the foreign portfolio nonrated fixed income investments, including mortgages. At March 31, 2006, approximately 18 percent of the foreign fixed income investments were either rated AAA or, on the basis of AIG's internal analysis, were equivalent from a credit standpoint to securities so rated. Approximately six percent were below investment grade or not rated at that date. A large portion of the foreign fixed income portfolio are sovereign fixed maturity securities supporting the policy liabilities in the country of issuance.

Any fixed income security may be subject to downgrade for a variety of reasons subsequent to any balance sheet date.

Valuation of Invested Assets

AIG has the ability to hold any fixed maturity security to its stated maturity, including those fixed maturity securities classified as available for sale. Therefore, the decision to sell any such fixed maturity security classified as available for sale reflects the judgment of AIG's management that the security sold is unlikely to provide, on a relative value basis, as attractive a return in the future as alternative securities entailing comparable risks. With respect to distressed securities, the sale decision reflects management's judgment that the risk-discounted anticipated ultimate recovery is less than the value achievable on sale.

The valuation of invested assets involves obtaining a market value for each security. The source for the market value is generally from market exchanges or dealer quotations, with the exception of nontraded securities.

If AIG chooses to hold a security, it evaluates the security for an other-than-temporary impairment in valuation. As a

matter of policy, the determination that a security has incurred an other-than-temporary decline in value and the amount of any loss recognition requires the judgment of AIG's management and a continual review of its investments.

In general, a security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer);
- The occurrence of a discrete credit event resulting in (i) the issuer defaulting on a material outstanding obligation; or (ii) the issuer seeking protection from creditors under the bankruptcy laws or any similar laws intended for the court supervised reorganization of insolvent enterprises; or (iii) the issuer proposing a voluntary reorganization pursuant to which creditors are asked to exchange their claims for cash or securities having a fair value substantially lower than par value of their claims; or
- In the opinion of AIG's management, it is probable that AIG may not realize a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

At each balance sheet date, AIG evaluates its securities holdings in an unrealized loss position. Where AIG does not intend to hold such securities until they have fully recovered their carrying value based on the circumstances present at the date of evaluation, AIG records the unrealized loss in income. If events or circumstances change, such as unexpected changes in creditworthiness of the obligor, general interest rate environment, tax circumstances, liquidity events, and statutory capital management considerations among others, AIG revisits its intent to determine if a loss should be recorded in income. Further, if a loss is recognized from a sale subsequent to a balance sheet date pursuant to these changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer exists.

Once a security has been identified as other-than-temporarily impaired, the amount of such impairment is determined by reference to that security's contemporaneous market price and recorded as a charge to earnings.

As a result of these policies, AIG recorded other-than-temporary impairment losses, net of taxes, of \$147 million and \$61 million in the first three months of 2006 and 2005, respectively.

No impairment charge with respect to any one single credit was significant to AIG's consolidated financial condition or results of operations, and no individual impairment loss exceeded 1.0 percent of consolidated net income for the first three months of 2006.

Excluding the other-than-temporary impairments noted above, the changes in market value for AIG's available for sale portfolio, which constitutes the vast majority of AIG's investments, were recorded in accumulated other comprehensive income as unrealized gains or losses, net of tax.

At March 31, 2006, the fair value of AIG's fixed maturities and equity securities aggregated to \$417.9 billion. At March 31, 2006, aggregate unrealized gains after taxes for fixed maturity and equity securities were \$9.5 billion. At March 31, 2006, the aggregate unrealized losses after taxes of fixed maturity and equity securities were approximately \$3.7 billion.

The effect on net income of unrealized losses after taxes will be further mitigated upon realization, because certain realized losses will be charged to participating policyholder accounts, or realization will result in current decreases in the amortization of certain deferred policy acquisition costs.

At March 31, 2006, unrealized losses for fixed maturity securities and equity securities did not reflect any significant industry concentrations.

The amortized cost of fixed maturities available for sale in an unrealized loss position at March 31, 2006, by contractual maturity, is shown below:

<i>(in millions)</i>	Amortized Cost
Due in one year or less	\$ 4,876
Due after one year through five years	31,523
Due after five years through ten years	74,930
Due after ten years	75,950
Total	\$187,279

In the three months ended March 31, 2006, the pretax realized losses incurred with respect to the sale of fixed maturities and equity securities were \$380 million. The aggregate fair value of securities sold was \$13.9 billion, which was approximately 97 percent of amortized cost. The average period of time that securities sold at a loss during the three months ended March 31, 2006 were trading continuously at a price below book value was approximately four months.

At March 31, 2006, aggregate pretax unrealized gains were \$14.7 billion, while the pretax unrealized losses with respect to investment grade bonds, below investment grade bonds and equity securities were \$5.2 billion, \$270 million and \$206 million, respectively. Aging of the pretax unrealized losses with respect to these securities, distributed as a percentage of cost relative to unrealized loss (the extent by which the market value is less than amortized cost or cost), including the number of respective items, was as follows:

Aging (dollars in millions)	Less than or equal to 20% of Cost ^(a)			Greater than 20% to 50% of Cost ^(a)			Greater than 50% of Cost ^(a)			Total

(a) For bonds, represents amortized cost.

(b) As more fully described above, upon realization, certain realized losses will be charged to participating policyholder accounts, or realization will result in a current decrease in the amortization of certain deferred policy acquisition costs.

As stated previously, the valuation for AIG's investment portfolio comes from market exchanges or dealer quotations, with the exception of nontraded securities. AIG considers nontraded securities to mean certain fixed income investments, certain structured securities, direct private equities, limited partnerships and hedge funds. The aggregate carrying value of these securities at March 31, 2006 was approximately \$65 billion.

The methodology used to estimate fair value of nontraded fixed income investments is by reference to traded securities with similar attributes and using a matrix pricing methodology. This technique takes into account such factors as the industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, and other relevant factors. The change in fair value is recognized as a component of accumulated other comprehensive income, net of tax.

For certain structured securities, the carrying value is based on an estimate of the security's future cash flows pursuant to the requirements of Emerging Issues Task Force Issue No. 99-20, "Recognition of Interest Income and Impairment on Purchased and Retained Beneficial Interests in Securitized

Financial Assets." The change in carrying value is recognized in income.

Hedge funds and limited partnerships in which AIG holds in the aggregate less than a five percent interest are reported at fair value. The change in fair value is recognized as a component of accumulated other comprehensive income, net of tax.

With respect to hedge funds and limited partnerships in which AIG holds in the aggregate a five percent or greater interest, AIG uses the equity method to record these investments. The changes in such net asset values are recorded in income.

AIG obtains the fair value of its investments in limited partnerships and hedge funds from information provided by the general partner or manager of each of these investments, the accounts of which are generally audited on an annual basis.

Each of these investment categories is regularly tested to determine if impairment in value exists. Various valuation

techniques are used with respect to each category in this determination.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets transactions, consumer finance and insurance premium financing. (See also Note 2 of Notes to Consolidated Financial Statements.)

Aircraft Finance

AIG's Aircraft Finance operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to domestic and foreign airlines. Revenues also result from the remarketing of commercial jets for its own account, and remarketing and fleet management for airlines and financial institutions.

ILFC finances its purchases of aircraft primarily through the issuance of a variety of debt instruments. The composite borrowing rates, which include the effect of economic hedges, at the end of the first three months of 2006 and 2005 were 5.12 percent and 4.49 percent, respectively. (See also the discussions under "Capital Resources" and "Liquidity" herein and Note 2 of Notes to Consolidated Financial Statements.)

ILFC's sources of revenue are principally from scheduled and charter airlines and companies associated with the airline industry. The airline industry is sensitive to changes in economic conditions, cyclical and highly competitive. Airlines and related companies may be affected by political or economic instability, terrorist activities, changes in national policy, competitive pressures on certain air carriers, fuel prices and shortages, labor stoppages, insurance costs, recessions, world health issues and other political or economic events adversely affecting world or regional trading markets. ILFC's revenues and income will be affected by its customers' ability to react and cope with the volatile competitive environment in which they operate, as well as ILFC's own competitive environment.

ILFC is exposed to operating loss and liquidity strain through nonperformance of aircraft lessees, through owning aircraft which it would be unable to sell or re-lease at acceptable rates at lease expiration and, in part, through committing to purchase aircraft which it would be unable to lease.

ILFC manages the risk of nonperformance by its lessees with security deposit requirements, through repossession rights, overhaul requirements, and closely monitoring industry conditions through its marketing force. However, there can be no assurance that ILFC would be able to successfully manage the risks relating to the effect of possible future deterioration in the airline industry. Approximately 90 percent of ILFC's fleet is leased to non-U.S. carriers, and the fleet, com-

prised of the most efficient aircraft in the airline industry, continues to be in high demand from such carriers.

ILFC typically contracts to re-lease aircraft before the end of the existing lease term. For aircraft returned before the end of the lease term, ILFC has generally been able to re-lease such aircraft within two to six months of its return. As a lessor, ILFC considers an aircraft "idle" or "off lease" when the aircraft is not subject to a signed lease agreement or signed letter of intent. ILFC had no aircraft off lease at March 31, 2006, and all new aircraft deliveries in 2006 have been leased. (See also the discussions under "Capital Resources" and "Liquidity" herein.)

Management formally reviews regularly, and no less frequently than quarterly, issues affecting ILFC's fleet, including events and circumstances that may cause impairment of aircraft values. Management evaluates aircraft in the fleet as necessary, based on these events and circumstances in accordance with Statement of Financial Accounting Standards No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets" (FAS 144). ILFC has not recognized any impairment related to its fleet. ILFC has been able to re-lease the aircraft without diminution in lease rates to an extent that would require an impairment write-down. (See also the discussions under "Liquidity" herein.)

Capital Markets

Capital Markets represents the operations of AIGFP, which engages as principal in a wide variety of financial transactions, including standard and customized financial products involving commodities, credit, currencies, energy, equities and rates. AIGFP also invests in a diversified portfolio of securities and engages in borrowing activities involving issuing standard and structured notes and other securities, and entering into guaranteed investment agreements.

As Capital Markets is a transaction-oriented operation, current and past revenues and operating results may not provide a basis for predicting future performance. Also, AIG's Capital Markets operations may be adversely affected by the downgrades in AIG's credit ratings. See Item 1A. in Part II of this Quarterly Report, for a further discussion of the potential effect of the rating downgrades on AIG's Capital Markets businesses herein.

AIG's Capital Markets operations derive substantially all their revenues from hedged financial positions entered in connection with counterparty transactions rather than from speculative transactions. AIGFP participates as a dealer in a wide variety of financial derivatives transactions.

As a dealer in financial derivatives, AIGFP marks all derivative and trading transactions to fair value daily. Thus, a gain or loss on each transaction is recognized daily. Under GAAP, in certain instances, gains and losses are required to be recorded in earnings immediately, whereas in other in-

stances, they are required to be recognized over the life of the underlying instruments. AIGFP economically hedges the market risks arising from its transactions, although hedge accounting is not currently being applied to any of the derivatives and related assets and liabilities. Accordingly, revenues and operating income are exposed to volatility resulting from differences in the timing of revenue recognition between the derivatives and the hedged assets and liabilities. Revenues and operating income of the Capital Markets operations and the percentage change in these amounts for any given period are also significantly affected by the number, size and profitability of transactions entered into by these subsidiaries during that period relative to those entered into during the prior period. Generally, the realization of transaction revenues as measured by the receipt of funds is not a significant reporting event as the gain or loss on AIGFP's trading transactions is currently reflected in operating income as the fair values change from period to period.

Derivative transactions are entered into in the ordinary course of Capital Markets operations. Therefore, income on derivatives is recorded at fair value, determined by reference to the mark to market value of the derivative or their estimated fair value where market prices are not readily available. The resulting aggregate unrealized gains or losses from the derivative are reflected in the income statement. Where Capital Markets cannot verify significant model inputs to observable market data and verify the model value to market transactions, Capital Markets values the contract at the transaction price at inception and, consequently, records no initial gain or loss in accordance with Emerging Issues Task Force Issue No. 02-03, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities" (EITF 02-03). Such initial gain or loss is recognized over the life of the transaction. Capital Markets periodically reevaluates its revenue recognition under EITF 02-03 based on the observability of market parameters. The mark to fair value of derivative transactions is reflected in the balance sheet in the captions "Unrealized gain on swaps, options and forward transactions," "Unrealized loss on swaps, options and forward transactions," "Trading assets" and "Trading liabilities." Unrealized gains represent the present value of the aggregate of each net receivable by counterparty, and the unrealized losses represent the present value of the aggregate of each net payable by counterparty as of March 31, 2006. These amounts will change from one period to the next due to changes in interest rates, currency rates, equity and commodity prices and other market variables, as well as cash movements, execution of new transactions and the maturing of existing transactions. (See also the discussion under "Derivatives" herein.)

Spread income on investments and borrowings is recorded on an accrual basis over the life of the transaction. Investments are classified as securities available for sale and

are marked to market with the resulting unrealized gains or losses reflected in accumulated other comprehensive income. U.S. dollar denominated borrowings are carried at cost, while borrowings in any currency other than the U.S. dollar result in unrealized foreign exchange gains or losses reported in income. AIGFP hedges the economic exposure on its investments and borrowings on a portfolio basis using derivatives and other financial instruments. While these hedges are highly effective economic hedges, the requirements under FAS 133 hedge accounting were not met. The change in the fair value of the derivatives used to hedge these economic exposures is therefore included in other revenues while the offsetting change in fair value of the hedged items is not recognized in earnings.

Consumer Finance

Domestically, AIG's Consumer Finance operations are principally conducted through American General Finance, Inc. (AGF). AGF derives a substantial portion of its revenues from finance charges assessed on outstanding real estate loans, secured and unsecured non-real estate loans and retail sales finance receivables. The real estate loans include first or second mortgages on residential real estate generally having a maximum term of 360 months, and are considered non-conforming. These loans may be closed-end accounts or open-end home equity lines of credit and may be fixed-rate or adjustable rate products. The non-real estate loans are secured by consumer goods, automobiles, or other personal property or are unsecured. Both secured and unsecured non-real estate loans generally have a maximum term of 60 months. The core of AGF's originations is sourced through its branches. However, a significant volume of real estate loans is also originated through broker relationships, and to lesser extents, through correspondent relationships and direct mail solicitations. In the first three months of 2006, two wholly-owned subsidiaries of AGF discontinued originating real estate loans through an arrangement with AIG Bank and began originating such loans under their own state licenses.

Many of AGF's borrowers are non-prime or sub-prime. Current economic conditions, such as interest rate and employment, have a direct effect on the borrowers' ability to repay these loans. AGF manages the credit risk inherent in its portfolio by using credit scoring models at the time of credit applications, established underwriting criteria, and in certain cases, individual loan reviews. AGF's Credit Strategy and Policy Committee monitors the quality of the finance receivables portfolio on a monthly basis when determining the appropriate level of the allowance for losses. The Credit Strategy and Policy Committee bases its conclusions on quantitative analyses, qualitative factors, current economic conditions and trends, and each committee member's experience in the consumer finance industry. Through the first three months of 2006, the credit quality of AGF's finance receivables continues to be strong. However, declines in the

strength of the U.S. housing market or economy may adversely affect the future credit quality of these receivables.

Internationally, AIG's Consumer Finance operations are principally conducted through AIG Consumer Finance Group (CFG). CFG operates primarily in emerging and developing markets. CFG has operations in Hong Kong, Taiwan, the Philippines, Thailand, Poland, Argentina, and Mexico. While products vary by market, the businesses generally provide credit cards, unsecured and secured non-real estate loans, term deposits, savings accounts, retail sales finance and real estate loans.

Consumer Finance operations are exposed to loss when contractual payments are not received. Credit loss exposure is managed through underwriting controls, mix of finance receivables, collateral and collection efficiency.

CFG monitors the quality of its finance receivable portfolio through a combination of a monthly Credit Review and quarterly Credit Reserve Committee review when determining the appropriate level of the allowance for losses. The Credit Reserve Committee bases its conclusions on quantitative analysis, qualitative factors, current economic conditions and trends, political and regulatory implications, competition, and the judgment of the committee's members. As a result of such a review and in light of industry-wide deteriorating credit conditions and tightening of overall consumer credit, the aggregate allowance for losses in AIG Credit Card Company (Taiwan) was increased by \$88 million pre-tax to approximately \$130 million, CFG's best estimate of the overall exposure at March 31, 2006. The allowance, which represents approximately 20 percent of CFG's outstanding credit card receivables for Taiwan at that date, was shared equally by the Financial Services and Life Insurance & Retirement Services segments.

Financial Services operations for the three months ended March 31, 2006 and 2005 were as follows:

<i>(in millions)</i>	2006	2005
Revenues ^(a) :		
Aircraft Finance ^(b)	\$ 965	\$ 827
Capital Markets ^{(c)(d)}	(300)	756
Consumer Finance ^(e)	924	833
Other	26	20
Total	\$1,615	\$2,436
Operating income (loss) ^(a) :		
Aircraft Finance	\$ 129	\$ 187
Capital Markets ^(d)	(470)	620
Consumer Finance ^(f)	175	221
Other, including intercompany adjustments	7	17
Total	\$ (159)	\$1,045

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the first three months of 2006 and 2005, the effect was \$0 and \$15 million, respectively, in operating income for Aircraft Finance and \$(678) million and \$468 million in both revenues and operating income for Capital Markets. These amounts result primarily

from interest rate and foreign currency derivatives hedging available for sale securities and borrowings.

(b) Revenues are primarily from ILFC aircraft lease rentals.

(c) Revenues, shown net of interest expense, are primarily from hedged financial positions entered into in connection with counterparty transactions and the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 described in (a) above.

(d) Certain transactions entered into by AIGFP generate tax credits and benefits which are included in income taxes in the consolidated statement of income.

The amount of such tax credits and benefits for the first three months of 2006 and 2005 are \$18 million, and \$19 million, respectively.

(e) Revenues are primarily finance charges.

(f) Includes \$44 million in additional allowance for losses from AIG Credit Card Company (Taiwan) in 2006.

Financial Services Results

Financial Services operating income decreased in the first three months of 2006 compared to the same period of 2005 due to the effect of hedging activities that do not qualify for hedge accounting under FAS 133.

Fluctuations in revenues and operating income from quarter to quarter are not unusual because of the transaction-oriented nature of Capital Markets operations and the volatility resulting from the accounting treatment for the economic hedges under FAS 133. The overwhelming majority of AIG's financial derivatives are conducted by the Capital Markets operations. Capital Markets enters into derivative transactions to hedge the interest rate and foreign currency exposures associated with its available for sale assets and borrowings. While the derivatives entered into to hedge its outstanding transactions and positions are highly effective economic hedges, AIG did not meet the requirements for hedge accounting under FAS 133. The change in the fair value of these derivatives is included in other revenues while the offsetting change in fair value of the hedged items is not recognized in earnings.

The effect of the Capital Markets' derivatives not qualifying for hedge accounting on revenues and operating income in the first three months of 2006 and 2005 was \$(678) million and \$468 million, respectively. The majority of the net loss on AIGFP's derivatives recognized in the first three months of 2006 was due to the rise in long-term U.S. interest rates, which resulted in a decrease in the fair value of its interest rate derivatives hedging its borrowings. To a lesser extent, the net loss was also due to slight weakening in the U.S. dollar against other currencies resulting in a decrease in the fair value of the foreign currency derivatives hedging AIGFP's available for sale securities. The majority of the net gain on AIGFP's derivatives in the first three months of 2005 was due to the strengthening of the U.S. dollar against the Euro, which increased the fair value of the foreign currency derivatives hedging available for sale securities. Long-term rates remained relatively flat in the first three months of 2005, thus having minimal effect on the fair value of the derivatives hedging AIGFP's borrowings.

To the extent the Financial Services subsidiaries, other than AIGFP, use derivatives to economically hedge their assets or liabilities with respect to their future cash flows, and such hedges do not qualify for hedge accounting treatment under FAS 133, the changes in fair value of such derivatives are recorded in realized capital gains (losses) or other revenues.

Financial market conditions in the first three months of 2006 continued to be characterized by a general flattening of interest rate yield curves across fixed income markets globally, tightening of credit spreads and equity valuations that were slightly higher. The decline in Capital Markets operating results for the first three months of 2006 was principally due to losses on derivatives not qualifying for hedge accounting under FAS 133, which was partially offset by improved transaction flow in AIGFP's credit, commodity index and equity products.

The most significant component of Capital Markets operating expenses is compensation, which was approximately \$136 million and \$111 million in the first three months of 2006 and 2005, respectively. The amount of compensation was not affected by gains and losses not qualifying for hedge accounting treatment under FAS 133.

As a result of AIG's early adoption of FAS 155, AIGFP elected to apply the fair value option to certain of its structured notes and other financial liabilities containing embedded derivatives outstanding as of January 1, 2006. The cumulative effect from the adoption of FAS 155 on these instruments at January 1, 2006 was a loss of approximately \$29 million pre-tax. The application of the fair value option to these hybrid financial instruments did not have a significant effect on AIGFP's operating income for the three months ended March 31, 2006.

ILFC's operating income decreased in the first three months of 2006 compared to the same period of 2005 as improvements in sales environment and increased lease revenues were offset by increased borrowing costs and certain adjustments for credit and tax reserves and lease-related accruals. ILFC's revenues increased in the first three months of

2006 compared to the same period of 2005 as a result of growth in the number of aircraft in ILFC's fleet, continued net improvements in lease rates and an increase in overhaul revenue.

Consumer Finance's operating income decreased in the first three months of 2006 compared to the same period of 2005 primarily due to the increase in borrowing costs and increases in the allowance for losses related to industry-wide credit deterioration in the Taiwan credit card market, which is going through credit tightening and uncertain regulatory developments.

Domestically, the relatively low interest rate environment throughout 2005 and the first three months of 2006 contributed to a high level of mortgage refinancing activity. AGF's average net finance receivables increased 14 percent in the first three months of 2006 when compared to the same period in 2005. However, net originations and purchases of finance receivables in AGF's centralized real estate business segment decreased in the first three months of 2006 as compared to the same period in 2005 primarily caused by a less robust U.S. housing market. The increase in AGF's revenues that principally resulted from portfolio growth was offset by higher interest expense and depressed whole loan sale prices resulting from a flattened yield curve. Both short-term and long-term market interest rates continued to increase significantly over the past year. AGF's short-term and long-term borrowing costs were 4.59 percent and 4.84 percent in the first three months of 2006, respectively, compared to 3.03 percent and 4.34 percent in the same period in 2005, respectively. Despite high energy costs, the U.S. economy continued to expand during the first three months of 2006, improving consumer credit quality. AGF's charge-off ratio improved 37 basis points in the first three months of 2006 when compared to the same period in 2005. AGF's delinquency ratio at March 31, 2006 improved 24 basis points when compared to March 31, 2005. At March 31, 2006, AGF's allowance ratio was 2.10 percent compared to 2.12 percent at March 31, 2005.

Financial Services Invested Assets

The following table is a summary of the composition of AIG's Financial Services invested assets at March 31, 2006 and December 31, 2005. (See also the discussions under "Operating Review: Financial Services Operations," "Capital Resources" and "Derivatives" herein.)

<i>(dollars in millions)</i>	2006		2005	
	Invested Assets	Percent of Total	Invested Assets	Percent of Total
Fixed maturities:				
Bonds available for sale, at market value	\$ 1,313	0.9%	\$ 1,307	0.9%
Equity securities:				
Preferred stocks available for sale, at market value	9	–	10	–
Mortgage loans on real estate, net of allowance	65	–	71	–
Policy loans	2	–	2	–
Collateral and guaranteed loans, net of allowance	2,202	1.5	1,719	1.2
Financial services assets:				
Flight equipment primarily under operating leases, net of accumulated depreciation	37,580	25.2	36,245	24.1
Securities available for sale, at market value	38,225	25.6	37,511	24.9
Trading securities, at market value	6,350	4.3	6,499	4.3
Spot commodities	230	0.2	92	0.1
Unrealized gain on swaps, options and forward transactions	17,792	11.9	18,695	12.4
Trading assets	1,411	0.9	1,204	0.8
Securities purchased under agreements to resell, at contract value	12,297	8.2	14,519	9.7
Finance receivables, net of allowance	27,219	18.2	27,995	18.6
Securities lending collateral, at market value	60	–	–	–
Other invested assets	2,953	2.0	2,751	1.9
Short-term investments, at cost	1,293	0.9	1,382	0.9
Cash	282	0.2	331	0.2
Investment income due and accrued	19	–	18	–
Real estate, net of accumulated depreciation	24	–	24	–
Total	\$149,326	100.0%	\$150,375	100.0%

As previously discussed, the cash used for the purchase of flight equipment is derived primarily from the proceeds of ILFC's debt financings. The primary sources for the repayment of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. During the first three months of 2006, ILFC acquired flight equipment costing \$1.90 billion. (See also the discussion under "Operating Review: Financial Services Operations" and "Capital Resources" herein.)

At March 31, 2006, ILFC had committed to purchase 308 new and used aircraft deliverable from 2006 through 2015 at an estimated aggregate purchase price of \$21.4 billion and had options to purchase 16 new aircraft at an estimated aggregate purchase price of \$1.5 billion. As of March 31, 2006, ILFC has entered into leases for all of the new aircraft to be delivered in 2006. ILFC will be required to find customers for any aircraft currently on order and any aircraft to be ordered, and it must arrange financing for portions of the purchase price of such equipment. ILFC has been successful to date both in placing its new aircraft on lease or under sales contract and obtaining adequate financing, but there can be no assurance that such success will continue in future environments.

AIG's Consumer Finance operations provide a wide variety of consumer finance products, including real estate loans, credit card loans, non-real estate loans, retail sales finance and credit-related insurance to customers both domestically and overseas, particularly in emerging markets. These products are funded through a combination of deposits and various borrowings including commercial paper and medium term notes. AIG's Consumer Finance operations are exposed to credit risk and risk of loss resulting from adverse fluctuations in interest rates. Over half of the finance receivable balance is related to real estate loans which are substantially collateralized by the related properties.

With respect to credit losses, the allowance for losses is maintained at a level considered adequate to absorb anticipated credit losses existing in that portfolio.

Capital Markets derivative transactions are carried at market value or at estimated fair value when market prices are not readily available. AIGFP reduces its economic risk exposure through similarly valued offsetting transactions including swaps, trading securities, options, forwards and futures. The estimated fair values of these transactions represent assessments of the present value of expected future cash flows. These transactions are exposed to liquidity risk if AIGFP were required to sell or close out the transactions

prior to maturity. AIG believes that the effect of any such event would not be significant to AIG's financial condition or its overall liquidity. (See also the discussion under "Operating Review: Financial Services Operations" and "Derivatives" herein.)

AIGFP uses the proceeds from the issuance of notes and bonds and borrowings under guaranteed investment agreements (GIAs) to invest in a diversified portfolio of securities, including securities available for sale, at market, and derivative transactions. The funds may also be temporarily invested in securities purchased under agreements to resell. The proceeds from the disposal of the aforementioned securities available for sale and securities purchased under agreements to resell have been used to fund the maturing GIAs or other AIGFP financings, or invest in new assets. (See also the discussion under "Capital Resources" herein.)

Securities available for sale is predominantly a portfolio of fixed income securities, where the individual securities have varying degrees of credit risk. At March 31, 2006, the average credit rating of this portfolio was AA+ or the equivalent thereto as determined through rating agencies or internal review. AIGFP has also entered into credit derivative transactions to economically hedge its credit risk associated with \$105 million of these securities. Securities deemed below investment grade at March 31, 2006 amounted to approximately \$154 million in fair value representing 0.3 percent of the total AIGFP securities available for sale. There have been no significant downgrades through March 31, 2006. If its securities available for sale portfolio were to suffer significant default and the collateral held declined significantly in value with no replacement or the credit default swap counterparty failed to perform, AIGFP could have a liquidity strain. AIG guarantees AIGFP's payment obligations, including its debt obligations.

AIGFP's risk management objective is to minimize interest rate, currency, commodity and equity risks associated with its securities available for sale. That is, when AIGFP purchases a security for its securities available for sale investment portfolio, it simultaneously enters into an offsetting internal hedge such that the payment terms of the hedging transaction offset the payment terms of the investment security, which achieves the economic result of converting the return on the underlying security to U.S. dollar LIBOR plus or minus a spread based on the underlying profit on each security on the initial trade date. The market risk associated with such internal hedges is managed on a portfolio basis, with third-party hedging transactions executed as necessary. As hedge accounting treatment is not achieved in accordance with FAS 133, the unrealized gains and losses on the securities related economic hedges are reflected in operating income, whereas the unrealized gains and losses on the underlying securities resulting from changes in interest rates, currency rates, commodity and equity prices, are recorded in accumulated other comprehensive income. When a security is sold, the related hedging transaction is terminated, and the

realized gain or loss with respect to this security is then recorded in operating income.

Securities purchased under agreements to resell are treated as collateralized financing transactions. AIGFP takes possession of or obtains a security interest in securities purchased under agreements to resell. AIGFP further minimizes its credit risk by monitoring counterparty credit exposure and, when it deems necessary, it requires additional collateral to be deposited.

AIGFP owns inventories in certain commodities in which it trades, and may reduce the exposure to market risk through the use of swaps, forwards, futures and option contracts. Physical commodities held in AIGFP's wholly-owned broker dealer subsidiary are recorded at market value. All other commodities are recorded at the lower of cost or market.

Trading securities, at market value, and securities and spot commodities sold but not yet purchased, at market value are marked to market daily with the unrealized gain or loss being recognized in income at that time. These trading securities are held to meet the short-term risk management objectives of Capital Markets operations.

The gross unrealized gains and gross unrealized losses of Capital Markets operations included in the financial services assets and liabilities at March 31, 2006 were as follows:

<i>(in millions)</i>	Gross Unrealized Gains	Gross Unrealized Losses
Securities available for sale, at market value	\$ 1,193	\$ 1,414
Unrealized gain/loss on swaps, options and forward transactions*	17,792	11,267

* These amounts are also presented as the respective balance sheet amounts.

The senior management of AIG defines the policies and establishes general operating parameters for Capital Markets operations. AIG's senior management has established various oversight committees to review the various financial market, operational and credit issues of the Capital Markets operations. The senior management of AIGFP reports the results of its operations to and reviews future strategies with AIG's senior management.

AIG actively manages the exposures to limit potential losses, while maximizing the rewards afforded by these business opportunities. In doing so, AIG must continually manage a variety of exposures including credit, market, liquidity, operational and legal risks.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products including institutional and retail asset management, broker dealer services and spread-based investment business from

the sale of guaranteed investment contracts, also known as funding agreements (GICs). Such services and products are offered to individuals and institutions both domestically and overseas.

Asset Management revenues and operating income for the three months ended March 31, 2006 and 2005 were as follows:

<i>(in millions)</i>	2006	2005
Revenues:		
Guaranteed investment contracts	\$ 822	\$ 896
Institutional Asset Management	279	319
Brokerage Services and Mutual Funds	73	63
Other	65	99
Total	\$1,239	\$1,377
Operating income:		
Guaranteed investment contracts ^(a)	\$ 218	\$ 319
Institutional Asset Management ^{(b)/(c)}	159	161
Brokerage Services and Mutual Funds	23	13
Other	61	97
Total	\$ 461	\$ 590

(a) The effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 was \$0 and \$62 million for the first three months of 2006 and 2005, respectively.

(b) Includes the full results of certain AIG managed private equity and real estate funds that are consolidated effective December 31, 2003 pursuant to FIN46R, "Consolidation of Variable Interest Entities". For the first three months of 2006 and 2005, operating income includes \$27 million and \$75 million of third-party limited partner earnings offset in minority interest expense.

(c) Includes the full results of certain AIG managed partnerships that are consolidated effective January 1, 2006 pursuant to EITF 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights". For the first three months of 2006, operating income includes \$69 million of third-party limited partner earnings offset in minority interest expense.

Asset Management Results

Asset Management operating income decreased in the first three months of 2006 compared to the same period of 2005 as a result of the continued run-off of AIG's GIC portfolio combined with spread compression. In addition, there was a decline in realized gains on sales of real estate investments and performance fees earned on various private equity investments. The revenues and operating income with respect to the segment are largely affected by the general conditions in the equity and credit markets. The decrease for the quarter was primarily due to the decline in the GIC business. GICs were sold domestically and abroad to both institutions and individuals. These products were written on an opportunistic basis when the market conditions were favorable. A significant portion of the remaining GIC portfolio consists of floating rate obligations. AIG has entered into hedges to manage against increases in short-term interest rates. AIG continues to believe these hedges are economically effective but do not qualify for hedge accounting under FAS 133. As a result, continued increases in short-term interest rates will negatively affect operating income in the segment. Realized capital gains

from the hedges offset the negative trend in operating income. GIC revenues include income from Sun America partnerships supporting the GIC line of business and are significantly affected by performance in the equity markets. Thus, revenues, operating income and cash flow attributable to GICs will vary among reporting periods. The decline in GIC operating income in the first three months of 2006 compared to the same period of 2005 reflects tighter spreads in the GIC portfolio, partially offset by improved net partnership returns. Spread compression has occurred as the base portfolio yield declined primarily due to an increase in the cost of funds in the short-term floating rate portion of the GIC portfolio, only partially offset by increased investment income from the floating rate assets backing the portfolio. As mentioned above, the lower level of gains and performance based fees also contributed to the decline in operating income for the first three months of 2006. These gains and performance fees are contingent upon various fund closings, maturity levels and market conditions, and by their nature, are not predictable. Therefore, the effect on the segment's earnings may vary from period to period.

In September 2005, AIG launched a \$10 billion medium term note program in the Euromarkets under which AIG debt securities are issued primarily for a matched investment program. AIG issued its first debt securities under the matched investment program in April 2006, selling Euro 500 million principal amount of notes. AIG also expects to launch a matched investment program in the domestic market which, along with the Euro program, will become AIG's principal spread-based investment activity. However, the timing of the launch of the domestic program remains uncertain. Because AIG's credit spreads in the capital markets have widened following the ratings declines, there may be a reduction in the earnings on new business in AIG's institutional spread based funding business.

Asset Management operating income represented 10 percent of AIG's consolidated income before income taxes, minority interest and cumulative effect of an accounting change in the first three months of 2006. This compares to 10 percent in the same period of 2005.

At March 31, 2006 and 2005, AIG's third party assets under management, including both retail mutual funds and institutional accounts, exceeded \$65 billion and \$55 billion and the aggregate GIC reserve was \$48.1 billion and \$55.8 billion, respectively.

Other Operations

Other operations include AIG's equity in certain partially owned companies, the distributions on the liabilities connected to trust preferred stock, as well as the unallocated corporate expenses of the parent holding company and other miscellaneous income and expenses. Other income (loss) amounted to \$(338) million and \$36 million in the first three

months of 2006 and 2005, respectively. Included in the 2006 amount is compensation expense related to the 2006 Starr tender offer of \$54 million. See also Note 4 of Notes to the Consolidated Financial Statements. In addition, included in the 2006 amount is compensation expense with respect to the SICO Plans of \$76 million, including various adjustments totalling \$61 million, primarily relating to stock-split adjustments and other miscellaneous items. See also Note 4 of Notes to the Consolidated Financial Statements.

Other realized capital gains (losses), amounted to \$(57) million and \$155 million for the three months ended March 31, 2006 and 2005, respectively.

Capital Resources

At March 31, 2006, AIG had total consolidated shareholders' equity of \$88.39 billion and total consolidated borrowings of \$118.8 billion. At that date, \$104.1 billion of such borrowings were either not guaranteed by AIG or were AIGFP's matched borrowings under obligations of GIAs, liabilities connected to trust preferred stock, or matched notes and bonds payable.

Borrowings

At March 31, 2006, AIG's net borrowings were \$14.67 billion after reflecting amounts that were matched borrowings under AIGFP's obligations of GIAs, matched notes and bonds payable, amounts not guaranteed by AIG and liabilities connected to trust preferred stock. The following table summarizes borrowings outstanding at March 31, 2006 and December 31, 2005:

<i>(in millions)</i>	2006	2005
AIG's net borrowings	\$ 14,665	\$ 10,425
Liabilities connected to trust preferred stock	1,390	1,391
AIGFP		
GIAs	21,600	20,811
Matched notes and bonds payable	25,874	24,950
Borrowings not guaranteed by AIG	55,252	52,272
Total	\$ 118,781	\$ 109,849

Borrowings issued or guaranteed by AIG and those borrowings not guaranteed by AIG at March 31, 2006 and December 31, 2005 were as follows:

<i>(in millions)</i>	2006	2005
AIG borrowings:		
Medium term notes	\$ 89	\$ 112
Notes and bonds payable	4,498	4,495
Loans and mortgages payable	2,008	814

Total Debt	\$118,781	\$109,849

* Includes borrowings under Export Credit Facility of \$2.8 billion and \$2.6 billion, at March 31, 2006 and December 31, 2005, respectively.

AIG intends to continue its customary practice of issuing debt securities from time to time to meet its financing needs and those of certain of its subsidiaries for general corporate purposes, as well as for a matched investment program.

On April 20, 2006, AIG sold \$1.0 billion principal amount of notes in a Rule 144A/Regulation S offering bearing interest at a rate of 6.250 percent per annum and maturing in 2036. On September 30, 2005, AIG sold \$1.5 billion principal amount of notes in a Rule 144A/Regulation S offering, \$500 million of which bear interest at a rate of 4.700 percent per annum and mature in 2010 and \$1.0 billion of which bear interest at a rate of 5.05 percent per annum and mature in 2015. These notes are senior unsecured obligations of AIG and rank equally with all of AIG's other senior debt outstanding. AIG has agreed to use commercially reasonable efforts to consummate an exchange offer for these notes by having declared effective a registration statement for the September 2005 and April 2006 notes within 360 days and 240 days, respectively, of the date on which the notes were issued.

On April 26, 2006, AIG completed its first offering of debt securities under its European medium term note program, selling Euro 750 million principal amount of notes bearing interest at a rate of 4.375 percent and maturing in 2016, Euro 500 million principal amount of floating rate notes maturing in 2011, and British Pound Sterling 500 million principal amount of notes bearing interest at a rate of 5.000 percent and maturing in 2023.

Except for the Euro 500 million principal amount of floating rate notes, the proceeds of which were used to fund the matched investment program, the proceeds from each issuance of 144A/Regulation S notes and European medium term notes were used for general corporate purposes, including the repayment of commercial paper.

In March 2006, AIG borrowed a total of \$1.3 billion on an unsecured basis pursuant to loan agreements with third-party banks, \$500 million of which matures in February 2007 but can be extended by AIG for an additional seven-month period and \$800 million of which matures in March 2007. In September 2005, AIG borrowed a total of \$600 million on an unsecured basis pursuant to loan agreements with third-party banks, \$500 million of which matures in August 2006 but can be extended by AIG for an additional seven-month period and \$100 million of which matures in September 2006.

AIGFP uses the proceeds from the issuance of notes and bonds and GIA borrowings to invest in a diversified portfolio of securities and derivative transactions. The borrowings may also be temporarily invested in securities purchased under agreements to resell. AIG guarantees the obligations of AIGFP under AIGFP's structured notes and bonds and GIA borrowings. Certain of AIGFP's notes contain embedded derivatives that are required to be accounted for separately under FAS 133. Upon AIG's early adoption of FAS 155, AIGFP has elected the fair value option for these instruments. Those notes that are accounted for using the fair value option are reported separately under hybrid financial instrument liabilities. (See also the discussions under "Operating Review:

Financial Services Operations," "Liquidity" and "Derivatives" herein.)

AIGFP has a Euro Medium Term Note Program under which an aggregate nominal amount of up to \$10.0 billion of notes may be outstanding at any one time. The Program provides that additional notes may be issued to replace matured or redeemed notes. As of March 31, 2006, \$8.85 billion of notes had been issued under the program, \$3.50 billion of which were outstanding including \$317 million resulting from foreign exchange translation into U.S. dollars. Notes issued under this program are included in Notes and Bonds Payable in the preceding table of borrowings.

AIG Funding, Inc. (AIG Funding), through the issuance of commercial paper, helps fulfill the short-term cash requirements of AIG and its subsidiaries. AIG Funding intends to continue to meet AIG's funding requirements through the issuance of commercial paper guaranteed by AIG. The issuance of AIG Funding's commercial paper is subject to the approval of AIG's Board of Directors.

AIG and AIG Funding are parties to unsecured syndicated revolving credit facilities aggregating \$2.75 billion, consisting of \$1.375 billion in a 364-day revolving credit facility that expires in July of 2006 and \$1.375 billion in a five-year revolving credit facility that expires in July of 2010. The 364-day facility allows for the conversion by AIG of any outstanding loans at expiration into one-year term loans. The facilities can be used for general corporate purposes and also to provide backup for AIG's commercial paper programs administered by AIG Funding. AIG expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings outstanding under these facilities, nor were any borrowings outstanding as of March 31, 2006.

In November 2005, AIG and AIG Funding entered into a 364-day revolving credit facility for an aggregate amount of \$3 billion, which can be drawn in the form of loans or letters of credit. The credit facility expires in November 2006 but allows for the issuance of letters of credit with terms of up to ten years and provides for the conversion by AIG of any outstanding loans at expiration into one-year term loans. The facility can be used for general corporate purposes, including providing backup for AIG's commercial paper programs administered by AIG Funding and obtaining letters of credit to secure obligations under insurance and reinsurance transactions. There are currently no loans outstanding under the facility, nor were any loans outstanding as of March 31, 2006. As of such dates, \$1.01 billion was available to be drawn under the facility, with the remainder having been drawn in the form of letters of credit.

AIG is also a party to an unsecured 364-day inter-company revolving credit facility provided by certain of its subsidiaries aggregating \$2 billion that expires in October of 2006. The facility allows for the conversion of any outstanding loans at expiration into one-year term loans. The facility can be used for general corporate purposes and also to pro-

vide backup for AIG's commercial paper programs. AIG expects to replace or extend this credit facility on or prior to its expiration. There are currently no borrowings outstanding under the inter-company facility, nor were any borrowings outstanding as of March 31, 2006.

ILFC fulfills its short term cash requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of ILFC's Board of Directors and is not guaranteed by AIG. ILFC is a party to unsecured syndicated revolving credit facilities aggregating \$6.0 billion at March 31, 2006. The facilities can be used for general corporate purposes and also to provide backup for ILFC's commercial paper program. They consist of \$2.0 billion in a 364-day revolving credit facility that expires in October 2006, with a one-year term out option, \$2.0 billion in a five-year revolving credit facility that expires in October 2009 and \$2.0 billion in a five-year revolving credit facility that expires in October 2010. ILFC expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings under these facilities, nor were any borrowings outstanding as of March 31, 2006.

At March 31, 2006, ILFC had increased the aggregate principal amount outstanding of its medium term and long-term notes. The foreign exchange adjustment for the foreign currency denominated debt was \$328 million at March 31, 2006 and \$197 million at December 31, 2005. ILFC had \$13.13 billion of debt securities registered for public sale at March 31, 2006. As of March 31, 2006, \$9.96 billion of debt securities were issued. In addition, ILFC has a Euro Medium Term Note Program for \$7.0 billion, under which \$4.98 billion in notes were sold through March 31, 2006. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging the portion of the note exposure not already offset by Euro denominated operating lease payments, although such hedges do not qualify for hedge accounting treatment under FAS 133. Notes issued under the Euro Medium Term Note program are included in Notes and Bonds Payable in the preceding table of borrowings.

ILFC had a \$4.3 billion Export Credit Facility for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At March 31, 2006, ILFC had \$1.2 billion outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured Export Credit Facility for up to a maximum of \$2.64 billion for Airbus aircraft to be delivered through May 31, 2005. The facility has since been extended to include aircraft to be delivered through May 31, 2006. The facility becomes availa-

ble as the various European Export Credit Agencies provide their guarantees for aircraft based on a six-month forward-looking calendar, and the interest rate is determined through a bid process. At March 31, 2006, ILFC had \$1.6 billion outstanding under this facility. Borrowings with respect to these facilities are included in Notes and Bonds Payable in the preceding table of borrowings.

In August 2004, ILFC received a commitment for an Ex-Im Bank comprehensive guarantee in the amount of \$1.68 billion to support the financing of up to 30 new Boeing aircraft. The initial delivery period from September 1, 2004 through August 31, 2005 has been extended by ILFC to August 31, 2006. ILFC did not have any borrowings outstanding under this facility at March 31, 2006. From time to time, ILFC enters into various bank financings. As of March 31, 2006 the total funded amount was \$1.6 billion. The financings mature through 2011. One tranche of one of the loans totaling \$410 million was funded in Japanese yen and swapped to U.S. dollars.

In December of 2005, ILFC entered into two tranches of junior subordinated debentures totaling \$1.0 billion. Both mature on December 21, 2065, but each tranche has a different call option. The \$600 million tranche has a call date of December 21, 2010 and the \$400 million tranche has a call date of December 21, 2015. The debenture with the 2010 call date has a fixed interest rate of 5.90 percent for the first five years. The debenture with the 2015 call date has a fixed interest rate of 6.25 percent for the first ten years. Both tranches have interest rate adjustments if the call option is not exercised. If the call option is not exercised, the new interest rate will be a floating quarterly reset rate based on the initial credit spread plus the highest of (i) 3 month LIBOR, (ii) 10-year constant maturity treasury and (iii) 30-year constant maturity treasury.

The proceeds of ILFC's debt financing are primarily used to purchase flight equipment, including progress payments during the construction phase. The primary sources for the repayment of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. AIG does not guarantee the debt obligations of ILFC. (See also the discussions under "Operating Review: Financial Services Operations" and "Liquidity" herein.)

AGF fulfills its short term cash requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of AGF's Board of Directors and is not guaranteed by AIG. AGF is a party to unsecured syndicated revolving credit facilities aggregating \$4.25 billion, consisting of \$2.125 billion in a 364-day revolving credit facility that expires in July of 2006 and \$2.125 billion in a five-year revolving credit facility that expires in July of 2010. The 364-day facility allows for the conversion by AGF of any outstanding loans at expiration into a one-year term

loan. The facilities can be used for general corporate purposes and also to provide backup for AGF's commercial paper programs. AGF expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings under these AGF facilities, nor were any borrowings outstanding as of March 31, 2006.

During 2005, AGF issued \$5.44 billion of fixed rate and variable rate medium term notes ranging in maturities from two to ten years. As of March 31, 2006, notes aggregating \$16.87 billion were outstanding with maturity dates ranging from 2006 to 2015 at interest rates ranging from 1.84 percent to 7.50 percent. To the extent deemed appropriate, AGF may enter into swap transactions to manage its effective borrowing with respect to these notes.

AGF's other funding sources include private placement debt, retail note issuances, securitizations of finance receiv-

ables that AGF accounts for as on-balance-sheet secured financings and bank financings. In addition, AGF has become an established issuer of long-term debt in the international capital markets.

In addition to debt refinancing activities, proceeds from the collection of finance receivables will be used to pay the principal and interest with respect to AGF's debt. AIG does not guarantee any of the debt obligations of AGF. See also the discussion under "Operating Review — Financial Services Operations" and "Liquidity" herein.

AIG Credit Card Company (Taiwan) and AIG Finance (Taiwan) Limited, both consumer finance subsidiaries in Taiwan, have issued commercial paper for the funding of their own operations. AIG did not guarantee the commercial paper issued by either of these subsidiaries.

Contractual Obligations and Other Commercial Commitments

The maturity schedule of AIG's contractual obligations at March 31, 2006 was as follows:

(in millions)

	Total Payments	Payments due by Period			
		Less Than One Year	One Through Three Years	Four Through Five Years	After Five Years
Borrowings ^(a)	\$103,712	\$ 43,853	\$ 22,024	\$ 19,156	\$ 18,679
Loss reserves ^(b)	78,100	21,477	23,821	11,325	21,477
Insurance and investment contract liabilities ^(c)	628,401	30,819	47,966	45,005	504,611
Aircraft purchase commitments	21,428	4,146	10,523	3,775	2,984
Total	\$831,641	\$100,295	\$104,334	\$ 79,261	\$547,751

(a) Excludes commercial paper and obligations included as debt pursuant to FIN 46R and includes hybrid financial instrument liabilities.

(b) Represents future loss and loss adjustment expense payments estimated based on historical loss development payment patterns.

(c) Insurance and investment contract liabilities include various investment-type products with contractually scheduled maturities including periodic payments of a term certain nature and guaranteed maturities under guaranteed investment contracts. Insurance and investment contract liabilities also include benefit and claim liabilities, of which a significant portion represents policies and contracts that do not have stated contractual maturity dates and may not result in any future payment obligations. For these policies and contracts (i) AIG is currently not making payments until the occurrence of an insurable event, such as death or disability, (ii) payments are conditional on survivorship, or (iii) the occurrence of a payment due to a surrender or other non-scheduled event out of AIG's control. AIG has made significant assumptions to determine the estimated undiscounted cash flows of these contractual policy benefits which include mortality, morbidity, future lapse rates, expenses, investment returns and interest crediting rates, offset by expected future deposits and premium on in-force policies. Due to the significance of the assumptions used, the amounts presented could be materially different from actual required payments. The amounts presented in this table are undiscounted and therefore exceed the future policy benefits and policyholder contract deposits included in the balance sheet.

The maturity schedule of AIG's other commercial commitments by segment at March 31, 2006 was as follows:*(in millions)*

	Total Amounts Committed	Amount of Commitment Expiration			
		Less Than One Year	One Through Three Years	Four Through Five Years	After Five Years
Letters of credit:					
Life Insurance & Retirement Services	\$ 185	\$ 50	\$ 5	\$ 22	\$ 108
DBG	250	250	–	–	–
Standby letters of credit:					
Capital Markets	1,749	12	33	49	1,655
Guarantees:					
Life Insurance & Retirement Services ^(a)	3,437	109	388	–	2,940
Aircraft Finance	125	3	40	–	82
Asset Management	88	49	7	32	–
Parent Company ^(b)	397	396	1	–	–
Other commercial commitments ^(c) :					
Capital Markets ^(d)	11,152	2,786	1,277	700	6,389
Aircraft Finance ^(e)	1,883	–	131	868	884
Life Insurance & Retirement Services ^(f)	3,424	562	1,193	822	847
Asset Management	549	394	140	15	–
DBG ^(g)	1,086	–	–	–	1,086
Total	\$ 24,325	\$ 4,611	\$ 3,215	\$ 2,508	\$ 13,991

(a) Primarily AIG SunAmerica construction guarantees connected to affordable housing investments.

(b) Represents reimbursement obligations under letters of credit issued by commercial banks.

(c) Excludes commitments with respect to pension plans. The annual pension contribution for 2006 is expected to be approximately \$70 million for U.S. and non-U.S. Plans.

(d) Primarily liquidity facilities provided in connection with certain municipal swap transactions and collateralized bond obligations.

(e) Primarily in connection with options to acquire aircraft.

(f) Primarily AIG SunAmerica commitments to invest in partnerships.

(g) Primarily commitments to invest in limited partnerships.

“Rating triggers” have been defined by one independent rating agency to include clauses or agreements the outcome of which depends upon the level of ratings maintained by one or more rating agencies. Rating triggers generally relate to events which (i) could result in the termination or limitation of credit availability, or require accelerated repayment, (ii) could result in the termination of business contracts or (iii) could require a company to post collateral for the benefit of counterparties.

AIG believes that any of its or its subsidiaries’ contractual obligations that are subject to “ratings triggers” or financial covenants relating to “ratings triggers” would not have a material adverse effect on its financial condition or liquidity.

As a result of the downgrades of AIG’s long-term senior debt ratings, AIG was required to post approximately \$1.16 billion of collateral with counterparties to municipal guaranteed investment agreements and financial derivatives transactions. In the event of a further downgrade, AIG will be required to post additional collateral. It is estimated that, as of the close of business on April 30, 2006 based on AIG’s outstanding municipal guaranteed investment agreements and financial derivatives transactions as of such date, a further downgrade of AIG’s long-term senior debt ratings to ‘Aa3’ by Moody’s or ‘AA-’ by S&P would permit counterparties to call for approximately

\$896 million of additional collateral. Further, additional downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIG manages its liquidity. The actual amount of additional collateral that AIG would be required to post to counterparties in the event of such downgrades depends on market conditions, the market value of the outstanding affected transactions and other factors prevailing at the time of the downgrade. Any additional obligations to post collateral will increase the demand on AIG’s liquidity.

Shareholders’ Equity

AIG’s consolidated shareholders’ equity increased \$2.07 billion during the first three months of 2006. Retained earnings increased \$3.10 billion, resulting from net income of \$3.2 billion and \$308 million reflecting the cumulative effect of accounting changes relating to the adoption of FSP 85-4-1 and FAS 155 less dividends of \$400 million. Unrealized appreciation of investments, net of taxes decreased \$1.50 billion and the cumulative translation adjustment loss, net of taxes, decreased \$260 million. During the first three months of 2006 there was a gain of \$17 million, net of taxes, relating to derivative contracts designated as cash flow hedging instruments. (See also the discussion under “Operating Review”

and “Liquidity” herein and the Consolidated Statement of Comprehensive Income.)

AIG has in the past reinvested most of its unrestricted earnings in its operations and believes such continued reinvestment in the future will be adequate to meet any foreseeable capital needs. However, AIG may choose from time to time to raise additional funds through the issuance of additional securities.

Stock Purchase

During the period January 1, 2006 through March 31, 2006, AIG did not purchase any shares of its common stock under its existing share repurchase authorization. AIG from time to time may buy shares of its common stock in the open market for general corporate purposes, including to satisfy its obligations under various employee benefit plans. At March 31, 2006, an additional 36,542,700 shares could be purchased under the then current authorization by AIG’s Board of Directors.

Dividends from Insurance Subsidiaries

Payments of dividends to AIG by its insurance subsidiaries are subject to certain restrictions imposed by regulatory authorities. With respect to AIG’s domestic insurance subsidiaries, the payment of any dividend requires formal notice to the insurance department in which the particular insurance subsidiary is domiciled. Under the laws of many states, an insurer may pay a dividend without prior approval of the insurance regulator when the amount of the dividend is below certain regulatory thresholds. To enhance their current capital positions, dividends from the DBG companies were suspended in the fourth quarter of 2005, and AIG has taken various other actions. See “Regulation and Supervision” below. Furthermore, AIG cannot predict how recent regulatory investigations may affect the ability of its regulated subsidiaries to pay dividends.

With respect to AIG’s foreign insurance subsidiaries, the most significant insurance regulatory jurisdictions include Bermuda, Japan, Hong Kong, Taiwan, the United Kingdom, Thailand and Singapore.

AIG cannot predict whether the regulatory investigations currently underway or future regulatory issues will impair AIG’s financial condition, results of operations or liquidity. To AIG’s knowledge, no AIG company is currently on any regulatory or similar “watch list” with regard to solvency. (See also the discussion under “Liquidity” herein.)

Regulation and Supervision

AIG’s insurance subsidiaries, in common with other insurers, are subject to regulation and supervision by the states and jurisdictions in which they do business. In the U.S. the National Association of Insurance Commissioners (NAIC) has developed Risk-Based Capital (RBC) requirements. RBC re-

lates an individual insurance company’s statutory surplus to the risk inherent in its overall operations.

AIG’s insurance subsidiaries file financial statements prepared in accordance with statutory accounting practices prescribed or permitted by domestic and foreign insurance regulatory authorities. The principal differences between statutory financial statements and financial statements prepared in accordance with U.S. GAAP for domestic companies are that statutory financial statements do not reflect deferred policy acquisition costs, some bond portfolios may be carried at amortized cost, assets and liabilities are presented net of reinsurance, policyholder liabilities are valued using more conservative assumptions and certain assets are non-admitted.

AIG recently filed the 2005 statutory financial statements for its domestic General Insurance companies after reviewing and agreeing with the relevant state insurance regulators on the statutory accounting treatment of various items. The regulatory authorities have also permitted certain of the domestic and foreign insurance subsidiaries to support the carrying value of their investments in certain non-insurance and foreign insurance subsidiaries by utilizing the AIG audited consolidated financial statements to satisfy the requirement that the U.S. GAAP-basis equity of such entities be audited. In addition, the regulatory authorities have permitted the domestic General Insurance companies to utilize audited financial statements prepared on a basis of accounting other than U.S. GAAP to value investments in joint ventures, limited partnerships and hedge funds. These permitted practices did not affect the domestic General Insurance companies’ compliance with minimum regulatory capital requirements.

Statutory capital of each company continued to exceed minimum company action level requirements following the adjustments, but AIG nonetheless contributed an additional \$750 million of capital into American Home effective September 30, 2005 and contributed a further \$2.25 billion of capital in February 2006 for a total of approximately \$3 billion of capital into Domestic General Insurance subsidiaries effective December 31, 2005. To enhance their current capital positions, dividends from the DBG companies were suspended in the fourth quarter of 2005. AIG believes it has the capital resources and liquidity to fund any necessary statutory capital contributions. AIG will review the capital position of its insurance company subsidiaries with various rating agencies and regulators to determine if additional capital contributions or other actions are warranted.

As discussed above, various regulators have commenced investigations into certain insurance business practices. In addition, the OTS and other regulators routinely conduct examinations of AIG and its subsidiaries, including AIG’s consumer finance operations. AIG cannot predict the ultimate effect that these investigations and examinations, or any additional regulation arising therefrom, might have on its

business. Federal, state or local legislation may affect AIG's ability to operate and expand its various financial services businesses, and changes in the current laws, regulations or interpretations thereof may have a material adverse effect on these businesses. See "Risk Factors — Regulatory Investigations" in Item 1A. of Part I of AIG's 2005 Annual Report on Form 10-K for a further discussion of the effect these investigations may have on AIG's businesses.

AIG's U.S. operations are negatively affected under guarantee fund assessment laws which exist in most states. As a result of operating in a state which has guarantee fund assessment laws, a solvent insurance company may be assessed for certain obligations arising from the insolvencies of other insurance companies which operated in that state. AIG generally records these assessments upon notice. Additionally, certain states permit at least a portion of the assessed amount to be used as a credit against a company's future premium tax liabilities. Therefore, the ultimate net assessment cannot reasonably be estimated. The guarantee fund assessments net of credits for the first three months of 2006 were \$3 million.

AIG is also required to participate in various involuntary pools (principally workers compensation business) which provide insurance coverage for those not able to obtain such coverage in the voluntary markets. This participation is also recorded upon notification, as these amounts cannot reasonably be estimated.

A substantial portion of AIG's General Insurance business and a majority of its Life Insurance & Retirement Services business are conducted in foreign countries. The degree of regulation and supervision in foreign jurisdictions varies. Generally, AIG, as well as the underwriting companies operating in such jurisdictions, must satisfy local regulatory requirements. Licenses issued by foreign authorities to AIG subsidiaries are subject to modification and revocation. Thus, AIG's insurance subsidiaries could be prevented from conducting future business in certain of the jurisdictions where they currently operate. AIG's international operations include operations in various developing nations. Both current and future foreign operations could be adversely affected by unfavorable political developments up to and including nationalization of AIG's operations without compensation. Adverse effects resulting from any one country may affect AIG's results of operations, liquidity and financial condition depending on the magnitude of the event and AIG's net financial exposure at that time in that country.

Foreign operations are individually subject to local solvency margin requirements that require maintenance of adequate capitalization, which AIG complies with by country. In addition, certain foreign locations, notably Japan, have established regulations that can result in guarantee fund assessments. These have not had a material effect on AIG's operations.

Liquidity

AIG's liquidity is primarily derived from the operating cash flows of its General and Life Insurance & Retirement Services operations. Management believes that AIG's liquid assets, its net cash provided by operations, and access to short-term funding through commercial paper and bank credit facilities will enable it to meet any anticipated cash requirements.

At March 31, 2006, AIG's consolidated invested assets included \$18.59 billion of cash and short-term investments. Consolidated net cash provided by operating activities in the first three months of 2006 amounted to \$3.07 billion.

The liquidity of the combined insurance operations is derived both domestically and abroad. The combined insurance operating cash flow is derived from two sources, underwriting operations and investment operations. Cash flow includes periodic premium collections, including policyholders' contract deposits, cash flows from investment operations and paid loss recoveries less reinsurance premiums, losses, benefits, and acquisition and operating expenses. Generally, there is a time lag from when premiums are collected and, when as a result of the occurrence of events specified in the policy, the losses and benefits are paid. Investment income cash flow is primarily derived from interest and dividends received and includes realized capital gains net of realized capital losses. (See also the discussions under "Operating Review: General Insurance Operations" and "Life Insurance & Retirement Services Operations" herein.)

With respect to General Insurance operations, if paid losses accelerated beyond AIG's ability to fund such paid losses from current operating cash flows, AIG might need to liquidate a portion of its General Insurance investment portfolio and/or arrange for financing. Potential events causing such a liquidity strain could be the result of several significant catastrophic events occurring in a relatively short period of time. Additional strain on liquidity could occur if the investments sold to fund such paid losses were sold into a depressed market place and/or reinsurance recoverable on such paid losses became uncollectible or collateral supporting such reinsurance recoverable significantly decreased in value. (See also the discussions under "Operating Review: General Insurance Operations" herein.)

With respect to Life Insurance & Retirement Services operations, if a substantial portion of the Life Insurance & Retirement Services operations bond portfolio diminished significantly in value and/or defaulted, AIG might need to liquidate other portions of its Life Insurance & Retirement Services investment portfolio and/or arrange financing. Potential events causing such a liquidity strain could be the result of economic collapse of a nation or region in which AIG Life Insurance & Retirement Services operations exist, nationalization, terrorist acts, or other such economic or political upheaval. In addition, a significant rise in interest rates leading to a significant increase in policyholder surrenders

could also create a liquidity strain. (See also the discussions under “Operating Review: Life Insurance & Retirement Services Operations” herein.)

In addition to the combined insurance pretax operating cash flow, AIG’s insurance operations held \$10.36 billion in cash and short-term investments at March 31, 2006. Operating cash flow and the cash and short-term balances held provided AIG’s insurance operations with a significant amount of liquidity. AIG subsidiaries have also issued debt securities to meet capital needs. In December 2005, Transatlantic issued \$750 million of debt securities in a public offering, of which \$450 million were purchased by other AIG subsidiaries. Transatlantic contributed the proceeds of the offering to a reinsurance company subsidiary.

This liquidity is available, among other things, to purchase predominately high quality and diversified fixed income securities and, to a lesser extent, marketable equity securities, and to provide mortgage loans on real estate, policy loans and collateral loans. This cash flow coupled with proceeds of approximately \$30 billion from the maturities, sales and redemptions of fixed income securities and from the sale of equity securities was used to purchase approximately \$39 billion of fixed income securities and marketable equity securities during the first three months of 2006.

AIG’s major Financial Services operating subsidiaries consist of AIGFP, ILFC, AGF and AIGCFG. Sources of funds considered in meeting the liquidity needs of AIGFP’s operations include guaranteed investment agreements, issuance of long-term and short-term debt, proceeds from maturities and sales of securities available for sale, securities sold under repurchase agreements, and securities and spot commodities sold but not yet purchased. ILFC, AGF and AIGCFG all utilize the commercial paper markets, retail and wholesale deposits, bank loans and bank credit facilities as sources of liquidity. ILFC and AGF also fund in the domestic and international capital markets without reliance on any guarantee from AIG. An additional source of liquidity for ILFC is the use of export credit facilities. AIGCFG also uses wholesale and retail bank deposits as sources of funds. On occasion, AIG has provided equity capital to ILFC, AGF and AIGCFG and provides intercompany loans to AIGCFG. An AIG subsidiary purchased additional shares of ILFC in the amount of \$400 million during the third quarter of 2005. Cash flow provided from operations is a major source of liquidity for AIG’s primary Financial Services operating subsidiaries.

AIG, the parent company, funds its short-term working capital needs through commercial paper issued by AIG Funding. As of March 31, 2006, AIG Funding had \$5.09 billion of commercial paper outstanding with an average maturity of 25 days. As additional liquidity, AIG parent has a \$2 billion inter-company revolving credit facility provided by certain of its subsidiaries, a \$1.375 billion 364-day revolving bank credit facility that expires in July 2006, a \$1.375 billion five

year revolving bank credit facility that expires in July 2010 and a \$3 billion 364-day revolving credit facility that expires in November 2006, of which \$1.01 billion is currently available as back-up liquidity. AIG parent’s primary sources of cash flow are dividends and loans from its subsidiaries. AIG parent’s primary uses of cash flow are for debt service, capital contributions to subsidiaries and the payment of dividends to shareholders. As of March 31, 2006, including debt obligations of AGC that are guaranteed by AIG, remaining debt and loan maturities due in 2006 are \$0, \$600 million and \$0 for the second, third and fourth quarters, respectively. According to the terms of the Zero Coupon Convertible Senior Debentures issued by AIG on November 9, 2001, holders can require AIG to repurchase the debentures once every five years beginning on November 9, 2006. Assuming that all of the outstanding debentures are required to be repurchased by AIG on November 9, 2006, the aggregate repurchase price payable by AIG on that date will be approximately \$1.10 billion. See also Note 9 of Notes to Consolidated Financial Statements in AIG’s 2005 Annual Report on Form 10-K for additional information on debt maturities for AIG and its subsidiaries.

Special Purpose Vehicles and Off Balance Sheet Arrangements

AIG uses special purpose vehicles (SPVs) and off balance sheet arrangements in the ordinary course of business. As a result of recent changes in accounting, a number of SPVs and off balance sheet arrangements have been reflected in AIG’s consolidated financial statements. In January 2003, FASB issued Interpretation No. 46, “Consolidation of Variable Interest Entities” (FIN 46). FIN 46 addressed the consolidation and disclosure rules for nonoperating entities that are now defined as Variable Interest Entities (VIEs). In December 2003, FASB issued a revision to Interpretation No. 46 (FIN 46R).

AIG has guidelines with respect to the formation of and investment in SPVs and off balance sheet arrangements. In addition, AIG has expanded the responsibility of its Complex Structured Financial Transaction Committee (CSFT) to include the review of any transaction that could subject AIG to heightened legal, reputational, regulatory, accounting or other risk. See “Management’s Report on Internal Control Over Financial Reporting” in Item 9A. of Part II included in AIG’s 2005 Annual Report on Form 10-K for a further discussion of the CSFT.

For additional information related to AIG’s activities with respect to VIEs and certain guarantees see “Recent Accounting Standards” herein and also Note 8 of Notes to Consolidated Financial Statements. Also, for additional disclosure regarding AIG’s commercial commitments (including guarantors), see “Contractual Obligations and Other Commercial Commitments” herein.

Derivatives

Derivatives are financial instruments among two or more parties with returns linked to or “derived” from some underlying equity, debt, commodity or other asset, liability, or index. Derivatives payments may be based on interest rates and exchange rates and/or prices of certain securities, commodities, financial or commodity indices, or other variables. The more significant types of derivative arrangements in which AIG transacts are swaps, forwards, futures and options. In the normal course of business, with the agreement of the original counterparty, these contracts may be terminated early or assigned to another counterparty.

The overwhelming majority of AIG’s derivatives activities are conducted by the Capital Markets operations, thus permitting AIG to participate in the derivatives dealer market acting primarily as principal. In these derivative operations, AIG structures transactions that generally allow its counterparties to obtain or hedge exposure to changes in interest and foreign currency exchange rates, credit events, securities’ prices and certain commodities and financial or commodity indices. AIG’s customers – such as corporations, financial institutions, multinational organizations, sovereign entities, government agencies and municipalities – use derivatives to hedge their own market exposures. For example, a futures, forward or option contract can be used to protect the customers’ assets or liabilities against price fluctuations.

A counterparty may default on any obligation to AIG, including a derivative contract. Credit risk is a consequence of extending credit and/or carrying trading and investment positions. Credit risk exists for a derivative contract when that contract has a positive fair value to AIG. To help manage this risk, AIGFP’s credit department operates within the guidelines set by the AIG Credit Risk Committee. This committee establishes the credit policy, sets limits for counterparties and provides limits for derivative transactions with counterparties having different credit ratings. In addition to credit ratings, this committee takes into account other factors, including the industry and country of the counterparty. Transactions which fall outside these pre-established guidelines require the specific approval of the AIG Credit Risk Committee. It is also AIG’s policy to establish reserves for potential credit impairment when necessary.

In addition, AIGFP utilizes various credit enhancements, including letters of credit, guarantees, collateral, credit triggers, credit derivatives, and margin agreements to reduce the credit risk relating to its outstanding financial derivative transactions. AIGFP requires credit enhancements in connection with specific transactions based on, among other things, the creditworthiness of the counterparties, and the transaction’s size and maturity.

AIG’s Derivatives Review Committee provides an independent review of any proposed derivative transaction or program

except those derivative transactions entered into by AIGFP with third parties. The committee examines, among other things, the nature and purpose of the derivative transaction, its potential credit exposure, if any, and the estimated benefits.

Managing Market Risk

Market risk is the risk of loss of fair value resulting from adverse fluctuations in interest rates, foreign currencies, equities and commodity prices. AIG has exposures to these risks.

AIG analyzes market risk using various statistical techniques including Value at Risk (VaR). VaR is a summary statistical measure that applies the estimated volatility and correlation of market factors to AIG’s market positions. The output from the VaR calculation is the maximum loss that could occur over a defined period of time given a certain probability. While VaR models are relatively sophisticated, the quantitative market risk information generated is limited by the assumptions and parameters established in creating the related models. AIG believes that statistical models alone do not provide a reliable method of monitoring and controlling market risk. Therefore, such models are tools and do not substitute for the experience or judgment of senior management.

Insurance

AIG has performed a separate VaR analysis for the General Insurance and Life Insurance & Retirement Services segments and for each market risk within each segment. For purposes of the VaR calculation, the insurance assets and liabilities from GICs are included in the Life Insurance & Retirement Services segment. For the calculations in the analyses the financial instrument assets included are the insurance segments’ invested assets, excluding real estate and investment income due and accrued, and the financial instrument liabilities included are reserve for losses and loss expenses, reserve for unearned premiums, future policy benefits for life and accident and health insurance contracts and other policyholders’ funds.

AIG calculated the VaR with respect to the net fair value of each of AIG’s insurance segments as of March 31, 2006 and December 31, 2005. The VaR number represents the maximum potential loss as of those dates that could be incurred with a 95 percent confidence (i.e., only five percent of historical scenarios show losses greater than the VaR figure) within a one-month holding period. AIG uses the historical simulation methodology that entails repricing all assets and liabilities under explicit changes in market rates within a specific historical time period. AIG uses the most recent three years of historical market information for interest rates, foreign exchange rates, and equity index prices. For each scenario, each transaction was repriced. Portfolio, business unit and finally AIG-wide scenario values are then calculated by netting the values of all the underlying assets and liabilities.

The following table presents the VaR on a combined basis and of each component of market risk for each of AIG's insurance segments as of March 31, 2006 and December 31, 2005. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

(in millions)	General Insurance		Life Insurance & Retirement Services	
	2006	2005	2006	2005
Market risk:				
Combined	\$1,673	\$1,617	\$5,260	\$4,515
Interest rate	1,636	1,717	5,032	4,382
Currency	119	130	597	541
Equity	560	535	795	762

The following table presents the average, high and low VaRs on a combined basis and of each component of market risk for each of AIG's insurance segments as of March 31, 2006 and December 31, 2005. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

(in millions)	2006			2005		
	Average	High	Low	Average	High	Low
General Insurance:						
Market risk:						
Combined	\$1,645	\$1,673	\$1,617	\$1,585	\$1,672	\$1,396
Interest rate	1,677	1,717	1,636	1,746	1,931	1,563
Currency	125	130	119	125	139	111
Equity	547	560	535	651	727	535
Life Insurance & Retirement Services:						
Market risk:						
Combined	\$4,888	\$5,260	\$4,515	\$4,737	\$5,024	\$4,515
Interest rate	4,707	5,032	4,382	4,488	4,750	4,382
Currency	569	597	541	511	560	442
Equity	778	795	762	953	1,024	762

In the Life Insurance & Retirement Services segment, the increase in Combined VaR and Interest rate VaR in 2006 was primarily the result of growth in the Foreign Life business. In most Asian markets, interest rates and interest rate volatilities were stable during the quarter.

Financial Services

AIG generally manages its market exposures within Financial Services by maintaining offsetting positions. Capital Markets seeks to minimize or set limits for open or uncovered market positions. Credit exposure is managed separately. (See the discussion on the management of credit risk above.)

AIG's Market Risk Management Department provides detailed independent review of AIG's market exposures, particularly those market exposures of the Capital Markets operations. This department determines whether AIG's market risks, as well as those market risks of individual subsidiaries, are within the parameters established by AIG's senior management. Well established market risk management techniques such as sensitivity analysis are used. Additionally, this department verifies that specific market risks of each of certain subsidiaries are managed and hedged by that subsidiary.

ILFC is exposed to market risk and the risk of loss of fair value and possible liquidity strain resulting from adverse fluctuations in interest rates. As of March 31, 2006 and December 31, 2005, AIG statistically measured the loss of

fair value through the application of a VaR model. In this analysis, the net fair value of Aircraft Finance operations was determined using the financial instrument assets which included the tax adjusted future flight equipment lease revenue, and the financial instrument liabilities which included the future servicing of the current debt. The estimated effect of the current derivative positions was also taken into account.

AIG calculated the VaR with respect to the net fair value of Aircraft Finance operations using the historical simulation methodology, as previously described. As of March 31, 2006 and December 31, 2005, the average VaR with respect to the net fair value of Aircraft Finance operations was approximately \$196 million and \$129 million, respectively. In late 2005, ILFC lengthened the average maturity of its debt, leading to an increase in its VaR.

Capital Markets operations are exposed to market risk due to changes in the level and volatility of interest rates, foreign currency exchange rates, equity prices and commodity prices. AIGFP hedges its exposure to these risks primarily through swaps, options, forwards and futures. To economically hedge interest rate risks, AIGFP may also purchase U.S. and foreign government obligations.

AIGFP does not seek to manage the market risk of each transaction through an individual third party offsetting transaction. Rather, AIGFP takes a portfolio approach to the management of its market risk exposures. AIGFP values the

predominant portion of its market-sensitive transactions by marking them to market currently through income. A smaller portion is priced by estimated fair value based upon an extrapolation of market factors. There is another limited portion of transactions where the initial fair value is not recorded through income currently and gains or losses are recognized over the life of the transactions. These valuations represent an assessment of the present values of expected future cash flows and may include reserves for such risks as are deemed appropriate by AIGFP and AIG management.

The recorded values of these transactions may be different from the values that might be realized if AIGFP were required to sell or close out the transactions prior to maturity. AIG believes that such differences are not significant to its financial condition or liquidity. Such differences would be immediately recognized when the transactions are sold or closed out prior to maturity.

AIGFP attempts to secure reliable and independent current market prices, such as published exchange prices, external subscription services such as from Bloomberg or Reuters or third-party broker quotes for use in this model. When such prices are not available, AIGFP use an internal methodology which includes extrapolation from observable and verifiable prices nearest to the dates of the transactions. Historically, actual results have not materially deviated from these models in any material respect.

Systems used by Capital Markets operations can monitor each unit's respective market positions on an intraday basis. AIGFP operates in major business centers overseas and therefore is open for business essentially 24 hours a day. Thus, the market exposure and offset strategies are monitored, reviewed and coordinated around the clock.

AIGFP applies various testing techniques which reflect significant potential market movements in interest rates, foreign exchange rates, commodity and equity prices, volatility levels and the effect of time. These techniques vary by currency and are regularly changed to reflect factors affecting the derivatives portfolio. The results from these analyses are regularly reviewed by AIG management.

As described above, Capital Markets operations are exposed to the risk of loss of fair value from adverse fluctuations in interest rate and foreign currency exchange rates and equity and commodity prices as well as implied volatilities thereon. AIG statistically measures the losses of fair value through the application of a VaR model across Capital Markets.

Capital Markets asset and liability portfolios for which the VaR analyses were performed included over the counter and exchange traded investments, derivative instruments and commodities. Because the market risk with respect to securities available for sale, at market, is substantially hedged, segregation of market sensitive instruments into trading and other than trading was not deemed necessary. The VaR calculation is unaffected by the accounting treatment of hedged transactions under FAS 133.

In the calculation of VaR for Capital Markets operations, AIG uses the same historical simulation methodology, described under Insurance above, which entails repricing all assets and liabilities under explicit changes in market rates within a specific historical time period. AIGFP has recently enhanced its library of factors by including implied option volatilities to construct the historical scenarios for simulation.

The following table presents the VaR on a combined basis and of each component of market risk for Capital Markets operations as of March 31, 2006 and December 31, 2005. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

<i>(in millions)</i>	2006	2005
Combined	\$20	\$22
Interest rate	8	9
Currency	6	3
Equity	12	14
Commodity	16	9

The following table presents the average, high and low VaRs on a combined basis and of each component of market risk for Capital Markets operations as of March 31, 2006 and December 31, 2005. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

<i>(in millions)</i>	2006			2005

Recent Accounting Standards

At the March 2004 meeting, the Emerging Issue Task Force (EITF) reached a consensus with respect to Issue No. 03-1, "The Meaning of Other-Than Temporary Impairment and Its Application to Certain Investments." On September 30, 2004, the FASB issued FASB Staff Position (FSP) EITF Issue 03-1-1, Effective Date of Paragraphs 10-20 of EITF Issue No. 03-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments." In November 2005, FASB issued FSP FAS 115-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments," which replaces the measurement and

recognition guidance set forth in Issue No. 03-1 and codifies certain existing guidance on impairment.

In March 2005, FASB issued FSP FIN46R-5 “Implicit Variable Interests under FASB Interpretation No. 46 (revised December 2003), Consolidation of Variable Interest Entities.”

On June 1, 2005, the FASB issued Statement No. 154, “Accounting Changes and Error Corrections” (FAS 154). FAS 154 replaces APB Opinion No. 20, “Accounting Changes” and FASB Statement No. 3, “Reporting Accounting Changes in Interim Financial Statements.”

At the June 2005 meeting, the EITF reached a consensus with respect to Issue No. 04-5, “Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners have Certain Rights.”

On June 29, 2005, FASB issued Statement 133 Implementation Issue No. B38, “Embedded Derivatives: Evaluation of Net Settlement with Respect to the Settlement of a Debt Instrument through Exercise of an Embedded Put Option or Call Option.”

On June 29, 2005, FASB issued Statement 133 Implementation issue No. B39, “Application of Paragraph 13(b) to Call Options That Are Exercisable Only by the Debtor.”

On September 19, 2005, FASB issued Statement of Position 05-1, “Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts.”

On February 16, 2006, FASB issued FAS No. 155, “Accounting for Certain Hybrid Financial Instruments.”

On March 27, 2006, the FASB issued FSP FTB 85-4-1, “Accounting for Life Settlement Contracts by Third-Party Investors” (FSP 85-4-1), an amendment of FTB 85-4, “Accounting for Purchases of Life Insurance.”

On April 13, 2006, the FASB issued FSP FIN 46(R)-6, “Determining the Variability to be Considered in Applying FASB Interpretation No. 46(R).”

From January 1, 2003 through December 31, 2005, AIG accounted for share-based payment transactions with employees under FAS 123, “Accounting for Stock-Based Compensation.” Share-based employee compensation expense was not recognized in the statement of income in prior periods. Effective January 1, 2006, AIG adopted the fair value recognition provisions of Statement of Financial Accounting Standards No. 123R “Share-Based Payments” (FAS 123R). FAS 123R requires that companies use a fair value method to value share-based payments and recognize the related compensation expense in net earnings. AIG adopted FAS 123R using the Modified Prospective Application method, and accordingly, financial statement amounts for the prior periods presented have not been restated to reflect the fair value method of expensing share-based compensation under

FAS 123R. The modified prospective application method provides for the recognition of the fair value with respect to share-based compensation for shares subscribed for or granted on or after January 1, 2006 and all previously granted but unvested awards as of January 1, 2006.

The adoption of FAS 123R resulted in share-based compensation expense of approximately \$8 million during the first three months of 2006, related to awards which were accounted for under the provisions of Accounting Principles Board Opinion No. 25, “Accounting for Stock Issued to Employees.” Consistent with AIG’s prospective adoption of the requirements of FAS 123, AIG did not include the compensation expense related to these awards in its Consolidated Statement of Income. Instead, the effect of these awards was disclosed in the pro forma disclosures required by FAS 123. AIG expects this expense to approximate \$31 million for fiscal 2006. FAS 123R also requires AIG to estimate forfeitures in calculating the expense relating to share-based compensation, rather than recognizing these forfeitures and corresponding reductions in expense as they occur. The pre-tax cumulative effect of adoption, recognized as a reduction in stock-based compensation of \$46 million, was recorded as a cumulative effect of an accounting change net of tax. FAS 123R requires AIG to reflect the cash savings resulting from excess tax benefits in its financial statements as cash flow from financing activities, rather than as cash flow from operating activities as in prior periods. The amount of this excess tax benefit for the three months ending March 31, 2006 was \$1.7 million.

As a result of FAS 123R, excluding the cumulative effect of adoption, AIG’s income before income taxes and net income for the three months ended March 31, 2006 was \$8 million and \$5 million, respectively, lower than if AIG had continued to account for share-based compensation under FAS 123. The effect on basic and diluted earnings for the three months ended March 31, 2006 was less than \$0.01 per share.

AIG uses a variety of assumptions and a binomial model to calculate the fair value of share-based compensation programs.

The contractual term of options granted is generally 10 years with an expected term of 7 years calculated based on an analysis of historical employee exercise behavior and employee turnover (post-vesting terminations).

Expected volatility is the average of historical volatility and the implied volatility of actively traded options on AIG shares.

Dividend yield is based on the twelve month period prior to the grant date. Interest rate curves used in the valuation model were the US Treasury STRIP rates with terms from 3 months to 10 years.

As of March 31, 2006, the total unrecognized compensation costs (net of expected forfeitures) related to

share-based awards granted and not yet vested under AIG's plans, and the blended weighted-average period over which those costs are expected to be recognized, are as follows:

	Unrecognized Pre-Tax Compensation Cost <i>(in millions)</i>	Blended Weighted- Average Period
1996 Employee Stock Purchase Plan, as amended	\$ 4	0.5 years
1999 Stock Option Plan, as amended	\$204	1.40 years
2002 Stock Incentive Plan	\$196	1.83 years
SICO Deferred Compensation Profit Participation Plans	\$357	6.08 years
2005-2006 AIG Deferred Compensation Profit Participation Plan	\$248	11.62 years

The total cost for awards outstanding under each plan as of March 31, 2006 is expected to be recognized over approximately double the respective plan's blended weighted average period.

Historically, SICO's Board of Directors could elect to pay a participant cash in lieu of shares of AIG common stock. On December 9, 2005, SICO notified plan participants that substantially all future payments would be settled with shares

rather than cash. On that date, AIG modified its accounting for the SICO Plans (as described in Note 4 of Notes to the Consolidated Financial Statements) from variable to fixed measurement accounting. See Note 10 herein and Note 16 of Notes to the Consolidated Financial Statements in the 2005 Annual Report on Form 10-K. Using fixed measurement accounting, the compensation expense relating to the SICO Plans for the three months ending March 31, 2006 was approximately \$14 million. In addition, various adjustments totalling \$61 million, primarily relating to stock-split adjustments and other miscellaneous items, were recorded in the three months ending March 31, 2006.

In December, 2005 and January, 2006, Starr made tender offers to AIG employees holding Starr common and preferred stock. In conjunction with AIG's adoption of FAS 123R, Starr is considered to be an "economic interest holder" in AIG. As a result, the compensation expense related to the 2006 tender offer is included in AIG's consolidated financial statements for the three months ending March 31, 2006. The amount of one-time compensation cost attributable to the 2006 tender offer is approximately \$54 million.

For further discussion of these recent accounting standards and their application to AIG, see Note 10 of Notes to Consolidated Financial Statements.

CONTROLS AND PROCEDURES

In connection with the preparation of this First Quarter Form 10-Q, an evaluation was carried out by AIG's management, with the participation of AIG's current Chief Executive Officer and Chief Financial Officer, of the effectiveness of AIG's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (Exchange Act)). Disclosure controls and procedures are designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms and that such information is accumulated and communicated to management, including the Chief Executive Officer and Chief Fi-

ancial Officer, to allow timely decisions regarding required disclosures. Based on its evaluation, and in light of the previously identified material weaknesses in internal control over financial reporting, as of December 31, 2005, described within the 2005 Annual Report on Form 10-K, AIG's Chief Executive Officer and Chief Financial Officer concluded that, as of March 31, 2006, AIG's disclosure controls and procedures were ineffective. In addition, there has been no change in AIG's internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) that occurred during the first three months of 2006 that has materially affected, or is reasonably likely to materially affect, AIG's internal control over financial reporting.

Part II

ITEM 1A. Risk Factors

The following discussion supplements and amends the significant risk factors that may affect AIG as described in detail under “Risk Factors” in Item 1A. of Part I of the 2005 Annual Report on Form 10-K.

AIG’s Credit Ratings

The downgrades in AIG’s credit ratings will increase AIG’s borrowing costs, may lessen AIG’s ability to compete in certain business and will require AIG to post additional collateral.

From March through June of 2005, the major rating agencies downgraded AIG’s ratings in a series of actions. Standard & Poor’s, a division of the McGraw-Hill Companies, Inc. (S&P), lowered the long-term senior debt and counterparty ratings of AIG from ‘AAA’ to ‘AA’ (second highest of eight rating categories) and changed the rating outlook to negative. S&P’s outlook indicates the potential direction of a rating over the intermediate term (typically six months to two years). A negative outlook means that a rating may be lowered; however, an outlook is not necessarily a precursor to a rating change. Moody’s Investors Service (Moody’s) lowered AIG’s long-term senior debt rating from ‘Aaa’ to ‘Aa2’ (second highest of nine rating categories) with a stable outlook. Moody’s appends numerical modifiers 1, 2, and 3 to the generic rating categories to show relative position within rating categories. Fitch Ratings (Fitch) downgraded the long-term senior debt ratings of AIG from ‘AAA’ to ‘AA’ (second highest of nine rating categories) and placed the ratings on Rating Watch Negative. A Fitch Rating Watch notifies investors that there is a reasonable probability of a rating change and the likely direction of such change. A Rating Watch Negative indicates a potential downgrade. Rating Watch is typically resolved over a relatively short period. In April 2006, Fitch removed AIG from Rating Watch Negative and affirmed its rating with a stable outlook.

The agencies also took rating actions on AIG’s insurance subsidiaries. S&P lowered the financial strength ratings of AIG’s insurance subsidiaries to ‘AA+’ (second highest rating of eight rating categories) and assigned a negative rating outlook. Fitch also lowered the financial strength ratings of AIG’s insurance companies to ‘AA+’ (second highest of nine rating categories) and placed them on Rating Watch Negative. In April 2006, Fitch removed the financial strength ratings from Rating Watch Negative and affirmed them with a stable outlook. S&P and Fitch ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories. Moody’s lowered the insurance financial strength ratings generally to either ‘Aa1’ or ‘Aa2’ (both within the second highest of nine rating categories) with a stable outlook. A.M. Best downgraded the financial strength ratings of most of AIG’s insurance subsidiaries

from ‘A++’ to ‘A+’ (second highest of fourteen rating levels) and the issuer credit ratings from ‘aa+’ to ‘aa-’ (remaining within the second highest of nine rating levels) and placed the ratings under review with negative implications. An under review modifier by A.M. Best is assigned to a company whose rating opinion is under review and may be subject to change in the near-term, generally defined as six months. Negative implications indicates a potential downgrade.

In addition, S&P changed the outlook on the ‘AA-’ long-term senior debt rating (second highest out of eight rating categories) of ILFC (a wholly owned subsidiary of AIG) to negative. Moody’s affirmed ILFC’s long-term and short-term senior debt ratings (‘A1’/‘P-1’) (third highest of nine, and highest of three, rating categories, respectively). Fitch downgraded ILFC’s long-term senior debt rating from ‘AA-’ to ‘A+’ (third highest of nine rating categories), placed it on Rating Watch Negative and downgraded ILFC’s short-term debt rating from ‘F1+’ to ‘F1’ (remaining within the highest of five rating categories). In April 2006, Fitch removed ILFC’s long-term senior debt rating from Rating Watch Negative and affirmed it with a stable outlook.

These debt and financial strength ratings are current opinions of the rating agencies. As such, they may be changed, suspended or withdrawn at any time by the rating agencies as a result of changes in, or unavailability of, information or based on other circumstances. Ratings may also be withdrawn at AIG management’s request. This discussion of ratings is not a complete list of ratings of AIG and its subsidiaries.

These ratings actions have affected and will continue to affect AIG’s business and results of operations in a number of ways.

- **Downgrades in AIG’s debt ratings will adversely affect AIG’s results of operations.** AIG relies on external sources of financing to fund several of its operations. The cost and availability of unsecured financing are generally dependent on the issuer’s long-term and short-term debt ratings. These downgrades and any future downgrades in AIG’s debt ratings may adversely affect AIG’s borrowing costs and therefore adversely affect AIG’s results of operations.
- **The downgrade in AIG’s long-term senior debt ratings will adversely affect AIGFP’s ability to compete for certain businesses.** Credit ratings are very important to the ability of financial institutions to compete in the derivative and structured transaction marketplaces. Historically, AIG’s triple-A ratings provided AIGFP a competitive advantage. The downgrades have reduced this advantage and, for specialized financial transactions that generally are conducted only by triple-A rated financial institutions, counterparties may be unwilling to transact business with AIGFP except on a secured basis. This could require AIGFP to post more collateral to counterparties in the future. See below for a

further discussion of the effect that posting collateral may have on AIG's liquidity.

- **Although the financial strength ratings of AIG's insurance company subsidiaries remain high compared to many of their competitors, the downgrades have reduced the previous ratings differential.** The competitive advantage of the ratings to AIG's insurance company subsidiaries may be lessened accordingly.
- **As a result of the downgrades of AIG's long-term senior debt ratings, AIG was required to post approximately \$1.16 billion of collateral with counterparties to municipal guaranteed investment contracts and financial derivatives transactions.** In the event of a further downgrade, AIG will be required to post additional collateral. It is estimated that, as of the close of business on April 30, 2006 based on

AIG's outstanding municipal guaranteed investment agreements and financial derivatives transactions as of such date, a further downgrade of AIG's long-term senior debt ratings to 'Aa3' by Moody's or 'AA-' by S&P would permit counterparties to call for approximately \$896 million of additional collateral. Further, additional downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIG manages its liquidity. The actual amount of additional collateral that AIG would be required to post to counterparties in the event of such downgrades depends on market conditions, the market value of the outstanding affected transactions and other factors prevailing at the time of the downgrade. Any additional obligations to post collateral will increase the demand on AIG's liquidity.

ITEM 2. Unregistered Sales of Equity Securities and Use of Proceeds

The table below provides information with respect to purchases of AIG Common stock during the three months ended March 31, 2006.

Period	Total Number of Shares Purchased ⁽¹⁾	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares that May Yet Be Purchased Under the Plans or Programs ⁽²⁾ at End of Month
January 1 - 31	—	\$ —	—	36,542,700
February 1 - 28	—	—	—	36,542,700
March 1 - 31	—	—	—	36,542,700
Total	—	\$ —	—	

(1) Does not include 29,514 shares delivered or attested to in satisfaction of the exercise price by holders of AIG employee stock options exercised during the three months ended March 31, 2006.

(2) On July 19, 2002, AIG announced that its Board of Directors had authorized the open market purchase of up to 10 million shares of common stock. On February 13, 2003, AIG announced that the Board had expanded the existing program through the authorization of an additional 50 million shares. The purchase program has no set expiration or termination date.

American International Group, Inc.

Computation of Ratios of Earnings to Fixed Charges

Three Months Ended March 31, (in millions, except ratios)	2006	2005
Income before income taxes, minority interest and cumulative effect of an accounting change	\$ 4,793	\$ 5,649
Less – Equity income of less than 50% owned persons	20	63
Add – Dividends from less than 50% owned persons	3	3
	4,776	5,589
Add – Fixed charges	1,948	1,730
Less – Capitalized interest	15	15
Income before income taxes, minority interest, cumulative effect of an accounting change and fixed charges	\$ 6,709	\$ 7,304
Fixed charges:		
Interest costs	\$ 1,896	\$ 1,679
Rental expense*	52	51
Total fixed charges	\$ 1,948	\$ 1,730
Ratio of earnings to fixed charges	3.44	4.22
Secondary Ratio		
Interest credited to GIC and GIA policy and contract holders	\$(1,090)	\$(1,094)
Total fixed charges excluding interest credited to GIC and GIA policy and contract holders	\$ 858	\$ 636
Secondary ratio of earnings to fixed charges	6.55	9.76

*The proportion deemed representative of the interest factor.

The secondary ratio is disclosed for the convenience of fixed income investors and the rating agencies that serve them and is more comparable to the ratios disclosed by all issuers of fixed income securities. The secondary ratio removes interest credited to guaranteed investment contract (GIC) policyholders and guaranteed investment agreement (GIA) contractholders. Such expenses are also removed from income before income taxes, minority interest and cumulative effect of an accounting change used in this calculation. GICs and

GIAs are entered into by AIG's insurance subsidiaries, principally Sun America Life Insurance Company and AIG Financial Products Corp. and its subsidiaries, respectively. The proceeds from GICs and GIAs are invested in a diversified portfolio of securities, primarily investment grade bonds. The assets acquired yield rates greater than the rates on the related policyholders obligation or agreement, with the intent of earning operating income from the spread.

CERTIFICATIONS

I, Martin J. Sullivan, certify that:

1. I have reviewed this Quarterly Report on Form 10-Q of American International Group, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

See Accompanying Notes to Consolidated Financial Statements.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited)***1. Financial Statement Presentation**

These unaudited condensed consolidated financial statements do not include certain financial information required by U.S. generally accepted accounting principles (GAAP) for complete financial statements and should be read in conjunction with the audited consolidated financial statements and the related notes, included in the Annual Report on Form 10-K/A of American International Group, Inc. (AIG) for the year ended December 31, 2005 (2005 Annual Report on Form 10-K/A).

In the opinion of management, the consolidated financial statements contain the normal recurring adjustments necessary for a fair statement of the results presented herein. Intercompany accounts and transactions have been eliminated. Certain accounts have been reclassified in the 2005 financial statements to conform to their 2006 presentation. See also Note 11 herein.

During the second quarter of 2006, as part of its continuing remediation efforts, AIG identified and recorded an out of period adjustment related to the accounting for certain interests in unit investment trusts in accordance with FIN 46(R),

“Consolidation of Variable Interest Entities” and APB Opinion No. 18, “The Equity Method of Accounting for Investments in Common Stock”. These investments had previously been accounted for as available for sale securities, with changes in market values being reflected in other comprehensive income, net of deferred income taxes. Beginning with the second quarter of 2006, the changes in market values are included in AIG’s net investment income. The adjustment decreased Unrealized appreciation (depreciation) of investments – net of reclassification adjustments, and the related Deferred income tax benefit (expense), in the Consolidated Statement of Comprehensive Income (Loss) by approximately \$576 million and approximately \$202 million, respectively, for the three and six-month periods ended June 30, 2006 and increased Net investment income by \$653 million, increased Incurred policy losses and benefits, related to certain participating policyholder funds, by \$77 million, and increased Income taxes by \$202 million in the Consolidated Statement of Income for the three and six-month periods ended June 30, 2006. There was no effect on Total shareholders’ equity as of June 30, 2006 or December 31, 2005.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information**

AIG identifies its reportable segments by product line consistent with its management structure. AIG's major product and service groupings are general insurance, life insurance & retirement services, financial services and asset management. **The following table summarizes the operations by major operating segment for the three and six-month periods ended June 30, 2006 and 2005:**

Operating Segments (in millions)	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
Revenues ^(a) :				
General Insurance ^{(b)(h)}	\$12,167	\$11,405	\$23,823	\$22,624
Life Insurance & Retirement Services ^{(c)(h)}	11,705	11,517	24,344	23,292
Financial Services ^(d)	1,226	3,778	2,841	6,214
Asset Management ^(e)	1,621	1,219	2,860	2,596
Other	24	(16)	134	379
Consolidated	\$26,743	\$27,903	\$54,002	\$55,105
Operating income (loss) ^{(a)(f)} :				
General Insurance ^(h)	\$ 2,863	\$ 1,885	\$ 5,194	\$ 3,527
Life Insurance & Retirement Services ^{(g)(h)}	2,302	2,324	4,857	4,505
Financial Services ^(g)	(548)	2,214	(707)	3,259
Asset Management	811	524	1,272	1,114
Other ^(f)	(187)	(246)	(582)	(55)
Consolidated	\$ 5,241	\$ 6,701	\$10,034	\$12,350

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2006 and 2005, the effect was \$(1.08) billion and \$1.63 billion, respectively, in revenues and \$(1.08) billion and \$1.61 billion, respectively, in operating income. For the six-month periods ended June 30, 2006 and 2005, the effect was \$(1.30) billion and \$2.56 billion, respectively, in revenues and \$(1.30) billion and \$2.62 billion, respectively, in operating income. These amounts result primarily from interest rate and foreign currency derivatives which are hedging available for sale securities and borrowings.

(b) Represents the sum of General Insurance net premiums earned, net investment income and realized capital gains (losses).

(c) Represents the sum of Life Insurance & Retirement Services GAAP premiums, net investment income and realized capital gains (losses). Included in realized capital gains (losses) is the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 and the application of FAS 52 of \$(21) million and \$(103) million in the three-month periods ended June 30, 2006 and 2005, respectively, and \$335 million and \$(183) million in the six-month periods ended June 30, 2006 and 2005, respectively.

(d) Represents interest, lease and finance charges.

(e) Represents management and advisory fees and net investment income with respect to Guaranteed Investment Contracts (GICs).

(f) Represents income before income taxes, minority interest and cumulative effect of an accounting change.

(g) Results of operations of AIG Credit Card Company (Taiwan) are shared equally by the Life Insurance & Retirement Services segment and the Financial Services segment. Additional allowances of \$44 million were recorded in the first quarter of 2006, by each segment, for losses in these credit card operations.

(h) Includes the effect of an out of period adjustment related to the accounting for certain interests in unit investment trusts. For the three and six-month periods ended June 30, 2006 the effect was an increase of \$432 million in revenues and operating income for General Insurance and an increase of \$221 million and \$144 million in revenues and operating income, respectively, for Life Insurance & Retirement Services.

(i) The operating loss for the Other category is as follows:

(in millions)	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
Operating income (loss):				
Equity earnings in unconsolidated subsidiaries	\$ 111	\$ 36	\$ 130	\$ 96
Compensation expense – SICO Plans	(14)	(60)	(90)	(67)
Compensation expense – C.V. Starr tender offer	–	–	(54)	–
Interest expense	(223)	(127)	(406)	(251)
Unallocated corporate expenses	(71)	(108)	(261)	(195)
Realized capital gains (losses)	24	(16)	134	379
Other miscellaneous, net	(14)	29	(35)	(17)
Total Other	\$ (187)	\$ (246)	\$ (582)	\$ (55)

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information** (continued)

Each of the General Insurance sub-segments is comprised of groupings of major products and services as follows: Domestic Brokerage Group is comprised of domestic commercial insurance products and services; Transatlantic is comprised of reinsurance products and services sold to other general insurance companies; Personal Lines are comprised of general insurance products and services sold to individuals; Mortgage Guaranty is comprised of products insuring against losses arising under certain loan agreements; and Foreign General is comprised of general insurance products sold overseas.

The following table summarizes AIG's General Insurance operations by major internal reporting unit for the three and six-month periods ended June 30, 2006 and 2005:

General Insurance (in millions)	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
Revenues:				
Domestic Brokerage Group	\$ 6,605	\$ 6,241	\$13,160	\$12,530

Reclassifications and Eliminations	-	(1)	2	5
Total General Insurance	\$ 2,863	\$ 1,885	\$ 5,194	\$ 3,527

^(a) Includes the effect of an out of period adjustment related to the accounting for certain interests in unit investment trusts. For the three and six-month periods ended June 30, 2006 the effect was an increase of \$412 million in revenues and operating income.

^(b) Includes additional (reduction in) losses incurred and net reinstatement premiums primarily related to prior year catastrophes of \$(51) million and \$27 million, in the three-month periods ended June 30, 2006 and 2005, respectively. Such losses and premiums were \$48 million and \$198 million in the six-month periods ended June 30, 2006 and 2005, respectively.

Life Insurance & Retirement Services is comprised of two major groupings of products and services: insurance-oriented products and services and retirement savings products and services. Substantially all of the retirement savings products are reported in the VALIC, AIG Annuity and AIG SunAmerica sub-segment.

The following table summarizes AIG's Life Insurance & Retirement Services operations by major internal reporting unit for the three and six-month periods ended June 30, 2006 and 2005:

Life Insurance & Retirement Services (in millions)	Three Months Ended June 30,		Six Months Ended June 30,

^(a) Represents the operations of American International Assurance Company, Limited together with American International Assurance Company (Bermuda) Limited (AIA), American International Reinsurance Company, Ltd. (AIRCO), and Nan Shan Life Insurance Company, Ltd. (Nan Shan). Revenues and operating income include realized capital gains (losses) of \$(15) million and \$110 million for the three-month periods ended June 30, 2006 and 2005, respectively, and \$198 million and \$176 million for the six-month periods ended June 30, 2006 and 2005, respectively. The effects of FAS 133 and the application of FAS 52 included in realized capital gains (losses) are losses of \$(131) million and gains of \$50 million for the three-month periods ended June 30, 2006 and 2005, respectively, and gains of \$112 million and \$61 million for the six-month periods ended June 30, 2006 and 2005, respectively. Includes \$44 million in additional allowances for losses recorded in the first quarter of 2006 from AIG Credit Card Company (Taiwan).

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information** (continued)

- (b) Represents the operations of American Life Insurance Company (ALICO), AIG Star Life Insurance Co., Ltd. (AIG Star Life), and AIG Edison Life Insurance Company (AIG Edison Life). Revenues and operating income include realized capital gains of \$162 million and \$11 million for the three-month periods ended June 30, 2006 and 2005, respectively, and gains of \$311 million and losses of \$(128) million for the six-month periods ended June 30, 2006 and 2005, respectively. The effects of FAS 133 and the application of FAS 52 included in realized capital gains (losses) are gains of \$111 million and losses of \$(78) million for the three-month periods ended June 30, 2006 and 2005, respectively, and gains of \$157 million and losses of \$(263) million for the six-month periods ended June 30, 2006 and 2005, respectively.
- (c) Includes the life operations of American General Life Insurance Company (AG Life), AIG Life Insurance Company and American International Life Assurance Company of New York. Also includes the operations of American General Life and Accident Insurance Company (AGLA). Revenues and operating income include realized capital losses of \$(75) million and \$(135) million for the three-month periods ended June 30, 2006 and 2005, respectively, and losses of \$(67) million and \$(63) million for the six-month periods ended June 30, 2006 and 2005, respectively. The effects of FAS 133 and the application of FAS 52 included in realized capital gains (losses) are gains of \$29 million and losses of \$(171) million for the three-month periods ended June 30, 2006 and 2005, respectively, and gains of \$115 million and losses of \$(66) million for the six-month periods ended June 30, 2006 and 2005, respectively.
- (d) "AIG SunAmerica" represents the annuity operations of AIG SunAmerica Life Assurance Company, as well as those of First SunAmerica Life Insurance Company and SunAmerica Life Insurance Company. Also includes the operations of The Variable Annuity Life Insurance Company (VALIC) and AIG Annuity Insurance Company (AIG Annuity). Revenues and operating income include realized capital losses of \$(307) million and gains of \$57 million for the three-month periods ended June 30, 2006 and 2005, respectively, and losses of \$(509) million and \$(22) million for the six-month periods ended June 30, 2006 and 2005, respectively. The effects of FAS 133 and the application of FAS 52 included in realized capital gains (losses) are losses of \$(42) million and gains of \$96 million for the three month periods ended June 30, 2006 and 2005, respectively, and losses of \$(36) million and gains of \$85 million for the six-month periods ended June 30, 2006 and 2005, respectively.
- (e) Includes the effect of an out of period adjustment related to the accounting for certain interests in unit investment trusts. For the three and six-month periods ended June 30, 2006 the effect was an increase of \$221 million in revenues and \$144 million in operating income.

The following table summarizes AIG's Financial Services operations by major internal reporting unit for the three and six-month periods ended June 30, 2006 and 2005:

Financial Services (in millions)	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
Revenues ^(a) :				
Aircraft Finance ^(b)	\$1,042	\$ 891	\$ 2,007	\$1,718
Capital Markets ^{(c)(d)}	(788)	1,975	(1,088)	2,731
Consumer Finance ^(e)	939	891	1,863	1,724
Other	33	21	59	41
Total Financial Services	\$1,226	\$3,778	\$ 2,841	\$6,214
Operating income (loss) ^(a) :				
Aircraft Finance	\$ 189	\$ 124	\$ 318	\$ 311

Total Financial Services	\$ (548)	\$2,214	\$ (707)	\$3,259

- (a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three and six-month periods ended June 30, 2005, the effect was \$(64) million and \$(49) million, respectively, in operating income for Aircraft Finance. During 2006, Aircraft Finance's derivative gains and losses are reported as part of the Other category and not reported in Aircraft Finance's operating income. For the three-month periods ended June 30, 2006 and 2005, the effect was \$(1.16) billion and \$1.70 billion in both revenues and operating income, respectively, for Capital Markets. For the six-month periods ended June 30, 2006 and 2005, the effect was \$(1.84) billion and \$2.16 billion in both revenues and operating income, respectively, for Capital Markets. These amounts result primarily from interest rate and foreign currency derivatives which are hedging available for sale securities and borrowings.
- (b) Revenues are primarily from International Lease Finance Corporation (ILFC) aircraft lease rentals.
- (c) Revenues, shown net of interest expense, are primarily from hedged financial positions entered into in connection with counterparty transactions and the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 described in (a) above.
- (d) Certain transactions entered into by AIGFP generate tax credits and benefits which are included in income taxes in the consolidated statement of income. The amount of such tax credits and benefits for the three-month periods ended June 30, 2006 and 2005 are \$8 million and \$21 million, respectively. The amount of such tax credits and benefits for the six-month periods ended June 30, 2006 and 2005 are \$26 million and \$40 million, respectively.
- (e) Revenues are primarily finance charges.
- (f) Includes \$44 million in additional allowances for losses recorded in the first quarter of 2006 from AIG Credit Card Company (Taiwan).

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information** (continued)

The following table summarizes AIG's Asset Management revenues and operating income for the three and six-month periods ended June 30, 2006 and 2005:

Asset Management (in millions)	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
Revenues:				
Guaranteed Investment Contracts	\$ 850	\$ 903	\$1,672	\$1,799
Institutional Asset Management	619	178	898	497
Brokerage Services and Mutual Funds	73	62	146	125
Other	79	76	144	175
Total Asset Management	\$1,621	\$1,219	\$2,860	\$2,596
Operating income:

Other	75	73	136	170
Total Asset Management	\$ 811	\$ 524	\$1,272	\$1,114

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three and six-month periods ended June 30, 2005, the effect was \$47 million and \$109 million, respectively, in operating income. During 2006, these derivative gains and losses are reported as part of the Other category, and not reported in Asset Management operating income.

(b) Includes the full results of certain AIG managed private equity and real estate funds that are consolidated pursuant to FIN 46(R), "Consolidation of Variable Interest Entities". Also includes \$183 million and \$37 million for the three-month periods ended June 30, 2006 and 2005, respectively, and \$210 million and \$112 million for the six-month periods ended June 30, 2006 and 2005, respectively, of third-party limited partner earnings offset in minority interest expense, which is not a component of operating income.

(c) Includes the full results of certain AIG managed partnerships that are consolidated effective January 1, 2006 pursuant to EITF 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights." For the three and six-month periods ended June 30, 2006, operating income includes \$87 million and \$156 million, respectively, of third-party limited partner earnings offset in minority interest expense, which is not a component of operating income.

3. Earnings Per Share

Earnings per share of AIG are based on the weighted average number of common shares outstanding during the period. See also Note 10 herein.

Computation of Earnings Per Share (EPS):

(in millions, except per share data)	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005

Cumulative effect on an accounting change, net of tax	—	—	0.01	—
Net income	\$ 1.21	\$ 1.71	\$ 2.43	\$ 3.16

(a) Assumes conversion of contingently convertible bonds due to the adoption of EITF Issue No. 04-8 "Accounting Issues Related to Certain Features of Contingently Convertible Debt and the Effect on Diluted Earnings per Share."

(b) Certain share equivalents arising from employee stock plans were not included in the computation of diluted earnings per share where the exercise price of the options exceeded the average market price and would have been antidilutive. The number of share equivalents excluded were 15 million and 23 million for the first six months of 2006 and 2005, respectively.

From time to time, AIG may buy shares of its common stock in the open market for general corporate purposes, including to satisfy its obligations under various employee benefit plans. At June 30, 2006 and December 31, 2005, an additional 36,542,700 shares could be purchased under the then current authorization by AIG's Board of Directors. Although AIG has authorization to purchase additional shares, AIG has not repurchased shares in 2006. During the six months ended June 30, 2005, AIG purchased in the open market 2,477,100 shares of its common stock.

4. Benefits Provided by Starr International Company, Inc. and C.V. Starr & Co., Inc.

Starr International Company, Inc. (SICO) has provided a series of two-year Deferred Compensation Profit Participation Plans (SICO Plans) to certain AIG employees. The SICO Plans came into being in 1975 when the voting shareholders and Board of Directors of SICO, a private holding company whose principal asset is AIG common stock, decided that a portion of the capital value of SICO should be used to provide an incentive plan for the current and succeeding managements of all American International companies, including AIG.

None of the costs of the various benefits provided under the SICO Plans has been paid by AIG, although AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an

offsetting amount credited to additional paid-in capital reflecting amounts deemed contributed by SICO. The SICO Plans provide that shares currently owned by SICO are set aside by SICO for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's voluntary termination of employment with AIG prior to normal retirement age. Under the SICO Plans, SICO's Board of Directors may elect to pay a participant cash in lieu of shares of AIG common stock. Following notification from SICO to participants in the SICO Plans that it will settle specific future awards under the SICO Plans with shares rather than cash, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting, although variable accounting will continue to be applied where SICO makes cash payments pursuant to elections made prior to March 2005. AIG gave effect to this change in settlement method beginning on December 9, 2005, the date of SICO's notice to participants in the SICO Plans. See also Note 6(f) herein.

Compensation expense with respect to the SICO Plans aggregated \$14 million and \$60 million for the three-month periods ended June 30, 2006 and 2005, respectively, and \$90 million and \$67 million for the six-month periods ended June 30, 2006 and 2005, respectively. Compensation expense in the first quarter of 2006 included various out of period

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)*

4. Benefits Provided by Starr International Company, Inc. *(continued)*

adjustments totaling \$61 million, primarily relating to stock-splits and other miscellaneous items. See also Note 10 herein.

In January 2006, C.V. Starr & Co., Inc. (Starr) completed its tender offer to purchase Starr interests from AIG employees. In conjunction with AIG's adoption of FAS 123R, Starr is considered to be an "economic interest holder" in AIG. As a result, compensation expense of \$54 million recorded in the first quarter with respect to the Starr offer, was included in the first six months of 2006.

As a result of its changing relationship with Starr and SICO, AIG has established new executive compensation plans to replace the SICO plans and investment opportunities previously provided by Starr. The replacement plans include both share-based plans and cash-based plans. In addition, these replacement plans generally include performance as well as service conditions. See also Note 10 herein.

5. Ownership and Transactions With Related Parties

(a) Ownership: According to the Schedule 13D filed on May 26, 2006 by Starr, SICO, Edward E. Matthews, Maurice R. Greenberg, the Maurice R. and Corinne P. Greenberg Family Foundation, Inc., the Universal Foundation, Inc. and the Maurice R. and Corinne P. Greenberg Joint Tenancy Company, LLC, these reporting persons may be deemed to beneficially own 393,157,543 shares of common stock. Based on the shares of common stock outstanding as of July 31, 2006, this ownership represents approximately 15 percent of the voting stock of AIG.

(b) Transactions with Related Parties: In the ordinary course of business during the first six months of 2006, AIG and its subsidiaries paid commissions to Starr and its subsidiaries for the production and management of insurance business. As of July 25, 2006, none of the Starr agencies serve as agents for AIG companies. There were no significant receivables from/payables to related parties at June 30, 2006.

6. Commitments and Contingent Liabilities

In the normal course of business, various commitments and contingent liabilities are entered into by AIG and certain of its subsidiaries. In addition, AIG guarantees various obligations of certain subsidiaries.

(a) AIG and certain of its subsidiaries become parties to derivative financial instruments with market risk resulting from both dealer and end user activities and to reduce currency, interest rate, equity and commodity exposures. These instruments are carried at their estimated fair values in the

consolidated balance sheet. The vast majority of AIG's derivative activity is transacted by AIGFP. (See also Note 20 of Notes to Consolidated Financial Statements in AIG's 2005 Annual Report on Form 10-K/A.)

(b) Securities sold, but not yet purchased and spot commodities sold but not yet purchased represent obligations of AIGFP to deliver specified securities and spot commodities at their contracted prices. AIGFP records a liability to repurchase the securities and spot commodities in the market at prevailing prices.

AIG has issued unconditional guarantees with respect to the prompt payment, when due, of all present and future payment obligations and liabilities of AIGFP arising from transactions entered into by AIGFP.

(c) At June 30, 2006, ILFC had committed to purchase 266 new aircraft deliverable from 2006 through 2015 at an estimated aggregate purchase price of \$18.9 billion and had options to purchase 13 new aircraft at an estimated aggregate purchase price of \$1.4 billion. ILFC will be required to find customers for any aircraft acquired, and it must arrange financing for portions of the purchase price of such equipment.

(d) AIG and its subsidiaries, in common with the insurance industry in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. The trend of increasing jury awards and settlements makes it difficult to assess the ultimate outcome of such litigation.

Although AIG regularly reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, directors and officers liability (D&O), professional liability, medical malpractice, workers compensation, general liability, products liability and related classes, as well as for asbestos and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss trends or loss development factors could be attributable to changes in inflation in labor and material costs or in the judicial environment, or in other social or economic phenomena affecting claims.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments and Contingent Liabilities** (continued)

(e) SAI Deferred Compensation Holdings, Inc., a wholly-owned subsidiary of AIG, has established a deferred compensation plan for registered representatives of certain AIG subsidiaries, pursuant to which participants have the opportunity to invest deferred commissions and fees on a notional basis. The value of the deferred compensation fluctuates with the value of the deferred investment alternatives chosen. AIG has provided a full and unconditional guarantee of the obligations of SAI Deferred Compensation Holdings, Inc. to pay the deferred compensation under the plan.

(f) On June 27, 2005, AIG entered into an agreement pursuant to which AIG agrees, subject to certain conditions, to make any payment that is not promptly paid with respect to the benefits accrued by certain employees of AIG and its subsidiaries under the SICO Plans (as defined in Note 4).

(g) AIG and certain of its subsidiaries have been named defendants in two putative class actions in state court in Alabama that arise out of the 1999 settlement of class and derivative litigation involving Caremark Rx, Inc. (Caremark). An excess policy issued by a subsidiary of AIG with respect to the 1999 litigation was expressly stated to be without limit of liability. In the current actions, plaintiffs allege that the judge approving the 1999 settlement was misled as to the extent of available insurance coverage and would not have approved the settlement had he known of the existence and/or unlimited nature of the excess policy. They further allege that AIG, its subsidiaries, and Caremark are liable for fraud and suppression for misrepresenting and/or concealing the nature and extent of coverage. In their complaint, plaintiffs request compensatory damages for the 1999 class in the amount of \$3.2 billion, plus punitive damages. AIG and its subsidiaries deny the allegations of fraud and suppression and have asserted, *inter alia*, that information concerning the excess policy was publicly disclosed months prior to the approval of the settlement. AIG and its subsidiaries further assert that the current claims are barred by the statute of limitations and that plaintiffs' assertions that the statute was tolled cannot stand against the public disclosure of the excess coverage. Plaintiffs, in turn, have asserted that the disclosure was insufficient to inform them of the nature of the coverage and did not start the running of the statute of limitations. On January 28, 2005, the Alabama trial court determined that one of the current actions may proceed as a class action on behalf of the 1999 classes that were allegedly defrauded by the settlement. AIG, its subsidiaries, and Caremark are seeking appellate relief from the Alabama Supreme Court. AIG cannot now estimate either the likelihood of its prevailing in these actions or the potential damages in the event liability is determined.

(h) On December 30, 2004, an arbitration panel issued its ruling in connection with a 1998 workers compensation quota share reinsurance agreement under which Superior National Insurance Company, among others, was reinsured by The United States Life Insurance Company in the City of New York (USLIFE), a subsidiary of American General Corporation. In its 2-1 ruling the arbitration panel refused to rescind the contract as requested by USLIFE. Instead, the panel reformed the contract to reduce USLIFE's participation by ten percent. USLIFE is pursuing certain reinsurance recoverables in connection with the contract. Further, the arbitration ruling established a second phase of arbitration for USLIFE to present its challenges to certain cessions to the contract. AIG holds a reserve of approximately \$374 million related to this matter as of June 30, 2006.

(i) Regulators from several states have commenced investigations into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Various parties, including insureds and shareholders, have also asserted putative class action and other claims against AIG or its subsidiaries alleging, among other things, violations of the antitrust and federal securities laws, and AIG expects that additional claims may be made.

In February 2006, AIG reached a resolution of claims and matters under investigation with the United States Department of Justice (DOJ), the Securities and Exchange Commission (SEC), the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). The settlements resolved outstanding litigation filed by the SEC, NYAG and DOI against AIG and concluded negotiations with these authorities and the DOJ in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. In the fourth quarter of 2005 AIG recorded an after-tax charge of \$1.15 billion for the settlements.

As a result of these settlements, AIG made payments or placed amounts in escrow in the first six months of 2006 totaling approximately \$1.64 billion, \$225 million of which represented fines and penalties. Amounts held in escrow totaling \$685 million, including interest thereon, are included in other assets and other liabilities at June 30, 2006. A substantial portion of the money will be available to resolve claims asserted in various regulatory and civil proceedings, including shareholder lawsuits.

Also, as part of the settlements, AIG has agreed to retain for a period of three years an independent consultant who will conduct a review that will include the adequacy of AIG's internal control over financial reporting and the remediation plan that AIG has implemented as a result of its own internal review.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***6. Commitments and Contingent Liabilities** *(continued)*

Various federal and state regulatory agencies are reviewing certain transactions and practices of AIG and its subsidiaries in connection with industry-wide and other inquiries. AIG has cooperated, and will continue to cooperate, in producing documents and other information in response to the subpoenas.

A number of lawsuits have been filed regarding the subject matter of the investigations of insurance brokerage practices, including derivative actions, individual actions and class actions under the federal securities laws, Racketeer Influenced and Corrupt Organizations Act (RICO), Employee Retirement Income Security Act (ERISA) and state common and corporate laws in both federal and state courts, including the United States District Court for the Southern District of New York (Southern District of New York), in the Commonwealth of Massachusetts Superior Court and in Delaware Chancery Court. All of these actions generally allege that AIG and its subsidiaries violated the law by allegedly concealing a scheme to “rig bids” and “steer” business between insurance companies and insurance brokers.

Since October 19, 2004, AIG or its subsidiaries have been named as a defendant in sixteen complaints that were filed in federal court and two that were originally filed in state court (Massachusetts and Florida) and removed to federal court. These cases generally allege that AIG and its subsidiaries violated federal and various state antitrust laws, as well as federal RICO laws, various state deceptive and unfair practice laws and certain state laws governing fiduciary duties. The alleged basis of these claims is that there was a conspiracy between insurance companies and insurance brokers with regard to the use of contingent commission agreements, bidding practices, and other broker-related conduct concerning coverage in certain sectors of the insurance industry. The Judicial Panel on Multidistrict Litigation entered an order on February 17, 2005, consolidating most of these cases and transferring them to the United States District Court for the District of New Jersey (District of New Jersey). The remainder of these cases have been transferred to the District of New Jersey. On August 15, 2005, the plaintiffs in the multidistrict litigation filed a Corrected First Consolidated Amended Commercial Class Action Complaint, which, in addition to the previously named AIG defendants, names new AIG subsidiaries as defendants. Also on August 15, 2005, AIG and two subsidiaries were named as defendants in a Corrected First Consolidated Amended Employee Benefits Class Action Complaint filed in the District of New Jersey, which asserts similar claims with respect to employee benefits insurance and a claim under ERISA on behalf of putative classes of employers and employees.

On November 29, 2005, the AIG defendants, along with other insurer defendants and the broker defendants filed motions to dismiss both the Commercial and Employee Benefits Complaints. Plaintiffs have filed a motion for class certification in the consolidated action, in response to which defendants have filed an opposition. On April 4, 2006, a complaint against AIG and several of its subsidiaries was filed in the United States District Court for the Northern District of Georgia alleging claims similar to what was alleged in the consolidated complaint. A conditional transfer order was issued on May 31, 2006. In addition, complaints were filed against AIG and several of its subsidiaries in Massachusetts and Florida state courts, which have both been stayed. In the Florida action, the plaintiff has filed a petition for a writ of certiorari with the District Court of Appeals of the State of Florida, Fourth District with respect to the stay order. On February 9, 2006, a complaint against AIG and several of its subsidiaries was filed in Texas state court, making claims similar to those in the federal cases above. On April 17, 2006, the AIG defendants moved to stay this action pending resolution of the consolidated action.

In April and May 2005, amended complaints were filed in the consolidated derivative and securities cases, as well as in one of the ERISA lawsuits, pending in the Southern District of New York adding allegations concerning AIG’s accounting treatment for non-traditional insurance products.

In September 2005, a second amended complaint was filed in the consolidated securities cases adding allegations concerning AIG’s first restatement of its financial statements described in the 2005 Annual Report on Form 10-K (the “First Restatement”), and a new securities action complaint was filed in the Southern District of New York, asserting claims premised on the same allegations made in the consolidated cases. In April 2006, motions to dismiss were denied in the securities actions. AIG filed answers in both securities actions in June 2006, as did other defendants.

Also in September 2005, a class action complaint was filed to consolidate the ERISA cases pending in the Southern District of New York. Motions to dismiss in the consolidated action were filed in January 2006.

In April 2005, new derivative actions were filed in Delaware Chancery Court, and in July and August 2005, two new derivative actions were filed in the Southern District of New York asserting claims duplicative of the claims made in the consolidated derivative action.

In July 2005, a second amended complaint was filed in the consolidated derivative case in the Southern District of New York, expanding upon accounting-related allegations, based upon the First Restatement. In June 2005, the derivative cases in Delaware were consolidated and, in August 2005, an amended consolidated complaint was filed. AIG’s

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***6. Commitments and Contingent Liabilities** *(continued)*

Board of Directors has appointed a special committee of independent directors to review the matters asserted in the derivative complaints. The courts have approved agreements staying the derivative cases pending in the Southern District of New York and in Delaware Chancery Court while the special committee of independent directors performs its work. In September 2005, a shareholder filed suit in Delaware Chancery Court seeking documents relating to some of the allegations made in the derivative suits. The court approved a stipulation dismissing that action on May 15, 2006.

On June 20, 2006, SICO filed suit in Delaware Chancery Court seeking the inspection of certain books and records of AIG.

In late 2002, a derivative action was filed in Delaware Chancery Court in connection with AIG's transactions with certain entities affiliated with Starr and SICO. In May 2005, the plaintiff filed an amended complaint which adds additional claims premised on allegations relating to insurance brokerage practices and AIG's non-traditional insurance products. On February 16, 2006, the Delaware Chancery Court entered an order dismissing the litigation with prejudice with respect to AIG's outside directors and dismissing the claims against the remaining AIG defendants without prejudice. In response to an order, dated July 5, 2006, dismissing certain of its claims, the plaintiff filed a second amended complaint on July 21, 2006, which adds additional claims against Starr.

AIG cannot predict the outcome of the matters described above or estimate the potential costs related to these matters and, accordingly, no reserve is being established in AIG's financial statements at this time. In the opinion of AIG management, AIG's ultimate liability for the matters referred to above is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

(j) On July 8, 2005, SICO filed a complaint against AIG in the Southern District of New York. The complaint alleges that AIG is in the possession of items, including artwork, which SICO claims it owns, and seeks an order causing AIG to release those items as well as actual, consequential, punitive and exemplary damages. On September 27, 2005, AIG filed its answer to SICO's complaint denying SICO's allegations and asserting counter-claims for breach of contract, unjust enrichment, conversion and breach of fiduciary duty relating to

SICO's breach of its commitment to use its AIG shares for the benefit of AIG and its employees. On October 17, 2005, SICO replied to AIG's counter-claims and additionally sought a judgment declaring that SICO is neither a control person nor an affiliate of AIG for purposes of Schedule 13D under the Securities Exchange Act of 1934, as amended (the Exchange Act), and Rule 144 under the Securities Act of 1933, as amended (the Securities Act), respectively. AIG responded to the SICO claims on November 7, 2005.

(k) AIG understands that some of its employees have received Wells notices in connection with previously disclosed SEC investigations of certain of AIG's transactions or accounting practices. Under SEC procedures, a Wells notice is an indication that the SEC staff has made a preliminary decision to recommend enforcement action that provides recipients with an opportunity to respond to the SEC staff before a formal recommendation is finalized. AIG anticipates that additional current and former employees could receive similar notices in the future as the regulatory investigations proceed.

(l) AIG generates income tax credits as a result of investing in synthetic fuel production. Tax credits generated from the production and sale of synthetic fuel under the Internal Revenue Code are subject to an annual phase-out provision that is based on the average wellhead price of domestic crude oil. The price range within which the tax credits are phased-out was originally established in 1980 and is adjusted annually for inflation. Depending on the price of domestic crude oil for a particular year, all or a portion of the tax credits generated in that year might be eliminated. Tax credits reflected in the income tax provision for the first six months of 2006 have been reduced to reflect an estimated phase-out of the tax credits from 2006 synthetic fuel production based on the observed price of domestic crude oil. Since the phase-out of tax credits from 2006 synthetic fuel production will depend on the average wellhead price of domestic crude oil for the entire 2006 calendar year, it is not possible to determine the extent to which the 2006 tax credits actually will be phased-out. As a result, the actual level of tax credits from 2006 synthetic fuel production may be higher or lower than the current estimate. AIG evaluates the production levels of its synthetic fuel production facilities in light of the risk of phase-out of the associated tax credits. As a result of the current high domestic crude oil prices, AIG has determined to reduce its production levels for the month of August 2006 and intends to continue to evaluate and possibly adjust production levels in light of this risk for the remainder of 2006. Regardless of oil prices, the tax credits expire after 2007.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**7. Employee Benefits**

The following table presents the components of the net periodic benefit costs with respect to pensions and other benefits for the three and six-month periods ended June 30, 2006 and 2005:

(in millions)	Pensions			Postretirement		
	Non-U.S. Plans	U.S. Plans	Total	Non-U.S. Plans	U.S. Plans	Total
Three Months Ended June 30, 2006

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***8. Recent Accounting Standards***Accounting Changes*

At the March 2004 meeting, the Emerging Issue Task Force (EITF) reached a consensus with respect to Issue No. 03-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments." On September 30, 2004, the FASB issued FASB Staff Position (FSP) EITF No. 03-1-1, Effective Date of Paragraphs 10-20 of EITF Issue No. 03-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments" delaying the effective date of this guidance until the FASB has resolved certain implementation issues with respect to this guidance, but the disclosures remain effective. This FSP, retitled FSP FAS 115-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments," replaces the measurement and recognition guidance set forth in Issue No. 03-1 and codifies certain existing guidance on impairment and accretion of income. AIG's adoption of FSP FAS 115-1 on January 1, 2006 did not have a material effect on AIG's consolidated financial condition or results of operations.

In December 2004, the FASB issued Statement No. 123 (revised 2004), "Share-Based Payment" (FAS 123R). FAS 123R and its related interpretive guidance replaces FAS No. 123, "Accounting for Stock-Based Compensation" (FAS 123), supersedes Accounting Principles Board Opinion No. 25, "Accounting for Stock Issued to Employees" (APB 25) and amends FAS 95, "Statement of Cash Flows." FAS 123, as originally issued in 1995, established as preferable a fair-value-based method of accounting for share-based payment transactions with employees. On January 1, 2003, AIG adopted the recognition provisions of FAS 123. See also Note 10 herein. AIG adopted the provisions of the revised FAS 123R and its related interpretive guidance on January 1, 2006.

For its service-based awards under the 1999 Stock Option Plan, 2002 Stock Incentive Plan and 1996 Employee Stock Purchase Plan, AIG recognizes compensation on a straight-line basis over the scheduled vesting period. Unrecognized unvested compensation expense for stock option awards granted under APB 25 (i.e., before January 1, 2003) will be recognized from January 1, 2006 to the vesting date. However, for the SICO Plans, the AIG Deferred Compensation Profit Participant Plan and the AIG Partners Plan, which contain both performance and service conditions, AIG recognizes compensation utilizing a graded vesting expense attribution method. The effect of this approach is to recognize compensation cost over the requisite service period for each separately vesting tranche of the award.

AIG's share-based plans generally provide for accelerated vesting after the participant turns 65 and retires. For awards granted after January 1, 2006, compensation expense is recognized ratably from the date of grant through the

shorter of age 65 or the vesting period. The effect of this change is not material to AIG's consolidated financial position or results of operations. Awards granted prior to January 1, 2006 will continue to be recognized over the vesting period with accelerated expense recognition upon an actual retirement. SICO compensation expense for participants retiring after age 65 had been reflected in prior years' results consistent with vested status under the SICO Plans.

On June 1, 2005, the FASB issued Statement No. 154, "Accounting Changes and Error Corrections" (FAS 154). FAS 154 replaces APB Opinion No. 20, "Accounting Changes" and FASB Statement No. 3, "Reporting Accounting Changes in Interim Financial Statements." FAS 154 requires that a voluntary change in accounting principles be applied retrospectively with all prior period financial statements presented based on the new accounting principle, unless it is impracticable to do so. FAS 154 also provides that a correction of errors in previously issued financial statements should be termed a "restatement." The new standard is effective for accounting changes and correction of errors beginning January 1, 2006.

At the June 2005 meeting, the EITF reached a consensus with respect to Issue No. 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights". The Issue addresses what rights held by the limited partner(s) preclude consolidation in circumstances in which the sole general partner would consolidate the limited partnership in accordance with generally accepted accounting principles absent the existence of the rights held by the limited partner(s). Based on that consensus, the EITF also agreed to amend the consensus in Issue No. 96-16, "Investor's Accounting for an Investee When the Investor Has a Majority of the Voting Interest but the Minority Shareholders Have Certain Approval or Veto Rights." The guidance in this Issue is effective after June 29, 2005 for general partners of all new limited partnerships formed and for existing limited partnerships for which the partnership agreements are modified. For general partners in all other limited partnerships, the guidance in this Issue is effective beginning January 1, 2006. The effect of the adoption of this EITF Issue was not material to AIG's consolidated financial condition or results of operations.

On June 29, 2005, FASB issued Statement 133 Implementation Issue No. B38, "Embedded Derivatives: Evaluation of Net Settlement with Respect to the Settlement of a Debt Instrument through Exercise of an Embedded Put Option or Call Option." This implementation guidance relates to the potential settlement of the debtor's obligation to the creditor that would occur upon exercise of the put option or call option, which meets the net settlement criterion in FAS 133. The effective date of the implementation guidance is January 1, 2006. The adoption of this guidance did not have a material effect on AIG's consolidated financial condition or results of operations.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***8. Recent Accounting Standards** *(continued)*

On June 29, 2005, the FASB issued Statement 133 Implementation Issue No. B39, "Application of Paragraph 13(b) to Call Options That Are Exercisable Only by the Debtor." The conditions in FAS 133 paragraph 13(b) do not apply to an embedded call option in a hybrid instrument containing a debt host contract if the right to accelerate the settlement of the debt can be exercised only by the debtor (issuer/borrower). This guidance does not apply to other embedded derivative features that may be present in the same hybrid instrument. The effective date of the implementation guidance is January 1, 2006. The adoption of this guidance did not have a material effect on AIG's consolidated financial condition or results of operations.

On February 16, 2006, the FASB issued FAS No. 155, "Accounting for Certain Hybrid Financial Instruments" (FAS 155), an amendment of FAS 140 and FAS 133. FAS 155 allows AIG to include changes in fair value in earnings on an instrument-by-instrument basis for any hybrid financial instrument that contains an embedded derivative that would otherwise be required to be bifurcated and accounted for separately under FAS 133. The election to measure the hybrid instrument at fair value is irrevocable at the acquisition or issuance date.

AIG elected to early adopt FAS 155 as of January 1, 2006, and apply FAS 155 fair value measurement to certain structured note liabilities and structured investments in AIG's available for sale portfolio that existed at December 31, 2005. The effect of this adoption resulted in an \$11 million after-tax (\$18 million pre-tax) decrease to opening retained earnings as of January 1, 2006, representing the difference between the fair value of these hybrid financial instruments and the prior carrying value as of December 31, 2005. The effect of adoption on after-tax gross gains and losses was \$218 million (\$336 million pre-tax) and \$229 million (\$354 million pre-tax), respectively.

In connection with AIG's early adoption of FAS 155, structured note liabilities of \$6.7 billion, other structured liabilities in conjunction with equity derivative transactions of \$138 million, and hybrid financial instruments of \$495 million at June 30, 2006 are now carried at fair value. The effect on earnings for the three and six-month periods ended June 30, 2006, for changes in the fair value of hybrid financial instruments, was a pre-tax loss of \$153 million and \$123 million, respectively, and is reflected in income.

On March 27, 2006, the FASB issued FSP FTB 85-4-1, "Accounting for Life Settlement Contracts by Third-Party Investors" (FSP 85-4-1), an amendment of FTB 85-4, "Accounting for Purchases of Life Insurance." Life settlements are designed to assist life insurance policyholders in monetizing the existing value of life insurance policies. FSP 85-4-1 allows AIG to measure life settlement contracts using either the investment method or fair value method. The election is made on an instrument-by-instrument basis and is irrevoca-

ble. AIG elected to early adopt FSP 85-4-1 as of January 1, 2006 using the investment method for pre-existing investments held at December 31, 2005. The effect of this adoption resulted in a \$319 million after tax (\$487 million pre-tax) increase to opening retained earnings.

On June 29, 2006, AIG restructured its ownership of life settlement contracts with no effect on the economic substance of these investments. At the same time, AIG paid \$610 million to its former co-investors to acquire all the remaining interests in life settlement contracts held in previously non-consolidated trusts.

At June 30, 2006, the carrying value of AIG's life settlement contracts was \$1.20 billion, and is included in Other invested assets on the consolidated balance sheet. These investments are monitored for impairment on a contract by contract basis quarterly. During the three month period ended June 30, 2006, income recognized on life settlement contracts previously held in non-consolidated trusts was \$5 million, and is included in net investment income on the consolidated statement of income. Such income totaled \$13 million for the six month period then ended. Further information regarding life settlement contracts as of June 30, 2006 is as follows:

(dollars in millions)

Remaining Life Expectancy of Insureds	Number of Contracts	Carrying Value	Face Value (Death Benefits)
0 – 1 year	2	\$ 3	\$ 4
1 – 2 years	20	12	15
2 – 3 years	83	69	111
3 – 4 years	132	115	208
4 – 5 years	136	72	154
Thereafter	1,501	925	3,454
Total	1,874	\$1,196	\$3,946

As of June 30, 2006, the anticipated life insurance premiums required to keep the life settlement contracts in force, payable in the ensuing twelve months ending June 30, 2007, and the four succeeding years ending June 30, 2011 are \$80 million, \$83 million, \$88 million, \$89 million, and \$89 million, respectively.

Future Application of Accounting Standards

On September 19, 2005, the FASB issued Statement of Position 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts" (SOP 05-1). SOP 05-1 provides guidance on accounting for deferred acquisition costs on internal replacements of insurance and investment contracts other than those specifically described in FASB Statement No. 97, "Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments." The SOP defines an internal replacement as a modification in

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***8. Recent Accounting Standards** *(continued)*

product benefits, features, rights, or coverage that occurs by the exchange of a contract for a new contract, or by amendment, endorsement, or rider to a contract, or by the election of a feature or coverage within a contract. The effective date of the implementation guidance is January 1, 2007. AIG is currently assessing the effect of implementing this guidance.

On April 13, 2006, the FASB issued FSP FIN 46(R)-6, “Determining the Variability to be Considered in Applying FASB Interpretation No. 46(R)” (FIN 46(R)-6 or FSP). The FSP affects the identification of which entities are variable interest entities through a “by design” approach in identifying and measuring the variable interests of the variable interest entity and its primary beneficiary. The requirements are effective beginning in the third quarter of 2006 and are to be applied to all new variable interest entities with which AIG becomes involved. The new requirements need not be applied to entities that have previously been analyzed under FIN 46(R)

unless a reconsideration event occurs. The adoption of this guidance is not expected to have a material effect on AIG’s consolidated financial condition or results of operations.

On July 13, 2006, the FASB issued FASB Interpretation No. 48, “Accounting for Uncertainty in Income Taxes – an interpretation of FASB Statement No. 109” (FIN 48), which clarifies the accounting for uncertainty in tax positions. This Interpretation prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of an income tax position taken or expected to be taken in a tax return. This Interpretation also provides guidance on derecognition, classification, interest and penalties, accounting in interim periods, and additional disclosures. The effective date of this implementation guidance is January 1, 2007, with the cumulative effect of the change in accounting principle recorded as an adjustment to opening retained earnings. AIG is currently assessing the effect of implementing this guidance.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**9. Information Provided in Connection with Outstanding Debt**

The following condensed consolidating financial statements are provided in compliance with Regulation S-X of the Securities and Exchange Commission.

(a) American General Corporation (AGC) is a holding company and a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all outstanding debt of AGC.

American General Corporation, as issuer:

10. Stock Compensation Plans

At June 30, 2006, AIG employees could be awarded compensation pursuant to six different stock-based compensation plan arrangements: (i) AIG 1999 Stock Option Plan, as amended (1999 Plan); (ii) AIG 1996 Employee Stock Purchase Plan, as amended (the 1996 Plan); (iii) AIG 2002 Stock Incentive Plan, as amended (2002 Plan) under which AIG has issued only restricted stock units (RSUs) and performance restricted stock units (Performance RSUs); (iv) SICO's Deferred Compensation Profit Participation Plans (SICO Plans); (v) AIG's 2005-2006 Deferred Compensation Profit Participation Plan (AIG DCPPP) and (vi) the AIG Partners Plan. The AIG DCPPP was adopted as a replacement for the SICO Plans for the 2005-2006 period, and the AIG Partners Plan replaces the AIG DCPPP. Stock-based

compensation earned under the AIG DCPPP and the AIG Partners Plan is issued as awards under the 2002 Plan. AIG currently settles share option exercises and other share awards to participants through the issuance of shares it has previously acquired and holds in its treasury account, except for share awards made by SICO, which are settled by SICO.

At June 30, 2006, AIG's non-employee directors received stock-based compensation in two forms, options granted pursuant to the 1999 Plan and grants of AIG common stock with delivery deferred until retirement from the Board, pursuant to the AIG Director Stock Plan, which was approved by the shareholders at the 2004 Annual Meeting of Shareholders.

From January 1, 2003 through December 31, 2005, AIG accounted for share-based payment transactions with employ-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**10. Stock Compensation Plans** (continued)

ees under FAS 123, "Accounting for Stock-Based Compensation." Share-based employee compensation expense from option awards was not recognized in the statement of income in prior periods. Effective January 1, 2006, AIG adopted the fair value recognition provisions of Statement of Financial Accounting Standards No. 123R "Share-Based Payments" (FAS 123R). FAS 123R requires that companies use a fair value method to value share-based payments and recognize the related compensation expense in net earnings. AIG adopted FAS 123R using the modified prospective application method, and accordingly, financial statement amounts for the prior periods presented have not been restated to reflect the fair value method of expensing share-based compensation under FAS 123R. The modified prospective application method provides for the recognition of the fair value with respect to share-based compensation for shares subscribed for or granted on or after January 1, 2006 and all previously granted but unvested awards as of January 1, 2006.

The adoption of FAS 123R resulted in share-based compensation expense of approximately \$9 million during the first six months of 2006, related to awards which were accounted for under the provisions of Accounting Principles Board Opinion No. 25, "Accounting for Stock Issued to Employees." AIG expects this expense to approximate \$19 million for fiscal 2006. FAS 123R also requires AIG to estimate forfeitures in calculating the expense relating to share-based compensation, rather than recognizing these forfeitures and corresponding reductions in expense as they occur. The pre-tax cumulative effect of adoption, recognized as a reduction in stock-based compensation of \$46 million, was recorded as a cumulative effect of an accounting change, net of tax, in the first quarter of 2006. FAS 123R requires AIG to reflect the cash savings resulting from excess tax benefits in its financial statements as cash flow from financing activities, rather than as cash flow from operating activities as in prior periods. The amount of this excess tax benefit for the three and six-month periods ended June 30, 2006 was \$0.6 million and \$2.3 million, respectively.

The effect of the adoption of FAS 123R on the consolidated statements of income and cash flows was as follows:

	Three Months Ended June 30, 2006			Six Months Ended June 30, 2006		
	Pre-adoption of FAS 123R	Effect of Adoption of FAS 123R	Including Effect of Adoption of FAS 123R	Pre-adoption of FAS 123R	Effect of Adoption of FAS 123R	Including Effect of Adoption of FAS 123R
<i>(in millions, except per share data)</i>						
Income before income taxes, minority interest and cumulative effect of an accounting change	\$ 5,242	\$(1)	\$ 5,241	\$10,043	\$ (9)	\$10,034
Provision for income taxes	\$ 1,686	\$ 2	\$ 1,688	\$ 3,124	\$ (1)	\$ 3,123
Income before minority interest and cumulative effect of an accounting change	\$ 3,556	\$(3)	\$ 3,553	\$ 6,919	\$ (8)	\$ 6,911
Cumulative effect of an accounting change, net of tax	\$ -	\$ -	\$ -	\$ -	\$ 34	\$ 34
Net income	\$ 3,193	\$(3)	\$ 3,190	\$ 6,359	\$ 26	\$ 6,385
Net cash provided by operating activities	\$ 2,923	\$ -	\$ 2,923	\$ 6,980	\$ (2)	\$ 6,978
Net cash provided by financing activities	\$16,571	\$ -	\$16,571	\$32,241	\$ 2	\$32,243
Basic earnings per share	\$ 1.23	\$ -	\$ 1.23	\$ 2.44	\$0.01	\$ 2.45
Diluted earnings per share	\$ 1.21	\$ -	\$ 1.21	\$ 2.42	\$0.01	\$ 2.43

The following table presents share-based compensation expenses, including the cumulative effect of adoption of FAS 123R, included in AIG's consolidated statement of income:

	Three Months Ended June 30, 2006	Six Months Ended June 30, 2006
<i>(in millions)</i>		
Share-based compensation expense before tax	\$57	\$211
Income tax benefit	\$16	\$ 28
After-tax share-based compensation expense	\$41	\$183

Included in share-based compensation expense of \$211 million for the six months ended June 30, 2006 was a one-time compensation cost of approximately \$54 million related to the Starr tender offer and various out of period adjustments totalling \$61 million, primarily relating to stock-splits and other miscellaneous items for the SICO plans, offset by a \$46 million pre-tax adjustment for the cumulative effect of the adoption of FAS 123R. These items were recorded in the first quarter of 2006. See Note 4 herein for a discussion of the Starr tender offer

and Note 8 herein for discussion of the prospective change to the accounting for retiree eligibility provisions and forfeiture treatment.

If AIG had adopted the FAS 123 provisions for recognizing compensation expense commencing at the date of grant of the awards, the effect would not have been material to net income or basic or diluted earnings per share for the three and six-month periods ended June 30, 2005.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**10. Stock Compensation Plans** (continued)*1999 Stock Option Plan*

The 1999 Plan provides that options to purchase a maximum of 45,000,000 shares of common stock can be granted to certain key employees and members of the Board of Directors at prices not less than fair market value at the date of grant.

The 1999 Plan was approved by the shareholders at the 2000 Annual Meeting of Shareholders, with certain amendments approved at the 2003 Annual Meeting of Shareholders. The 1999 Plan superseded the 1991 employee stock option plan (the 1991 Plan), although outstanding options granted under the 1991 Plan continue in force until exercise or expiration. The maximum number of shares that may be granted to any employee in any one year under the 1999 Plan is 900,000. Options granted under the 1999 Plan generally vest over four years (25 percent vesting per year) and expire 10 years from the date of grant.

At June 30, 2006, there were 20,761,320 shares reserved for future grants under the 1999 Plan and 28,321,678 shares reserved for issuance under the 1999 and 1991 Plans.

Deferrals

During 2005, options with respect to 1,731,471 shares were exercised with delivery deferred. At December 31, 2005 optionees had made valid elections to defer delivery of 2,067,643 shares of AIG common stock upon exercise of options expiring during 2006. In addition, non-employee directors of AIG had made valid elections to defer delivery of 21,093 shares of AIG common stock upon exercise of options expiring during 2006.

Valuation Methodology

In 2004, AIG developed a binomial lattice model to calculate the fair value of stock option grants. In prior years, a Black-Scholes model was used. A more detailed description of the valuation methodology is provided below.

The following weighted average assumptions were used for stock options granted in the first six months of 2006 and 2005:

	2006	2005
Expected annual dividend yield ^(a)	0.71%	0.36%
Expected volatility ^(b)	27.3%	34.4%
Risk-free interest rate ^(c)	4.17%	3.87%
Expected term ^(d)	7 years	7 years

(a) The dividend yield is based on the dividend yield over the twelve month period prior to the grant date.

(b) In 2006, expected volatility is the average of historical volatility (based on seven years of daily stock price changes) and the implied volatility of actively traded options on AIG shares and in 2005, expected volatility is the historical volatility based on five years of daily stock price changes.

(c) The interest rate curves used in the valuation model were the U.S. Treasury STRIP rates with terms from 3 months to 10 years.

(d) The contractual term of the option is generally 10 years with an expected term of 7 years calculated based on an analysis of historical employee exercise behavior and employee turnover (post-vesting terminations). The early exercise rate is a function of time elapsed since the grant. Fifteen years of historical data was used to estimate the early exercise rate.

Additional information with respect to AIG's stock option plans at June 30, 2006, and changes for the six months then ended, were as follows:

Options:	Shares	Weighted Average Exercise Price
Outstanding at beginning of year	52,545,425	\$54.84
Granted	103,000	\$65.43
Exercised	(858,053)	\$42.80
Forfeited or expired	(805,027)	\$68.50
Outstanding at end of period	50,985,345	\$54.85
Options exercisable at end of period	39,907,861	\$52.54
Weighted average fair value per share of options granted		\$21.28

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**10. Stock Compensation Plans** (continued)

Information about stock options outstanding at June 30, 2006, is summarized as follows:

Range of Exercise Prices	Options Outstanding				Options Exercisable			
	Number Outstanding	Weighted Average Remaining Contractual Life	Weighted Average Exercise Price	Aggregate Intrinsic Values (in millions)	Number Exercisable (vested)	Weighted Average Remaining Contractual Life	Weighted Average Exercise Price	Aggregate Intrinsic Values (in millions)

\$54.11-\$59.99	8,337,923	4.58	57.84	11	6,280,376	3.06	57.34	11
\$60.13-\$63.95	9,083,916	6.44	62.33	–	5,974,994	6.02	61.92	–
\$64.01-\$69.63	8,208,831	7.30	65.45	–	3,822,360	5.35	65.67	–
\$70.35-\$98.00	6,357,811	4.91	83.87	–	5,632,857	4.82	84.47	–
Total	50,985,345	4.60	\$54.85	\$455	39,907,861	3.61	\$52.54	\$445

Vested and expected-to-vest options as of June 30, 2006, included in the table above, totaled 45,531,044, with a weighted average exercise price of \$53.65, a weighted average contractual life of 4.06 years and an aggregate intrinsic value of \$455 million.

As of June 30, 2006, total unrecognized compensation cost (net of expected forfeitures) was \$153 million, and \$3 million related to non-vested share-based compensation awards granted under the 1999 Plan and the 1996 Plan, respectively, with blended weighted average periods of 1.38 years and 0.41 years, respectively. The cost of awards outstanding under these plans at June 30, 2006 is expected to be recognized over approximately three years and one year, respectively, for the 1999 Plan and the 1996 Plan.

The intrinsic value of options exercised during the six months ended June 30, 2006 was approximately \$20 million. The fair value of options vesting for the six months ended June 30, 2006 was approximately \$42 million. AIG received \$40 million and \$22 million for the six-month periods ended June 30, 2006 and 2005, respectively, from the exercise of stock options. AIG did not cash-settle any share-based payment awards for the six-month periods ended June 30, 2006 and 2005. The tax benefits realized as a result of stock option exercises were \$5 million and \$6 million for the six-month periods ended June 30, 2006 and 2005, respectively.

2002 Stock Incentive Plan

AIG's 2002 Plan was adopted at the 2002 shareholders meeting and amended and restated by the AIG Board of Directors on September 18, 2002 (the 2002 Plan). The 2002 Plan provides that equity-based or equity-related awards with respect to shares of common stock can be issued to employees in any year up to a maximum of that number of shares equal to (a) 1,000,000 shares plus (b) the number of shares available but not issued in the prior calendar year. The maximum

award that a grantee may receive under the 2002 Plan per year is rights with respect to 250,000 shares. For the six-month periods ended June 30, 2006 and 2005, 3,663,835 RSUs, including performance RSUs, and 31,500 RSUs, respectively, were granted by AIG. There were 6,443,028 shares reserved for issuance in connection with future awards at June 30, 2006. Substantially all RSUs granted to date under the 2002 Plan other than Performance RSUs granted under the Partners Plan vest on the fourth anniversary of the date of grant.

Director Stock Awards

The methodology used for valuing employee stock options is also used to value director stock options. Director stock options vest one year after the grant date, but are otherwise the same as employee stock options. Options with respect to 37,500 shares were granted during the six months ended June 30, 2006, and no shares were granted during the first six months of 2005.

AIG also granted 7,500 shares and 3,000 shares, with delivery deferred, to directors for the six-month periods ended June 30, 2006 and 2005, respectively, under the Director Stock Plan. At June 30, 2006, there were 77,500 shares reserved for future grants under the Director Stock Plan.

Employee Stock Purchase Plan

AIG's 1996 Plan provides that eligible employees (those employed at least one year) may receive privileges to purchase up to an aggregate of 10,000,000 shares of AIG common stock, at a price equal to 85 percent of the fair market value on the date of the grant of the purchase privilege. Purchase privileges are granted quarterly and are limited to the number of whole shares that can be purchased on an annual basis by an amount equal to the lesser of 10 percent of an employee's annual salary or \$10,000.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**10. Stock Compensation Plans** (continued)*SICO Plans*

The SICO Plans provide that shares of AIG common stock currently held by SICO are set aside for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's termination of employment with AIG prior to normal retirement age.

Historically, SICO's Board of Directors could elect to pay a participant cash in lieu of shares of AIG common stock. On December 9, 2005, SICO notified participants that essentially all subsequent distributions would be made only in shares, and not cash. As of that date, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. Variable measurement accounting is used for those few awards for which cash elections had been made prior to March 2005. The SICO Plans are also described in Note 4 herein.

Although none of the costs of the various benefits provided under the SICO Plans has been paid by AIG, AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts deemed contributed by SICO.

As of December 9, 2005, there were 12,650,292 non-vested AIG shares under the SICO Plans with a weighted-average fair value per share of \$61.92. As of June 30, 2006, there were 11,740,679 non-vested AIG shares under the SICO Plans with a weighted-average fair value per share of \$61.76.

A significant portion of the awards under the SICO Plans vest upon retirement if the participant reaches age 65. The portion of the awards for which early payout is available vest on the applicable payout date.

AIG DCPPP

Effective September 21, 2005, AIG adopted the AIG DCPPP, which provides equity-based compensation to key AIG employees, including senior executive officers. The AIG DCPPP was modeled on the SICO Plans.

The AIG DCPPP contingently allocates a fixed number of shares to each participant if AIG's cumulative adjusted earnings per share for 2005 and 2006 exceed that for 2003 and 2004. The performance period is September 21, 2005 to December 31, 2006. At the end of the performance period, common shares are contingently allocated. The service period and related vesting consists of three pre-retirement tranches and a final retirement tranche at age 65.

At June 30, 2006, there were units representing 4,674,382 shares granted to participants.

AIG Partners Plan

On June 26, 2006, AIG's Compensation Committee approved two grants under the AIG Partners Plan. The first grant has a performance period which runs from January 1, 2006 through December 31, 2007. The second grant has a performance period which runs from January 1, 2007 through December 31, 2008. Both grants vest 50 percent on the fourth and sixth anniversaries of the first day of the related performance period. In addition, the Compensation Committee approved the performance metrics for the two grants prior to the date of grant. The measurement of the grants is deemed to have occurred on June 26, 2006 when there was mutual understanding of the key terms and conditions of the grants. Consistent with this treatment:

- a) 1,069,355 Performance RSUs for the first grant and 2,490,365 Performance RSUs for the second grant and
- b) Unrecognized Compensation of \$60 million for the first grant and \$139 million for the second grant are included in the related disclosure tables. Performance RSUs related to the first grant are excluded from AIG's diluted shares calculation because an insufficient amount of time has elapsed to conclusively determine that the performance metric will be achieved at the end of the related performance period. Because the performance period for the second grant does not begin until January 1, 2007, compensation expense for the second grant is not included in AIG's 2006 results and diluted shares calculation.

VALUATION

The fair value of each award granted under the 2002 Plan, the AIG DCPPP, the AIG Partners Plan, and the SICO Plans is based on the closing price of AIG stock on the date of grant.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**10. Stock Compensation Plans** (continued)

A summary of shares relating to outstanding awards unvested under the foregoing plans as of June 30, 2006, and changes during the six months ended June 30, 2006 is presented below:

	Number of Shares				Weighted Average Grant-Date Fair Value				
	2002 Plan	AIG DCPPP	AIG Partners Plan	Total 2002 Plan	SICO Plan	2002 Plan	AIG DCPPP	AIG Partners Plan	SICO Plan
Unvested at January 1, 2006	4,322,265	4,898,880	-	9,221,145	12,650,292	\$63.63	\$52.55	\$ -	\$61.92
Granted	104,115	-	3,559,720	3,663,835	-	67.33	-	55.89	-
Vested	(5,080)	-	-	(5,080)	(617,064)	64.25	-	-	65.53
Forfeited	(105,610)	(224,498)	-	(330,108)	(292,549)	61.95	59.40	-	58.92
Unvested at June 30, 2006	4,315,690	4,674,382	3,559,720	12,549,792	11,740,679	\$63.76	\$52.22	\$55.89	\$61.76

At June 30, 2006, the total unrecognized compensation cost (net of expected forfeitures) related to non-vested share-based compensation awards granted under the 2002 Plan, the AIG DCPPP, the AIG Partners Plan and the SICO plans and the blended weighted-average period over which that cost is expected to be recognized is as follows:

	Unrecognized Compensation Cost (in millions)	Blended Weighted-Average Period
2002 Plan	\$183	1.71 years
AIG DCPPP	\$239	11.12 years
AIG Partners Plan	\$199	2.89 years
Total 2002 Plan	\$621	—
SICO Plans	\$327	6.07 years

The total cost for awards outstanding as of June 30, 2006 under the 2002 Plan, the AIG DCPPP, the AIG Partners Plan, and the SICO Plans is expected to be recognized over approximately 4 years, 12 years, 6 years and 23 years, respectively.

11. Cash Flows

During the second quarter of 2006, AIG began presenting cash flows related to the origination and sale of finance receivables held for sale as cash flows within operating activities in the Consolidated Statement of Cash Flows. Previously these amounts were presented as cash flows within investing activities. In addition, certain intercompany transactions included in Finance receivables held for sale — originations and purchases and Finance receivable principal payments received in the Consolidated Statement of Cash Flows were not eliminated in 2005. After evaluating the effect of these items during the second quarter of 2006, AIG has revised the 2005 presentation to conform to the 2006 presentation.

The effect of these revisions are summarized in the table below:

(in millions)

For the Three Months Ended March 31, 2006	As Previously Reported	Revisions	As Revised
Cash flows from operating activities			
Finance receivables held for sale — originations and purchases	\$ —	\$ (2,267)	\$ (2,267)

Cautionary Statement Regarding Projections and Other Information About Future Events

This Quarterly Report and other publicly available documents may include, and AIG's officers and representatives may from time to time make, projections concerning financial information and statements concerning future economic performance and events, plans and objectives relating to management, operations, products and services, and assumptions underlying these projections and statements. These projections and statements are not historical facts but instead represent only AIG's belief regarding future events, many of which, by their nature, are inherently uncertain and outside AIG's control. These projections and statements may address, among other things, the status and potential future outcome of the current regulatory and civil proceedings against AIG and their potential effect on AIG's businesses, financial position, results of operations, cash flows and liquidity, the effect of the credit rating downgrades on AIG's businesses and competitive position, the unwinding and resolving of various relationships between AIG and Starr and SICO, and AIG's strategy for growth, product development, market position, financial results and reserves. It is possible that AIG's actual results and financial condition may differ, possibly materially, from the anticipated results and financial condition indicated in these projections and statements. Factors that could cause AIG's actual results to differ, possibly materially, from those in the specific projections and statements are discussed throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations and in "Risk Factors" in Item 1A. of Part I of AIG's 2005 Annual Report on Form 10-K and Item 1A. of Part II of AIG's Quarterly Report on Form 10-Q for the quarter ended March 31, 2006. AIG is not under any obligation (and expressly disclaims any such obligations) to update or alter any projections or other statement, whether written or oral, that may be made from time to time, whether as a result of new information, future events or otherwise.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG presents its operations in the way it believes will be most meaningful. Statutory loss ratios and combined ratios are presented in accordance with accounting principles prescribed by insurance regulatory authorities because these are standard measures of performance filed with insurance regulatory authorities and used for analysis in the insurance industry and thus allow more meaningful comparisons with AIG's insurance competitors. AIG has also incorporated into this discussion a number of cross-references to additional information included throughout this Form 10-Q and its 2005 Annual Report on Form 10-K/A for the year ended December 31, 2005 (2005 Annual Report on Form 10-K/A) to assist readers seeking related information on a particular subject.

Overview of Operations and Business Results

AIG identifies its reportable segments by product line, consistent with its management structure. AIG's major product and service groupings are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management. AIG's operations in 2006 are conducted by its subsidiaries principally through these segments. Through these segments, AIG provides insurance and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. This geographic, product and service diversification is one of AIG's major strengths and sets it apart from its competitors. The Other category consists of items not allocated to AIG's operating segments.

AIG's subsidiaries serve commercial, institutional and individual customers through an extensive property-casualty and life insurance and retirement services network. In the United States, AIG companies are the largest underwriters of commercial and industrial insurance and one of the largest life insurance and retirement services operations as well. AIG's Financial Services businesses include commercial aircraft and equipment leasing, capital markets operations and consumer finance, both in the United States and abroad. AIG also provides asset management services to institutions and individu-

Consolidated Results

The following table summarizes AIG's revenues, income before income taxes, minority interest and cumulative effect of an accounting change and net income for the three and six-month periods ended June 30, 2006 and 2005:

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
Total revenues	\$26,743	\$27,903	\$54,002	\$55,105
Income before income taxes, minority interest and cumulative effect of an accounting change	5,241	6,701	10,034	12,350
Net income	\$ 3,190	\$ 4,489	\$ 6,385	\$ 8,288

Revenues in the second quarter and first six months of 2006 decreased 4 percent and 2 percent, respectively, largely as a result of decreased revenues in the Financial Services segment from hedging activities that do not qualify for hedge

als. As part of its spread-based business activities, AIG issues various debt instruments in the public and private markets.

AIG's operating performance reflects implementation of various long-term strategies and defined goals in its various operating segments. A primary goal of AIG in managing its General Insurance operations is to achieve an underwriting profit. To achieve this goal, AIG must be disciplined in its risk selection and premiums must be adequate and terms and conditions appropriate to cover the risk accepted. AIG also believes in strict control of expenses.

A central focus of AIG operations in recent years is the development and expansion of new distribution channels. In 2005 and the first six months of 2006, AIG expanded its distribution channels, which now include banks, credit card companies and television-media home shopping in many Asian countries. Examples of new distribution channels used both domestically and overseas include banks, affinity groups, direct response and e-commerce.

AIG patiently builds relationships in markets around the world where it sees long-term growth opportunities. For example, the fact that AIG has the only wholly-owned foreign life insurance operations in eight cities in China is the result of relationships developed over nearly 30 years. AIG's more recent extensions of operations into India, Vietnam, Russia and other emerging markets reflect the same growth strategy. Moreover, AIG believes in investing in the economies and infrastructures of these countries and growing with them. When AIG companies enter a new jurisdiction, they typically offer both basic protection and savings products. As the economies evolve, AIG's products evolve with them, to more sophisticated and investment-oriented models.

Growth for AIG may be generated both internally and through acquisitions which both fulfill strategic goals and offer adequate return on capital. Recently AIG acquired Travel Guard International, one of the nation's leading providers of travel insurance programs and emergency travel assistance, and acquired Central Insurance Co., Ltd., a leading general insurance company in Taiwan.

accounting treatment under FAS 133, the effects of which are reported in other revenues. The decrease was offset by the growth in net premiums earned from global General Insurance operations as well as growth in both General Insurance

and Life Insurance & Retirement Services net investment income, Life Insurance & Retirement Services GAAP premiums and increased revenues from Asset Management activities.

Income before income taxes, minority interest and cumulative effect of an accounting change in the three and six-month periods ended June 30, 2006 decreased 22 percent and 19 percent, respectively. Increases in General Insurance and Asset Management operating income were more than offset by an operating loss in Financial Services driven by the effects of hedging activities that do not qualify for hedge accounting treatment under FAS 133. Life Insurance & Retirement Services operating income decreased slightly in the second quarter of 2006 from the comparable prior year period, and increased 8 percent on a year-to-date basis.

Results for the first six months of 2006 were negatively affected by a one-time charge relating to the Starr tender offer (\$54 million before and after tax) and an additional allowance for losses in AIG Credit Card Company (Taiwan) (\$88 million before and after tax), both of which were recorded in first quarter of 2006.

During the second quarter of 2006, as part of its continuing remediation efforts, AIG identified and recorded an out of period adjustment related to the accounting for certain interests in unit investment trusts in accordance with FIN 46(R), "Consolidation of Variable Interest Entities" and APB Opinion No. 18, "The Equity Method of Accounting for Investments in Common Stock." These investments had previously been accounted for as available for sale securities, with changes in market values being reflected in other comprehensive income, net of deferred income taxes. Beginning with the second quarter of 2006, the changes in market values are included in AIG's net investment income. The adjustment decreased Unrealized appreciation (depreciation) of investments — net of reclassification adjustments,

and the related Deferred income tax benefit (expense), in the Consolidated Statement of Comprehensive Income (Loss) by approximately \$576 million and approximately \$202 million, respectively, for the three and six-month periods ended June 30, 2006 and increased Net investment income by \$653 million, increased Incurred policy losses and benefits, related to certain participating policyholder funds, by \$77 million, and increased Income taxes by \$202 million in the Consolidated Statement of Income for the three and six-month periods ended June 30, 2006. There was no effect on Total shareholders' equity as of June 30, 2006 or December 31, 2005.

In the second quarter of 2006, AIG also recorded other out of period adjustments of \$85 million (\$55 million after tax) of interest income related to interest earned on deposit contracts and \$32 million (\$21 million after tax) of expenses related to the remediation of a material weakness in controls over certain balance sheet reconciliations. AIG also recorded other out of period adjustments in the first quarter of 2006 of \$61 million (before and after tax) of expenses related to the SICO plans, \$59 million (\$38 million after tax) of expenses related to deferred advertising costs in General Insurance, \$300 million (\$145 million after tax) of revenues related to the remediation of a material weakness in accounting for certain derivative transactions under FAS 133, and \$126 million of income tax expense related to AIG's remediation of a material weakness in controls over income tax accounting.

The effective income tax rate increased from 29.9 percent in the first quarter of 2006 to 32.2 percent and 31.1 percent for the three and six-month periods ended June 30, 2006, respectively, reflecting changes in the sources of foreign taxable income and the effect of the phase out of synfuel tax credits on the estimated full year tax rate.

The following table summarizes the operations of each principal segment for the three and six-month periods ended June 30, 2006 and 2005. (See also Note 2 of Notes to Consolidated Financial Statements).

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
Revenues ^(a) :				
General Insurance ^{(b)(h)}	\$12,167	\$11,405	\$23,823	\$22,624
Life Insurance & Retirement Services ^{(c)(h)}	11,705	11,517	24,344	23,292
Financial Services ^(d)	1,226	3,778	2,841	6,214
Asset Management ^(e)	1,621	1,219	2,860	2,596
Other	24	(16)	134	379
Consolidated	\$26,743	\$27,903	\$54,002	\$55,105
Operating Income (loss) ^{(a)(f)} :				
General Insurance ^(h)	\$ 2,863	\$ 1,885	\$ 5,194	\$ 3,527
Life Insurance & Retirement Services ^{(g)(h)}	2,302	2,324	4,857	4,505

Consolidated	\$ 5,241	\$ 6,701	\$10,034	\$12,350

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2006 and 2005, the effect was \$(1.08) billion and \$1.63 billion, respectively, in revenues and \$(1.08) billion and \$1.61 billion, respectively, in operating income. For the six-month periods ended June 30, 2006 and 2005, the effect was \$(1.30) billion and \$2.56 billion, respectively, in revenues and \$(1.30) billion and \$2.62 billion, respectively, in operating income. These amounts result primarily from interest rate and foreign currency derivatives which are hedging available for sale securities and borrowings.

- (b) Represents the sum of General Insurance net premiums earned, net investment income and realized capital gains (losses).
- (c) Represents the sum of Life Insurance & Retirement Services GAAP premiums, net investment income and realized capital gains (losses).
- (d) Represents interest, lease and finance charges.
- (e) Represents management and advisory fees and net investment income with respect to GICs.
- (f) Represents income before income taxes, minority interest and cumulative effect of an accounting change.
- (g) Results of operations of AIG Credit Card Company (Taiwan) are shared equally by the Life Insurance & Retirement Services segment and the Financial Services segment. Additional allowances of \$44 million were recorded in the first quarter of 2006, by each segment, for losses in these credit card operations.
- (h) Includes the effect of an out of period adjustment related to the accounting for certain interests in unit investment trusts. For the three and six-month periods ended June 30, 2006 the effect was an increase of \$432 million in revenues and operating income for General Insurance and an increase of \$221 million and \$144 million in revenues and operating income, respectively, for Life Insurance & Retirement Services.

General Insurance

AIG's General Insurance operations provide property and casualty products and services throughout the world. The increase in General Insurance operating income in the three and six-month periods ended June 30, 2006 compared to the same periods of 2005 was primarily attributable to improvement in underwriting results for the Domestic Brokerage Group (DBG). General Insurance operating income included adverse development in the first six months of 2006 and 2005 from catastrophes in prior years, which were more than offset by favorable development on non-catastrophe losses. Operating income for the three and six-month periods ended June 30, 2006 also increased due to the effect of the out of period adjustment related to the accounting for certain interests in unit investment trusts.

Life Insurance & Retirement Services

AIG's Life Insurance & Retirement Services operations provide insurance, financial and investment products throughout the world. Foreign operations provided approximately 75 percent and 63 percent of AIG's Life Insurance & Retirement Services operating income for the three months ended June 30, 2006 and 2005, respectively, and 70 percent and 59 percent, respectively, for the first six months of 2006 and 2005.

Life Insurance & Retirement Services operating income decreased slightly in the second quarter of 2006 when compared to the same period of 2005 as a result of lower earnings in the Domestic Life Operations and higher realized capital losses, which were partially offset by the effect of an out of period adjustment related to the accounting for certain interests in unit investment trusts and growth in earnings from Foreign Life and Domestic Retirement Services. Realized capital losses included in revenues and operating income were \$218 million in the second quarter of 2006 compared to realized capital gains of \$46 million in the same period of 2005.

Life Insurance & Retirement Services operating income increased by 8 percent in the first six months of 2006 when compared to the same period of 2005 due, in part, to the effect of an out of period adjustment related to the accounting for certain interests in unit investment trusts. Realized capital losses included in revenues and operating income were \$60 million in the first six months of 2006 compared to realized capital losses of \$36 million in the same period of 2005.

Financial Services

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital market transactions, consumer finance and insurance premium financing.

Financial Services incurred operating losses in the three and six-month periods ended June 30, 2006 compared to the same periods of 2005, due to the effect of hedge activities that do not qualify for hedge accounting treatment under FAS 133. Fluctuations in revenues and operating income from quarter to quarter are not unusual because of the transaction-oriented nature of Capital Markets operations and the effect of not qualifying for hedge accounting treatment under FAS 133 for hedges on securities available for sale and borrowings.

Asset Management

AIG's Asset Management operations include institutional and retail asset management and broker dealer services and AIG's spread-based investment businesses. The AIG Matched Investment Program (MIP), which was launched in September of 2005, is replacing AIG's GIC program as AIG's principal spread-based investment activity. The GIC program products and services are offered to individuals and institutions, both domestically and overseas.

Asset Management operating income increased 55 percent for the second quarter of 2006 when compared to the same period of 2005 due to continued strong asset flows and increased transaction driven fees and the effects of FIN 46(R) and EITF 04-5 which are offset in minority interest expense, which is not a component of operating income; operating income also increased 14 percent in the first six months of 2006 when compared to the same period of 2005 reflecting strong results in the segment's core businesses and the effects of FIN 46(R) and EITF 04-5 which are offset in minority interest expense, which is not a component of operating income.

Capital Resources

At June 30, 2006, AIG had total consolidated shareholders' equity of \$87.71 billion and total consolidated borrowings of \$126.1 billion. At that date, \$110.8 billion of such borrowings were either not guaranteed by AIG or were AIGFP's

matched borrowings under obligations of guaranteed investment agreements (GIAs), liabilities connected to trust preferred stock, or matched notes and bonds payable.

AIG has not purchased any shares of its common stock under its existing common stock repurchase authorization during 2006.

Liquidity

At June 30, 2006, AIG's consolidated invested assets included \$23.33 billion in cash and short-term investments. Consolidated net cash provided from operating activities in the first six months of 2006 amounted to \$7.0 billion. AIG believes that its liquid assets, cash provided by operations and access to the capital markets will enable it to meet any anticipated cash requirements.

Outlook

Despite industry price erosion in some classes of general insurance, AIG expects to continue to identify profitable opportunities and build attractive new General Insurance businesses as a result of AIG's broad product line and extensive distribution networks. In December 2005, American International Underwriters Overseas, Ltd. (AIUO) received a license from the government of Vietnam to operate a wholly owned general insurance company in Vietnam. This license, the first general insurance license granted by Vietnam to a U.S.-based insurance organization, permits AIG to operate a general insurance company throughout Vietnam.

During the second quarter of 2006, the Canadian Parliament passed legislation that will allow UGC to begin writing business in Canada, the world's second largest mortgage guaranty market, when provincial licenses are issued.

In China, AIG currently has wholly-owned life insurance operations in eight cities. In April 2006, applications for provincial expansion of AIG's life insurance operations in Guangdong and Jiangsu and of general insurance operations in Guangdong were approved. AIG's operations are expanding resources in these regions with the opening of additional sales and service centers. AIG's application to serve the group insurance market was also approved.

In Japan, earnings growth for AIG Star Life Insurance Co., Ltd. and AIG Edison Life Insurance Company reflects the runoff of the more profitable in-force business in comparison to new business currently being generated. In May 2006, AIG announced the merger of these companies, which is expected to be completed by October 2007 after meeting all regulatory requirements. The merger is expected to enhance the combined entity's ability to grow new business by expanding distribution and gaining efficiency of scale. In the fiscal year ended March 31, 2006, AIG's life operations in Japan retained their position as the largest foreign life operation on a total premium basis. AIG has developed a leader-

ship position in the distribution of annuities through banks in both Japan and Korea. Also, American Life Insurance Company (ALICO) has launched new life products to the Japan bank market after further deregulation of banks in December 2005. AIG is a leader in direct marketing through sponsors and in the broad market in Japan and Korea. AIG also is investing in expanding distribution channels with emphasis in India, Korea and Vietnam.

Domestically, AIG anticipates its Life Insurance & Retirement Services businesses to continue growing in 2006 through distribution channel expansion and new and enhanced products. The home service operation, which is expected to be a slow growth business, has not met business objectives, although its cash flow has been strong. Domestic group life/health results continue to be weak, reflecting the ongoing restructuring activities which may result in the exiting of certain product lines. AIG Retirement Services individual fixed annuities business will continue to be challenged due to the interest rate environment and increased competition from bank products, while variable annuity products with living benefits will continue to be the product of consumer choice.

Changes in market conditions in the aircraft leasing business are not immediately apparent in operating results. Lease rates have firmed as a result of strong demand from the global commercial aviation market, especially in Asia. Sales have increased and AIG expects an increasing level of interest from a variety of purchasers. However, higher interest rates are expected to continue to compress lease margins. AIG's Consumer Finance operations overseas were negatively affected in the first quarter of 2006 by industry-wide credit deterioration in the Taiwan credit card market. The operating results of AIG's Consumer Finance operations in the U.S. could be affected by the residential housing market, interest rates and unemployment.

AIG's GIC program is in runoff and is being replaced by the new MIP, which was launched in September 2005. AIG expects the MIP to be AIG's principal spread-based investment activity. AIG's credit spreads will affect the profitability of this business.

AIG has many promising growth initiatives underway around the world. Cooperative agreements such as those with PICC Property and Casualty Company Limited and various banks in the U.S., Japan and Korea are expected to expand distribution networks for AIG's products and provide models for future growth.

Critical Accounting Estimates

AIG considers its most critical accounting estimates those with respect to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts,

deferred policy acquisition costs, estimated gross profits for investment-oriented products, fair value determinations for certain Capital Markets assets and liabilities, other-than-temporary declines in the value of investments and flight equipment recoverability. These accounting estimates require the use of assumptions about matters, some of which are highly uncertain at the time of estimation. To the extent actual experience differs from the assumptions used, AIG's results of operations would be directly affected.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG's critical accounting estimates are discussed in detail. The major categories for which assumptions are developed and used to establish each critical accounting estimate are highlighted below.

Reserves for Losses and Loss Expenses and Reinsurance Recoverable (General Insurance):

- *Loss trend factors:* used to establish expected loss ratios for subsequent accident years based on premium rate adequacy and the projected loss ratio with respect to prior accident years.
- *Expected loss ratios for the latest accident year:* for example, accident year 2005 for the year end 2005 loss reserve analysis. For low frequency, high severity classes such as excess casualty, expected loss ratios generally are utilized for at least the three most recent accident years.
- *Loss development factors:* used to project the reported losses for each accident year to an ultimate amount.
- *Reinsurance recoverable on unpaid losses:* the expected recoveries from reinsurers on losses that have not yet been reported and/or settled.

Future Policy Benefits for Life and Accident and Health Contracts (Life Insurance & Retirement Services):

- *Interest rates:* which vary by geographical region, year of issuance and products.
- *Mortality, morbidity and surrender rates:* based upon actual experience by geographical region modified to allow for variation in policy form.

Estimated Gross Profits (Life Insurance & Retirement Services):

- *Estimated gross profits* to be realized over the estimated duration of the contracts (investment-oriented products) affect the carrying value of deferred policy acquisition costs under FAS 97. Estimated gross profits include investment income and gains and losses on investments less required interest, actual mortality and other expenses.

Deferred Policy Acquisition Costs (Life Insurance & Retirement Services):

- Recoverability based on current and future expected profitability, which is affected by interest rates, foreign exchange rates, mortality experience, and policy persistency.

Deferred Policy Acquisition Costs (General Insurance):

- Recoverability and eligibility based upon the current terms and profitability of the underlying insurance contracts.

Fair Value Determinations of Certain Assets and Liabilities (Financial Services – Capital Markets):

- *Valuation models:* utilizing factors, such as market liquidity and current interest, foreign exchange and volatility rates.
- AIG attempts to secure reliable and independent current market price data, such as published exchange rates from external subscription services such as Bloomberg or Reuters or third-party broker quotes for use in its model. When such prices are not available, AIG uses an internal methodology, which includes interpolation and extrapolation from verifiable prices from trades occurring on dates nearest to the dates of the transactions.

Other-Than-Temporary Declines in the Value of Investments:

A security is considered a candidate for other-than-temporary impairment based upon the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer).
- The occurrence of a discrete credit event resulting in the debtor defaulting or seeking bankruptcy or insolvency protection or voluntary reorganization.
- The probability of non-realization of a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

At each balance sheet date, AIG evaluates its securities holdings in an unrealized loss position. Where AIG does not intend to hold such securities until they have fully recovered their carrying value, based on the circumstances present at the date of evaluation, AIG records the unrealized loss in income. If events or circumstances change, such as unexpected changes in creditworthiness of the obligor, general interest rate environment, tax circumstances, liquidity events, and statutory capital management considerations among others, AIG revisits its intent to determine if a loss should be recorded in income. Further, if a loss is recognized from a sale subsequent to a balance sheet date pursuant to these changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer exists.

Flight Equipment — Recoverability (Financial Services):

- *Expected undiscounted future net cash flows:* based upon current lease rates, projected future lease rates and estimated terminal values of each aircraft based on third party information.

Operating Review

General Insurance Operations

AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of property and casualty insurance both domestically and abroad.

Domestic General Insurance operations are comprised of DBG, which includes the operations of The Hartford Steam Boiler Inspection and Insurance Company (HSB); Transatlantic Holdings, Inc. (Transatlantic); Personal Lines, including 21st Century Insurance Group (21st Century); and United Guaranty Corporation (UGC).

AIG's primary domestic division is DBG. DBG's business in the United States and Canada is conducted through its General Insurance subsidiaries including American Home Assurance Company (American Home), National Union Fire Insurance Company of Pittsburgh, Pa. (National Union), Lexington Insurance Company (Lexington) and certain other General Insurance company subsidiaries of AIG.

DBG writes substantially all classes of business insurance, accepting such business mainly from insurance brokers. This provides DBG the opportunity to select specialized markets and retain underwriting control. Any licensed broker is able to submit business to DBG without the traditional agent-company contractual relationship, but such broker usually has no authority to commit DBG to accept a risk.

In addition to writing substantially all classes of business insurance, including large commercial or industrial property insurance, excess liability, inland marine, environmental, workers compensation and excess and umbrella coverages, DBG offers many specialized forms of insurance such as aviation, accident and health, equipment breakdown, directors and officers liability (D&O), difference-in-conditions, kidnap-ransom, export credit and political risk, and various types of professional errors and omissions coverages. The AIG Risk Management operation provides insurance and risk management programs for large corporate customers. The AIG Risk Finance operation is a leading provider of customized structured insurance products. Also included in DBG are the operations of AIG Environmental, which focuses specifically on providing specialty products to clients with environmental exposures. Lexington writes surplus lines, those risks for which conventional insurance companies do not readily provide insurance coverage, either because of complexity or because the coverage does not lend itself to conventional contracts.

Certain of the products of the DBG companies include funding components or have been structured in a manner such that little or no insurance risk is actually transferred. Funds received in connection with these products are recorded as deposits and included in other liabilities, rather than premiums and incurred losses.

The AIG Worldsource Division introduces and coordinates AIG's products and services to U.S.-based multinational clients and foreign corporations doing business in the U.S.

Transatlantic subsidiaries offer reinsurance capacity on both a treaty and facultative basis both in the U.S. and abroad. Transatlantic structures programs for a full range of property and casualty products with an emphasis on specialty risk.

AIG's Personal Lines operations provide automobile insurance through AIG Direct, the mass marketing operation of AIG, Agency Auto Division and 21st Century, as well as a broad range of coverages for high net-worth individuals through the AIG Private Client Group.

The main business of the UGC subsidiaries is the issuance of residential mortgage guaranty insurance, both domestically and internationally, on conventional first lien mortgages for the purchase or refinance of one to four family residences. UGC subsidiaries also write second lien and private student loan guaranty insurance.

AIG's Foreign General Insurance group accepts risks primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance group also includes business written by AIG's foreign-based insurance subsidiaries. The Foreign General group uses various marketing methods and multiple distribution channels to write both commercial and consumer lines insurance with certain refinements for local laws, customs and needs. AIU operates in Asia, the Pacific Rim, the United Kingdom, Europe, Africa, the Middle East and Latin America.

As previously noted, AIG believes it should present and discuss its financial information in a manner most meaningful to its investors. Accordingly, in its General Insurance business, AIG uses certain regulatory measures, where AIG has determined these measurements to be useful and meaningful.

A critical discipline of a successful general insurance business is the objective to produce profit from underwriting activities exclusive of investment-related income. When underwriting is not profitable, premiums are inadequate to pay for insured losses and underwriting related expenses. In these situations, the addition of general insurance related investment income and realized capital gains may, however, enable a general insurance business to produce operating income. For these reasons, AIG views underwriting results to be critical in the overall evaluation of performance.

Statutory underwriting profit is derived by reducing net premiums earned by net losses and loss expenses incurred and net expenses incurred. Statutory accounting generally requires immediate expense recognition and ignores the matching of revenues and expenses as required by GAAP. That is, for statutory purposes, expenses are recognized immediately, not over the same period that the revenues are earned. Thus, statutory expenses exclude changes in deferred acquisition costs (DAC).

GAAP provides for the recognition of expenses at the same time revenues are earned, the accounting principle of matching. Therefore, acquisition expenses are deferred and amortized over the period the related net premiums written are earned. DAC is reviewed for recoverability, and such review requires management judgment. (See also "Critical Accounting Estimates" herein.)

AIG, along with most General Insurance companies, uses the loss ratio, the expense ratio and the combined ratio as measures of underwriting performance. The loss ratio is the sum of losses and loss expenses incurred divided by net premiums earned. The expense ratio is statutory underwriting expenses divided by net premiums written. The combined ratio is the sum of the loss ratio and the expense ratio. These ratios are relative measurements that describe, for every \$100 of net premiums earned or written, the cost of losses and statutory expenses, respectively. The combined ratio presents

the total cost per \$100 of premium production. A combined ratio below 100 demonstrates underwriting profit; a combined ratio above 100 demonstrates underwriting loss.

Net premiums written are initially deferred and earned based upon the terms of the underlying policies. The net unearned premium reserve constitutes deferred revenues which are generally earned ratably over the policy period. Thus, the net unearned premium reserve is not fully recognized in income as net premiums earned until the end of the policy period.

The underwriting environment varies from country to country, as does the degree of litigation activity. Regulation, product type and competition have a direct effect on pricing and consequently on profitability as reflected in underwriting profit and statutory general insurance ratios.

General Insurance operating income is comprised of statutory underwriting results, changes in DAC, net investment income and realized capital gains and losses. Operating income, as well as net premiums written, net premiums earned, net investment income and realized capital gains (losses) and statutory ratios for the three and six-month periods ended June 30, 2006 and 2005 were as follows:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
<i>(in millions, except ratios)</i>				
Net premiums written:

(a) Income statement accounts expressed in non-functional currencies are translated into U.S. dollars using average exchange rates.

(b) Includes the effect of an out of period adjustment related to the accounting for certain interests in unit investment trusts. For the three and six-month periods ended June 30, 2006 the effect was an increase of \$412 million.

(c) Includes a reduction in incurred losses in the three-month period ended June 30, 2006 of \$51 million and additional losses incurred and net reinstatement premiums in the three-month period ended June 30, 2005 of \$27 million, related primarily to prior year catastrophes, resulting in (decreases) increases of (0.49) points and 0.26 points, respectively, in the consolidated General Insurance loss ratio. The effect on the six-month periods ended June 30, 2006 and 2005 included \$48 million and \$198 million, respectively, of additional losses incurred and net reinstatement premiums primarily relating to prior year catastrophes, resulting in increases of 0.22 points and 0.96 points, respectively, in the consolidated General Insurance loss ratio.

(d) Includes the results of wholly owned AIU agencies.

(e) Includes amortization of advertising costs.

(f) Statutory underwriting profit (loss) is a measure that U.S. domiciled insurance companies are required to report to their regulatory authorities. The following table reconciles statutory underwriting profit (loss) to income before income taxes, minority interest and cumulative effect of an accounting change for the General Insurance segment for the three and six month periods ended June 30, 2006 and 2005.

<i>(in millions)</i>	Domestic Brokerage Group	Transatlantic	Personal Lines	Mortgage Guaranty	Foreign General	Reclassifications and Eliminations	Total

AIG transacts business in most major foreign currencies. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of General Insurance net premiums written for the three and six-month periods ended June 30, 2006:

	Three Months Ended June 30, 2006	Six Months Ended June 30, 2006
Growth in original currency	9.7%	7.9%
Foreign exchange effect	(0.4)	(1.1)
Growth as reported in U.S. dollars	9.3%	6.8%

General Insurance Results

General Insurance operating income increased 52 percent in the second quarter of 2006 compared to the same period in 2005 due primarily to improvement in statutory underwriting profit for DBG as a result of improved loss ratios for the current accident year compared to the loss ratios recorded in the second quarter of 2005 for accident year 2005, as well as growth in net investment income. Included in net investment income in the second quarter of 2006 is the \$432 million

effect of an out of period adjustment related to the accounting for certain interests in unit investment trusts. The combined ratio improved to 86.5 during the second quarter of 2006, a reduction of 5.4 points from the prior period in 2005, led by a reduction in the loss ratio of 6.2 points. Net premiums written increased 9 percent in the second quarter of 2006 compared to the same period in 2005 as domestic property rates improved and submission activity increased in the aftermath of the 2005 hurricanes and through the expansion of distribution channels within Foreign General. The increase in

net premiums written was tempered by an increase in ceded reinsurance necessary to manage the increase in property exposures retained by AIG. AIG is evaluating additional reinsurance programs to manage retained property exposures as direct property business increases.

General Insurance operating income increased 47 percent in the first six months of 2006 compared to the same period of 2005 due to improvement in statutory underwriting profit for DBG as a result of improved loss ratios for the current accident year compared to the loss ratios recorded in the first six months of 2005 for accident year 2005, as well as growth in net investment income. Included in net investment income for the first six months of 2006 is the \$432 million effect of the aforementioned out of period adjustment. The combined ratio improved to 87.8, a reduction of 4.9 points from the first six months of 2005, led by a reduction in the loss ratio of 5.7 points. Net premiums written increased 7 percent as domestic property rates improved and submission activity increased in the aftermath of the 2005 hurricanes and through the expansion of distribution channels within Foreign General.

Quarterly DBG Results

DBG's net premiums written increased 11 percent in the second quarter of 2006 compared to the same period in 2005 as property rates improved and submission activity increased in the aftermath of the 2005 hurricanes. DBG attributes the increase in submissions to its strong distribution channels and overall financial strength in comparison to many insurers that experienced significant losses and reductions of surplus as a result of the hurricanes. This increase was tempered by an increase in ceded reinsurance necessary to manage the level of property exposures retained by DBG.

Operating income increased 91 percent to \$1.53 billion in the second quarter of 2006 compared to the same period in 2005, reflecting increases in statutory underwriting profit and net investment income. The improvement in DBG's statutory underwriting profit for the second quarter of 2006 was primarily due to lower accident year loss ratios for the 2006 accident year compared to the loss ratios recorded in the second quarter of 2005 for accident year 2005. In addition, the second quarter of 2006 includes a \$53 million reduction in the estimated ultimate losses related to prior year hurricanes compared to the same period of 2005 which included an insignificant increase in losses related to prior year hurricanes. Favorable reserve development on non-catastrophic prior year losses totaled \$57 million for the second quarter of 2006 compared to adverse development of \$112 million for the same period of 2005. The 2006 development relates primarily to classes of business which did not require reserve strengthening in connection with AIG's year-end 2005 reserve study.

DBG's expense ratio decreased slightly in the second quarter of 2006 to 17.9 compared to 18.1 in the same period of 2005. Direct acquisition expenses declined, reflecting an increase in lines of business, such as property, that have a lower commission rate, as well as a modest decrease in overall commission rates. Net acquisition expenses declined due to the items cited above as well as the new quota share reinsurance program added in 2006 to manage the level of property exposures retained by DBG. Other operating expense as a percent of net premium written increased primarily due to an increase in bad debt expense, due largely to an out of period adjustment of \$32 million relating to reconciliation remediation activities.

Year-to-date DBG Results

DBG's net premiums written increased 7 percent in the first six months of 2006 compared to the same period of 2005 due to property rate increases as well as increases in submission activity in the aftermath of the 2005 hurricanes. Operating income increased 90 percent to \$2.89 billion in the first six months of 2006 reflecting increases in statutory underwriting profit and net investment income. The improvement in DBG's statutory underwriting profit for 2006 was due to lower accident year loss ratios for the 2006 accident year compared to the loss ratios recorded in the first six months of 2005 for accident year 2005. In addition, year to date 2006 operating income includes a \$25 million reduction in the estimated ultimate losses related to prior year hurricanes compared to the same period of 2005 which included \$118 million of increased losses related to prior year hurricanes. Favorable reserve development on non-catastrophic prior year losses totaled \$62 million for the first six months of 2006 compared to adverse development of \$215 million for the same period of 2005. The 2006 development relates primarily to classes of business which did not require reserve strengthening in connection with AIG's year-end 2005 reserve study.

DBG's expense ratio decreased slightly to 18.1 compared to 18.3 in the first six months of 2006. Direct acquisition expenses declined, reflecting an increase in lines of business such as property that have a lower commission rate as well as a modest decrease in overall commission rates. Net acquisition expenses declined due to the items cited above as well as the new quota share reinsurance program added in 2006 to manage the level of property exposures retained by DBG. Other operating expenses increased primarily due to an increase in bad debt expense, partially offset by a favorable \$23 million out of period adjustment relating to reconciliation remediation activities.

Quarterly Transatlantic Results

Transatlantic's net premiums written and net premiums earned in the second quarter of 2006 increased by 3 percent and 5 percent, respectively, when compared to the same period in 2005 primarily due to increases in domestic auto liability and specialty casualty net premiums written. These increases were partially offset by decreases in international property and auto liability premiums. Second quarter 2006 operating income increased \$44 million, due largely to increased net investment income and lower catastrophe incurred losses and net reinstatement premiums related to prior year catastrophes.

Year-to-date Transatlantic Results

Transatlantic's net premiums written and net premiums earned increased in the first six months of 2006 by 3 percent and 4 percent, respectively, compared to the same period of 2005 due primarily to increases in domestic specialty casualty and property net premiums written. These increases were offset, in part, by decreases in international premiums caused, in part, by the adverse effect of changes in foreign currency exchange rates between periods, with the most significant decreases in the auto liability and property lines. Operating income increased in the first six months of 2006 compared to the same period of 2005 due to increased net investment income and improved statutory underwriting profit, resulting largely from reduced net catastrophe costs (including the effect of net reinstatement premiums), and lower net adverse development on loss reserves, offset, in part, by higher commission costs.

Quarterly Personal Lines Results

Personal Lines net premiums written increased slightly in the second quarter of 2006 compared to the same period in 2005, as growth in the Private Client Group and Agency Auto divisions was offset by the runoff of the involuntary auto business and a small decline in the AIG Direct and 21st Century divisions. The reduction in the involuntary business was a result of terminating an MGA relationship on December 31, 2005. Growth in the Private Client Group spans multiple products as it continues to penetrate the high net worth market. Agency Auto growth was due to expanded agent/broker appointments and enhanced product offerings. AIG Direct premiums were down due to a decline in response rates. 21st Century experienced strong growth outside of California, but not enough to offset the decline in the soft California market. Operating income in the second quarter of 2006 increased from the same period in 2005 driven by a lower combined ratio. The improved loss ratio reflects favorable prior year loss reserve development in the direct businesses. The expense ratio increased from a year ago as 21st Century expenses were up due primarily to its national expansion

efforts and higher stock-based compensation. AIG Direct acquisition expenses were up primarily due to lower response rates driving up acquisition cost per policy.

Year-to-date Personal Lines Results

Personal Lines net premiums written increased slightly in the first six months of 2006 compared to the same period in 2005, reflecting growth in the Private Client Group and Agency Auto divisions which offset the runoff of the involuntary auto business and a small decline in the AIG Direct and 21st Century divisions. Operating income was up slightly for the first six months of 2006 compared to the same period of 2005, driven primarily by an increase in net investment income as the combined ratio remained relatively unchanged. The loss ratio in the first six months of 2006 improved from a year ago due to favorable prior year loss development in the AIG Direct and 21st Century businesses, while the expense ratio increased as a result of, among other things, investment in people, technology, national expansion efforts and lower response rates.

Quarterly UGC Results

UGC's net premiums written increased in the second quarter of 2006 when compared to the same period in 2005, primarily driven by growth in domestic second lien and international operations. Operating income during the second quarter of 2006 was down slightly when compared to the same period in 2005 as improved underwriting results in the domestic second lien and international groups and increased investment income were offset by a decline in the domestic first lien business. The loss ratio increased to 33.1 in the second quarter of 2006 from 17.4 in the year ago quarter, a period with an unusually low frequency of defaults. Operating income for the second quarter of 2006 includes favorable development on prior accident years, offset by higher 2006 accident year loss ratios. The increase in the loss ratio also reflects UGC's change in business mix.

Year-to-date UGC Results

UGC's net premiums written were up 26 percent in the first six months of 2006 compared to the same period in 2005 on growth from all business units. Operating income was up slightly for the first six months of 2006 when compared to the same period in 2005, primarily due to an increase in net investment income, which was offset by a 10.6 point increase in the loss ratio to 31.8. The loss ratio for the first six months of 2005 was unusually low due to historically low defaults in the first half of 2005. Operating income for the first six months of 2006 includes favorable development on prior accident years, offset by higher 2006 accident year loss ratios. The increase in the loss ratio also reflects UGC's change in business mix.

Quarterly Foreign General Insurance Results

Foreign General Insurance's net premiums written as reported in U.S. dollars and in original currency increased 10 percent and 12 percent, respectively, in the second quarter of 2006 when compared to the same period in 2005, reflecting growth in both the commercial and consumer lines due to new business, as well as new distribution channels. Foreign General Insurance net premiums written were essentially equally derived from the commercial insurance and consumer lines. The personal accident business in the Far East region increased net premiums written in the second quarter of 2006 from a year ago, but an increase in loss frequency negatively affected operating income. Southeast Asia had increased net premiums written in the second quarter of 2006 when compared to the same period in 2005 in the personal accident business which led to increased operating income. The commercial lines business in both Europe and the United Kingdom increased net premiums written from a year ago due to new business with a resulting increase in operating income compared to the second quarter of 2005. Energy had modest growth in net premiums written, but several high severity losses caused a reduction in second quarter 2006 operating income when compared to the same period of 2005. The Ascot Lloyd's syndicate reported strong growth in net premiums written during the second quarter of 2006 due to rate increases on its U.S. book of business along with contractual terms on renewals that reflect better conditions and higher deductibles. This led to improved operating income from a year ago, but higher than expected profit commission payments related to prior underwriting years totaling \$34 million negatively affected operating income during the second quarter of 2006.

The combined ratio for Foreign General Insurance for the second quarter of 2006 was 82.25, slightly higher than the 82.06 in the comparable period of 2005. The Foreign General Insurance loss ratio decreased 2.88 points in the second quarter of 2006 compared to the same period of 2005 due to lower current accident year losses and favorable loss development from prior accident years. The Foreign General Insurance expense ratio increased 3.07 points in the second quarter of 2006 from the same period in 2005 principally due to higher commissions, employee compensation costs and accelerated amortization of advertising costs.

Year-to-date Foreign General Insurance Results

Foreign General Insurance's net premiums written as reported in U.S. dollars and in original currency increased 9 percent and 13 percent, respectively, in the first six months of 2006 when compared to the same period in 2005, reflecting growth in both the commercial and consumer lines. The personal accident business in the Far East region, the commercial lines business in both Europe and the United Kingdom, and the Ascot Lloyd's syndicate all contributed to the growth in net premiums written. Rate decreases in the com-

mercial lines business in the United Kingdom, additional losses incurred relating to 2005 catastrophes and higher than expected profit commission payments related to prior underwriting years for Ascot Lloyd's had a negative effect on operating income in the first six months of 2006 when compared to the same period of 2005.

The combined ratio for Foreign General Insurance for the first six months of 2006 was 81.81, essentially unchanged from the comparable period of 2005. The Foreign General Insurance loss ratio decreased 2.31 points in the first six months of 2006 from the same period of 2005 due to lower current accident year losses for 2006 and favorable loss development from prior accident years, excluding catastrophe losses. The Foreign General Insurance expense ratio increased 2.33 points in the first six months of 2006 from the same period in 2005 principally due to higher commissions, employee compensation costs and accelerated amortization of advertising costs.

General Insurance Net Investment Income

General Insurance net investment income increased by \$554 million and \$657 million in the second quarter and the first six months of 2006, respectively, when compared to the same periods of 2005, principally due to the effects of an out of period adjustment of \$432 million related to the accounting for certain interests in unit investment trusts and an \$85 million out of period adjustment related to interest earned on a DBG deposit contract. The increase also reflects higher interest income, strong cash flows, including the effect of capital contributions from the parent, higher interest rates and the positive effect of compounding previously earned and reinvested net investment income as well as higher dividend and partnership income for DBG. Foreign General Insurance net investment income increased in the three and six-month periods ended June 30, 2006 when compared to the same periods of 2005 due to the effects of the aforementioned out of period adjustment, offset by a decline in partnership income. Foreign General partnership income in the second quarter and first half of 2005 benefited from increases in market valuations due to increased initial public offering activity. Foreign General cash flows declined for the first six months of 2006 compared to the year ago period, due to payments related to catastrophe related losses incurred in 2005.

Realized capital gains and losses resulted from the ongoing investment management of the General Insurance portfolios within the overall objectives of the General Insurance operations. See the discussion on "Valuation of Invested Assets" herein.

Reinsurance

AIG is a major purchaser of reinsurance for its General Insurance operations. AIG insures risks globally, and its reinsurance programs must be coordinated in order to provide AIG

the level of reinsurance protection that AIG desires. Reinsurance is an important risk management tool to manage transaction and insurance line risk retention at prudent levels set by management. AIG also purchases reinsurance to mitigate its catastrophic exposure. AIG is cognizant of the need to exercise good judgment in the selection and approval of both domestic and foreign companies participating in its reinsurance programs because one or more catastrophe losses could negatively affect AIG's reinsurers and result in an inability of AIG to collect reinsurance recoverables. AIG's reinsurance department evaluates catastrophic events and assesses the probability of occurrence and magnitude of catastrophic events through the use of state-of-the-art industry recognized program models, among other techniques. AIG supplements these models through continually monitoring the risk exposure of AIG's worldwide General Insurance operations and adjusting such models accordingly. For a further discussion of catastrophe exposures, see "Managing Risk – Catastrophe Exposures". Although reinsurance arrangements do not relieve AIG from its direct obligations to its insureds, an efficient and effective reinsurance program substantially limits AIG's exposure to potentially significant losses. AIG continually evaluates the reinsurance markets and the relative attractiveness of various arrangements for coverage, including structures such as catastrophe bonds, insurance risk securitizations and "sidecar" and similar vehicles. With respect to its property business, AIG has either renewed existing coverage or purchased new coverage that, in the opinion of management, is adequate to limit AIG's exposures.

AIG's consolidated general reinsurance assets amounted to \$22.87 billion at June 30, 2006 and resulted from AIG's reinsurance arrangements. Thus, a credit exposure existed at June 30, 2006 with respect to reinsurance recoverable to the extent that any reinsurer may not be able to reimburse AIG under the terms of these reinsurance arrangements. AIG manages its credit risk in its reinsurance relationships by transacting with reinsurers that it considers financially sound, and when necessary AIG holds substantial collateral in the form of funds, securities and/or irrevocable letters of credit. This collateral can be drawn on for amounts that remain unpaid beyond specified time periods on an individual reinsurer basis. At December 31, 2005, approximately 48 percent of the general reinsurance assets were from unauthorized reinsurers. Many of these balances were collateralized, permitting statutory recognition. Additionally, with the approval of its domiciliary insurance regulators, AIG posted approximately \$1.5 billion of letters of credit issued by several commercial banks in favor of certain Domestic General Insurance companies to permit statutory recognition of balances otherwise uncollateralized at December 31, 2005. The remaining 52 percent of the general reinsurance assets were from authorized reinsurers. The terms authorized and unauthorized pertain to regulatory categories, not creditworthiness. At December 31, 2005, approximately 88 percent of the balances with respect to authorized reinsurers are from reinsur-

ers rated A (excellent) or better, as rated by A.M. Best, or A (strong) or better, as rated by Standard & Poor's, a division of The McGraw-Hill Companies, Inc. (S&P). These ratings are measures of financial strength. Through June 30, 2006, there has been no significant deterioration in the rating profile of AIG's reinsurers representing more than five percent of AIG's reinsurance assets as of December 31, 2005.

AIG maintains an allowance for estimated unrecoverable reinsurance. Although AIG has been largely successful in its previous recovery efforts, at June 30, 2006, AIG had an allowance for unrecoverable reinsurance approximating \$932 million. At that date, AIG had no significant reinsurance recoverables due from any individual reinsurer that was financially troubled (e.g., liquidated, insolvent, in receivership or otherwise subject to formal or informal regulatory restriction).

AIG's Reinsurance Security Department conducts ongoing detailed assessments of the reinsurance markets and current and potential reinsurers, both foreign and domestic. Such assessments include, but are not limited to, identifying if a reinsurer is appropriately licensed and has sufficient financial capacity, and evaluating the local economic environment in which a foreign reinsurer operates. This department also reviews the nature of the risks ceded and the requirements for credit risk mitigants. For example, in AIG's treaty reinsurance contracts, AIG includes provisions that frequently require a reinsurer to post collateral when a referenced event occurs. Furthermore, AIG limits its unsecured exposure to reinsurers through the use of credit triggers, which include, but are not limited to, insurer financial strength rating downgrades, policyholder surplus declines at or below a certain predetermined level or a certain predetermined level of a reinsurance recoverable being reached. In addition, AIG's Credit Risk Committee reviews the credit limits for and concentrations with any one reinsurer.

AIG enters into intercompany reinsurance transactions, primarily through American International Reinsurance Company, Ltd. (AIRCO), for its General Insurance and Life Insurance operations. AIG enters into these transactions as a sound and prudent business practice in order to maintain underwriting control and spread insurance risk among AIG's various legal entities. All material intercompany transactions have been eliminated in consolidation. AIG generally obtains letters of credit in order to obtain statutory recognition of these intercompany reinsurance transactions. At June 30, 2006, approximately \$3.7 billion of letters of credit were outstanding to cover intercompany reinsurance transactions with AIRCO or other General Insurance subsidiaries.

At June 30, 2006, consolidated general reinsurance assets of \$22.87 billion include reinsurance recoverables for paid losses and loss expenses of \$1.05 billion and \$18.75 billion with respect to the ceded reserve for losses and loss expenses, including ceded losses incurred but not reported

(IBNR) (ceded reserves) and \$3.07 billion of ceded reserve for unearned premiums. The ceded reserve for losses and loss expenses represent the accumulation of estimates of ultimate ceded losses including provisions for ceded IBNR and loss expenses. The methods used to determine such estimates and to establish the resulting ceded reserves involve significant judgment in projecting the frequency and severity of losses over multiple years and are continually reviewed and updated by management. Any adjustments thereto are reflected in income currently. It is AIG's belief that the ceded reserves for losses and loss expenses at June 30, 2006 were representative of the ultimate losses recoverable. In the future, as the ceded reserves continue to develop to ultimate amounts, the ultimate loss recoverable may be greater or less than the reserves currently ceded.

Reserve for Losses and Loss Expenses

The table below classifies as of June 30, 2006 and December 31, 2005 the components of the General Insurance gross reserve for losses and loss expenses (loss reserves) by major lines of business on a statutory Annual Statement basis*:

<i>(in millions)</i>	June 30, 2006	December 31, 2005
Other liability occurrence	\$18,666	\$18,116
Other liability claims made	12,526	12,447
Workers compensation	12,318	11,630
Property	7,028	7,217
Auto liability	6,318	6,569
International	5,409	4,939
Reinsurance	3,194	2,886
Medical malpractice	2,196	2,363
Products liability	1,988	1,937
Accident and health	1,700	1,678
Aircraft	1,615	1,844
Commercial multiple peril	1,449	1,359
Fidelity/surety	1,006	1,072
Other	3,553	3,112
Total	\$78,966	\$77,169

*Presented by lines of business pursuant to statutory reporting requirements as prescribed by the National Association of Insurance Commissioners.

AIG's gross reserve for losses and loss expenses represents the accumulation of estimates of ultimate losses, including IBNR and loss expenses. The methods used to determine loss reserve estimates and to establish the resulting reserves are continually reviewed and updated by management. Any adjustments resulting therefrom are reflected in operating income currently. Because loss reserve estimates are subject to the outcome of future events, changes in estimates are unavoidable given that loss trends vary and time is often required for changes in trends to be recognized and confirmed. Reserve changes that increase previous estimates of ultimate cost are referred to as unfavorable adverse development or reserve strengthening. Reserve changes that decrease previous estimates of ultimate cost are referred to as favorable development.

At June 30, 2006, General Insurance net loss reserves increased \$2.74 billion from the prior year end to \$60.21 bil-

lion. The net loss reserves represent loss reserves reduced by reinsurance recoverables, net of an allowance for unrecoverable reinsurance and applicable discount for future investment income. The table below classifies the components of the General Insurance net loss reserves by business unit as of June 30, 2006 and December 31, 2005.

<i>(in millions)</i>	June 30, 2006	December 31, 2005
DBG ^(a)	\$ 42,508	\$40,782
Transatlantic	5,893	5,690
Personal Lines ^(b)	2,533	2,578
Mortgage Guaranty	367	340
Foreign General ^(c)	8,913	8,086
Total Net Loss Reserve	\$ 60,214	\$57,476

(a) At June 30, 2006 and December 31, 2005, DBG loss reserves include approximately \$3.55 billion and \$3.77 billion, respectively, (\$3.96 billion and \$4.26 billion, respectively, before discount) related to business written by DBG but ceded to AIRCO and reported in AIRCO's statutory filings. DBG loss reserves also include approximately \$498 million and \$407 million related to business included in AIUO's statutory filings at June 30, 2006 and December 31, 2005, respectively.

(b) At June 30, 2006 and December 31, 2005, Personal Lines loss reserves include \$885 million and \$878 million, respectively, related to business ceded to DBG and reported in DBG's statutory filings.

(c) At June 30, 2006 and December 31, 2005, Foreign General loss reserves include approximately \$2.68 billion and \$2.15 billion, respectively, related to business reported in DBG's statutory filings.

The DBG net loss reserve of \$42.51 billion is comprised principally of the business of AIG subsidiaries participating in the American Home/National Union pool (11 companies) and the surplus lines pool (Lexington, Starr Excess Liability Insurance Company and Landmark Insurance Company).

Beginning in 1998, DBG ceded a quota share percentage of its other liability occurrence and products liability occurrence business to AIRCO. The quota share percentage ceded was 40 percent in 1998, 65 percent in 1999, 75 percent in 2000 and 2001, 50 percent in 2002 and 2003, 40 percent in 2004, 35 percent in 2005 and 20 percent in 2006 and covered all business written in these years for these lines by participants in the American Home/National Union pool. In 1998 the cession reflected only the other liability occurrence business, but in 1999 and subsequent years included products liability occurrence. AIRCO's loss reserves relating to these quota share cessions from DBG are recorded on a discounted basis. As of June 30, 2006, AIRCO carried a discount of approximately \$410 million applicable to the \$3.96 billion in undiscounted reserves it assumed from the American Home/National Union pool via this quota share cession. AIRCO also carries approximately \$478 million in net loss reserves relating to Foreign General insurance business. These reserves are carried on an undiscounted basis.

Beginning in 1997, the Personal Lines division ceded a percentage of all business written by the companies participating in the personal lines pool to the American Home/National Union pool. As noted above, the total reserves carried by participants in the American Home/National Union

pool relating to this cession amounted to \$885 million as of June 30, 2006.

The companies participating in the American Home/National Union pool have maintained a participation in the business written by AIU for decades. As of June 30, 2006, these AIU reserves carried by participants in the American Home/National Union pool amounted to approximately \$2.68 billion. The remaining Foreign General reserves are carried by AIUO, AIRCO, and other smaller AIG subsidiaries domiciled outside the United States. Statutory filings in the U.S. by AIG companies reflect all the business written by U.S. domiciled entities only, and therefore exclude business written by AIUO, AIRCO, and all other internationally domiciled subsidiaries. The total reserves carried at June 30, 2006 by AIUO and AIRCO were approximately \$4.21 billion and \$4.03 billion, respectively. AIRCO's \$4.03 billion in total general insurance reserves consist of approximately \$3.55 billion from business assumed from the American Home/National Union pool and an additional \$478 million relating to Foreign General Insurance business.

Discounting of Reserves

At June 30, 2006, AIG's overall General Insurance net loss reserves reflects a loss reserve discount of \$2.11 billion, including tabular and non-tabular calculations. The tabular workers compensation discount is calculated using a 3.5 percent interest rate and the 1979-81 Decennial Mortality Table. The non-tabular workers compensation discount is calculated separately for companies domiciled in New York and Pennsylvania, and follows the statutory regulations for each state. For New York companies, the discount is based on a five percent interest rate and the companies' own payout patterns. For Pennsylvania companies, the statute has specified discount factors for accident years 2001 and prior, which

are based on a six percent interest rate and an industry payout pattern. For accident years 2002 and subsequent, the discount is based on the yield of U.S. Treasury securities ranging from one to twenty years and the company's own payout pattern, with the future expected payment for each year using the interest rate associated with the corresponding Treasury security yield for that time period. The discount is comprised of the following: \$512 million – tabular discount for workers compensation in DBG; \$1.19 billion – non-tabular discount for workers compensation in DBG; and, \$410 million – non-tabular discount for other liability occurrence and products liability occurrence in AIRCO. The total undiscounted workers compensation loss reserve carried by DBG is approximately \$10.2 billion as of June 30, 2006. The other liability occurrence and products liability occurrence business in AIRCO that is assumed from DBG is discounted based on the yield of U.S. Treasury securities ranging from one to twenty years and the DBG payout pattern for this business. The undiscounted reserves assumed by AIRCO from DBG totaled approximately \$3.96 billion at June 30, 2006.

Quarterly Reserving Process

It is management's belief that the General Insurance net loss reserves are adequate to cover General Insurance net losses and loss expenses as of June 30, 2006. While AIG regularly reviews the adequacy of established loss reserves, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's loss reserves as of June 30, 2006. In the opinion of management, such adverse development and resulting increase in reserves is not likely to have a material adverse effect on AIG's consolidated financial position, although it could have a material adverse effect on AIG's consolidated results of operations for an individual reporting period.

The table below presents the reconciliation of General Insurance net loss reserves for the three and six-month periods ended June 30, 2006 and 2005 as follows:

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
Net reserve for losses and loss expenses at beginning of period	\$58,892	\$49,334	\$57,476	\$47,254
Foreign exchange effect	370	(349)	487	(321)
Losses and loss expenses incurred:				
Current year	6,911	7,032	13,752	14,071
Prior years, other than accretion of discount*	(248)	(13)	(213)	130
Prior years, accretion of discount	101	97	202	194
Losses and loss expenses incurred	6,764	7,116	13,741	14,395
Losses and loss expenses paid	5,812	5,537	11,490	10,764
Net reserve for losses and loss expenses at end of period	\$60,214	\$50,564	\$60,214	\$50,564

* Includes \$30 million and \$35 million in the three-month periods ended June 30, 2006 and 2005, respectively, for the general reinsurance operations of Transatlantic and \$(63) million and \$0, respectively, of additional losses incurred resulting from increased costs related to the 2005 and 2004 catastrophes. Includes \$65 million and \$90 million in the six-month periods ended June 30, 2006 and 2005, respectively, for the general reinsurance operations of Transatlantic and \$35 million and \$118 million, respectively, of additional losses incurred resulting from increased costs related to the 2005 and 2004 catastrophes. Transatlantic includes \$10 million of prior year adverse catastrophe development in both the three months and six months ended June 30, 2006.

The loss ratios recorded by AIG for the first six months of 2006 take into account the results of the comprehensive reserve reviews that were completed in the fourth quarter of 2005. As explained more fully in the 2005 Annual Report on Form 10-K/A, AIG's year-end 2005 reserve review reflected careful consideration of the reserve analyses prepared by AIG's internal actuarial staff with the assistance of third party actuaries. In determining the appropriate loss ratios for accident year 2006 for each class of business, AIG gave appropriate consideration to the loss ratios resulting from the reserve analyses as well as all other relevant information including rate changes, expected changes in loss costs, changes in coverage, reinsurance or mix of business, and other factors that may affect the loss ratios.

In the first six months of 2006, AIG enhanced its process of determining the quarterly loss development from prior accident years. In the first quarter of 2006, AIG began conducting additional analyses to determine the change in estimated ultimate loss for each accident year for each profit center. For example, if loss emergence for a profit center is different than expected for certain accident years in the quarter, the actuaries now take additional steps to examine the indicated effect such emergence would have on the reserves of that profit center. In some cases, the higher or lower than expected emergence may result in no clear change in the ultimate loss estimate for the accident years in question, and no adjustment would be made to the profit center's reserves for prior accident years. In other cases, the higher or lower than expected emergence may result in a larger change, either favorable or unfavorable, than the difference between the actual and expected loss emergence. Such additional analyses were conducted for each profit center, as appropriate, in the first and second quarters of 2006 to determine the loss development from prior accident years for the first and second quarters of 2006.

In the second quarter of 2006, net loss development from prior accident years was favorable by approximately \$248 million. This reflects approximately \$63 million of favorable development pertaining to catastrophes in 2005, partially offset by adverse development of approximately \$30 million from Transatlantic. Excluding catastrophes and Transatlantic, as well as accretion of discount of approximately \$101 million, net loss development from prior accident years in the second quarter of 2006 was favorable by approximately \$215 million. The majority of the favorable development was attributable to shorter tail classes of business throughout General Insurance. This favorable development relates primarily to classes of business which did not require reserve strengthening in connection with AIG's year-end 2005 reserve study. DBG accounted for approximately \$57 million of the \$215 million of overall favorable development in the second quarter of 2006, excluding catastrophes. Accident years 2003 through 2005 continued to develop favorably in the second quarter for most classes of business

throughout AIG. Accident years 2001 and prior continued to develop adversely in the quarter, primarily due to approximately \$125 million of adverse development from excess casualty business and approximately \$35 million from the excess workers compensation class of business. The \$215 million of overall net favorable development was comprised of approximately \$190 million of adverse development from accident years 2002 and prior, offset by approximately \$410 million of favorable development from accident years 2003 through 2005.

In the first six months of 2006, net loss development from prior accident years was favorable by approximately \$213 million. This reflects approximately \$35 million of adverse development pertaining to catastrophes in 2004 and 2005 and approximately \$65 million of adverse development from Transatlantic. Excluding catastrophes and Transatlantic, as well as accretion of discount of approximately \$202 million, net loss development from prior accident years in the first six months of 2006 was favorable by approximately \$313 million. The majority of the favorable development was attributable to shorter tail classes of business throughout General Insurance. DBG accounted for approximately \$62 million of the \$313 million of overall favorable development in the first six months of 2006, excluding catastrophes. Accident years 2003 through 2005 developed favorably in the first six months of 2006 for most classes of business throughout AIG. Accident years 2002 and prior developed adversely in the first six months, primarily due to approximately \$300 million of adverse development from excess casualty business and approximately \$70 million from the excess workers compensation class of business. The \$313 million of overall net favorable development was comprised of approximately \$420 million of adverse development from accident years 2002 and prior, offset by approximately \$735 million of favorable development from accident years 2003 through 2005.

In the second quarter of 2005, net loss development from prior accident years was favorable by approximately \$13 million, including negligible development pertaining to catastrophes and approximately \$35 million of adverse development from Transatlantic. Excluding catastrophes and Transatlantic, as well as accretion of discount of approximately \$97 million, net loss development from prior accident years in the second quarter of 2005 was favorable by approximately \$48 million. In the second quarter of 2005, most classes of business experienced favorable development for accident years 2002 through 2004, with the exception of D&O which continued to experience adverse development for accident year 2002. The \$48 million of overall net favorable development was comprised of approximately \$400 million of adverse development from accident years 2001 and prior, offset by approximately \$350 million of favorable development from accident year 2004 and approximately \$100 million of favorable development from accident

year 2003. The majority of the adverse developments from accident years 2001 and prior pertained to the excess casualty and D&O classes of business.

In the first six months of 2005, net loss development from prior accident years was adverse by approximately \$130 million, including approximately \$118 million pertaining to catastrophes in 2004 and approximately \$90 million of adverse development from Transatlantic. Excluding catastrophes and Transatlantic, as well as accretion of discount of approximately \$194 million, net loss development from prior accident years in the first six months of 2005 was favorable by approximately \$78 million. In the first six months of 2005, most classes of business experienced favorable development for accident years 2002 through 2004, with the exception of D&O which experienced approximately \$100 million of adverse development for accident year 2002. The \$78 million of overall net favorable development included approximately \$750 million of adverse development pertaining to accident years 2001 and prior, offset by approximately \$250 million of favorable development from accident year 2003 and \$570 million of favorable development from accident year 2004. The majority of the adverse development from accident years 2001 and prior emanated from the excess casualty and D&O classes of business.

Loss Reserving Process

The General Insurance loss reserves can generally be categorized into two distinct groups. One group is long-tail casualty lines of business which include excess and umbrella liability, D&O, professional liability, medical malpractice, workers compensation, general liability, products liability, and related classes. The other group is short-tail lines of business consisting principally of property lines, personal lines and certain classes of casualty lines. These lines of business and actuarial

assumptions made in the review of these lines of business are described in the 2005 Annual Report on Form 10-K/A.

The process of determining the current loss ratio for each class or business segment is based on a variety of factors and is described in detail in AIG's 2005 Annual Report on Form 10-K/A. AIG uses the process described above to update AIG's reserves on a quarterly basis. AIG's 2005 Annual Report on Form 10-K/A also includes a discussion and analysis of the volatility of AIG's 2005 reserve estimates and a sensitivity analysis.

Asbestos and Environmental Reserves

The estimation of loss reserves relating to asbestos and environmental claims on insurance policies written many years ago is subject to greater uncertainty than other types of claims due to inconsistent court decisions as well as judicial interpretations and legislative actions that in some cases have tended to broaden coverage beyond the original intent of such policies and in others have expanded theories of liability.

As described more fully in the 2005 Annual Report on Form 10-K/A, AIG's reserves relating to asbestos and environmental claims reflect the results of the comprehensive ground up analysis which was completed in the fourth quarter of 2005. AIG plans to update the ground up analysis on an annual basis. In the first six months of 2006, AIG maintained the ultimate loss estimates for asbestos and environmental claims resulting from the recently completed reserve analyses. A minor amount of incurred loss emergence pertaining to asbestos was reflected in the first six months of 2006, as depicted in the table that follows. This minor development is primarily attributable to the general reinsurance operations of Transatlantic.

A summary of reserve activity, including estimates for applicable IBNR, relating to asbestos and environmental claims separately and combined for the six months ended June 30, 2006 and 2005 follows:

<i>(in millions)</i>	2006		2005	
	Gross	Net	Gross	Net
Asbestos:				
Reserve for losses and loss expenses at beginning of year	\$4,441	\$1,840	\$2,559	\$1,060
Losses and loss expenses incurred*	(1)	4	96	27
Losses and loss expenses paid*	(277)	(96)	(151)	(51)
Reserve for losses and loss expenses at end of period	\$4,163	\$1,748	\$2,504	\$1,036
Environmental:				
Reserve for losses and loss expenses at beginning of year	\$ 926	\$ 410	\$ 974	\$ 451
Losses and loss expenses incurred*	1	-	(12)	(3)
Losses and loss expenses paid*	(55)	(33)	(56)	(31)
Reserve for losses and loss expenses at end of period	\$ 872	\$ 377	\$ 906	\$ 417
Combined:				
Reserve for losses and loss expenses at beginning of year	\$5,367	\$2,250	\$3,533	\$1,511
Losses and loss expenses incurred*	-	4	84	24
Losses and loss expenses paid*	(332)	(129)	(207)	(82)
Reserve for losses and loss expenses at end of period	\$5,035	\$2,125	\$3,410	\$1,453

* All amounts pertain to policies underwritten in prior years.

As indicated in the table above, asbestos loss payments increased significantly in the first six months of 2006 compared to the same period in the prior years, primarily as a result of payments pertaining to settlements that had been negotiated in earlier periods. There was negligible development of asbestos and environmental reserves in the first six months of 2006.

The gross and net IBNR included in the reserve for losses and loss expenses, relating to asbestos and environmental claims separately and combined, at June 30, 2006 and 2005 were estimated as follows:

<i>(in millions)</i>	2006		2005	
	Gross	Net	Gross	Net
Asbestos	\$3,100	\$1,351	\$1,710	\$ 753
Environmental	562	241	543	264
Combined	\$3,662	\$1,592	\$2,253	\$1,017

A summary of asbestos and environmental claims count activity for the six months ended June 30, 2006 and 2005 was as follows:

	2006			2005		
	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined
Claims at beginning of year	7,293	9,873	17,166	7,575	8,216	15,791
Claims during year:						
Opened	453	900	1,353	484	1,324	1,808
Settled	(73)	(83)	(156)	(32)	(108)	(140)
Dismissed or otherwise resolved	(493)	(893)	(1,386)	(580)	(1,770)	(2,350)
Claims at end of period	7,180	9,797	16,977	7,447	7,662	15,109

The table below presents AIG's survival ratios for asbestos and environmental claims at June 30, 2006 and 2005. The survival ratio is derived by dividing the current carried loss reserve by the average payments for the three most recent calendar years for these claims. Therefore, the survival ratio is a simplistic measure estimating the number of years it would be before the current ending loss reserves for these claims would be paid off using recent year average payments. Many factors, such as aggressive settlement procedures, mix of business and level of coverage provided, have a significant effect on the amount of asbestos and environmental reserves and payments and the resultant survival ratio. Thus, caution should be exercised in attempting to determine reserve adequacy for these claims based simply on this survival ratio.

AIG's survival ratios for asbestos and environmental claims, separately and combined were based upon a three-year average payment. These ratios at June 30, 2006 and 2005 were as follows:

<i>(number of years)</i>	Gross	Net
2006		
Survival ratios:		
Asbestos	13.2	15.9
Environmental	6.3	5.5
Combined	11.1	11.9
2005		
Survival ratios:		
Asbestos	9.5	12.6
Environmental	6.4	6.6
Combined	8.4	10.0

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad. Insurance-oriented products consist of individual and group life, payout annuities, endowment and accident and health policies. Retirement savings products consist generally of fixed and variable annuities.

Domestically, AIG's Life Insurance & Retirement Services operations offer a broad range of protection products, such as life insurance, group life and health products, including disability income products and payout annuities, which include single premium immediate annuities, structured settle-

ments and terminal funding annuities. Home service operations include an array of life insurance, accident and health and annuity products sold through career agents. In addition, home service includes a small block of run-off property and casualty coverage. Retirement services include group retirement products, individual fixed and variable annuities sold through banks, broker dealers and exclusive sales representatives, and annuity runoff operations, which include previously-acquired "closed blocks" and other fixed and variable annuities largely sold through distribution relationships that have been discontinued.

Overseas, AIG's Life Insurance & Retirement Services operations include insurance and investment-oriented products such as whole and term life, investment linked, universal life

and endowments, personal accident and health products, group products including pension, life and health, and fixed and variable annuities.

Life Insurance & Retirement Services operations presented on a sub-product basis for the three and six-month periods ended June 30, 2006 and 2005 were as follows:

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,

(a) Effective January 1, 2006, the Broker/Dealer operations of the Domestic Life Insurance companies are being reported and managed within the Asset Management segment. Included in GAAP premiums were revenues of \$40 million and \$64 million, respectively, for the three and six-month periods ended June 30, 2005.

(b) Includes structured settlements, single premium immediate annuities and terminal funding annuities.

(c) Primarily represents runoff annuity business sold through discontinued distribution relationships.

(d) Includes the effect of an out of period adjustment related to the accounting for certain interests in unit investment trusts. For the three and six-month periods ended June 30, 2006 the effect was an increase of \$221 million and \$144 million in net investment income and operating income, respectively.

(e) For purposes of this presentation, pricing net investment gains are segregated as a component of total realized capital gains (losses). They represent certain amounts of realized capital gains where gains are an inherent element in pricing certain life products in some foreign countries.

(f) Amounts presented were as at June 30, 2006 and December 31, 2005.

AIG's Life Insurance & Retirement Services subsidiaries report their operations through the following operating units: Domestic Life — AIG American General, including American General Life Insurance Company (AG Life), United States Life Insurance in the City of New York (USLIFE) and American General Life and Accident Insurance Company (AGLA); Domestic Retirement Services — The Variable Annuity Life Insurance Company (VALIC), AIG Annuity Insurance Com-

pany (AIG Annuity) and AIG SunAmerica; Foreign Life — ALICO, AIRCO, AIG Edison Life, AIG Star Life, American International Assurance Company, Limited together with American International Assurance Company (Bermuda) Limited (AIA), Nan Shan Life Insurance Company, Ltd. (Nan Shan) and The Philippine American Life and General Insurance Company (Philamlife).

AIG transacts business in most major foreign currencies. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of Life Insurance & Retirement Services GAAP premiums for the three and six-month periods ended June 30, 2006:

	Three Months Ended June 30, 2006	Six Months Ended June 30, 2006
Growth in original currency*	6.8%	7.0%
Foreign exchange effect	(2.4)	(3.3)
Growth as reported in U.S. dollars	4.4%	3.7%

* Computed using a constant exchange rate for each respective period.

Life Insurance & Retirement Services Results

Life Insurance & Retirement Services GAAP premiums increased 4 percent to \$7.6 billion in the second quarter of 2006 compared to the same period in 2005. Net investment income increased for the second quarter of 2006 when compared to the same period in 2005. The increase includes the effect of an out of period adjustment relating to the accounting for certain interests in unit investment trusts totaling \$221 million, reduced by lower policyholder trading gains (losses), which are linked mainly to equities, and which are offset by an equal change in incurred policy losses and benefits. In addition, certain operations experienced lower investment income related to short-term volatility of yield enhancement investments in structured notes linked to emerging market sovereign debt, which had mark-to-market losses of \$46 million in the quarter.

Operating income including realized capital gains (losses) decreased slightly in the second quarter of 2006 when compared to the same period in 2005. Domestic Life operations continued to perform well in its core life insurance businesses that included growth of retail periodic sales, but operating income declined in the quarter due to lower investment income from calls and tenders, and additional reserves for legal contingencies. Domestic Retirement Services operating income grew for the quarter due to strong partnership income, lower amortization of deferred policy acquisition costs related to realized capital losses and an increase in underlying reserves which grew 3 percent in the second quarter. Foreign Life Insurance & Retirement Services operating income growth in the quarter included the effect of the aforementioned out of period adjustment and was dampened by a

significantly weaker Yen exchange rate compared to the same three month period last year. Realized capital gains (losses) for the second quarter of 2006 totaled a net loss of \$218 million versus a gain of \$46 million during the same period last year. The loss in the current quarter was primarily due to the write-down of certain fixed income securities for interest rate-related other-than-temporary declines in value where the companies' intent to hold until recovery changed.

Life Insurance & Retirement Services GAAP premiums increased 4 percent to \$15.4 billion for the first six months of 2006 compared to the same period of 2005. Net investment income increased for the first six months of 2006 reflecting a higher level of invested assets and the effect of the aforementioned out of period adjustment. Operating income, including realized capital gains (losses), grew 8 percent for the first six months of 2006 compared to the same period of 2005. Domestic Life operating income declined for the first six months of 2006 primarily due to lower investment income from calls and tenders and additional reserves for legal contingencies. Domestic Retirement Services operating income declined 22 percent for the first six months of 2006 primarily due to significant realized capital losses which more than offset increased income from growth in underlying reserves, higher partnership income and lower amortization of deferred policy acquisition costs related to capital losses. Foreign Life Insurance & Retirement Services operating income grew 27 percent for the first six months of 2006 on a U.S. dollar basis due to higher realized capitalized gains and the effect of the aforementioned out of period adjustment. Operating income growth in U.S. dollars is lower than growth on a local currency basis primarily due to a weaker Japanese Yen in the first six months of 2006 compared to the same period last year. Realized capital losses were \$60 million for the first six months of 2006 compared to losses of \$36 million during the same period of 2005.

Domestic Life Operations

The following table reflects retail periodic life insurance sales by product for the three and six-month periods ended June 30, 2006 and 2005:

Domestic Life Insurance Periodic Premium Sales*

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
By product:				
Universal life	\$107	\$ 54	\$243	\$112
Variable universal life	18	10	27	24
Term life	63	60	123	113
Whole life/other	3	3	6	6
Total	\$191	\$127	\$399	\$255

* Periodic premium represents premium from new business expected to be collected over a one year period.

Quarterly Domestic Life Results

AIG's Domestic Life operations had continued growth of GAAP premiums for the second quarter of 2006 when compared to the same period last year. The life insurance product line had strong periodic universal life sales from the independent distribution platform. While not sustainable at this pace in a very competitive environment, this result has positioned the Life insurance product line to achieve another solid sales year. AGLA, the home service business, is diversifying product offerings, enhancing the capabilities and quality of the sales force which has resulted in improved agent productivity and better persistency of in-force business. Strong growth of payout annuities GAAP premiums emanated from sales of single premium immediate annuities that remained strong during the quarter. GAAP premiums for the group life/health product line were slightly lower in the second quarter of 2006 compared to 2005 reflecting slower growth in the credit business, and tightened pricing and underwriting in the group employer lines. Restructuring efforts in this business continue to focus on new product introductions, cross selling, other growth strategies, and may include exiting certain product lines.

Operating income for the Domestic Life Insurance line of business declined 2 percent for the second quarter of 2006 due to lower investment income related to yield enhancement activities that included mark-to-market losses of \$8 million on structured notes linked to emerging market sovereign debt and lower call and tender income. Operating income for the home service line of business declined from the second quarter of 2005 due to lower investment income from calls and tenders on fixed maturity securities and mark-to-market losses of \$8 million on structured notes linked to emerging market sovereign debt. The group life/health business operating income results for the second quarter of 2006 included a \$24 million reserve increase related to litigation and contingencies. The payout annuities line of business operating income declined for the quarter primarily due to lower calls and tenders on fixed maturity securities when compared to the second quarter of 2005.

Year-to-date Domestic Life Results

GAAP premiums for the Domestic Life operations grew 5 percent for the first six months of 2006 compared to the same period of 2005 reflecting strong sales of universal life and single premium immediate annuities. The life insurance product line experienced strong periodic sales from the independent distribution platform for the first six months of 2006. The home service business GAAP premiums declined for the first six months of 2006 as the reduction of premium in-force outpaced the positive sales growth for the period. The payout annuities GAAP premiums growth for the first six months of 2006 reflects strong sales of single premium annuities when compared to the same period last year. GAAP premiums for the group life/health product line for the first

six months of 2006 reflect the restructuring efforts in certain product lines.

Operating income for the life insurance product line declined for the first six months of 2006 due to lower investment income related to yield enhancement activities, including mark-to-market losses on structured notes linked to emerging market debt of \$5 million, that offset the positive effect of higher sales. Operating income for the home service line of business grew from the same period last year due to improved persistency of premium in-force and lower acquisition costs, partially offset by mark-to-market losses of \$4 million on structured notes linked to emerging market sovereign debt. The group life/health business operating income for the first six months of 2006 is lower than the same period last year due to additional reserves related to litigation and contingencies in the credit life and A&H business and transition costs related to the outsourcing of back office operations. The payout annuities product line operating income declined for the first six months of 2006 primarily due to lower calls and tenders on fixed maturity securities when compared to the same period last year.

Quarterly Domestic Retirement Services Results

Domestic Retirement Services total deposits declined approximately 6 percent for the second quarter of 2006 when compared to the year ago quarter. The decline is due to lower fixed annuity sales that continued to face increased competition from bank products in the flat yield curve environment. Individual variable annuity deposits grew 46 percent in the second quarter of 2006 from the year ago quarter reflecting strong growth in products with new guarantee features. Group retirement deposits were flat in the quarter compared to last year reflecting the increased number of policyholders nearing retirement age. New products have been launched that are designed to meet the needs of retirement age policyholders and retain assets under management.

Group retirement products operating earnings for the second quarter of 2006 were lower than the same period last year principally due to slightly lower investment spreads, mark-to-market losses of \$14 million on structured notes linked to emerging market sovereign debt and higher amortization of deferred acquisition costs related to internal replacements of existing contracts into new contracts. Individual fixed annuity operating income grew 38 percent for the second quarter of 2006 compared to last year principally due to lower amortization of deferred policy acquisition costs related to realized capital losses, higher partnership income, increased net investment spreads and growth in underlying reserves, partially offset by mark-to-market losses of \$14 mil-

lion on structured notes linked to emerging market sovereign debt. Operating income for individual variable annuities grew 7 percent in the second quarter of 2006 from the year ago quarter in line with growth in underlying reserves.

Year-to-date Domestic Retirement Services Results

Domestic Retirement Services total deposits declined approximately 6 percent for the first six months of 2006 when compared to the first six months of 2005. The decrease in total deposits reflects declining fixed annuity sales partially offset by strong growth in individual variable annuity sales. In addition, surrender rates during the first six months of 2006 are higher when compared to the same period last year. Net flows for the six months of 2006 were negative \$2.2 billion compared to positive net flows of \$1.1 billion last year reflecting lower deposits and higher surrenders. The negative flows primarily reflect runoff annuity business sold through discontinued distribution relationships.

Group retirement products operating earnings grew 4 percent for the first six months due to higher partnership income and growth in underlying reserves, partially offset by mark-to-market losses of \$9 million on structured notes linked to emerging market sovereign debt. Individual fixed annuity operating income for the first six months of 2006 grew 38 percent primarily from growth in partnership income, lower amortization of deferred policy acquisition costs related to capital losses, growth in average underlying reserves and slightly lower average crediting rates, partially offset by mark-to-market losses of \$8 million on structured notes linked to emerging market sovereign debt. The individual variable annuity product line grew operating earnings for the first six months as fee income increased on higher sales volumes and increased underlying reserves.

Domestic Retirement Services Supplemental Data

The following table reflects deposits for Domestic Retirement Services for the three and six-month periods ended June 30, 2006 and 2005:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
<i>(in millions)</i>				
Group retirement products*	\$1,608	\$1,608	\$3,549	\$3,239
Individual fixed annuities	1,331	1,951	3,018	4,414
Individual variable annuities	1,148	785	2,175	1,676
Individual fixed annuities - runoff	42	58	85	107
Total	\$4,129	\$4,402	\$8,827	\$9,436

* Includes mutual funds of \$256 million and \$239 million for the three months of 2006 and 2005, respectively and \$801 million and \$462 million for six months of 2006 and 2005, respectively.

The following chart shows the amount of reserves by surrender charge category for Domestic Retirement Services as of June 30, 2006:

<i>(in millions)</i>	Group Retirement Products*	Individual Fixed Annuities	Individual Variable Annuities
Zero or no surrender charge	\$41,237	\$10,302	\$10,259
Between 0 percent - 4 percent	10,762	10,555	8,141
Greater than 4 percent	2,531	30,749	10,239
Non-Surrenderable	888	3,154	87
Total	\$55,418	\$54,760	\$28,726

* Excludes mutual funds.

In the three months and six months ended June 30, 2006 surrender rates increased for individual fixed annuities, individual variable annuities and group retirement products compared to the same periods in 2005. The increase in surrender rate for fixed annuities continues to be driven by the shape of the yield curve and general aging of the in-force block; however, less than 20 percent of the individual fixed annuity reserves as of June 30, 2006 are available to be surrendered without charge. Individual variable annuity surrender rates for the second quarter and first six months of 2006 primarily reflect the higher shock-lapse that occurs following expiration of the surrender charge period on certain 3-year and 7-year contracts. Reflecting a widespread industry phenomenon, this lapse rate, much of which was anticipated when the products were issued, has recently been affected by investor demand to exchange existing policies for new-generation contracts with living benefits or lower fees. In addition, partial withdrawals on certain variable annuity products have increased as AIG has introduced features designed to generate a stream of income to the participants.

A continued increase in the level of surrenders in any of these businesses or in the individual fixed annuities runoff block could accelerate the amortization of deferred acquisition costs in future years and negatively affect fee income earned on assets under management.

The following table reflects the net flows by line of business for Domestic Retirement Services for the three and six-month periods ended June 30, 2006 and 2005:

Domestic Retirement Services – Net Flows^(a)

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
Group retirement products ^(b)	\$ 194	\$ 299	\$ 635	\$ 578
Individual fixed annuities	(736)	448	(737)	1,833
Individual variable annuities	88	(126)	(45)	(54)
Individual fixed annuities - runoff	(1,253)	(684)	(2,079)	(1,250)
Total	\$(1,707)	\$ (63)	\$(2,226)	\$ 1,107

(a) Net flows are defined as deposits received, less benefits, surrenders, withdrawals and death benefits.

(b) Includes mutual funds.

The combination of lower deposits and higher surrenders in the individual fixed annuity and individual fixed an-

nuitly-runoff blocks resulted in negative net flows for the three and six-month periods ended June 30, 2006. The continuation of the current interest rate and competitive environment could prolong this trend.

Quarterly Foreign Life Insurance & Retirement Services Results

Foreign Life Insurance & Retirement Services operations produced 78 percent and 79 percent of Life Insurance & Retirement Services GAAP premiums for the three months ended June 30, 2006 and 2005, respectively. Foreign Life Insurance & Retirement Services GAAP premiums increased in the second quarter of 2006 by approximately 4 percent compared to the same period in 2005 on a U.S. dollar basis and 7 percent excluding the effect of currency changes. AIG transacts business in most major foreign currencies and therefore premiums reported in U.S. dollars will vary both by volume and by changes in foreign currency translation rates. Foreign life GAAP premiums growth is also affected by a continuing trend for clients to purchase investment-oriented products. This is particularly true in Southeast Asia, including Taiwan, where AIG's life operations in that region have responded to this trend by offering a wide array of investment-linked products, both periodic pay and single premium, with multiple fund selection, but with minimal investment guarantees. For GAAP reporting purposes, only revenues from policy charges for insurance, administration, and surrender charges are reported as GAAP premiums for these life products. This product mix shift contributed to the single digit growth rate in Foreign Life Insurance & Retirement Services GAAP premiums, while continuing to grow total reserves by double digits.

Foreign Life Insurance & Retirement Services operating income of \$1.72 billion for the second quarter of 2006 included \$164 million of realized capital gains compared to \$124 million of gains in the year ago quarter and the effect of an out of period adjustment related to the accounting for certain interests in unit investment trusts that increased operating income by \$144 million in the three and six-month periods ended June 30, 2006. Foreign Life Insurance & Retirement Services operating income grew 18 percent on a U.S. dollar basis. Similar to the effect of exchange rates on GAAP premiums, operating income results for foreign operations are negatively affected by exchange rates when compared to last year. On a comparable basis, the growth in life insurance product line results for the quarter were generally in line with the growth in underlying reserves. Personal accident & health results for the second quarter of 2006 reflect continued stable profit margins, but year-on-year comparisons in U.S. dollars are affected by the weakening Yen exchange rate given the large concentration of that product line in Japan. Group products operating income results declined slightly in the second quarter of 2006 due to higher mortality and morbidity costs when compared to the same period last year. Growth of

individual fixed annuities operating income for the second quarter of 2006, emanating primarily from Japan, is in line with the growth in average assets under management and the greater benefits from increasing scale. The growth of individual variable annuities operating income in the second quarter of 2006 reflects continued strong growth in assets under management related to the increased demand for those products in Japan and in Europe.

During the second quarter of 2006, Japanese tax authorities announced a reduction in the amount of premium that policyholders may deduct from their Japanese tax returns for certain accident and health products. Foreign life operations in Japan experienced a decline in sales of those products and an increase in terminations during the quarter. The effect on second quarter 2006 operating income of higher terminations amounted to approximately \$10 million of higher expenses. If terminations continue at current experience levels, operating results will continue to be negatively affected. Higher than anticipated terminations result in accelerated amortization of deferred acquisition costs, offset somewhat by the release of policy benefit reserves in excess of cash value. The amount of deferred acquisition costs related to the policies in force for these products amounted to \$278 million as of June 30, 2006. In response to the tax law change, AIG has developed new products, both life and health, to meet the needs of clients in that market. AIG continues to believe that any increase in policy terminations would not be material to AIG's consolidated financial condition or results of operations.

Year-to-date Foreign Life Insurance & Retirement Services Results

Foreign Life Insurance & Retirement Services operations produced 78 percent and 79 percent of Life Insurance & Retirement Services GAAP premiums in the first six months of 2006 and 2005, respectively. GAAP premiums grew approximately 3 percent for the first six months of 2006 on a U.S. dollar basis and 7 percent when measured on an original currency basis compared to the year ago periods. Globally, AIG's deep and diverse distribution, which includes bancassurance, worksite marketing, direct marketing and strong

agency organizations, provides a powerful distribution platform for AIG's diverse product lines. In Japan, distribution of single premium life insurance products through banks was deregulated in December 2005 resulting in strong sales of products designed for that market during the first six months of 2006. This new distribution outlet adds to the existing multiple distribution platform in Japan where AIG remains the leading foreign provider.

Foreign Life Insurance & Retirement Services operating income for the first six months of 2006 was \$3.39 billion, which included \$516 million of realized capital gains and the \$144 million effect of the aforementioned out of period adjustment included in life insurance, compared with \$2.66 billion of operating income for the same period of 2005, which included \$49 million of realized capital gains. The first six months of 2006 results for the life insurance product line also included a \$37 million operating loss attributable to this segment's share of the losses from AIG Credit Card Company (Taiwan) compared to a gain of \$20 million in the first six months of 2005, due to the allowance for losses recorded in the first quarter of 2006. The positive effect of DAC and value of business acquired (VOBA) unlocking for the life insurance product line was \$17 million and \$58 million for the first six months of 2006 and 2005, respectively. Personal accident and health product line results for the first six months of 2006 reflect the growth of underlying premium in force, although growth is dampened by a weaker Yen exchange rate when compared to the same period last year. The Foreign Retirement Services business continued to grow in Japan and Korea by expanding distribution and leveraging AIG's product expertise. Reserves for individual fixed annuities continue to grow although demand for multi-currency fixed annuities in Japan has slowed due to currency rate fluctuations, rising local interest rates and equity markets. Growth of individual variable annuities has accelerated as those products have become more popular with consumers in Japan and Europe coupled with improved performance of equity markets. The largest contributor to the growth in group products is the pension profit center which experienced higher growth in fee income emanating from increased assets under management.

Life Insurance & Retirement Services Net Investment Income and Realized Capital Gains (losses)

The following table summarizes the components of net investment income for the three and six-month periods ended June 30, 2006 and 2005:

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,

Total retirement services	70	(1)	201	73
Total	\$ 50	\$ (18)	\$ 154	\$ 100

Quarterly Life Insurance & Retirement Services Net Investment Income and Realized Capital Gains (Losses)

Net investment income increased 3 percent for the second quarter of 2006 when compared to the same period in 2005 as a result of the above mentioned out of period adjustment. This adjustment offset a decline which was mostly attributable to lower policyholder trading gains (losses), which are linked mainly to equities, and are offset by an equal change in incurred policy losses and benefits. Investment income results for certain operations were reduced in the second quarter of 2006 by losses related to investments in structured notes linked to emerging market sovereign debt that incorporates both interest rate risk and currency risk. Mark-to-market losses related to these structured notes were \$46 million and \$28 million for the three and six months ended June 30, 2006, respectively. In addition, period to period comparisons of investment income for some lines of business are affected by yield enhancement activity, particularly partnership income as shown in the above table.

AIG generates income tax credits as a result of investing in synthetic fuel production (synfuels) related to the investment loss shown in the above table and records those benefits in its provision for income taxes. The amount of those income tax credits was \$21 million and \$61 million for the

three months ended June 30, 2006 and 2005, respectively. See Note 6(l) of Notes to Consolidated Financial Statements for a further discussion of the effect of the change in oil prices on synfuel tax credits. AIG may reduce future production levels depending upon oil prices which affect the availability of the synthetic fuel tax credit.

Year-to-date Life Insurance & Retirement Services Net Investment Income and Realized Capital Gains (Losses)

The growth in net investment income for the first six months of 2006 compared to a year ago parallels the growth in general account reserves and surplus for both Domestic and Foreign Life Insurance & Retirement Services companies and the effect of the aforementioned out of period adjustment. Also, net investment income was positively affected by the compounding of previously earned and reinvested investment cash flows along with the addition of new net cash flows from operations. Investment income includes income generated from traditional fixed income investments as well as income generated from other sources.

The amount of income tax credits generated as a result of investing in synthetic fuel production (synfuels) was \$59 million and \$115 million for the first six months of 2006 and 2005, respectively.

The following table summarizes realized capital gains (losses) by major category for the three and six-month periods ended June 30, 2006 and 2005:

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005

Realized capital gains (losses) include normal portfolio transactions as well as derivative gains (losses) for transactions that do not qualify for hedge accounting treatment under FAS 133, transactional foreign exchange gains and losses and other-than-temporary declines in the value of investments. Line of business results for Domestic Life Insurance & Retirement Services exclude the effect of realized capital gains (losses), but include the related effect on the amortization of deferred acquisition costs.

Life Insurance & Retirement Services Underwriting and Investment Risk

The risks associated with life and accident and health products are underwriting risk and investment risk. The risk associated with the financial and investment contract products is primarily investment risk.

Underwriting risk represents the exposure to loss resulting from the actual policy experience adversely emerging in comparison to the assumptions made in the product pricing associated with mortality, morbidity, termination and expenses. The emergence of significant adverse experience would require an adjustment to DAC and benefit reserves that could have a substantial effect on AIG's results of operations.

Natural disasters such as hurricanes, earthquakes and other catastrophes have the potential to adversely affect AIG's operating results. Other risks, such as an outbreak of a pandemic disease, such as the Avian Influenza A Virus (H5N1), could adversely affect AIG's business and operating results to an extent that may be only minimally offset by reinsurance programs.

While outbreaks of the Avian Flu continue to occur among poultry or wild birds in a number of countries in Asia, Europe, and Africa, transmission to humans has been rare to date. If the virus mutates to a form that can be transmitted from human to human, it has the potential to spread rapidly worldwide. If such an outbreak were to take place, early quarantine and vaccination could be critical to containment.

Both the contagion and mortality rate of any mutated H5N1 virus that can be transmitted from human to human are highly speculative. AIG continues to monitor the developing facts. A significant global outbreak could have a material adverse effect on Life Insurance & Retirement Services operating results and liquidity from increased mortality and morbidity rates. For a further discussion of pandemic influenza, see "Managing Market Risk – Catastrophe Exposures – Pandemic Influenza."

AIG's Foreign Life Insurance & Retirement Services companies generally limit their maximum underwriting exposure on life insurance of a single life to approximately \$1.7 million of coverage. AIG's Domestic Life Insurance & Retirement Services companies limit their maximum underwriting exposure on life insurance of a single life to \$10 million of coverage in certain circumstances by using yearly

renewable term reinsurance. (See also the discussion under "Liquidity" herein.)

AIRCO acts primarily as an internal reinsurance company for AIG's foreign life operations. This facilitates insurance risk management (retention, volatility, concentrations) and capital planning locally (branch and subsidiary). It also allows AIG to pool its insurance risks and purchase reinsurance more efficiently at a consolidated level, manage global counterparty risk and relationships and manage global life catastrophe risks.

AIG's domestic Life Insurance & Retirement Services operations utilize internal and third-party reinsurance relationships to manage insurance risks and to facilitate capital management strategies. Pools of highly-rated third-party reinsurers are utilized to manage net amounts at risk in excess of retention limits. AIG's domestic life insurance companies also cede excess, non-economic reserves carried on a statutory-basis only on certain term and universal life insurance policies and certain fixed annuities to AIG Life of Bermuda Ltd., a wholly owned Bermuda reinsurer.

AIG generally obtains letters of credit in order to obtain statutory recognition of these intercompany reinsurance transactions. For this purpose, AIG entered into a \$2.5 billion syndicated letter of credit facility in December 2004. Letters of credit totaling \$2.5 billion were outstanding as of June 30, 2006. The letter of credit facility has a ten-year term, but the facility can be reduced or terminated by the lenders beginning after seven years.

In November 2005, AIG entered into a revolving credit facility for an aggregate amount of \$3 billion. The facility can be drawn in the form of letters of credit with terms of up to ten years. As of June 30, 2006, \$2.33 billion principal amount of letters of credit are outstanding under this facility, of which approximately \$939 million relates to life intercompany reinsurance transactions. AIG also obtained approximately \$298 million letters of credit on a bilateral basis.

Investment risk represents the exposure to loss resulting from the cash flows from the invested assets, primarily long-term fixed rate investments, being less than the cash flows required to meet the obligations of the expected policy and contract liabilities and the necessary return on investments. (See also the discussion under "Liquidity" herein.)

To minimize its exposure to investment risk, AIG tests the cash flows from the invested assets and policy and contract liabilities using various interest rate scenarios to evaluate investment risk and to confirm that assets are sufficient to pay these liabilities.

AIG actively manages the asset-liability relationship in its foreign operations, as it has been doing throughout AIG's history, even though certain territories lack qualified long-term investments or certain local regulatory authorities may impose investment restrictions. For example, in several

Southeast Asian countries, the duration of investments is shorter than the effective maturity of the related policy liabilities. Therefore, there is risk that the reinvestment of the proceeds at the maturity of the initial investments may be at a yield below that of the interest required for the accretion of the policy liabilities. Additionally, there exists a future investment risk associated with certain policies currently in force which will have premium receipts in the future. That is, the investment of these future premium receipts may be at a yield below that required to meet future policy liabilities.

In the first six months of 2006, new money investment yields have been generally rising in some markets, such as Japan, Thailand and the U.S., which is generally favorable to AIG's spread-based businesses. In regard to inforce business, management focus is required in both the investment and product management process to maintain an adequate yield to match the interest necessary to support future policy liabilities. Business strategies continue to evolve to maintain profitability of the overall business. As such, in some countries, new products are being introduced with minimal investment guarantees resulting in a shift toward investment linked savings products and away from traditional savings products with higher guarantees.

The investment of insurance cash flows and reinvestment of the proceeds of matured securities and coupons requires active management of investment yields while maintaining satisfactory investment quality and liquidity.

AIG may use alternative investments in certain foreign jurisdictions where interest rates remain low and there are limited long-dated bond markets, including equities, real estate and foreign currency denominated fixed income instruments to extend the duration or increase the yield of the investment portfolio to more closely match the requirements of the policyholder liabilities and DAC recoverability. This strategy has been effectively used in Japan and more recently by Nan Shan in Taiwan. Foreign assets comprised approximately 29 percent of Nan Shan's invested assets at June 30, 2006, slightly below the maximum allowable percentage under current regulation. In response to the low interest rate environment and the volatile exchange rate of the NT dollar, Nan Shan is emphasizing new products with lower implied guarantees, including participating endowments and variable universal life. Although the risks of a continued low interest rate environment coupled with a volatile NT dollar could increase net liabilities and require additional capital to maintain adequate local solvency margins, Nan Shan currently believes it has adequate resources to meet all future policy obligations.

AIG actively manages the asset-liability relationship in its domestic operations. This relationship is more easily man-

aged through the ample supply of qualified long-term investments.

AIG uses asset-liability matching as a management tool worldwide to determine the composition of the invested assets and appropriate marketing strategies. As a part of these strategies, AIG may determine that it is economically advantageous to be temporarily in an unmatched position due to anticipated interest rate or other economic changes. In addition, the absence of long-dated fixed income instruments in certain markets may preclude a matched asset-liability position in those markets.

A number of guaranteed benefits, such as living benefits or guaranteed minimum death benefits, are offered on certain variable life and variable annuity products. AIG manages its exposure resulting from these long-term guarantees through reinsurance or capital market hedging instruments.

DAC for Life Insurance & Retirement Services products arises from the deferral of those costs that vary with, and are directly related to, the acquisition of new or renewal business. Policy acquisition costs for life insurance products are generally deferred and amortized over the premium paying period of the policy. Policy acquisition costs that relate to universal life and investment-type products, including variable and fixed annuities (investment-oriented products) are deferred and amortized, with interest, as appropriate, in relation to the historical and future incidence of estimated gross profits to be realized over the estimated lives of the contracts. Amortization expense includes the effects of current period realized capital gains and losses for investment type products. With respect to investment-oriented products, AIG's policy is to adjust amortization assumptions for DAC when estimates of current or future gross profits to be realized from these contracts are revised. With respect to variable annuities sold domestically (representing the vast majority of AIG's variable annuity business), the assumption for the long-term annual net growth rate of the equity markets used in the determination of DAC amortization is approximately ten percent. A methodology referred to as "reversion to the mean" is used to maintain this long-term net growth rate assumption, while giving consideration to short-term variations in equity markets. Estimated gross profits include investment income and gains and losses less interest required on policyholder reserves, as well as other charges in the contract less actual mortality and expenses. Current experience and changes in the expected future gross profits are analyzed to determine the effect on the amortization of DAC. The estimation of projected gross profits requires significant management judgment. The assumptions with respect to the current and projected gross profits are reviewed and analyzed quarterly and are adjusted accordingly.

The following table summarizes the major components of the changes in DAC and VOBA for the six months ended June 30, 2006 and 2005:

<i>(in millions)</i>	2006			2005		
	DAC	VOBA	Total	DAC	VOBA	Total
Domestic Life Insurance & Retirement Services:

Related to change in unrealized gains (losses) on securities	1,937	149	2,086	(183)	(45)	(228)
Increase (decrease) due to foreign exchange	872	82	954	(227)	(72)	(299)
Balance at end of period	\$31,635	\$2,247	\$33,882	\$24,683	\$2,231	\$26,914

AIG's variable annuity earnings will be affected by changes in market returns because separate account revenues, primarily composed of mortality and expense charges and asset management fees, are a function of asset values.

DAC for both insurance-oriented and investment-oriented products as well as retirement services products are

reviewed for recoverability, which involves estimating the future profitability of current business. This review also involves significant management judgment. If the actual emergence of future profitability were to be substantially different than that estimated, AIG's results of operations could be significantly affected in future periods.

Invested Assets

The following tables summarize the composition of AIG's invested assets by segment, at June 30, 2006 and December 31, 2005:

<i>(in millions)</i>	General Insurance	Life Insurance & Retirement Services	Asset Management	Financial Services	Other	Total

Insurance and Asset Management Invested Assets

AIG's investment strategy is to invest primarily in high quality securities while maintaining diversification to avoid significant exposure to issuer, industry and/or country concentrations. With respect to Domestic General Insurance, AIG's strategy is to invest in longer duration fixed maturity investments to maximize the yields at the date of purchase. With respect to Life Insurance & Retirement Services, AIG's strategy is to produce cash flows required to meet maturing insurance liabilities. (See also the discussion under "Operating Review: Life Insurance & Retirement Services Operations" herein.) AIG invests in equities for various reasons, including diversifying its overall exposure to interest rate risk. Available for sale bonds and equity securities are subject to declines in fair value. Such declines in fair value are presented in unrealized appreciation or depreciation of investments, net of taxes as a component of accumulated other comprehensive

income. Declines that are determined to be other-than-temporary are reflected in income in the period in which the intent to hold the securities to recovery no longer exists. See "Valuation of Invested Assets". Generally, insurance regulations restrict the types of assets in which an insurance company may invest. When permitted by regulatory authorities and when deemed necessary to protect insurance assets, including invested assets, from adverse movements in foreign currency exchange rates, interest rates and equity prices, AIG and its insurance subsidiaries may enter into derivative transactions as end users. (See also the discussion under "Derivatives" herein.)

In certain jurisdictions, significant regulatory and/or foreign governmental barriers exist which may not permit the immediate free flow of funds between insurance subsidiaries or from the insurance subsidiaries to AIG parent.

The following tables summarize the composition of AIG's insurance and asset management invested assets by segment, at June 30, 2006 and December 31, 2005:

<i>(dollars in millions)</i>	General Insurance	Life Insurance & Retirement Services	Asset Management	Total	Percent of Total	<u>Percent Distribution</u>

Credit Quality

At June 30, 2006, approximately 59 percent of the fixed maturities investments were domestic securities. Approximately 37 percent of such domestic securities were rated AAA by one or more of the principal rating agencies. Approximately seven percent were below investment grade or not rated.

A significant portion of the foreign fixed income portfolio is rated by Moody's Investors Service (Moody's), S&P or similar foreign services. Similar credit quality rating services are not available in all overseas locations. AIG reviews the credit quality of the foreign portfolio nonrated fixed income investments, including mortgages. At June 30, 2006, approximately 18 percent of the foreign fixed income investments were either rated AAA or, on the basis of AIG's internal analysis, were equivalent from a credit standpoint to securities so rated. Approximately six percent were below investment grade or not rated at that date. A large portion of the foreign fixed income portfolio are sovereign fixed maturity securities supporting the policy liabilities in the country of issuance.

Any fixed income security may be subject to downgrade for a variety of reasons subsequent to any balance sheet date.

Valuation of Invested Assets

AIG has the ability to hold any fixed maturity security to its stated maturity, including those fixed maturity securities classified as available for sale. Therefore, the decision to sell any such fixed maturity security classified as available for sale reflects the judgment of AIG's management that the security sold is unlikely to provide, on a relative value basis, as attractive a return in the future as alternative securities entailing comparable risks. With respect to distressed securities, the sale decision reflects management's judgment that the risk-discounted anticipated ultimate recovery is less than the value achievable on sale.

The valuation of invested assets involves obtaining a market value for each security. The source for the market value is generally from market exchanges or dealer quotations, with the exception of nontraded securities.

If AIG chooses to hold a security, it evaluates the security for an other-than-temporary impairment in valuation. As a

matter of policy, the determination that a security has incurred an other-than-temporary decline in value and the amount of any loss recognition requires the judgment of AIG's management and a continual review of its investments.

In general, a security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer);
- The occurrence of a discrete credit event resulting in (i) the issuer defaulting on a material outstanding obligation; or (ii) the issuer seeking protection from creditors under the bankruptcy laws or any similar laws intended for the court supervised reorganization of insolvent enterprises; or (iii) the issuer proposing a voluntary reorganization pursuant to which creditors are asked to exchange their claims for cash or securities having a fair value substantially lower than par value of their claims; or
- In the opinion of AIG's management, it is probable that AIG may not realize a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

At each balance sheet date, AIG evaluates its securities holdings in an unrealized loss position. Where AIG does not intend to hold such securities until they have fully recovered their carrying value based on the circumstances present at the date of evaluation, AIG records the unrealized loss in income. If events or circumstances change, such as unexpected changes in creditworthiness of the obligor, general interest rate environment, tax circumstances, liquidity events, and statutory capital management considerations among others, AIG revisits its intent to determine if a loss should be recorded in income. Further, if a loss is recognized from a sale subsequent to a balance sheet date pursuant to these changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer exists.

Once a security has been identified as other-than-temporarily impaired, the amount of such impairment is determined by reference to that security's contemporaneous market price and recorded as a charge to earnings.

As a result of these policies, AIG recorded, in realized capital gains (losses), other-than-temporary impairment pretax losses of \$370 million and \$107 million for the three-month periods ended June 30, 2006 and 2005, respectively,

and \$596 million and \$200 million for the six-month periods ended June 30, 2006 and 2005, respectively.

No impairment charge with respect to any one single credit was significant to AIG's consolidated financial condition or results of operations, and no individual impairment loss exceeded 1.0 percent of consolidated net income for the first six months of 2006.

Excluding the other-than-temporary impairments noted above, the changes in market value for AIG's available for sale portfolio, which constitutes the vast majority of AIG's investments, were recorded in accumulated other comprehensive income as unrealized gains or losses, net of tax.

At June 30, 2006, the fair value of AIG's fixed maturities and equity securities aggregated to \$417.3 billion. At June 30, 2006, aggregate unrealized gains after taxes for fixed maturity and equity securities were \$7.0 billion. At June 30, 2006, the aggregate unrealized losses after taxes of fixed maturity and equity securities were approximately \$6.2 billion.

The effect on net income of unrealized losses after taxes will be further mitigated upon realization, because certain realized losses will be charged to participating policyholder accounts, or realization will result in current decreases in the amortization of certain deferred policy acquisition costs.

At June 30, 2006, unrealized losses for fixed maturity securities and equity securities did not reflect any significant industry concentrations.

The amortized cost of fixed maturities available for sale in an unrealized loss position at June 30, 2006, by contractual maturity, is shown below:

<i>(in millions)</i>	Amortized Cost
Due in one year or less	\$ 5,690
Due after one year through five years	36,505
Due after five years through ten years	92,162
Due after ten years	93,329
Total	\$227,686

In the six months ended June 30, 2006, the pretax realized losses incurred with respect to the sale of fixed maturities and equity securities were \$790 million. The aggregate fair value of securities sold was \$25.8 billion, which was approximately 97 percent of amortized cost. The average period of time that securities sold at a loss during the six months ended June 30, 2006 were trading continuously at a price below book value was approximately five months.

At June 30, 2006, aggregate pretax unrealized gains were \$10.79 billion, while the pretax unrealized losses with respect to investment grade bonds, non-investment grade bonds and equity securities were \$9.0 billion, \$320 million and \$338 million, respectively. Aging of the pretax unrealized losses with respect to these securities, distributed as a percentage of cost relative to unrealized loss (the extent by which the market value is less than amortized cost or cost), including the number of respective items, was as follows:

Aging (dollars in millions)	Less than or equal to 20% of Cost ^(a)			Greater than 20% to 50% of Cost ^(a)			Greater than 50% of Cost ^(a)			Total		
	Unrealized Cost ^(a)	Loss	Items	Unrealized Cost ^(a)	Loss	Items	Unrealized Cost ^(a)	Loss	Items	Unrealized Cost ^(a)	Loss ^(b)	Items

(a) For bonds, represents amortized cost.

(b) As more fully described above, upon realization, certain realized losses will be charged to participating policyholder accounts, or realization will result in a current decrease in the amortization of certain deferred policy acquisition costs.

As stated previously, the valuation for AIG's investment portfolio comes from market exchanges or dealer quotations, with the exception of nontraded securities. AIG considers nontraded securities to mean certain fixed income investments, certain structured securities, direct private equities, limited partnerships and hedge funds. The aggregate carrying value of these securities at June 30, 2006 was approximately \$68 billion.

The methodology used to estimate fair value of nontraded fixed income investments is by reference to traded securities with similar attributes and using a matrix pricing methodology. This technique takes into account such factors as the industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, and other relevant factors. The change in fair value is recognized as a component of accumulated other comprehensive income, net of tax.

For certain structured securities, the carrying value is based on an estimate of the security's future cash flows pursuant to the requirements of Emerging Issues Task Force Issue No. 99-20, "Recognition of Interest Income and Impairment

on Purchased and Retained Beneficial Interests in Securitized Financial Assets." The change in carrying value is recognized in income.

Hedge funds and limited partnerships in which AIG holds in the aggregate less than a five percent interest are reported at fair value. The change in fair value is recognized as a component of accumulated other comprehensive income, net of tax.

With respect to hedge funds and limited partnerships in which AIG holds in the aggregate a five percent or greater interest, AIG uses the equity method to record these investments. The changes in such net asset values are recorded in income.

AIG obtains the fair value of its investments in limited partnerships and hedge funds from information provided by the general partner or manager of each of these investments, the accounts of which are generally audited on an annual basis.

Each of these investment categories is regularly tested to determine if impairment in value exists. Various valuation techniques are used with respect to each category in this determination.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets transactions, consumer finance and insurance premium financing. (See also Note 2 of Notes to Consolidated Financial Statements.)

Aircraft Finance

AIG's Aircraft Finance operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to domestic and foreign airlines. Revenues also result from the remarketing of commercial jets for its own account, and remarketing and fleet management for airlines and financial institutions.

ILFC finances its purchases of aircraft primarily through the issuance of a variety of debt instruments. The composite borrowing rates, which include the effect of economic hedges, at June 30, 2006 and 2005 were 5.24 percent and 4.52 percent, respectively. (See also the discussions under "Capital Resources" and "Liquidity" herein and Note 2 of Notes to Consolidated Financial Statements.)

ILFC's sources of revenue are principally from scheduled and charter airlines and companies associated with the airline industry. The airline industry is sensitive to changes in economic conditions, cyclical and highly competitive. Airlines and related companies may be affected by political or economic instability, terrorist activities, changes in national policy, competitive pressures on certain air carriers, fuel prices and shortages, labor stoppages, insurance costs, recessions, world health issues and other political or economic events adversely affecting world or regional trading markets. ILFC's revenues and income will be affected by its customers' ability to react and cope with the volatile competitive environment in which they operate, as well as ILFC's own competitive environment.

ILFC is exposed to operating loss and liquidity strain through nonperformance of aircraft lessees, through owning aircraft which it would be unable to sell or re-lease at acceptable rates at lease expiration and, in part, through committing to purchase aircraft which it would be unable to lease.

ILFC manages the risk of nonperformance by its lessees with security deposit requirements, through repossession rights, overhaul requirements, and closely monitoring industry conditions through its marketing force. However, there can be no assurance that ILFC would be able to successfully manage the risks relating to the effect of possible future deterioration in the airline industry. Approximately 90 percent of

ILFC's fleet is leased to non-U.S. carriers, and the fleet, comprised of the most efficient aircraft in the airline industry, continues to be in high demand from such carriers.

ILFC typically contracts to re-lease aircraft before the end of the existing lease term. For aircraft returned before the end of the lease term, ILFC has generally been able to re-lease such aircraft within two to six months of its return. As a lessor, ILFC considers an aircraft "idle" or "off lease" when the aircraft is not subject to a signed lease agreement or signed letter of intent. ILFC had no aircraft off lease at June 30, 2006, and all new aircraft deliveries in 2006 have been leased. (See also the discussions under "Capital Resources" and "Liquidity" herein.)

Management formally reviews regularly, and no less frequently than quarterly, issues affecting ILFC's fleet, including events and circumstances that may cause impairment of aircraft values. Management evaluates aircraft in the fleet as necessary, based on these events and circumstances in accordance with Statement of Financial Accounting Standards No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets" (FAS 144). ILFC has not recognized any impairment related to its fleet. ILFC has been able to re-lease the aircraft without diminution in lease rates to an extent that would require an impairment write-down. (See also the discussions under "Liquidity" herein.)

Capital Markets

Capital Markets represents the operations of AIGFP, which engages as principal in a wide variety of financial transactions, including standard and customized financial products involving commodities, credit, currencies, energy, equities and rates. AIGFP also invests in a diversified portfolio of securities and engages in borrowing activities involving issuing standard and structured notes and other securities, and entering into guaranteed investment agreements (GIAs).

As Capital Markets is a transaction-oriented operation, current and past revenues and operating results may not provide a basis for predicting future performance. AIG's Capital Markets operations derive substantially all their revenues from hedged financial positions entered in connection with counterparty transactions rather than from speculative transactions. AIGFP also participates as a dealer in a wide variety of financial derivatives transactions. AIGFP economically hedges the market risks arising from its transactions, although hedge accounting under FAS 133 is not currently being applied to any of the derivatives and related assets and liabilities. Accordingly, revenues and operating income are exposed to volatility resulting from differences in the timing of revenue recognition between the derivatives and the hedged assets and liabilities. Revenues and operating income of the Capital Markets operations and the percentage change in these amounts for any given period are also significantly affected by the number, size and profitability of transactions

entered into by these subsidiaries during that period relative to those entered into during the prior period. Generally, the realization of transaction revenues as measured by the receipt of funds is not a significant reporting event as the gain or loss on AIGFP's trading transactions is currently reflected in operating income as the fair values change from period to period.

The overwhelming majority of AIG's financial derivatives are conducted by the Capital Markets operations. Capital Markets enters into derivative transactions to hedge the interest rate and foreign currency exposures associated with its available for sale assets and borrowings. While the derivatives entered into to hedge its outstanding transactions and positions are highly effective economic hedges, AIG did not meet the requirements for hedge accounting under FAS 133. The change in the fair value of these derivatives is included in other revenues while the offsetting change in fair value of the hedged items is not recognized in earnings.

Derivative transactions are entered into in the ordinary course of Capital Markets operations. Income on derivatives is recorded at fair value, determined by reference to the mark to market value of the derivative or their estimated fair value where market prices are not readily available. The resulting aggregate unrealized gains or losses from the derivative are reflected in the income statement. Where Capital Markets cannot verify significant model inputs to observable market data and verify the model value to market transactions, Capital Markets values the contract at the transaction price at inception and, consequently, records no initial gain or loss in accordance with Emerging Issues Task Force Issue No. 02-03, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities" (EITF 02-03). Such initial gain or loss is recognized over the life of the transaction. Capital Markets periodically reevaluates its revenue recognition under EITF 02-03 based on the observability of market parameters. The mark to fair value of derivative transactions is reflected in the balance sheet in the captions "Unrealized gain on swaps, options and forward transactions," "Unrealized loss on swaps, options and forward transactions," "Trading assets" and "Trading liabilities." Unrealized gains represent the present value of the aggregate of each net receivable, by counterparty, and the unrealized losses represent the present value of the aggregate of each net payable, by counterparty as of June 30, 2006. These amounts will change from one period to the next due to changes in interest rates, currency rates, equity and commodity prices and other market variables, as well as cash movements, execution of new transactions and the maturing of existing transactions. (See also the discussion under "Derivatives" herein.)

Spread income on investments and borrowings is recorded on an accrual basis over the life of the transaction. Investments are classified as securities available for sale and are marked to market with the resulting unrealized gains or losses reflected in accumulated other comprehensive income.

U.S. dollar denominated borrowings are carried at cost, while borrowings in any currency other than the U.S. dollar result in unrealized foreign exchange gains or losses reported in income. AIGFP hedges the economic exposure on its investments and borrowings on a portfolio basis using derivatives and other financial instruments. While these hedges are highly effective economic hedges, the requirements under FAS 133 hedge accounting were not met.

To the extent the Financial Services subsidiaries, other than AIGFP, use derivatives to economically hedge their assets or liabilities with respect to their future cash flows, and such hedges do not qualify for hedge accounting treatment under FAS 133, the changes in fair value of such derivatives are recorded in realized capital gains (losses) or other revenues. Amounts recorded in realized capital gains (losses) are reported as part of the Other category.

Consumer Finance

Domestically, AIG's Consumer Finance operations are principally conducted through American General Finance, Inc. (AGF). AGF derives a substantial portion of its revenues from finance charges assessed on outstanding real estate loans, secured and unsecured non-real estate loans and retail sales finance receivables. The real estate loans include first or second mortgages on residential real estate generally having a maximum term of 360 months, and are considered non-conforming. These loans may be closed-end accounts or open-end home equity lines of credit and may be fixed-rate or adjustable rate products. The non-real estate loans are secured by consumer goods, automobiles, or other personal property or are unsecured. Both secured and unsecured non-real estate loans generally have a maximum term of 60 months. The core of AGF's originations is sourced through its branches. However, a significant volume of real estate loans is also originated through broker relationships, and to lesser extents, through correspondent relationships and direct mail solicitations. In the first quarter of 2006, two wholly-owned subsidiaries of AGF discontinued originating real estate loans through an arrangement with AIG Federal Savings Bank, a federally chartered thrift, and began originating such loans under their own state licenses.

Many of AGF's borrowers are non-prime or sub-prime. Current economic conditions, such as interest rate and employment, have a direct effect on the borrowers' ability to repay these loans. AGF manages the credit risk inherent in its portfolio by using credit scoring models at the time of credit applications, established underwriting criteria, and in certain cases, individual loan reviews. AGF's Credit Strategy and Policy Committee monitors the quality of the finance receivables portfolio monthly when determining the appropriate level of the allowance for losses. The Credit Strategy and Policy Committee bases its conclusions on quantitative analyses, qualitative factors, current economic conditions and trends, and each committee member's experience in the con-

sumer finance industry. Through the first six months of 2006, the credit quality of AGF's finance receivables continues to be strong. However, declines in the strength of the U.S. housing market or economy may adversely affect the future credit quality of these receivables.

Internationally, AIG's Consumer Finance operations are principally conducted through AIG Consumer Finance Group (CFG). CFG operates primarily in emerging and developing markets. CFG has operations in Hong Kong, Taiwan, the Philippines, Thailand, Poland, Argentina, and Mexico. While products vary by market, the businesses generally provide credit cards, unsecured and secured non-real estate loans, term deposits, savings accounts, retail sales finance and real estate loans.

Consumer Finance operations are exposed to loss when contractual payments are not received. Credit loss exposure is managed through underwriting controls, mix of finance receivables, collateral and collection efficiency.

CFG monitors the quality of its finance receivable portfolio through a combination of a monthly Credit Review and quarterly Credit Reserve Committee review when determining the appropriate level of the allowance for losses. The Credit Reserve Committee bases its conclusions on quantitative analysis, qualitative factors, current economic conditions and trends, political and regulatory implications, competition, and the judgment of the committee's members. As a result of such a review and in light of industry-wide deteriorating credit conditions and tightening of overall consumer credit, the aggregate allowance for losses in AIG Credit Card Company (Taiwan) was increased by \$88 million in the first quarter of 2006 to \$130 million at March 31, 2006. The remaining balance, net of write-offs during the second quarter, is approximately \$96 million at June 30, 2006. This balance, representing approximately 17 percent of CFG's outstanding credit card receivables for Taiwan, continues to be CFG's best estimate of the overall exposure and hence no additional increases to the allowance for losses were deemed necessary at June 30, 2006. The results of AIG Credit Card Company (Taiwan) are shared equally by the Financial Services and Life Insurance & Retirement Services segments.

Financial Services Results

Financial Services operations for the three and six-month periods ended June 30, 2006 and 2005 were as follows:

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
Revenues ^(a) :				
Aircraft Finance ^(b)	\$1,042	\$ 891	\$ 2,007	\$1,718
Capital Markets ^{(c)(d)}	(788)	1,975	(1,088)	2,731
Consumer Finance ^(e)	939	891	1,863	1,724
Other	33	21	59	41
Total	\$1,226	\$3,778	\$ 2,841	\$6,214
Operating income (loss) ^(a) :				
Aircraft Finance	\$ 189	\$ 124	\$ 318	\$ 311
Capital Markets ^(d)	(952)	1,836	(1,422)	2,456
Consumer Finance ^(f)	199	238	374	459
Other, including intercompany adjustments	16	16	23	33
Total	\$ (548)	\$2,214	\$ (707)	\$3,259

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three and six-month periods ended June 30, 2005, the effect was \$(64) million and \$(49) million, respectively, in operating income for Aircraft Finance. During 2006, Aircraft Finance's derivative gains and losses are reported as part of the Other category, and not reported in Aircraft Finance's operating income. For the three-month periods ended June 30, 2006 and 2005, the effect was \$(1.16) billion and \$1.70 billion in both revenues and operating income, respectively, for Capital Markets. For the six-month periods ended June 30, 2006 and 2005, the effect was \$(1.84) billion and \$2.16 billion in both revenues and operating income for Capital Markets. These amounts result primarily from interest rate and foreign currency derivatives which are hedging available for sale securities and borrowings.

(b) Revenues are primarily from ILFC aircraft lease rentals.

(c) Revenues, shown net of interest expense, are primarily from hedged financial positions entered into in connection with counterparty transactions and the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 described in (a) above.

(d) Certain transactions entered into by AIGFP generate tax credits and benefits which are included in income taxes in the consolidated statement of income. The amount of such tax credits and benefits for the three-month periods ended June 30, 2006 and 2005 are \$8 million and \$21 million, respectively. The amount of such tax credits and benefits for the six-month periods ended June 30, 2006 and 2005 are \$26 million and \$40 million, respectively.

(e) Revenues are primarily finance charges.

(f) Includes \$44 million in additional allowances for losses recorded in the first quarter of 2006 from AIG Credit Card Company (Taiwan).

Financial Services operating income decreased in the second quarter and first six months of 2006 compared to the same periods of 2005 due to the effect of hedging activities that do not qualify for hedge accounting under FAS 133. The effect of not applying hedge accounting under FAS 133 was partially offset by improved results in Capital Markets.

Quarterly Aircraft Finance Results

ILFC's operating income increased by \$65 million, or 52 percent, in the second quarter of 2006 compared to the same period of 2005. The increase was due to a 2005 loss of \$64 million relating to the effect of derivatives not qualifying for hedge accounting treatment. In 2006, such derivative gains and losses are reported as part of the Other category. Increased lease rental revenues driven by a larger fleet size and higher utilization of ILFC's aircraft were almost entirely offset by higher depreciation expense caused by a larger fleet, higher interest expense resulting from the rising cost of funds and additional outstanding borrowings, and charges related to bankrupt airlines. ILFC's fleet of aircraft under operating leases increased by approximately 78 planes from June 30, 2005 to June 30, 2006.

On August 4, 2006, ILFC announced a restatement of certain of its financial statements to correct its accounting for certain derivative transactions under FAS 133. AIG's consolidated financial statements were unaffected by ILFC's announced restatement because these derivative transactions were eliminated in consolidation.

Year-to-date Aircraft Finance Results

ILFC's operating income increased slightly in the first six months of 2006 compared to the same period of 2005. The increase was due to a 2005 loss of \$49 million relating to the effect of derivatives not qualifying for hedge accounting treatment. In 2006, such derivative gains and losses are reported as part of the Other category. Higher lease rental revenues driven by a larger fleet size and higher utilization of ILFC's aircraft were more than offset by higher depreciation expense caused by a larger fleet, higher interest expense resulting from the rising cost of funds and additional outstanding borrowings, charges related to bankrupt airlines and the settlement of a tax dispute in Australia related to the restructuring of ownership of aircraft.

Quarterly Capital Markets Results

Capital Markets' operating income in the second quarter of 2006 decreased by \$2.79 billion compared to the same period of 2005. Improved results, primarily from increased transaction flow in AIGFP's credit, commodity index and equity products, were more than offset by the loss resulting from the effect of derivatives not qualifying for hedge accounting treatment of \$1.16 billion in the current quarter compared to a gain of \$1.70 billion in the comparable period last year, a decrease of \$2.86 billion. The majority of the net

loss on AIGFP's derivatives recognized in the second quarter of 2006 was due to the effect of the weakening of the U.S. dollar primarily against the British Pound and Euro resulting in a decrease in the fair value of the foreign currency derivatives which are hedging AIGFP's available for sale securities. To a lesser extent, the increase in long term U.S. interest rates had a similar effect on AIGFP's interest rate derivatives hedging its assets and liabilities. The majority of the net gain on AIGFP's derivatives in the second quarter of 2005 was due to falling long term interest rates which increased the fair value of AIGFP's derivatives hedging its assets and liabilities. To a lesser extent, the strengthening of the U.S. dollar primarily against the Euro and British Pound increased the fair value of the foreign currency derivatives hedging available for sale securities.

Financial market conditions in the second quarter of 2006 continued to be characterized by higher levels of interest rates globally, unchanged credit spreads and equity valuations that were slightly lower. The decline in Capital Markets operating income for the second quarter of 2006 was principally due to losses on derivatives not qualifying for hedge accounting under FAS 133, which was partially offset by improved transaction flow in AIGFP's credit, commodity index and equity products.

The most significant component of Capital Markets operating expenses is compensation, which was approximately \$129 million and \$110 million in the second quarter of 2006 and 2005, respectively. The amount of compensation was not affected by gains and losses not qualifying for hedge accounting treatment under FAS 133.

Year-to-date Capital Markets Results

Capital Markets' operating income in the six month period ended June 30, 2006 decreased by \$3.88 billion compared to the same period of 2005. Improved results, primarily from increased transaction flow in AIGFP's credit, commodity index and equity products, were more than offset by the loss resulting from the effect of derivatives not qualifying for hedge accounting treatment of \$1.84 billion in the current period compared to a gain of \$2.16 billion in the comparable period last year, a decrease of \$4.0 billion. The majority of the net loss on AIGFP's derivatives recognized in the first six months of 2006 was due to the weakening in the U.S. dollar primarily against the British Pound and Euro resulting in a decrease in the fair value of the foreign currency derivatives hedging AIGFP's available for sale securities. To a lesser extent, the net loss was due to the rise in long-term U.S. interest rates which resulted in a decrease in the fair value of its derivatives hedging its assets and liabilities. The majority of the net gain on AIGFP's derivatives in the first six months of 2005 was due to falling long term U.S. interest rates which increased the fair value of AIGFP's derivatives hedging its assets and liabilities. To a lesser extent, the strengthening of the U.S. dollar primarily against the British Pound and Euro

increased the fair value of the foreign currency derivatives hedging available for sale securities.

Financial market conditions in the first six months of 2006 continued to be characterized by a general flattening of interest rate yield curves across fixed income markets globally, tightening of credit spreads and equity valuations that were slightly higher.

The compensation expense of Capital Markets was approximately \$265 million and \$221 million in the first six months of 2006 and 2005, respectively. The amount of compensation was not affected by gains and losses not qualifying for hedge accounting treatment under FAS 133.

As a result of AIG's early adoption of FAS 155, AIGFP elected to apply the fair value option to certain of its structured notes and other financial liabilities containing embedded derivatives outstanding as of January 1, 2006. The cumulative effect from the adoption of FAS 155 on these instruments at January 1, 2006 was a loss of approximately \$29 million pre-tax. The application of the fair value option to these hybrid financial instruments did not have a significant effect on AIGFP's operating income for the second quarter or first six months of 2006.

Quarterly Consumer Finance Results

Consumer Finance's operating income decreased in the second quarter of 2006 compared to the same period of 2005 in both the domestic and foreign operations.

Domestically, the relatively low interest rate environment throughout 2005 contributed to a high level of mortgage refinancing activity. AGF's average net finance receivables increased 8 percent in the second quarter of 2006 when compared to the same period in 2005. However, net originations and purchases of finance receivables in AGF's centralized real estate business segment decreased in the second quarter of 2006 compared to the same period in 2005 primarily caused by a less robust U.S. housing market. The increase in AGF's revenues that principally resulted from portfolio growth was offset by higher interest expense and depressed whole loan sale prices resulting from a flattened yield curve. Both short-term and long-term market interest rates continued to increase significantly over the past year. AGF's short-term and long-term borrowing costs were 5.03 percent and 5.01 percent in the second quarter of 2006, respectively, compared to 3.46 percent and 4.31 percent, respectively, in the same period in 2005. Despite high energy costs, the U.S. economy continued to expand during the second quarter of 2006, improving consumer credit quality as compared to the second quarter of 2005. AGF's charge-off ratio improved 23 basis points in the second quarter of 2006 when compared to the same period in 2005.

Revenues from the foreign consumer finance operations increased by approximately 15 percent in the second quarter of 2006 compared to the same period in 2005. Portfolio growth was the primary driver behind higher revenues in 2006. These revenues were offset by increasing cost of funds and higher expenses in connection with branch expansions and new product promotions, resulting in a lower operating income for the second quarter of 2006 compared to the same period in 2005.

Year-to-date Consumer Finance Results

Consumer Finance's operating income decreased 19 percent in the first six months of 2006 compared to the same period of 2005 in both the domestic and foreign operations.

Domestically, the relatively low interest rate environment throughout 2005 contributed to a high level of mortgage refinancing activity. AGF's average net finance receivables increased 11 percent in the first six months of 2006 when compared to the same period in 2005. However, net originations and purchases of finance receivables in AGF's centralized real estate business segment decreased in the first six months of 2006 compared to the same period in 2005 primarily caused by a less robust U.S. housing market. The increase in AGF's revenues that principally resulted from portfolio growth was offset by higher interest expense and depressed whole loan sale prices resulting from a flattened yield curve. AGF's short-term and long-term borrowing costs were 4.85 percent and 4.89 percent in the first six months of 2006, respectively, compared to 3.25 percent and 4.31 percent, respectively, in the same period in 2005. Despite high energy costs, the U.S. economy continued to expand during the first six months of 2006, improving consumer credit quality. AGF's charge-off ratio improved 30 basis points in the first six months of 2006 when compared to the same period in 2005. AGF's delinquency ratio at June 30, 2006 improved 10 basis points when compared to June 30, 2005. At June 30, 2006, AGF's allowance ratio was 2.07 percent compared to 2.04 percent at June 30, 2005.

Revenues from the foreign consumer finance operations increased by approximately 20 percent in the first six months of 2006 compared to the same period in 2005. Portfolio growth was the primary driver behind higher revenues. Higher revenues were offset by increases in the allowance for losses related to industry-wide credit deterioration in the Taiwan credit card market, increasing cost of funds and higher expenses in connection with branch expansions and new product promotions, resulting in a lower operating income for the first six months of 2006 compared to the same period in 2005.

Financial Services Invested Assets

The following table is a summary of the composition of AIG's Financial Services invested assets at June 30, 2006 and December 31, 2005. (See also the discussions under "Operating Review: Financial Services Operations," "Capital Resources" and "Derivatives" herein.)

<i>(dollars in millions)</i>	2006		2005	
	Invested Assets	Percent of Total	Invested Assets	Percent of Total
Fixed maturities:				
Bonds available for sale, at market value	\$ 1,298	0.9%	\$ 1,307	0.9%
Equity securities:				
Preferred stocks available for sale, at market value	6	–	10	–
Mortgage loans on real estate, net of allowance	70	–	71	–
Policy loans	2	–	2	–
Collateral and guaranteed loans, net of allowance	2,002	1.3	1,719	1.2
Financial services assets:				
Flight equipment primarily under operating leases, net of accumulated depreciation	39,307	25.8	36,245	24.1
Securities available for sale, at market value	38,678	25.4	37,511	24.9
Trading securities, at market value	5,165	3.4	6,499	4.3
Spot commodities	797	0.5	92	0.1
Unrealized gain on swaps, options and forward transactions	18,901	12.4	18,695	12.4
Trading assets	1,345	0.9	1,204	0.8
Securities purchased under agreements to resell, at contract value	14,085	9.2	14,519	9.7
Finance receivables, net of allowance	27,515	18.1	27,995	18.6
Securities lending collateral, at market value	64	–	–	–
Other invested assets	1,869	1.2	2,751	1.9
Short-term investments, at cost	1,055	0.7	1,382	0.9
Cash	284	0.2	331	0.2
Investment income due and accrued	19	–	18	–
Real estate, net of accumulated depreciation	24	–	24	–
Total	\$152,486	100.0%	\$150,375	100.0%

As previously discussed, the cash used for the purchase of flight equipment is derived primarily from the proceeds of ILFC's debt financings. The primary sources for the repayment of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. During the first six months of 2006, ILFC acquired flight equipment costing \$4.17 billion. (See also the discussion under "Operating Review: Financial Services Operations" and "Capital Resources" herein.)

At June 30, 2006, ILFC had committed to purchase 266 new aircraft deliverable from 2006 through 2015 at an estimated aggregate purchase price of \$18.9 billion and had options to purchase 13 new aircraft at an estimated aggregate purchase price of \$1.4 billion. As of June 30, 2006, ILFC has entered into leases for all of the new aircraft to be delivered in 2006. ILFC will be required to find customers for any aircraft currently on order and any aircraft to be ordered, and it must arrange financing for portions of the purchase price of such equipment. ILFC has been successful to date both in placing its new aircraft on lease or under sales contract and obtaining adequate financing, but there can be no assurance that such success will continue in future environments.

AIG's Consumer Finance operations provide a wide variety of consumer finance products, including real estate loans, credit card loans, non-real estate loans, retail sales finance and credit-related insurance to customers both domestically and overseas, particularly in emerging markets. These products are funded through a combination of deposits and various borrowings including commercial paper and medium term notes. AIG's Consumer Finance operations are exposed to credit risk and risk of loss resulting from adverse fluctuations in interest rates. Over half of the finance receivables are real estate loans which are substantially collateralized by the related properties.

With respect to credit losses, the allowance for losses is maintained at a level considered adequate to absorb anticipated credit losses existing in that portfolio.

Capital Markets derivative transactions are carried at market value or at estimated fair value when market prices are not readily available. AIGFP reduces its economic risk exposure through similarly valued offsetting transactions including swaps, trading securities, options, forwards and futures. The estimated fair values of these transactions represent assessments of the present value of expected future cash flows. These transactions are exposed to liquidity risk if AIGFP were required to sell or close out the transactions

prior to maturity. AIG believes that the effect of any such event would not be significant to AIG's financial condition or its overall liquidity. (See also the discussion under "Operating Review: Financial Services Operations" and "Derivatives" herein.)

AIGFP uses the proceeds from the issuance of notes and bonds and GIAs to invest in a diversified portfolio of securities, including securities available for sale, at market, and derivative transactions. The funds may also be invested in securities purchased under agreements to resell. The proceeds from the disposal of the aforementioned securities available for sale and securities purchased under agreements to resell are used to fund the maturing GIAs or other AIGFP financings, or invest in new assets. (See also the discussion under "Capital Resources" herein.)

Securities available for sale is predominantly a diversified portfolio of high grade fixed income securities, where the individual securities have varying degrees of credit risk. At June 30, 2006, the average credit rating of this portfolio was in the AA category or the equivalent thereto as determined through rating agencies or internal review. AIGFP has also entered into credit derivative transactions to economically hedge its credit risk associated with \$130 million of these securities. Securities deemed below investment grade at June 30, 2006 amounted to approximately \$153 million in fair value representing 0.4 percent of the total AIGFP securities available for sale. There have been no significant downgrades through June 30, 2006. If its securities available for sale portfolio were to suffer significant default and the collateral held declined significantly in value with no replacement or the credit default swap counterparty failed to perform, AIGFP could have a liquidity strain. AIG guarantees AIGFP's payment obligations, including its debt obligations.

AIGFP's risk management objective is to minimize interest rate, currency, commodity and equity risks associated with its securities available for sale. That is, when AIGFP purchases a security for its securities available for sale investment portfolio, it simultaneously enters into an offsetting internal hedge such that the payment terms of the hedging transaction offset the payment terms of the investment security, which achieves the economic result of converting the return on the underlying security to U.S. dollar LIBOR plus or minus a spread based on the underlying profit on each security on the initial trade date. The market risk associated with such internal hedges is managed on a portfolio basis, with third-party hedging transactions executed as necessary. As hedge accounting treatment is not achieved in accordance with FAS 133, the unrealized gains and losses on the derivative transactions with unaffiliated third parties are reflected in operating income, whereas the unrealized gains and losses on the underlying securities resulting from changes in interest rates, currency rates, commodity and equity prices, are recorded in accumulated other comprehensive income. When a security is sold, the realized gain or loss with respect to this security is then recorded in operating income.

Securities purchased under agreements to resell are treated as collateralized financing transactions. AIGFP takes possession of or obtains a security interest in securities purchased under agreements to resell.

AIGFP owns inventories in certain commodities in which it trades, and may reduce the exposure to market risk through the use of swaps, forwards, futures and option contracts. Physical commodities held in AIGFP's wholly-owned broker dealer subsidiary are recorded at market value. All other commodities are recorded at the lower of cost or market.

Trading securities, at market value, and securities and spot commodities sold but not yet purchased, at market value are marked to market daily with the unrealized gain or loss being recognized in income at that time. These trading securities are purchased and sold as necessary to meet the risk management objectives of Capital Markets operations.

The gross unrealized gains and gross unrealized losses of Capital Markets operations included in the financial services assets and liabilities at June 30, 2006 were as follows:

<i>(in millions)</i>	Gross Unrealized Gains	Gross Unrealized Losses
Securities available for sale, at market value	\$ 490	\$ 198
Unrealized gain/loss on swaps, options and forward transactions*	18,901	11,956

* These amounts are also presented as the respective balance sheet amounts.

The senior management of AIG defines the policies and establishes general operating parameters for Capital Markets operations. AIG's senior management has established various oversight committees to monitor on an ongoing basis the various financial market, operational and credit risk attendant to the Capital Markets operations. The senior management of AIGFP reports the results of its operations to and reviews future strategies with AIG's senior management.

AIG actively manages the exposures to limit potential losses, while maximizing the rewards afforded by these business opportunities. In doing so, AIG must continually manage a variety of exposures including credit, market, liquidity, operational and legal risks.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products including institutional and retail asset management, broker dealer services and spread-based investment business from the sale of guaranteed investment contracts, also known as funding agreements (GICs). Such services and products are offered to individuals and institutions both domestically and overseas.

Asset Management Results

Asset Management revenues and operating income for the three and six-month periods ended June 30, 2006 and 2005 were as follows:

(in millions)	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
Revenues:				
Guaranteed investment contracts	\$ 850	\$ 903	\$1,672	\$1,799
Institutional Asset Management	619	178	898	497
Brokerage Services and Mutual Funds	73	62	146	125
Other	79	76	144	175
Total	\$1,621	\$1,219	\$2,860	\$2,596
Operating income:				
Guaranteed investment contracts ^(a)	\$ 242	\$ 326	\$ 460	\$ 645
Institutional Asset Management ^{(b)(c)}	473	108	632	269
Brokerage Services and Mutual Funds	21	17	44	30
Other	75	73	136	170
Total	\$ 811	\$ 524	\$1,272	\$1,114

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three and six-month periods ended June 30, 2005, the effect was \$47 million and \$109 million, respectively, in operating income. During 2006, these derivative gains and losses are reported as part of the Other category, and not reported in Asset Management operating income.

(b) Includes the full results of certain AIG managed private equity and real estate funds that are consolidated pursuant to FIN 46(R), "Consolidation of Variable Interest Entities". Also includes \$183 million and \$37 million for the three-month periods ended June 30, 2006 and 2005, respectively, and \$210 million and \$112 million for the six-month periods ended June 30, 2006 and 2005, respectively, of third-party limited partner earnings offset in minority interest expense which is not a component of operating income.

(c) Includes the full results of certain AIG managed partnerships that are consolidated effective January 1, 2006 pursuant to EITF 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights". For the three and six-month periods ended June 30, 2006, operating income includes \$87 million and \$156 million, respectively, of third-party limited partner earnings offset in minority interest expense which is not a component of operating income.

Quarterly Asset Management Results

Asset management operating income increased 55 percent in the second quarter of 2006 compared to the same period of 2005 on revenues that grew 33 percent as increases in Institutional Asset Management operating income were partially offset by lower income on the GIC portfolio. Continued growth in fees driven by higher levels of assets under management were augmented by increases in realized gains on sales of real estate investments, as well as performance fees earned on various private equity and structured fixed income investments. The MIP began to show positive operating in-

come during the second quarter of 2006. The revenues and operating income with respect to Asset Management are largely affected by the general conditions in the equity and credit markets. Realized gains and performance fees are contingent upon various fund closings, maturity levels and market conditions, and by their nature, are not predictable. Therefore, the effect on Asset Management's earnings may vary from period to period.

The GIC portfolio, historically AIG's principal spread-based investment activity, continues to run off as anticipated. The MIP has replaced the GIC program as AIG's principal spread-based investment activity. A significant portion of the remaining GIC portfolio consists of floating rate obligations. AIG has entered into hedges to manage against increases in short-term interest rates. AIG continues to believe these hedges are economically effective even though they do not qualify for hedge accounting under FAS 133. As a result, continued increases in short-term interest rates will negatively affect operating income in the segment. Realized capital gains from the hedges offset the negative trend in GIC related operating income. GIC revenues include income from Sun America partnerships supporting the GIC line of business and are significantly affected by performance in the equity markets. Thus, revenues, operating income and cash flow attributable to GICs will vary among reporting periods.

The decrease in GIC operating income in the second quarter of 2006 compared to the same period of 2005 also reflects spread compression in the existing GIC portfolio. Spread compression has occurred as the base portfolio yield declined primarily due to an increase in the cost of funds in the short-term floating rate portion of the GIC portfolio, only partially offset by increased investment income from the floating rate assets backing the portfolio.

The MIP, a spread-based investment activity providing for the issuance of AIG debt securities, was initially launched in the Euromarkets in September 2005 through AIG's \$10 billion Euro medium term note program. Through June 30, 2006, AIG has issued the equivalent of \$947.1 million under the Euro medium term note program for the MIP, and in addition, in July 2006, AIG issued the equivalent of \$635.4 million under the Euro medium term note program for the MIP. Also, in June 2006, AIG issued \$750 million principal amount of notes in a Rule 144A offering for the MIP. AIG also plans to issue registered debt securities for the MIP in the domestic market under its universal shelf registration statement.

Year-to-date Asset Management Results

Asset Management operating income increased 14 percent in the first six months of 2006 compared to the same period of 2005 on revenues that increased 10 percent. Continued growth in fees driven by increasing levels of assets under management were augmented by increases in realized

gains on sales of real estate investments as well as performance fees earned on various private equity and structured fixed income investments. The decrease in GIC operating income in the first six months of 2006 compared to the same period of 2005 reflects the continued run-off of GIC balances combined with spread compression in the remaining GIC portfolio.

At June 30, 2006 and 2005, AIG's third party assets under management, including both retail mutual funds and institutional accounts, exceeded \$66 billion and \$61 billion and the aggregate GIC reserve was \$48.5 billion and \$51.6 billion, respectively.

Other Operations

The operating income (loss) for Other operations for the three and six-month periods ended June 30, 2006 and 2005 was as follows:

Other (in millions)	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
Operating Income (Loss):				
Equity earnings in unconsolidated subsidiaries	\$ 111	\$ 36	\$ 130	\$ 96
Compensation expense – SICO Plans	(14)	(60)	(90)	(67)
Compensation expense – C.V. Starr tender offer	-	-	(54)	-
Interest expense	(223)	(127)	(406)	(251)
Unallocated corporate expenses	(71)	(108)	(261)	(195)
Realized capital gains (losses)	24	(16)	134	379
Other miscellaneous, net	(14)	29	(35)	(17)
Total Other	\$(187)	\$(246)	\$(582)	\$(55)

Other operating loss amounted to \$187 million and \$246 million in the three-month periods ended June 30, 2006 and 2005, respectively, as interest expense increased, primarily reflecting increased borrowings by the parent holding company. This decline was partially offset by increased equity earnings in unconsolidated subsidiaries. The second quarter of 2006 also reflects a decrease in unallocated corporate expenses, primarily relating to a reduction in unallocated stock compensation expense and pension expense of \$39 million, and a decrease in compensation expense with respect to the SICO Plans.

Other operating loss amounted to \$582 million and \$55 million in the six-month periods ended June 30, 2006 and 2005, respectively, as interest expense increased, primarily reflecting increased borrowings by the parent holding company. The first six months of 2006 also reflects an in-

crease in unallocated corporate expenses, reflecting expenses of \$29 million in the first six months of 2006 relating to certain executive departures (of which approximately \$18 million related to departures in 2005), and an overall increase in corporate operating expenses primarily resulting from on-going efforts to remediate material weaknesses in internal controls. Also reflected in operating loss in the first six months of 2006 is an out of period adjustment totaling \$61 million with respect to the SICO Plans and a one-time charge related to the Starr tender offer of \$54 million, both of which were recorded in the first quarter of 2006. See also Note 4 of Notes to the Consolidated Financial Statements for further discussion. These declines were partially offset by increased equity earnings in unconsolidated subsidiaries. Realized capital gains declined, primarily reflecting lower levels of realized gains for the parent holding company.

Capital Resources

At June 30, 2006, AIG had total consolidated shareholders' equity of \$87.71 billion and total consolidated borrowings of \$126.1 billion. At that date, \$110.8 billion of such borrowings were either not guaranteed by AIG or were AIGFP's matched borrowings under obligations of GIAs, liabilities connected to trust preferred stock, or matched notes and bonds payable.

Borrowings

At June 30, 2006, AIG's net borrowings were \$15.32 billion after reflecting amounts that were matched borrowings under AIGFP's obligations of GIAs, matched notes and bonds payable, amounts not guaranteed by AIG and liabilities connected to trust preferred stock. The following table summarizes borrowings outstanding at June 30, 2006 and December 31, 2005:

(in millions)	2006	2005
AIG's net borrowings	\$ 15,323	\$ 10,425
Liabilities connected to trust preferred stock	1,399	1,391
AIG Matched Investment Program		
Matched notes and bonds payable	1,716	-
AIGFP		
GIAs	21,571	20,811
Matched notes and bonds payable	28,054	24,950
Borrowings not guaranteed by AIG	58,034	52,272
Total	\$126,097	\$ 109,849

Borrowings issued or guaranteed by AIG and those borrowings not guaranteed by AIG at June 30, 2006 and December 31, 2005 were as follows:

<i>(in millions)</i>	2006	2005
AIG borrowings:		
Notes and bonds payable	\$ 7,474	\$ 4,607
Loans and mortgages payable	2,028	814
AIG Matched Investment Program		
Matched notes and bonds payable	1,716	—
Total	11,218	5,421
Borrowings guaranteed by AIG:		
AIGFP		
GIAs	21,571	20,811
Notes and bonds payable	23,196	26,463
Hybrid financial instrument liabilities	6,652	—

AIG SunAmerica	186	233
Total	2,634	1,350
Total borrowings not guaranteed by AIG	58,034	52,272
Total Debt	\$126,097	\$109,849

* Includes borrowings under Export Credit Facility of \$2.8 billion and \$2.6 billion, at June 30, 2006 and December 31, 2005, respectively.

AIG intends to continue its customary practice of issuing debt securities from time to time to meet its financing needs and those of certain of its subsidiaries for general corporate purposes, as well as for a matched investment program. In July 2006, AIG filed and had declared effective a post-effective amendment to its universal shelf registration statement to

sell up to \$25.1 billion of debt securities, preferred and common stock and other securities.

On April 20, 2006, AIG sold \$1.0 billion principal amount of senior notes in a Rule 144A/Regulation S offering bearing interest at a rate of 6.25 percent per annum and maturing in 2036, and on September 30, 2005, AIG sold \$1.5 billion principal amount of senior notes in a Rule 144A/Regulation S offering, \$500 million of which bear interest at a rate of 4.7 percent per annum and mature in 2010 and \$1.0 billion of which bear interest at a rate of 5.05 percent per annum and mature in 2015. The proceeds from these offerings were used by AIG for general corporate purposes. In July 2006, AIG commenced exchange offers for these notes pursuant to which AIG will issue in exchange substantially identical notes that are registered under the Securities Act.

On June 16, 2006, AIG sold \$750 million principal amount of senior, floating rate notes in a Rule 144A offering that matures in 2009. The proceeds of this offering were used to fund the MIP.

AIG has a Euro medium term note program under which an aggregate nominal amount of up to \$10.0 billion of notes may be outstanding at any one time. The program provides that additional notes may be issued to replace matured or redeemed notes. AIG completed its first offerings under the program in April 2006, and, as of June 30, 2006, the equivalent of \$2.8 billion principal amount of notes were outstanding under the program, of which the proceeds from \$1.0 billion of notes were used to fund the matched investment program. The aggregate amount outstanding includes \$85 million resulting from foreign exchange translation into U.S. dollars, of which \$67 million relates to notes issued by AIG for general corporate purposes and \$18 million relates to notes issued to fund the MIP. AIG has hedged the currency exposure arising from foreign currency denominated notes by economically hedging that exposure, although such hedges do not qualify for hedge accounting treatment under FAS 133. In addition, in July 2006, AIG sold the equivalent of \$635.4 million under the program, the proceeds of which were used to fund the MIP.

In March 2006, AIG borrowed a total of \$1.3 billion on an unsecured basis pursuant to loan agreements with third-party banks, \$500 million of which matures in February 2007 but can be extended by AIG for an additional seven-month period and \$800 million of which matures in March 2007. In September 2005, AIG borrowed a total of \$600 million on an unsecured basis pursuant to loan agreements with third-party banks, \$500 million of which matures in August 2006 but can be extended by AIG for an additional seven-month period and \$100 million of which matures in September 2006.

AIGFP uses the proceeds from the issuance of notes and bonds and GIA borrowings to invest in a diversified portfolio

of securities and derivative transactions. The borrowings may also be temporarily invested in securities purchased under agreements to resell. AIG guarantees the obligations of AIGFP under AIGFP's structured notes and bonds and GIA borrowings. Certain of AIGFP's notes contain embedded derivatives that are required to be accounted for separately under FAS 133. Upon AIG's early adoption of FAS 155, AIGFP has elected the fair value option for these instruments. Those notes that are accounted for using the fair value option are reported separately under hybrid financial instrument liabilities. (See also the discussions under "Operating Review: Financial Services Operations," "Liquidity" and "Derivatives" herein.)

On June 16, 2006, AIGFP sold an aggregate of \$2.0 billion principal amount of senior, floating rate notes in Rule 144A offerings, of which \$1.0 billion matures in 2007 and \$1.0 billion matures in 2008. AIGFP has a Euro Medium Term Note Program under which an aggregate nominal amount of up to \$10.0 billion of notes may be outstanding at any one time. The Program provides that additional notes may be issued to replace matured or redeemed notes. As of June 30, 2006, \$10.09 billion of notes had been issued under the program, \$4.66 billion of which were outstanding including \$310 million resulting from foreign exchange translation into U.S. dollars. Notes issued under this program are included in Notes and Bonds Payable in the preceding table of borrowings.

AIG Funding, Inc. (AIG Funding), through the issuance of commercial paper, helps fulfill the short-term cash requirements of AIG and its subsidiaries. AIG Funding intends to continue to meet AIG's funding requirements through the issuance of commercial paper guaranteed by AIG. The issuance of AIG Funding's commercial paper is subject to the approval of AIG's Board of Directors.

AIG and AIG Funding are parties to unsecured syndicated revolving credit facilities, which as of June 30, 2006, aggregated to \$2.75 billion, consisting of \$1.375 billion in a 364-day revolving credit facility and \$1.375 billion in a five-year revolving credit facility. In July 2006, these credit facilities were renewed and increased to an aggregate of \$3.25 billion, consisting of \$1.625 billion in the 364-day facility that expires in July of 2007 and \$1.625 billion in the five-year facility that expires in July of 2011. The 364-day facility allows for the conversion by AIG of any outstanding loans at expiration into one-year term loans. The facilities can be used for general corporate purposes and also to provide backup for AIG's commercial paper programs administered by AIG Funding. AIG expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings outstanding under these facilities, nor were any borrowings outstanding as of June 30, 2006.

In November 2005, AIG and AIG Funding entered into a 364-day revolving credit facility for an aggregate amount of \$3 billion, which can be drawn in the form of loans or letters

of credit. The credit facility expires in November 2006 but allows for the issuance of letters of credit with terms of up to ten years and provides for the conversion by AIG of any outstanding loans at expiration into one-year term loans. The facility can be used for general corporate purposes, including providing backup for AIG's commercial paper programs administered by AIG Funding and obtaining letters of credit to secure obligations under insurance and reinsurance transactions. There are currently no loans outstanding under the facility, nor were any loans outstanding as of June 30, 2006. As of such dates, \$669 million was available to be drawn under the facility, with the remainder having been drawn in the form of letters of credit.

AIG is also a party to an unsecured 364-day inter-company revolving credit facility provided by certain of its subsidiaries aggregating \$2 billion that expires in October of 2006. The facility allows for the conversion of any outstanding loans at expiration into one-year term loans. The facility can be used for general corporate purposes and also to provide backup for AIG's commercial paper programs. AIG expects to replace or extend this credit facility on or prior to its expiration. There are currently no borrowings outstanding under the inter-company facility, nor were any borrowings outstanding as of June 30, 2006.

ILFC fulfills its short term cash requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of ILFC's Board of Directors and is not guaranteed by AIG. ILFC is a party to unsecured syndicated revolving credit facilities aggregating \$6.0 billion at June 30, 2006. The facilities can be used for general corporate purposes and also to provide backup for ILFC's commercial paper program. They consist of \$2.0 billion in a 364-day revolving credit facility that expires in October 2006, with a one-year term out option, \$2.0 billion in a five-year revolving credit facility that expires in October 2009 and \$2.0 billion in a five-year revolving credit facility that expires in October 2010. ILFC expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings under these facilities, nor were any borrowings outstanding as of June 30, 2006.

At June 30, 2006, ILFC had increased the aggregate principal amount outstanding of its medium term and long-term notes. The foreign exchange adjustment for the foreign currency denominated debt was \$570 million at June 30, 2006 and \$197 million at December 31, 2005. ILFC had \$13.13 billion of debt securities registered for public sale at June 30, 2006. As of June 30, 2006, \$11.58 billion of debt securities were issued. In addition, ILFC has a Euro Medium Term Note Program for \$7.0 billion, under which \$4.28 billion in notes were sold through June 30, 2006. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging the portion of the note exposure not already offset by Euro denominated operating lease payments, although such hedges

do not qualify for hedge accounting treatment under FAS 133. Notes issued under the Euro Medium Term Note program are included in Notes and Bonds Payable in the preceding table of borrowings.

ILFC had a \$4.3 billion Export Credit Facility for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At June 30, 2006, ILFC had \$1.1 billion outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured Export Credit Facility for up to a maximum of \$2.64 billion for Airbus aircraft to be delivered through May 31, 2005. The facility has since been extended to include aircraft to be delivered through May 31, 2006. The facility was subsequently increased to \$3.64 billion and extended to include aircraft to be delivered through May 31, 2007. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a six-month forward-looking calendar, and the interest rate is determined through a bid process. At June 30, 2006, ILFC had \$1.7 billion outstanding under this facility. Borrowings with respect to these facilities are included in Notes and Bonds Payable in the preceding table of borrowings.

In August 2004, ILFC received a commitment for an Ex-Im Bank comprehensive guarantee in the amount of \$1.68 billion to support the financing of up to 30 new Boeing aircraft. The initial delivery period from September 1, 2004 through August 31, 2005 has been extended by ILFC to August 31, 2006. ILFC did not have any borrowings outstanding under this facility at June 30, 2006. From time to time, ILFC enters into various bank financings. As of June 30, 2006 the total funded amount was \$1.5 billion. The financings mature through 2011. One tranche of one of the loans totaling \$410 million was funded in Japanese yen and swapped to U.S. dollars.

In December of 2005, ILFC entered into two tranches of junior subordinated debentures totaling \$1.0 billion. Both mature on December 21, 2015, but each tranche has a different call option. The \$600 million tranche has a call date of December 21, 2010 and the \$400 million tranche has a call date of December 21, 2015. The debenture with the 2010 call date has a fixed interest rate of 5.90 percent for the first five years. The debenture with the 2015 call date has a fixed interest rate of 6.25 percent for the first ten years. Both tranches have interest rate adjustments if the call option is not exercised. If the call option is not exercised, the new interest rate will be a floating quarterly reset rate based on the initial credit spread plus the highest of (i) 3 month LIBOR, (ii) 10-

year constant maturity treasury and (iii) 30-year constant maturity treasury.

The proceeds of ILFC's debt financing are primarily used to purchase flight equipment, including progress payments during the construction phase. The primary sources for the repayment of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. AIG does not guarantee the debt obligations of ILFC. (See also the discussions under "Operating Review: Financial Services Operations" and "Liquidity" herein.)

AGF fulfills its short term cash requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of AGF's Board of Directors and is not guaranteed by AIG. AGF is a party to unsecured syndicated revolving committed credit facilities aggregating \$4.25 billion, including a \$2.125 billion 364-day revolving credit facility that expires in July of 2007 and a \$2.125 billion five-year revolving credit facility that expires in July of 2010. The 364-day facility allows for the conversion by AGF of any outstanding loans at expiration into a one-year term loan. The facilities can be used for general corporate purposes and also to provide backup for AGF's commercial paper programs. AGF expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings under these AGF facilities, nor were any borrowings outstanding as of June 30, 2006.

During 2005, AGF issued \$5.44 billion of fixed rate and variable rate medium term notes ranging in maturities from two to ten years. As of June 30, 2006, notes aggregating \$17.23 billion were outstanding with maturity dates ranging from 2006 to 2015 at interest rates ranging from 1.90 percent to 7.50 percent. To the extent deemed appropriate, AGF may enter into swap transactions to manage its effective borrowing with respect to these notes.

AGF's other funding sources include private placement debt, retail note issuances, securitizations of finance receivables that AGF accounts for as on-balance-sheet secured financings and bank financings. In addition, AGF has become an established issuer of long-term debt in the international capital markets.

In addition to debt refinancing activities, proceeds from the collection of finance receivables will be used to pay the principal and interest with respect to AGF's debt. AIG does not guarantee any of the debt obligations of AGF. See also the discussion under "Operating Review — Financial Services Operations" and "Liquidity" herein.

AIG Credit Card Company (Taiwan) and AIG Finance (Taiwan) Limited, both consumer finance subsidiaries in Taiwan, have issued commercial paper for the funding of their own operations. AIG did not guarantee the commercial paper issued by either of these subsidiaries.

Contractual Obligations and Other Commercial Commitments**The maturity schedule of AIG's contractual obligations at June 30, 2006 was as follows:***(in millions)*

	Total Payments	Payments due by Period			
		Less Than One Year	One Through Three Years	Four Through Five Years	After Five Years
Borrowings ^(a)	\$111,276	\$31,851	\$ 24,258	\$20,278	\$ 34,889
Loss reserves ^(b)	78,966	21,716	24,084	11,450	21,716
Insurance and investment contract liabilities ^(c)	627,747	22,049	49,972	46,068	509,658
Aircraft purchase commitments	18,876	1,601	10,143	4,148	2,984
Total	\$836,865	\$77,217	\$108,457	\$81,944	\$569,247

(a) Excludes commercial paper and obligations included as debt pursuant to FIN 46(R) and includes hybrid financial instrument liabilities recorded at fair value.

(b) Represents future loss and loss adjustment expense payments estimated based on historical loss development payment patterns.

(c) Insurance and investment contract liabilities include various investment-type products with contractually scheduled maturities including periodic payments of a term certain nature and guaranteed maturities under guaranteed investment contracts. Insurance and investment contract liabilities also include benefit and claim liabilities, of which a significant portion represents policies and contracts that do not have stated contractual maturity dates and may not result in any future payment obligations. For these policies and contracts (i) AIG is currently not making payments until the occurrence of an insurable event, such as death or disability, (ii) payments are conditional on survivorship, or (iii) the occurrence of a payment due to a surrender or other non-scheduled event out of AIG's control. AIG has made significant assumptions to determine the estimated undiscounted cash flows of these contractual policy benefits which include mortality, morbidity, future lapse rates, expenses, investment returns and interest crediting rates, offset by expected future deposits and premium on in-force policies. Due to the significance of the assumptions used, the amounts presented could be materially different from actual required payments. The amounts presented in this table are undiscounted and therefore exceed the future policy benefits and policyholder contract deposits included in the balance sheet.

The maturity schedule of AIG's other commercial commitments by segment at June 30, 2006 was as follows:*(in millions)*

	Total Amounts Committed	Amount of Commitment Expiration			
		Less Than One Year	One Through Three Years	Four Through Five Years	After Five Years
Letters of credit:					
Life Insurance & Retirement Services	\$ 185	\$ 37	\$ 24	\$ -	\$ 124
DBG	184	184	-	-	-
Standby letters of credit:					
Capital Markets	1,750	511	75	39	1,125
Guarantees:					
Life Insurance & Retirement Services ^(a)	3,537	109	398	-	3,030
Aircraft Finance	127	2	45	-	80
Asset Management	285	56	59	-	170
Parent Company ^(b)	533	421	1	111	-
Other commercial commitments ^(c) :					
Capital Markets ^(d)	15,007	4,528	2,460	1,764	6,255
Aircraft Finance ^(e)	1,752	-	-	868	884
Life Insurance & Retirement Services ^(f)	4,469	1,187	1,394	993	895
Asset Management	632	412	148	57	15
Life Settlement	253	-	253	-	-
DBG ^(g)	913	-	-	-	913
Parent Company	194	53	108	33	-
Total	\$ 29,821	\$ 7,500	\$ 4,965	\$ 3,865	\$13,491

(a) Primarily AIG SunAmerica construction guarantees connected to affordable housing investments.

(b) Represents reimbursement obligations under letters of credit issued by commercial banks.

(c) Excludes commitments with respect to pension plans. The annual pension contribution for 2006 is expected to be approximately \$70 million for U.S. and non-U.S. Plans.

(d) Primarily liquidity facilities provided in connection with certain municipal swap transactions and collateralized bond obligations.

(e) Primarily in connection with options to acquire aircraft.

(f) Primarily AIG SunAmerica commitments to invest in partnerships.

(g) Primarily commitments to invest in limited partnerships.

“Rating triggers” have been defined by one independent rating agency to include clauses or agreements the outcome of which depends upon the level of ratings maintained by one or more rating agencies. Rating triggers generally relate to events which (i) could result in the termination or limitation of credit availability, or require accelerated repayment, (ii) could result in the termination of business contracts or (iii) could require a company to post collateral for the benefit of counterparties.

AIG believes that any of its or its subsidiaries’ contractual obligations that are subject to “ratings triggers” or financial covenants relating to “ratings triggers” would not have a material adverse effect on its financial condition or liquidity.

As a result of the downgrades of AIG’s long-term senior debt ratings, AIG was required to post approximately \$1.16 billion of collateral with counterparties to municipal guaranteed investment agreements and financial derivatives transactions. In the event of a further downgrade, AIG will be required to post additional collateral. It is estimated that, as of the close of business on July 31, 2006 based on AIG’s outstanding municipal guaranteed investment agreements and financial derivatives transactions as of such date, a further downgrade of AIG’s long-term senior debt ratings to ‘Aa3’ by Moody’s or ‘AA-’ by S&P would permit counterparties to call for approximately \$873 million of additional collateral. Further, additional downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIG manages its liquidity. The actual amount of additional collateral that AIG would be required to post to counterparties in the event of such downgrades depends on market conditions, the market value of the outstanding affected transactions and other factors prevailing at the time of the downgrade. Any additional obligations to post collateral will increase the demand on AIG’s liquidity.

Shareholders’ Equity

AIG’s consolidated shareholders’ equity increased \$1.39 billion during the first six months of 2006. Retained earnings increased \$5.86 billion, resulting from net income of \$6.39 billion and \$308 million reflecting the cumulative effect of accounting changes less dividends of \$831 million. Unrealized appreciation of investments, net of taxes, decreased \$5.49 billion and the cumulative translation adjustment loss, net of taxes, decreased \$721 million. During the first six months of 2006 there was a gain of \$5 million, net of taxes, relating to derivative contracts designated as cash flow hedging instruments. (See also the discussion under “Operating Review” and “Liquidity” herein and the Consolidated Statement of Comprehensive Income.)

AIG has in the past reinvested most of its unrestricted earnings in its operations and believes such continued reinvestment in the future will be adequate to meet any foreseeable capital needs. However, AIG may choose from time to

time to raise additional funds through the issuance of additional securities.

Stock Purchase

During 2006, AIG did not purchase any shares of its common stock under its existing share repurchase authorization. AIG from time to time may buy shares of its common stock in the open market for general corporate purposes, including to satisfy its obligations under various employee benefit plans. At June 30, 2006, an additional 36,542,700 shares could be purchased under the then current authorization by AIG’s Board of Directors.

Dividends from Insurance Subsidiaries

Payments of dividends to AIG by its insurance subsidiaries are subject to certain restrictions imposed by regulatory authorities. With respect to AIG’s domestic insurance subsidiaries, the payment of any dividend requires formal notice to the insurance department in which the particular insurance subsidiary is domiciled. Under the laws of many states, an insurer may pay a dividend without prior approval of the insurance regulator when the amount of the dividend is below certain regulatory thresholds. To enhance their current capital positions, dividends from the DBG companies were suspended in the fourth quarter of 2005, and AIG has taken various other actions. See “Regulation and Supervision” below. Furthermore, AIG cannot predict how recent regulatory investigations may affect the ability of its regulated subsidiaries to pay dividends.

With respect to AIG’s foreign insurance subsidiaries, the most significant insurance regulatory jurisdictions include Bermuda, Japan, Hong Kong, Taiwan, the United Kingdom, Thailand and Singapore.

AIG cannot predict whether the regulatory investigations currently underway or future regulatory issues will impair AIG’s financial condition, results of operations or liquidity. To AIG’s knowledge, no AIG company is currently on any regulatory or similar “watch list” with regard to solvency. (See also the discussion under “Liquidity” herein.)

Regulation and Supervision

AIG’s insurance subsidiaries, in common with other insurers, are subject to regulation and supervision by the states and jurisdictions in which they do business. In the U.S. the National Association of Insurance Commissioners (NAIC) has developed Risk-Based Capital (RBC) requirements. RBC relates an individual insurance company’s statutory surplus to the risk inherent in its overall operations.

AIG’s insurance subsidiaries file financial statements prepared in accordance with statutory accounting practices prescribed or permitted by domestic and foreign insurance regulatory authorities. The principal differences between statutory financial statements and financial statements prepared

in accordance with U.S. GAAP for domestic companies are that statutory financial statements do not reflect deferred policy acquisition costs, some bond portfolios may be carried at amortized cost, assets and liabilities are presented net of reinsurance, policyholder liabilities are valued using more conservative assumptions and certain assets are non-admitted.

In connection with the filing of the 2005 statutory financial statements for AIG's domestic General Insurance companies, AIG agreed with the relevant state insurance regulators on the statutory accounting treatment of various items. The regulatory authorities have also permitted certain of the domestic and foreign insurance subsidiaries to support the carrying value of their investments in certain non-insurance and foreign insurance subsidiaries by utilizing the AIG audited consolidated financial statements to satisfy the requirement that the U.S. GAAP-basis equity of such entities be audited. In addition, the regulatory authorities have permitted the domestic General Insurance companies to utilize audited financial statements prepared on a basis of accounting other than U.S. GAAP to value investments in joint ventures, limited partnerships and hedge funds. These permitted practices did not affect the domestic General Insurance companies' compliance with minimum regulatory capital requirements.

Statutory capital of each company continued to exceed minimum company action level requirements following the adjustments, but AIG nonetheless contributed an additional \$750 million of capital into American Home effective September 30, 2005 and contributed a further \$2.25 billion of capital in February 2006 for a total of approximately \$3 billion of capital into Domestic General Insurance subsidiaries effective December 31, 2005. To enhance their current capital positions, dividends from the DBG companies were suspended in the fourth quarter of 2005. AIG believes it has the capital resources and liquidity to fund any necessary statutory capital contributions. AIG will review the capital position of its insurance company subsidiaries with various rating agencies and regulators to determine if additional capital contributions or other actions are warranted.

As discussed above, various regulators have commenced investigations into certain insurance business practices. In addition, the OTS and other regulators routinely conduct examinations of AIG and its subsidiaries, including AIG's consumer finance operations. AIG cannot predict the ultimate effect that these investigations and examinations, or any additional regulation arising therefrom, might have on its business. Federal, state or local legislation may affect AIG's ability to operate and expand its various financial services businesses, and changes in the current laws, regulations or interpretations thereof may have a material adverse effect on these businesses. See "Risk Factors — Regulatory Investigations" in Item 1A. of Part I of AIG's 2005 Annual Report on Form 10-K for a further discussion of the effect these investigations may have on AIG's businesses.

AIG's U.S. operations are negatively affected under guarantee fund assessment laws which exist in most states. As a result of operating in a state which has guarantee fund assessment laws, a solvent insurance company may be assessed for certain obligations arising from the insolvencies of other insurance companies which operated in that state. AIG generally records these assessments upon notice. Additionally, certain states permit at least a portion of the assessed amount to be used as a credit against a company's future premium tax liabilities. Therefore, the ultimate net assessment cannot reasonably be estimated. The guarantee fund assessments net of credits for the first six months of 2006 were \$17 million.

AIG is also required to participate in various involuntary pools (principally workers compensation business) which provide insurance coverage for those not able to obtain such coverage in the voluntary markets. This participation is also recorded upon notification, as these amounts cannot reasonably be estimated.

A substantial portion of AIG's General Insurance business and a majority of its Life Insurance & Retirement Services business are conducted in foreign countries. The degree of regulation and supervision in foreign jurisdictions varies. Generally, AIG, as well as the underwriting companies operating in such jurisdictions, must satisfy local regulatory requirements. Licenses issued by foreign authorities to AIG subsidiaries are subject to modification and revocation. Thus, AIG's insurance subsidiaries could be prevented from conducting future business in certain of the jurisdictions where they currently operate. AIG's international operations include operations in various developing nations. Both current and future foreign operations could be adversely affected by unfavorable political developments up to and including nationalization of AIG's operations without compensation. Adverse effects resulting from any one country may affect AIG's results of operations, liquidity and financial condition depending on the magnitude of the event and AIG's net financial exposure at that time in that country.

Foreign operations are individually subject to local solvency margin requirements that require maintenance of adequate capitalization, which AIG complies with by country. In addition, certain foreign locations, notably Japan, have established regulations that can result in guarantee fund assessments. These have not had a material effect on AIG's financial condition or results of operations.

Liquidity

AIG's liquidity is primarily derived from the operating cash flows of its General and Life Insurance & Retirement Services operations. Management believes that AIG's liquid assets, its net cash provided by operations, and access to the capital markets will enable it to meet any anticipated cash requirements.

At June 30, 2006, AIG's consolidated invested assets included \$23.33 billion of cash and short-term investments. Consolidated net cash provided by operating activities in the first six months of 2006 amounted to \$7.0 billion.

During the second quarter of 2006, AIG began presenting cash flows related to the origination and sale of finance receivables held for sale as cash flows within operating activities in the Consolidated Statement of Cash Flows. Previously these amounts were presented as cash flows within investing activities. In addition, certain intercompany transactions included in Finance receivables held for sale — originations and purchases and Finance receivable principal payments received in the Consolidated Statement of Cash Flows were not eliminated in 2005. After evaluating the effect of these items during the second quarter of 2006, AIG has revised the 2005 presentation to conform to the 2006 presentation. See Note 11 of Notes to the Consolidated Financial Statements.

The liquidity of the combined insurance operations is derived both domestically and abroad. The combined insurance operating cash flow is derived from two sources, underwriting operations and investment operations. Cash flow includes periodic premium collections, including policyholders' contract deposits, cash flows from investment operations and paid loss recoveries less reinsurance premiums, losses, benefits, and acquisition and operating expenses. Generally, there is a time lag from when premiums are collected and, when as a result of the occurrence of events specified in the policy, the losses and benefits are paid. Investment income cash flow is primarily derived from interest and dividends received and includes realized capital gains net of realized capital losses. (See also the discussions under "Operating Review: General Insurance Operations" and "Life Insurance & Retirement Services Operations" herein.)

With respect to General Insurance operations, if paid losses accelerated beyond AIG's ability to fund such paid losses from current operating cash flows, AIG might need to liquidate a portion of its General Insurance investment portfolio and/or arrange for financing. Potential events causing such a liquidity strain could be the result of several significant catastrophic events occurring in a relatively short period of time. Additional strain on liquidity could occur if the investments sold to fund such paid losses were sold into a depressed market place and/or reinsurance recoverable on such paid losses became uncollectible or collateral supporting such reinsurance recoverable significantly decreased in value. (See also the discussions under "Operating Review: General Insurance Operations" herein.)

With respect to Life Insurance & Retirement Services operations, if a substantial portion of the Life Insurance & Retirement Services operations bond portfolio diminished significantly in value and/or defaulted, AIG might need to liquidate other portions of its Life Insurance & Retirement Services investment portfolio and/or arrange financing. Po-

tential events causing such a liquidity strain could be the result of economic collapse of a nation or region in which Life Insurance & Retirement Services operations exist, nationalization, terrorist acts, or other such economic or political upheaval. In addition, a significant rise in interest rates leading to a significant increase in policyholder surrenders could also create a liquidity strain. (See also the discussions under "Operating Review: Life Insurance & Retirement Services Operations" herein.)

In addition to the combined insurance pretax operating cash flow, AIG's insurance operations held \$12.99 billion in cash and short-term investments at June 30, 2006. Operating cash flow and the cash and short-term balances held provided AIG's insurance operations with a significant amount of liquidity. AIG subsidiaries have also issued debt securities to meet capital needs. In December 2005, Transatlantic issued \$750 million of debt securities in a public offering, of which \$450 million were purchased by other AIG subsidiaries. Transatlantic contributed the proceeds of the offering to a reinsurance company subsidiary.

This liquidity is available, among other things, to purchase predominately high quality and diversified fixed income securities and, to a lesser extent, marketable equity securities, and to provide mortgage loans on real estate, policy loans and collateral loans. This cash flow coupled with proceeds of approximately \$65 billion from the maturities, sales and redemptions of fixed income securities and from the sale of equity securities was used to purchase approximately \$81 billion of fixed income securities and marketable equity securities during the first six months of 2006.

AIG's major Financial Services operating subsidiaries consist of AIGFP, ILFC, AGF and AIGCFG. Sources of funds considered in meeting the liquidity needs of AIGFP's operations include guaranteed investment agreements, issuance of long-term and short-term debt, proceeds from maturities and sales of securities available for sale, securities sold under repurchase agreements, and securities and spot commodities sold but not yet purchased. ILFC, AGF and AIGCFG all utilize the commercial paper markets, retail and wholesale deposits, bank loans and bank credit facilities as sources of liquidity. ILFC and AGF also fund in the domestic and international capital markets without reliance on any guarantee from AIG. An additional source of liquidity for ILFC is the use of export credit facilities. AIGCFG also uses wholesale and retail bank deposits as sources of funds. On occasion, AIG has provided equity capital to ILFC, AGF and AIGCFG and provides intercompany loans to AIGCFG. An AIG subsidiary purchased additional shares of ILFC in the amount of \$400 million during the third quarter of 2005. Cash flow provided from operations is a major source of liquidity for AIG's primary Financial Services operating subsidiaries.

AIG, the parent company, funds its short-term working capital needs through commercial paper issued by AIG Fund-

ing. As of June 30, 2006, AIG Funding had \$3.23 billion of commercial paper outstanding with an average maturity of 28 days. As additional liquidity, AIG parent has a \$2 billion inter-company revolving credit facility provided by certain of its subsidiaries, a \$1.625 billion 364-day revolving bank credit facility that expires in July 2007, a \$1.625 billion five year revolving bank credit facility that expires in July 2011 and a \$3 billion 364-day revolving credit facility that expires in November 2006, of which \$669 million is currently available as back-up liquidity. AIG parent's primary sources of cash flow are dividends and loans from its subsidiaries. AIG parent's primary uses of cash flow are for debt service, capital contributions to subsidiaries and the payment of dividends to shareholders. As of June 30, 2006, including debt obligations of AGC that are guaranteed by AIG, remaining debt and loan maturities due in 2006 are \$600 million and \$0 for the third and fourth quarters, respectively. According to the terms of the Zero Coupon Convertible Senior Debentures issued by AIG on November 9, 2001, holders can require AIG to repurchase the debentures once every five years beginning on November 9, 2006. Assuming that all of the outstanding debentures are required to be repurchased by AIG on November 9, 2006, the aggregate repurchase price payable by AIG on that date will be approximately \$1.10 billion. See also Note 9 of Notes to Consolidated Financial Statements in AIG's 2005 Annual Report on Form 10-K/A for additional information on debt maturities for AIG and its subsidiaries.

Special Purpose Vehicles and Off Balance Sheet Arrangements

AIG uses special purpose vehicles (SPVs) and off balance sheet arrangements in the ordinary course of business. As a result of recent changes in accounting, a number of SPVs and off balance sheet arrangements have been reflected in AIG's consolidated financial statements. In January 2003, FASB issued Interpretation No. 46, "Consolidation of Variable Interest Entities" (FIN 46). FIN 46 addressed the consolidation and disclosure rules for nonoperating entities that are now defined as Variable Interest Entities (VIEs). In December 2003, FASB issued a revision to Interpretation No. 46 (FIN 46(R)).

AIG has guidelines with respect to the formation of and investment in SPVs and off balance sheet arrangements. In addition, AIG has expanded the responsibility of its Complex Structured Financial Transaction Committee (CSFT) to include the review of any transaction that could subject AIG to heightened legal, reputational, regulatory, accounting or other risk. See "Management's Report on Internal Control Over Financial Reporting" in Item 9A. of Part II included in AIG's 2005 Annual Report on Form 10-K for a further discussion of the CSFT.

For additional information related to AIG's activities with respect to VIEs and certain guarantees see "Recent Accounting Standards" herein and also Note 8 of Notes to Con-

solidated Financial Statements. Also, for additional disclosure regarding AIG's commercial commitments (including guarantors), see "Contractual Obligations and Other Commercial Commitments" herein.

Derivatives

Derivatives are financial instruments among two or more parties with returns linked to or "derived" from some underlying equity, debt, commodity or other asset, liability, or index. Derivatives payments may be based on interest rates and exchange rates and/or prices of certain securities, commodities, financial or commodity indices, or other variables. The more significant types of derivative arrangements in which AIG transacts are swaps, forwards, futures and options. In the normal course of business, with the agreement of the original counterparty, these contracts may be terminated early or assigned to another counterparty.

The overwhelming majority of AIG's derivatives activities are conducted by the Capital Markets operations, thus permitting AIG to participate in the derivatives dealer market acting primarily as principal. In these derivative operations, AIG structures transactions that generally allow its counterparties to obtain or hedge exposure to changes in interest and foreign currency exchange rates, credit events, securities' prices and certain commodities and financial or commodity indices. AIG's customers – such as corporations, financial institutions, multinational organizations, sovereign entities, government agencies and municipalities – use derivatives to hedge their own market exposures. For example, a futures, forward or option contract can be used to protect the customers' assets or liabilities against price fluctuations.

A counterparty may default on any obligation to AIG, including a derivative contract. Credit risk is a consequence of extending credit and/or carrying trading and investment positions. Credit risk exists for a derivative contract when that contract has a positive fair value to AIG. To help manage this risk, AIGFP's credit department operates within the guidelines set by the AIG Credit Risk Committee. This committee establishes the credit policy, sets limits for counterparties and provides limits for derivative transactions with counterparties having different credit ratings. In addition to credit ratings, this committee takes into account other factors, including the industry and country of the counterparty. Transactions which fall outside these pre-established guidelines require the specific approval of the AIG Credit Risk Committee. It is also AIG's policy to establish reserves for potential credit impairment when necessary.

In addition, AIGFP utilizes various credit enhancements, including letters of credit, guarantees, collateral, credit triggers, credit derivatives, and margin agreements to reduce the credit risk relating to its outstanding financial derivative transactions. AIGFP requires credit enhancements in connection with specific transactions based on, among other things,

the creditworthiness of the counterparties, and the transaction's size and maturity.

AIG's Derivatives Review Committee provides an independent review of any proposed derivative transaction or program except those derivative transactions entered into by AIGFP with third parties. The committee examines, among other things, the nature and purpose of the derivative transaction, its potential credit exposure, if any, and the estimated benefits.

Managing Risk

Market Risk

Market risk is the risk of loss of fair value resulting from adverse fluctuations in interest rates, foreign currencies, equities and commodity prices. AIG has exposures to these risks.

AIG analyzes market risk using various statistical techniques including Value at Risk (VaR). VaR is a summary statistical measure that applies the estimated volatility and correlation of market factors to AIG's market positions. The output from the VaR calculation is the maximum loss that could occur over a defined period of time given a certain probability. While VaR models are relatively sophisticated, the quantitative market risk information generated is limited by the assumptions and parameters established in creating the related models. AIG believes that statistical models alone do not provide a reliable method of monitoring and controlling market risk. Therefore, such models are tools and do not substitute for the experience or judgment of senior management.

Insurance

AIG has performed a separate VaR analysis for the General Insurance and Life Insurance & Retirement Services segments and for each market risk within each segment. For purposes of the VaR calculation, the insurance assets and liabilities from GICs are included in the Life Insurance & Retirement Services segment. For the calculations in the analyses the financial instrument assets included are the insurance segments' invested assets, excluding real estate and investment income due and accrued, and the financial instrument liabilities included are reserve for losses and loss expenses, unearned premiums, future policy benefits for life and accident and health insurance contracts and other policyholders' funds.

AIG calculated the VaR with respect to the net fair value of each of AIG's insurance segments as of June 30, 2006 and December 31, 2005. The VaR number represents the maximum potential loss as of those dates that could be incurred with a 95 percent confidence (i.e., only five percent of historical scenarios show losses greater than the VaR figure) within a one-month holding period. AIG uses the historical simulation methodology that entails repricing all assets and liabilities under explicit changes in market rates within a specific historical time period. AIG uses the most recent three years of historical market information for interest rates, foreign exchange rates, and equity index prices. For each scenario, each transaction was repriced. Portfolio, business unit and finally AIG-wide scenario values are then calculated by netting the values of all the underlying assets and liabilities.

The following table presents the period-end, average, high and low VaRs on a combined basis and of each component of market risk for each of AIG's insurance segments as of June 30, 2006 and December 31, 2005. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

<i>(in millions)</i>	2006				2005			
	As of June 30,	For the six months ended June 30,			As of December 31,	For the year ended December 31,		
		Average	High	Low		Average	High	Low
General Insurance:								
Market risk:								
Combined	\$1,776	\$1,689	\$1,776	\$1,617	\$1,617	\$1,585	\$1,672	\$1,396
Interest rate	1,716	1,690	1,717	1,636	1,717	1,746	1,931	1,563
Currency	150	133	150	119	130	125	139	111
Equity	553	549	560	535	535	651	727	535
Life Insurance & Retirement Services:								
Market risk:								
Combined	\$4,857	\$4,878	\$5,260	\$4,515	\$4,515	\$4,737	\$5,024	\$4,515
Interest rate	4,843	4,752	5,032	4,382	4,382	4,488	4,750	4,382
Currency	475	538	597	475	541	511	560	442
Equity	967	841	967	762	762	953	1,024	762

In the Life Insurance & Retirement Services segment, the increase in Combined VaR and interest rate VaR in 2006 was primarily the result of growth in the Foreign Life business. In most Asian markets, interest rates and interest rate volatilities were stable during the first six months of 2006.

Financial Services

AIG generally manages its market exposures within Financial Services by maintaining offsetting positions. Capital Markets seeks to minimize or set limits for open or uncovered market positions. Credit exposure is managed separately. (See the discussion on the management of credit risk above.)

AIG's Market Risk Management Department provides detailed independent review of AIG's market exposures, particularly those market exposures of the Capital Markets operations. This department determines whether AIG's market risks, as well as those market risks of individual subsidiaries, are within the parameters established by AIG's senior management. Well established market risk management techniques such as sensitivity analysis are used. Additionally, this department verifies that specific market risks of each of certain subsidiaries are managed and hedged by that subsidiary.

ILFC is exposed to market risk and the risk of loss of fair value and possible liquidity strain resulting from adverse fluctuations in interest rates. As of June 30, 2006 and December 31, 2005, AIG statistically measured the loss of fair value through the application of a VaR model. In this analysis, the net fair value of Aircraft Finance operations was determined using the financial instrument assets which included the tax adjusted future flight equipment lease revenue, and the financial instrument liabilities which included the future servicing of the current debt. The estimated effect of the current derivative positions was also taken into account.

AIG calculated the VaR with respect to the net fair value of Aircraft Finance operations using the historical simulation methodology, as previously described. As of June 30, 2006 and December 31, 2005, the average VaR with respect to the net fair value of Aircraft Finance operations was approximately \$182 million and \$129 million, respectively. In late 2005, ILFC lengthened the average maturity of its debt, leading to an increase in its VaR.

Capital Markets operations are exposed to market risk due to changes in the level and volatility of interest rates, foreign currency exchange rates, equity prices and commodity prices. AIGFP hedges its exposure to these risks primarily through swaps, options, forwards and futures. To economically hedge interest rate risks, AIGFP may also purchase U.S. and foreign government obligations.

AIGFP does not seek to manage the market risk of each transaction through an individual third party offsetting transaction. Rather, AIGFP takes a portfolio approach to the management of its market risk exposures. AIGFP values the predominant portion of its market-sensitive transactions by marking them to market currently through income. A smaller portion is priced by estimated fair value based upon an extrapolation of market factors. There is another limited portion of transactions where the initial fair value is not recorded through income currently and gains or losses are recognized over the life of the transactions. These valuations represent an assessment of the present values of expected future cash flows and may include reserves for such risks as are deemed appropriate by AIGFP and AIG management.

The recorded values of these transactions may be different from the values that might be realized if AIGFP were

required to sell or close out the transactions prior to maturity. AIG believes that such differences are not significant to its financial condition or liquidity. Such differences would be immediately recognized when the transactions are sold or closed out prior to maturity.

AIGFP attempts to secure reliable and independent current market prices, such as published exchange prices, external subscription services such as from Bloomberg or Reuters or third-party broker quotes for use in this model. When such prices are not available, AIGFP use an internal methodology which includes extrapolation from observable and verifiable prices nearest to the measurement date of the reporting period. Historically, actual results have not materially deviated from these models in any material respect.

Systems used by Capital Markets operations can monitor each unit's respective market positions on an intraday basis. AIGFP operates in major business centers overseas and therefore is open for business essentially 24 hours a day. Thus, the market exposure and offset strategies are monitored, reviewed and coordinated around the clock.

AIGFP applies various testing techniques which reflect significant potential market movements in interest rates, foreign exchange rates, commodity and equity prices, volatility levels and the effect of time. These techniques vary by currency and are regularly changed to reflect factors affecting the derivatives portfolio. The results from these analyses are regularly reviewed by AIG management.

As described above, Capital Markets operations are exposed to the risk of loss of fair value from adverse fluctuations in interest rate and foreign currency exchange rates and equity and commodity prices as well as implied volatilities thereon. AIG statistically measures the losses of fair value through the application of a VaR model across Capital Markets.

Capital Markets asset and liability portfolios for which the VaR analyses were performed included over the counter and exchange traded investments, derivative instruments and commodities. Because the market risk with respect to securities available for sale, at market, is substantially hedged, segregation of market sensitive instruments into trading and other than trading was not deemed necessary. The VaR calculation is unaffected by the accounting treatment of hedged transactions under FAS 133.

In the calculation of VaR for Capital Markets operations, AIG uses the same historical simulation methodology, described under Insurance above, which entails repricing all assets and liabilities under explicit changes in market rates within a specific historical time period.

The following table presents the VaR on a combined basis and of each component of market risk for Capital Markets operations as of June 30, 2006 and December 31, 2005. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

<i>(in millions)</i>	2006	2005
Combined	\$20	\$22
Interest rate	7	9
Currency	9	3
Equity	13	14
Commodity	10	9

The following table presents the average, high and low VaRs on a combined basis and of each component of market risk for Capital Markets operations as of June 30, 2006 and December 31, 2005. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

<i>(in millions)</i>	2006			2005		
	Average	High	Low	Average	High	Low
Combined	\$21	\$22	\$20	\$17	\$22	\$13
Interest rate	8	9	7	9	11	6
Currency	6	9	3	4	6	3
Equity	13	14	12	9	16	5
Commodity	12	16	9	8	10	7

Catastrophe Exposures

The nature of AIG's business exposes it to various catastrophic events in which multiple losses across multiple lines of business can occur in any calendar year. In order to control this exposure, AIG uses a combination of techniques, including setting aggregate limits in key business units, monitoring and modeling accumulated exposures, and purchasing catastrophe reinsurance to supplement its other reinsurance protections.

AIG evaluates catastrophic events and assesses the probability of occurrence and magnitude of catastrophic events through the use of third party models generally recognized as industry standards. Following is an overview of modeled losses associated with the more significant natural perils. The modeled results assume that all reinsurers perform their obligations to AIG in accordance with their terms.

It is important to recognize that there is no standard methodology to project the possible losses from total property and workers compensation exposures and that the use of different models could result in materially different projected losses. Further, there are no industry standard assumptions to be utilized in projecting these losses. The use of different assumptions could materially change the projected losses. Therefore, these modeled losses may not be comparable to estimates made by other companies.

These estimates are inherently uncertain and may not reflect AIG's maximum exposures to these events. It is highly likely that AIG's losses will vary, perhaps significantly, from these estimates.

Natural Catastrophe Exposures

The modeled results provided in the table below were based on the aggregate exceedence probability (AEP) losses which represent total property and workers compensation losses that may occur in any single year from one or more natural events. The model, which has been updated to reflect 2005 catastrophes, generally used 2005 exposure data and the current reinsurance program structure. The values provided were based on 100 year return period losses, which have a 1 percent likelihood of being exceeded in any single year. Thus, there is a one percent probability that AIG could incur in any year losses in excess of the modeled amounts for these perils.

<i>(in millions)</i>	Gross	Net of Reinsurance	Net, After Income Taxes	% of Consolidated Shareholders' Equity at December 31, 2005
Earthquake	\$3,412	\$2,283	\$1,484	1.7%
Tropical Cyclone*	\$5,336	\$3,907	\$2,540	2.9%

* Includes hurricanes, typhoons and other wind-related events.

In addition, AIG also evaluates potential single event earthquake and hurricane losses that may be incurred. The single events utilized are a subset of potential events identified and utilized by Lloyd's¹ and referred to as Realistic Disaster Scenarios (RDSs). The purpose of this analysis was to utilize these RDSs to provide a reference frame and place into context the model results. However, it is important to note that the specific events used for this analysis do not necessarily represent the worst case loss that AIG could incur from this type of an event in these regions. The losses associated with the RDSs are included in the table below.

Single event modeled property and workers compensation losses to AIG's worldwide portfolio of risk for key geographic areas. Gross values represent AIG's liability after the application of policy limits and deductibles, and net values represent losses after all reinsurance is applied.

<i>(in millions)</i>	Gross	Net of Reinsurance
Miami Hurricane	\$4,530	\$2,911
Northeast Hurricane	3,732	2,498
San Francisco Earthquake	3,628	2,229
Los Angeles Earthquake	3,285	2,145
Gulf Coast Hurricane	2,581	1,391
Japanese Earthquake	339	153
European Windstorm	135	41
Japanese Typhoon	125	105

ACTUAL RESULTS IN ANY PERIOD ARE LIKELY TO VARY, PERHAPS MATERIALLY, FROM THE MODELED SCENARIOS, AND THE OCCURRENCE OF ONE OR MORE SEVERE EVENTS COULD HAVE A MATERIAL ADVERSE EFFECT ON AIG'S FINANCIAL CONDITION, RESULTS OF OPERATIONS AND LIQUIDITY.

¹ Lloyd's Realistic Disaster Scenarios, Scenario Specifications, April 2006

Measures Implemented to Control Hurricane and Earthquake Catastrophic Risk

Catastrophic risk from the earthquake and hurricane perils is proactively managed through reinsurance programs, and aggregate accumulation monitoring. Catastrophe reinsurance is purchased by AIG from financially sound reinsurers. Recoveries under this program, along with other non-catastrophic reinsurance protections, are reflected in the net values provided in the tables above. In addition to the catastrophic reinsurance programs, hurricane and earthquake exposures are also controlled by monitoring aggregate exposures on a regular basis. The aggregate exposures are calculated by compiling total liability within AIG defined hurricane and earthquake catastrophe risk zones and therefore represent the maximum that could be lost in any individual zone. These aggregate accumulations are tracked over time in order to monitor both long and short term trends. AIG's major property writers, Lexington and The Private Client Group, have also implemented catastrophe related underwriting procedures and manage their books at an account level. Lexington individually models most accounts prior to binding in order to specifically quantify catastrophic risk for each account.

Pandemic Influenza

The potential for a pandemic influenza outbreak has received media attention during the past year. AIG continues to analyze its exposure to this serious threat and, as such, has engaged an external risk management firm to model loss scenarios associated with an outbreak of Avian Flu. Using a 1 in 100 year return period, AIG estimates its after-tax net losses under its life insurance policies due to Avian Flu at approximately 0.9 percent of consolidated shareholders' equity as of December 31, 2005. This estimate was calculated over a 3 year period, although the majority of the losses would be incurred in the first year. The modeled losses calculated were based on 2005 policy data representing approximately 90 percent of AIG's Individual Life, Group Life, and Credit Life books of business, net of reinsurance. This estimate does not include claims that could be made under other policies, such as business interruption or general liability policies, and does not reflect estimates for losses resulting from disruption of AIG's own business operations that may arise out of such a pandemic. The model used to generate this estimate has only recently been developed. The reasonableness of the model and its underlying assumptions cannot readily be verified by reference to comparable historical events. As a result, AIG's actual losses from a pandemic influenza outbreak are likely to vary significantly from those predicted by the model.

Terrorism

Terrorism risk is also monitored to control AIG's exposure. AIG shares its exposures to terrorism risks under the Terrorism Risk Insurance Act (TRIA). AIG's current deductible

under TRIA is \$3.3 billion and AIG would share 10 percent of certified terrorism losses in excess of the \$3.3 billion.

Recent Accounting Standards

At the March 2004 meeting, the Emerging Issue Task Force (EITF) reached a consensus with respect to Issue No. 03-1, "The Meaning of Other-Than Temporary Impairment and Its Application to Certain Investments." On September 30, 2004, the FASB issued FASB Staff Position (FSP) EITF Issue 03-1-1, Effective Date of Paragraphs 10-20 of EITF Issue No. 03-1, "The Meaning of Other-Than-Temporary Impairment and its Application to Certain Investments." In November 2005, FASB issued FSP FAS 115-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments," which replaces the measurement and recognition guidance set forth in Issue No. 03-1 and codifies certain existing guidance on impairment.

On June 1, 2005, the FASB issued Statement No. 154, "Accounting Changes and Error Corrections" (FAS 154). FAS 154 replaces APB Opinion No. 20, "Accounting Changes" and FASB Statement No. 3, "Reporting Accounting Changes in Interim Financial Statements."

At the June 2005 meeting, the EITF reached a consensus with respect to Issue No. 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners have Certain Rights."

On June 29, 2005, the FASB issued Statement 133 Implementation Issues No. B38, "Embedded Derivatives: Evaluation of Net Settlement with Respect to the Settlement of a Debt Instrument through Exercise of an Embedded Put Option or Call Option" and No. B39, "Application of Paragraph 13(b) to Call Options That are Exercisable Only by the Debtor."

On September 19, 2005, the FASB issued Statement of Position 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts."

On February 16, 2006, the FASB issued FAS No. 155, "Accounting for Certain Hybrid Financial Instruments."

On March 27, 2006, the FASB issued FASB FTB 85-4-1, "Accounting for Life Settlement Contracts by Third-Party Investors" (FSP 85-4-1), an amendment of FTB 85-4, "Accounting for Purchases of Life Insurance."

On April 13, 2006, the FASB issued FSP FIN 46(R)-6, "Determining the Variability to be Considered in Applying FASB Interpretation No. 46(R)."

On July 13, 2006, the FASB issued FASB Interpretation No. 48, "Accounting for Uncertainty in Income Taxes - an interpretation of FASB Statement No. 109" (FIN 48).

Effective January 1, 2006, AIG adopted the fair value recognition provisions of Statement of Financial Accounting Standards No. 123R “Share-Based Payments” (FAS 123R).

For further discussion of these recent accounting standards and its application to AIG, see Note 10 of Notes to Consolidated Financial Statements.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Included in Item 2. Managements Discussion and Analysis of Financial Condition and Results of Operations.

ITEM 4. CONTROLS AND PROCEDURES

In connection with the preparation of this Form 10-Q, an evaluation was carried out by AIG’s management, with the participation of AIG’s Chief Executive Officer and Chief Financial Officer, of the effectiveness of AIG’s disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (Exchange Act)). Disclosure controls and procedures are designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms and that such information is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial

Officer, to allow timely decisions regarding required disclosures. Based on its evaluation, and in light of the previously identified material weaknesses in internal control over financial reporting, as of December 31, 2005, described within the 2005 Annual Report on Form 10-K, AIG’s Chief Executive Officer and Chief Financial Officer concluded that, as of June 30, 2006, AIG’s disclosure controls and procedures were ineffective. In addition, there has been no change in AIG’s internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) that occurred during the quarter ended June 30, 2006 that has materially affected, or is reasonably likely to materially affect, AIG’s internal control over financial reporting.

Part II – OTHER INFORMATION

ITEM 2. Unregistered Sales of Equity Securities and Use of Proceeds.

The table below provides information with respect to purchases of AIG Common stock during the three months ended June 30, 2006.

Period	Total Number of Shares Purchased ⁽¹⁾	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares that May Yet Be Purchased Under the Plans or Programs at End of Month ⁽²⁾
April 1 - 30	–	\$ –	–	36,542,700
May 1 - 31	–	–	–	36,542,700
June 1 - 30	–	–	–	36,542,700
Total	–	\$ –	–	

(1) Does not include 30,518 shares delivered or attested to in satisfaction of the exercise price by holders of AIG employee stock options exercised during the three months ended June 30, 2006.

(2) On July 19, 2002, AIG announced that its Board of Directors had authorized the open market purchase of up to 10 million shares of common stock. On February 13, 2003, AIG announced that the Board had expanded the existing program through the authorization of an additional 50 million shares. The purchase program has no set expiration or termination date.

ITEM 4. Submission of Matters to a Vote of Security Holders.

At the Annual Meeting of Shareholders held on May 17, 2006, the Shareholders:

(a) Elected fifteen directors as follows:

Nominee	Shares For	Shares Withheld
Pei-yuan Chia	2,245,278,647	112,943,402
Marshall A. Cohen	1,738,721,381	619,500,668
Martin S. Feldstein	1,780,147,427	578,074,622
Ellen V. Futter	1,801,720,202	556,501,847
Stephen L. Hammerman	2,280,495,958	77,726,091
Richard C. Holbrooke	1,791,353,064	566,868,985
Fred H. Langhammer	2,300,193,254	58,028,795
George L. Miles, Jr.	2,290,670,840	67,551,209
Morris W. Offit	2,251,884,371	106,337,678
James F. Orr III	2,300,512,200	57,709,849
Martin J. Sullivan	1,849,146,165	509,075,884
Michael H. Sutton	2,299,458,677	58,763,372
Edmund S.W. Tse	2,294,329,520	63,892,529
Robert B. Willumstad	2,300,312,892	57,909,157
Frank G. Zarb	1,832,805,886	525,416,163

(b) Approved by a vote of 1,745,063,449 shares to 576,509,051 shares, with 36,649,549 abstaining, a proposal to ratify the selection of PricewaterhouseCoopers LLP as the independent registered public accounting firm for 2006.

(c) Approved by a vote of 2,169,404,151 shares to 148,588,891 shares, with 40,229,007 abstaining, a proposal to adopt an Executive Incentive Plan.

ITEM 6. Exhibits.

See accompanying Exhibit Index.

American International Group, Inc.
 Computation of Ratios of Earnings to Fixed Charges

<i>(in millions, except ratios)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2006	2005	2006	2005
Income before income taxes, minority interest and cumulative effect of an accounting change	\$ 5,241	\$6,701	\$10,034	\$12,350
Less – Equity income of less than 50% owned persons	110	30	130	93
Add – Dividends from less than 50% owned persons	15	123	18	126
	5,146	6,794	9,922	12,383
Add – Fixed charges	2,048	1,739	3,996	3,469
Less – Capitalized interest	14	15	29	30
Income before income taxes, minority interest, cumulative effect of an accounting change and fixed charges	\$ 7,180	\$8,518	\$13,889	\$15,822
Fixed charges:				
Interest costs	\$ 1,995	\$1,687	\$ 3,891	\$ 3,366
Rental expense*	53	52	105	103
Total fixed charges	\$ 2,048	\$1,739	\$ 3,996	\$ 3,469
Ratio of earnings to fixed charges	3.51	4.90	3.48	4.56
Secondary Ratio				
Interest credited to GIC and GIA policy and contract holders	\$ (1,097)	\$ (968)	\$ (2,187)	\$ (2,062)
Total fixed charges excluding interest credited to GIC and GIA policy and contract holders	\$ 951	\$ 771	\$ 1,809	\$ 1,407
Secondary ratio of earnings to fixed charges	6.40	9.79	6.47	9.78

*The portion deemed representative of the interest factor.

The secondary ratio is disclosed for the convenience of fixed income investors and the rating agencies that serve them and is more comparable to the ratios disclosed by all issuers of fixed income securities. The secondary ratio removes interest credited to guaranteed investment contract (GIC) policyholders and guaranteed investment agreement (GIA) contractholders. Such expenses are also removed from income before income taxes, minority interest and cumulative effect of an accounting change used in this calculation. GICs and

GIAAs are entered into by AIG's insurance subsidiaries, principally Sun America Life Insurance Company and AIG Financial Products Corp. and its subsidiaries, respectively. The proceeds from GICs and GIAAs are invested in a diversified portfolio of securities, primarily investment grade bonds. The assets acquired yield rates greater than the rates on the related policyholders obligation or agreement, with the intent of earning operating income from the spread.

CERTIFICATIONS

I, Martin J. Sullivan, certify that:

1. I have reviewed this Quarterly Report on Form 10-Q of American International Group, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

CERTIFICATIONS

I, Steven J. Bensinger, certify that:

1. I have reviewed this Quarterly Report on Form 10-Q of American International Group, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited)**1. Financial Statement Presentation**

These unaudited condensed consolidated financial statements do not include certain financial information required by U.S. generally accepted accounting principles (GAAP) for complete financial statements and should be read in conjunction with the audited consolidated financial statements and the related notes included in the Annual Report on Form 10-K/A of American International Group, Inc. (AIG) for the year ended December 31, 2005 (2005 Annual Report on Form 10-K/A).

In the opinion of management, these consolidated financial statements contain the normal recurring adjustments neces-

sary for a fair statement of the results presented herein. All material intercompany accounts and transactions have been eliminated. Certain accounts have been reclassified in the 2005 financial statements to conform to their 2006 presentation. See also Note 11 herein.

Information with respect to the three and nine months ended September 30, 2005 includes the effects of corrections and reclassifications made in conjunction with the Second Restatement. See also AIG's 2005 Annual Report on Form 10-K/A.

2. Segment Information

AIG identifies its reportable segments by product line consistent with its management structure. AIG's major product and service groupings are general insurance, life insurance & retirement services, financial services and asset management. **The following table summarizes the operations by major operating segment for the three and nine-month periods ended September 30, 2006 and 2005:**

Operating Segments (in millions)	Three Months Ended September 30,		Nine Months Ended September 30,

Consolidated	\$ 6,301	\$ 2,547	\$16,335	\$14,897

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2006 and 2005, the effect was \$165 million and \$(353) million, respectively, in revenues and \$165 million and \$(345) million, respectively, in operating income. For the nine-month periods ended September 30, 2006 and 2005, the effect was \$(1.13) billion and \$2.21 billion, respectively, in revenues and \$(1.13) billion and \$2.28 billion, respectively, in operating income. These amounts result primarily from interest rate and foreign currency derivatives which are hedging available for sale securities and borrowings.

(b) Represents the sum of General Insurance net premiums earned, net investment income and realized capital gains (losses).

(c) Represents the sum of Life Insurance & Retirement Services GAAP premiums, net investment income and realized capital gains (losses). Included in realized capital gains (losses) is the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 and foreign exchange gains (losses) of \$(190) million and \$(264) million in the three-month periods ended September 30, 2006 and 2005, respectively, and \$145 million and \$(447) million in the nine-month periods ended September 30, 2006 and 2005, respectively.

(d) Represents interest, lease and finance charges.

(e) Represents net investment income with respect to Guaranteed Investment Contracts (GICs) and management and advisory fees.

(f) Represents income before income taxes, minority interest and cumulative effect of an accounting change.

(g) Results of operations of AIG Credit Card Company (Taiwan) are shared equally by the Life Insurance & Retirement Services segment and the Financial Services segment. Additional allowances of \$44 million were recorded in the first quarter of 2006, by each segment, for losses in these credit card operations.

(h) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts and other mutual funds (unit investment trusts). For the three and nine-month periods ended September 30, 2006 the effect was an increase of \$92 million and \$524 million, respectively, in both revenues and operating income for General Insurance and an increase of \$24 million in both revenues and operating income for the three-month period ended September 30, 2006 and \$245 million and \$168 million in revenues and operating income, respectively, for the nine-month period ended September 30, 2006, for Life Insurance & Retirement Services.

(i) Includes current year catastrophe related losses of \$2.44 billion in both the third quarter and first nine months of 2005. There were no significant catastrophe related losses in the third quarter and first nine months of 2006.

(j) Includes additional losses incurred and net reinstatement premiums related to prior year catastrophes of \$28 million and \$39 million in the three-month periods ended September 30, 2006 and 2005, respectively. Such losses and premiums were \$87 million and \$252 million in the nine-month periods ended September 30, 2006 and 2005, respectively.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information** (continued)

(k) The operating loss for the Other category is as follows:

(in millions)	Three Months Ended September 30,		Nine Months Ended September 30,	
	2006	2005	2006	2005
Operating income (loss):				
Equity earnings in unconsolidated subsidiaries*	\$ 48	\$ (205)	\$ 178	\$ (109)

(a) Represents the operations of American International Assurance Company, Limited together with American International Assurance Company (Bermuda) Limited (AIA), American International Reinsurance Company, Ltd. (AIRCO), and Nan Shan Life Insurance Company, Ltd. (Nan Shan). Revenues and operating income include realized capital gains (losses) of \$(87) million and \$(23) million for the three-month periods ended September 30, 2006 and 2005, respectively, and \$111 million and \$154 million for the nine-month periods ended September 30, 2006 and 2005, respectively. The effects of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses included in realized capital gains (losses) are losses of \$102 million and \$174 million for the three-month periods ended September 30, 2006 and 2005, respectively, and gains of \$11 million and losses of \$113 million for the nine-month periods ended September 30, 2006 and 2005, respectively. Includes \$44 million in additional allowances for losses recorded in the first quarter of 2006 from AIG Credit Card Company (Taiwan).

(b) Represents the operations of American Life Insurance Company (ALICO), AIG Star Life Insurance Co., Ltd. (AIG Star Life), and AIG Edison Life Insurance Company (AIG Edison Life). Revenues and operating income include realized capital gains of \$65 million and \$44 million for the three-month periods ended September 30, 2006 and 2005, respectively, and gains of \$376 million and losses of \$85 million for the nine-month periods ended September 30, 2006 and 2005, respectively. The effects of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses included in realized capital gains (losses) are gains of \$28 million and losses of \$102 million for the three-month periods ended September 30, 2006 and 2005, respectively, and gains of \$184 million and losses of \$365 million for the nine-month periods ended September 30, 2006 and 2005, respectively.

(c) Includes the life operations of American General Life Insurance Company (AG Life), AIG Life Insurance Company and American International Life Assurance Company of New York. Also includes the operations of American General Life and Accident Insurance Company (AGLA). Revenues and operating income include realized capital gains (losses) of \$(123) million and \$41 million for the three-month periods ended September 30, 2006 and 2005, respectively, and losses of \$190 million and \$22 million for the nine-month periods ended September 30, 2006 and 2005, respectively. The effects of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses included in realized capital gains (losses) are losses of \$104 million and gains of \$122 million for the three-month periods ended September 30, 2006 and 2005, respectively, and gains of \$11 million and \$56 million for the nine-month periods ended September 30, 2006 and 2005, respectively.

(d) "AIG SunAmerica" represents the annuity operations of AIG SunAmerica Life Assurance Company, as well as those of First SunAmerica Life Insurance Company and SunAmerica Life Insurance Company. Also includes the operations of The Variable Annuity Life Insurance Company (VALIC) and AIG Annuity Insurance Company (AIG Annuity). Revenues and operating income include realized capital losses of \$24 million and \$83 million for the three-month periods ended September 30, 2006 and 2005, respectively, and losses of \$414 million and \$71 million for the nine-month periods ended September 30, 2006 and 2005, respectively. The effects of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses included in realized capital gains (losses) are \$0 and losses of \$110 million for the three month periods ended September 30, 2006 and 2005, respectively, and losses of \$36 million and \$25 million for the nine-month periods ended September 30, 2006 and 2005, respectively.

(e) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts. For the three-month period ended September 30, 2006 the effect was an increase of \$9 million in both revenues and operating income. For the nine-month period ended September 30, 2006 the effect was an increase of \$230 million in revenues and \$153 million in operating income.

(f) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts. For the three and nine-month periods ended September 30, 2006 the effect was an increase of \$15 million in both revenues and operating income.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information** (continued)

The following table summarizes AIG's Financial Services operations by major internal reporting unit for the three and nine-month periods ended September 30, 2006 and 2005:

Financial Services (in millions)	Three Months Ended September 30,		Nine Months Ended September 30,	
	2006	2005	2006	2005
Revenues ^(a) :				
Aircraft Finance ^(b)	\$1,060	\$ 943	\$ 3,067	\$2,661
Capital Markets ^{(c)(d)}	1,118	23	30	2,754
Consumer Finance ^(e)	970	940	2,833	2,664
Other	39	20	98	61
Total Financial Services	\$3,187	\$1,926	\$ 6,028	\$8,140
Operating income (loss) ^(a) :				
Aircraft Finance	\$ 157	\$ 165	\$ 475	\$ 476
Capital Markets ^(d)	965	(150)	(457)	2,306
Consumer Finance ^{(f)(g)}	220	190	594	649
Other	15	19	38	52
Total Financial Services	\$1,357	\$ 224	\$ 650	\$3,483

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three and nine-month periods ended September 30, 2005, the effect was \$(10) million and \$(59) million, respectively, in operating income for Aircraft Finance. During 2006, Aircraft Finance derivative gains and losses are reported as part of the Other category and not reported in Aircraft Finance operating income. For the three-month periods ended September 30, 2006 and 2005, the effect was \$783 million and \$(365) million in both revenues and operating income, respectively, for Capital Markets. For the nine-month periods ended September 30, 2006 and 2005, the effect was \$(1.06) billion and \$1.80 billion in both revenues and operating income, respectively, for Capital Markets. These amounts result primarily from interest rate and foreign currency derivatives which are hedging available for sale securities and borrowings.

(b) Revenues are primarily aircraft lease rentals from International Lease Finance Corporation (ILFC).

(c) Revenues, shown net of interest expense, are primarily from hedged financial positions entered into in connection with counterparty transactions and the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 described in (a) above.

(d) Certain transactions entered into by AIGFP generate tax credits and benefits which are included in income taxes in the consolidated statement of income. The amount of such tax credits and benefits for the three-month periods ended September 30, 2006 and 2005 are \$3 million and \$23 million, respectively. The amount of such tax credits and benefits for the nine-month periods ended September 30, 2006 and 2005 are \$29 million and \$63 million, respectively.

(e) Revenues are primarily finance charges.

(f) Includes \$44 million in additional allowances for losses recorded in the first quarter of 2006 from AIG Credit Card Company (Taiwan).

(g) Includes catastrophe related losses of \$62 million recorded in the third quarter of 2005 resulting from hurricane Katrina, which were reduced by \$22 million in the third quarter of 2006.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information** (continued)

The following table summarizes AIG's Asset Management revenues and operating income for the three and nine-month periods ended September 30, 2006 and 2005:

Asset Management (in millions)	Three Months Ended September 30,		Nine Months Ended September 30,	
	2006	2005	2006	2005
Revenues:				
Guaranteed Investment Contracts	\$ 845	\$ 908	\$2,517	\$2,707
Institutional Asset Management	265	279	1,163	776
Brokerage Services and Mutual Funds	71	67	217	192

Operating income:				
Guaranteed Investment Contracts ^(a)	\$ 175	\$ 294	\$ 635	\$ 939
Institutional Asset Management ^{(b)(c)}	89	155	721	424
Brokerage Services and Mutual Funds	23	20	67	50
Other	54	99	190	269
Total Asset Management	\$ 341	\$ 568	\$1,613	\$1,682

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three and nine-month periods ended September 30, 2005, the effect was \$18 million and \$127 million, respectively, in operating income. During 2006, these derivative gains and losses are reported as part of the Other category, and not reported in Asset Management operating income.

(b) Includes the full results of certain AIG managed private equity and real estate funds that are consolidated pursuant to FIN 46(R), "Consolidation of Variable Interest Entities". Also includes \$(3) million and \$77 million for the three-month periods ended September 30, 2006 and 2005, respectively, and \$207 million and \$189 million for the nine-month periods ended September 30, 2006 and 2005, respectively, of third-party limited partner earnings offset in minority interest expense, which is not a component of operating income.

(c) Includes the full results of certain AIG managed partnerships that are consolidated effective January 1, 2006 pursuant to EITF 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights." For the three and nine-month periods ended September 30, 2006, operating income includes \$47 million and \$203 million, respectively, of third-party limited partner earnings offset in minority interest expense, which is not a component of operating income.

3. Earnings Per Share

Earnings per share of AIG are based on the weighted average number of common shares outstanding during the period. See also Note 10 herein.

Computation of Earnings Per Share (EPS):

Cumulative effect on an accounting change, net of tax	—	—	0.01	—
Net income	\$ 1.61	\$ 0.66	\$ 4.04	\$ 3.82

(a) Assumes conversion of contingently convertible bonds due to the adoption of EITF Issue No. 04-8 "Accounting Issues Related to Certain Features of Contingently Convertible Debt and the Effect on Diluted Earnings per Share."

(b) Certain share equivalents arising from employee stock plans were not included in the computation of diluted earnings per share where the exercise price of the options exceeded the average market price and would have been antidilutive. The number of share equivalents excluded were 14 million and 21 million for the first nine months of 2006 and 2005, respectively.

From time to time, AIG may buy shares of its common stock in the open market for general corporate purposes, including to satisfy its obligations under various employee benefit plans. At September 30, 2006 and December 31, 2005, an additional 36,542,700 shares could be purchased under the then current authorization by AIG's Board of Directors. Although AIG has authorization to purchase additional shares, AIG has not repurchased shares in 2006. During the nine months ended September 30, 2005, AIG purchased in the open market 2,477,100 shares of its common stock, all of which were acquired in the first quarter.

The quarterly dividend rate per common share, commencing with the dividend declared in May 2006 and paid on September 15, 2006, is \$0.165. The declared dividend amount of \$0.175 for the three months ended September 30, 2005 includes a \$0.025 increase to the amount previously declared in the second quarter of 2005 for payment in September 2005 as well as the \$0.125 dividend declared in May 2005 for payment in September 2005.

4. Benefits Provided by Starr International Company, Inc. and C.V. Starr & Co., Inc.

Starr International Company, Inc. (SICO) has provided a series of two-year Deferred Compensation Profit Participation Plans (SICO Plans) to certain AIG employees. The SICO Plans came into being in 1975 when the voting shareholders and Board of Directors of SICO, a private holding company

whose principal asset is AIG common stock, decided that a portion of the capital value of SICO should be used to provide an incentive plan for the current and succeeding managements of all American International companies, including AIG.

None of the costs of the various benefits provided under the SICO Plans has been paid by AIG, although AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts deemed contributed by SICO. The SICO Plans provide that shares currently owned by SICO are set aside by SICO for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's voluntary termination of employment with AIG prior to normal retirement age. Under the SICO Plans, SICO's Board of Directors may elect to pay a participant cash in lieu of shares of AIG common stock. Following notification from SICO to participants in the SICO Plans that it will settle specific future awards under the SICO Plans with shares rather than cash, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting, although variable accounting will continue to be applied where SICO makes cash pay-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)*

4. Benefits Provided by Starr International Company, Inc. *(continued)*

ments pursuant to elections made prior to March 2005. AIG gave effect to this change in settlement method beginning on December 9, 2005, the date of SICO's notice to participants in the SICO Plans. See also Note 6(b) "Commitments" herein.

Compensation expense with respect to the SICO Plans aggregated \$14 million and \$62 million for the three-month periods ended September 30, 2006 and 2005, respectively, and \$104 million and \$129 million for the nine-month periods ended September 30, 2006 and 2005, respectively. Compensation expense in the first quarter of 2006 included various out of period adjustments totaling \$61 million, primarily relating to stock-splits and other miscellaneous items. See also Note 10 herein.

In January 2006, C.V. Starr & Co., Inc. (Starr) completed its tender offer to purchase Starr interests from AIG employees. In conjunction with AIG's adoption of FAS 123R, Starr is considered to be an "economic interest holder" in AIG. As a result, compensation expense of \$54 million recorded in the first quarter with respect to the Starr offer, was included in the first nine months of 2006.

As a result of its changing relationship with Starr and SICO, AIG has established new executive compensation plans to replace the SICO plans and investment opportunities previously provided by Starr. The replacement plans include both share-based plans and cash-based plans. In addition, these replacement plans generally include performance as well as service conditions. See also Note 10 herein.

5. Ownership and Transactions With Related Parties

(a) Ownership: According to the Schedule 13D filed on May 26, 2006 by Starr, SICO, Edward E. Matthews, Maurice R. Greenberg, the Maurice R. and Corinne P. Greenberg Family Foundation, Inc., the Universal Foundation, Inc. and the Maurice R. and Corinne P. Greenberg Joint Tenancy Company, LLC, these reporting persons could be deemed to beneficially own 393,157,543 shares of common stock at that date. Based on the shares of common stock outstanding as of October 31, 2006, this ownership would represent approximately 15 percent of the voting stock of AIG. Although these reporting persons have made filings under Section 16 of the Securities Exchange Act of 1934, as amended (the Exchange Act), reporting sales of shares of common stock, no amendment to the Schedule 13D has been filed to report a change in ownership.

(b) Transactions with Related Parties: In the ordinary course of business during the first nine months of 2006, AIG

and its subsidiaries paid commissions to Starr and its subsidiaries for the production and management of insurance business. As of July 25, 2006, none of the Starr agencies serve as agents for AIG companies. There were no significant receivables from/payables to related parties at September 30, 2006.

6. Commitments, Contingencies and Guarantees

In the normal course of business, various commitments and contingent liabilities are entered into by AIG and certain of its subsidiaries. In addition, AIG guarantees various obligations of certain subsidiaries.

Litigation and Investigations

(a) AIG and its subsidiaries, in common with the insurance industry in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. The trend of increasing jury awards and settlements makes it difficult to assess the ultimate outcome of such litigation.

Although AIG regularly reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, directors and officers liability (D&O), professional liability, medical malpractice, workers compensation, general liability, products liability and related classes, as well as for asbestos and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss trends or loss development factors could be attributable to changes in inflation, in labor and material costs or in the judicial environment, or in other social or economic phenomena affecting claims.

(b) AIG and certain of its subsidiaries have been named defendants in two putative class actions in state court in Alabama that arise out of the 1999 settlement of class and derivative litigation involving Caremark Rx, Inc. (Caremark). An excess policy issued by a subsidiary of AIG with respect to the 1999 litigation was expressly stated to be without limit of liability. In the current actions, plaintiffs allege that the judge approving the 1999 settlement was misled as to the extent of

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

available insurance coverage and would not have approved the settlement had he known of the existence and/or unlimited nature of the excess policy. They further allege that AIG, its subsidiaries, and Caremark are liable for fraud and suppression for misrepresenting and/or concealing the nature and extent of coverage. In their complaint, plaintiffs request compensatory damages for the 1999 class in the amount of \$3.2 billion, plus punitive damages. AIG and its subsidiaries deny the allegations of fraud and suppression and have asserted, *inter alia*, that information concerning the excess policy was publicly disclosed months prior to the approval of the settlement. AIG and its subsidiaries further assert that the current claims are barred by the statute of limitations and that plaintiffs' assertions that the statute was tolled cannot stand against the public disclosure of the excess coverage. Plaintiffs, in turn, have asserted that the disclosure was insufficient to inform them of the nature of the coverage and did not start the running of the statute of limitations. On January 28, 2005, the Alabama trial court determined that one of the current actions may proceed as a class action on behalf of the 1999 classes that were allegedly defrauded by the settlement. AIG, its subsidiaries, and Caremark sought appellate relief from the Alabama Supreme Court, which was granted in substantial part in August 2006. The matter is in the process of being remanded to the trial court to proceed with a class certification determination under the standards set by the Alabama Supreme Court. AIG cannot now estimate either the likelihood of its prevailing in these actions or the potential damages in the event liability is determined.

(c) Regulators from several states have commenced investigations into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Various parties, including insureds and shareholders, have also asserted putative class action and other claims against AIG or its subsidiaries alleging, among other things, violations of the antitrust and federal securities laws, and AIG expects that additional claims may be made.

In February 2006, AIG reached a resolution of claims and matters under investigation with the United States Department of Justice (DOJ), the Securities and Exchange Commission (SEC), the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). The settlements resolved outstanding litigation filed by the SEC, NYAG and DOI against AIG and concluded negotiations with these authorities and the DOJ in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. In the fourth

quarter of 2005 AIG recorded an after-tax charge of \$1.15 billion for the settlements.

As a result of these settlements, AIG made payments or placed amounts in escrow in the first nine months of 2006 totaling approximately \$1.64 billion, \$225 million of which represented fines and penalties. Amounts held in escrow totaling \$692 million, including interest thereon, are included in other assets and other liabilities at September 30, 2006. A substantial portion of the money will be available to resolve claims asserted in various regulatory and civil proceedings, including shareholder lawsuits.

Also, as part of the settlements, AIG has agreed to retain for a period of three years an independent consultant who will conduct a review that will include the adequacy of AIG's internal control over financial reporting and the remediation plan that AIG has implemented as a result of its own internal review.

Various federal and state regulatory agencies are reviewing certain transactions and practices of AIG and its subsidiaries in connection with industry-wide and other inquiries. AIG has cooperated, and will continue to cooperate, in producing documents and other information in response to the subpoenas.

A number of lawsuits have been filed regarding the subject matter of the investigations of insurance brokerage practices, including derivative actions, individual actions and class actions under the federal securities laws, Racketeer Influenced and Corrupt Organizations Act (RICO), Employee Retirement Income Security Act (ERISA) and state common and corporate laws in both federal and state courts, including the United States District Court for the Southern District of New York (Southern District of New York), in the Commonwealth of Massachusetts Superior Court and in Delaware Chancery Court. All of these actions generally allege that AIG and its subsidiaries violated the law by allegedly concealing a scheme to "rig bids" and "steer" business between insurance companies and insurance brokers.

Since October 19, 2004, AIG or its subsidiaries have been named as a defendant in eighteen complaints that were filed in federal court and two that were originally filed in state court (Massachusetts and Florida) and removed to federal court. These cases generally allege that AIG and its subsidiaries violated federal and various state antitrust laws, as well as federal RICO laws, various state deceptive and unfair practice laws and certain state laws governing fiduciary duties. The alleged basis of these claims is that there was a conspiracy between insurance companies and insurance brokers with regard to the use of contingent commission agreements, bidding practices, and other broker-related conduct concerning coverage in certain sectors of the insurance industry. The Judicial Panel on Multidistrict Litigation entered an

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***6. Commitments, Contingencies and Guarantees** *(continued)*

order on February 17, 2005, consolidating most of these cases and transferring them to the United States District Court for the District of New Jersey (District of New Jersey). The remainder of these cases have been transferred to the District of New Jersey. On August 15, 2005, the plaintiffs in the multidistrict litigation filed a Corrected First Consolidated Amended Commercial Class Action Complaint, which, in addition to the previously named AIG defendants, names new AIG subsidiaries as defendants. Also on August 15, 2005, AIG and two subsidiaries were named as defendants in a Corrected First Consolidated Amended Employee Benefits Class Action Complaint filed in the District of New Jersey, which asserts similar claims with respect to employee benefits insurance and a claim under ERISA on behalf of putative classes of employers and employees.

On November 29, 2005, the AIG defendants, along with other insurer defendants and the broker defendants filed motions to dismiss both the Commercial and Employee Benefits Complaints. On October 3, 2006, the Court reserved in part and denied in part the motions to dismiss. The Court denied the motions to dismiss the ERISA claims, but ordered an expedited discovery schedule, and the Court reserved on the state law claims. Plaintiffs have filed a motion for class certification in the consolidated action, in response to which defendants have filed an opposition. In addition, complaints were filed against AIG and several of its subsidiaries in Massachusetts and Florida state courts, which have both been stayed. In the Florida action, the plaintiff filed a petition for a writ of certiorari with the District Court of Appeals of the State of Florida, Fourth District with respect to the stay order which was granted on August 16, 2006. The Fourth District Court remanded to the trial court to reconsider whether a stay should be granted. On February 9, 2006, a complaint against AIG and several of its subsidiaries was filed in Texas state court, making claims similar to those in the federal cases above. On October 17, 2006, the court stayed the case until January 31, 2007.

In April and May 2005, amended complaints were filed in the consolidated derivative and securities cases, as well as in one of the ERISA lawsuits, pending in the Southern District of New York adding allegations concerning AIG's accounting treatment for non-traditional insurance products.

In September 2005, a second amended complaint was filed in the consolidated securities cases adding allegations concerning AIG's first restatement of its financial statements described in the 2005 Annual Report on Form 10-K (the "First Restatement"), and a new securities action complaint was filed in the Southern District of New York, asserting claims premised on the same allegations made in the consoli-

dated cases. In April 2006, motions to dismiss were denied in the securities actions. AIG filed answers in both securities actions in June 2006, as did other defendants.

Also in September 2005, a class action complaint was filed to consolidate the ERISA cases pending in the Southern District of New York. Motions to dismiss in the consolidated action were filed in January 2006.

In April 2005, new derivative actions were filed in Delaware Chancery Court, and in July and August 2005, two new derivative actions were filed in the Southern District of New York asserting claims duplicative of the claims made in the consolidated derivative action.

In July 2005, a second amended complaint was filed in the consolidated derivative case in the Southern District of New York, expanding upon accounting-related allegations, based upon the First Restatement. In June 2005, the derivative cases in Delaware were consolidated and, in August 2005, an amended consolidated complaint was filed. AIG's Board of Directors has appointed a special committee of independent directors to review the matters asserted in the derivative complaints. The courts have approved agreements staying the derivative cases pending in the Southern District of New York and in Delaware Chancery Court while the special committee of independent directors performs its work. In September 2005, a shareholder filed suit in Delaware Chancery Court seeking documents relating to some of the allegations made in the derivative suits. The court approved a stipulation dismissing that action on May 15, 2006.

On June 20, 2006, SICO filed suit in Delaware Chancery Court seeking the inspection of certain books and records of AIG. The Chancery court has dismissed the action with prejudice by agreement of the parties.

In late 2002, a derivative action was filed in Delaware Chancery Court in connection with AIG's transactions with certain entities affiliated with Starr and SICO. In May 2005, the plaintiff filed an amended complaint which adds additional claims premised on allegations relating to insurance brokerage practices and AIG's non-traditional insurance products. On February 16, 2006, the Delaware Chancery Court entered an order dismissing the litigation with prejudice with respect to AIG's outside directors and dismissing the claims against the remaining AIG defendants without prejudice. In response to an order, dated July 5, 2006, dismissing certain of its claims, the plaintiff filed a second amended complaint on July 21, 2006, which adds additional claims against Starr. Defendants filed answers in September 2006.

AIG cannot predict the outcome of the matters described above or estimate the potential costs related to these matters and, accordingly, no reserve is being established in AIG's financial statements at this time. In the opinion of AIG man-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***6. Commitments, Contingencies and Guarantees** *(continued)*

agement, AIG's ultimate liability for the matters referred to above is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

(d) On July 8, 2005, SICO filed a complaint against AIG in the Southern District of New York. The complaint alleges that AIG is in the possession of items, including artwork, which SICO claims it owns, and seeks an order causing AIG to release those items as well as actual, consequential, punitive and exemplary damages. On September 27, 2005, AIG filed its answer to SICO's complaint denying SICO's allegations and asserting counter-claims for breach of contract, unjust enrichment, conversion and breach of fiduciary duty relating to SICO's breach of its commitment to use its AIG shares for the benefit of AIG and its employees. On October 17, 2005, SICO replied to AIG's counter-claims and additionally sought a judgment declaring that SICO is neither a control person nor an affiliate of AIG for purposes of Schedule 13D under the Exchange Act, or Rule 144 under the Securities Act of 1933, as amended (the Securities Act), respectively. AIG responded to the SICO claims on November 7, 2005.

(e) AIG understands that some of its employees have received Wells notices in connection with previously disclosed SEC investigations of certain of AIG's transactions or accounting practices. Under SEC procedures, a Wells notice is an indication that the SEC staff has made a preliminary decision to recommend enforcement action that provides recipients with an opportunity to respond to the SEC staff before a formal recommendation is finalized. AIG anticipates that additional current and former employees could receive similar notices in the future as the regulatory investigations proceed.

Commitments

(a) At September 30, 2006, ILFC had committed to purchase 268 new aircraft deliverable from 2006 through 2015 at an estimated aggregate purchase price of \$19.2 billion and had options to purchase three new aircraft at an estimated aggregate purchase price of \$453 million. ILFC will be required to find customers for any aircraft acquired, and it must arrange financing for portions of the purchase price of such equipment.

(b) On June 27, 2005, AIG entered into an agreement pursuant to which AIG agrees, subject to certain conditions, to make any payment that is not promptly paid with respect to the benefits accrued by certain employees of AIG and its subsidiaries under the SICO Plans (as defined in Note 4).

Contingencies

(a) On December 30, 2004, an arbitration panel issued its ruling in connection with a 1998 workers compensation quota share reinsurance agreement under which Superior National Insurance Company, among others, was reinsured by The United States Life Insurance Company in the City of New York (USLIFE), a subsidiary of American General Corporation. In its 2-1 ruling, the arbitration panel refused to rescind the contract as requested by USLIFE. Instead, the panel reformed the contract to reduce USLIFE's participation by ten percent. USLIFE is pursuing certain reinsurance recoverables in connection with the contract. Further, the arbitration ruling established a second phase of arbitration for USLIFE to present its challenges to certain cessions to the contract. AIG holds a reserve of approximately \$379 million related to this matter as of September 30, 2006.

(b) AIG generates income tax credits as a result of investing in synthetic fuel production. Tax credits generated from the production and sale of synthetic fuel under the Internal Revenue Code are subject to an annual phase-out provision that is based on the average wellhead price of domestic crude oil. The price range within which the tax credits are phased-out was originally established in 1980 and is adjusted annually for inflation. Depending on the price of domestic crude oil for a particular year, all or a portion of the tax credits generated in that year might be eliminated. Tax credits reflected in the income tax provision for the first nine months of 2006 have been reduced to reflect an estimated phase-out of the tax credits from 2006 synthetic fuel production based on the observed price of domestic crude oil. Since the phase-out of tax credits from 2006 synthetic fuel production will depend on the average wellhead price of domestic crude oil for the entire 2006 calendar year, it is not possible to determine the extent to which the 2006 tax credits actually will be phased-out. As a result, the actual level of tax credits from 2006 synthetic fuel production may be higher or lower than the current estimate. AIG evaluates the production levels of its synthetic fuel production facilities in light of the risk of phase-out of the associated tax credits. As a result of fluctuating domestic crude oil prices, AIG intends to evaluate and possibly adjust production levels in light of this risk for the remainder of 2006. Regardless of oil prices, the tax credits expire after 2007.

Guarantees

(a) AIG and certain of its subsidiaries become parties to derivative financial instruments with market risk resulting from both dealer and end user activities and to reduce currency, interest rate, equity and commodity exposures. These instruments are carried at their estimated fair values in the consolidated balance sheet. The vast majority of AIG's derivative activity is transacted by AIGFP. (See also Note 20 of Notes to

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

Consolidated Financial Statements in AIG's 2005 Annual Report on Form 10-K/A.)

(b) AIG has issued unconditional guarantees with respect to the prompt payment, when due, of all present and future payment obligations and liabilities of AIGFP arising from transactions entered into by AIGFP.

(c) SAI Deferred Compensation Holdings, Inc., a wholly-owned subsidiary of AIG, has established a deferred

compensation plan for registered representatives of certain AIG subsidiaries, pursuant to which participants have the opportunity to invest deferred commissions and fees on a notional basis. The value of the deferred compensation fluctuates with the value of the deferred investment alternatives chosen. AIG has provided a full and unconditional guarantee of the obligations of SAI Deferred Compensation Holdings, Inc. to pay the deferred compensation under the plan.

7. Employee Benefits

The following table presents the components of the net periodic benefit costs with respect to pensions and postretirement benefits for the three and nine-month periods ended September 30, 2006 and 2005:

(in millions)	Pensions			Postretirement		
	Non-U.S. Plans	U.S. Plans	Total	Non-U.S. Plans	U.S. Plans	Total
Three Months Ended September 30, 2006						
Components of net period benefit cost:						
Service cost	\$ 18	\$ 32	\$ 50	\$ 1	\$ 1	\$ 2
Interest cost	9	41	50	1	3	4
Expected return on assets	(7)	(48)	(55)	-	-	-
Amortization of prior service cost	(3)	(1)	(4)	-	(2)	(2)
Amortization of transitional liability	1	-	1	-	-	-
Recognized actuarial loss	4	18	22	-	-	-
Net period benefit cost	\$ 22	\$ 42	\$ 64	\$ 2	\$ 2	\$ 4
Three Months Ended September 30, 2005						
Components of net period benefit cost:						
Service cost	\$ 19	\$ 26	\$ 45	\$ 1	\$ 2	\$ 3
Interest cost	8	37	45	-	4	4
Expected return on assets	(5)	(41)	(46)	-	-	-
Amortization of prior service cost	(3)	-	(3)	-	(2)	(2)
Loss due to settlements	1	-	1	-	-	-
Recognized actuarial loss	6	16	22	-	1	1
Net period benefit cost	\$ 26	\$ 38	\$ 64	\$ 1	\$ 5	\$ 6
Nine Months Ended September 30, 2006						
Components of net period benefit cost:						
Service cost	\$ 55	\$ 94	\$ 149	\$ 3	\$ 4	\$ 7
Interest cost	26	122	148	2	8	10
Expected return on assets	(21)	(145)	(166)	-	-	-
Amortization of prior service cost	(7)	(2)	(9)	-	(5)	(5)
Amortization of transitional liability	1	-	1	-	-	-
Recognized actuarial loss	12	56	68	-	-	-
Net period benefit cost	\$ 66	\$ 125	\$ 191	\$ 5	\$ 7	\$ 12
Nine Months Ended September 30, 2005						
Components of net period benefit cost:						
Service cost	\$ 56	\$ 78	\$ 134	\$ 3	\$ 5	\$ 8
Interest cost	24	111	135	1	11	12

Loss due to settlements	4	-	4	-	-	-
Amortization of transition liability	1	-	1	-	-	-
Recognized actuarial loss	17	49	66	-	2	2
Net period benefit cost	\$ 78	\$ 113	\$ 191	\$ 4	\$ 13	\$ 17

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***8. Recent Accounting Standards***Accounting Changes*

At the March 2004 meeting, the Emerging Issue Task Force (EITF) reached a consensus with respect to Issue No. 03-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments." On September 30, 2004, the Financial Accounting Standards Board (FASB) issued FASB Staff Position (FSP) EITF No. 03-1-1, Effective Date of Paragraphs 10-20 of EITF Issue No. 03-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments" delaying the effective date of this guidance until the FASB has resolved certain implementation issues with respect to this guidance, but the disclosures remain effective. This FSP, retitled FSP FAS 115-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments," replaces the measurement and recognition guidance set forth in Issue No. 03-1 and codifies certain existing guidance on impairment and accretion of income. AIG's adoption of FSP FAS 115-1 on January 1, 2006 did not have a material effect on AIG's consolidated financial condition or results of operations.

In December 2004, the FASB issued Statement No. 123 (revised 2004), "Share-Based Payment" (FAS 123R). FAS 123R and its related interpretive guidance replaces FAS No. 123, "Accounting for Stock-Based Compensation" (FAS 123), supersedes Accounting Principles Board Opinion No. 25, "Accounting for Stock Issued to Employees" (APB 25) and amends FAS 95, "Statement of Cash Flows." FAS 123, as originally issued in 1995, established as preferable a fair-value-based method of accounting for share-based payment transactions with employees. On January 1, 2003, AIG adopted the recognition provisions of FAS 123. See also Note 10 herein. AIG adopted the provisions of the revised FAS 123R and its related interpretive guidance on January 1, 2006.

For its service-based awards under the 1999 Stock Option Plan, 2002 Stock Incentive Plan and 1996 Employee Stock Purchase Plan, AIG recognizes compensation on a straight-line basis over the scheduled vesting period. Unrecognized unvested compensation expense for stock option awards granted under APB 25 (i.e., before January 1, 2003) will be recognized from January 1, 2006 to the vesting date. However, for the SICO Plans, the AIG Deferred Compensation Profit Participant Plan and the AIG Partners Plan, which contain both performance and service conditions, AIG recognizes compensation utilizing a graded vesting expense attribution method. The effect of this approach is to recognize compensation cost over the requisite service period for each separately vesting tranche of the award.

AIG's share-based plans generally provide for accelerated vesting after the participant turns 65 and retires. For awards granted after January 1, 2006, compensation expense

is recognized ratably from the date of grant through the shorter of age 65 or the vesting period. The effect of this change is not material to AIG's consolidated financial position or results of operations. Awards granted prior to January 1, 2006 will continue to be recognized over the vesting period with accelerated expense recognition upon an actual retirement. SICO compensation expense for participants retiring after age 65 had been reflected in prior years' results consistent with vested status under the SICO Plans.

On June 1, 2005, the FASB issued Statement No. 154, "Accounting Changes and Error Corrections" (FAS 154). FAS 154 replaces APB Opinion No. 20, "Accounting Changes" and FASB Statement No. 3, "Reporting Accounting Changes in Interim Financial Statements." FAS 154 requires that a voluntary change in accounting principles be applied retrospectively with all prior period financial statements presented based on the new accounting principle, unless it is impracticable to do so. FAS 154 also provides that a correction of errors in previously issued financial statements should be termed a "restatement." The new standard was effective for accounting changes and correction of errors beginning January 1, 2006.

At the June 2005 meeting, the EITF reached a consensus with respect to Issue No. 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights." The Issue addresses what rights held by the limited partner(s) preclude consolidation in circumstances in which the sole general partner would consolidate the limited partnership in accordance with generally accepted accounting principles absent the existence of the rights held by the limited partner(s). Based on that consensus, the EITF also agreed to amend the consensus in Issue No. 96-16, "Investor's Accounting for an Investee When the Investor Has a Majority of the Voting Interest but the Minority Shareholders Have Certain Approval or Veto Rights." The guidance in this Issue is effective after June 29, 2005 for general partners of all new limited partnerships formed and for existing limited partnerships for which the partnership agreements are modified. For general partners in all other limited partnerships, the guidance in this Issue was effective beginning January 1, 2006. The effect of the adoption of this EITF Issue was not material to AIG's consolidated financial condition or results of operations.

On June 29, 2005, FASB issued Statement 133 Implementation Issue No. B38, "Embedded Derivatives: Evaluation of Net Settlement with Respect to the Settlement of a Debt Instrument through Exercise of an Embedded Put Option or Call Option." This implementation guidance relates to the potential settlement of the debtor's obligation to the creditor that would occur upon exercise of the put option or call option, which meets the net settlement criterion in FAS 133. The effective date of the implementation guidance is January 1, 2006. The adop-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**8. Recent Accounting Standards** (continued)

tion of this guidance did not have a material effect on AIG's consolidated financial condition or results of operations.

On June 29, 2005, the FASB issued Statement 133 Implementation Issue No. B39, "Application of Paragraph 13(b) to Call Options That Are Exercisable Only by the Debtor." The conditions in FAS 133 paragraph 13(b) do not apply to an embedded call option in a hybrid instrument containing a debt host contract if the right to accelerate the settlement of the debt can be exercised only by the debtor (issuer/borrower). This guidance does not apply to other embedded derivative features that may be present in the same hybrid instrument. The effective date of the implementation guidance is January 1, 2006. The adoption of this guidance did not have a material effect on AIG's consolidated financial condition or results of operations.

On February 16, 2006, the FASB issued FAS No. 155, "Accounting for Certain Hybrid Financial Instruments" (FAS 155), an amendment of FAS 140 and FAS 133. FAS 155 allows AIG to include changes in fair value in earnings on an instrument-by-instrument basis for any hybrid financial instrument that contains an embedded derivative that would otherwise be required to be bifurcated and accounted for separately under FAS 133. The election to measure the hybrid instrument at fair value is irrevocable at the acquisition or issuance date.

AIG elected to early adopt FAS 155 as of January 1, 2006, and apply FAS 155 fair value measurement to certain structured note liabilities and structured investments in AIG's available for sale portfolio that existed at December 31, 2005. The effect of this adoption resulted in an \$11 million after-tax (\$18 million pre-tax) decrease to opening retained earnings as of January 1, 2006, representing the difference between the fair value of these hybrid financial instruments and the prior carrying value as of December 31, 2005. The effect of adoption on after-tax gross gains and losses was \$218 million (\$336 million pre-tax) and \$229 million (\$354 million pre-tax), respectively.

In connection with AIG's early adoption of FAS 155, structured note liabilities of \$8.1 billion, other structured liabilities in conjunction with equity derivative transactions of \$70 million, and hybrid financial instruments of \$407 million at September 30, 2006 are now carried at fair value. The effect on earnings for the three and nine-month periods ended September 30, 2006, for changes in the fair value of hybrid financial instruments, was a pre-tax gain of \$79 million and a pre-tax loss of \$44 million, respectively, and is reflected in Other income.

On March 27, 2006, the FASB issued FSP FTB 85-4-1, "Accounting for Life Settlement Contracts by Third-Party Investors" (FSP 85-4-1), an amendment of FTB 85-4, "Accounting for Purchases of Life Insurance." Life settlements are designed to assist life insurance policyholders in monetizing the existing value of life insurance policies. FSP 85-4-1

allows AIG to measure life settlement contracts using either the investment method or fair value method. The election is made on an instrument-by-instrument basis and is irrevocable. AIG elected to early adopt FSP 85-4-1 as of January 1, 2006 using the investment method for pre-existing investments held at December 31, 2005. The effect of this adoption resulted in a \$319 million after tax (\$487 million pre-tax) increase to opening retained earnings.

On June 29, 2006, AIG restructured its ownership of life settlement contracts with no effect on the economic substance of these investments. At the same time, AIG paid \$610 million to its former co-investors to acquire all the remaining interests in life settlement contracts held in previously non-consolidated trusts.

At September 30, 2006, the carrying value of AIG's life settlement contracts was \$1.21 billion, and is included in Other invested assets on the consolidated balance sheet. These investments are monitored for impairment on a contract by contract basis quarterly. During the three month period ended September 30, 2006, income recognized on life settlement contracts previously held in non-consolidated trusts was \$5 million, and is included in net investment income on the consolidated statement of income. Such income totaled \$18 million for the nine month period then ended. Further information regarding life settlement contracts as of September 30, 2006 is as follows:

(dollars in millions)

Remaining Life Expectancy of Insureds	Number of Contracts	Carrying Value	Face Value (Death Benefits)
0 - 1 year	4	\$ 6	\$ 7
1 - 2 years	24	14	20
2 - 3 years	64	38	59
3 - 4 years	135	131	229
4 - 5 years	137	85	175
Thereafter	1,540	935	3,495
Total	1,904	\$1,209	\$3,985

As of September 30, 2006, the anticipated life insurance premiums required to keep the life settlement contracts in force, payable in the ensuing twelve months ending September 30, 2007, and the four succeeding years ending September 30, 2011 are \$84 million, \$88 million, \$93 million, \$94 million, and \$95 million, respectively.

On April 13, 2006, the FASB issued FSP FIN 46(R)-6, "Determining the Variability to be Considered in Applying FASB Interpretation No. 46(R)" (FIN 46(R)-6 or FSP). The FSP affects the identification of which entities are variable interest entities through a "by design" approach in identifying and measuring the variable interests of the variable interest entity and its primary beneficiary. The requirements became effective beginning in the third quarter of 2006 and are to be applied to all new variable interest entities with

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***8. Recent Accounting Standards** *(continued)*

which AIG becomes involved. The new requirements need not be applied to entities that have previously been analyzed under FIN 46(R) unless a reconsideration event occurs. The adoption of this guidance did not have a material effect on AIG's consolidated financial condition or results of operations.

Future Application of Accounting Standards

On September 19, 2005, the FASB issued Statement of Position 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts" (SOP 05-1). SOP 05-1 provides guidance on accounting for deferred acquisition costs on internal replacements of insurance and investment contracts other than those specifically described in FASB Statement No. 97, "Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments." The SOP defines an internal replacement as a modification in product benefits, features, rights, or coverage that occurs by the exchange of a contract for a new contract, or by amendment, endorsement, or rider to a contract, or by the election of a feature or coverage within a contract. The effective date of the implementation guidance is January 1, 2007. AIG is currently assessing the effect of implementing this guidance.

On July 13, 2006, the FASB issued FASB Interpretation No. 48, "Accounting for Uncertainty in Income Taxes – an interpretation of FASB Statement No. 109" (FIN 48), which clarifies the accounting for uncertainty in income tax positions. FIN 48 prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of an income tax position taken or expected to be taken in a tax return. FIN 48 also provides guidance on derecognition, classification, interest and penalties, accounting in interim periods, and additional disclosures. The effective date of this implementation guidance is January 1, 2007, with the cumulative effect of the change in accounting principle recorded as an adjustment to opening retained earnings. AIG is currently assessing the effect of implementing this guidance.

On September 13, 2006, the SEC issued Staff Accounting Bulletin No. 108, "Considering the Effects of Prior Year Misstatements when Quantifying Misstatements in Current Year Financial Statements" (SAB 108). SAB 108 provides interpretive guidance on how the effects of the carryover or reversal of prior year misstatements should be considered in quantifying a current year misstatement. SAB 108 requires registrants to quantify errors using both a balance sheet and

an income statement approach and evaluate whether either approach results in quantifying a misstatement that, when all relevant quantitative and qualitative factors are considered, is material. SAB 108 is effective for registrants' financial statements for fiscal years ending on or after November 15, 2006, with early application encouraged. The adoption of SAB 108 is not expected to have a material effect on AIG's consolidated financial statements.

In September 2006, the FASB issued FAS No. 157, "Fair Value Measurements" (FAS 157). FAS 157 defines fair value, establishes a framework for measuring fair value and expands disclosures about fair value measurements. FAS 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007. AIG is currently assessing the effect of implementing this guidance.

In September 2006, the FASB issued FAS No. 158, "Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans – an amendment of FASB Statements No. 87, 88, 106 and 132(R)" (FAS No. 158). FAS No. 158 requires an employer to prospectively recognize the over funded or under funded status of a defined benefit postretirement plan as an asset or liability in its balance sheet and to recognize changes in that funded status in the year in which the changes occur through other comprehensive income. FAS No. 158 also requires an employer to measure the funded status of a plan as of the date of its year-end balance sheet, with limited exceptions. AIG is required to adopt this standard in its financial statements for the year ending December 31, 2006. The estimated cumulative effect, including deferred income taxes, on AIG's consolidated balance sheet at December 31, 2006 as a result of the adoption of this standard is a net reduction in shareholders' equity through a charge to Other comprehensive income of approximately \$720 million, with a corresponding net decrease of approximately \$350 million in total assets, and a net increase of approximately \$370 million in total liabilities. The actual effect of the adoption at December 31, 2006 may differ from the above estimates due to changes in assumptions such as the discount rate, actuarial assumptions, the measurements of fair value of plan assets and the recognition of any additional minimum liabilities determined under the provisions of FAS 87 prior to the adoption of FAS 158. In addition, AIG is in the process of determining the realizability of additional deferred tax assets that would be generated by plans in foreign locations. Accordingly, the net after tax effect of the adoption of FAS 158 may change pending the outcome of this review during the fourth quarter.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***9. Information Provided in Connection with Outstanding Debt**

The following condensed consolidating financial statements are provided in compliance with Regulation S-X of the Securities and Exchange Commission.

(a) American General Corporation (AGC) is a holding company and a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all outstanding debt of AGC.

American General Corporation, as issuer:

10. Stock Compensation Plans

At September 30, 2006, AIG employees could be awarded compensation pursuant to six different stock-based compensation plan arrangements: (i) AIG 1999 Stock Option Plan, as amended (1999 Plan); (ii) AIG 1996 Employee Stock Purchase Plan, as amended (1996 Plan); (iii) AIG 2002 Stock Incentive Plan, as amended (2002 Plan) under which AIG has issued time-vested restricted stock units (RSUs) and performance restricted stock units (Performance RSUs); (iv) SICO's Deferred Compensation Profit Participation Plans (SICO Plans); (v) AIG's 2005-2006 Deferred Compensation Profit Participation Plan (AIG DCPPP) and (vi) the AIG Partners Plan. The AIG DCPPP was adopted as a replacement for the SICO Plans for the 2005-2006 period, and the AIG Partners Plan replaces the AIG DCPPP.

Stock-based compensation earned under the AIG DCPPP and the AIG Partners Plan is issued as awards under the 2002 Plan. AIG currently settles share option exercises and other share awards to participants through the issuance of shares it has previously acquired and holds in its treasury account, except for share awards made by SICO, which are settled by SICO.

At September 30, 2006, AIG's non-employee directors received stock-based compensation in two forms, options granted pursuant to the 1999 Plan and grants of AIG common stock with delivery deferred until retirement from the Board, pursuant to the AIG Director Stock Plan, which was approved by the shareholders at the 2004 Annual Meeting of Shareholders.

From January 1, 2003 through December 31, 2005, AIG accounted for share-based payment transactions with employ-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**10. Stock Compensation Plans** (continued)

ees under FAS 123, "Accounting for Stock-Based Compensation." Share-based employee compensation expense from option awards was not recognized in the statement of income in prior periods. Effective January 1, 2006, AIG adopted the fair value recognition provisions of Statement of Financial Accounting Standards No. 123R "Share-Based Payments" (FAS 123R). FAS 123R requires that companies use a fair value method to value share-based payments and recognize the related compensation expense in net earnings. AIG adopted FAS 123R using the modified prospective application method, and accordingly, financial statement amounts for the prior periods presented have not been restated to reflect the fair value method of expensing share-based compensation under FAS 123R. The modified prospective application method provides for the recognition of the fair value with respect to share-based compensation for shares subscribed for or granted on or after January 1, 2006 and all previously granted but unvested awards as of January 1, 2006.

The adoption of FAS 123R resulted in share-based compensation expense of approximately \$14 million during the first nine months of 2006, related to awards which were accounted for under the provisions of Accounting Principles Board Opinion No. 25, "Accounting for Stock Issued to Employees." AIG expects this expense to approximate \$19 million for fiscal 2006. FAS 123R also requires AIG to estimate forfeitures in calculating the expense relating to share-based compensation, rather than recognizing these forfeitures and corresponding reductions in expense as they occur. The pre-tax cumulative effect of adoption, recognized as a reduction in stock-based compensation of \$46 million, was recorded as a cumulative effect of an accounting change, net of tax, in the first quarter of 2006. FAS 123R requires AIG to reflect the cash savings resulting from excess tax benefits in its financial statements as cash flow from financing activities, rather than as cash flow from operating activities as in prior periods. The amount of this excess tax benefit for the three and nine-month periods ended September 30, 2006 was \$3.9 million and \$6.2 million, respectively.

The effect of the adoption of FAS 123R on the consolidated statements of income and cash flows was as follows:

	Three Months Ended September 30, 2006			Nine Months Ended September 30, 2006		
	Pre-adoption of FAS 123R	Effect of Adoption of FAS 123R	Including Effect of Adoption of FAS 123R	Pre-adoption of FAS 123R	Effect of Adoption of FAS 123R	Including Effect of Adoption of FAS 123R
<i>(in millions, except per share data)</i>						
Income before income taxes, minority interest and cumulative effect of an accounting change	\$ 6,306	\$ (5)	\$ 6,301	\$16,349	\$ (14)	\$16,335
Provision for income taxes	\$ 1,944	\$ (1)	\$ 1,943	\$ 5,068	\$ (2)	\$ 5,066
Income before minority interest and cumulative effect of an accounting change	\$ 4,362	\$ (4)	\$ 4,358	\$11,281	\$ (12)	\$11,269
Cumulative effect of an accounting change, net of tax	\$ -	\$ -	\$ -	\$ -	\$ 34	\$ 34
Net income	\$ 4,228	\$ (4)	\$ 4,224	\$10,587	\$ 22	\$10,609
Net cash provided by (used in) operating activities	\$ (615)	\$ (4)	\$ (619)	\$ 6,010	\$ (6)	\$ 6,004
Net cash provided by financing activities	\$16,922	\$ 4	\$16,926	\$44,859	\$ 6	\$44,865
Basic earnings per share	\$ 1.62	\$ -	\$ 1.62	\$ 4.06	\$0.01	\$ 4.07
Diluted earnings per share	\$ 1.61	\$ -	\$ 1.61	\$ 4.03	\$0.01	\$ 4.04

The following table presents share-based compensation expenses, including the cumulative effect of adoption of FAS 123R, included in AIG's consolidated statement of income:

	Three Months Ended September 30, 2006	Nine Months Ended September 30, 2006
<i>(in millions)</i>		
Share-based compensation expense before tax	\$66	\$277
Income tax benefit	14	42
After-tax share-based compensation expense	\$52	\$235

Included in share-based compensation expense of \$277 million for the nine months ended September 30, 2006 was a one-time compensation cost of approximately \$54 million related to the Starr tender offer and various out of period adjustments totalling \$61 million, primarily relating to stock-splits and other miscellaneous items for the SICO plans, offset by a \$46 million pre-tax adjustment for the cumulative effect of the adoption of FAS 123R. These items were recorded in the first quarter of 2006. See Note 4 herein for a discussion of the Starr

tender offer and Note 8 herein for discussion of the prospective change to the accounting for retiree eligibility provisions.

If AIG had adopted the FAS 123 provisions for recognizing compensation expense commencing at the date of grant of the awards, the effect would not have been material to net income or basic or diluted earnings per share for the three and nine-month periods ended September 30, 2005.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**10. Stock Compensation Plans** (continued)**1999 Stock Option Plan**

The 1999 Plan provides that options to purchase a maximum of 45,000,000 shares of common stock can be granted to certain key employees and members of the Board of Directors at prices not less than fair market value at the date of grant.

The 1999 Plan was approved by the shareholders at the 2000 Annual Meeting of Shareholders, with certain amendments approved at the 2003 Annual Meeting of Shareholders. The 1999 Plan superseded the 1991 employee stock option plan (the 1991 Plan), although outstanding options granted under the 1991 Plan continue in force until exercise or expiration. The maximum number of shares that may be granted to any employee in any one year under the 1999 Plan is 900,000. Options granted under the 1999 Plan generally vest over four years (25 percent vesting per year) and expire 10 years from the date of grant.

At September 30, 2006, there were 20,997,720 shares reserved for future grants under the 1999 Plan and

27,787,332 shares reserved for issuance under the 1999 and 1991 Plans.

Deferrals

During 2005, options with respect to 1,731,471 shares were exercised with delivery deferred. At December 31, 2005 optionees had made valid elections to defer delivery of 2,067,643 shares of AIG common stock upon exercise of options expiring during 2006. Of these elections, 1,780,027 shares were exercised and deferred in the third quarter of 2006. In addition, non-employee directors of AIG had made valid elections to defer delivery of 21,093 shares of AIG common stock upon exercise of options expiring during 2006.

Valuation Methodology

In 2004, AIG developed a binomial lattice model to calculate the fair value of stock option grants. In prior years, a Black-Scholes model was used. A more detailed description of the valuation methodology is provided below.

The following weighted average assumptions were used for stock options granted in the first nine months of 2006 and 2005:

	2006	2005
Expected annual dividend yield ^(a)	0.71%	0.36%
Expected volatility ^(b)	27.3%	34.4%
Risk-free interest rate ^(c)	4.17%	3.87%
Expected term ^(d)	7 years	7 years

(a) The dividend yield is based on the dividend yield over the twelve month period prior to the grant date.

(b) In 2006, expected volatility is the average of historical volatility (based on seven years of daily stock price changes) and the implied volatility of actively traded options on AIG shares and in 2005, expected volatility is the historical volatility based on five years of daily stock price changes.

(c) The interest rate curves used in the valuation model were the U.S. Treasury STRIP rates with terms from 3 months to 10 years.

(d) The contractual term of the option is generally 10 years with an expected term of 7 years calculated based on an analysis of historical employee exercise behavior and employee turnover (post-vesting terminations). The early exercise rate is a function of time elapsed since the grant. Fifteen years of historical data was used to estimate the early exercise rate.

Additional information with respect to AIG's stock option plans at September 30, 2006, and changes for the nine months then ended, were as follows:

Options:	Shares	Weighted Average Exercise Price
Outstanding at beginning of year	52,545,425	\$54.84
Granted	123,500	\$64.55
Exercised	(1,617,411)	\$34.02
Shares subject to deferred delivery	(1,780,027)	\$15.80
Forfeited or expired	(1,167,789)	\$69.77
Outstanding at end of period	48,103,698	\$56.65
Options exercisable at end of period	37,700,495	\$54.81
Weighted average fair value per share of options granted		\$21.11

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**10. Stock Compensation Plans** (continued)

Information about stock options outstanding at September 30, 2006, is summarized as follows:

Range of Exercise Prices	Options Outstanding				Options Exercisable			
	Number Outstanding	Weighted Average Remaining Contractual Life	Weighted Average Exercise Price	Aggregate Intrinsic Values (in millions)	Number Exercisable (vested)	Weighted Average Remaining Contractual Life	Weighted Average Exercise Price	Aggregate Intrinsic Values (in millions)

\$64.01-\$69.63	8,141,722	7.05	65.45	7	3,787,201	5.10	65.66	3
\$70.35-\$98.00	6,168,262	4.68	83.89	–	5,486,873	4.60	84.46	–
Total	48,103,698	4.55	\$56.65	\$572	37,700,495	3.64	\$54.81	\$532

Vested and expected-to-vest options as of September 30, 2006, included in the table above, totaled 44,125,436, with a weighted average exercise price of \$56.01, a weighted average contractual life of 4.27 years and an aggregate intrinsic value of \$553 million.

As of September 30, 2006, total unrecognized compensation cost (net of expected forfeitures) was \$132 million and \$3 million related to non-vested share-based compensation awards granted under the 1999 Plan and the 1996 Plan, respectively, with blended weighted average periods of 1.32 years and 0.41 years, respectively. The cost of awards outstanding under these plans at September 30, 2006 is expected to be recognized over approximately three years and one year, respectively, for the 1999 Plan and the 1996 Plan.

The intrinsic value of options exercised during the nine months ended September 30, 2006 was approximately \$138 million. The fair value of options vesting for the nine months ended September 30, 2006 was approximately \$63 million. AIG received \$55 million and \$28 million for the nine-month periods ended September 30, 2006 and 2005, respectively, from the exercise of stock options. AIG did not cash-settle any share-based payment awards for the nine-month periods ended September 30, 2006 and 2005. The tax benefits realized as a result of stock option exercises were \$15 million for both the nine-month periods ended September 30, 2006 and 2005, respectively.

2002 Stock Incentive Plan

AIG's 2002 Plan was adopted at the 2002 shareholders meeting and amended and restated by the AIG Board of Directors on September 18, 2002 (the 2002 Plan). The 2002 Plan provides that equity-based or equity-related awards with respect to shares of common stock can be issued to employees in any year up to a maximum of that number of shares equal to (a) 1,000,000 shares plus (b) the number of shares available

but not issued in the prior calendar year. The maximum award that a grantee may receive under the 2002 Plan per year is rights with respect to 250,000 shares. For the nine-month periods ended September 30, 2006 and 2005, 3,919,170 RSUs, including performance RSUs, and 1,133,405 RSUs, respectively, were granted by AIG. There were 6,316,623 shares reserved for issuance in connection with future awards at September 30, 2006. Substantially all RSUs granted to date under the 2002 Plan other than performance RSUs granted under the Partners Plan vest on the fourth anniversary of the date of grant.

Director Stock Awards

The methodology used for valuing employee stock options is also used to value director stock options. Director stock options vest one year after the grant date, but are otherwise the same as employee stock options. Options with respect to 40,000 shares and 32,500 shares were granted during the nine months ended September 30, 2006 and 2005, respectively.

AIG also granted 10,750 shares and 4,625 shares, with delivery deferred, to directors for the nine-month periods ended September 30, 2006 and 2005, respectively, under the Director Stock Plan. At September 30, 2006, there were 74,250 shares reserved for future grants under the Director Stock Plan.

Employee Stock Purchase Plan

AIG's 1996 Plan provides that eligible employees (those employed at least one year) may receive privileges to purchase up to an aggregate of 10,000,000 shares of AIG common stock, at a price equal to 85 percent of the fair market value on the date of the grant of the purchase privilege. Purchase privileges are granted quarterly and are limited to the number of whole shares that can be purchased on an annual basis by

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**10. Stock Compensation Plans** (continued)

an amount equal to the lesser of 10 percent of an employee's annual salary or \$10,000.

SICO Plans

The SICO Plans provide that shares of AIG common stock currently held by SICO are set aside for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's termination of employment with AIG prior to normal retirement age.

Historically, SICO's Board of Directors could elect to pay a participant cash in lieu of shares of AIG common stock. On December 9, 2005, SICO notified participants that essentially all subsequent distributions would be made only in shares, and not cash. As of that date, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. Variable measurement accounting is used for those few awards for which cash elections had been made prior to March 2005. The SICO Plans are also described in Note 4 herein.

Although none of the costs of the various benefits provided under the SICO Plans has been paid by AIG, AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts deemed contributed by SICO.

As of December 9, 2005, there were 12,650,292 non-vested AIG shares under the SICO Plans with a weighted-average fair value per share of \$61.92. As of September 30, 2006, there were 11,656,065 non-vested AIG shares under the SICO Plans with a weighted-average fair value per share of \$61.90.

A significant portion of the awards under the SICO Plans vest upon retirement if the participant reaches age 65. The portion of the awards for which early payout is available vest on the applicable payout date.

AIG DCPPP

Effective September 21, 2005, AIG adopted the AIG DCPPP, which provides equity-based compensation to key AIG employees, including senior executive officers. The AIG DCPPP was modeled on the SICO Plans.

The AIG DCPPP contingently allocates a fixed number of shares to each participant if AIG's cumulative adjusted earnings per share for 2005 and 2006 exceed that for 2003 and 2004. The performance period is September 21, 2005 to December 31, 2006. At the end of the performance period, common shares are contingently allocated. The service period and related vesting consists of three pre-retirement tranches and a final retirement tranche at age 65.

At September 30, 2006, there were units representing 4,643,722 shares granted to participants.

AIG Partners Plan

On June 26, 2006, AIG's Compensation Committee approved two grants under the AIG Partners Plan. The first grant has a performance period which runs from January 1, 2006 through December 31, 2007. The second grant has a performance period which runs from January 1, 2007 through December 31, 2008. Both grants vest 50 percent on the fourth and sixth anniversaries of the first day of the related performance period. In addition, the Compensation Committee approved the performance metrics for the two grants prior to the date of grant. The measurement of the grants is deemed to have occurred on June 26, 2006 when there was mutual understanding of the key terms and conditions of the grants. Consistent with this treatment: a) 1,068,605 performance RSUs for the first grant and 2,488,865 performance RSUs for the second grant and b) unrecognized compensation of \$55 million for the first grant and \$138 million for the second grant are included in the related disclosure tables. Performance RSUs related to the first grant are excluded from AIG's diluted shares calculation because an insufficient amount of time has elapsed to conclusively determine that the performance metric will be achieved at the end of the related performance period. Because the performance period for the second grant does not begin until January 1, 2007, compensation expense for the second grant is not included in AIG's 2006 results and diluted shares calculation.

VALUATION

The fair value of each award granted under the 2002 Plan, the AIG DCPPP, the AIG Partners Plan, and the SICO Plans is based on the closing price of AIG stock on the date of grant.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***10. Stock Compensation Plans** *(continued)*

A summary of shares relating to outstanding awards unvested under the foregoing plans as of September 30, 2006, and changes during the nine months ended September 30, 2006 is presented below:

	Number of Shares					Weighted Average Grant-Date Fair Value				
	2002 Plan	AIG DCPPP	AIG Partners Plan	Total 2002 Plan	SICO Plans	2002 Plan	AIG DCPPP	AIG Partners Plan	Total 2002 Plan	SICO Plans
Unvested at January 1, 2006	4,322,265	4,898,880	-	9,221,145	12,650,292	\$63.63	\$52.55	\$ -	\$57.74	\$61.92
Granted	315,170	-	3,604,000	3,919,170	-	62.11	-	56.42	56.88	-
Vested	(5,080)	-	-	(5,080)	(653,486)	64.25	-	-	64.25	64.55
Forfeited	(187,680)	(255,158)	(16,200)	(459,038)	(340,741)	62.47	59.40	56.22	60.54	61.01
Unvested at September 30, 2006	4,444,675	4,643,722	3,587,800	12,676,197	11,656,065	\$63.57	\$52.17	\$56.42	\$57.37	\$61.90

At September 30, 2006, the total unrecognized compensation cost (net of expected forfeitures) related to non-vested share-based compensation awards granted under the 2002 Plan, the AIG DCPPP, the AIG Partners Plan and the SICO plans and the blended weighted-average period over which that cost is expected to be recognized is as follows:

	Unrecognized Compensation Cost <i>(in millions)</i>	Blended Weighted-Average Period
2002 Plan	\$178	1.62 years
AIG DCPPP	\$231	4.57 years
AIG Partners Plan	\$195	2.56 years
Total 2002 Plan	\$604	3.05 years
SICO Plans	\$313	6.06 years

The total cost for awards outstanding as of September 30, 2006 under the 2002 Plan, the AIG DCPPP, the AIG Partners Plan, and the SICO Plans is expected to be recognized over approximately 4 years, 12 years, 6 years and 23 years, respectively.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***11. Cash Flows**

As part of its remediation activities during the third quarter of 2006, AIG determined that certain non-cash activities and adjustments, including the effects of changes in foreign exchange translation on assets and liabilities, previously were misclassified within the operating, investing and financing sections of the Consolidated Statement of Cash Flows. The more significant line items revised include the change in General and life insurance reserves and Deferred policy acquisition costs within operating activities; Purchases of fixed maturity securities within investing activities; and Proceeds from notes, bonds, loans and mortgages payable, and hybrid financial instrument liabilities within financing activities. After evaluating the effect of these items during the third quarter of 2006, AIG has revised the previous periods presented below to conform to the third quarter 2006 presentation:

(in millions)

	Six Months Ended June 30, 2006	Three Months Ended March 31, 2006	Year Ended December 31, 2005	Nine Months Ended September 30, 2005	Six Months Ended June 30, 2005	Three Months Ended March 31, 2005

Cautionary Statement Regarding Projections and Other Information About Future Events

This Quarterly Report and other publicly available documents may include, and AIG's officers and representatives may from time to time make, projections concerning financial information and statements concerning future economic performance and events, plans and objectives relating to management, operations, products and services, and assumptions underlying these projections and statements. These projections and statements are not historical facts but instead represent only AIG's belief regarding future events, many of which, by their nature, are inherently uncertain and outside AIG's control. These projections and statements may address, among other things, the status and potential future outcome of the current regulatory and civil proceedings against AIG and their potential effect on AIG's businesses, financial position, results of operations, cash flows and liquidity, the effect of the credit rating downgrades on AIG's businesses and competitive position, the unwinding and resolving of various relationships between AIG and Starr and SICO, and AIG's strategy for growth, product development, market position, financial results and reserves. It is possible that AIG's actual results and financial condition may differ, possibly materially, from the anticipated results and financial condition indicated in these projections and statements. Factors that could cause AIG's actual results to differ, possibly materially, from those in the specific projections and statements are discussed throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations and in "Risk Factors" in Item 1A. of Part I of AIG's 2005 Annual Report on Form 10-K, Item 1A. of Part II of AIG's Quarterly Report on Form 10-Q for the quarter ended March 31, 2006 and Item 1A. of Part II of this Quarterly Report. AIG is not under any obligation (and expressly disclaims any such obligations) to update or alter any projections or other statement, whether written or oral, that may be made from time to time, whether as a result of new information, future events or otherwise.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG presents its operations in the way it believes will be most meaningful. Statutory loss ratios and combined ratios are presented in accordance with accounting principles prescribed by insurance regulatory authorities because these are standard measures of performance filed with insurance regulatory authorities and used for analysis in the insurance industry and thus allow more meaningful comparisons with AIG's insurance competitors. AIG has also incorporated into this discussion a number of cross-references to additional information included throughout this Form 10-Q and its 2005 Annual Report on Form 10-K/A for the year ended December 31, 2005 (2005 Annual Report on Form 10-K/A) to assist readers seeking related information on a particular subject.

Overview of Operations and Business Results

AIG identifies its reportable segments by product line, consistent with its management structure. AIG's major product and service groupings are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management. AIG's operations in 2006 are conducted by its subsidiaries principally through these segments. Through these segments, AIG provides insurance and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. This geographic, product and service diversification is one of AIG's major strengths and sets it apart from its competitors. The Other category consists of items not allocated to AIG's operating segments.

AIG's subsidiaries serve commercial, institutional and individual customers through an extensive property-casualty and life insurance and retirement services network. In the United States, AIG companies are the largest underwriters of commercial and industrial insurance and one of the largest life insurance and retirement services operations as well. AIG's Financial Services businesses include commercial aircraft and equipment leasing, capital markets operations and consumer finance, both in the United States and abroad. AIG also provides asset management services to institutions and individu-

Consolidated Results

The following table summarizes AIG's revenues, income before income taxes, minority interest and cumulative effect of an accounting change and net income for the three and nine-month periods ended September 30, 2006 and 2005:

	Three Months Ended		Nine Months Ended	
	September 30, 2006	2005	September 30, 2006	2005
<i>(in millions)</i>				
Total revenues	\$29,199	\$26,408	\$83,201	\$81,513
Income before income taxes, minority interest and cumulative effect of an accounting change	6,301	2,547	16,335	14,897
Net income	\$ 4,224	\$ 1,745	\$10,609	\$10,033

Revenues in the third quarter and first nine months of 2006 increased 11 percent and 2 percent, respectively, largely as a result of the growth in net premiums earned and net investment income from global General Insurance operations

als. As part of its spread-based business activities, AIG issues various debt instruments in the public and private markets.

AIG's operating performance reflects implementation of various long-term strategies and defined goals in its various operating segments. A primary goal of AIG in managing its General Insurance operations is to achieve an underwriting profit. To achieve this goal, AIG must be disciplined in its risk selection and premiums must be adequate and terms and conditions appropriate to cover the risk accepted. AIG also believes in strict control of expenses.

A central focus of AIG operations in recent years is the development and expansion of new distribution channels. In 2005 and the first nine months of 2006, AIG expanded its distribution channels, which now include banks, credit card companies and television-media home shopping in many Asian countries. Examples of new distribution channels used both domestically and overseas include banks, affinity groups, direct response and e-commerce.

AIG patiently builds relationships in markets around the world where it sees long-term growth opportunities. For example, the fact that AIG has the only wholly-owned foreign life insurance operations in eight cities in China is the result of relationships developed over nearly 30 years. AIG's more recent extensions of operations into India, Vietnam, Russia and other emerging markets reflect the same growth strategy. Moreover, AIG believes in investing in the economies and infrastructures of these countries and growing with them. When AIG companies enter a new jurisdiction, they typically offer both basic protection and savings products. As the economies evolve, AIG's products evolve with them, to more sophisticated and investment-oriented models.

Growth for AIG may be generated both internally and through acquisitions which both fulfill strategic goals and offer adequate return on capital. Recently AIG acquired Travel Guard International, one of the nation's leading providers of travel insurance programs and emergency travel assistance, and Central Insurance Co., Ltd., a leading general insurance company in Taiwan.

and growth in Life Insurance & Retirement Services net investment income and GAAP premiums. Revenues in the Financial Services segment increased in the third quarter of 2006, but decreased for the first nine months of 2006 largely

as a result of hedging activities that do not qualify for hedge accounting treatment under FAS 133, the effects of which are reported in other income.

Income before income taxes, minority interest and cumulative effect of an accounting change in the three and nine-month periods ended September 30, 2006 increased 147 percent and 10 percent, respectively, with the significant increase primarily a reflection of the negative effect of \$2.44 billion in catastrophe related losses incurred in the third quarter of 2005. The 2006 periods also included higher General Insurance and Life Insurance & Retirement Services operating income. Fluctuations in Financial Services operating income in all periods presented were driven by the transaction oriented nature of Capital Markets operations and the effects of hedging activities that do not qualify for hedge accounting treatment under FAS 133.

During the third quarter and nine months ended September 30, 2006, as part of its continuing remediation efforts, AIG recorded certain out of period and other adjustments. These adjustments collectively increased net income by \$73 million in the third quarter of 2006 and decreased net income by \$29 million for the first nine months of 2006. The third quarter adjustments included the following: an increase in realized capital gains relating to foreign exchange of \$36 million (\$23 million after tax); increases in bad debt expense of \$225 million (\$146 million after tax) and earned premiums of \$99 million (\$65 million after tax), both of which relate to balance sheet reconciliations; an increase in partnership income of \$121 million (\$79 million after tax), which relates to improved valuation information; a further increase in unit investment trust income of \$116 million (\$75 million after tax), as described below; and an increase in income tax expense of \$39 million relating to AIG's ongoing remediation of internal controls over income tax accounting. See also the discussion of AIG's reportable segments in Management's Discussion & Analysis of Financial Condition and Results of Operations.

During the second quarter of 2006, AIG identified and recorded an out of period adjustment related to the accounting for certain interests in unit investment trusts in accordance with FIN 46(R), "Consolidation of Variable Interest Entities" and APB Opinion No. 18, "The Equity Method of Accounting for Investments in Common Stock." These investments had previously been accounted for as available for sale securities, with

changes in market values being reflected in other comprehensive income, net of deferred income taxes. Beginning with the second quarter of 2006, the changes in market values are included in AIG's net investment income. During the second quarter of 2006, the adjustment decreased Unrealized appreciation (depreciation) of investments — net of reclassification adjustments, and the related Deferred income tax benefit (expense), in the Consolidated Statement of Comprehensive Income (Loss) by approximately \$576 million and approximately \$202 million, respectively, and increased Net investment income by \$653 million, increased Incurred policy losses and benefits, related to certain participating policyholder funds, by \$77 million, and increased Income taxes by \$202 million in the Consolidated Statement of Income. There was no effect on Total shareholders' equity as of September 30, 2006 or December 31, 2005.

In the second quarter of 2006, AIG also recorded other out of period adjustments of \$85 million (\$55 million after tax) of interest income related to interest earned on deposit contracts and \$32 million (\$21 million after tax) of expenses related to the remediation of a material weakness in controls over certain balance sheet reconciliations.

AIG also recorded other out of period adjustments in the first quarter of 2006 of \$61 million (before and after tax) of expenses related to the SICO plans, \$59 million (\$38 million after tax) of expenses related to deferred advertising costs in General Insurance, a decrease of \$300 million (\$145 million after tax) in revenues related to the remediation of a material weakness in accounting for certain derivative transactions under FAS 133, and \$126 million of income tax expense related to AIG's remediation of a material weakness in controls over income tax accounting.

Results for the first nine months of 2006 were negatively affected by a one-time charge relating to the Starr tender offer (\$54 million before and after tax) and an additional allowance for losses in AIG Credit Card Company (Taiwan) (\$88 million before and after tax), both of which were recorded in first quarter of 2006.

The effective income tax rate increased from 28.0 percent for full year 2005 to 30.8 percent and 31.0 percent for the three and nine-month periods ended September 30, 2006, respectively, reflecting changes in the sources of foreign taxable income, the effect of the phase out of synfuel tax credits on the estimated full year tax rate and the aforementioned out of period adjustments.

The following table summarizes the operations of each principal segment for the three and nine-month periods ended September 30, 2006 and 2005. (See also Note 2 of Notes to Consolidated Financial Statements).

<i>(in millions)</i>	Three Months Ended		Nine Months Ended	
	September 30, 2006	2005	September 30, 2006	2005
Revenues ^(a) :				
General Insurance ^{(b)(h)}	\$12,615	\$11,192	\$36,438	\$33,816
Life Insurance & Retirement Services ^{(c)(h)}	12,356	11,760	36,819	35,086
Financial Services ^(d)	3,187	1,926	6,028	8,140
Asset Management ^(e)	1,238	1,355	4,098	3,951
Other	(197)	175	(182)	520
Consolidated	\$29,199	\$26,408	\$83,201	\$81,513
Operating Income (loss) ^{(a)(f)(i)(j)} :				
General Insurance ^(h)	\$ 2,625	\$ (137)	\$ 7,819	\$ 3,390
Life Insurance & Retirement Services ^{(g)(h)}	2,448	2,248	7,424	6,787
Financial Services ^(g)	1,357	224	650	3,483
Asset Management	341	568	1,613	1,682
Other ^(k)	(470)	(356)	(1,171)	(445)
Consolidated	\$ 6,301	\$ 2,547	\$16,335	\$14,897

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2006 and 2005, the effect was \$165 million and \$(353) million, respectively, in revenues and \$165 million and \$(345) million, respectively, in operating income. For the nine-month periods ended September 30, 2006 and 2005, the effect was \$(1.13) billion and \$2.21 billion, respectively, in revenues and \$(1.13) billion and \$2.28 billion, respectively, in operating income. These amounts result primarily from interest rate and foreign currency derivatives which are hedging available for sale securities and borrowings.

(b) Represents the sum of General Insurance net premiums earned, net investment income and realized capital gains (losses).

(c) Represents the sum of Life Insurance & Retirement Services GAAP premiums, net investment income and realized capital gains (losses).

(d) Represents interest, lease and finance charges.

(e) Represents net investment income with respect to GICs and management and advisory fees.

(f) Represents income before income taxes, minority interest and cumulative effect of an accounting change.

(g) Results of operations of AIG Credit Card Company (Taiwan) are shared equally by the Life Insurance & Retirement Services segment and the Financial Services segment. Additional allowances of \$44 million were recorded in the first quarter of 2006, by each segment, for losses in these credit card operations.

(h) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts. For the three and nine-month periods ended September 30, 2006 the effect was an increase of \$92 million and \$524 million in both revenues and operating income for General Insurance and an increase of \$24 million in both revenues and operating income for the three-month period ended September 30, 2006 and \$245 million and \$168 million in revenues and operating income, respectively, for the nine-month period ended September 30, 2006, for Life Insurance & Retirement Services.

(i) Includes current year catastrophe related losses of \$2.44 billion in both the third quarter and first nine months of 2005. There were no significant catastrophe related losses in the third quarter and first nine months of 2006.

(j) Includes additional losses incurred and net reinstatement premiums related to prior year catastrophes of \$28 million and \$39 million in the three-month periods ended September 30, 2006 and 2005, respectively. Such losses and premiums were \$87 million and \$252 million in the nine-month periods ended September 30, 2006 and 2005, respectively.

(k) Includes current year catastrophe related losses from unconsolidated subsidiaries of \$246 million for both the third quarter and first nine months of 2005. There were no significant catastrophe related losses in the third quarter and first nine months of 2006. Also includes unfavorable development from unconsolidated subsidiaries related to prior year catastrophe related losses of \$1 million and \$15 million for the first nine months of 2006 and 2005, respectively.

General Insurance

AIG's General Insurance operations provide property and casualty products and services throughout the world. The increase in General Insurance operating income in the three and nine-month periods ended September 30, 2006 compared to the same periods of 2005 was primarily attributable to catastrophe related losses of \$2.11 billion in the third quarter of 2005 and the improvement in underwriting results for the Domestic Brokerage Group (DBG). General Insurance operating income included adverse development in the first nine months of 2006 and 2005 from catastrophes in prior years and certain long-tail casualty lines, which were more than offset by favorable development in other lines. Operating income for the three and nine-month periods ended September 30, 2006 also increased due to the effect of the out of period adjustments related to the

accounting for certain interests in unit investment trusts, partially offset by reconciliation adjustments.

Life Insurance & Retirement Services

AIG's Life Insurance & Retirement Services operations provide insurance, financial and investment products throughout the world. Foreign operations provided approximately 65 percent and 61 percent of AIG's Life Insurance & Retirement Services operating income for the three months ended September 30, 2006 and 2005, respectively, and 67 percent and 59 percent, respectively, for the first nine months of 2006 and 2005.

Life Insurance & Retirement Services operating income increased \$200 million in the third quarter of 2006 from the same period of 2005. Results for the quarter were particularly strong in the Foreign Life operations that were helped by

higher investment returns and lower acquisition costs. Domestic Life and Retirement Services results improved over the prior year with growth in the in-force business and lower catastrophe and synfuel losses. Life Insurance & Retirement Services operating income included \$12 million in catastrophe related losses in the third quarter of 2005. Realized capital losses included in revenues and operating income were \$176 million in the third quarter of 2006 compared to realized capital losses of \$16 million in the same period of 2005.

Life Insurance & Retirement Services operating income increased by 9 percent in the first nine months of 2006 when compared to the same period of 2005 due, in part, to the effect of an out of period adjustment related to the accounting for certain interests in unit investment trusts. Realized capital losses included in revenues and operating income were \$117 million in the first nine months of 2006 compared to realized capital losses of \$18 million in the same period of 2005.

Financial Services

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital market transactions, consumer finance and insurance premium financing.

Financial Services operating income increased in the third quarter of 2006 and decreased in the first nine months of 2006 compared to the same periods of 2005 primarily due to the effects of hedging activities that do not qualify for hedge accounting treatment under FAS 133. Financial Services operating income in 2005 included catastrophe related losses of \$62 million recorded in the third quarter of 2005 resulting from hurricane Katrina, which were reduced by \$22 million in the third quarter of 2006. Fluctuations in revenues and operating income from quarter to quarter are not unusual because of the transaction-oriented nature of Capital Markets operations and the effect of not qualifying for hedge accounting treatment under FAS 133 for hedges on securities available for sale and borrowings.

Asset Management

AIG's Asset Management operations include institutional and retail asset management and broker dealer services and AIG's spread-based investment businesses. The AIG Matched Investment Program (MIP), which was launched in September of 2005, is replacing AIG's GIC program as AIG's principal spread-based investment activity.

Asset Management operating income decreased 40 percent for the third quarter of 2006 when compared to the same period of 2005 due to the continued run-off of GICs and decreased transaction-driven fees partially offset by growth in the asset management fees within Institutional Asset Management and income from AIG's MIP. Gains and losses arising from the consolidation of certain variable interest entities and partnerships are included in operating income, but are offset in minor-

ity interest expense, which is not a component of operating income. Operating income decreased 4 percent in the first nine months of 2006 when compared to the same period of 2005, primarily due to the continued run-off of GIC balances combined with spread compression in the remaining GIC portfolio.

Capital Resources

At September 30, 2006, AIG had total consolidated shareholders' equity of \$96.15 billion and total consolidated borrowings of \$137.1 billion. At that date, \$122.1 billion of such borrowings were either not guaranteed by AIG or were AIGFP's matched borrowings under obligations of guaranteed investment agreements (GIAs), liabilities connected to trust preferred stock, or matched notes and bonds payable.

AIG has not purchased any shares of its common stock under its existing common stock repurchase authorization during 2006.

Liquidity

At September 30, 2006, AIG's consolidated invested assets included \$24.14 billion in cash and short-term investments. Consolidated net cash provided from operating activities in the first nine months of 2006 amounted to \$6.0 billion. AIG believes that its liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements.

Outlook

The commercial property and casualty insurance industry has historically experienced cycles of price erosion followed by rate strengthening as a result of catastrophe or other significant losses that affect the overall capacity of the industry to provide coverage. Despite industry price erosion in some classes of general insurance, AIG expects to continue to identify profitable opportunities and build attractive new general insurance businesses as a result of AIG's broad product line and extensive distribution networks. There can be no assurance, however, that price erosion will not become more widespread or that AIG's profitability will not deteriorate from current levels in major commercial lines, as well as in personal lines and specialty coverages, such as mortgage guaranty, where the loss ratio is expected to increase due to softening in the U.S. housing market and the weakening performance of non-traditional mortgage products.

In December 2005, American International Underwriters Overseas, Ltd. (AIUO) received a license from the government of Vietnam to operate a wholly owned general insurance company in Vietnam. This license, the first general insurance license granted by Vietnam to a U.S.-based insurance organization, permits AIG to operate a general insurance company throughout Vietnam.

During the second quarter of 2006, the Canadian Parliament passed legislation that will allow UGC to begin writing business in Canada, the world's second largest mortgage guaranty market, when provincial licenses are issued.

In China, applications for provincial expansion of AIG's life insurance operations in Guangdong and Jiangsu and of general insurance operations in Guangdong were approved in April 2006. AIG's wholly-owned life insurance operations in eight cities have now been structured into four regional management teams located in Shanghai, Beijing, Guangdong Province and Jiangsu Province. AIG's operations are expanding resources in these regions with the opening of additional offices.

In Japan, earnings growth for AIG Star Life Insurance Co., Ltd. and AIG Edison Life Insurance Company reflects the runoff of the more profitable in-force business in comparison to new business currently being generated. In May 2006, AIG announced the merger of these companies, which is expected to enhance the combined entity's ability to grow new business by expanding distribution and gaining efficiency of scale. In the fiscal year ended March 31, 2006, AIG's life operations in Japan retained their position as the largest foreign life operation on a total premium basis. AIG has developed a leadership position in the distribution of annuities through banks in both Japan and Korea. Also, American Life Insurance Company (ALICO) has launched new life products to the Japan bank market after further deregulation of banks in December 2005. AIG is a leader in direct marketing through sponsors and in the broad market in Japan and Korea. AIG also is investing in expanding distribution channels with emphasis in India, Korea and Vietnam.

Domestically, AIG anticipates its Life Insurance & Retirement Services businesses to continue growing in 2006 through distribution channel expansion and new and enhanced products. The home service operation, which is expected to be a slow growth business, has not met business objectives, although its cash flow has been strong. Domestic group life/health results continue to be weak, resulting in ongoing restructuring activities which may result in the exiting of certain product lines. AIG Retirement Services individual fixed annuities business will continue to be challenged due to the interest rate environment and increased competition from bank products, while variable annuity products with living benefits will continue to be the product of consumer choice.

Globally, heightened regulatory scrutiny of financial services companies in many jurisdictions has the potential to affect future financial results through higher compliance costs or other charges. This is particularly true in Japan and South-east Asia where financial institutions have received an increased number of remediation orders affecting consumer/policyholder rights over the last twelve months.

Changes in market conditions in the aircraft leasing business are not immediately apparent in operating results. Lease rates have firmed as a result of continued demand from the

global commercial aviation market, especially in Asia. However, higher interest rates are expected to continue to compress lease margins. AIG's Consumer Finance operations overseas were negatively affected in the first quarter of 2006 by industry-wide credit deterioration in the Taiwan credit card market. The operating results of AIG's Consumer Finance operations in the U.S. could be affected by the residential housing market, interest rates and unemployment. Also, AIG continues to explore opportunities to expand its Consumer Finance operations into new foreign markets.

The GIC portfolio continues to run-off. The MIP has replaced the GIC program as AIG's principal spread-based investment activity. Although the MIP is beginning to show positive operating income, because the asset mix under the MIP does not include the alternative investments utilized in the GIC program, AIG does not expect that the income growth in the MIP will offset the run-off in the GIC portfolio for the foreseeable future.

AIG has many promising growth initiatives underway around the world. Cooperative agreements such as those with PICC Property and Casualty Company Limited and various banks in the U.S., Japan and Korea are expected to expand distribution networks for AIG's products and provide models for future growth.

Critical Accounting Estimates

AIG considers its most critical accounting estimates those with respect to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts, deferred policy acquisition costs, estimated gross profits for investment-oriented products, fair value determinations for certain Capital Markets assets and liabilities, other-than-temporary declines in the value of investments and flight equipment recoverability. These accounting estimates require the use of assumptions about matters, some of which are highly uncertain at the time of estimation. To the extent actual experience differs from the assumptions used, AIG's results of operations would be directly affected.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG's critical accounting estimates are discussed in detail. The major categories for which assumptions are developed and used to establish each critical accounting estimate are highlighted below.

Reserves for Losses and Loss Expenses and Reinsurance Recoverable (General Insurance):

- *Loss trend factors:* used to establish expected loss ratios for subsequent accident years based on premium rate adequacy and the projected loss ratio with respect to prior accident years.
- *Expected loss ratios for the latest accident year:* for example, accident year 2005 for the year end 2005 loss reserve analysis. For low frequency, high severity classes

such as excess casualty, expected loss ratios generally are utilized for at least the three most recent accident years.

- *Loss development factors:* used to project the reported losses for each accident year to an ultimate amount.
- *Reinsurance recoverable on unpaid losses:* the expected recoveries from reinsurers on losses that have not yet been reported and/or settled.

Future Policy Benefits for Life and Accident and Health Contracts (Life Insurance & Retirement Services):

- *Interest rates:* which vary by geographical region, year of issuance and products.
- *Mortality, morbidity and surrender rates:* based upon actual experience by geographical region modified to allow for variation in policy form.

Estimated Gross Profits (Life Insurance & Retirement Services):

- *Estimated gross profits* to be realized over the estimated duration of the contracts (investment-oriented products) affect the carrying value of deferred policy acquisition costs under FAS 97. Estimated gross profits include investment income and gains and losses on investments less required interest, actual mortality and other expenses.

Deferred Policy Acquisition Costs (Life Insurance & Retirement Services):

- Recoverability based on current and future expected profitability, which is affected by interest rates, foreign exchange rates, mortality experience, and policy persistency.

Deferred Policy Acquisition Costs (General Insurance):

- Recoverability and eligibility based upon the current terms and profitability of the underlying insurance contracts.

Fair Value Determinations of Certain Assets and Liabilities (Financial Services – Capital Markets):

- *Valuation models:* utilizing factors, such as market liquidity and current interest, foreign exchange and volatility rates.
- AIG attempts to secure reliable and independent current market price data, such as published exchange rates from external subscription services such as Bloomberg or Reuters or third-party broker quotes for use in its model. When such prices are not available, AIG uses an internal methodology, which includes interpolation and extrapolation from verifiable prices from trades occurring on dates nearest to the dates of the transactions.

Other-Than-Temporary Declines in the Value of Investments:

A security is considered a candidate for other-than-temporary impairment based upon the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer).
- The occurrence of a discrete credit event resulting in the debtor defaulting or seeking bankruptcy or insolvency protection or voluntary reorganization.

- The probability of non-realization of a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

At each balance sheet date, AIG evaluates its securities holdings in an unrealized loss position. Where AIG does not intend to hold such securities until they have fully recovered their carrying value, based on the circumstances present at the date of evaluation, AIG records the unrealized loss in income. If events or circumstances change, such as unexpected changes in creditworthiness of the obligor, general interest rate environment, tax circumstances, liquidity events, and statutory capital management considerations among others, AIG revisits its intent to determine if a loss should be recorded in income. Further, if a loss is recognized from a sale subsequent to a balance sheet date pursuant to these changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer exists.

Flight Equipment — Recoverability (Financial Services):

- *Expected undiscounted future net cash flows:* based upon current lease rates, projected future lease rates and estimated terminal values of each aircraft based on third party information.

Operating Review

General Insurance Operations

AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of property and casualty insurance both domestically and abroad.

Domestic General Insurance operations are comprised of DBG, which includes the operations of The Hartford Steam Boiler Inspection and Insurance Company (HSB); Transatlantic Holdings, Inc. (Transatlantic); Personal Lines, including 21st Century Insurance Group (21st Century); and United Guaranty Corporation (UGC).

AIG's primary domestic division is DBG. DBG's business in the United States and Canada is conducted through its General Insurance subsidiaries including American Home Assurance Company (American Home), National Union Fire Insurance Company of Pittsburgh, Pa. (National Union), Lexington Insurance Company (Lexington) and certain other General Insurance company subsidiaries of AIG.

DBG writes substantially all classes of business insurance, accepting such business mainly from insurance brokers. This provides DBG the opportunity to select specialized markets and retain underwriting control. Any licensed broker is able to submit business to DBG without the traditional agent-company contractual relationship, but such broker usually has no authority to commit DBG to accept a risk.

In addition to writing substantially all classes of business insurance, including large commercial or industrial property insurance, excess liability, inland marine, environmental,

workers compensation and excess and umbrella coverages, DBG offers many specialized forms of insurance such as aviation, accident and health, equipment breakdown, directors and officers liability (D&O), difference-in-conditions, kidnap-ransom, export credit and political risk, and various types of professional errors and omissions coverages. The AIG Risk Management operation provides insurance and risk management programs for large corporate customers. The AIG Risk Finance operation is a leading provider of customized structured insurance products. Also included in DBG are the operations of AIG Environmental, which focuses specifically on providing specialty products to clients with environmental exposures. Lexington writes surplus lines, those risks for which conventional insurance companies do not readily provide insurance coverage, either because of complexity or because the coverage does not lend itself to conventional contracts.

Certain of the products of the DBG companies include funding components or have been structured in a manner such that little or no insurance risk is actually transferred. Funds received in connection with these products are recorded as deposits, and are included in other liabilities, rather than as premium revenue. Amounts paid by AIG are recorded as reductions to the deposit liability rather than as incurred losses.

The AIG Worldsource Division introduces and coordinates AIG's products and services to U.S.-based multinational clients and foreign corporations doing business in the U.S.

Transatlantic subsidiaries offer reinsurance capacity on both a treaty and facultative basis both in the U.S. and abroad. Transatlantic structures programs for a full range of property and casualty products with an emphasis on specialty risk.

AIG's Personal Lines operations provide automobile insurance through AIG Direct, the mass marketing operation of AIG, Agency Auto Division and 21st Century, as well as a broad range of coverages for high net-worth individuals through the AIG Private Client Group.

The main business of the UGC subsidiaries is the issuance of residential mortgage guaranty insurance, both domestically and internationally, on conventional first lien mortgages for the purchase or refinance of one to four family residences. UGC subsidiaries also write second lien and private student loan guaranty insurance.

AIG's Foreign General Insurance group accepts risks primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance group also includes business written by AIG's foreign-based insurance subsidiaries. The Foreign General group uses various marketing methods and multiple distribution channels to write both commercial and consumer lines insurance with certain refinements for local laws, customs and needs. AIU operates in Asia, the Pacific Rim, the United Kingdom, Europe, Africa, the Middle East and Latin America.

As previously noted, AIG believes it should present and discuss its financial information in a manner most meaningful to its investors. Accordingly, in its General Insurance business, AIG uses certain regulatory measures, where AIG has determined these measurements to be useful and meaningful.

A critical discipline of a successful general insurance business is the objective to produce profit from underwriting activities exclusive of investment-related income. When underwriting is not profitable, premiums are inadequate to pay for insured losses and underwriting related expenses. In these situations, the addition of general insurance related investment income and realized capital gains may, however, enable a general insurance business to produce operating income. For these reasons, AIG views underwriting results to be critical in the overall evaluation of performance.

Statutory underwriting profit is derived by reducing net premiums earned by net losses and loss expenses incurred and net expenses incurred. Statutory accounting generally requires immediate expense recognition and ignores the matching of revenues and expenses as required by GAAP. That is, for statutory purposes, expenses are recognized immediately, not over the same period that the revenues are earned. Thus, statutory expenses exclude changes in deferred acquisition costs (DAC).

GAAP provides for the recognition of expenses at the same time revenues are earned, the accounting principle of matching. Therefore, acquisition expenses are deferred and amortized over the period the related net premiums written are earned. DAC is reviewed for recoverability, and such review requires management judgment. (See also "Critical Accounting Estimates" herein.)

AIG, along with most General Insurance companies, uses the loss ratio, the expense ratio and the combined ratio as measures of underwriting performance. The loss ratio is the sum of losses and loss expenses incurred divided by net premiums earned. The expense ratio is statutory underwriting expenses divided by net premiums written. The combined ratio is the sum of the loss ratio and the expense ratio. These ratios are relative measurements that describe, for every \$100 of net premiums earned or written, the cost of losses and statutory expenses, respectively. The combined ratio presents the total cost per \$100 of premium production. A combined ratio below 100 demonstrates underwriting profit; a combined ratio above 100 demonstrates underwriting loss.

Net premiums written are initially deferred and earned based upon the terms of the underlying policies. The net unearned premium reserve constitutes deferred revenues which are generally earned ratably over the policy period. Thus, the net unearned premium reserve is not fully recognized in income as net premiums earned until the end of the policy period.

The underwriting environment varies from country to country, as does the degree of litigation activity. Regulation, product type and competition have a direct effect on pricing and consequently on profitability as reflected in underwriting profit and statutory general insurance ratios.

General Insurance operating income is comprised of statutory underwriting results, changes in DAC, net investment income and realized capital gains and losses. Operating income, as well as net premiums written, net premiums earned, net investment income and realized capital gains (losses) and statutory ratios for the three and nine-month periods ended September 30, 2006 and 2005 were as follows:

<i>(in millions, except ratios)</i>	Three Months Ended		Nine Months Ended	
	September 30, 2006	2005	September 30, 2006	2005

(a) Income statement accounts expressed in non-functional currencies are translated into U.S. dollars using average exchange rates.

(b) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts. For DBG, for the three and nine-month periods ended September 30, 2006 the effect was an increase of \$70 million and \$90 million, respectively, and for Foreign General, for the three and nine-month periods ended September 30, 2006, the effect was an increase of \$22 million and \$434 million, respectively.

(c) Includes current year catastrophe related losses of \$2.11 billion for both the three and nine-month periods ended September 30, 2005. There were no significant catastrophe related losses in the third quarter and first nine months of 2006.

(d) Includes additional losses incurred and net reinstatement premiums related to prior year catastrophes of \$50 million and \$39 million, in the three-month periods ended September 30, 2006 and 2005, respectively. Such losses and premiums were \$108 million and \$237 million in the nine-month periods ended September 30, 2006 and 2005, respectively.

(e) Includes the results of wholly owned Foreign General agencies.

(f) Includes amortization of advertising costs.

(g) Statutory underwriting profit (loss) is a measure that U.S. domiciled insurance companies are required to report to their regulatory authorities. The following table reconciles statutory underwriting profit (loss) to income before income taxes, minority interest and cumulative effect of an accounting change for the General Insurance segment for the three and nine-month periods ended September 30, 2006 and 2005.

(in millions)	Domestic Brokerage Group	Transatlantic	Personal Lines	Mortgage Guaranty	Foreign General	Reclassifications and Eliminations	Total

AIG transacts business in most major foreign currencies. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of General Insurance net premiums written for the three and nine-month periods ended September 30, 2006:

	Three Months Ended September 30, 2006	Nine Months Ended September 30, 2006
Growth in original currency	8.5%	8.1%
Foreign exchange effect	0.3	(0.6)
Growth as reported in U.S. dollars	8.8%	7.5%

General Insurance Results

General Insurance operating income increased in the third quarter of 2006 compared to the same period in 2005 due primarily to the effects of the catastrophes in the third quarter of 2005. Other factors contributing to the increase were an improvement in statutory underwriting profit for DBG as a result of improved loss ratios for the current accident year compared to the loss ratios recorded in the third quarter of 2005 for accident year 2005, as well as growth in net investment income. The combined ratio improved to 89.1 during the third quarter of 2006, a reduction of 23.0 points from the same period in 2005, primarily due to an improvement in the loss ratio of 25.9 points. The reduction in catastrophe losses represented 20.0 points of the overall decrease. Net premiums written increased 9 percent in the third quarter of 2006 compared to the same period in 2005 as domestic property rates improved, submission activity increased in both property and non-property lines in the aftermath of the 2005 hurricanes and distribution channels within Foreign General expanded. Net premiums written for the third quarter of 2005 included a reduction of \$258 million for reinstatement premiums related to catastrophes, accounting for approximately 3 percentage points of the 2006 increase in net premiums written compared to the third quarter of 2005. The increase in net premiums written was tempered by an increase in ceded reinsurance necessary to manage the increase in property exposures retained by AIG.

In the third quarter of 2006, certain adjustments were made in conjunction with the remediation of balance sheet account reconciliations which increased earned premiums by \$99 million and increased bad debt expense by \$225 million. These adjustments reflect continuing progress in AIG's ongoing remediation efforts. The combined effect of these adjustments increased the expense ratio by 2.0 points and decreased the

loss ratio by 0.6 points. Included in net investment income for the three and nine-month periods ended September 30, 2006 are \$213 million and \$645 million of out of period adjustments related to the accounting for certain investments in unit investment trusts and additional partnership income arising from improved valuations.

General Insurance operating income increased in the first nine months of 2006 compared to the same period of 2005 due to the reduction in catastrophe losses combined with the improvement in statutory underwriting profit for DBG as a result of improved loss ratios for the current accident year compared to the loss ratios recorded in the first nine months of 2005 for accident year 2005, as well as growth in net investment income. The combined ratio improved to 88.2, a reduction of 10.9 points from the first nine months of 2005, primarily due to an improvement in the loss ratio of 12.4 points. The reduction in catastrophe losses represented 6.7 points of the overall reduction. Net premiums written increased 7 percent as domestic property rates improved, submission activity increased in the aftermath of the 2005 hurricanes and the distribution channels within Foreign General expanded. Net premiums written for the first nine months of 2005 included a reduction of \$258 million for reinstatement premiums related to catastrophes, accounting for approximately 1 percentage point of the 2006 increase in net premiums written compared to the first nine months of 2005.

Quarterly DBG Results

Operating income increased to \$1.56 billion in the third quarter of 2006 compared to a loss of \$283 million in the same period in 2005, an improvement of \$1.84 billion.

The improvement is also reflected in the combined ratio, which declined to 90.0 in the third quarter of 2006 compared to 118.2 in the same period in 2005. The third quarter of

2005 included \$1.37 billion of losses and net reinstatement premiums for major catastrophes, which increased the 2005 combined ratio by 24.3 points.

DBG's net premiums written increased 10 percent in the third quarter of 2006 compared to the same period in 2005 as property rates improved and submission activity increased in the aftermath of the 2005 hurricanes. DBG attributes the increase in submissions to its strong distribution channels and overall financial strength in comparison to many insurers that experienced significant losses and reductions of surplus as a result of the hurricanes. Net premiums written for the third quarter of 2005 were reduced by \$122 million due to reinstatement premiums related to catastrophes; net premiums written for the third quarter of 2006 were increased by \$47 million due to the reversal of a reinsurance contract previously accounted for as reinsurance and now accounted for as a deposit, the overall effect of which was largely offset in losses and underwriting expenses. The combined effect of these two items contributed approximately 3 percentage points to the increase in net premiums written.

The loss ratio for the third quarter of 2006 declined to 66.9 compared to 99.4 for the same period in 2005, primarily due to the effects of the catastrophes in the third quarter of 2005. Lines of business that were not directly affected by the 2005 major catastrophes also improved primarily due to lower accident year loss ratios for the 2006 accident year compared to the loss ratios recorded in the third quarter of 2005 for accident year 2005. The improvement in accident year loss ratios for the third quarter of 2006 was partially offset by an increase of \$21 million in the estimated ultimate losses related to prior year hurricanes compared to the same period of 2005 which included an increase of \$39 million in losses related to prior year hurricanes. Reserve development on non-catastrophic prior year losses increased incurred losses by \$40 million for the third quarter of 2006 compared to an increase of \$190 million for the same period of 2005.

DBG's expense ratio increased in the third quarter of 2006 to 23.1 compared to 18.8 in the same period of 2005. Net acquisition expenses as a percent of net premiums written increased by 0.5 in the third quarter of 2006 compared to the same period in 2005 due to an increase in premium assessments, partially offset by ceding commissions on quota share reinsurance programs added in 2006 to manage the level of property exposures retained by DBG. Other operating expense as a percent of net premiums written increased by 3.9 points primarily due to an increase in bad debt expense, due largely to a charge of \$225 million relating to reconciliation remediation activities. Adjustments from AIG's ongoing remediation activities described above also resulted in increases of \$155 million and \$191 million to earned premiums and net investment income, respectively, for a net increase in operating income of \$121 million in the third quarter of 2006. Incurred losses did not change as a result of the above

increase to earned premiums because the adjustment was isolated to the reconciliation of unearned premium balances.

The combined effect of the out of period and other adjustments in the third quarter of 2006 was a decrease in the DBG loss ratio of 1.7 points and an increase in the expense ratio of 3.7 points.

Year-to-date DBG Results

Operating income increased to \$4.45 billion in the first nine months of 2006 compared to \$1.24 billion in the same period in 2005, an improvement of \$3.21 billion.

The improvement is also reflected in the combined ratio, which declined to 88.7 in the first nine months of 2006 compared to 104.2 in the same period in 2005. The first nine months of 2005 included \$1.37 billion of losses and net reinstatement premiums for major catastrophes, which increased the 2005 combined ratio by 8.1 points.

DBG's net premiums written increased 8 percent in the first nine months of 2006 compared to the same period of 2005 due to property rate increases as well as increases in submission activity in the aftermath of the 2005 hurricanes. Net premiums written for the first nine months of 2005 were reduced by \$122 million due to reinstatement premiums related to catastrophes; net premiums written for the first nine months of 2006 were increased by \$47 million due to the reversal of a reinsurance contract previously accounted for as reinsurance and now accounted for as a deposit, the overall effect of which was largely offset in losses and underwriting expenses. The combined effect of these two items contributed approximately 1 percentage point to the increase in net premiums written.

The loss ratio for the first nine months of 2006 declined to 69.0 compared to 85.7 for the same period in 2005, primarily due to the effects of the catastrophes in the first nine months of 2005. Lines of business that were not directly affected by the 2005 major catastrophes also improved, primarily due to lower accident year loss ratios for the 2006 accident year compared to the loss ratios recorded in the third quarter of 2005 for accident year 2005. In addition, year-to-date 2006 operating income included a \$4 million reduction in the estimated ultimate losses related to prior year hurricanes compared to the same period of 2005, which included \$157 million of increased losses related to prior year hurricanes. Favorable reserve development on non-catastrophic prior year losses totaled \$25 million for the first nine months of 2006 compared to adverse development of \$410 million for the same period of 2005. The 2006 development relates primarily to classes of business which did not require reserve strengthening in connection with AIG's year-end 2005 reserve study.

DBG's expense ratio increased to 19.8 percent in the first nine months of 2006 compared to 18.4 percent for the same pe-

riod in 2005. Net acquisition expenses as a percent of net premiums written declined 0.5 points in the first nine months of 2006 compared to the same period in 2005 despite the increase in premium assessments in the third quarter of 2006, reflecting an increase in lines of business such as property that have a lower commission rate, a modest decrease in overall commission rates and the new quota share reinsurance programs added in 2006 to manage the level of property exposures retained by DBG. Other operating expenses as a percent of net premiums written increased 1.3 points primarily due to an increase in bad debt expense, due largely to a charge of \$225 million relating to reconciliation remediation activities.

Quarterly Transatlantic Results

Transatlantic's net premiums written and net premiums earned in the third quarter of 2006 increased by 4 percent and 6 percent, respectively, when compared to the same period in 2005 primarily due to increases in domestic other liability, medical malpractice and accident and health net premiums written. These increases were partially offset by decreases in domestic property, principally homeowners, and international medical malpractice premiums. Third quarter 2006 operating income increased due largely to lower catastrophe losses and net ceded reinstatement premiums and increased net investment income.

Year-to-date Transatlantic Results

Transatlantic's net premiums written and net premiums earned increased in the first nine months of 2006 by 4 percent and 5 percent, respectively, compared to the same period of 2005 due primarily to increases in domestic other liability, medical malpractice and accident and health net premiums written. These increases were offset, in part, by decreases in international premiums with the most significant decreases in the auto liability and property lines. Operating income increased in the first nine months of 2006 compared to the same period of 2005 due to lower catastrophe losses and net ceded reinstatement premiums, and increased net investment income.

Quarterly Personal Lines Results

Personal Lines net premiums written and net premiums earned decreased slightly in the third quarter of 2006 compared to the same period in 2005, as growth in the Private Client Group was offset by the run-off of the involuntary auto business and declines in the AIG Direct, Agency Auto and 21st Century divisions. Growth in the Private Client Group spans multiple products, with continued penetration into the high net worth market and strong brand and innovative loss prevention programs. The soft auto market, with flat to declining rates, is adversely affecting growth in the direct business of AIG Direct and 21st Century. 21st Century is experiencing solid performance outside of California, however, it is not outpacing the decline in California. Agency

Auto growth is down due to pricing and underwriting pressure in certain markets. Operating income in the third quarter of 2006 increased from the same period in 2005 driven by an improved loss ratio. Operating income in 2005 included \$62 million of hurricane Katrina losses and related reinstatement premiums whereas operating income in 2006 is benefiting from favorable development of prior period reserves.

Year-to-date Personal Lines Results

Personal Lines net premiums written decreased slightly in the first nine months of 2006 compared to the same period in 2005, with growth in the Private Client Group and Agency Auto divisions being offset by the run-off of the involuntary auto business and small declines in the AIG Direct and 21st Century divisions. Operating income increased for the first nine months of 2006 compared to the same period of 2005, driven primarily by a lower loss ratio. Operating income in 2005 included \$62 million of hurricane Katrina losses and related reinstatement premiums whereas operating income in 2006 is benefiting from an absence of catastrophes and favorable prior year reserve development. The expense ratio has increased in 2006, compared to the year ago period, primarily due to investments in people and technology, national expansion efforts and lower response rates.

Quarterly UGC Results

Mortgage Guaranty net premiums written were up 56 percent for the third quarter of 2006 compared to the same period in 2005. All business segments contributed to the increase. Operating income for the three months ended September 30, 2005 was negatively affected by \$29 million of ceded premiums for the domestic first lien business. Incurred losses were up compared to the third quarter of 2005 due to aging of the first lien portfolio and a slowing domestic housing market. Additionally, early loss development of alternative risk products and growth in insurance in-force in 2006 drove the increases in domestic second lien losses. Operating income for the third quarter of 2006 was up 18 percent compared to the prior period, with improvements in all business units.

Year-to-date UGC Results

Mortgage Guaranty net premiums written were up 36 percent for the first nine months of 2006 compared to the same period in 2005. All business units contributed to the increase. Operating income for the first nine months of 2005 was negatively affected by \$29 million of ceded premiums for domestic first lien business. Incurred losses increased from the same period in 2005, due to aging of the first lien portfolio, a slowing domestic housing market, early loss development of alternative risk second lien product and growth in the domestic second lien insurance in-force. Operating income for the first nine months of 2006 increased by 6 percent over the prior year period.

Quarterly Foreign General Insurance Results

Foreign General Insurance net premiums written increased 10 percent (9 percent in original currency) in the third quarter of 2006 when compared to the same period in 2005. This increase is due to growth in both the commercial and consumer lines driven by new business, new distribution channels, including the acquisition of Central Insurance Co., Ltd. in Taiwan, and higher premiums for the Ascot Lloyd's syndicate. Lower reinstatement premium costs, which in 2005 were unusually high due to hurricanes Katrina and Rita, contributed two percent to the increase in net premiums written. The personal accident business net premiums written increased in the third quarter of 2006 from a year ago, but an increase in loss frequency negatively affected operating income. The commercial lines net premiums written in Europe, the Far East and the United Kingdom increased from a year ago due to new business with a resulting increase in operating income compared to the third quarter of 2005. Operating income from energy lines, primarily in the United Kingdom, and the Ascot Lloyd's syndicate both increased compared to the third quarter of 2005 due to increased net premiums written in 2006 and losses incurred in the third quarter of 2005 relating to catastrophe events.

The combined ratio for Foreign General Insurance for the third quarter of 2006 was 83.7, an improvement of 8.5 points from 92.2 in the comparable period of 2005. The Foreign General Insurance loss ratio decreased 11.4 points in the third quarter of 2006 compared to the same period of 2005. The results of 2006 benefited from lower current accident year losses and favorable loss development from prior accident years, excluding catastrophes, of \$105 million, offset by \$21 million of adverse loss development on the 2005 hurricanes and by \$22 million of losses related to a typhoon in Japan during the third quarter of 2006. The results for 2005 included several catastrophic events, principally hurricanes Katrina and Rita. The Foreign General Insurance expense ratio increased 2.9 points in the third quarter of 2006 from the same period in 2005, principally due to higher commission costs, the increased significance of consumer lines of business, which have higher acquisition costs, accelerated amortization of advertising costs and premium reductions of \$56 million relating to reconciliation remediation activities. Due to the current mix of business, AIG expects commission costs to continue to increase over the next quarter, principally for classes of business with historically lower than average loss ratios.

Year-to-date Foreign General Insurance Results

Foreign General Insurance net premiums written increased 9 percent (12 percent in original currency) in the first nine months of 2006 compared to the same period in 2005, reflecting growth in both the commercial and consumer lines. The personal accident business in the Far East region, the commercial lines business in both Europe and the United

Kingdom, and the Ascot Lloyd's syndicate all contributed to the growth in net premiums written. Operating income showed corresponding increases over the prior year, which included significant losses related to hurricanes Katrina and Rita.

The combined ratio for Foreign General Insurance for the first nine months of 2006 was 82.4, an improvement of 2.8 points from 2005. The Foreign General Insurance loss ratio decreased 5.3 points in the first nine months of 2006 from the same period of 2005 due to lower current accident year losses, favorable loss development from prior accident years and fewer catastrophes. The Foreign General Insurance expense ratio increased 2.5 points in the first nine months of 2006 from the same period in 2005 principally due to higher commission costs, the increased significance of consumer lines of business, which have higher acquisition costs and accelerated amortization of advertising costs.

Quarterly General Insurance Net Investment Income

General Insurance net investment income increased by \$383 million in the third quarter of 2006, when compared to the same period of 2005 due to strong cash flows, including the effect of capital contributions from the parent, higher partnership income for DBG and the out of period adjustments relating to unit investment trust and partnership investments. Foreign General net investment income for the third quarter increased compared to the same period in 2005 due to strong cash flows, resulting from higher premium collections and reinsurance loss recoveries, as well as higher interest rates.

Year-to-date General Insurance Net Investment Income

General Insurance net investment income increased by \$1.04 billion in the first nine months of 2006, when compared to the same period of 2005. The increase for the nine month period is principally due to the effects of out of period adjustments of \$524 million related to the accounting for certain interests in unit investment trusts, \$121 million of out of period adjustments for partnership income and a second quarter 2006 \$85 million out of period adjustment related to interest earned on a DBG deposit contract. Foreign General Insurance net investment income increased in the nine-month period ended September 30, 2006 compared to the same period of 2005 due to the effects of the out of period adjustments, offset by a decline in partnership income. Foreign General partnership income in the first nine months of 2005 benefited from increases in market valuations due to increased initial public offering activity.

Realized capital gains and losses resulted from the ongoing investment management of the General Insurance portfolios within the overall objectives of the General Insurance operations. See the discussion on "Valuation of Invested Assets" herein.

Reinsurance

AIG is a major purchaser of reinsurance for its General Insurance operations. AIG insures risks globally, and its reinsurance programs must be coordinated in order to provide AIG the level of reinsurance protection that AIG desires. Reinsurance is an important risk management tool to manage transaction and insurance line risk retention at prudent levels set by management. AIG also purchases reinsurance to mitigate its catastrophic exposure. AIG is cognizant of the need to exercise good judgment in the selection and approval of both domestic and foreign companies participating in its reinsurance programs because one or more catastrophe losses could negatively affect AIG's reinsurers and result in an inability of AIG to collect reinsurance recoverables. AIG's reinsurance department evaluates catastrophic events and assesses the probability of occurrence and magnitude of catastrophic events through the use of state-of-the-art industry recognized program models, among other techniques. AIG supplements these models through continually monitoring the risk exposure of AIG's worldwide General Insurance operations and adjusting such models accordingly. For a further discussion of catastrophe exposures, see "Managing Risk – Catastrophe Exposures." Although reinsurance arrangements do not relieve AIG from its direct obligations to its insureds, an efficient and effective reinsurance program substantially limits AIG's exposure to potentially significant losses. With respect to its property business, AIG has either renewed existing reinsurance coverage or purchased new coverage that, in the opinion of management, is adequate to limit AIG's exposures. AIG continually evaluates the reinsurance markets and the relative attractiveness of various arrangements for coverage, including structures such as catastrophe bonds, insurance risk securitizations and "sidecar" and similar vehicles. Effective July 15, 2006, AIG's Lexington Insurance Company (Lexington) and Concord Re Limited (Concord Re), a "sidecar" reinsurer that was established exclusively to reinsure Lexington, entered into a quota share reinsurance agreement covering the U.S. commercial property insurance business written by Lexington. Concord Re was capitalized with approximately \$730 million through the issuance of equity securities and loans from third party investors. AIG and its subsidiaries invest in a wide variety of investment vehicles managed by third parties where AIG has no control over investment decisions. Accordingly, there can be no assurance that such vehicles do not, or will not, hold securities of Concord Re.

AIG's consolidated general reinsurance assets amounted to \$22.99 billion at September 30, 2006 and resulted from AIG's reinsurance arrangements. Thus, a credit exposure existed at September 30, 2006 with respect to reinsurance recoverable to the extent that any reinsurer may not be able to reimburse AIG under the terms of these reinsurance arrangements. AIG manages its credit risk in its reinsurance relationships by transacting with reinsurers that it considers

financially sound, and when necessary AIG holds substantial collateral in the form of funds, securities and/or irrevocable letters of credit. This collateral can be drawn on for amounts that remain unpaid beyond specified time periods on an individual reinsurer basis. At December 31, 2005, approximately 48 percent of the general reinsurance assets were from unauthorized reinsurers. Many of these balances were collateralized, permitting statutory recognition. Additionally, with the approval of its domiciliary insurance regulators, AIG posted approximately \$1.5 billion of letters of credit issued by several commercial banks in favor of certain Domestic General Insurance companies to permit those companies statutory recognition of balances otherwise uncollateralized at December 31, 2005. The remaining 52 percent of the general reinsurance assets were from authorized reinsurers. The terms authorized and unauthorized pertain to regulatory categories, not creditworthiness. At December 31, 2005, approximately 88 percent of the balances with respect to authorized reinsurers are from reinsurers rated A (excellent) or better, as rated by A.M. Best, or A (strong) or better, as rated by Standard & Poor's, a division of The McGraw-Hill Companies, Inc. (S&P). These ratings are measures of financial strength. Through September 30, 2006, there has been no significant deterioration in the rating profile of AIG's reinsurers representing more than five percent of AIG's reinsurance assets as of December 31, 2005.

AIG maintains an allowance for estimated unrecoverable reinsurance. Although AIG has been largely successful in its previous recovery efforts, at September 30, 2006, AIG had an allowance for unrecoverable reinsurance approximating \$447 million. The allowance was reduced substantially during 2006, as uncollectible amounts due from individual reinsurers were charged off against the allowance, primarily due to the balance sheet reconciliation remediation process; in addition, a portion of the allowance was reclassified to align it with the related receivable. The reduction for charge offs was partially offset by additional provisions totaling \$92 million during the nine months ended September 30, 2006. At September 30, 2006, AIG had no significant reinsurance recoverables due from any individual reinsurer that was financially troubled (e.g., liquidated, insolvent, in receivership or otherwise subject to formal or informal regulatory restriction).

AIG's Reinsurance Security Department conducts ongoing detailed assessments of the reinsurance markets and current and potential reinsurers, both foreign and domestic. Such assessments include, but are not limited to, identifying if a reinsurer is appropriately licensed and has sufficient financial capacity, and evaluating the local economic environment in which a foreign reinsurer operates. This department also reviews the nature of the risks ceded and the requirements for credit risk mitigants. For example, in AIG's treaty reinsurance contracts, AIG includes provisions that frequently require a reinsurer to post collateral when a referenced event occurs.

Furthermore, AIG limits its unsecured exposure to reinsurers through the use of credit triggers, which include, but are not limited to, insurer financial strength rating downgrades, policyholder surplus declines at or below a certain predetermined level or a certain predetermined level of a reinsurance recoverable being reached. In addition, AIG's Credit Risk Committee reviews the credit limits for and concentrations with any one reinsurer.

AIG enters into intercompany reinsurance transactions, primarily through American International Reinsurance Company, Ltd. (AIRCO), for its General Insurance and Life Insurance operations. AIG enters into these transactions as a sound and prudent business practice in order to maintain underwriting control and spread insurance risk among AIG's various legal entities. All material intercompany transactions have been eliminated in consolidation. AIG generally obtains letters of credit in order to obtain statutory recognition of these intercompany reinsurance transactions. At September 30, 2006, approximately \$3.7 billion of letters of credit were outstanding to cover intercompany reinsurance transactions with AIRCO or other General Insurance subsidiaries.

At September 30, 2006, consolidated general reinsurance assets of \$22.99 billion include reinsurance recoverables for paid losses and loss expenses of \$1.58 billion and \$18.35 billion with respect to the ceded reserve for losses and loss expenses, including ceded losses incurred but not reported (IBNR) (ceded reserves) and \$3.07 billion of ceded reserve for unearned premiums. The ceded reserve for losses and loss expenses represent the accumulation of estimates of ultimate ceded losses including provisions for ceded IBNR and loss expenses. The methods used to determine such estimates and to establish the resulting ceded reserves involve significant judgment in projecting the frequency and severity of losses over multiple years and are continually reviewed and updated by management. Any adjustments thereto are reflected in income currently. It is AIG's belief that the ceded reserves for losses and loss expenses at September 30, 2006 were representative of the ultimate losses recoverable. In the future, as the ceded reserves continue to develop to ultimate amounts, the ultimate loss recoverable may be greater or less than the reserves currently ceded.

Reserve for Losses and Loss Expenses

The table below classifies as of September 30, 2006 and December 31, 2005 the components of the General Insurance gross reserve for losses and loss expenses (loss reserves) by major lines of business on a statutory Annual Statement basis*:

<i>(in millions)</i>	September 30, 2006	December 31, 2005
Other liability occurrence	\$18,879	\$18,116
Other liability claims made	12,768	12,447
Workers compensation	12,751	11,630
Property	6,634	7,217
Auto liability	6,351	6,569
International	5,376	4,939
Reinsurance	3,419	2,886
Medical malpractice	2,200	2,363
Products liability	1,988	1,937
Accident and health	1,727	1,678
Aircraft	1,642	1,844
Commercial multiple peril	1,449	1,359
Fidelity/surety	1,015	1,072
Other	3,664	3,112
Total	\$79,863	\$77,169

*Presented by lines of business pursuant to statutory reporting requirements as prescribed by the National Association of Insurance Commissioners.

AIG's gross reserve for losses and loss expenses represents the accumulation of estimates of ultimate losses, including IBNR and loss expenses. The methods used to determine loss reserve estimates and to establish the resulting reserves are continually reviewed and updated by management. Any adjustments resulting therefrom are reflected in operating income currently. Because loss reserve estimates are subject to the outcome of future events, changes in estimates are unavoidable given that loss trends vary and time is often required for changes in trends to be recognized and confirmed. Reserve changes that increase previous estimates of ultimate cost are referred to as unfavorable or adverse development or reserve strengthening. Reserve changes that decrease previous estimates of ultimate cost are referred to as favorable development.

At September 30, 2006, General Insurance net loss reserves increased \$4.04 billion from the prior year end to \$61.51 billion. The net loss reserves represent loss reserves reduced by reinsurance recoverables, net of an allowance for unrecoverable reinsurance and applicable discount for future investment income. The table below classifies the components of the General Insurance net loss reserves by business unit as of September 30, 2006 and December 31, 2005.

<i>(in millions)</i>	September 30, 2006	December 31, 2005
DBG ^(a)	\$ 43,383	\$40,782
Transatlantic	6,118	5,690
Personal Lines ^(b)	2,486	2,578
Mortgage Guaranty	390	340
Foreign General ^(c)	9,136	8,086
Total Net Loss Reserve	\$ 61,513	\$57,476

(a) At September 30, 2006 and December 31, 2005, DBG loss reserves include approximately \$3.50 billion and \$3.77 billion, respectively, (\$3.87 billion and \$4.26 billion, respectively, before discount) related to

business written by DBG but ceded to AIRCO and reported in AIRCO's statutory filings. DBG loss reserves also include approximately \$532 million and \$407 million related to business included in AIUO's statutory filings at September 30, 2006 and December 31, 2005, respectively.

(b) At September 30, 2006 and December 31, 2005, Personal Lines loss reserves include \$876 million and \$878 million, respectively, related to business ceded to DBG and reported in DBG's statutory filings.

(c) At September 30, 2006 and December 31, 2005, Foreign General loss reserves include approximately \$2.70 billion and \$2.15 billion, respectively, related to business reported in DBG's statutory filings.

The DBG net loss reserve of \$43.38 billion is comprised principally of the business of AIG subsidiaries participating in the American Home/National Union pool (11 companies) and the surplus lines pool (Lexington, Starr Excess Liability Insurance Company and Landmark Insurance Company).

Beginning in 1998, DBG ceded a quota share percentage of its other liability occurrence and products liability occurrence business to AIRCO. The quota share percentage ceded was 40 percent in 1998, 65 percent in 1999, 75 percent in 2000 and 2001, 50 percent in 2002 and 2003, 40 percent in 2004, 35 percent in 2005 and 20 percent in 2006 and covered all business written in these years for these lines by participants in the American Home/National Union pool. In 1998 the cession reflected only the other liability occurrence business, but in 1999 and subsequent years included products liability occurrence. AIRCO's loss reserves relating to these quota share cessions from DBG are recorded on a discounted basis. As of September 30, 2006, AIRCO carried a discount of approximately \$370 million applicable to the \$3.87 billion in undiscounted reserves it assumed from the American Home/National Union pool via this quota share cession. AIRCO also carries approximately \$478 million in net loss reserves relating to Foreign General insurance business. These reserves are carried on an undiscounted basis.

Beginning in 1997, the Personal Lines division ceded a percentage of all business written by the companies participating in the personal lines pool to the American Home/National Union pool. As noted above, the total reserves carried by participants in the American Home/National Union pool relating to this cession amounted to \$876 million as of September 30, 2006.

The companies participating in the American Home/National Union pool have maintained a participation in the business written by AIU for decades. As of September 30, 2006, these AIU reserves carried by participants in the American Home/National Union pool amounted to approximately \$2.70 billion. The remaining Foreign General reserves are carried by AIUO, AIRCO, and other smaller AIG subsidiaries domiciled outside the United States. Statutory filings in the U.S. by AIG companies reflect all the business written by U.S. domiciled entities only, and therefore exclude business written by AIUO, AIRCO, and all other internationally domiciled subsidiaries. The total reserves carried at September 30, 2006 by AIUO and AIRCO were approximately \$4.35 billion and

\$3.98 billion, respectively. AIRCO's \$3.98 billion in total general insurance reserves consist of approximately \$3.50 billion from business assumed from the American Home/National Union pool and an additional \$478 million relating to Foreign General Insurance business.

Discounting of Reserves

At September 30, 2006, AIG's overall General Insurance net loss reserves reflects a loss reserve discount of \$2.11 billion, including tabular and non-tabular calculations. The tabular workers compensation discount is calculated using a 3.5 percent interest rate and the 1979-81 Decennial Mortality Table. The non-tabular workers compensation discount is calculated separately for companies domiciled in New York and Pennsylvania, and follows the statutory regulations for each state. For New York companies, the discount is based on a five percent interest rate and the companies' own payout patterns. For Pennsylvania companies, the statute has specified discount factors for accident years 2001 and prior, which are based on a six percent interest rate and an industry payout pattern. For accident years 2002 and subsequent, the discount is based on the yield of U.S. Treasury securities ranging from one to twenty years and the company's own payout pattern, with the future expected payment for each year using the interest rate associated with the corresponding Treasury security yield for that time period. The discount is comprised of the following: \$512 million – tabular discount for workers compensation in DBG; \$1.23 billion – non-tabular discount for workers compensation in DBG; and, \$370 million – non-tabular discount for other liability occurrence and products liability occurrence in AIRCO. The total undiscounted workers compensation loss reserve carried by DBG is approximately \$10.6 billion as of September 30, 2006. The other liability occurrence and products liability occurrence business in AIRCO that is assumed from DBG is discounted based on the yield of U.S. Treasury securities ranging from one to twenty years and the DBG payout pattern for this business. The undiscounted reserves assumed by AIRCO from DBG totaled approximately \$3.87 billion at September 30, 2006.

Quarterly Reserving Process

It is management's belief that the General Insurance net loss reserves are adequate to cover General Insurance net losses and loss expenses as of September 30, 2006. While AIG regularly reviews the adequacy of established loss reserves, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's loss reserves as of September 30, 2006. In the opinion of management, such adverse development and resulting increase in reserves is not likely to have a material adverse effect on AIG's consolidated financial position, although it could have a material adverse effect on AIG's consolidated results of operations for an individual reporting period.

The table below presents the reconciliation of General Insurance net loss reserves for the three and nine-month periods ended September 30, 2006 and 2005 as follows:

<i>(in millions)</i>	Three Months Ended September 30,		Nine Months Ended September 30,	
	2006	2005	2006	2005
Net reserve for losses and loss expenses at beginning of period	\$60,214	\$50,564	\$57,476	\$47,254
Foreign exchange effect	34	(33)	521	(354)
Acquisition ^(a)	55	—	55	—
Losses and loss expenses incurred:				
Current year	6,957	8,626	20,710	22,697
Prior years, other than accretion of discount ^(b)	(41)	244	(255)	374
Prior years, accretion of discount	101	97	303	291
Losses and loss expenses incurred	7,017	8,967	20,758	23,362
Losses and loss expenses paid	5,807	5,439	17,297	16,203
Net reserve for losses and loss expenses at end of period	\$61,513	\$54,059	\$61,513	\$54,059

(a) Reflects the opening balance with respect to the acquisition of the Central Insurance Co., Ltd. in the third quarter of 2006.

(b) Includes \$24 million and \$30 million in the three-month periods ended September 30, 2006 and 2005, respectively, for the general reinsurance operations of Transatlantic and \$43 million and \$39 million, respectively, of additional losses incurred resulting from 2005 and 2004 catastrophes. Includes \$89 million and \$120 million in the nine-month periods ended September 30, 2006 and 2005, respectively, for the general reinsurance operations of Transatlantic and \$80 million and \$157 million, respectively, of additional losses incurred resulting from 2005 and 2004 catastrophes. Transatlantic included \$4 million and \$24 million of prior years adverse catastrophe development in the three and nine months ended September 30, 2006, respectively.

The loss ratios recorded by AIG for the first nine months of 2006 take into account the results of the comprehensive reserve reviews that were completed in the fourth quarter of 2005. As explained more fully in the 2005 Annual Report on Form 10-K/A, AIG's year-end 2005 reserve review reflected careful consideration of the reserve analyses prepared by AIG's internal actuarial staff with the assistance of third party actuaries. In determining the appropriate loss ratios for accident year 2006 for each class of business, AIG gave appropriate consideration to the loss ratios resulting from the reserve analyses as well as all other relevant information including rate changes, expected changes in loss costs, changes in coverage, reinsurance or mix of business, and other factors that may affect the loss ratios.

In the first nine months of 2006, AIG enhanced its process of determining the quarterly loss development from prior accident years. In the first quarter of 2006, AIG began conducting additional analyses to determine the change in estimated ultimate loss for each accident year for each profit center. For example, if loss emergence for a profit center is different than expected for certain accident years in the quarter, the actuaries now take additional steps to examine the indicated effect such emergence would have on the reserves of that profit center. In some cases, the higher or lower than expected emergence may result in no clear change in the ultimate loss estimate for the accident years in question, and no adjustment would be made to the profit center's reserves for prior accident years. In other cases, the higher or lower than expected emergence may result in a larger change, either favorable or unfavorable, than the difference between the actual and expected loss emergence. Such additional analyses were conducted for each profit center, as appropriate, in the first, second and third quarters of 2006 to determine the loss development from prior accident years for the first, second

and third quarters of 2006. As part of its quarterly reserving process, AIG also considers notices of claims received with respect to emerging issues, such as those related to stock option backdating.

In the third quarter of 2006, net loss development from prior accident years was favorable by approximately \$41 million, including approximately \$43 million of adverse development pertaining to the major hurricanes in 2005 and 2004 and \$24 million of adverse development pertaining to the general reinsurance operations of Transatlantic. Excluding catastrophes and Transatlantic, as well as accretion of discount of approximately \$101 million, net loss development from prior accident years in the third quarter of 2006 was favorable by approximately \$108 million. This overall favorable development of \$108 million consisted of approximately \$490 million of favorable development from accident years 2003 through 2005, partially offset by approximately \$380 million of adverse development from accident years 2002 and prior. The \$490 million of favorable development from accident years 2003 through 2005 included approximately \$310 million from accident year 2005, \$160 million from accident year 2004, and \$20 million from accident year 2003. The adverse development from accident years 2002 and prior included approximately \$130 million from accident year 1999, primarily due to two significant claims, with the balance spread across many accident years. Foreign General prior accident year reserves, excluding catastrophes, developed favorably by approximately \$105 million in the quarter. DBG prior accident year reserves, excluding catastrophes, developed adversely by approximately \$40 million. The overall development also included approximately \$22 million of favorable development from Personal Lines and approximately \$21 million of favorable development from UGC. The

favorable developments experienced in Foreign General included both short tail as well as longer tail classes of business.

In the first nine months of 2006, net loss development from prior accident years was favorable by approximately \$255 million, including approximately \$80 million of adverse development pertaining to the major hurricanes in 2004 and 2005 and \$89 million of adverse development from the general reinsurance operations of Transatlantic. Excluding catastrophes and Transatlantic, as well as accretion of discount of approximately \$303 million, net loss development from prior accident years in the first nine months of 2006 was favorable by approximately \$424 million. This overall favorable development of \$424 million consisted of approximately \$1.23 billion of favorable development from accident years 2003 through 2005, partially offset by approximately \$805 million of adverse development from accident years 2002 and prior. The \$1.23 billion of favorable development from accident years 2003 through 2005 included approximately \$550 million from accident year 2005, \$450 million from accident year 2004, and \$230 million from accident year 2003. The adverse developments from accident years 2002 and prior were widely spread among many accident years. The overall favorable development of \$424 million included approximately \$235 million from Foreign General, \$80 million from Personal Lines, \$85 million from UGC, and \$25 million from DBG. For both the third quarter and the first nine months of 2006, most classes of business throughout AIG continued to experience favorable development for accident years 2003 through 2005. The adverse development from accident years 2002 and prior reflected developments from excess casualty, workers compensation, excess workers compensation, and post-1986 environmental liability classes of business, all within DBG.

As a result of the continued favorable experience for accident years 2003 through 2005, the expected loss ratios for accident year 2006 were improved for a number of casualty classes of business in the third quarter of 2006. For those classes of business where the expected loss ratio for accident year 2006 was adjusted in the third quarter, the revised loss ratio was generally applied to the cumulative 2006 net earned premium for the class. The overall effect on the third quarter results was approximately a \$100 million improvement. This amount represents the application of the revised expected loss ratios to the net premiums earned reported for the first six months of 2006.

In the third quarter of 2005, net loss development from prior accident years was adverse by approximately \$244 million, including approximately \$39 million of adverse development pertaining to the major hurricanes from accident year 2004 and approximately \$30 million of adverse development pertaining to the general reinsurance operations of Transatlantic. Excluding catastrophes and Transatlantic, as well as accretion of discount of approximately \$97 million, net loss development from prior accident years in the third quarter of

2005 was adverse by approximately \$175 million. In the third quarter of 2005, most classes of business experienced favorable development for accident years 2003 and 2004 and adverse development for accident years 2001 and prior. The overall development of \$175 million consisted of approximately \$350 million of adverse development from accident years 2001 and prior, partially offset by approximately \$170 million of favorable development from accident year 2004 and \$30 million of favorable development from accident year 2003. Accident year 2002 experienced adverse development for D&O and excess casualty, with an overall adverse development of approximately \$20 million in the quarter. For all accident years combined, the D&O and excess casualty classes accounted for the vast majority of the \$175 million overall adverse development in the quarter. The \$175 million of overall adverse development, excluding catastrophes, was comprised of approximately \$190 million of adverse development from DBG, \$15 million of adverse development from Foreign General, and \$15 million of favorable development from each of the Personal Lines and UGC segments.

In the first nine months of 2005, net loss development from prior accident years was adverse by approximately \$375 million, including approximately \$157 million of adverse development from the major hurricanes from accident year 2004 and approximately \$120 million of adverse development from the general reinsurance operations of Transatlantic. Excluding catastrophes and Transatlantic, as well as accretion of discount of approximately \$291 million, net loss development from prior accident years in the first nine months of 2005 was adverse by approximately \$98 million. The overall development of \$98 million consisted of approximately \$1.13 billion of adverse development from accident years 2002 and prior, offset by approximately \$740 million of favorable development from accident year 2004 and approximately \$290 million of favorable development from accident year 2003. Most classes of business produced favorable development for accident years 2003 and 2004, and adverse development for accident years 2001 and prior. The majority of the adverse development from accident year 2002 and prior was attributable to the D&O and excess casualty classes of business. Accident year 2002 experienced favorable development for many classes of business. However, in total, accident year 2002 experienced approximately \$50 million of adverse development primarily attributable to approximately \$125 million of adverse development from the D&O class. The overall adverse development of \$98 million for all prior accident years, excluding catastrophes, was comprised of approximately \$410 million of adverse development from DBG, \$190 million of favorable development from Foreign General, \$60 million of favorable development from Personal Lines, and \$62 million of favorable development from UGC.

Loss Reserving Process

The General Insurance loss reserves can generally be categorized into two distinct groups. One group is long-tail casualty lines of business which include excess and umbrella liability, D&O, professional liability, medical malpractice, workers compensation, general liability, products liability, and related classes. The other group is short-tail lines of business consisting principally of property lines, personal lines and certain classes of casualty lines. These lines of business and actuarial assumptions made in the review of these lines of business are described in the 2005 Annual Report on Form 10-K/A.

The process of determining the current loss ratio for each class or business segment is based on a variety of factors and is described in detail in AIG's 2005 Annual Report on Form 10-K/A. AIG uses the process described above to update AIG's reserves on a quarterly basis. AIG's 2005 Annual Report on Form 10-K/A also includes a discussion and analysis of the volatility of AIG's 2005 reserve estimates and a sensitivity analysis.

Asbestos and Environmental Reserves

The estimation of loss reserves relating to asbestos and environmental claims on insurance policies written many years ago is subject to greater uncertainty than other types of claims due to inconsistent court decisions as well as judicial interpretations and legislative actions that in some cases have tended to broaden coverage beyond the original intent of such policies and in others have expanded theories of liability.

As described more fully in the 2005 Annual Report on Form 10-K/A, AIG's reserves relating to asbestos and environmental claims reflect the results of the comprehensive ground up analysis which was completed in the fourth quarter of 2005. AIG is in the process of updating its ground up analysis and expects to continue to do so on an annual basis. In the first nine months of 2006, AIG maintained the ultimate loss estimates for asbestos and environmental claims resulting from the recently completed reserve analyses. A minor amount of incurred loss emergence pertaining to asbestos was reflected in the first nine months of 2006, as depicted in the table that follows. This minor development is primarily attributable to the general reinsurance operations of Transatlantic.

A summary of reserve activity, including estimates for applicable IBNR, relating to asbestos and environmental claims separately and combined for the nine months ended September 30, 2006 and 2005 follows:

<i>(in millions)</i>	2006		2005	
	Gross	Net	Gross	Net
Asbestos:				
Reserve for losses and loss expenses at beginning of year	\$4,441	\$1,840	\$2,559	\$1,060
Losses and loss expenses incurred*	2	7	120	33
Losses and loss expenses paid*	(404)	(151)	(239)	(91)

* All amounts pertain to policies underwritten in prior years.

As indicated in the table above, asbestos loss payments increased significantly in the first nine months of 2006 compared to the same period in the prior years, primarily as a result of payments pertaining to settlements that had been negotiated in earlier periods. There was negligible development of asbestos and environmental reserves in the first nine months of 2006.

The gross and net IBNR included in the reserve for losses and loss expenses, relating to asbestos and environmental claims separately and combined, at September 30, 2006 and 2005 were estimated as follows:

<i>(in millions)</i>	2006		2005	
	Gross	Net	Gross	Net
Asbestos	\$2,863	\$1,312	\$1,550	\$ 684
Environmental	567	242	558	253
Combined	\$3,430	\$1,554	\$2,108	\$ 937

A summary of asbestos and environmental claims count activity for the nine months ended September 30, 2006 and 2005 was as follows:

	2006			2005		
	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined
Claims at beginning of year	7,293	9,873	17,166	7,575	8,216	15,791
Claims during year:						
Opened	538	1,032	1,570	646	4,583	5,229
Settled	(126)	(120)	(246)	(49)	(178)	(227)
Dismissed or otherwise resolved	(678)	(1,295)	(1,973)	(831)	(2,934)	(3,765)
Claims at end of period	7,027	9,490	16,517	7,341	9,687	17,028

The table below presents AIG's survival ratios for asbestos and environmental claims at September 30, 2006 and 2005. The survival ratio is derived by dividing the current carried loss reserve by the average payments for the three most recent calendar years for these claims. Therefore, the survival ratio is a simplistic measure estimating the number of years it would be before the current ending loss reserves for these claims would be paid off using recent year average payments. The 2006 survival ratio is lower than the ratio at December 31, 2005 because the more recent periods included in the rolling average reflect higher claims payments. Many factors, such as aggressive settlement procedures, mix of business and level of coverage provided, have a significant effect on the amount of asbestos and environmental reserves and payments and the resultant survival ratio. Thus, caution should be exercised in attempting to determine reserve adequacy for these claims based simply on this survival ratio.

AIG's survival ratios for asbestos and environmental claims, separately and combined, were based upon a three-year average payment. These ratios at September 30, 2006 and 2005 were as follows:

(number of years)	Gross	Net
2006		
Survival ratios:		
Asbestos	11.9	13.6
Environmental	6.5	5.3
Combined	10.4	10.7
2005		
Survival ratios:		
Asbestos	9.0	11.0
Environmental	6.5	6.0
Combined	8.1	8.9

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad. Insurance-oriented products consist of individual and group life, payout annuities, endowment and accident and health policies. Retirement savings products consist generally of fixed and variable annuities.

Domestically, AIG's Life Insurance & Retirement Services operations offer a broad range of protection products, such as life insurance, group life and health products, including disability income products and payout annuities, which include single premium immediate annuities, structured settlements and terminal funding annuities. Home service operations include an array of life insurance, accident and health and annuity products sold primarily through career agents. In

addition, home service includes a small block of run-off property and casualty coverage. Retirement services include group retirement products, individual fixed and variable annuities sold through banks, broker dealers and exclusive sales representatives, and annuity runoff operations, which include previously-acquired "closed blocks" and other fixed and variable annuities largely sold through distribution relationships that have been discontinued.

Overseas, AIG's Life Insurance & Retirement Services operations include insurance and investment-oriented products such as whole and term life, investment linked, universal life and endowments, personal accident and health products, group products including pension, life and health, and fixed and variable annuities.

Life Insurance & Retirement Services operations presented on a sub-product basis for the three and nine-month periods ended September 30, 2006 and 2005 were as follows:

(a) Effective January 1, 2006, the Broker/Dealer operations of the Domestic Life Insurance companies are being reported and managed within the Asset Management segment. Included in GAAP premiums were revenues of \$15 million and \$79 million, respectively, for the three and nine-month periods ended September 30, 2005.

(b) Includes structured settlements, single premium immediate annuities and terminal funding annuities.

(c) Primarily represents runoff annuity business sold through discontinued distribution relationships.

(d) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts. For the nine month period ended September 30, 2006, the effect was an increase of \$245 million and \$168 million in net investment income and operating income, respectively.

(e) For purposes of this presentation, pricing net investment gains are segregated as a component of total realized capital gains (losses). They represent certain amounts of realized capital gains where gains are an inherent element in pricing certain life products in some foreign countries.

(f) Amounts presented were as at September 30, 2006 and December 31, 2005.

AIG's Life Insurance & Retirement Services subsidiaries report their operations through the following operating units: Domestic Life — AIG American General, including American General Life Insurance Company (AG Life), United States Life Insurance in the City of New York (USLIFE) and American General Life and Accident Insurance Company (AGLA); Domestic Retirement Services — The Variable Annuity Life Insurance Company (VALIC), AIG Annuity Insurance Com-

pany (AIG Annuity) and AIG SunAmerica; Foreign Life — ALICO, AIRCO, AIG Edison Life, AIG Star Life, American International Assurance Company, Limited together with American International Assurance Company (Bermuda) Limited (AIA), Nan Shan Life Insurance Company, Ltd. (Nan Shan) and The Philippine American Life and General Insurance Company (Philamlife).

AIG transacts business in most major foreign currencies. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of Life Insurance & Retirement Services GAAP premiums for the three and nine-month periods ended September 30, 2006:

	Three Months Ended September 30, 2006	Nine Months Ended September 30, 2006
Growth in original currency*	7.9%	7.3%
Foreign exchange effect	(0.4)	(2.4)
Growth as reported in U.S. dollars	7.5%	4.9%

* Computed using a constant exchange rate for each respective period.

Life Insurance & Retirement Services Results

Life Insurance & Retirement Services GAAP premiums increased 7.5 percent to \$7.6 billion in the third quarter of 2006 compared to the same period in 2005. Net investment income increased \$226 million for the third quarter of 2006 when compared to the same period in 2005. Net investment income includes policyholder trading gains (losses) amounting to \$221 million in the third quarter of 2006 compared to \$359 million in same period of 2005. Policyholder trading gains (losses) are linked primarily to equities and are offset by an equal change in incurred policy losses and benefits.

Operating income increased 9 percent in the third quarter of 2006 when compared to the same period in 2005. Domestic Life operations continued to perform well in its core life insurance businesses with growth in GAAP premium and invested assets supporting the underlying reserves. Domestic Retirement Services operating income growth in the quarter was driven by individual fixed and variable annuity business, offset in part by lower growth and spread compression in the group retirement products line. Foreign Life Insurance & Retirement Services operating income grew 16 percent in the quarter helped by higher investment returns. Realized capital gains (losses) for the third quarter of 2006

totalled a net loss of \$176 million versus a loss of \$16 million during the same period last year. The loss in the current quarter was primarily due to the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, partially offset by foreign currency gains.

Life Insurance & Retirement Services GAAP premiums increased 4.9 percent to \$23 billion for the first nine months of 2006 compared to the same period of 2005. Net investment income increased for the first nine months of 2006 reflecting a higher level of invested assets. The increase in net investment income also includes the effect of out of period adjustments relating to the accounting for certain interests in unit investment trusts totaling \$24 million and \$245 million for the three and nine-month periods ending September 30, 2006, respectively. Operating income grew 9 percent for the first nine months of 2006 compared to the same period of 2005. Domestic Life earnings for the core life and payout annuity businesses continue to demonstrate earnings growth, but was more than offset by lower investment income from calls and tenders, lower partnership income and additional reserves for legal contingencies. Domestic Retirement Services earnings declined for the first nine months of 2006 primarily due to realized capital losses which more than offset increased income from growth in invested assets and lower amortization of deferred policy acquisition costs related to capital losses. Foreign Life Insurance & Retirement Services operating income grew 23 percent for the first nine months of 2006 due to higher realized capital gains and the effect of the aforementioned out of period adjustments. Operating income growth in U.S. dollars is lower than growth on a local currency basis primarily due to a weaker Japanese Yen in the first nine months of 2006 compared to the same period last year. Realized capital losses were \$117 million for the first nine months of 2006 compared to \$18 million during the same period of 2005.

Domestic Life Operations

The following table reflects retail periodic life insurance sales by product for the three and nine-month periods ended September 30, 2006 and 2005, respectively:

Domestic Life Insurance Periodic Premium Sales*

	Three Months Ended		Nine Months Ended	
	September 30,		September 30,	
(in millions)	2006	2005	2006	2005
By product:				
Universal life	\$ 46	\$ 79	\$289	\$191
Variable universal life	15	11	42	35
Term life	59	59	182	172
Whole life/other	3	1	9	7
Total	\$123	\$150	\$522	\$405

* Periodic premium represents premium from new business expected to be collected over a one year period.

Quarterly Domestic Life Results

AIG's Domestic Life operations had growth of GAAP premiums for the third quarter of 2006 when compared to the same period last year. In the life insurance product line, periodic life sales declined due to re-pricing of certain universal life products and tightened underwriting standards for certain markets to maintain margins. AGLA, the home service business, is diversifying product offerings and enhancing the capabilities and quality of the sales force, which has resulted in improved agent productivity and better persistency of in-force business. Growth of payout annuities GAAP premiums emanated from sales of single premium immediate annuities and structured settlements. GAAP premiums for the group life/health product line were slightly lower in the third quarter of 2006 compared to 2005 reflecting slower growth in the credit insurance business, and tightened pricing and underwriting in the group employer lines. Management continues to focus on new product introductions, cross selling, other growth strategies, and options that may include exiting certain product lines.

Earnings for the Domestic Life Insurance line of business grew 9 percent for the third quarter of 2006 reflecting growth in in-force business and higher net investment income. Earnings for the home service line of business increased 37 percent compared to the third quarter of 2005, which included approximately \$8 million of hurricane losses, and also due to higher investment income from partnerships of \$17 million. The group life/health line of business results for the third quarter of 2006 reflect continuing restructuring efforts in that business. The payout annuities line of business earnings increased over last year due to growth in single premium annuities and also due to a \$12 million reserve strengthening in the third quarter of 2005.

Year-to-date Domestic Life Results

GAAP premiums for the Domestic Life operations grew 5 percent for the first nine months of 2006 compared to the same period of 2005 reflecting improved sales of universal life and single premium immediate annuities. The life insurance product line experienced increased periodic sales from the independent distribution platform during the first nine months of 2006. The home service business GAAP premiums declined slightly for the first nine months of 2006 as the reduction of premium in-force from normal lapses and maturities exceeded sales growth for the period. The payout annuities GAAP premium growth for the first nine months of 2006 reflects increased sales of single premium annuities and structured settlements when compared to the same period last year. GAAP premiums for the group life/health product line for the first nine months of 2006 reflect the restructuring efforts in certain product lines.

Earnings for the life insurance product line declined for the first nine months of 2006 due to lower investment income

related to yield enhancement activities that offset growth in in-force business. Earnings for the home service line of business grew from the same period last year due to increased net investment income from partnerships and lower catastrophe and acquisition costs. The group life/health line of business earnings for the first nine months of 2006 are lower than the same period last year due to reserves related to litigation and contingencies in the credit life and A&H business and transition costs related to the outsourcing of back office operations. The payout annuities product line earnings declined for the first nine months of 2006 primarily due to lower calls and tenders on fixed maturity securities when compared to the same period last year.

Quarterly Domestic Retirement Services Results

Domestic Retirement Services total deposits declined slightly for the third quarter of 2006 when compared to the year ago quarter driven by lower fixed annuity sales that continued to face increased competition from bank products in the flat yield curve environment, partially offset by substantially higher variable annuity sales. Individual variable annuity deposits grew 36 percent in the third quarter of 2006 from the year ago quarter reflecting growth in products with new guarantee features. Group retirement deposits grew only slightly in the quarter compared to third quarter 2005, reflecting the increased number of policyholders nearing retirement age. New products have been launched that are designed to meet the needs of retirement age policyholders and retain assets under management. While total deposits within the group retirement business are growing moderately, annuity deposits are down \$49 million, and group mutual fund deposits are up \$69 million, for the third quarter of 2006 when compared to the same period last year, due to market demand for lower cost group retirement products. Over time, this will result in a gradual reduction in profitability of this business, due to lower profit margins in the mutual fund product compared to the annuity product.

Group retirement products earnings for the third quarter of 2006 were lower than the same period last year principally due to lower partnership income and higher amortization of deferred acquisition costs related to internal replacements of existing contracts into new contracts. Individual fixed annuity earnings grew 9 percent for the third quarter of 2006 compared to the same period last year as a result of increased net investment spreads and lower DAC amortization due to realized capital losses. Earnings for individual variable annuities grew \$7 million in the third quarter of 2006 from the year ago quarter principally due to higher fee income as a result of increased assets under management.

Year-to-date Domestic Retirement Services Results

Domestic Retirement Services total deposits declined approximately 5 percent for the first nine months of 2006 when compared to the first nine months of 2005. The decrease in

total deposits reflects declining fixed annuity sales partially offset by growth in individual variable annuity sales. In addition, fixed annuity surrender rates increased during the first nine months of 2006 when compared to the same period last year. Net flows for the nine months of 2006 were negative \$4.1 billion compared to positive net flows of \$0.3 billion last year reflecting the lower deposits and higher surrenders.

Group retirement products earnings were flat for the first nine months with slightly compressed spreads offsetting the effect of separate account growth. Individual fixed annuity earnings for the first nine months of 2006 grew 28 percent primarily from growth in partnership income, lower amortization of deferred policy acquisition costs related to capital losses, growth in average underlying reserves and lower average crediting rates. The individual variable annuity product line earnings grew for the first nine months as fee income increased on higher sales volumes and increased underlying reserves.

Domestic Retirement Services Supplemental Data

The following table reflects deposits for Domestic Retirement Services for the three and nine-month periods ended September 30, 2006 and 2005:

	Three Months Ended September 30,		Nine Months Ended September 30,	
<i>(in millions)</i>	2006	2005	2006	2005
Group retirement products:				
Annuities	\$1,335	\$1,384	\$ 4,083	\$ 4,161
Mutual funds	284	215	1,085	677
Individual fixed annuities	1,194	1,498	4,212	5,912
Individual variable annuities	1,059	781	3,234	2,457
Individual fixed annuities - runoff	37	48	122	155
Total	\$3,909	\$3,926	\$12,736	\$13,362

The following chart shows the amount of reserves by surrender charge category for Domestic Retirement Services as of September 30, 2006:

<i>(in millions)</i>	Group Retirement Products*	Individual Fixed Annuities	Individual Variable Annuities
Zero or no surrender charge	\$41,266	\$10,465	\$10,721
Between 0 percent - 4 percent	11,434	10,948	8,513
Greater than 4 percent	2,755	29,685	10,222
Non-Surrenderable	887	3,163	89
Total	\$56,342	\$54,261	\$29,545

* Excludes mutual funds.

For the three months and nine months ended September 30, 2006 surrender rates increased for individual fixed annuities and individual variable annuities, while surrender rates for group retirement products declined as a result of successful asset retention efforts. The increase in surrender rate for fixed annuities continues to be driven by the shape of the yield curve and general aging of the in-force block; however, less than 20 percent of the individual fixed annuity reserves as of September 30, 2006 are available to be surren-

dered without charge. Individual variable annuity surrender rates for the third quarter and the first nine months of 2006 primarily reflect higher shock-lapses that occur following expiration of the surrender charge period on certain 3-year and 7-year contracts, although the trend has moderated during the year. Reflecting a widespread industry phenomenon, this lapse rate, much of which was anticipated when the products were issued, has recently been affected by investor demand to exchange existing policies for new-generation contracts with living benefits or lower fees. In addition, the high lapse rates are in part due to the surrenders within certain acquired blocks of business.

A further increase in the level of surrenders in any of these businesses or in the individual fixed annuities runoff block could accelerate the amortization of deferred acquisition costs and negatively affect fee income earned on assets under management.

The following table reflects the net flows by line of business for Domestic Retirement Services for the three and nine-month periods ended September 30, 2006 and 2005:

Domestic Retirement Services – Net Flows^(a)

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2006	2005	2006	2005
<i>(in millions)</i>				
Group retirement products ^(b)	\$ 158	\$ (58)	\$ 793	\$ 520
Individual fixed annuities	(1,021)	13	(1,758)	1,846
Individual variable annuities	11	(155)	(34)	(209)
Individual fixed annuities - runoff	(1,042)	(607)	(3,121)	(1,857)
Total	\$(1,894)	\$(807)	\$(4,120)	\$ 300

(a) Net flows are defined as deposits received, less benefits, surrenders, withdrawals and death benefits.

(b) Includes mutual funds.

The combination of lower deposits and higher surrenders in the individual fixed annuity and individual fixed annuity-runoff blocks resulted in negative net flows for the three and nine-month periods ended September 30, 2006. The continuation of the current interest rate and competitive environment could prolong this trend.

Quarterly Foreign Life Insurance & Retirement Services Results

Foreign Life Insurance & Retirement Services operations produced 78 percent and 77 percent of Life Insurance & Retirement Services GAAP premiums for the three months ended September 30, 2006 and 2005, respectively. Foreign Life Insurance & Retirement Services GAAP premiums increased in the third quarter of 2006 by approximately 8 percent compared to the same period in 2005 driven primarily by growth in southeast Asia outside of Japan and Taiwan. Currency changes had little effect on GAAP premiums in the quarter when compared to prior year. Foreign life GAAP premium growth is affected by a continuing trend for clients to purchase investment-oriented products. This is particularly

true in Southeast Asia, including Taiwan, where AIG's life operations in that region have responded to this trend by offering a wide array of investment-linked products, both periodic pay and single premium, with multiple fund selection, but with minimal investment guarantees. For GAAP reporting purposes, only revenues from policy charges for insurance, administration, and surrender charges are reported as GAAP premiums for these life products. This product mix shift contributed to the single digit growth rate in Foreign Life Insurance & Retirement Services GAAP premiums, while continuing to grow total reserves.

Foreign Life Insurance & Retirement Services operating income grew by \$214 million or 16 percent, to \$1.6 billion for the third quarter of 2006 and included \$29 million of realized capital losses compared to \$26 million of gains in the year ago quarter. On a comparable basis, the growth in life insurance earnings for the quarter were generally in line with the growth in invested assets and increased overall compared to the third quarter of 2005, helped by higher seasonal dividend income of approximately \$35 million in Taiwan, actuarial adjustments of \$30 million and out of period adjustments of \$24 million related to unit investment trusts and \$18 million related to a reinsurance adjustment. The 2005 earnings included a charge to income of \$20 million related to a wind down of operations in Chile. Personal accident & health earnings for the third quarter of 2006 reflect continued stable profit margins and revenue growth. Group products earnings grew in the third quarter of 2006 due to improved mortality and morbidity costs when compared to the same period last year. Growth of individual fixed annuities earnings for the third quarter of 2006, emanating primarily from Japan, is in line with the growth in average assets under management and lower acquisition costs from DAC unlocking. The growth of individual variable annuities earnings in the third quarter of 2006 reflects continued growth in assets under management related to the increased demand for those products in Japan and in Europe.

During the second quarter of 2006, Japanese tax authorities announced a reduction in the amount of premium that policyholders may deduct from their Japanese tax returns for certain accident and health products. Foreign life operations in Japan continued to experience a decline in sales of those products and an increase in terminations during the quarter, which resulted in approximately \$23 million of higher expenses. This negative effect was more than offset by a \$29 million benefit to operating income from the personal accident line of business as a result of an actuarial change in estimate. If terminations continue at current experience levels, results will continue to be negatively affected. Higher than anticipated terminations result in accelerated amortization of deferred acquisition costs, offset somewhat by the release of policy benefit reserves in excess of cash value. The amount of deferred acquisition costs related to the policies in-force for these products amounted to \$240 million as of Sep-

tember 30, 2006. In response to the tax law change, AIG has developed new products, both life and health, to meet the needs of clients in that market. AIG continues to believe that any increase in policy terminations would not be material to AIG's consolidated financial condition or results of operations.

Year-to-date Foreign Life Insurance & Retirement Services Results

Foreign Life Insurance & Retirement Services operations produced 78 percent of Life Insurance & Retirement Services GAAP premiums in the first nine months of 2006 and 2005. GAAP premiums grew approximately 5 percent for the first nine months of 2006 (7 percent in original currency) compared to the same period in 2005. AIG transacts business in most major foreign currencies and therefore premiums reported in U.S. dollars will vary by volume and from changes in foreign currency translation rates. Globally, AIG's deep and diverse distribution, which includes bancassurance, worksite marketing, direct marketing and strong agency organizations, provides a powerful distribution platform for AIG's diverse product lines. In Japan, distribution of single premium life insurance products through banks was deregulated in December 2005 resulting in increased sales of products designed for that market during the first nine months of 2006. This new distribution outlet adds to the existing multiple distribution platform in Japan where AIG remains the leading foreign provider.

Foreign Life Insurance & Retirement Services operating income for the first nine months of 2006 was \$5.0 billion, which included \$487 million of realized capital gains and the effect of out of period adjustments related to the accounting

for certain interests in unit investment trusts that increased operating income by \$168 million, compared with \$4.0 billion of operating income for the same period of 2005, which included \$75 million of realized capital gains. The first nine months of 2006 results for the life insurance product line also included a \$38 million operating loss attributable to this segment's share of the operating results from AIG Credit Card Company (Taiwan) compared to a gain of \$29 million in the first nine months of 2005, due to an increase in allowance for losses recorded in the first quarter of 2006. The positive effect of DAC and value of business acquired (VOBA) unlocking for the life insurance product line was \$31 million and \$91 million for the first nine months of 2006 and 2005, respectively. Personal accident and health product line results for the first nine months of 2006 generally reflect the growth of underlying premium in-force, although growth was negatively affected by a weaker Yen exchange rate when compared to the same period last year. The Foreign Retirement Services business continued to grow in Japan and Korea by expanding distribution and leveraging AIG's product expertise. The positive effect of DAC and VOBA unlocking for the Retirement Services lines of business was \$32 million and \$13 million for the first nine months of 2006 and 2005, respectively. Reserves for individual fixed annuities continue to grow although demand for multi-currency fixed annuities in Japan has slowed due to currency rate fluctuations, rising local interest rates and stronger equity markets. Growth of individual variable annuity deposits has accelerated as those products have become more popular with consumers in Japan and Europe coupled with improved performance of equity markets.

Life Insurance & Retirement Services Net Investment Income and Realized Capital Gains (Losses)

The following table summarizes the components of net investment income for the three and nine-month periods ended September 30, 2006 and 2005:

<i>(in millions)</i>	Three Months Ended September 30,		Nine Months Ended September 30,	
	2006	2005	2006	2005
Domestic				
Fixed maturities, including short term investments	\$2,268	\$2,175	\$ 6,795	\$ 6,724

Net investment income^(c)	\$4,893	\$4,667	\$13,900	\$13,151

(a) Includes the effect of an out of period adjustment relating to the accounting for certain interests in unit investment trusts. For the three and nine-month periods ending September 30, 2006, the effect was an increase of \$24 million and \$245 million, respectively.

(b) Relates principally to assets held in various trading securities accounts that do not qualify for separate account treatment under SOP 03-1. These amounts are offset by an equal change included in incurred policy losses and benefits.

(c) Includes call and tender income.

The following table summarizes Domestic Life Insurance & Retirement Services partnership income (losses) by line of business for the three and nine-month periods ended September 30, 2006 and 2005:

	Three Months Ended		Nine Months Ended	
	September 30,		September 30,	
(in millions)	2006	2005	2006	2005
Domestic life – excluding Synfuels:

Total retirement services	79	115	280	188
Total	\$ 83	\$ 96	\$ 237	\$ 196

Quarterly Life Insurance & Retirement Services Net Investment Income and Realized Capital Gains (Losses)

Net investment income increased 5 percent for the third quarter of 2006 when compared to the same period in 2005. Growth was negatively affected by lower policyholder trading gains (losses) in the third quarter of 2006 when compared to 2005. Policyholder trading gains (losses), which are linked mainly to equities, are offset by an equal change in incurred policy losses and benefits. Investment income results for certain operations include investments in structured notes linked to emerging market sovereign debt that incorporates both interest rate risk and currency risk. Mark-to-market adjustments related to these structured notes were a gain of \$6 million and a loss of \$22 million for the three and nine months ended September 30, 2006, respectively. In Taiwan, dividend income increased \$35 million over the same quarter last year due to the increased allocation of invested assets from fixed maturities to equities and the seasonality of dividend payments. In addition, period to period comparisons of investment income for some lines of business are affected by yield enhancement activity, particularly partnership income as shown in the above table.

AIG generates income tax credits as a result of investing in synthetic fuel production (synfuels) related to the investment loss shown in the above table and records those benefits in its provision for income taxes. The amount of those income tax credits was \$20 million and \$52 million for the

three months ended September 30, 2006 and 2005, respectively. See Note 6(b) “Contingencies” of Notes to Consolidated Financial Statements for a further discussion of the effect of fluctuating domestic crude oil prices on synfuel tax credits. For the remainder of 2006, AIG may adjust production levels depending upon oil prices which affect the availability of the synthetic fuel tax credit. Regardless of oil prices, the tax credits expire after 2007.

Year-to-date Life Insurance & Retirement Services Net Investment Income and Realized Capital Gains (Losses)

The growth in net investment income for the first nine months of 2006 compared to a year ago parallels the growth in general account reserves and surplus for both Domestic and Foreign Life Insurance & Retirement Services companies and the effect of the aforementioned out of period adjustment. Also, net investment income was positively affected by the compounding of previously earned and reinvested investment cash flows along with the addition of new net cash flows from operations. Investment income includes income generated from traditional fixed income investments as well as income generated from other sources.

The amount of income tax credits generated as a result of investing in synthetic fuel production (synfuels) was \$79 million and \$167 million for the first nine months of 2006 and 2005, respectively.

The following table summarizes realized capital gains (losses) by major category for the three and nine-month periods ended September 30, 2006 and 2005:

<i>(in millions)</i>	Three Months Ended September 30,		Nine Months Ended September 30,	
	2006	2005	2006	2005
Domestic life				
Fixed maturities	\$ 1	\$ (10)	\$ (60)	\$ 13

Total foreign	\$ (29)	\$ 26	\$ 487	\$ 75
Total	\$ (176)	\$ (16)	\$ (117)	\$ (18)

Realized capital gains (losses) include normal portfolio transactions as well as derivative gains (losses) for transactions that do not qualify for hedge accounting treatment under FAS 133, transactional foreign exchange gains and losses and other-than-temporary declines in the value of investments. Line of business results for Domestic Life Insurance & Retirement Services exclude the effect of realized capital gains (losses), but include the related effect on the amortization of deferred acquisition costs.

Life Insurance & Retirement Services Underwriting and Investment Risk

The risks associated with life and accident and health products are underwriting risk and investment risk. The risk associated with the financial and investment contract products is primarily investment risk.

Underwriting risk represents the exposure to loss resulting from the actual policy experience adversely emerging in comparison to the assumptions made in the product pricing associated with mortality, morbidity, termination and expenses. The emergence of significant adverse experience would require an adjustment to DAC and benefit reserves that could have a substantial effect on AIG's results of operations.

Natural disasters such as hurricanes, earthquakes and other catastrophes have the potential to adversely affect AIG's operating results. Other risks, such as an outbreak of a pandemic disease, such as the Avian Influenza A Virus (H5N1), could adversely affect AIG's business and operating results to an extent that may be only minimally offset by reinsurance programs.

While outbreaks of the Avian Flu continue to occur among poultry or wild birds in a number of countries in Asia, Europe, and Africa, transmission to humans has been rare to date. If the virus mutates to a form that can be transmitted from human to human, it has the potential to spread rapidly worldwide. If such an outbreak were to take place, early quarantine and vaccination could be critical to containment.

Both the contagion and mortality rate of any mutated H5N1 virus that can be transmitted from human to human are highly speculative. AIG continues to monitor the developing facts. A significant global outbreak could have a material adverse effect on Life Insurance & Retirement Services operating results and liquidity from increased mortality and morbidity rates. For a further discussion of pandemic influenza, see "Managing Market Risk — Catastrophe Exposures — Pandemic Influenza."

AIG's Foreign Life Insurance & Retirement Services companies generally limit their maximum underwriting expo-

sure on life insurance of a single life to approximately \$1.7 million of coverage. AIG's Domestic Life Insurance & Retirement Services companies limit their maximum underwriting exposure on life insurance of a single life to \$10 million of coverage in certain circumstances by using yearly renewable term reinsurance. (See also the discussion under "Liquidity" herein.)

AIRCO acts primarily as an internal reinsurance company for AIG's foreign life operations. This facilitates insurance risk management (retention, volatility, concentrations) and capital planning locally (branch and subsidiary). It also allows AIG to pool its insurance risks and purchase reinsurance more efficiently at a consolidated level, manage global counterparty risk and relationships and manage global life catastrophe risks.

AIG's domestic Life Insurance & Retirement Services operations utilize internal and third-party reinsurance relationships to manage insurance risks and to facilitate capital management strategies. Pools of highly-rated third-party reinsurers are utilized to manage net amounts at risk in excess of retention limits. AIG's life insurance companies also cede excess, non-economic reserves carried on a statutory-basis only on certain term and universal life insurance and accident and health policies and certain fixed annuities to AIG Life of Bermuda Ltd., a wholly owned Bermuda reinsurer.

AIG generally obtains letters of credit in order to obtain statutory recognition of these intercompany reinsurance transactions. For this purpose, AIG entered into a \$2.5 billion syndicated letter of credit facility in December 2004. Letters of credit totaling \$2.5 billion were outstanding as of September 30, 2006. The letter of credit facility has a ten-year term, but the facility can be reduced or terminated by the lenders beginning after seven years.

In November 2005, AIG entered into a revolving credit facility for an aggregate amount of \$3 billion. The facility can be drawn in the form of letters of credit with terms of up to ten years. As of September 30, 2006, \$2.49 billion principal amount of letters of credit are outstanding under this facility, of which approximately \$1.09 billion relates to life intercompany reinsurance transactions. AIG also obtained approximately \$298 million letters of credit on a bilateral basis.

Investment risk represents the exposure to loss resulting from the cash flows from the invested assets, primarily long-term fixed rate investments, being less than the cash flows required to meet the obligations of the expected policy and contract liabilities and the necessary return on investments. (See also the discussion under "Liquidity" herein.)

To minimize its exposure to investment risk, AIG tests the cash flows from the invested assets and policy and contract liabilities using various interest rate scenarios to evaluate investment risk and to confirm that assets are sufficient to pay these liabilities.

AIG actively manages the asset-liability relationship in its foreign operations, as it has been doing throughout AIG's history, even though certain territories lack qualified long-term investments or certain local regulatory authorities may impose investment restrictions. For example, in several Southeast Asian countries, the duration of investments is shorter than the effective maturity of the related policy liabilities. Therefore, there is risk that the reinvestment of the proceeds at the maturity of the initial investments may be at a yield below that of the interest required for the accretion of the policy liabilities. Additionally, there exists a future investment risk associated with certain policies currently in-force which will have premium receipts in the future. That is, the investment of these future premium receipts may be at a yield below that required to meet future policy liabilities.

In the first nine months of 2006, new money investment rates have generally risen in the U.S. and Japan and have generally fallen in Taiwan and Thailand. In regard to in-force business, management focus is required in both the investment and product management process to maintain an adequate yield to match the interest necessary to support future policy liabilities. Business strategies continue to evolve to maintain profitability of the overall business. As such, in some countries, new products are being introduced with minimal investment guarantees resulting in a shift toward investment linked savings products and away from traditional savings products with higher guarantees.

The investment of insurance cash flows and reinvestment of the proceeds of matured securities and coupons requires active management of investment yields while maintaining satisfactory investment quality and liquidity.

AIG may use alternative investments in certain foreign jurisdictions where interest rates remain low and there are limited long-dated bond markets, including equities, real estate and foreign currency denominated fixed income instruments to extend the duration or increase the yield of the investment portfolio to more closely match the requirements of the policyholder liabilities and DAC recoverability. This strategy has been effectively used in Japan and more recently by Nan Shan in Taiwan. Foreign assets comprised approximately 32 percent of Nan Shan's invested assets at September 30, 2006, slightly below the maximum allowable percentage under current regulation. The majority of Nan Shan's in-force policy portfolio is traditional life and endowment insurance products with implicit interest rate guarantees. New business with lower interest rate guarantees are gradually reducing the overall interest requirements, but asset portfolio yields have declined faster due to the prolonged low interest rate environment. As a result, although the investment margins for a large block of in-force policies are negative, the block remains profitable because the mortality and expense margins presently exceed the negative investment spread. In response to the low interest rate environment and the volatile exchange rate of the NT dollar, Nan Shan is

emphasizing new products with lower implied guarantees, including participating endowments and investment-linked products. Although the risks of a continued low interest rate environment coupled with a volatile NT dollar could increase net liabilities and require additional capital to maintain adequate local solvency margins, Nan Shan currently believes it has adequate resources to meet all future policy obligations.

AIG actively manages the asset-liability relationship in its domestic operations. This relationship is more easily managed through the availability of qualified long-term investments.

AIG uses asset-liability matching as a management tool worldwide to determine the composition of the invested assets and appropriate marketing strategies. As a part of these strategies, AIG may determine that it is economically advantageous to be temporarily in an unmatched position due to anticipated interest rate or other economic changes. In addition, the absence of long-dated fixed income instruments in certain markets may preclude a matched asset-liability position in those markets.

A number of guaranteed benefits, such as living benefits or guaranteed minimum death benefits, are offered on certain variable life and variable annuity products. AIG manages its exposure resulting from these long-term guarantees through reinsurance or capital market hedging instruments.

DAC for Life Insurance & Retirement Services products arises from the deferral of those costs that vary with, and are directly related to, the acquisition of new or renewal business. Policy acquisition costs for life insurance products are gener-

ally deferred and amortized over the premium paying period of the policy. Policy acquisition costs that relate to universal life and investment-type products, including variable and fixed annuities (investment-oriented products) are deferred and amortized, with interest, as appropriate, in relation to the historical and future incidence of estimated gross profits to be realized over the estimated lives of the contracts. Amortization expense includes the effects of current period realized capital gains and losses for investment type products. With respect to investment-oriented products, AIG's policy is to adjust amortization assumptions for DAC when estimates of current or future gross profits to be realized from these contracts are revised. With respect to variable annuities sold domestically (representing the vast majority of AIG's variable annuity business), the assumption for the long-term annual net growth rate of the equity markets used in the determination of DAC amortization is approximately ten percent. A methodology referred to as "reversion to the mean" is used to maintain this long-term net growth rate assumption, while giving consideration to short-term variations in equity markets. Estimated gross profits include investment income and gains and losses less interest required on policyholder reserves, as well as other charges in the contract less actual mortality and expenses. Current experience and changes in the expected future gross profits are analyzed to determine the effect on the amortization of DAC. The estimation of projected gross profits requires significant management judgment. The assumptions with respect to the current and projected gross profits are reviewed and analyzed quarterly and are adjusted accordingly.

The following table summarizes the major components of the changes in deferred acquisition costs and the value of business acquired (VOBA) for the nine months ended September 30, 2006 and 2005:

<i>(in millions)</i>	2006			2005		
	DAC	VOBA	Total	DAC	VOBA	Total

* Represents sales inducement assets reclassified from DAC to Other assets.

AIG's variable annuity earnings will be affected by changes in market returns because separate account revenues, primarily composed of mortality and expense charges and asset management fees, are a function of asset values.

DAC for both insurance-oriented and investment-oriented products as well as retirement services products are

reviewed for recoverability, which involves estimating the future profitability of current business. This review also involves significant management judgment. If the actual emergence of future profitability were to be substantially different than that estimated, AIG's results of operations could be significantly affected in future periods.

Invested Assets

The following tables summarize the composition of AIG's invested assets by segment, at September 30, 2006 and December 31, 2005:

<i>(in millions)</i>	General Insurance	Life Insurance & Retirement Services	Asset Management	Financial Services	Other	Total
2006						
Fixed maturities:

Insurance and Asset Management Invested Assets

AIG's investment strategy is to invest primarily in high quality securities while maintaining diversification to avoid significant exposure to issuer, industry and/or country concentrations. With respect to Domestic General Insurance, AIG's strategy is to invest in longer duration fixed maturity investments to maximize the yields at the date of purchase. With respect to Life Insurance & Retirement Services, AIG's strategy is to produce cash flows required to meet maturing insurance liabilities. (See also the discussion under "Operating Review: Life Insurance & Retirement Services Operations" herein.) AIG invests in equities for various reasons, including diversifying its overall exposure to interest rate risk. Available for sale bonds and equity securities are subject to declines in fair value. Such declines in fair value are presented in unrealized appreciation or depreciation of investments, net of taxes as a component of accumulated other comprehensive

income. Declines that are determined to be other-than-temporary are reflected in income in the period in which the intent to hold the securities to recovery no longer exists. See "Valuation of Invested Assets". Generally, insurance regulations restrict the types of assets in which an insurance company may invest. When permitted by regulatory authorities and when deemed necessary to protect insurance assets, including invested assets, from adverse movements in foreign currency exchange rates, interest rates and equity prices, AIG and its insurance subsidiaries may enter into derivative transactions as end users. (See also the discussion under "Derivatives" herein.)

In certain jurisdictions, significant regulatory and/or foreign governmental barriers exist which may not permit the immediate free flow of funds between insurance subsidiaries or from the insurance subsidiaries to AIG parent.

The following tables summarize the composition of AIG's insurance and asset management invested assets by segment, at September 30, 2006 and December 31, 2005:

<i>(dollars in millions)</i>	General Insurance	Life Insurance & Retirement Services	Asset Management	Total	Percent of Total	<u>Percent Distribution</u> Domestic Foreign

Credit Quality

At September 30, 2006, approximately 58 percent of the fixed maturities investments were domestic securities. Approximately 39 percent of such domestic securities were rated AAA by one or more of the principal rating agencies. Approximately six percent were below investment grade or not rated.

A significant portion of the foreign fixed income portfolio is rated by Moody's Investors Service (Moody's), S&P or similar foreign services. Similar credit quality rating services are not available in all overseas locations. AIG reviews the credit quality of the foreign portfolio nonrated fixed income investments, including mortgages. At September 30, 2006, approximately 19 percent of the foreign fixed income investments were either rated AAA or, on the basis of AIG's internal analysis, were equivalent from a credit standpoint to securities so rated. Approximately five percent were below investment grade or not rated at that date. A large portion of the foreign fixed income portfolio are sovereign fixed maturity securities supporting the policy liabilities in the country of issuance.

Any fixed income security may be subject to downgrade for a variety of reasons subsequent to any balance sheet date.

Valuation of Invested Assets

AIG has the ability to hold any fixed maturity security to its stated maturity, including those fixed maturity securities classified as available for sale. Therefore, the decision to sell any such fixed maturity security classified as available for sale reflects the judgment of AIG's management that the security sold is unlikely to provide, on a relative value basis, as attractive a return in the future as alternative securities entailing comparable risks. With respect to distressed securities, the sale decision reflects management's judgment that the risk-discounted anticipated ultimate recovery is less than the value achievable on sale.

The valuation of invested assets involves obtaining a market value for each security. The source for the market value is generally from market exchanges or dealer quotations, with the exception of nontraded securities.

AIG periodically evaluates its securities for other-than-temporary impairments in valuation. As a matter of policy,

the determination that a security has incurred an other-than-temporary decline in value and the amount of any loss recognition requires the judgment of AIG's management and a continual review of its investments.

In general, a security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer);
- The occurrence of a discrete credit event resulting in (i) the issuer defaulting on a material outstanding obligation; or (ii) the issuer seeking protection from creditors under the bankruptcy laws or any similar laws intended for the court supervised reorganization of insolvent enterprises; or (iii) the issuer proposing a voluntary reorganization pursuant to which creditors are asked to exchange their claims for cash or securities having a fair value substantially lower than par value of their claims; or
- In the opinion of AIG's management, it is probable that AIG may not realize a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

At each balance sheet date, AIG evaluates its securities holdings in an unrealized loss position. Where AIG does not intend to hold such securities until they have fully recovered their carrying value based on the circumstances present at the date of evaluation, AIG records the unrealized loss in income. If events or circumstances change, such as unexpected changes in creditworthiness of the obligor, general interest rate environment, tax circumstances, liquidity events, and statutory capital management considerations among others, AIG revisits its intent to determine if a loss should be recorded in income. Further, if a loss is recognized from a sale subsequent to a balance sheet date pursuant to these changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer exists.

Once a security has been identified as other-than-temporarily impaired, the amount of such impairment is determined by reference to that security's contemporaneous market price and recorded as a charge to earnings.

As a result of these policies, AIG recorded, in realized capital gains (losses), other-than-temporary impairment pretax losses of \$170 million and \$184 million for the three-month periods ended September 30, 2006 and 2005, respec-

tively, and \$766 million and \$384 million for the nine-month periods ended September 30, 2006 and 2005, respectively.

No impairment charge with respect to any one single credit was significant to AIG's consolidated financial condition or results of operations, and no individual impairment loss exceeded 1.0 percent of consolidated net income for the first nine months of 2006.

Excluding the other-than-temporary impairments noted above, the changes in market value for AIG's available for sale portfolio, which constitutes the vast majority of AIG's investments, were recorded in accumulated other comprehensive income as unrealized gains or losses, net of tax.

At September 30, 2006, the fair value of AIG's fixed maturities and equity securities aggregated \$431.3 billion. At September 30, 2006, aggregate unrealized gains after taxes for fixed maturity and equity securities were \$8.9 billion. At September 30, 2006, the aggregate unrealized losses after taxes of fixed maturity and equity securities were approximately \$2.9 billion.

The effect on net income of unrealized losses after taxes will be further mitigated upon realization, because certain realized losses will be charged to participating policyholder accounts, or realization will result in current decreases in the amortization of certain deferred policy acquisition costs.

At September 30, 2006, unrealized losses for fixed maturity securities and equity securities did not reflect any significant industry concentrations.

The amortized cost of fixed maturities available for sale in an unrealized loss position at September 30, 2006, by contractual maturity, is shown below:

<i>(in millions)</i>	Amortized Cost
Due in one year or less	\$ 4,734
Due after one year through five years	30,234
Due after five years through ten years	56,708
Due after ten years	64,918
Total	\$156,594

In the nine months ended September 30, 2006, the pretax realized losses incurred with respect to the sale of fixed maturities and equity securities were \$1.1 billion. The aggregate fair value of securities sold was \$34 billion, which was approximately 97 percent of amortized cost. The average period of time that securities sold at a loss during the nine months ended September 30, 2006 were trading continuously at a price below book value was approximately four months.

At September 30, 2006, aggregate pretax unrealized gains were \$13.71 billion, while the pretax unrealized losses with respect to investment grade bonds, non-investment grade bonds and equity securities were \$4.0 billion, \$115 million and \$281 million, respectively. Aging of the pretax unrealized losses with respect to these securities, distributed as a percentage of cost relative to unrealized loss (the extent by which the market value is less than amortized cost or cost), including the number of respective items, was as follows:

Aging (dollars in millions)	Less than or equal to 20% of Cost ^(a)			Greater than 20% to 50% of Cost ^(a)			Greater than 50% of Cost ^(a)			Total		
	Cost ^(a)	Unrealized Loss	Items	Cost ^(a)	Unrealized Loss	Items	Cost ^(a)	Unrealized Loss	Items	Cost ^(a)	Unrealized Loss ^(b)	Items

(a) For bonds, represents amortized cost.

(b) As more fully described above, upon realization, certain realized losses will be charged to participating policyholder accounts, or realization will result in a current decrease in the amortization of certain deferred policy acquisition costs.

As stated previously, the valuation for AIG's investment portfolio comes from market exchanges or dealer quotations, with the exception of nontraded securities. AIG considers nontraded securities to mean certain fixed income investments, certain structured securities, direct private equities, limited partnerships and hedge funds. The aggregate carrying value of these securities at September 30, 2006 was approximately \$70 billion.

The methodology used to estimate fair value of nontraded fixed income investments is by reference to traded securities with similar attributes and using a matrix pricing methodology. This technique takes into account such factors as the industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, and other relevant factors. The change in fair value is recognized as a component of accumulated other comprehensive income, net of tax.

For certain structured securities, the carrying value is based on an estimate of the security's future cash flows pursuant to the requirements of Emerging Issues Task Force Issue No. 99-20, "Recognition of Interest Income and Impairment

on Purchased and Retained Beneficial Interests in Securitized Financial Assets." The change in carrying value is recognized in income.

Hedge funds and limited partnerships in which AIG holds in the aggregate less than a five percent interest are reported at fair value. The change in fair value is recognized as a component of accumulated other comprehensive income, net of tax.

With respect to hedge funds and limited partnerships in which AIG holds in the aggregate a five percent or greater interest, AIG uses the equity method to record these investments. The changes in such net asset values are recorded in income.

AIG obtains the fair value of its investments in limited partnerships and hedge funds from information provided by the general partner or manager of each of these investments, the accounts of which are generally audited on an annual basis.

Each of these investment categories is regularly tested to determine if impairment in value exists. Various valuation techniques are used with respect to each category in this determination.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets transactions, consumer finance and insurance premium financing.

Aircraft Finance

AIG's Aircraft Finance represents the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to domestic and foreign airlines. Revenues also result from the remarketing of commercial jets for its own account, and remarketing and fleet management for airlines and financial institutions.

ILFC finances its purchases of aircraft primarily through the issuance of a variety of debt instruments. The composite borrowing rates at September 30, 2006 and 2005 were 5.14 percent and 4.43 percent, respectively. The composite borrowing rates do not reflect the benefit of hedging ILFC's floating rate and foreign currency denominated debt. ILFC hedges these exposures using interest rate and foreign currency derivatives. These derivatives are effective economic hedges; however, since hedge accounting under FAS 133 is not applied, the benefits of using derivatives to hedge these exposures is not reflected in ILFC's borrowing rates. (See also the discussions under "Capital Resources" and "Liquidity" herein.)

ILFC's sources of revenue are principally from scheduled and charter airlines and companies associated with the airline industry. The airline industry is sensitive to changes in economic conditions, cyclical and highly competitive. Airlines and related companies may be affected by political or economic instability, terrorist activities, changes in national policy, competitive pressures on certain air carriers, fuel prices and shortages, labor stoppages, insurance costs, recessions, world health issues and other political or economic events adversely affecting world or regional trading markets.

For a discussion of ILFC's potential exposure to airframe and engine manufacturers, see "Risk Factors" in Item 1A. of Part II of this Quarterly Report.

ILFC is exposed to operating loss and liquidity strain through nonperformance of aircraft lessees, through owning aircraft which it would be unable to sell or re-lease at acceptable rates at lease expiration and, in part, through committing to purchase aircraft which it would be unable to lease.

ILFC's revenues and income may be adversely affected by the volatile competitive environment in which its customers operate. ILFC manages the risk of nonperformance by its

lessees with security deposit requirements, repossession rights, overhaul requirements, and close monitoring industry conditions through its marketing force. However, there can be no assurance that ILFC would be able to successfully manage the risks relating to the effect of possible future deterioration in the airline industry. Approximately 90 percent of ILFC's fleet is leased to non-U.S. carriers, and the fleet, comprised of the most efficient aircraft in the airline industry, continues to be in high demand from such carriers.

ILFC typically contracts to re-lease aircraft before the end of the existing lease term. For aircraft returned before the end of the lease term, ILFC has generally been able to re-lease such aircraft within two to six months of its return. As a lessor, ILFC considers an aircraft "idle" or "off lease" when the aircraft is not subject to a signed lease agreement or signed letter of intent. ILFC had one aircraft off lease at September 30, 2006, and all new aircraft, but one, scheduled for delivery through 2007 have been leased. (See also the discussions under "Capital Resources" and "Liquidity" herein.)

Management formally reviews regularly, and no less frequently than quarterly, issues affecting ILFC's fleet, including events and circumstances that may cause impairment of aircraft values. Management evaluates aircraft in the fleet as necessary, based on these events and circumstances in accordance with Statement of Financial Accounting Standards No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets" (FAS 144). ILFC has not recognized any impairment related to its fleet. ILFC has been able to re-lease the aircraft without diminution in lease rates that would result in an impairment under FAS 144. (See also the discussions under "Liquidity" herein.)

Capital Markets

Capital Markets represents the operations of AIGFP, which engages as principal in a wide variety of financial transactions, including standard and customized financial products involving commodities, credit, currencies, energy, equities and rates. AIGFP also invests in a diversified portfolio of securities and engages in borrowing activities involving issuing standard and structured notes and other securities, and entering into guaranteed investment agreements (GIAs).

As Capital Markets is a transaction-oriented operation, current and past revenues and operating results may not provide a basis for predicting future performance. AIG's Capital Markets operations derive substantially all their revenues from hedged financial positions entered in connection with counterparty transactions rather than from speculative transactions. AIGFP also participates as a dealer in a wide variety of financial derivatives transactions. AIGFP economically hedges the market risks arising from its transactions, although hedge accounting under FAS 133 is not currently being applied to any of the derivatives and related assets and

liabilities. Accordingly, revenues and operating income are exposed to volatility resulting from differences in the timing of revenue recognition between the derivatives and the hedged assets and liabilities. Revenues and operating income of the Capital Markets operations and the percentage change in these amounts for any given period are also significantly affected by the number, size and profitability of transactions entered into by these subsidiaries during that period relative to those entered into during the prior period. Generally, the realization of transaction revenues as measured by the receipt of funds is not a significant reporting event as the gain or loss on AIGFP's trading transactions is currently reflected in operating income as the fair values change from period to period.

A significant majority of AIG's financial derivative transactions are conducted by the Capital Markets operations. Capital Markets enters into derivative transactions to hedge the interest rate and foreign currency exposures associated with its available for sale assets and borrowings. Although the derivatives entered into to hedge its outstanding transactions and positions are highly effective economic hedges, AIG did not meet the requirements for hedge accounting under FAS 133.

Derivative transactions are entered into in the ordinary course of Capital Markets operations. Income on derivatives is recorded at fair value, determined by reference to the mark to market value of the derivative or their estimated fair value where market prices are not readily available. The resulting aggregate unrealized gains or losses from the derivatives are reflected in the income statement. Where Capital Markets cannot verify significant model inputs to observable market data and verify the model value to market transactions, Capital Markets values the contract at the transaction price at inception and, consequently, records no initial gain or loss in accordance with Emerging Issues Task Force Issue No. 02-03, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities" (EITF 02-03). Such initial gain or loss is recognized over the life of the transaction. Capital Markets periodically reevaluates its revenue recognition under EITF 02-03 based on the observability of market parameters. The mark to fair value of derivative transactions is reflected in the balance sheet in the captions "Unrealized gain on swaps, options and forward transactions" and "Unrealized loss on swaps, options and forward transactions." Unrealized gains represent the present value of the aggregate of each net receivable, by counterparty, and the unrealized losses represent the present value of the aggregate of each net payable, by counterparty, as of September 30, 2006. These amounts will change from one period to the next due to changes in interest rates, currency rates, equity and commodity prices and other market variables, as well as cash movements, execution of new transactions and the maturing of existing transactions. (See also the discussion under "Derivatives" herein.)

Spread income on investments and borrowings is recorded on an accrual basis over the life of the transaction. Investments are classified as securities available for sale and are marked to market with the resulting unrealized gains or losses reflected in accumulated other comprehensive income. U.S. dollar denominated borrowings are carried at cost, while borrowings in any currency other than the U.S. dollar result in unrealized foreign exchange gains or losses reported in income. AIGFP hedges the economic exposure on its investments and borrowings on a portfolio basis using derivatives and other financial instruments. While these hedges are highly effective economic hedges, they do not qualify for hedge accounting treatment under FAS 133. The change in the fair value of the derivatives used to hedge these economic exposures is therefore included in Other income, while the offsetting change in fair value of the hedged investments and borrowings is not recognized in earnings.

To the extent the Financial Services subsidiaries, other than AIGFP, use derivatives to economically hedge their assets or liabilities with respect to their future cash flows, and such hedges do not qualify for hedge accounting treatment under FAS 133, the changes in fair value of such derivatives are recorded in realized capital gains (losses) or other revenues. Amounts recorded in realized capital gains (losses) are reported as part of the Other category.

Consumer Finance

Domestically, AIG's Consumer Finance operations are principally conducted through American General Finance, Inc. (AGF). AGF derives a substantial portion of its revenues from finance charges assessed on outstanding real estate loans, secured and unsecured non-real estate loans and retail sales finance receivables. The real estate loans include first or second mortgages on residential real estate generally having a maximum term of 360 months, and are considered non-conforming. These loans may be closed-end accounts or open-end home equity lines of credit and may be fixed-rate or adjustable rate products. The non-real estate loans are secured by consumer goods, automobiles, or other personal property or are unsecured. Both secured and unsecured non-real estate loans generally have a maximum term of 60 months. The core of AGF's originations is sourced through its branches. However, a significant volume of real estate loans is also originated through broker relationships, and to lesser extents, through correspondent relationships and direct mail solicitations. In the first quarter of 2006, two wholly-owned subsidiaries of AGF discontinued originating real estate loans through an arrangement with AIG Federal Savings Bank, a federally chartered thrift, and began originating such loans under their own state licenses.

Many of AGF's borrowers are non-prime or sub-prime. Current economic conditions, such as interest rate and employment levels, have a direct effect on the borrowers' ability to repay these loans. AGF manages the credit risk inherent in

its portfolio by using credit scoring models at the time of credit applications, established underwriting criteria, and in certain cases, individual loan reviews. AGF's Credit Strategy and Policy Committee monitors the quality of the finance receivables portfolio monthly when determining the appropriate level of the allowance for losses. The Credit Strategy and Policy Committee bases its conclusions on quantitative analyses, qualitative factors, current economic conditions and trends, and each committee member's experience in the consumer finance industry. Through the first nine months of 2006, the credit quality of AGF's finance receivables continues to be strong. However, declines in the strength of the U.S. housing market or economy may adversely affect the future credit quality of these receivables.

Internationally, AIG's Consumer Finance operations are principally conducted through AIG Consumer Finance Group Inc. (CFG). CFG operates primarily in emerging and developing markets. CFG has operations in Hong Kong, Taiwan, the Philippines, Thailand, China, Poland, Argentina, and Mexico. While products vary by market, the businesses generally provide credit cards, unsecured and secured non-real estate loans, term deposits, savings accounts, retail sales finance and real estate loans. CFG originates finance receivables through its branches and direct solicitation. CFG also originates finance receivables indirectly through relationships with retailers, auto dealers, and independent agents.

Consumer Finance operations are exposed to loss when contractual payments are not received. Credit loss exposure is managed through a combination of underwriting controls, mix of finance receivables, collateral and collection efficiency.

CFG monitors the quality of its finance receivable portfolio through a combination of a monthly Credit Review and quarterly Credit Reserve Committee review when determining the appropriate level of the allowance for losses. The Credit Reserve Committee bases its conclusions on quantitative analysis, qualitative factors, current economic conditions and trends, political and regulatory implications, competition, and the judgment of the committee's members. As a result of such a review and in light of industry-wide deteriorating credit conditions and tightening of overall consumer credit, the aggregate allowance for losses in AIG Credit Card Company (Taiwan) was increased by \$88 million in the first quarter of 2006 to \$130 million at March 31, 2006. The remaining balance, net of write-offs during the second and third quarters, is approximately \$69 million at September 30, 2006. This balance, representing approximately 14 percent of CFG's outstanding credit card receivables for Taiwan, continues to be CFG's best estimate of the overall exposure and hence no additional increases to the allowance for losses were deemed necessary at September 30, 2006. The results of AIG Credit Card Company (Taiwan) are shared equally by the Financial Services and Life Insurance & Retirement Services segments.

Financial Services Results

Financial Services operations for the three and nine-month periods ended September 30, 2006 and 2005 were as follows:

<i>(in millions)</i>	Three Months Ended September 30,		Nine Months Ended September 30,	
	2006	2005	2006	2005
Revenues^(a):				
Aircraft Finance ^(b)	\$1,060	\$ 943	\$3,067	\$2,661
Capital Markets ^{(c)(d)}	1,118	23	30	2,754
Consumer Finance ^(e)	970	940	2,833	2,664
Other	39	20	98	61
Total	\$3,187	\$1,926	\$6,028	\$8,140
Operating income (loss)^(a):				
Aircraft Finance	\$ 157	\$ 165	\$ 475	\$ 476
Capital Markets ^(d)	965	(150)	(457)	2,306
Consumer Finance ^{(f)(g)}	220	190	594	649
Other, including intercompany adjustments	15	19	38	52
Total	\$1,357	\$ 224	\$ 650	\$3,483

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three and nine-month periods ended September 30, 2005, the effect was \$(10) million and \$(59) million, respectively, in operating income for Aircraft Finance. During 2006, Aircraft Finance derivative gains and losses are reported as part of the Other category, and not reported in Aircraft Finance operating income. For the three-month periods ended September 30, 2006 and 2005, the effect was \$783 million and \$(365) million in both revenues and operating income, respectively, for Capital Markets. For the nine-month periods ended September 30, 2006 and 2005, the effect was \$(1.06) billion and \$1.80 billion in both revenues and operating income for Capital Markets. These amounts result primarily from interest rate and foreign currency derivatives which are hedging available for sale securities and borrowings.

(b) Revenues are primarily aircraft lease rentals from ILFC.

(c) Revenues, shown net of interest expense, are primarily from hedged financial positions entered into in connection with counterparty transactions and the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133 described in (a) above.

(d) Certain transactions entered into by AIGFP generate tax credits and benefits which are included in income taxes in the consolidated statement of income. The amount of such tax credits and benefits for the three-month periods ended September 30, 2006 and 2005 are \$3 million and \$23 million, respectively. The amount of such tax credits and benefits for the nine-month periods ended September 30, 2006 and 2005 are \$29 million and \$63 million, respectively.

(e) Revenues are primarily finance charges.

(f) Includes \$44 million in additional allowances for losses recorded in the first quarter of 2006 from AIG Credit Card Company (Taiwan).

(g) Includes catastrophe related losses of \$62 million recorded in the third quarter of 2005 resulting from hurricane Katrina, which were reduced by \$22 million in the third quarter of 2006.

Financial Services operating income increased in the third quarter and decreased in the first nine months of 2006 compared to the same periods of 2005 due primarily to the effect of hedging activities that do not qualify for hedge accounting under FAS 133.

Quarterly Aircraft Finance Results

ILFC's operating income decreased slightly in the third quarter of 2006 compared to the same period of 2005. Rental revenues increased by \$120 million or 13 percent driven by a larger aircraft fleet. At September 30, 2006, ILFC had 818 aircraft subject to operating leases compared to 734 aircraft at September 30, 2005. The increase in rental revenues was more than offset by increases in depreciation and interest expense. Depreciation expense increased by \$47 million or 13 percent in line with the increase in the size of aircraft fleet. Interest expense increased by \$91 million or 30 percent driven by the rising cost of funds and additional borrowings to fund aircraft purchases. ILFC's interest expense does not reflect the benefit of hedging ILFC's floating rate and foreign currency denominated debt, ILFC hedges these exposures using interest rate and foreign currency derivatives. These derivatives are effective economic hedges. Since hedge accounting under FAS 133 is not applied, the benefits of using derivatives to hedge these exposures is not reflected in its borrowing rates.

Year-to-date Aircraft Finance Results

ILFC's operating income remained relatively stable in the first nine months of 2006 compared to the same period of 2005. Rental revenues increased by \$392 million or 15 percent driven by a larger aircraft fleet and increased utilization. The increase in rental revenues was offset by increases in depreciation, interest expense, charges related to bankrupt airlines as well as the settlement of a tax dispute in Australia related to the restructuring of ownership of aircraft. Depreciation expense increased by \$134 million or 13 percent in line with the increase in the size of aircraft fleet. Interest expense increased by \$166 million or 19 percent driven by rising cost of funds and additional borrowings funding aircraft purchases. As discussed above, ILFC's interest expense does not reflect the benefit of hedging ILFC's floating rate and foreign currency denominated debt.

Quarterly Capital Markets Results

Capital Markets operating income in the third quarter of 2006 increased by \$1.12 billion compared to the same period of 2005 primarily due to a gain related to derivatives not qualifying for hedge accounting treatment of \$783 million in the current quarter compared to a loss of \$365 million in the comparable period last year. A large part of the net gain on AIGFP's derivatives recognized in the third quarter of 2006 was due to the decrease in long term U.S. interest rates which increased the fair value of AIGFP's derivatives hedging its assets and liabilities. The performance of the U.S. dollar against other currencies in the third quarter of 2006 did not have a significant effect on the fair value of the derivatives hedging AIGFP's assets and liabilities. The majority of the net loss on AIGFP's derivatives in the third quarter of 2005 was due to rising long term interest rates, which decreased the fair value of AIGFP's derivatives hedging its assets and liabilities.

This net loss was slightly offset by the strengthening of the U.S. dollar primarily against the Euro and British Pound, which increased the fair value of the foreign currency derivatives hedging available for sale securities.

Financial market conditions in the third quarter of 2006 were characterized by lower levels of interest rates globally, unchanged credit spreads and higher equity valuations. The increase in Capital Markets operating income for the third quarter of 2006 was principally due to gains on derivatives not qualifying for hedge accounting under FAS 133. AIGFP's transaction flow in credit, commodity and equity products improved during the third quarter of 2006 compared to the third quarter of 2005, although this was more than offset by reduced revenues from other product groups.

The most significant component of Capital Markets operating expenses is compensation, which was approximately \$115 million and \$138 million in the third quarter of 2006 and 2005, respectively. The amount of compensation was not affected by gains and losses not qualifying for hedge accounting treatment under FAS 133.

AIG elected to early adopt FAS 155 in 2006 and, accordingly, AIGFP has elected to account for a significant majority of its hybrid financial instruments at fair value. The change in fair value of these hybrid financial instruments is included in operating income. AIGFP economically hedges these hybrid financial instruments with other derivative positions with third parties. The change in fair value of these positions is reflected in operating income. The net effect of these hybrid financial instruments and the derivatives economically hedging these instruments had a minimal effect on AIGFP's operating income for the third quarter of 2006.

Year-to-date Capital Markets Results

Capital Markets operating income in the nine month period ended September 30, 2006 decreased by \$2.76 billion compared to the same period of 2005. Improved results, primarily from increased transaction flow in AIGFP's credit, commodity index and equity products, were more than offset by the loss resulting from the effect of derivatives not qualifying for hedge accounting treatment of \$1.06 billion in the current period compared to a gain of \$1.80 billion in the comparable period last year, a decrease of \$2.86 billion. A large part of the net loss on AIGFP's derivatives recognized in the first nine months of 2006 was due to the weakening of the U.S. dollar, primarily against the British Pound and Euro, resulting in a decrease in the fair value of the foreign currency derivatives hedging AIGFP's available for sale securities. The majority of the net gain on AIGFP's derivatives in the first nine months of 2005 was due to the strengthening of the U.S. dollar, primarily against the British Pound and Euro, which increased the fair value of the foreign currency derivatives hedging available for sale securities. To a lesser extent, the net gain in 2005 was due to the decrease in long term U.S. interest rates which

increased the fair value of derivatives hedging AIGFP's assets and liabilities.

Financial market conditions in the first nine months of 2006 were characterized by a general flattening of interest rate yield curves across fixed income markets globally, tightening of credit spreads and equity valuations that were higher.

The compensation expense of Capital Markets was approximately \$380 million and \$359 million in the first nine months of 2006 and 2005, respectively. The amount of compensation was not affected by gains and losses not qualifying for hedge accounting treatment under FAS 133.

As a result of AIG's early adoption of FAS 155, AIGFP elected to apply the fair value option to its structured notes and other financial liabilities containing embedded derivatives outstanding as of January 1, 2006. The cumulative effect from the adoption of FAS 155 on these instruments at January 1, 2006 was a loss of approximately \$29 million pre-tax.

The application of the fair value option to these hybrid financial instruments did not have a significant effect on AIGFP's operating income for the first nine months of 2006.

Quarterly Consumer Finance Results

Consumer Finance operating income increased in the third quarter of 2006 compared to the same period of 2005 in the domestic operations and decreased slightly in foreign operations.

Domestically, the relatively low interest rate environment throughout 2005 contributed to a high level of mortgage refinancing activity. AGF's average net finance receivables increased 5 percent in the third quarter of 2006 when compared to the same period in 2005. However, net originations and purchases of finance receivables in AGF's centralized real estate business segment decreased in the third quarter of 2006 compared to the same period in 2005 primarily caused by a less robust U.S. housing market. The increase in AGF's revenues that principally resulted from portfolio growth was offset by higher interest expense and depressed whole loan sale prices resulting from a flattened yield curve. Both short-term and long-term market interest rates continued to increase significantly over the past year. AGF's short-term borrowing costs were 5.38 percent in the third quarter of 2006 compared to 3.96 percent in the third quarter of 2005. AGF's long-term borrowing costs were 5.09 percent in the third quarter of 2006 compared to 4.47 percent in the third quarter of 2005. Despite high energy costs, the U.S. economy continued to expand during the third quarter of 2006, improving consumer credit quality compared to the third quarter of 2005. AGF's charge-off ratio improved 17 basis points in the third quarter of 2006 when compared to the same period in 2005.

AGF's results included catastrophe related losses of \$62 million in the third quarter of 2005 resulting from hurricane Katrina. However, after a reassessment of payment and charge-off experience during the past year, AGF reduced the reserve by \$22 million in the third quarter of 2006. At September 30, 2006, AGF's allowance ratio was 1.99 percent compared to 2.24 percent at September 30, 2005.

Revenues from foreign consumer finance operations increased by approximately 15 percent in the third quarter of 2006 compared to the same period in 2005. Loan growth was the primary driver behind higher revenues in 2006. Higher revenues were offset by higher loan loss provisions due to loan growth and higher operating expenses in connection with expansion of distribution channels and new product promotions, resulting in slightly lower operating income for the third quarter of 2006 compared to the same period in 2005.

Year-to-date Consumer Finance Results

Consumer Finance operating income decreased in the first nine months of 2006 compared to the same period of 2005. The domestic operations remain essentially unchanged year over year while the foreign operations decreased primarily due to the credit deterioration in the Taiwan credit card market.

Domestically, the relatively low interest rate environment throughout 2005 contributed to a high level of mortgage refinancing activity. AGF's average net finance receivables increased 9 percent in the first nine months of 2006 when compared to the same period in 2005. However, net originations and purchases of finance receivables in AGF's centralized real estate business decreased in the first nine months of 2006 compared to the same period in 2005 primarily caused by a less robust U.S. housing market. The increase in AGF's revenues that principally resulted from portfolio growth was offset by higher interest expense and depressed whole loan sale prices resulting from a flattened yield curve. AGF's short-term borrowing costs were 5.06 percent in the first nine months of 2006 compared to 3.47 percent in the same period in 2005. AGF's long-term borrowing costs were 4.97 percent in the first nine months of 2006 compared to 4.36 percent in the same period in 2005. Despite high energy costs, the U.S. economy continued to expand during the first nine months of 2006, improving consumer credit quality. AGF's charge-off ratio improved 25 basis points in the first nine months of 2006 when compared to the same period in 2005. AGF's delinquency ratio at September 30, 2006 remained the same when compared to September 30, 2005. At September 30, 2006, AGF's allowance ratio was 1.99 percent compared to 2.24 percent at September 30, 2005.

During the third quarter of 2006, AGF reassessed the adequacy of the reserve established in September 2005 resulting from hurricane Katrina as discussed above.

Revenues from the foreign consumer finance operations increased by approximately 20 percent in the first nine months of 2006 compared to the same period in 2005. Loan growth was the primary driver behind higher revenues. Higher revenues were more than offset by increases in the allowance for losses related to industry-wide credit deteriora-

tion in the Taiwan credit card market, increased cost of funds, and higher operating expenses in connection with expansion of distribution channels and new product promotions, resulting in a lower operating income for the first nine months of 2006 compared to the same period in 2005.

Financial Services Invested Assets

The following table is a summary of the composition of AIG's Financial Services invested assets at September 30, 2006 and December 31, 2005. (See also the discussions under "Operating Review: Financial Services Operations," "Capital Resources" and "Derivatives" herein.)

<i>(dollars in millions)</i>	2006		2005	
	Invested Assets	Percent of Total	Invested Assets	Percent of Total
Fixed maturities:				
Bonds available for sale, at market value	\$ 1,336	0.8%	\$ 1,307	0.9%
Equity securities:				
Preferred stocks available for sale, at market value	5	-	10	-
Mortgage loans on real estate, net of allowance	92	-	71	-
Policy loans	2	-	2	-
Collateral and guaranteed loans, net of allowance	2,152	1.3	1,719	1.2
Financial services assets:				
Flight equipment primarily under operating leases, net of accumulated depreciation	39,460	22.9	36,245	24.1
Securities available for sale, at market value	41,232	24.0	37,511	24.9
Trading securities, at market value	5,822	3.4	6,499	4.3
Spot commodities	118	0.1	92	0.1
Unrealized gain on swaps, options and forward transactions	20,235	11.8	18,695	12.4
Trading assets	2,194	1.3	1,204	0.8
Securities purchased under agreements to resell, at contract value	27,041	15.7	14,519	9.7
Finance receivables, net of allowance	28,634	16.7	27,995	18.6
Securities lending collateral, at market value	76	-	-	-
Other invested assets	1,934	1.1	2,751	1.9
Short-term investments, at cost	1,306	0.7	1,382	0.9
Cash	279	0.2	331	0.2
Investment income due and accrued	22	-	18	-
Real estate, net of accumulated depreciation	24	-	24	-
Total	\$171,964	100.0%	\$150,375	100.0%

As previously discussed, the cash used for the purchase of flight equipment is derived primarily from the proceeds of ILFC's debt financings. The primary sources for the repayment of this debt and the interest thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. During the first nine months of 2006, ILFC acquired flight equipment costing \$4.86 billion. (See also the discussion under "Operating Review: Financial Services Operations" and "Capital Resources" herein.)

At September 30, 2006, ILFC had committed to purchase 268 new aircraft deliverable from 2006 through 2015 at an estimated aggregate purchase price of \$19.2 billion and had options to purchase three new aircraft at an estimated aggregate purchase price of \$453 million. As of September 30, 2006, ILFC has entered into leases for all, but one, of the new aircraft scheduled for delivery through 2007. ILFC will be required to find customers for any aircraft currently on order and any aircraft to be ordered, and it must arrange financing for portions of the purchase price of such equipment. ILFC has been successful to date both in placing its new aircraft on lease or under sales contract and obtaining adequate financing, but there can be no assurance that such success will continue in future environments.

AIG's Consumer Finance operations provide a wide variety of consumer finance products, including real estate loans, credit card loans, non-real estate loans, retail sales finance and credit-related insurance to customers both domestically and overseas, particularly in emerging markets. These products are funded through a combination of deposits and various borrowings including commercial paper and medium term notes. AIG's Consumer Finance operations are exposed to credit risk and risk of loss resulting from adverse fluctuations in interest rates. Over half of the finance receivables are real estate loans which are substantially collateralized by the related properties.

With respect to credit losses, the allowance for losses is maintained at a level considered adequate to absorb anticipated credit losses existing in that portfolio as of the balance sheet date.

Capital Markets derivative transactions are carried at market value or at estimated fair value when market prices are not readily available. AIGFP reduces its economic risk exposure through similarly valued offsetting transactions including swaps, trading securities, options, forwards and futures. The estimated fair values of these transactions represent assessments of the present value of expected future cash flows. These transactions are exposed to liquidity risk if AIGFP were required to sell or close out the transactions prior to maturity. AIG believes that the effect of any such event would not be significant to AIG's financial condition or its overall liquidity. (See also the discussion under "Operating Review: Financial Services Operations" and "Derivatives" herein.)

AIGFP uses the proceeds from the issuance of notes and bonds and GIAs to invest in a diversified portfolio of securities, including securities available for sale, at market, and derivative transactions. The funds may also be invested in securities purchased under agreements to resell. The proceeds from the disposal of the aforementioned securities available for sale and securities purchased under agreements to resell are used to fund the maturing GIAs or other AIGFP financings, or invest in new assets. (See also the discussion under "Capital Resources" herein.)

Securities available for sale is predominantly a diversified portfolio of high grade fixed income securities, where the individual securities have varying degrees of credit risk. At September 30, 2006, the average credit rating of this portfolio was in the AA category or the equivalent thereto as determined through rating agencies or internal review. AIGFP has also entered into credit derivative transactions to economically hedge its credit risk associated with \$128 million of these securities.

Securities deemed below investment grade at September 30, 2006 amounted to approximately \$259 million in fair value representing 0.6 percent of the total AIGFP securities available for sale. There have been no significant downgrades through September 30, 2006. If its securities available for sale portfolio were to suffer significant default and the collateral held declined significantly in value with no replacement or the credit default swap counterparty failed to perform, AIGFP could have a liquidity strain. AIG guarantees AIGFP's payment obligations, including its debt obligations.

AIGFP's risk management objective is to minimize interest rate, currency, commodity and equity risks associated with its securities available for sale. That is, when AIGFP purchases a security for its securities available for sale investment portfolio, it simultaneously enters into an offsetting internal hedge such that the payment terms of the hedging transaction offset the payment terms of the investment security, which achieves the economic result of converting the return on the underlying security to U.S. dollar LIBOR plus or minus a spread based on the underlying profit on each security on the initial trade date. The market risk associated with such internal hedges is managed on a portfolio basis, with third-party hedging transactions executed as necessary. As hedge accounting treatment is not achieved in accordance with FAS 133, the unrealized gains and losses on the derivative transactions with unaffiliated third parties are reflected in operating income, whereas the unrealized gains and losses on the underlying securities available for sale resulting from changes in interest rates, currency rates, commodity and equity prices, are recorded in accumulated other comprehensive income. When a security is sold, the realized gain or loss with respect to this security is then recorded in operating income.

Securities purchased under agreements to resell are treated as collateralized financing transactions. AIGFP takes possession of or obtains a security interest in securities purchased under agreements to resell.

AIGFP owns inventories in certain commodities in which it trades, and may reduce the exposure to market risk through the use of swaps, forwards, futures and option contracts. Physical commodities held in AIGFP's wholly-owned broker dealer subsidiary are recorded at market value. All other commodities are recorded at the lower of cost or market.

Trading securities, at market value, and securities and spot commodities sold but not yet purchased, at market value are marked to market daily with the unrealized gain or loss being recognized in income at that time. These trading securities are purchased and sold as necessary to meet the risk management objectives of Capital Markets operations.

The gross unrealized gains and gross unrealized losses of Capital Markets operations included in the financial services assets and liabilities at September 30, 2006 were as follows:

<i>(in millions)</i>	Gross Unrealized Gains	Gross Unrealized Losses
Securities available for sale, at market value	\$ 749	\$ 18
Unrealized gain/loss on swaps, options and forward transactions*	20,235	12,764

* These amounts are also presented as the respective balance sheet amounts.

The senior management of AIG defines the policies and establishes general operating parameters for Capital Markets operations. AIG's senior management has established various oversight committees to monitor on an ongoing basis the various financial market, operational and credit risk attendant to the Capital Markets operations. The senior management of AIGFP reports the results of its operations to and reviews future strategies with AIG's senior management.

AIG actively manages the exposures to limit potential losses, while maximizing the rewards afforded by these business opportunities. In doing so, AIG must continually manage a variety of exposures including credit, market, liquidity, operational and legal risks.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products including institutional and retail asset management, broker dealer services and spread-based investment business from the sale of guaranteed investment contracts, also known as funding agreements (GICs). Such services and products are offered to individuals and institutions both domestically and overseas.

Asset Management Results

Asset Management revenues and operating income for the three and nine-month periods ended September 30, 2006 and 2005 were as follows:

<i>(in millions)</i>	Three Months Ended September 30,		Nine Months Ended September 30,	
	2006	2005	2006	2005
Revenues:				
Guaranteed investment contracts	\$ 845	\$ 908	\$2,517	\$2,707
Institutional Asset Management	265	279	1,163	776
Brokerage Services and Mutual Funds	71	67	217	192
Other	57	101	201	276
Total	\$1,238	\$1,355	\$4,098	\$3,951
Operating income:				
Guaranteed investment contracts ^(a)	\$ 175	\$ 294	\$ 635	\$ 939
Institutional Asset Management ^{(b)(c)}	89	155	721	424
Brokerage Services and Mutual Funds	23	20	67	50
Other	54	99	190	269
Total	\$ 341	\$ 568	\$1,613	\$1,682

(a) Includes the effect of hedging activities that do not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three and nine-month periods ended September 30, 2005, the effect was a gain of \$18 million and \$127 million, respectively, in operating income. During 2006, these derivative gains and losses are reported as part of the Other category, and not reported in Asset Management operating income.

(b) Includes the full results of certain AIG managed private equity and real estate funds that are consolidated pursuant to FIN 46(R), "Consolidation of Variable Interest Entities". Also includes \$(3) million and \$77 million for the three-month periods ended September 30, 2006 and 2005, respectively, and \$207 million and \$189 million for the nine-month periods ended September 30, 2006 and 2005, respectively, of third-party limited partner earnings offset in minority interest expense which is not a component of operating income.

(c) Includes the full results of certain AIG managed partnerships that are consolidated effective January 1, 2006 pursuant to EITF 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights". For the three and nine-month periods ended September 30, 2006, operating income includes \$47 million and \$203 million, respectively, of third-party limited partner earnings offset in minority interest expense which is not a component of operating income.

Quarterly Asset Management Results

Asset Management operating income decreased 40 percent in the third quarter of 2006 compared to the same period of 2005 on revenues that declined 9 percent due to the continued run-off of GIC balances combined with spread compression in the remaining GIC portfolio. The spread compression has occurred due to an increase in the cost of funds in the short-term floating rate portion of the GIC portfolio, only partially offset by increased investment income from the floating rate assets backing the portfolio.

Operating income in the third quarter of 2006 also declined from the year-ago quarter due to lower transaction-driven revenues that were partially offset by growth in asset-based management fees within Institutional Asset Management.

The GIC portfolio continues to run-off. The MIP has replaced the GIC program as AIG's principal spread-based investment activity. Although the MIP is beginning to show positive operating income, because the asset mix under the MIP does not include the alternative investments utilized in the GIC program, AIG does not expect that the income growth in the MIP will offset the run-off in the GIC portfolio for the foreseeable future. A significant portion of the remaining GIC portfolio consists of floating rate obligations. AIG has entered into hedges to manage against increases in short-term interest rates. AIG continues to believe these hedges are economically effective but do not qualify for hedge accounting treatment under FAS 133. As a result, continued increases in short-term interest rates will negatively affect operating income in the segment. Realized capital gains from the hedges offset the negative trend in GIC related operating income. GIC revenues include income from Sun America partnerships supporting the GIC line of business and are significantly affected by performance in the equity markets. Thus, revenues, operating income and cash flow attributable to GICs will vary among reporting periods.

The MIP was initially launched in the Euromarkets in September 2005 through AIG's \$10 billion Euro medium term note program. Through September 30, 2006, AIG has issued the equivalent of \$3.3 billion for the MIP in the Euro, U.S. Rule 144A and U.S. public markets.

The revenues and operating income for this segment are largely affected by the general conditions in the equity and credit markets. Realized gains and performance fees are contingent upon various fund closings, maturity levels and market conditions, and by their nature are not predictable. Therefore, the segment's earnings may vary from period to period.

Year-to-date Asset Management Results

Asset Management revenues and operating income decreased 4 percent in the first nine months of 2006 compared to the same period of 2005 due to the decline in operating income from the GIC portfolio, reflecting the continued run-off of GIC balances, combined with spread compression in the remaining GIC portfolio. The decrease in revenues and operating income was partially offset by growth in asset management fees in Institutional Asset Management.

At September 30, 2006 and 2005, AIG's non-affiliated client assets under management, including both retail mutual funds and institutional accounts, were approximately \$70 billion and \$59 billion and the aggregate GIC reserve was \$49.2 billion and \$49.7 billion, respectively.

Other Operations

The operating income (loss) for Other operations for the three and nine-month periods ended September 30, 2006 and 2005 was as follows:

Other <i>(in millions)</i>	Three Months Ended		Nine Months Ended	
	September 30, 2006	2005	September 30, 2006	2005
Operating Income (Loss):				
Equity earnings in unconsolidated subsidiaries	\$ 48	\$(205)	\$ 178	\$(109)
Compensation expense – SICO Plans	(14)	(63)	(104)	(130)
Compensation expense – C.V. Starr tender offer	–	–	(54)	–
Interest expense	(227)	(131)	(633)	(382)
Unallocated corporate expenses	(95)	(92)	(356)	(287)
Realized capital gains (losses)	(197)	175	(182)	520
Other miscellaneous, net	15	(40)	(20)	(57)
Total Other	\$(470)	\$(356)	\$(1,171)	\$(445)

Other operating loss amounted to \$470 million and \$356 million in the three-month periods ended September 30, 2006 and 2005, respectively, as interest expense increased, primarily reflecting increased borrowings by the parent holding company. The third quarter of 2006 also reflects net realized capital losses, primarily reflecting the effect of hedging activities of the Financial Services and Asset Management segments that do not qualify for hedge accounting treatment under FAS 133, partially offset by a gain in the parent company of \$86 million from the sale of AIG's investment in IPC Holdings, Ltd. These declines were partially offset by increased equity earnings in certain unconsolidated subsidiaries driven primarily by a decrease in catastrophe losses of \$246 million. The third quarter of 2006 also reflects a decrease in compensation expense with respect to the SICO Plans, and income of \$21 million resulting from a change in accounting estimate relating to a favorable resolution of a litigation matter.

Other operating loss amounted to \$1.17 billion and \$445 million in the nine-month periods ended September 30, 2006 and 2005, respectively, as interest expense increased, primarily reflecting increased borrowings by the parent holding company. The first nine months of 2006 also reflects net realized capital losses, as discussed in the preceding paragraph, and an increase in unallocated corporate expenses, reflecting expenses of \$29 million in the first nine months of 2006 relating to certain executive departures (of which approximately \$18 million related to departures in 2005), and an overall increase in corporate operating expenses primarily resulting from on-going efforts to improve internal controls at the parent holding company. Also reflected in operating loss in the first nine months of 2006 is an out of period adjustment totaling \$61 million with respect to the SICO Plans and a one-time charge related to the Starr tender offer of \$54 million, both of which were recorded in the first quarter of 2006. See also Note 4 of Notes to the Consolidated Financial Statements for further discussion. These declines

were partially offset by increased equity earnings in certain unconsolidated subsidiaries, and income of \$21 million resulting from a change in accounting estimate, as discussed in the preceding paragraph.

Capital Resources

At September 30, 2006, AIG had total consolidated shareholders' equity of \$96.15 billion and total consolidated borrowings of \$137.1 billion. At that date, \$122.1 billion of such borrowings were either not guaranteed by AIG or were AIGFP's matched borrowings under obligations of GIAs, liabilities connected to trust preferred stock, or matched notes and bonds payable.

Borrowings

At September 30, 2006, AIG's net borrowings were \$14.98 billion after reflecting amounts that were matched borrowings under AIGFP's obligations of GIAs, matched notes and bonds payable, amounts not guaranteed by AIG and liabilities connected to trust preferred stock. The following table summarizes borrowings outstanding at September 30, 2006 and December 31, 2005:

<i>(in millions)</i>	2006	2005
AIG's net borrowings	\$ 14,982	\$ 10,425
Liabilities connected to trust preferred stock	1,399	1,391
AIG Matched Investment Program		
Matched notes and bonds payable	3,333	—
AIGFP		
GIAs	21,091	20,811
Matched notes and bonds payable	38,184	24,950
Borrowings not guaranteed by AIG	58,133	52,272
Total	\$137,122	\$ 109,849

Borrowings issued or guaranteed by AIG and those borrowings not guaranteed by AIG at September 30, 2006 and December 31, 2005 were as follows:

<i>(in millions)</i>	2006	2005
AIG borrowings:		
Notes and bonds payable	\$ 7,482	\$ 4,607
Loans and mortgages payable	833	814
AIG Matched Investment Program

Total	2,767	1,350
Total borrowings not guaranteed by AIG	58,133	52,272
Total Debt	\$137,122	\$109,849

* Includes borrowings under Export Credit Facility of \$2.7 billion and \$2.6 billion, at September 30, 2006 and December 31, 2005, respectively.

AIG intends to continue its customary practice of issuing debt securities from time to time to meet its financing needs and those of certain of its subsidiaries for general corporate purposes, as well as for a matched investment program. In July 2006, AIG filed and had declared effective a post-effec-

tive amendment to its universal shelf registration statement to sell up to \$25.1 billion of debt securities, preferred and common stock and other securities.

In October 2006, AIG established a medium term note program under its shelf registration statement providing for the issuance of up to \$25.1 billion of AIG debt securities, the proceeds of which may be used by either AIG or AIGFP for general corporate purposes or to fund the MIP. In October 2006, AIG issued under the program \$750 million principal amount of senior notes maturing in 2016 for AIG's general corporate purposes and an aggregate of \$1.0 billion principal amount of senior notes maturing in 2011 to fund the MIP.

On April 20, 2006, AIG sold \$1.0 billion principal amount of senior notes in a Rule 144A/Regulation S offering maturing in 2036, and on September 30, 2005, AIG sold \$1.5 billion principal amount of senior notes in a Rule 144A/Regulation S offering, of which \$500 million matures in 2010 and \$1.0 billion matures in 2015. The proceeds from these offerings were used by AIG for general corporate purposes. In August 2006, AIG completed exchange offers for these notes pursuant to which AIG issued in exchange substantially identical notes that are registered under the Securities Act.

On June 16, 2006, AIG sold \$750 million principal amount of senior, floating rate notes in a Rule 144A offering that matures in 2009. The proceeds of this offering were used to fund the MIP.

AIG has a Euro medium term note program under which an aggregate nominal amount of up to \$10.0 billion of notes may be outstanding at any one time. The program provides that additional notes may be issued to replace matured or redeemed notes. As of September 30, 2006, the equivalent of \$4.4 billion principal amount of notes were outstanding under the program, of which the proceeds from \$2.6 billion of notes were used to fund the MIP. The aggregate amount outstanding includes \$76 million resulting from foreign exchange translation into U.S. dollars, of which \$72 million relates to notes issued by AIG for general corporate purposes and \$4 million relates to notes issued to fund the MIP. AIG has hedged the currency exposure arising from foreign currency denominated notes by economically hedging that exposure, although such hedges do not qualify for hedge accounting treatment under FAS 133. In addition, in October 2006, AIG sold the equivalent of \$218 million under the program, of which \$180 million was used to fund the MIP and \$38 million was used for AIG's general corporate purposes.

In March 2006, AIG borrowed a total of \$1.3 billion on an unsecured basis pursuant to loan agreements with third-party banks, of which \$500 million matures in February 2007 but can be extended by AIG for an additional seven months and \$200 million matures in March 2007; \$600 million was repaid in September 2006.

AIGFP uses the proceeds from the issuance of notes and bonds and GIA borrowings to invest in a diversified portfolio of securities and derivative transactions. The borrowings may also be temporarily invested in securities purchased under agreements to resell. AIG guarantees the obligations of AIGFP under AIGFP's structured notes and bonds and GIA borrowings. Certain of AIGFP's notes contain embedded derivatives that are required to be accounted for separately under FAS 133. Upon AIG's early adoption of FAS 155, AIGFP has elected the fair value option for these instruments. Those notes that are accounted for using the fair value option are reported separately under hybrid financial instrument liabilities. (See also the discussions under "Operating Review: Financial Services Operations," "Liquidity" and "Derivatives" herein.)

On June 16, 2006, AIGFP sold an aggregate of \$2.0 billion principal amount of senior, floating rate notes in Rule 144A offerings, of which \$1.0 billion matures in 2007 and \$1.0 billion matures in 2008. AIGFP has a Euro medium term note program under which an aggregate nominal amount of up to \$10.0 billion of notes may be outstanding at any one time. The program provides that additional notes may be issued to replace matured or redeemed notes. As of September 30, 2006, \$5.39 billion of notes were outstanding under the program, including \$283 million resulting from foreign exchange translation into U.S. dollars. Notes issued under this program are included in Notes and Bonds Payable in the preceding table of borrowings.

AIG Funding, Inc. (AIG Funding), through the issuance of commercial paper, helps fulfill the short-term cash requirements of AIG and its subsidiaries. AIG Funding intends to continue to meet AIG's funding requirements through the issuance of commercial paper guaranteed by AIG. The issuance of AIG Funding's commercial paper is subject to the approval of AIG's Board of Directors.

AIG and AIG Funding are parties to unsecured syndicated revolving credit facilities, which as of September 30, 2006, aggregated to \$3.25 billion, consisting of \$1.625 billion in a 364-day facility that expires in July of 2007 and \$1.625 billion in a five-year facility that expires in July of 2011. The 364-day facility allows for the conversion by AIG of any outstanding loans at expiration into one-year term loans. The facilities can be used for general corporate purposes and also to provide backup for AIG's commercial paper programs administered by AIG Funding. AIG expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings outstanding under these facilities, nor were any borrowings outstanding as of September 30, 2006.

In November 2005, AIG and AIG Funding entered into a 364-day revolving credit facility for an aggregate amount of \$3 billion, which can be drawn in the form of loans or letters of credit. The credit facility expires in November 2006 but

allows for the issuance of letters of credit with terms of up to ten years and provides for the conversion by AIG of any outstanding loans at expiration into one-year term loans. The facility can be used for general corporate purposes, including providing backup for AIG's commercial paper programs administered by AIG Funding and obtaining letters of credit to secure obligations under insurance and reinsurance transactions. There are currently no loans outstanding under the facility, nor were any loans outstanding as of September 30, 2006. As of such dates, \$511 million was available to be drawn under the facility, with the remainder having been drawn in the form of letters of credit.

AIG is also a party to an unsecured 364-day inter-company revolving credit facility provided by certain of its subsidiaries aggregating \$2 billion that expires in October of 2007. The facility allows for the conversion of any outstanding loans at expiration into one-year term loans. The facility can be used for general corporate purposes and also to provide backup for AIG's commercial paper programs. AIG expects to replace or extend this credit facility on or prior to its expiration. There are currently no borrowings outstanding under the inter-company facility, nor were any borrowings outstanding as of September 30, 2006.

ILFC fulfills its short term cash requirements through operating cash flows and the issuance of commercial paper. The issuance of commercial paper is subject to the approval of ILFC's Board of Directors and is not guaranteed by AIG. ILFC is a party to unsecured syndicated revolving credit facilities aggregating \$6.0 billion at September 30, 2006. The facilities can be used for general corporate purposes and also to provide backup for ILFC's commercial paper program. They consist of \$2.0 billion in a 364-day revolving credit facility that expires in October 2006, with a one-year term out option, \$2.0 billion in a five-year revolving credit facility that expires in October 2009 and \$2.0 billion in a five-year revolving credit facility that expires in October 2010. Subsequent to September 30, 2006, ILFC replaced the \$2.0 billion 364-day facility with a five-year, \$2.5 billion facility expiring in October 2011. ILFC expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings under these facilities, nor were any borrowings outstanding as of September 30, 2006.

As a well-known seasoned issuer, ILFC has filed an automatic shelf registration statement with the SEC allowing ILFC immediate access to the U.S. public debt markets. For the nine months ended September 30, 2006, \$1.2 billion of debt securities were issued under this registration statement and \$5.8 billion were issued under a prior registration statement. In addition, ILFC has a Euro medium term note program for \$7.0 billion, under which \$4.28 billion in notes were sold through September 30, 2006. Notes issued under the Euro medium term note program are included in Notes and bonds payable in the preceding table of borrowings. The foreign exchange adjustment for the foreign currency denom-

inated debt was \$534 million at September 30, 2006 and \$197 million at December 31, 2005. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging the portion of the note exposure not already offset by Euro denominated operating lease payments, although such hedges do not qualify for hedge accounting treatment under FAS 133.

ILFC had a \$4.3 billion Export Credit Facility for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At September 30, 2006, ILFC had \$1.0 billion outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured Export Credit Facility for up to a maximum of \$2.64 billion for Airbus aircraft to be delivered through May 31, 2005. The facility was subsequently increased to \$3.64 billion and extended to include aircraft to be delivered through May 31, 2007. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a six-month forward-looking calendar, and the interest rate is determined through a bid process. At September 30, 2006, ILFC had \$1.7 billion outstanding under this facility. Borrowings with respect to these facilities are included in Notes and Bonds Payable in the preceding table of borrowings.

In December of 2005, ILFC entered into two tranches of junior subordinated debentures totaling \$1.0 billion. Both mature on December 21, 2065, but each tranche has a different call option. The \$600 million tranche has a call date of December 21, 2010 and the \$400 million tranche has a call date of December 21, 2015. The debenture with the 2010 call date has a fixed interest rate of 5.90 percent for the first five years. The debenture with the 2015 call date has a fixed interest rate of 6.25 percent for the first ten years. Both tranches have interest rate adjustments if the call option is not exercised. If the call option is not exercised, the new interest rate will be a floating quarterly reset rate based on the initial credit spread plus the highest of (i) 3 month LIBOR, (ii) 10-year constant maturity treasury and (iii) 30-year constant maturity treasury.

The proceeds of ILFC's debt financing are primarily used to purchase flight equipment, including progress payments during the construction phase. The primary sources for the repayment of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. AIG does not guarantee the debt obligations of ILFC.

(See also the discussions under “Operating Review: Financial Services Operations” and “Liquidity” herein.)

AGF fulfills its short term cash requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of AGF’s Board of Directors and is not guaranteed by AIG. AGF is a party to unsecured syndicated revolving committed credit facilities aggregating \$4.25 billion, including a \$2.125 billion 364-day revolving credit facility that expires in July of 2007 and a \$2.125 billion five-year revolving credit facility that expires in July of 2010. The 364-day facility allows for the conversion by AGF of any outstanding loans at expiration into a one-year term loan. The facilities can be used for general corporate purposes and also to provide backup for AGF’s commercial paper programs. AGF expects to replace or extend these credit facilities on or prior to their expiration. There are currently no borrowings under these AGF facilities, nor were any borrowings outstanding as of September 30, 2006.

AGF issued \$5.44 billion during 2005 and \$1.76 billion in the first nine months of 2006 of fixed rate and variable rate medium term notes ranging in maturities from two to ten years. As of September 30, 2006, notes aggregating \$17.48 billion were outstanding with maturity dates ranging from 2006 to 2016 at interest rates ranging from 1.94 percent

to 7.50 percent. To the extent deemed appropriate, AGF may enter into swap transactions to manage its effective borrowing with respect to these notes. As a well-known seasoned issuer, AGF has filed an automatic shelf registration statement with the SEC allowing AGF immediate access to the U.S. public debt markets.

AGF’s other funding sources include private placement debt, retail note issuances, securitizations of finance receivables that AGF accounts for as on-balance-sheet secured financings and bank financings. In addition, AGF has become an established issuer of long-term debt in the international capital markets.

In addition to debt refinancing activities, proceeds from the collection of finance receivables may be used to pay the principal and interest on AGF’s debt. AIG does not guarantee any of the debt obligations of AGF. See also the discussion under “Operating Review — Financial Services Operations” and “Liquidity” herein.

AIG Credit Card Company (Taiwan) and AIG Finance (Taiwan) Limited, both consumer finance businesses in Taiwan, have issued commercial paper for the funding of their own operations. AIG did not guarantee the commercial paper issued by either of these subsidiaries.

Contractual Obligations and Other Commercial Commitments

The maturity schedule of AIG’s contractual obligations at September 30, 2006 was as follows:

(in millions)

	Total Payments	Payments due by Period			
		Less Than One Year	1-3 Years	3+ ⁵ Years	Over Five Years
Borrowings ^(a)	\$121,937	\$28,800	\$ 28,763	\$26,120	\$ 38,254
Interest payments on borrowings	45,021	4,133	8,351	5,988	26,549
Loss reserves ^(b)	79,863	21,962	24,358	11,580	21,963
Insurance and investment contract liabilities ^(c)	633,884	18,756	53,186	48,687	513,255
Aircraft purchase commitments	19,213	983	10,143	4,833	3,254
Total	\$899,918	\$74,634	\$124,801	\$97,208	\$603,275

(a) Excludes commercial paper and obligations included as debt pursuant to FIN 46(R) and includes hybrid financial instrument liabilities recorded at fair value.

(b) Represents future loss and loss adjustment expense payments estimated based on historical loss development payment patterns.

(c) Insurance and investment contract liabilities include various investment-type products with contractually scheduled maturities including periodic payments of a term certain nature and guaranteed maturities under guaranteed investment contracts. Insurance and investment contract liabilities also include benefit and claim liabilities, of which a significant portion represents policies and contracts that do not have stated contractual maturity dates and may not result in any future payment obligations. For these policies and contracts (i) AIG is currently not making payments until the occurrence of an insurable event, such as death or disability, (ii) payments are conditional on survivorship, or (iii) the occurrence of a payment due to a surrender or other non-scheduled event out of AIG’s control. AIG has made significant assumptions to determine the estimated undiscounted cash flows of these contractual policy benefits which include mortality, morbidity, future lapse rates, expenses, investment returns and interest crediting rates, offset by expected future deposits and premium on in-force policies. Due to the significance of the assumptions used, the amounts presented could be materially different from actual required payments. The amounts presented in this table are undiscounted and therefore exceed the future policy benefits and policyholder contract deposits included in the balance sheet.

The maturity schedule of AIG's other commercial commitments by segment at September 30, 2006 was as follows:*(in millions)*

	Total Amounts Committed	Amount of Commitment Expiration			
		Less Than One Year	1-3 Years	3+5 Years	Over Five Years
Letters of credit:					
Life Insurance & Retirement Services	\$ 185	\$ 31	\$ 1	\$ 23	\$ 130
Parent Company ^(b)	540	426	1	113	–
DBG	183	183	–	–	–
Standby letters of credit:					
Capital Markets	1,749	1,457	77	42	173
Guarantees:					
Life Insurance & Retirement Services ^(a)	2,140	112	419	7	1,602
Aircraft Finance	170	–	–	52	118
Asset Management	252	23	59	–	170
Other commercial commitments ^(c) :					
Capital Markets ^(d)	14,585	4,414	1,515	2,616	6,040
Aircraft Finance ^(e)	797	–	–	183	614
Life Insurance & Retirement Services ^(f)	4,281	1,008	1,306	1,080	887
Asset Management	1,193	934	176	47	36
Life Settlement	252	–	252	–	–
DBG ^(g)	873	245	188	440	–
Parent Company	200	58	118	24	–
Total	\$ 27,400	\$ 8,891	\$ 4,112	\$ 4,627	\$ 9,770

(a) Primarily AIG SunAmerica construction guarantees connected to affordable housing investments.

(b) Represents reimbursement obligations under letters of credit issued by commercial banks.

(c) Excludes commitments with respect to pension plans. The annual pension contribution for 2006 is expected to be approximately \$70 million for U.S. and non-U.S. Plans.

(d) Primarily liquidity facilities provided in connection with certain municipal swap transactions and collateralized bond obligations.

(e) Primarily in connection with options to acquire aircraft.

(f) Primarily AIG SunAmerica commitments to invest in partnerships.

(g) Primarily commitments to invest in limited partnerships.

“Rating triggers” have been defined by one independent rating agency to include clauses or agreements the outcome of which depends upon the level of ratings maintained by one or more rating agencies. Rating triggers generally relate to events which (i) could result in the termination or limitation of credit availability, or require accelerated repayment, (ii) could result in the termination of business contracts or (iii) could require a company to post collateral for the benefit of counterparties.

AIG believes that any of its or its subsidiaries’ contractual obligations that are subject to “ratings triggers” or financial covenants relating to “ratings triggers” would not have a material adverse effect on its financial condition or liquidity.

As a result of the downgrades of AIG’s long-term senior debt ratings, AIG was required to post approximately \$1.16 billion of collateral with counterparties to municipal guaranteed investment agreements and financial derivatives transactions. In

the event of a further downgrade, AIG will be required to post additional collateral. It is estimated that, as of the close of business on October 31, 2006 based on AIG’s outstanding municipal guaranteed investment agreements and financial derivatives transactions as of such date, a further downgrade of AIG’s long-term senior debt ratings to ‘Aa3’ by Moody’s or ‘AA-’ by S&P would permit counterparties to call for approximately \$1.1 billion of additional collateral. Further, additional downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIG manages its liquidity. The actual amount of additional collateral that AIG would be required to post to counterparties in the event of such downgrades depends on market conditions, the market value of the outstanding affected transactions and other factors prevailing at the time of the downgrade. Any additional obligations to post collateral will increase the demand on AIG’s liquidity.

Shareholders' Equity

AIG's consolidated shareholders' equity increased during the first nine months of 2006 and twelve months of 2005 as follows:

<i>(in millions)</i>	September 30, 2006	December 31, 2005
Beginning of year	\$86,317	\$79,673
Net income	10,609	10,477
Unrealized appreciation (depreciation) of investments, net of taxes	(852)	(1,978)
Cumulative translation adjustment, net of taxes	623	(540)
Dividends to shareholders	(1,260)	(1,615)
Other*	717	300
End of period	\$96,154	\$86,317

* Reflects the effects of employee stock transactions and in 2006 also reflects the cumulative effect of accounting changes.

(See also the discussion under "Operating Review" and "Liquidity" herein and the Consolidated Statement of Comprehensive Income.)

AIG has in the past reinvested most of its unrestricted earnings in its operations and believes such continued reinvestment in the future will be adequate to meet any foreseeable capital needs. However, AIG may choose from time to time to raise additional funds through the issuance of additional securities.

Stock Purchase

During 2006, AIG did not purchase any shares of its common stock under its existing share repurchase authorization. AIG from time to time may buy shares of its common stock in the open market for general corporate purposes, including to satisfy its obligations under various employee benefit plans. At September 30, 2006, an additional 36,542,700 shares could be purchased under the then current authorization by AIG's Board of Directors.

Dividends from Insurance Subsidiaries

Payments of dividends to AIG by its insurance subsidiaries are subject to certain restrictions imposed by regulatory authorities. With respect to AIG's domestic insurance subsidiaries, the payment of any dividend requires formal notice to the insurance department in which the particular insurance subsidiary is domiciled. Under the laws of many states, an insurer may pay a dividend without prior approval of the insurance regulator when the amount of the dividend is below certain regulatory thresholds. To enhance their current capital positions, dividends from the DBG companies were suspended in the fourth quarter of 2005, and AIG has taken various other actions. See "Regulation and Supervision" below. Furthermore, AIG cannot predict how recent regulatory investigations may affect the ability of its regulated subsidiaries to pay dividends.

With respect to AIG's foreign insurance subsidiaries, the most significant insurance regulatory jurisdictions include Bermuda, Japan, Hong Kong, Taiwan, the United Kingdom, Thailand and Singapore.

AIG cannot predict whether the regulatory investigations currently underway or future regulatory issues will impair AIG's financial condition, results of operations or liquidity. To AIG's knowledge, no AIG company is currently on any regulatory or similar "watch list" with regard to solvency. (See also the discussion under "Liquidity" herein.)

Regulation and Supervision

AIG's insurance subsidiaries, in common with other insurers, are subject to regulation and supervision by the states and jurisdictions in which they do business. In the U.S. the National Association of Insurance Commissioners (NAIC) has developed Risk-Based Capital (RBC) requirements. RBC relates an individual insurance company's statutory surplus to the risk inherent in its overall operations.

AIG's insurance subsidiaries file financial statements prepared in accordance with statutory accounting practices prescribed or permitted by domestic and foreign insurance regulatory authorities. The principal differences between statutory financial statements and financial statements prepared in accordance with U.S. GAAP for domestic companies are that statutory financial statements do not reflect deferred policy acquisition costs, some bond portfolios may be carried at amortized cost, assets and liabilities are presented net of reinsurance, policyholder liabilities are valued using more conservative assumptions and certain assets are non-admitted.

In connection with the filing of the 2005 statutory financial statements for AIG's domestic General Insurance companies, AIG agreed with the relevant state insurance regulators on the statutory accounting treatment of various items. The regulatory authorities have also permitted certain of the domestic and foreign insurance subsidiaries to support the carrying value of their investments in certain non-insurance and foreign insurance subsidiaries by utilizing the AIG audited consolidated financial statements to satisfy the requirement that the U.S. GAAP-basis equity of such entities be audited. In addition, the regulatory authorities have permitted the domestic General Insurance companies to utilize audited financial statements prepared on a basis of accounting other than

U.S. GAAP to value investments in joint ventures, limited partnerships and hedge funds. These permitted practices did not affect the domestic General Insurance companies' compliance with minimum regulatory capital requirements.

Statutory capital of each company continued to exceed minimum company action level requirements following the adjustments, but AIG nonetheless contributed an additional \$750 million of capital into American Home effective September 30, 2005 and contributed a further \$2.25 billion of capital in February 2006 for a total of approximately \$3 billion of capital into Domestic General Insurance subsidiaries effective December 31, 2005. To enhance their current capital positions, dividends from the DBG companies were suspended in the fourth quarter of 2005. AIG believes it has the capital resources and liquidity to fund any necessary statutory capital contributions. AIG will review the capital position of its insurance company subsidiaries with various rating agencies and regulators to determine if additional capital contributions or other actions are warranted.

As discussed above, various regulators have commenced investigations into certain insurance business practices. In addition, the OTS and other regulators routinely conduct examinations of AIG and its subsidiaries, including AIG's consumer finance operations. AIG cannot predict the ultimate effect that these investigations and examinations, or any additional regulation arising therefrom, might have on its business. Federal, state or local legislation may affect AIG's ability to operate and expand its various financial services businesses, and changes in the current laws, regulations or interpretations thereof may have a material adverse effect on these businesses. See "Risk Factors — Regulatory Investigations" in Item 1A. of Part I of AIG's 2005 Annual Report on Form 10-K for a further discussion of the effect these investigations may have on AIG's businesses.

AIG's U.S. operations are negatively affected under guarantee fund assessment laws which exist in most states. As a result of operating in a state which has guarantee fund assessment laws, a solvent insurance company may be assessed for certain obligations arising from the insolvencies of other insurance companies which operated in that state. AIG generally records these assessments upon notice. Additionally, certain states permit at least a portion of the assessed amount to be used as a credit against a company's future premium tax liabilities. Therefore, the ultimate net assessment cannot reasonably be estimated. The guarantee fund assessments net of credits for the first nine months of 2006 were \$74 million.

AIG is also required to participate in various involuntary pools (principally workers compensation business) which provide insurance coverage for those not able to obtain such coverage in the voluntary markets. This participation is also recorded upon notification, as these amounts cannot reasonably be estimated.

A substantial portion of AIG's General Insurance business and a majority of its Life Insurance & Retirement Services business are conducted in foreign countries. The degree of regulation and supervision in foreign jurisdictions varies. Generally, AIG, as well as the underwriting companies operating in such jurisdictions, must satisfy local regulatory requirements. Licenses issued by foreign authorities to AIG subsidiaries are subject to modification and revocation. Thus, AIG's insurance subsidiaries could be prevented from conducting future business in certain of the jurisdictions where they currently operate. AIG's international operations include operations in various developing nations. Both current and future foreign operations could be adversely affected by unfavorable political developments up to and including nationalization of AIG's operations without compensation. Adverse effects resulting from any one country may affect AIG's results of operations, liquidity and financial condition depending on the magnitude of the event and AIG's net financial exposure at that time in that country.

Foreign operations are individually subject to local solvency margin requirements that require maintenance of adequate capitalization, which AIG complies with by country. In addition, certain foreign locations, notably Japan, have established regulations that can result in guarantee fund assessments. These have not had a material effect on AIG's financial condition or results of operations.

Liquidity

AIG's liquidity is primarily derived from the operating cash flows of its General and Life Insurance & Retirement Services operations. Management believes that AIG's liquid assets, its net cash provided by operations, and access to the capital markets will enable it to meet any anticipated cash requirements.

At September 30, 2006, AIG's consolidated invested assets included \$24.14 billion of cash and short-term investments. Consolidated net cash provided by operating activities in the first nine months of 2006 amounted to \$6.0 billion.

During the second quarter of 2006, AIG began presenting cash flows related to the origination and sale of finance receivables held for sale as cash flows within operating activities in the Consolidated Statement of Cash Flows. Previously these amounts were presented as cash flows within investing activities. In addition, certain intercompany transactions included in Finance receivables held for sale — originations and purchases and Finance receivable principal payments received in the Consolidated Statement of Cash Flows were not eliminated in 2005. After evaluating the effect of these items during the second quarter of 2006, AIG has revised the 2005 presentation to conform to the 2006 presentation. See Note 11 of Notes to the Consolidated Financial Statements.

The liquidity of the combined insurance operations is derived both domestically and abroad. The combined insurance operating cash flow is derived from two sources, underwriting operations and investment operations. Cash flow includes periodic premium collections, including policyholders' contract deposits, cash flows from investment operations and paid loss recoveries less reinsurance premiums, losses, benefits, and acquisition and operating expenses. Generally, there is a time lag from when premiums are collected and, when as a result of the occurrence of events specified in the policy, the losses and benefits are paid. Investment income cash flow is primarily derived from interest and dividends received and includes realized capital gains net of realized capital losses. (See also the discussions under "Operating Review: General Insurance Operations" and "Life Insurance & Retirement Services Operations" herein.)

With respect to General Insurance operations, if paid losses accelerated beyond AIG's ability to fund such paid losses from current operating cash flows, AIG might need to liquidate a portion of its General Insurance investment portfolio and/or arrange for financing. Potential events causing such a liquidity strain could be the result of several significant catastrophic events occurring in a relatively short period of time. Additional strain on liquidity could occur if the investments sold to fund such paid losses were sold into a depressed market place and/or reinsurance recoverable on such paid losses became uncollectible or collateral supporting such reinsurance recoverable significantly decreased in value. (See also the discussions under "Operating Review: General Insurance Operations" herein.)

With respect to Life Insurance & Retirement Services operations, if a substantial portion of the Life Insurance & Retirement Services operations bond portfolio diminished significantly in value and/or defaulted, AIG might need to liquidate other portions of its Life Insurance & Retirement Services investment portfolio and/or arrange financing. Potential events causing such a liquidity strain could be the result of economic collapse of a nation or region in which Life Insurance & Retirement Services operations exist, nationalization, terrorist acts, or other such economic or political upheaval. In addition, a significant rise in interest rates leading to a significant increase in policyholder surrenders could also create a liquidity strain. (See also the discussions under "Operating Review: Life Insurance & Retirement Services Operations" herein.)

In addition to the combined insurance pretax operating cash flow, AIG's insurance operations held \$12.75 billion in cash and short-term investments at September 30, 2006. Operating cash flow and the cash and short-term balances held provided AIG's insurance operations with a significant amount of liquidity. AIG subsidiaries have also issued debt securities to meet capital needs. In December 2005, Transatlantic issued \$750 million of debt securities in a public offering, of which \$450 million were purchased by other AIG

subsidiaries. Transatlantic contributed the proceeds of the offering to a reinsurance company subsidiary.

This liquidity is available, among other things, to purchase predominately high quality and diversified fixed income securities and, to a lesser extent, marketable equity securities, and to provide mortgage loans on real estate, policy loans and collateral loans. This cash flow coupled with proceeds of approximately \$91 billion from the maturities, sales and redemptions of fixed income securities and from the sale of equity securities was used to purchase approximately \$110 billion of fixed income securities and marketable equity securities during the first nine months of 2006.

AIG's major Financial Services operating subsidiaries consist of AIGFP, ILFC, AGF, AIGCFG and AI Credit. Sources of funds considered in meeting the liquidity needs of AIGFP's operations include guaranteed investment agreements, issuance of long-term and short-term debt, proceeds from maturities and sales of securities available for sale, securities sold under repurchase agreements, and securities and spot commodities sold but not yet purchased. ILFC, AGF, AIGCFG and AI Credit all utilize the commercial paper markets, retail and wholesale deposits, bank loans and bank credit facilities as sources of liquidity. ILFC and AGF also fund in the domestic and international capital markets without reliance on any guarantee from AIG. An additional source of liquidity for ILFC is the use of export credit facilities. AIGCFG also uses wholesale and retail bank deposits as sources of funds. On occasion, AIG has provided equity capital to ILFC, AGF and AIGCFG and provides intercompany loans to AIGCFG. An AIG subsidiary purchased additional shares of ILFC in the amount of \$400 million during the third quarter of 2005. Cash flow provided from operations is a major source of liquidity for AIG's primary Financial Services operating subsidiaries.

AIG, the parent company, funds its short-term working capital needs through commercial paper issued by AIG Funding. As of September 30, 2006, AIG Funding had \$4.48 billion of commercial paper outstanding with an average maturity of 27 days. As additional liquidity, AIG parent has a \$2 billion inter-company revolving credit facility provided by certain of its subsidiaries, a \$1.625 billion 364-day revolving bank credit facility that expires in July 2007, a \$1.625 billion five year revolving bank credit facility that expires in July 2011 and a \$3 billion 364-day revolving credit facility that expires in November 2006, of which \$511 million is currently available as back-up liquidity. AIG parent's primary sources of cash flow are dividends and loans from its subsidiaries. AIG parent's primary uses of cash flow are for debt service, capital contributions to subsidiaries and the payment of dividends to shareholders. On November 9, 2006, AIG intends to redeem its Zero Coupon Convertible Senior Debentures that were issued on November 9, 2001. The aggregate redemption price payable by AIG is approximately \$1.07 billion. See also Note 9 of Notes to Consolidated Fi-

financial Statements in AIG's 2005 Annual Report on Form 10-K/A for additional information on debt maturities for AIG and its subsidiaries.

Special Purpose Vehicles and Off Balance Sheet Arrangements

AIG uses special purpose vehicles (SPVs) and off balance sheet arrangements in the ordinary course of business. As a result of recent changes in accounting, a number of SPVs and off balance sheet arrangements have been reflected in AIG's consolidated financial statements. In January 2003, FASB issued Interpretation No. 46, "Consolidation of Variable Interest Entities" (FIN 46). FIN 46 addressed the consolidation and disclosure rules for nonoperating entities that are now defined as Variable Interest Entities (VIEs). In December 2003, FASB issued a revision to Interpretation No. 46 (FIN 46(R)).

AIG has guidelines with respect to the formation of and investment in SPVs and off balance sheet arrangements. In addition, AIG has expanded the responsibility of its Complex Structured Financial Transaction Committee (CSFT) to include the review of any transaction that could subject AIG to heightened legal, reputational, regulatory, accounting or other risk. See "Management's Report on Internal Control Over Financial Reporting" in Item 9A. of Part II included in AIG's 2005 Annual Report on Form 10-K for a further discussion of the CSFT.

For additional information related to AIG's activities with respect to VIEs and certain guarantees see "Recent Accounting Standards" herein and also Note 8 of Notes to Consolidated Financial Statements. Also, for additional disclosure regarding AIG's commercial commitments (including guarantors), see "Contractual Obligations and Other Commercial Commitments" herein.

Derivatives

Derivatives are financial instruments among two or more parties with returns linked to or "derived" from some underlying equity, debt, commodity or other asset, liability, or index. Derivatives payments may be based on interest rates and exchange rates and/or prices of certain securities, commodities, financial or commodity indices, or other variables. The more significant types of derivative arrangements in which AIG transacts are swaps, forwards, futures and options. In the normal course of business, with the agreement of the original counterparty, these contracts may be terminated early or assigned to another counterparty.

The overwhelming majority of AIG's derivatives activities are conducted by the Capital Markets operations, thus permitting AIG to participate in the derivatives dealer market acting primarily as principal. In these derivative operations, AIG structures transactions that generally allow its counterparties to obtain or hedge exposure to changes in

interest and foreign currency exchange rates, credit events, securities' prices and certain commodities and financial or commodity indices. AIG's customers – such as corporations, financial institutions, multinational organizations, sovereign entities, government agencies and municipalities – use derivatives to hedge their own market exposures. For example, a futures, forward or option contract can be used to protect the customers' assets or liabilities against price fluctuations.

A counterparty may default on any obligation to AIG, including a derivative contract. Credit risk is a consequence of extending credit and/or carrying trading and investment positions. Credit risk exists for a derivative contract when that contract has a positive fair value to AIG. To help manage this risk, AIGFP's credit department operates within the guidelines set by the AIG Credit Risk Committee. This committee establishes the credit policy, sets limits for counterparties and provides limits for derivative transactions with counterparties having different credit ratings. In addition to credit ratings, this committee takes into account other factors, including the industry and country of the counterparty. Transactions which fall outside these pre-established guidelines require the specific approval of the AIG Credit Risk Committee. It is also AIG's policy to establish reserves for potential credit impairment when necessary.

In addition, AIGFP utilizes various credit enhancements, including letters of credit, guarantees, collateral, credit triggers, credit derivatives, and margin agreements to reduce the credit risk relating to its outstanding financial derivative transactions. AIGFP requires credit enhancements in connection with specific transactions based on, among other things, the creditworthiness of the counterparties, and the transaction's size and maturity.

AIG's Derivatives Review Committee provides an independent review of any proposed derivative transaction or program except those derivative transactions entered into by AIGFP with third parties. The committee examines, among other things, the nature and purpose of the derivative transaction, its potential credit exposure, if any, and the estimated benefits.

Managing Risk

Market Risk

Market risk is the risk of loss of fair value resulting from adverse fluctuations in interest rates, foreign currencies, equities and commodity prices. AIG has exposures to these risks.

AIG analyzes market risk using various statistical techniques including Value at Risk (VaR). VaR is a summary statistical measure that applies the estimated volatility and correlation of market factors to AIG's market positions. The output from the VaR calculation is the maximum loss that could occur over a defined period of time given a certain probability. While VaR models are relatively sophisticated, the quantitative market risk information generated is limited by the assumptions and parameters established in creating the related models. AIG believes that statistical models alone do

not provide a reliable method of monitoring and controlling market risk. Therefore, such models are tools and do not substitute for the experience or judgment of senior management.

Insurance

AIG has performed a separate VaR analysis for the General Insurance and Life Insurance & Retirement Services segments and for each market risk within each segment. For purposes of the VaR calculation, the insurance assets and liabilities from GICs are included in the Life Insurance & Retirement Services segment. For the calculations in the analyses the financial instrument assets included are the insurance segments' invested assets, excluding real estate and investment income due and accrued, and the financial instrument liabilities included are reserve for losses and loss expenses, unearned premiums, future policy benefits for life and accident and health insurance contracts and other policyholders' funds.

The following table presents the period-end, average, high and low VaRs on a combined basis and of each component of market risk for each of AIG's insurance segments as of September 30, 2006 and December 31, 2005. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

<i>(in millions)</i>	2006				2005*			
	As of September 30,	For the nine months ended September 30,			As of December 31,	For the year ended December 31,		
		Average	High	Low		Average	High	Low
General Insurance:								
Market risk:								
Combined	\$1,703	\$1,692	\$1,776	\$1,617	\$1,617	\$1,585	\$1,672	\$1,396
Interest rate	1,566	1,659	1,717	1,566	1,717	1,746	1,931	1,563
Currency	200	150	200	119	130	125	139	111
Equity	535	546	560	535	535	651	727	535
Life Insurance & Retirement Services:								
Market risk:								
Combined	\$4,469	\$4,794	\$5,276	\$4,442	\$4,515	\$4,737	\$5,024	\$4,515
Interest rate	4,218	4,619	5,032	4,218	4,382	4,488	4,750	4,382
Currency	580	548	597	475	541	511	560	442
Equity	1,312	1,222	1,312	1,143	762	953	1,024	762

* The calculations of Equity VaR for the Life Insurance & Retirement Services segment shown above for all 2006 periods include structured exposures and exposures related to equity-linked guarantees on variable annuity products. These exposures are not included in the Equity VaR calculations for the 2005 periods.

In the Life Insurance & Retirement Services segment, the Combined VaR is near the low point in the range for 2006 and is similar to the Combined VaR at the end of 2005. The Equity VaR increase during 2006 did not cause a corresponding increase in Combined VaR due to both diversification effects and to declines in interest rate volatilities, which reduced Interest Rate VaR during 2006.

Financial Services

AIG generally manages its market exposures within Financial Services by maintaining offsetting positions. Capital Markets seeks to minimize or set limits for open or uncovered market positions. Credit exposure is managed separately. (See the discussion on the management of credit risk above.)

AIG's Market Risk Management Department provides detailed independent review of AIG's market exposures, par-

AIG calculated the VaR with respect to the net fair value of each of AIG's insurance segments as of September 30, 2006 and December 31, 2005. The VaR number represents the maximum potential loss as of those dates that could be incurred with a 95 percent confidence (i.e., only five percent of historical scenarios show losses greater than the VaR figure) within a one-month holding period. AIG uses the historical simulation methodology that entails repricing all assets and liabilities under explicit changes in market rates within a specific historical time period. AIG uses the most recent three years of historical market information for interest rates, foreign exchange rates, and equity index prices. For each scenario, each transaction was repriced. Portfolio, business unit and finally AIG-wide scenario values are then calculated by netting the values of all the underlying assets and liabilities.

ticularly those market exposures of the Capital Markets operations. This department determines whether AIG's market risks, as well as those market risks of individual subsidiaries, are within the parameters established by AIG's senior management. Well established market risk management techniques such as sensitivity analysis are used. Additionally, this department verifies that specific market risks of each of certain subsidiaries are managed and hedged by that subsidiary.

ILFC is exposed to market risk and the risk of loss of fair value and possible liquidity strain resulting from adverse fluctuations in interest rates. As of September 30, 2006 and December 31, 2005, AIG statistically measured the loss of fair value through the application of a VaR model. In this analysis, the net fair value of Aircraft Finance operations was determined using the financial instrument assets which included the tax adjusted future flight equipment lease revenue, and the financial instrument liabilities which included the

future servicing of the current debt. The estimated effect of the current derivative positions was also taken into account.

AIG calculated the VaR with respect to the net fair value of Aircraft Finance operations using the historical simulation methodology, as previously described. As of September 30, 2006 and December 31, 2005, the average VaR with respect to the net fair value of Aircraft Finance operations was approximately \$165 million and \$129 million, respectively. In late 2005, ILFC lengthened the average maturity of its debt, leading to an increase in its VaR.

Capital Markets operations are exposed to market risk due to changes in the level and volatility of interest rates, foreign currency exchange rates, equity prices and commodity prices. AIGFP hedges its exposure to these risks primarily through swaps, options, forwards and futures. To economically hedge interest rate risks, AIGFP may also purchase U.S. and foreign government obligations.

AIGFP does not seek to manage the market risk of each transaction through an individual third party offsetting transaction. Rather, AIGFP takes a portfolio approach to the management of its market risk exposures. AIGFP values the predominant portion of its market-sensitive transactions by marking them to market currently through income. A smaller portion is priced by estimated fair value based upon an extrapolation of market factors. There is another limited portion of transactions where the initial fair value is not recorded through income currently and gains or losses are recognized over the life of the transactions. These valuations represent an assessment of the present values of expected future cash flows and may include reserves for such risks as are deemed appropriate by AIGFP and AIG management.

The recorded values of these transactions may be different from the values that might be realized if AIGFP were required to sell or close out the transactions prior to maturity. AIG believes that such differences are not significant to its financial condition or liquidity. Such differences would be immediately recognized in income when the transactions are sold or closed out prior to maturity.

AIGFP attempts to secure reliable and independent current market prices, such as published exchange prices, external subscription services such as from Bloomberg or Reuters or third-party broker quotes for use in this model. When such prices are not available, AIGFP use an internal methodology which includes extrapolation from observable and verifiable prices nearest to the measurement date of the reporting period. Historically, actual results have not materially deviated from these models in any material respect.

Systems used by Capital Markets operations can monitor each unit's respective market positions on an intraday basis. AIGFP operates in major business centers overseas and therefore is open for business essentially 24 hours a day. Thus, the market exposure and offset strategies are regularly monitored, reviewed and coordinated.

AIGFP applies various testing techniques which reflect significant potential market movements in interest rates, foreign exchange rates, commodity and equity prices, volatility levels and the effect of time. These techniques vary by currency and are regularly changed to reflect factors affecting the derivatives portfolio. The results from these analyses are regularly reviewed by AIG management.

As described above, Capital Markets operations are exposed to the risk of loss of fair value from adverse fluctuations in interest rate and foreign currency exchange rates and equity and commodity prices as well as implied volatilities thereon. AIG statistically measures the losses of fair value through the application of a VaR model across Capital Markets.

Capital Markets asset and liability portfolios for which the VaR analyses were performed included over the counter and exchange traded investments, derivative instruments and commodities. Because the market risk with respect to securities available for sale, at market, is substantially hedged, segregation of market sensitive instruments into trading and other than trading was not deemed necessary. The VaR calculation is unaffected by the accounting treatment of hedged transactions under FAS 133.

In the calculation of VaR for Capital Markets operations, AIG uses the same historical simulation methodology, described under Insurance above, which entails repricing all assets and liabilities under explicit changes in market rates within a specific historical time period.

The following table presents the VaR on a combined basis and of each component of market risk for Capital Markets operations as of September 30, 2006 and December 31, 2005. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

<i>(in millions)</i>	2006	2005
Combined	\$19	\$22
Interest rate	9	9
Currency	7	3
Equity	15	14
Commodity	14	9

The following table presents the average, high and low VaRs on a combined basis and of each component of market risk for Capital Markets operations as of September 30, 2006 and December 31, 2005. Due to diversification effects, the combined VaR is always smaller than the sum of its components.

(in millions)	2006			2005		
	Average	High	Low	Average	High	Low
Combined	\$20	\$22	\$19	\$17	\$22	\$13
Interest rate	8	9	7	9	11	6
Currency	6	9	3	4	6	3
Equity	14	15	12	9	16	5
Commodity	12	16	9	8	10	7

Catastrophe Exposures

The nature of AIG's business exposes it to various catastrophic events in which multiple losses across multiple lines of business can occur in any calendar year. In order to control this exposure, AIG uses a combination of techniques, including setting aggregate limits in key business units, monitoring and modeling accumulated exposures, and purchasing catastrophe reinsurance to supplement its other reinsurance protections.

AIG evaluates catastrophic events and assesses the probability of occurrence and magnitude of catastrophic events through the use of third party models generally recognized as industry standards. Following is an overview of modeled losses associated with the more significant natural perils. The modeled results assume that all reinsurers perform their obligations to AIG in accordance with their terms.

It is important to recognize that there is no standard methodology to project the possible losses from total property and workers compensation exposures and that the use of different models could result in materially different projected losses. Further, there are no industry standard assumptions to be utilized in projecting these losses. The use of different assumptions could materially change the projected losses. Therefore, these modeled losses may not be comparable to estimates made by other companies.

These estimates are inherently uncertain and may not reflect AIG's maximum exposures to these events. It is highly likely that AIG's losses will vary, perhaps significantly, from these estimates.

Natural Catastrophe Exposures

The modeled results provided in the table below were based on the aggregate exceedence probability (AEP) losses which represent total property and workers compensation losses that may occur in any single year from one or more natural events. The model, which has been updated to reflect 2005 catastrophes, generally used 2005 exposure data and the current reinsurance program structure. The values provided

were based on 100 year return period losses, which have a 1 percent likelihood of being exceeded in any single year. Thus, there is a one percent probability that AIG could incur in any year losses in excess of the modeled amounts for these perils.

(in millions)

Natural Peril	Gross	Net of Reinsurance	Net, After Income Taxes	% of Consolidated Shareholders' Equity at December 31, 2005
Earthquake	\$3,412	\$2,283	\$1,484	1.7%
Tropical Cyclone*	\$5,336	\$3,907	\$2,540	2.9%

* Includes hurricanes, typhoons and other wind-related events.

In addition, AIG also evaluates potential single event earthquake and hurricane losses that may be incurred. The single events utilized are a subset of potential events identified and utilized by Lloyd's¹ and referred to as Realistic Disaster Scenarios (RDSs). The purpose of this analysis was to utilize these RDSs to provide a reference frame and place into context the model results. However, it is important to note that the specific events used for this analysis do not necessarily represent the worst case loss that AIG could incur from this type of an event in these regions. The losses associated with the RDSs are included in the table below.

Single event modeled property and workers compensation losses to AIG's worldwide portfolio of risk for key geographic areas. Gross values represent AIG's liability after the application of policy limits and deductibles, and net values represent losses after all reinsurance is applied.

(in millions)

Natural Peril	Gross	Net of Reinsurance
	Miami Hurricane	\$4,530
Northeast Hurricane	3,732	2,498
San Francisco Earthquake	3,628	2,229
Los Angeles Earthquake	3,285	2,145
Gulf Coast Hurricane	2,581	1,391
Japanese Earthquake	339	153
European Windstorm	135	41
Japanese Typhoon	125	105

Because the specific international RDS events do not necessarily correspond to AIG's international exposures, AIG also runs simulations against its own exposures where statistical return period losses associated with the written exposure specific to AIG's exposures provide the basis for monitoring risk. Based on these simulations, the 100 year return period for Japanese Earthquake is \$359 million gross, and \$113 million net, the 100 year return period for European Windstorm is \$168 million gross, and \$54 million net, and the 100 year return period for the Japanese Typhoon is \$313 million gross, and \$260 million net.

ACTUAL RESULTS IN ANY PERIOD ARE LIKELY TO VARY, PERHAPS MATERIALLY, FROM THE MODELED SCENARIOS, AND THE OCCURRENCE OF ONE OR

¹ Lloyd's Realistic Disaster Scenarios, Scenario Specifications, April 2006

MORE SEVERE EVENTS COULD HAVE A MATERIAL ADVERSE EFFECT ON AIG'S FINANCIAL CONDITION, RESULTS OF OPERATIONS AND LIQUIDITY.

Measures Implemented to Control Hurricane and Earthquake Catastrophic Risk

Catastrophic risk from the earthquake and hurricane perils is proactively managed through reinsurance programs, and aggregate accumulation monitoring. Catastrophe reinsurance is purchased by AIG from financially sound reinsurers. Recoveries under this program, along with other non-catastrophic reinsurance protections, are reflected in the net values provided in the tables above. In addition to the catastrophic reinsurance programs, hurricane and earthquake exposures are also controlled by monitoring aggregate exposures on a regular basis. The aggregate exposures are calculated by compiling total liability within AIG defined hurricane and earthquake catastrophe risk zones and therefore represent the maximum that could be lost in any individual zone. These aggregate accumulations are tracked over time in order to monitor both long and short term trends. AIG's major property writers, Lexington and The Private Client Group, have also implemented catastrophe related underwriting procedures and manage their books at an account level. Lexington individually models most accounts prior to binding in order to specifically quantify catastrophic risk for each account.

Pandemic Influenza

The potential for a pandemic influenza outbreak has received media attention during the past year. AIG continues to analyze its exposure to this serious threat and, as such, has engaged an external risk management firm to model loss scenarios associated with an outbreak of Avian Flu. Using a 1 in 100 year return period, AIG estimates its after-tax net losses under its life insurance policies due to Avian Flu at approximately 0.9 percent of consolidated shareholders' equity as of December 31, 2005. This estimate was calculated over a 3 year period, although the majority of the losses would be incurred in the first year. The modeled losses calculated were based on 2005 policy data representing approximately 90 percent of AIG's Individual Life, Group Life, and Credit Life books of business, net of reinsurance. This estimate does not include claims that could be made under other policies, such as business interruption or general liability policies, and does not reflect estimates for losses resulting from disruption of AIG's own business operations that may arise out of such a pandemic. The model used to generate this estimate has only recently been developed. The reasonableness of the model and its underlying assumptions cannot readily be verified by reference to comparable historical events. As a result, AIG's actual losses from a pandemic influenza outbreak are likely to vary significantly from those predicted by the model.

Terrorism

Terrorism risk is also monitored to control AIG's exposure. AIG shares its exposures to terrorism risks under the Terrorism Risk Insurance Act (TRIA). AIG's current deductible under TRIA is \$3.3 billion and AIG would share 10 percent of certified terrorism losses in excess of the \$3.3 billion.

Recent Accounting Standards

At the March 2004 meeting, the Emerging Issue Task Force (EITF) reached a consensus with respect to Issue No. 03-1, "The Meaning of Other-Than Temporary Impairment and Its Application to Certain Investments." On September 30, 2004, the FASB issued FASB Staff Position (FSP) EITF Issue 03-1-1, Effective Date of Paragraphs 10-20 of EITF Issue No. 03-1, "The Meaning of Other-Than-Temporary Impairment and its Application to Certain Investments." In November 2005, FASB issued FSP FAS 115-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments," which replaces the measurement and recognition guidance set forth in Issue No. 03-1 and codifies certain existing guidance on impairment.

On June 1, 2005, the FASB issued Statement No. 154, "Accounting Changes and Error Corrections" (FAS 154). FAS 154 replaces APB Opinion No. 20, "Accounting Changes" and FASB Statement No. 3, "Reporting Accounting Changes in Interim Financial Statements."

At the June 2005 meeting, the EITF reached a consensus with respect to Issue No. 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners have Certain Rights."

On June 29, 2005, the FASB issued Statement 133 Implementation Issues No. B38, "Embedded Derivatives: Evaluation of Net Settlement with Respect to the Settlement of a Debt Instrument through Exercise of an Embedded Put Option or Call Option" and No. B39, "Application of Paragraph 13(b) to Call Options That are Exercisable Only by the Debtor."

On September 19, 2005, the FASB issued Statement of Position 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts."

On February 16, 2006, the FASB issued FAS No. 155, "Accounting for Certain Hybrid Financial Instruments."

On March 27, 2006, the FASB issued FASB FTB 85-4-1, "Accounting for Life Settlement Contracts by Third-Party Investors" (FSP 85-4-1), an amendment of FTB 85-4, "Accounting for Purchases of Life Insurance."

On April 13, 2006, the FASB issued FSP FIN 46(R)-6, "Determining the Variability to be Considered in Applying FASB Interpretation No. 46(R)."

On July 13, 2006, the FASB issued FASB Interpretation No. 48, “Accounting for Uncertainty in Income Taxes - an interpretation of FASB Statement No. 109” (FIN 48).

Effective January 1, 2006, AIG adopted the fair value recognition provisions of Statement of Financial Accounting Standards No. 123R “Share-Based Payments” (FAS 123R). For further discussion of these recent accounting standards and its application to AIG, see Note 10 of Notes to Consolidated Financial Statements.

On September 13, 2006, the SEC issued Staff Accounting Bulletin No. 108, “Considering the Effects of Prior Year

Misstatements when Quantifying Misstatements in Current Year Financial Statements” (SAB 108).

In September 2006, the FASB issued FAS No. 157, “Fair Value Measurements” (FAS No. 157).

In September 2006, the FASB issued FAS No. 158, “Employers’ Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106 and 132(R)” (FAS No. 158).

For further discussion of these recent accounting standards and its application to AIG, see Note 8 of the Notes to Consolidated Financial Statements.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Included in Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations.

ITEM 4. CONTROLS AND PROCEDURES

In connection with the preparation of this Form 10-Q, an evaluation was carried out by AIG’s management, with the participation of AIG’s Chief Executive Officer and Chief Financial Officer, of the effectiveness of AIG’s disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (Exchange Act)). Disclosure controls and procedures are designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms and that such information is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial

Officer, to allow timely decisions regarding required disclosures. Based on its evaluation, and in light of the previously identified material weaknesses in internal control over financial reporting, as of December 31, 2005, described within the 2005 Annual Report on Form 10-K, AIG’s Chief Executive Officer and Chief Financial Officer concluded that, as of September 30, 2006, AIG’s disclosure controls and procedures were ineffective. In addition, there has been no change in AIG’s internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) that occurred during the quarter ended September 30, 2006 that has materially affected, or is reasonably likely to materially affect, AIG’s internal control over financial reporting.

Part II – OTHER INFORMATION**ITEM 1A. Risk Factors.**

The following supplements the significant factors that may affect our business and operations described under “Risk Factors” in Item 1A. of Part I of AIG’s 2005 Annual Report on Form 10-K and Item 1A. of Part II of AIG’s Quarterly Report on Form 10-Q for the quarter ended March 31, 2006.

There are limited suppliers of aircraft and engines.

The supply of jet transport aircraft, which ILFC purchases and leases, is dominated by two airframe manufacturers, Boeing and Airbus, and a limited number of engine manufacturers. As a result, ILFC is dependent on the manufacturers’ success in remaining financially stable, producing aircraft and related components which meet the airlines’ demands, both in type and quantity, and fulfilling their contractual obligations to ILFC. Competition between the manufacturers for market share is also escalating and may cause instances of deep discounting for certain aircraft types and may negatively affect ILFC’s competitive pricing.

ITEM 2. Unregistered Sales of Equity Securities and Use of Proceeds.

The table below provides information with respect to purchases of AIG Common stock during the three months ended September 30, 2006.

Period	Total Number of Shares Purchased ⁽¹⁾	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares that May Yet Be Purchased Under the Plans or Programs at End of Month ⁽²⁾
July 1 - 31	–	\$ –	–	36,542,700
August 1 - 31	–	–	–	36,542,700
September 1 - 30	–	–	–	36,542,700
Total	–	\$ –	–	

(1) Does not include 41,230 shares delivered or attested to in satisfaction of the exercise price by holders of AIG employee stock options exercised during the three months ended September 30, 2006.

(2) On July 19, 2002, AIG announced that its Board of Directors had authorized the open market purchase of up to 10 million shares of common stock. On February 13, 2003, AIG announced that the Board had expanded the existing program through the authorization of an additional 50 million shares. The purchase program has no set expiration or termination date.

ITEM 6. Exhibits.

32	Section 1350 Certifications	Filed herewith.

American International Group, Inc.
 Computation of Ratios of Earnings to Fixed Charges

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2006	2005	2006	2005
<i>(in millions, except ratios)</i>				
Income before income taxes, minority interest and cumulative effect of an accounting change	\$ 6,301	\$ 2,547	\$16,335	\$14,897
Less – Equity income of less than 50% owned persons	44	(208)	174	(115)
Add – Dividends from less than 50% owned persons	8	17	26	143
	6,265	2,772	16,187	15,155
Add – Fixed charges	2,306	2,440	6,302	5,909
Less – Capitalized interest	14	15	43	45
Income before income taxes, minority interest, cumulative effect of an accounting change and fixed charges	\$ 8,557	\$ 5,197	\$22,446	\$21,019
Fixed charges:				
Interest costs	\$ 2,254	\$ 2,389	\$ 6,145	\$ 5,755
Rental expense*	52	51	157	154
Total fixed charges	\$ 2,306	\$ 2,440	\$ 6,302	\$ 5,909
Ratio of earnings to fixed charges	3.71	2.13	3.56	3.56
Secondary Ratio				
Interest credited to GIC and GIA policy and contract holders	\$ (1,266)	\$ (1,677)	\$ (3,453)	\$ (3,739)
Total fixed charges excluding interest credited to GIC and GIA policy and contract holders	\$ 1,040	\$ 763	\$ 2,849	\$ 2,170
Secondary ratio of earnings to fixed charges	7.01	4.61	6.67	7.96

*The portion deemed representative of the interest factor.

The secondary ratio is disclosed for the convenience of fixed income investors and the rating agencies that serve them and is more comparable to the ratios disclosed by all issuers of fixed income securities. The secondary ratio removes interest credited to guaranteed investment contract (GIC) policyholders and guaranteed investment agreement (GIA) contractholders. Such expenses are also removed from income before income taxes, minority interest and cumulative effect of an accounting change used in this calculation. GICs and

GIAAs are entered into by AIG's insurance subsidiaries, principally Sun America Life Insurance Company and AIG Financial Products Corp. and its subsidiaries, respectively. The proceeds from GICs and GIAAs are invested in a diversified portfolio of securities, primarily investment grade bonds. The assets acquired yield rates greater than the rates on the related policyholders obligation or agreement, with the intent of earning operating income from the spread.

CERTIFICATIONS

I, Martin J. Sullivan, certify that:

1. I have reviewed this Quarterly Report on Form 10-Q of American International Group, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

* Except for the information provided in Part I under the heading "Directors and Executive Officers of AIG," Part III Items 10, 11, 12, 13 and 14 are included in AIG's Definitive Proxy Statement to be used in connection with AIG's Annual Meeting of Shareholders scheduled to be held on May 16, 2007.

Part I

Item 1. Business

American International Group, Inc. (AIG), a Delaware corporation, is a holding company which, through its subsidiaries, is engaged in a broad range of insurance and insurance-related activities in the United States and abroad. AIG's primary activities include both General Insurance and Life Insurance & Retirement Services operations. Other significant activities include Financial Services and Asset Management. The principal business units in each of AIG's segments are as follows*:

General Insurance

American Home Assurance Company (American Home)
National Union Fire Insurance Company of Pittsburgh, Pa. (National Union)
New Hampshire Insurance Company (New Hampshire)
Lexington Insurance Company (Lexington)
The Hartford Steam Boiler Inspection and Insurance Company (HSB)
Transatlantic Reinsurance Company
United Guaranty Residential Insurance Company
American International Underwriters Overseas, Ltd. (AIUO)

Life Insurance & Retirement Services

Domestic:

American General Life Insurance Company (AIG American General)
American General Life and Accident Insurance Company (AGLA)
The United States Life Insurance Company in the City of New York (USLIFE)
The Variable Annuity Life Insurance Company (VALIC)
AIG Annuity Insurance Company (AIG Annuity)
SunAmerica Life Insurance Company (SunAmerica Life)
AIG SunAmerica Life Assurance Company

Foreign:

American Life Insurance Company (ALICO)
AIG Star Life Insurance Co., Ltd. (AIG Star Life)
AIG Edison Life Insurance Company (AIG Edison Life)
American International Assurance Company, Limited, together with American International Assurance Company (Bermuda) Limited (AIA)
American International Reinsurance Company Limited (AIRCO)
Nan Shan Life Insurance Company, Ltd. (Nan Shan)
The Philippine American Life and General Insurance Company (Philamlife)

Financial Services

International Lease Finance Corporation (ILFC)
AIG Financial Products Corp. and AIG Trading Group Inc. and their respective subsidiaries (collectively, AIGFP)
American General Finance, Inc. (AGF)
AIG Consumer Finance Group, Inc. (AIGCFG)
Imperial A.I. Credit Companies

Asset Management

AIG SunAmerica Asset Management Corp. (SAAMCo)
AIG Global Asset Management Holdings Corp. and its subsidiaries and affiliated companies (collectively, AIGGIG)

At December 31, 2006, AIG and its subsidiaries had approximately 106,000 employees.

AIG's Internet address for its corporate website is www.aigcorporate.com. AIG makes available free of charge, through the Investor Information section of AIG's corporate website, Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K and Proxy Statements on Schedule 14A and amendments to those reports or statements filed or furnished pursuant to Section 13(a), 14(a) or 15(d) of the Securities Exchange Act of 1934 (the Exchange Act) as soon as reasonably practicable after such materials are electronically filed with, or furnished to, the Securities and Exchange Commission (SEC). AIG also makes available on its corporate website copies of the charters for its Audit, Nominating and Corporate Governance and Compensation Committees, as well as its Corporate Governance Guidelines (which include Director Independence Standards), Director, Executive Officer and Senior Financial Officer Code of Business Conduct and Ethics, Employee Code of Conduct and Related-Party Transactions Approval Policy. Except for the documents specifically incorporated by reference into this Annual Report on Form 10-K, information contained on AIG's website or that can be accessed through its website is not incorporated by reference into this Annual Report on Form 10-K.

Throughout this Annual Report on Form 10-K, AIG presents its operations in the way it believes will be most meaningful, as well as most transparent. Certain of the measurements used by AIG management are "non-GAAP financial measures" under SEC rules and regulations. Statutory underwriting profit (loss) and combined ratios are determined in accordance with accounting principles prescribed by insurance regulatory authorities. For an explanation of why AIG management considers these "non-GAAP measures" useful to investors, see Management's Discussion and Analysis of Financial Condition and Results of Operations.

*For information on AIG's business segments, see Note 2 of Notes to Consolidated Financial Statements.

The following table presents the general development of the business of AIG on a consolidated basis, the contributions made to AIG's consolidated revenues and operating income and the assets held, in the periods indicated, by its General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management operations and other realized capital gains (losses). For additional information, see Item 6. Selected Financial Data, Management's Discussion and Analysis of Financial Condition and Results of Operations and Notes 1 and 2 of Notes to Consolidated Financial Statements.

Total assets	979,414	853,051	801,007	675,602	561,131

(a) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts and other mutual funds (unit investment trusts). For 2006, the effect was an increase of \$490 million in both revenues and operating income for General Insurance and an increase of \$240 million and \$169 million in revenues and operating income, respectively, for Life Insurance & Retirement Services.

(b) Includes current year catastrophe-related losses of \$2.89 billion and \$1.05 billion in 2005 and 2004, respectively. There were no significant catastrophe-related losses in 2006.

(c) Includes additional losses incurred and net reinstatement premiums related to prior year catastrophes of \$199 million and \$277 million in 2006 and 2005, respectively.

(d) Operating income was reduced by fourth quarter charges of \$1.8 billion, \$850 million and \$2.1 billion for 2005, 2004 and 2002, respectively, resulting from the annual review of General Insurance loss and loss adjustment reserves. In 2006, 2005 and 2004, changes in estimates for asbestos and environmental reserves were \$198 million, \$873 million and \$850 million, respectively.

(e) Calculated on the basis under which the U.S.-domiciled insurance companies are required to report such measurements to regulatory authorities.

- (f) *Includes the effect of hedging activities that did not qualify for hedge accounting treatment under Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133) and the application of Statement of Financial Accounting Standards No. 52, "Foreign Currency Translation" (FAS 52). For 2006, 2005, 2004, 2003 and 2002, respectively, the amounts included are \$355 million, \$(495) million, \$(140) million, \$78 million and \$(91) million.*
- (g) *2005 includes the effect of the non-renewal of a single large group life case of \$36 billion. Also, the foreign in-force is translated to U.S. dollars at the appropriate balance sheet exchange rate in each period.*
- (h) *Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For 2006, 2005, 2004, 2003 and 2002, respectively, the effect was \$(1.82) billion, \$2.01 billion, \$(122) million, \$(1.01) billion and \$220 million in both revenues and operating income for Capital Markets. These amounts result primarily from interest rate and foreign currency derivatives that are economically hedging available for sale securities and borrowings. For 2004, 2003 and 2002, respectively, the effect was \$(27) million, \$49 million and \$20 million in operating income for Aircraft Leasing. In 2006 and 2005, Aircraft Leasing derivative gains and losses were reported as part of AIG's Other category, and were not reported in Aircraft Leasing operating income.*
- (i) *Includes \$1.6 billion of regulatory settlement costs in 2005 as described under Item 3. Legal Proceedings.*
- (j) *Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For 2006, 2005, 2004, 2003 and 2002, respectively, the effect was \$(1.86) billion, \$2.02 billion, \$385 million, \$(1.50) billion and \$(216) million in revenues and \$(1.86) billion, \$2.02 billion, \$671 million, \$(1.22) billion and \$(58) million in operating income. These amounts result primarily from interest rate and foreign currency derivatives that are hedging available for sale securities and borrowings.*
- (k) *Represents the sum of General Insurance net premiums earned, Life Insurance & Retirement Services GAAP premiums, net investment income, Financial Services interest, lease and finance charges, Asset Management net investment income from spread-based products and advisory and management fees, and realized capital gains (losses).*
- (l) *Represents income before income taxes, minority interest and cumulative effect of accounting changes.*

General Insurance Operations

AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of commercial property and casualty insurance and various personal lines both domestically and abroad. Domestic General Insurance operations are comprised of the Domestic Brokerage Group (DBG), Reinsurance, Personal Lines, and Mortgage Guaranty.

AIG is diversified both in terms of classes of business and geographic locations. In General Insurance, workers compensation business is the largest class of business written and represented approximately 15 percent of net premiums written for the year ended December 31, 2006. During 2006, 8 percent and 7 percent of the direct General Insurance premiums written (gross premiums less return premiums and cancellations, excluding reinsurance assumed and before deducting reinsurance ceded) were written in California and New York, respectively. No other state accounted for more than five percent of such premiums.

The majority of AIG's General Insurance business is in the casualty classes, which tend to involve longer periods of time for the reporting and settling of claims. This may increase the risk and uncertainty with respect to AIG's loss reserve development.

DBG

AIG's primary Domestic General Insurance division is DBG. DBG's business in the United States and Canada is conducted through American Home, National Union, Lexington, HSB and certain other General Insurance company subsidiaries of AIG. During 2006, DBG accounted for 54 percent of AIG's General Insurance net premiums written.

DBG writes substantially all classes of business insurance, accepting such business mainly from insurance brokers. This provides DBG the opportunity to select specialized markets and retain underwriting control. Any licensed broker is able to submit business to DBG without the traditional agent-company contractual relationship, but such broker usually has no authority to commit DBG to accept a risk.

In addition to writing substantially all classes of business insurance, including large commercial or industrial property insurance, excess liability, inland marine, environmental, workers compensation and excess and umbrella coverages, DBG offers many specialized forms of insurance such as aviation, accident and health, equipment breakdown, directors and officers liability (D&O), difference-in-conditions, kidnap-ransom, export credit and political risk, and various types of professional errors and omissions coverages. The AIG Risk Management operation provides insurance and risk management programs for large corporate customers. The AIG Risk Finance operation is a leading provider of customized structured insurance products. Also included in DBG are the operations of AIG Environmental, which focuses specifically on providing specialty products to clients with environmental exposures. Lexington writes surplus lines for risks which conventional insurance companies do not readily provide insurance coverage, either because of complexity or because the coverage does not lend itself to conventional contracts. The AIG Worldsource Division introduces and coordinates AIG's products

and services to U.S.-based multinational clients and foreign corporations doing business in the U.S.

Certain of the products of the DBG companies include funding components or have been structured so that little or no insurance risk is actually transferred. Funds received in connection with these products are recorded as deposits and included in other liabilities, rather than premiums and incurred losses.

Reinsurance

The subsidiaries of Transatlantic Holdings, Inc. (Transatlantic) offer reinsurance on both a treaty and facultative basis to insurers in the U.S. and abroad. Transatlantic structures programs for a full range of property and casualty products with an emphasis on specialty risk. Transatlantic is a public company owned 59.2 percent by AIG and therefore is included in AIG's consolidated financial statements.

Personal Lines

AIG's Personal Lines operations provide automobile insurance through AIG Direct, a mass marketing operation, the Agency Auto Division and 21st Century Insurance Group (21st Century), as well as a broad range of coverages for high net-worth individuals through the AIG Private Client Group. 21st Century is a public company owned 61.9 percent by AIG and therefore is included in AIG's consolidated financial statements. During the first quarter of 2007, AIG offered to acquire the outstanding shares of 21st Century not already owned by AIG and its subsidiaries.

Mortgage Guaranty

The main business of the subsidiaries of United Guaranty Corporation (UGC) is the issuance of residential mortgage guaranty insurance, both domestically and internationally, on conventional first lien mortgages for the purchase or refinance of one to four family residences. UGC subsidiaries also write second lien and private student loan guaranty insurance.

Foreign General Insurance

AIG's Foreign General Insurance group accepts risks primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance group also includes business written by AIG's foreign-based insurance subsidiaries. The Foreign General Insurance group uses various marketing methods and multiple distribution channels to write both commercial and consumer lines insurance with certain refinements for local laws, customs and needs. AIU operates in Asia, the Pacific Rim, Europe, including the U.K., Africa, the Middle East and Latin America. During 2006, the Foreign General Insurance group accounted for 25 percent of AIG's General Insurance net premiums written.

Discussion and Analysis of Consolidated Net Losses and Loss Expense Reserve Development

The reserve for net losses and loss expenses represents the accumulation of estimates for reported losses (case basis reserves) and provisions for losses incurred but not reported

(IBNR), both reduced by applicable reinsurance recoverable and the discount for future investment income, where permitted. Losses and loss expenses are charged to income as incurred.

Loss reserves established with respect to foreign business are set and monitored in terms of the respective local or functional currency. Therefore, no assumption is included for changes in currency rates. See also Note 1(b) of Notes to Consolidated Financial Statements.

Management reviews the adequacy of established loss reserves through the utilization of a number of analytical reserve development techniques. Through the use of these techniques, management is able to monitor the adequacy of AIG's established reserves and determine appropriate assumptions for inflation. Also, analysis of emerging specific development patterns, such as case reserve redundancies or deficiencies and IBNR emergence, allows management to determine any required adjustments.

The "Analysis of Consolidated Losses and Loss Expense Reserve Development" table presents the development of net losses and loss expense reserves for calendar years 1996 through 2006. Immediately following this table is a second table that presents all data on a basis that excludes asbestos and environmental net losses and loss expense reserve development. The opening reserves held are shown at the top of the table for each year end date. The amount of loss reserve discount included in the opening reserve at each date is shown immediately below the reserves held for each year. The undiscounted reserve at each date is thus the sum of the discount and the reserve held.

The upper half of the table presents the cumulative amounts paid during successive years related to the undiscounted opening loss reserves. For example, in the table that excludes asbestos and environmental losses, with respect to the net losses and loss expense reserve of \$24.75 billion as of December 31, 1999, by the end of 2006 (seven years later) \$29.16 billion had actually

been paid in settlement of these net loss reserves. In addition, as reflected in the lower section of the table, the original undiscounted reserve of \$25.82 billion was reestimated to be \$36.28 billion at December 31, 2006. This increase from the original estimate would generally result from a combination of a number of factors, including reserves being settled for larger amounts than originally estimated. The original estimates will also be increased or decreased as more information becomes known about the individual claims and overall claim frequency and severity patterns. The redundancy (deficiency) depicted in the table, for any particular calendar year, presents the aggregate change in estimates over the period of years subsequent to the calendar year reflected at the top of the respective column heading. For example, the redundancy of \$259 million at December 31, 2006 related to December 31, 2005 net losses and loss expense reserves of \$57.34 billion represents the cumulative amount by which reserves for 2005 and prior years have developed favorably during 2006.

The bottom of each table below presents the remaining undiscounted and discounted net loss reserve for each year. For example, in the table that excludes asbestos and environmental losses, for the 2001 year end, the remaining undiscounted reserves held as of December 31, 2006 are \$12.25 billion, with a corresponding discounted net reserve of \$11.35 billion.

The reserves for net losses and loss expenses with respect to Transatlantic and 21st Century are included only in consolidated net losses and loss expenses commencing with the year ended December 31, 1998, the year they were first consolidated in AIG's financial statements. Reserve development for these operations is included only for 1998 and subsequent periods. Thus, the presentation for 1997 and prior year ends is not fully comparable to that for 1998 and subsequent years in the tables below.

Analysis of Consolidated Losses and Loss Expense Reserve Development

The following table presents for each calendar year the losses and loss expense reserves and the development thereof including those with respect to asbestos and environmental claims. See also Management's Discussion and Analysis of Financial Condition and Results of Operations.

The following table presents the gross liability (before discount), reinsurance recoverable and net liability recorded at each year end and the reestimation of these amounts as of December 31, 2006.

(in millions)	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006
Gross Liability, End of Year	\$30,302	\$29,740	\$34,474	\$34,666	\$36,777	\$40,400	\$46,036	\$51,363	\$59,897	\$73,912	\$77,211
Reinsurance Recoverable, End of Year	10,156	9,008	9,023	8,846	10,661	13,691	15,887	14,288	12,602	16,576	14,495
Net Liability, End of Year	20,146	20,732	25,451	25,820	26,116	26,709	30,149	37,075	47,295	57,336	62,715
Reestimated Gross Liability	32,186	34,940	44,281	50,004	55,974	60,289	61,735	62,488	64,772	73,241	
Reestimated Reinsurance Recoverable	9,699	10,679	12,725	13,722	15,680	16,270	16,225	13,797	12,409	16,164	
Reestimated Net Liability	22,487	24,261	31,556	36,282	40,294	44,019	45,510	48,691	52,363	57,077	
Cumulative Gross Redundancy/(Deficiency)	(1,884)	(5,200)	(9,807)	(15,338)	(19,197)	(19,889)	(15,699)	(11,125)	(4,875)	671	

The reserve for losses and loss expenses as reported in AIG's consolidated balance sheet at December 31, 2006 differs from the total reserve reported in the Annual Statements filed with state insurance departments and, where appropriate, with foreign regulatory authorities. The differences at December 31, 2006 relate primarily to reserves for certain foreign operations not required to be reported in the United States for statutory reporting purposes. Further, statutory practices in the United States require reserves to be shown net of applicable reinsurance recoverable.

The reserve for gross losses and loss expenses is prior to reinsurance and represents the accumulation for reported losses and IBNR. Management reviews the adequacy of established gross loss reserves in the manner previously described for net loss reserves.

For further discussion regarding net reserves for losses and loss expenses, see Management's Discussion and Analysis of Financial Condition and Results of Operations — Operating Review — General Insurance Operations — Reserve for Losses and Loss Expenses.

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad. Insurance-oriented products consist of individual and group life, payout annuities (including structured settlements), endowment and accident and health policies. Retirement savings products consist generally of fixed and variable annuities.

There was no significant adverse effect on AIG's Life Insurance & Retirement Services results of operations from economic conditions in any one state, country or geographic region for the year ended December 31, 2006.

Foreign Life Insurance & Retirement Services

In its Life Insurance & Retirement Services businesses, AIG operates overseas principally through ALICO, AIG Star Life, AIG Edison Life, AIA, AIRCO, Nan Shan and Philamlife. ALICO is incorporated in Delaware and all of its business is written outside of the United States. ALICO has operations either directly or through subsidiaries in Europe, including the U.K., Latin America, the Caribbean, the Middle East, South Asia and the Far East, with Japan being the largest territory. AIA operates primarily in China (including Hong Kong), Singapore, Malaysia, Thailand, Korea, Australia, New Zealand, Vietnam, Indonesia, and India. The operations in India are conducted through a joint venture, Tata AIG Life Insurance Company Limited. Nan Shan operates in Taiwan. Philamlife is the largest life insurer in the Philippines. AIG Star Life and AIG Edison Life operate in Japan. Operations in foreign countries comprised 78 percent of Life Insurance & Retirement Services GAAP premiums and 68 percent of Life Insurance & Retirement Services operating income in 2006.

The Foreign Life Insurance & Retirement Services companies have over 270,000 full and part-time agents, as well as

independent producers, and sell their products largely to indigenous persons in local and foreign currencies. In addition to the agency outlets, these companies also distribute their products through direct marketing channels, such as mass marketing, and through brokers and other distribution outlets, such as financial institutions.

Life insurance products such as whole life and endowment continue to be significant in the overseas companies, especially in Southeast Asia, while a mixture of life insurance, accident and health and retirement services products are sold in Japan.

AIG also has subsidiary operations in Canada, Egypt, Mexico, Poland, Switzerland, Russia and Puerto Rico, and conducts life insurance business through a joint venture in Brazil and in certain countries in Central and South America.

Domestic Life Insurance & Retirement Services

AIG's principal domestic Life Insurance & Retirement Services operations include AGLA, AIG American General, AIG Annuity, USLIFE, VALIC and SunAmerica Life. These companies utilize multiple distribution channels including independent producers, brokerage, career agents and banks to offer life insurance, annuity and accident and health products and services, as well as financial and other investment products. The domestic Life Insurance & Retirement Services operations comprised 22 percent of total Life Insurance & Retirement Services GAAP premiums and 32 percent of Life Insurance & Retirement Services operating income in 2006.

Reinsurance

AIG's General Insurance subsidiaries worldwide operate primarily by underwriting and accepting risks for their direct account and securing reinsurance on that portion of the risk in excess of the limit which they wish to retain. This operating policy differs from that of many insurance companies that will underwrite only up to their net retention limit, thereby requiring the broker or agent to secure commitments from other underwriters for the remainder of the gross risk amount.

Various AIG profit centers, including DBG, AIU, AIG Reinsurance Advisors, Inc. and AIG Risk Finance, as well as certain Foreign Life subsidiaries, use AIRCO as a reinsurer for certain of their businesses, and AIRCO also receives premiums from offshore captives of AIG clients. In accordance with permitted accounting practices in Bermuda, AIRCO discounts reserves attributable to certain classes of business assumed from other AIG subsidiaries.

For a further discussion of reinsurance, see Item 1A. Risk Factors — Reinsurance, Management's Discussion and Analysis of Financial Condition and Results of Operations — Risk Management — Reinsurance and Note 5 of Notes to Consolidated Financial Statements.

Insurance Investment Operations

A significant portion of AIG's General Insurance and Life Insurance & Retirement Services revenues are derived from AIG's

insurance investment operations, which are summarized in the following table.

The following table summarizes the investment results of the insurance operations.

Years Ended December 31, (in millions)	Annual Average Cash and Invested Assets			Return on Average Cash and Assets ^(c)	Return on Average Assets ^(d)
	Cash (including short-term investments)	Invested Assets ^{(a)(b)}	Total		
General Insurance:					
2006	\$3,201	\$102,231	\$105,432	5.4%	5.6%
2005	2,450	86,211	88,661	4.5	4.7
2004	2,012	73,338	75,350	4.2	4.4
2003	1,818	59,855	61,673	4.2	4.3
2002	1,537	47,477	49,014	4.8	5.0
Life Insurance & Retirement Services:					
2006	\$7,205	\$384,724	\$391,929	5.0%	5.1%
2005	6,180	352,250	358,430	5.1	5.1
2004	5,089	307,659	312,748	4.9	5.0
2003	4,680	247,608	252,288	5.1	5.2
2002	3,919	199,750	203,669	5.5	5.6

(a) Including investment income due and accrued and real estate.

(b) Includes collateral assets invested under the securities lending program.

(c) Net investment income divided by the annual average sum of cash and invested assets.

(d) Net investment income divided by the annual average invested assets.

AIG's worldwide insurance investment policy places primary emphasis on investments in government and other high quality, fixed income securities in all of its portfolios and, to a lesser extent, investments in high yield bonds, common stocks, real estate, hedge funds and partnerships, in order to enhance returns on policyholders' funds and generate net investment income. The ability to implement this policy is somewhat limited in certain territories as there may be a lack of adequate long-term investments or investment restrictions may be imposed by the local regulatory authorities.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance. Together, the Aircraft Leasing, Capital Markets and Consumer Finance operations generate the majority of the revenues produced by the Financial Services operations. Imperial A.I. Credit Companies also contribute to Financial Services income. This operation engages principally in insurance premium financing for both AIG's customers and those of other insurers.

Aircraft Leasing

AIG's Aircraft Leasing operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to foreign and domestic airlines. Revenues also result from the remarketing of commercial jets for its own account, and remarketing and fleet management services for airlines and for financial institutions. See also Note 2 of Notes to Consolidated Financial Statements.

Capital Markets

The Capital Markets operations of AIG are conducted primarily through AIGFP, which engages as principal in standard and customized interest rate, currency, equity, commodity, energy and credit products with top-tier corporations, financial institutions, governments, agencies, institutional investors, and high-net-worth individuals throughout the world. AIGFP also invests in a diversified portfolio of securities and principal investments and engages in borrowing activities that include issuing standard and structured notes and other securities and entering into guaranteed investment agreements (GIAs). See also Note 2 of Notes to Consolidated Financial Statements.

Consumer Finance

Consumer Finance operations include AGF as well as AIGCFG. AGF provides a wide variety of consumer finance products, including real estate and non-real estate loans, retail sales finance and credit-related insurance to customers in the United States, Puerto Rico, and the U.S. Virgin Islands. AIGCFG, through its subsidiaries, is engaged in developing a multi-product consumer finance business with an emphasis on emerging markets.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products, including institutional and retail asset management, broker-dealer services and institutional spread-based investment business. Such services and products are offered to individuals and institutions both domestically and overseas. Asset Management's spread-based

investment business includes the results of AIG's proprietary institutional spread-based investment operation, the Matched Investment Program (MIP), which was launched in September of 2005 and replaced the GIC program.

AIG's principal Asset Management operations are conducted through certain subsidiaries of AIG Retirement Services, Inc., including SAAMCo and the AIG Advisor Group broker dealers (AIG SunAmerica); and through AIGGIG, including AIG Global Investment Corp., AIG Global Real Estate and AIG Private Bank. AIG SunAmerica sells and manages mutual funds and provides financial advisory services through independent-contractor registered representatives. AIGGIG manages invested assets on a global basis for AIG subsidiaries and affiliates, as well as third-party institutional, retail, and private banking clients. AIGGIG offers equity, fixed income and alternative investment funds and provides securities lending and custodial services and numerous forms of structured investment products across all asset classes. Each of these subsidiary operations receives fees for investment products and services provided.

Other Operations

Certain other AIG subsidiaries provide insurance-related services such as adjusting claims and marketing specialized products. Several wholly owned foreign subsidiaries of AIG operating in countries or jurisdictions such as Ireland, Bermuda, Barbados and Gibraltar provide insurance and related administrative and back office services to a variety of affiliated and unaffiliated insurance and reinsurance companies, including captive insurance companies unaffiliated with AIG.

AIG also has several other subsidiaries which engage in various businesses. Mt. Mansfield Company, Inc. owns and operates the ski slopes, lifts, school and an inn located at Stowe, Vermont. Also included in AIG's Other operations are unallocated corporate expenses, including interest expense and the settlement costs more fully described in Item 3. Legal Proceedings and Note 12(a) of Notes to Consolidated Financial Statements.

Additional Investments

AIG's significant investments in partially owned companies (which are accounted for under the equity method) include a 19.4 percent interest in Allied World Assurance Holdings, Ltd. (AWAC), a property-casualty insurance holding company, a 24.5 percent interest in The Fuji Fire and Marine Insurance Co., Ltd., a general insurance company, a 26 percent interest in Tata AIG Life Insurance Company, Ltd. and a 26 percent interest in Tata AIG General Insurance Company, Ltd. For a discussion of AIG's investments in partially owned companies, see Note 1(u) of Notes to Consolidated Financial Statements.

Locations of Certain Assets

As of December 31, 2006, approximately 37 percent of the consolidated assets of AIG were located in foreign countries (other than Canada), including \$6.5 billion of cash and securities on deposit with foreign regulatory authorities. Foreign operations and assets held abroad may be adversely affected by political

developments in foreign countries, including such possibilities as tax changes, nationalization, and changes in regulatory policy, as well as by consequence of hostilities and unrest. The risks of such occurrences and their overall effect upon AIG vary from country to country and cannot easily be predicted. If expropriation or nationalization does occur, AIG's policy is to take all appropriate measures to seek recovery of such assets. Certain of the countries in which AIG's business is conducted have currency restrictions which generally cause a delay in a company's ability to repatriate assets and profits. See also Notes 1 and 2 of Notes to Consolidated Financial Statements and Item 1A. Risk Factors — Foreign Operations.

Regulation

AIG's operations around the world are subject to regulation by many different types of regulatory authorities, including insurance, securities, investment advisory, banking and thrift regulators in the United States and abroad. The regulatory environment can have a significant effect on AIG and its business. AIG's operations have become more diverse and consumer-oriented, increasing the scope of regulatory supervision and the possibility of intervention. In addition, the investigations into financial accounting practices that led to two restatements of AIG's consolidated financial statements have heightened regulatory scrutiny of AIG worldwide.

In 1999, AIG became a unitary thrift holding company within the meaning of the Home Owners' Loan Act (HOLA) when the Office of Thrift Supervision (OTS) granted AIG approval to organize AIG Federal Savings Bank. AIG is subject to OTS regulation, examination, supervision and reporting requirements. In addition, the OTS has enforcement authority over AIG and its subsidiaries. Among other things, this permits the OTS to restrict or prohibit activities that are determined to be a serious risk to the financial safety, soundness or stability of AIG's subsidiary savings association, AIG Federal Savings Bank.

Under prior law, a unitary savings and loan holding company, such as AIG, was not restricted as to the types of business in which it could engage, provided that its savings association subsidiary continued to be a qualified thrift lender. The Gramm-Leach-Bliley Act of 1999 (GLBA) provides that no company may acquire control of an OTS regulated institution after May 4, 1999 unless it engages only in the financial activities permitted for financial holding companies under the law or for multiple savings and loan holding companies. The GLBA, however, grandfathered the unrestricted authority for activities with respect to a unitary savings and loan holding company existing prior to May 4, 1999, so long as its savings association subsidiary continues to be a qualified thrift lender under the HOLA. As a unitary savings and loan holding company whose application was pending as of May 4, 1999, AIG is grandfathered under the GLBA and generally is not restricted under existing laws as to the types of business activities in which it may engage, provided that AIG Federal Savings Bank continues to be a qualified thrift lender under the HOLA.

Certain states require registration and periodic reporting by insurance companies that are licensed in such states and are controlled by other corporations. Applicable legislation typically

requires periodic disclosure concerning the corporation that controls the registered insurer and the other companies in the holding company system and prior approval of intercorporate services and transfers of assets (including in some instances payment of dividends by the insurance subsidiary) within the holding company system. AIG's subsidiaries are registered under such legislation in those states that have such requirements.

AIG's insurance subsidiaries, in common with other insurers, are subject to regulation and supervision by the states and by other jurisdictions in which they do business. Within the United States, the method of such regulation varies but generally has its source in statutes that delegate regulatory and supervisory powers to an insurance official. The regulation and supervision relate primarily to approval of policy forms and rates, the standards of solvency that must be met and maintained, including risk-based capital measurements, the licensing of insurers and their agents, the nature of and limitations on investments, restrictions on the size of risks that may be insured under a single policy, deposits of securities for the benefit of policyholders, requirements for acceptability of reinsurers, periodic examinations of the affairs of insurance companies, the form and content of reports of financial condition required to be filed, and reserves for unearned premiums, losses and other purposes. In general, such regulation is for the protection of policyholders rather than the equity owners of these companies.

In preparing both its 2004 and 2005 audited statutory financial statements for its Domestic General Insurance companies, AIG agreed with the relevant regulatory agencies on the statutory accounting treatment of the various items requiring adjustment or restatement. These adjustments and restatements reduced previously reported General Insurance statutory surplus at December 31, 2004 by approximately \$3.5 billion to approximately \$20.6 billion.

With respect to the 2005 audited statutory financial statements, the state regulators permitted the Domestic General Insurance companies to record a \$724 million reduction to opening statutory surplus as of January 1, 2005.

AIG has taken various steps to enhance the capital positions of the Domestic General Insurance companies. AIG entered into capital maintenance agreements with the Domestic General Insurance companies that set forth procedures through which AIG will provide ongoing capital support. Dividends from the Domestic General Insurance companies were suspended from fourth quarter 2005 through 2006, but AIG expects that dividend payments will resume in the first quarter of 2007. AIG contributed an additional \$750 million of capital into American Home effective September 30, 2005, and contributed a further \$2.25 billion of capital in February 2006 for a total of approximately \$3 billion of capital into Domestic General Insurance subsidiaries effective December 31, 2005. Furthermore, in order to allow the Domestic General Insurance companies to record as an admitted asset at December 31, 2006 certain reinsurance ceded to non-U.S. reinsurers (which has the effect of increasing the statutory surplus of such Domestic General Insurance companies), AIG obtained and entered into reimbursement agreements for approxi-

mately \$2 billion of letters of credit issued by several commercial banks in favor of certain Domestic General Insurance companies.

Risk-Based Capital (RBC) is designed to measure the adequacy of an insurer's statutory surplus in relation to the risks inherent in its business. Thus, inadequately capitalized general and life insurance companies may be identified.

The RBC formula develops a risk-adjusted target level of statutory surplus by applying certain factors to various asset, premium and reserve items. Higher factors are applied to more risky items and lower factors are applied to less risky items. Thus, the target level of statutory surplus varies not only as a result of the insurer's size, but also based on the risk profile of the insurer's operations.

The RBC Model Law provides for four incremental levels of regulatory attention for insurers whose surplus is below the calculated RBC target. These levels of attention range in severity from requiring the insurer to submit a plan for corrective action to placing the insurer under regulatory control.

The statutory surplus of each of AIG's Domestic General and Life Insurance subsidiaries exceeded their RBC target levels as of December 31, 2006.

To the extent that any of AIG's insurance entities would fall below prescribed levels of statutory surplus, it would be AIG's intention to infuse necessary capital to support that entity.

A substantial portion of AIG's General Insurance business and a majority of its Life Insurance business is carried on in foreign countries. The degree of regulation and supervision in foreign jurisdictions varies. Generally, AIG, as well as the underwriting companies operating in such jurisdictions, must satisfy local regulatory requirements. Licenses issued by foreign authorities to AIG subsidiaries are subject to modification or revocation by such authorities, and AIU or other AIG subsidiaries could be prevented from conducting business in certain of the jurisdictions where they currently operate. In the past, AIU has been allowed to modify its operations to conform with new licensing requirements in most jurisdictions.

In addition to licensing requirements, AIG's foreign operations are also regulated in various jurisdictions with respect to currency, policy language and terms, amount and type of security deposits, amount and type of reserves, amount and type of local investment and the share of profits to be returned to policyholders on participating policies. Some foreign countries regulate rates on various types of policies. Certain countries have established reinsurance institutions, wholly or partially owned by the local government, to which admitted insurers are obligated to cede a portion of their business on terms that may not always allow foreign insurers, including AIG subsidiaries, full compensation. In some countries, regulations governing constitution of technical reserves and remittance balances may hinder remittance of profits and repatriation of assets.

See also Management's Discussion and Analysis of Financial Condition and Results of Operations — Capital Resources and Liquidity — Regulation and Supervision and Note 11 of Notes to Consolidated Financial Statements.

Competition

AIG's Insurance, Financial Services and Asset Management businesses operate in highly competitive environments, both domestically and overseas. Principal sources of competition are insurance companies, banks, investment banks and other non-bank financial institutions.

The insurance industry in particular is highly competitive. Within the United States, AIG's General Insurance subsidiaries compete with approximately 3,100 other stock companies, specialty insurance organizations, mutual companies and other underwriting organizations. AIG's subsidiaries offering Life Insurance & Retirement Services compete in the United States with approximately 2,000 life insurance companies and other participants in related financial services fields. Overseas, AIG subsidiaries compete for business with foreign insurance operations of the larger U.S. insurers, global insurance groups, and local companies in particular areas in which they are active.

AIG's strong ratings have historically provided a competitive advantage. For a discussion of the possible adverse effects on AIG's competitive position as a result of a ratings downgrade, see Item 1A. Risk Factors — AIG's Credit Ratings.

Directors and Executive Officers of AIG

Set forth below is information concerning the directors and executive officers of AIG. All directors are elected for one-year terms at the annual meeting of shareholders. All executive officers are elected to one-year terms, but serve at the pleasure of the Board of Directors.

Except as hereinafter noted, each of the executive officers has, for more than five years, occupied an executive position with AIG or companies that are now its subsidiaries. Other than the employment contracts between AIG and Messrs. Sullivan and Bensinger, there are no other arrangements or understandings between any executive officer and any other person pursuant to which the executive officer was elected to such position. From January 2000 until joining AIG in May 2004, Dr. Frenkel served as Chairman of Merrill Lynch International, Inc. Prior to joining AIG in September 2002, Mr. Bensinger was Executive Vice President and Chief Financial Officer of Combined Specialty Group, Inc. (a division of Aon Corporation) commencing in March 2002, and served as Executive Vice President of Trenwick Group, Ltd. from October 1999 through December 2001. Prior to joining AIG in September 2006, Ms. Kelly served as Executive Vice President and General Counsel of MCI/WorldCom. Previously, she was Senior Vice President and General Counsel of Sears, Roebuck and Co. from 1999 to 2003.

Item 1A. Risk Factors

Casualty Insurance Underwriting and Reserves

Casualty insurance liabilities are difficult to predict and may exceed the related reserves for losses and loss expenses.

Although AIG annually reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, D&O, professional liability, medical malpractice, workers compensation, general liability, products liability and related classes, as well as for asbestos and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss cost trends or loss development factors could be attributable to changes in inflation or in the judicial environment, or in other social or economic phenomena affecting claims. See also Management's Discussion and Analysis of Financial Condition and Results of Operations — Operating Review — General Insurance Operations — Reserve for Losses and Loss Expenses.

Adjustments to Life Insurance & Retirement Services Deferred Policy Acquisition Costs

Interest rate fluctuations and other events may require AIG subsidiaries to accelerate the amortization of deferred policy acquisition costs (DAC) which could adversely affect AIG's consolidated financial condition or results of operations. DAC represents the costs that vary with and are related primarily to the acquisition of new and renewal insurance and annuity contracts. When interest rates rise, policy loans and surrenders and withdrawals of life insurance policies and annuity contracts may increase as policyholders seek to buy products with perceived higher returns, requiring AIG subsidiaries to accelerate the amortization of DAC. To the extent such amortization exceeds surrender or other charges earned upon surrender and withdrawals of certain life insurance policies and annuity contracts, AIG's results of operations could be negatively affected.

DAC for both insurance-oriented and investment-oriented products as well as retirement services products is reviewed for recoverability, which involves estimating the future profitability of current business. This review involves significant management judgment. If the actual emergence of future profitability were to be substantially lower than estimated, AIG could be required to

accelerate its DAC amortization and such acceleration could adversely affect AIG's results of operations. See also Management's Discussion and Analysis of Financial Condition and Results of Operations — Critical Accounting Estimates and Notes 1 and 4 of Notes to Consolidated Financial Statements.

Reinsurance

Reinsurance may not be available or affordable. AIG subsidiaries are major purchasers of reinsurance and utilize reinsurance as part of AIG's overall risk management strategy. Reinsurance is an important risk management tool to manage transaction and insurance line risk retention, and to mitigate losses that may arise from catastrophes. Market conditions beyond AIG's control determine the availability and cost of the reinsurance purchased by AIG subsidiaries. For example, reinsurance may be more difficult to obtain after a year with a large number of major catastrophes. Accordingly, AIG may be forced to incur additional expenses for reinsurance or may be unable to obtain sufficient reinsurance on acceptable terms, in which case AIG would have to accept an increase in exposure risk, reduce the amount of business written by its subsidiaries or seek alternatives.

Reinsurance subjects AIG to the credit risk of its reinsurers and may not be adequate to protect AIG against losses. Although reinsurance makes the reinsurer liable to the AIG subsidiary to the extent the risk is ceded, it does not relieve the AIG subsidiary of the primary liability to its policyholders. Accordingly, AIG bears credit risk with respect to its subsidiaries' reinsurers. A reinsurer's insolvency or inability or refusal to make timely payments under the terms of its agreements with the AIG subsidiaries could have a material adverse effect on AIG's results of operations and liquidity. See also Management's Discussion and Analysis of Financial Condition and Results of Operations — Risk Management — Reinsurance.

A Material Weakness

The remaining material weakness in AIG's internal control over financial reporting relating to income tax accounting could affect the accuracy or timing of future regulatory filings. As of December 31, 2006, AIG's management concluded that the material weakness relating to the controls over income tax accounting was not fully remediated. Remediation of this material weakness is ongoing. Until remediated, this weakness could affect the accuracy or timing of future filings with the SEC and other regulatory authorities. See also Item 9A. Controls and Procedures — Management's Report on Internal Control Over Financial Reporting.

Catastrophe Exposures

The occurrence of catastrophic events could adversely affect AIG's consolidated financial condition or results of operations. The occurrence of events such as hurricanes, earthquakes, pandemic disease, acts of terrorism and other catastrophes could adversely affect AIG's consolidated financial condition or results of

operations, including by exposing AIG's businesses to the following:

- widespread claim costs associated with property, workers compensation, mortality and morbidity claims;
- loss resulting from the cash flows from invested assets being less than the cash flows required to meet the policy and contract liabilities; or
- loss resulting from the actual policy experience adversely emerging in comparison to the assumptions made in the product pricing associated with mortality, morbidity, termination and expenses.

Legal Proceedings

Significant legal proceedings adversely affected AIG's results of operations in 2005. As a result of the settlements discussed below under Item 3. Legal Proceedings, AIG recorded an after-tax charge of approximately \$1.15 billion in the fourth quarter of 2005. AIG is party to numerous other legal proceedings and regulatory investigations. It is possible that the effect of the unresolved matters could be material to AIG's consolidated results of operations for an individual reporting period. For a discussion of these unresolved matters, see Item 3. Legal Proceedings.

Regulation

AIG is subject to extensive regulation in the jurisdictions in which it conducts its businesses. AIG's operations around the world are subject to regulation by different types of regulatory authorities, including insurance, securities, investment advisory, banking and thrift regulators in the United States and abroad. AIG's operations have become more diverse and consumer-oriented, increasing the scope of regulatory supervision and the possibility of intervention. In particular, AIG's consumer lending business is subject to a broad array of laws and regulations governing lending practices and permissible loan terms, and AIG would expect increased regulatory oversight relating to this business.

The regulatory environment could have a significant effect on AIG and its businesses. Among other things, AIG could be fined, prohibited from engaging in some of its business activities or subject to limitations or conditions on its business activities. Significant regulatory action against AIG could have material adverse financial effects, cause significant reputational harm, or harm business prospects. New laws or regulations or changes in the enforcement of existing laws or regulations applicable to clients may also adversely affect AIG and its businesses.

Foreign Operations

Foreign operations expose AIG to risks that may affect its operations, liquidity and financial condition. AIG provides insurance and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. A substantial portion of AIG's General Insurance business and a majority of its Life Insurance & Retirement Services businesses are conducted outside the United States. Operations outside of

the United States may be affected by regional economic downturns, changes in foreign currency exchange rates, political upheaval, nationalization and other restrictive government actions, which could also affect other AIG operations.

The degree of regulation and supervision in foreign jurisdictions varies. Generally, AIG, as well as the underwriting companies operating in such jurisdictions, must satisfy local regulatory requirements. Licenses issued by foreign authorities to AIG subsidiaries are subject to modification and revocation. Thus, AIG's insurance subsidiaries could be prevented from conducting future business in certain of the jurisdictions where they currently operate. AIG's international operations include operations in various developing nations. Both current and future foreign operations could be adversely affected by unfavorable political developments including tax changes, regulatory restrictions and nationalization of AIG's operations without compensation. Adverse actions from any one country may adversely affect AIG's results of operations, liquidity and financial condition depending on the magnitude of the event and AIG's net financial exposure at that time in that country.

Information Technology

A failure in AIG's operational systems or infrastructure or those of third parties could disrupt business, damage AIG's reputation and cause losses. AIG's operations rely on the secure processing, storage and transmission of confidential and other information in its computer systems and networks. AIG's business depends on effective information systems and the integrity and timeliness of the data it uses to run its business. AIG's ability to adequately price its products and services, establish reserves, provide effective and efficient service to its customers, and to timely and accurately report its financial results also depends significantly on the integrity of the data in its information systems. Although AIG takes protective measures and endeavors to modify them as circumstances warrant, its computer systems, software and networks may be vulnerable to unauthorized access, computer viruses or other malicious code and other events that could have security consequences. If one or more of such events occur, this potentially could jeopardize AIG's or its clients' or counterparties' confidential and other information processed and stored in, and transmitted through, its computer systems and networks, or otherwise cause interruptions or malfunctions in AIG's, its clients', its counterparties' or third parties' operations, which could result in significant losses or reputational damage. AIG may be required to expend significant additional resources to modify its protective measures or to investigate and remediate vulnerabilities or other exposures, and AIG may be subject to litigation and financial losses that are either not insured against or not fully covered by insurance maintained.

Despite the contingency plans and facilities AIG has in place, its ability to conduct business may be adversely affected by a disruption of the infrastructure that supports AIG's business in the communities in which it is located. This may include a disruption involving electrical, communications, transportation or other services used by AIG. These disruptions may occur, for example, as a result of events that affect only the buildings occupied by AIG or as a result of events

with a broader effect on the cities where those buildings are located. If a disruption occurs in one location and AIG's employees in that location are unable to occupy its offices and conduct business or communicate with or travel to other locations, AIG's ability to service and interact with its clients may suffer and it may not be able to successfully implement contingency plans that depend on communication or travel.

AIG's Credit Ratings

Financial strength and credit ratings by major ratings agencies are an important factor in establishing the competitive position of insurance companies and other financial institutions and affect the availability and cost of borrowings. Any ratings downgrade may lessen AIG's ability to compete in certain businesses and may increase AIG's interest expense. Financial strength ratings measure an insurance company's ability to meet its obligations to contract holders and policyholders, help to maintain public confidence in a company's products, facilitate marketing of products and enhance a company's competitive position. Credit ratings measure a company's ability to repay its obligations and directly affect the cost and availability to that company of unsecured financing. Historically, AIG's credit and financial strength ratings have provided AIG a competitive advantage.

From March through June of 2005, the major rating agencies downgraded the ratings of AIG and its insurance subsidiaries in a series of actions. Many of the ratings were put on negative watch or negative outlook, which indicates a potential downgrade. Since then, however, the agencies have affirmed the ratings of AIG and all of its subsidiaries with a stable outlook, which indicates that the rating is not likely to change in the near term, except that S&P maintains a negative outlook on Transatlantic and on the senior long-term debt rating of ILFC.

A downgrade of the credit or financial strength ratings of AIG or its subsidiaries could adversely affect AIG's business and its consolidated results of operations in a number of ways, including:

- increasing AIG's interest expense;
- reducing AIGFP's ability to compete in the structured products and derivatives businesses;
- reducing the competitive advantage of AIG's insurance subsidiaries, which may result in reduced product sales and/or lower prices;
- adversely affecting relationships with agents and sales representatives; and
- in the case of a downgrade of AGF or ILFC, increasing their interest expense and reducing their ability to compete in their respective businesses.

As a result of the downgrades in 2005 discussed above, AIG was required to post approximately \$1.16 billion of collateral with counterparties to municipal guaranteed investment contracts and financial derivatives transactions. In the event of a further downgrade, AIG would be required to post additional collateral. It is estimated that, as of the close of business on February 15, 2007, based on AIG's outstanding municipal GIAs and financial derivatives transactions as of such date, a further downgrade of AIG's long-term senior debt ratings to Aa3 by Moody's or AA- by

S&P would permit counterparties to call for approximately \$864 million of additional collateral. Further, additional downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIG manages its liquidity. For a further discussion of AIG's credit ratings and the potential effect of posting collateral on AIG's liquidity, see Management's Discussion and Analysis of Financial Condition and Results of Operations — Capital Resources and Liquidity — Credit Ratings and — Liquidity.
