and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the *Second Employee Benefits Complaint*) along with revised particularized statements in both actions on May 22, 2007. The allegations in the *Second Commercial Complaint* and the *Second Employee Benefits Complaint* are substantially similar to the allegations in the *First Commercial Complaint* and *First Employee Benefits Complaint*, respectively. The complaints also attempt to add several new parties and delete others; the *Second Commercial Complaint* adds two new plaintiffs and twenty seven new defendants (including three new AIG defendants), and the *Second Employee Benefits Complaint* adds eight new plaintiffs and nine new defendants (including two new AIG defendants). The defendants filed motions to dismiss the amended complaints and to strike the newly added parties. The Court granted (without leave to amend) defendants' motions to dismiss the federal antitrust and RICO claims on August 31, 2007 and September 28, 2007, respectively. The Court declined to exercise supplemental jurisdiction over the state law claims in the *Second Commercial Complaint* and therefore dismissed it in its entirety. On January 14, 2008, the court granted defendants' motion for summary judgment on the ERISA claims in the *Second Employee Benefits Complaint* and subsequently dismissed the remaining state law claims without prejudice, thereby dismissing the *Second Employee Benefits Complaint* in its entirety. On February 12, 2008, plaintiffs filed a notice of appeal to the United States Court of Appeals for the Third Circuit with respect to the dismissal of the *Second Employee Benefits Complaint*. Plaintiffs previously appealed the dismissal of the *Second Commercial Complaint* to the United States Court of Appeals for the Third Circuit on October 10, 2007. Several similar actions that were consolidated before Chief Judge Brown are still pending in the District Court. Those actions are currently stayed pending a decision by the court on whether they will proceed during the appeal of the dismissal of the *Second Commercial Complaint* and the *Second Employee Benefits Complaint*.

On August 24, 2007, the Ohio Attorney General filed a complaint in the Ohio Court of Common Pleas against AIG and a number of its subsidiaries, as well as several other broker and insurer defendants, asserting violation of Ohio's antitrust laws. The complaint, which is similar to the *Second Commercial Complaint*, alleges that AIG and the other broker and insurer defendants conspired to allocate customers, divide markets, and restrain competition in commercial lines of casualty insurance sold through the broker defendant. The complaint seeks treble damages on behalf of Ohio public purchasers of commercial casualty insurance, disgorgement on behalf of both public and private purchasers of commercial casualty insurance, as well as a \$500 per day penalty for each day of conspiratorial conduct. AIG, along with other co-defendants, moved to dismiss the complaint on November 16, 2007. Discovery is stayed in the case pending a ruling on the motion to dismiss or until May 15, 2008, whichever occurs first.

SICO. In July, 2005, SICO filed a complaint against AIG in the Southern District of New York, claiming that AIG had refused to provide SICO access to certain artwork and asked the court to order AIG immediately to release the property to SICO. AIG filed

an answer denying SICO's allegations and setting forth defenses to SICO's claims. In addition, AIG filed counterclaims asserting breach of contract, unjust enrichment, conversion, breach of fiduciary duty, a constructive trust and declaratory judgment, relating to SICO's breach of its commitment to use its AIG shares only for the benefit of AIG and AIG employees. Fact and expert discovery has been concluded and SICO's motion for summary judgment is pending.

Regulatory Investigations. Regulators from several states have commenced investigations into insurance brokerage practices related to contingent commissions and other industry wide practices as well as other broker-related conduct, such as alleged bid-rigging. In addition, various federal, state and foreign regulatory and governmental agencies are reviewing certain transactions and practices of AIG and its subsidiaries in connection with industry wide and other inquiries. AIG has cooperated, and will continue to cooperate, in producing documents and other information in response to subpoenas and other requests. On January 29, 2008, AIG reached settlement agreements with nine states and the District of Columbia. The settlement agreements call for AIG to pay a total of \$12.5 million to be allocated among the ten jurisdictions and also require AIG to continue to maintain certain producer compensation disclosure and ongoing compliance initiatives. AIG will also continue to cooperate with these states in their ongoing investigations. AIG has not admitted liability under the settlement agreements and continues to deny the allegations. Nevertheless, AIG agreed to settle in order to avoid the expense and uncertainty of protracted litigation. The settlement agreements, which remain subject to court approvals, were reached with the Attorneys General of the States of Florida, Hawaii, Maryland, Michigan, Oregon, Texas and West Virginia, the Commonwealths of Massachusetts and Pennsylvania, and the District of Columbia, the Florida Department of Financial Services, and the Florida Office of Insurance Regulation. The agreement with the Texas Attorney General also settles allegations of anticompetitive conduct relating to AIG's relationship with Allied World Assurance Company and includes an additional settlement payment of \$500,000 related thereto.

Wells Notices. AIG understands that some of its employees have received Wells notices in connection with previously disclosed SEC investigations of certain of AIG's transactions or accounting practices. Under SEC procedures, a Wells notice is an indication that the SEC staff has made a preliminary decision to recommend enforcement action that provides recipients with an opportunity to respond to the SEC staff before a formal recommendation is finalized. It is possible that additional current and former employees could receive similar notices in the future as the regulatory investigations proceed.

Effect on AIG

In the opinion of AIG management, AIG's ultimate liability for the unresolved litigation and investigation matters referred to above is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

Item 4. Submission of Matters to a Vote of Security Holders

There were no matters submitted to a vote of security holders during the fourth quarter of 2007.

Part II

Item 5.

Market for the Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

AIG's common stock is listed on the New York Stock Exchange, as well as on the stock exchanges in Paris and Tokyo.

The following table presents the high and low closing sales prices and the dividends paid per share of AIG's common stock on the New York Stock Exchange Composite Tape, for each quarter of 2007 and 2006:

	2007			2006		
	High	Low	Dividends Paid	High	Low	Dividends Paid
First quarter	\$72.15	\$66.77	\$0.165	\$70.83	\$65.35	\$0.150
Second quarter	72.65	66.49	0.165	66.54	58.67	0.150
Third quarter	70.44	61.64	0.200	66.48	57.76	0.165
Fourth quarter	70.11	51.33	0.200	72.81	66.30	0.165

The approximate number of holders of common stock as of January 31, 2008, based upon the number of record holders, was 56,500.

Subject to the dividend preference of any of AIG's serial preferred stock that may be outstanding, the holders of shares of common stock are entitled to receive such dividends as may be declared by AIG's Board of Directors from funds legally available therefor.

In February 2007, AIG's Board of Directors adopted a new dividend policy, which took effect with the dividend that was declared in the second quarter of 2007. Under ordinary circumstances, AIG's plan is to increase its common stock dividend by approximately 20 percent annually. The payment of any dividend, however, is at the discretion of AIG's Board of Directors, and the future payment of dividends will depend on various factors, including the performance of AIG's businesses, AIG's consolidated financial condition, results of operations and liquidity and the existence of investment opportunities.

For a discussion of certain restrictions on the payment of dividends to AIG by some of its insurance subsidiaries, see Note 14 to Consolidated Financial Statements.

The following table summarizes AIG's stock repurchases for the three-month period ended December 31, 2007:

Period	Total Number of Shares Purchased ^{(a)(b)}	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares that May Yet Be Purchased Under the Plans or Programs at End of Month ^(b)
October 1 - 31, 2007	13,964,098	\$66.12	13,964,098	
November 1 - 30, 2007	5,709,067	61.56	5,709,067	
December 1 - 31, 2007	1,584,199	55.58	1,584,199	
Total	21,257,364	\$64.11	21,257,364	

(a) Reflects date of delivery. Does not include 49,583 shares delivered or attested to in satisfaction of the exercise price by holders of AIG employee stock options exercised during the three months ended December 31, 2007 or 23,300 shares purchased by ILFC to satisfy obligations under employee benefit plans.

(b) In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. In November 2007, AIG's Board of Directors authorized the repurchase of an additional \$8 billion in common stock. A balance of \$10.9 billion remained for purchases under the program as of December 31, 2007, although \$912 million of that amount has been advanced by AIG to purchase shares under the program and an additional \$1 billion was required to be advanced in January 2008 to meet commitments that existed at December 31, 2007.

AIG does not expect to purchase additional shares under its share repurchase program for the foreseeable future, other than to meet commitments that existed at December 31, 2007.

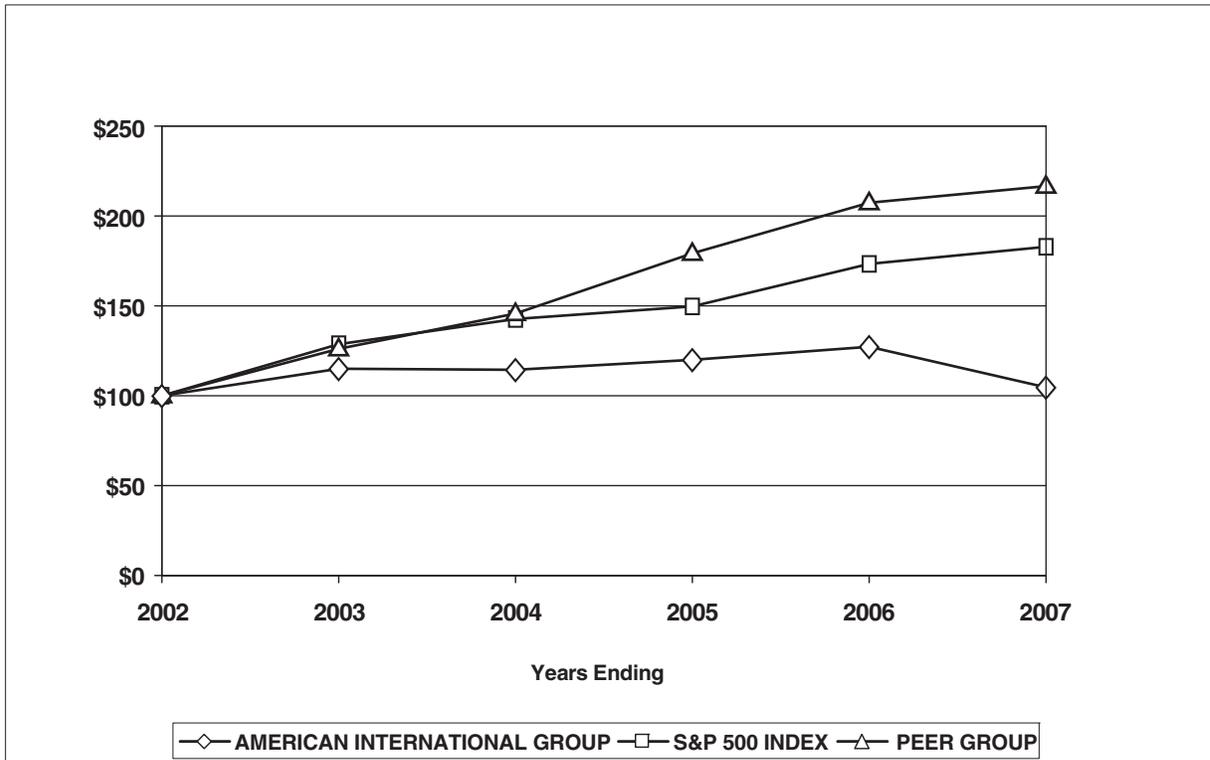

AIG's table of equity compensation plans previously approved by security holders and equity compensation plans not previously approved by security holders will be included in AIG's Definitive Proxy Statement in connection with its 2008 Annual Meeting of Shareholders, which will be filed with the SEC within 120 days of AIG's fiscal year end.

Performance Graph

The following Performance Graph compares the cumulative total shareholder return on AIG common stock for a five-year period (December 31, 2002 to December 31, 2007) with the cumulative total return of the Standard & Poor's 500 stock index (which includes AIG) and a peer group of companies consisting of nine

insurance companies to which AIG compares its business and operations: ACE Limited, Aflac Incorporated, The Chubb Corporation, The Hartford Financial Services Group, Inc., Lincoln National Corporation, MetLife, Inc., Prudential Financial, Inc., The Travelers Companies, Inc. (formerly The St. Paul Travelers Companies, Inc.) and XL Capital Ltd.

(a) Certain reclassifications have been made to prior period amounts to conform to the current period presentation.

(b) In 2007, 2006, 2005, 2004 and 2003, includes other-than-temporary impairment charges of \$4.7 billion, \$944 million, \$598 million, \$684 million and \$1.5 billion, respectively. Also includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. In 2007, 2006, 2005, 2004 and 2003, respectively, the effect was \$(1.44) billion, \$(1.87) billion, \$2.02 billion, \$385 million and \$(1.50) billion in revenues and \$(1.44) billion, \$(1.87) billion, \$2.02 billion, \$671 million and \$(1.22) billion in operating income. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings. These gains (losses) in 2007 include a \$380 million out of period charge to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIGFP. The gains (losses) in 2006 include an out of period charge of \$223 million related to the remediation of the material weakness in internal control over the accounting for certain derivative transactions under FAS 133. In the first quarter of 2007, AIG began applying hedge accounting for certain transactions, primarily in its Capital Markets operations. In the second quarter of 2007, AGF and ILFC began applying hedge accounting to most of their derivatives hedging interest rate and foreign exchange risks associated with their floating rate and foreign currency denominated borrowings.

(c) In 2006, includes the effect of out of period adjustments related to the accounting for UCITS. The effect was an increase of \$490 million in both revenues and operating income for General Insurance and an increase of \$240 million and \$169 million in revenues and operating income, respectively, for Life Insurance & Retirement Services.

(d) In 2007, includes an unrealized market valuation loss of \$11.5 billion on AIGFP's super senior credit default swap portfolio and an other-than-temporary impairment charge of \$643 million on AIGFP's available for sale investment securities reported in other income.

(e) Includes current year catastrophe-related losses of \$276 million in 2007, \$3.28 billion in 2005 and \$1.16 billion in 2004. There were no significant catastrophe-related losses in 2006 and 2003.

(f) Reduced by fourth quarter charges of \$1.8 billion and \$850 million in 2005 and 2004, respectively, related to the annual review of General Insurance loss and loss adjustment reserves. In 2006, 2005 and 2004, changes in estimates for asbestos and environmental reserves were \$198 million, \$873 million and \$850 million, respectively.

(g) Includes that portion of long-term debt maturing in less than one year. See also Note 11 to Consolidated Financial Statements.

Management's Discussion and Analysis of Financial Condition and Results of Operations

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG presents its operations in the way it believes will be most meaningful. Statutory underwriting profit (loss) and combined ratios are

presented in accordance with accounting principles prescribed by insurance regulatory authorities because these are standard measures of performance used in the insurance industry and thus allow more meaningful comparisons with AIG's insurance competitors. AIG has also incorporated into this discussion a number of cross-references to additional information included throughout this Annual Report on Form 10-K to assist readers seeking additional information related to a particular subject.

Cautionary Statement Regarding Projections and Other Information About Future Events

This Annual Report on Form 10-K and other publicly available documents may include, and AIG's officers and representatives may from time to time make, projections concerning financial information and statements concerning future economic performance and events, plans and objectives relating to management, operations, products and services, and assumptions underlying these projections and statements. These projections and statements are not historical facts but instead represent only AIG's belief regarding future events, many of which, by their nature, are inherently uncertain and outside AIG's control. These projections and statements may address, among other things, the status and potential future outcome of the current regulatory and civil proceedings against AIG and their potential effect on AIG's businesses, financial condition, results of operations, cash flows and liquidity, AIG's exposures to subprime mortgages, monoline insurers and the residential real estate market and AIG's strategy for growth, product development, market position, financial results and reserves. It is possible that AIG's actual results and financial condition may differ, possibly materially, from the anticipated results and financial condition indicated in these projections and statements. Factors that could cause AIG's actual results to differ, possibly materially, from those in the specific projections and statements are discussed throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations and in Item 1A. Risk Factors of this Annual Report on Form 10-K. AIG is not under any obligation (and expressly disclaims any such obligations) to update or alter any projection or other statement, whether written or oral, that may be made from time to time, whether as a result of new information, future events or otherwise.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Overview of Operations and Business Results

AIG identifies its reportable segments by product or service line, consistent with its management structure. AIG's major product and service groupings are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management. Through these operating segments, AIG provides insurance, financial and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. This geographic, product and service diversification is one of AIG's major strengths and sets it apart from its competitors. AIG's Other category consists of items not allocated to AIG's operating segments.

AIG's subsidiaries serve commercial, institutional and individual customers through an extensive property-casualty and life insurance and retirement services network. In the United States, AIG companies are the largest underwriters of commercial and industrial insurance and are among the largest life insurance and retirement services operations as well. AIG's Financial Services businesses include commercial aircraft and equipment leasing, capital markets operations and consumer finance, both in the United States and abroad. AIG also provides asset management services to institutions and individuals. As part of its Spread-Based Investment activities, and to finance its operations, AIG issues various debt instruments in the public and private markets.

AIG's operating performance reflects implementation of various long-term strategies and defined goals in its various operating segments. A primary goal of AIG in managing its General Insurance operations is to achieve an underwriting profit. To achieve this goal, AIG must be disciplined in its risk selection, and premiums must be adequate and terms and conditions appropriate to cover the risks accepted and expenses incurred.

AIG has commenced a realignment to simplify its Foreign General Insurance operations, many of which were historically conducted through branches of U.S. companies. On October 8, 2007, AIU Insurance Company announced the conversion of its existing China branches into AIG General Insurance Company China Limited, the first non-Chinese owned general insurance company established in China. This subsidiary assumed the existing business portfolio, assets and liabilities of the China branches. On October 15, 2007, AIG General Insurance (Taiwan) Co., Ltd. (AIGGI Taiwan) announced the completion of its merger with AIU Insurance Company Taiwan Branch. On December 1, 2007, Landmark Insurance Company Limited, a U.K. subsidiary, assumed all of the insurance liabilities of the U.K. branch of New Hampshire Insurance Company and changed its name to AIG U.K. Ltd. On January 1, 2008, AIU Insurance Company ceased participating in the Domestic General Insurance pooling arrangement. These ongoing simplification efforts are expected to result in better utilization of capital and a lower effective tax rate.

A central focus of AIG operations in recent years has been the development and expansion of distribution channels. In 2007, AIG continued to expand its distribution channels, which now include banks, credit card companies, television-media home shopping, affinity groups, direct response, worksite marketing and e-commerce.

AIG patiently builds relationships in markets around the world where it sees long-term growth opportunities. For example, the fact that AIG has the only wholly owned foreign life insurance operations in China, operating in 19 cities, is the result of relationships developed over nearly 30 years. AIG's more recent extensions of operations into India, Vietnam, Russia and other emerging markets reflect the same growth strategy. Moreover, AIG believes in investing in the economies and infrastructures of these countries and growing with them. When AIG companies enter a new jurisdiction, they typically offer basic protection and savings products. As the economies evolve, AIG's products evolve with them, to more sophisticated and investment-oriented models.

Growth for AIG may be generated internally as well as through acquisitions which both fulfill strategic goals and offer adequate return on capital. In October 2007, AIG expanded its Foreign General Insurance operations in Germany through the acquisition of Württembergische und Badische Versicherungs-AG (WüBA). In January 2007, American General Finance, Inc. (AGF) expanded its operations into the U.K. through the acquisition of Ocean Finance and Mortgages Limited, a finance broker for home owner loans in the U.K.

Outlook

General Trends

In mid-2007, the U.S. residential mortgage market began to experience serious disruption due to credit quality deterioration in a significant portion of loans originated, particularly to non-prime and subprime borrowers; evolving changes in the regulatory environment; a slower residential housing market; increased cost of borrowings for mortgage participants; and illiquid credit markets.

AIG participates in the U.S. residential mortgage market in several ways: AGF originates principally first-lien mortgage loans and to a lesser extent second-lien mortgage loans to buyers and owners of residential housing; United Guaranty Corporation (UGC) provides first loss mortgage guaranty insurance for high loan-to-value first- and second-lien residential mortgages; AIG insurance and financial services subsidiaries invest in mortgage-backed securities and CDOs, in which the underlying collateral is composed in whole or in part of residential mortgage loans; and AIGFP provides credit protection through credit default swaps on certain super senior tranches of collateralized debt obligations (CDOs), a significant majority of which have AAA underlying or subordinate layers.

Disruption in the U.S. residential mortgage market may also increase claim activity in the financial institution segment of AIG's D&O and professional liability classes of business. However, based on its review of information currently available, AIG believes overall loss activity for the broader D&O and professional liability classes is likely to remain within or near the levels observed during the last several years, which include losses related to stock options backdating as well as to the U.S. residential mortgage market.

The operating results of AIG's consumer finance and mortgage guaranty operations in the United States have been and are likely

to continue to be adversely affected by the factors referred to above. The downward cycle in the U.S. housing market is not expected to improve until residential inventories return to a more normal level and the mortgage credit market stabilizes. AIG expects that this downward cycle will continue to adversely affect UGC's operating results for the foreseeable future and will result in a significant operating loss for UGC in 2008. AIG also incurred substantial unrealized market valuation losses in 2007, particularly in the fourth quarter, on AIGFP's super senior credit default swap portfolio and substantial other-than-temporary impairment charges on AIG's Insurance and Financial Services available for sale securities. The results from AIG's operations with exposure to the U.S. residential mortgage market will be highly dependent on future market conditions. Continuing market deterioration will cause AIG to report additional unrealized market valuation losses and impairment charges.

The ongoing effect of the downward cycle in the U.S. housing market on AIG's other operations, investment portfolio and overall consolidated financial condition could be material if the market disruption continues and expands beyond the residential mortgage markets, although AIG seeks to mitigate the risks to its business by disciplined underwriting and active risk management.

Globally, heightened regulatory scrutiny of financial services companies in many jurisdictions has the potential to affect future financial results through higher compliance costs. This is particularly true in the United States, where Federal and state authorities have commenced various investigations of the financial services industry, and in Japan and Southeast Asia, where financial institutions have received remediation orders affecting consumer and policyholder rights.

In certain quarters, AIG's returns from partnerships and other alternative investments were particularly strong, driven by favorable equity market performance and credit conditions. These returns may vary from period to period and AIG believes that the particularly strong performance in certain prior periods is not indicative of the returns to be expected from this asset class in future periods.

AIG has recorded out of period adjustments in the last two years due to the remediation of control deficiencies. As AIG continues its remediation activities, AIG expects to continue to incur expenses related to these activities and to record additional out of period adjustments, although all known errors have been corrected.

General Insurance

The commercial property and casualty insurance industry has historically experienced cycles of price erosion followed by rate strengthening as a result of catastrophes or other significant losses that affect the overall capacity of the industry to provide coverage. As premium rates decline, AIG will generally experience higher current accident year loss ratios, as the written premiums are earned. Despite industry price erosion in commercial lines, AIG expects to continue to identify profitable opportunities and build attractive new general insurance businesses as a result of AIG's broad product line and extensive distribution networks in the United States and abroad.

Workers compensation remains under considerable pricing pressure, as statutory rates continue to decline. Rates for aviation, excess casualty, D&O and certain other lines of insurance also continue to decline due to competitive pressures. Rates for commercial property lines are also declining following another year of relatively low catastrophe losses. Further price erosion is expected in 2008 for the commercial lines; AIG seeks to mitigate the decline by constantly seeking out profitable opportunities across its diverse product lines and distribution networks while maintaining a commitment to underwriting discipline. There can be no assurance that price erosion will not become more widespread or that AIG's profitability will not deteriorate from current levels in major commercial lines.

In Foreign General Insurance, opportunities for growth exist in the consumer lines due to increased demand in emerging markets and the trend toward privatization of health insurance. In commercial lines, the late 2007 acquisition of WüBa enhances AIG's insurance offerings to small and medium sized companies in Europe.

Through operations in Bahrain designed to comply with Islamic law, AIG is tapping into a growing market. Islamic insurance, called Takaful, is an alternative to conventional insurance based on the concept of mutual assistance through pooling of resources.

The Personal Lines automobile marketplace remains challenging with rates declining steadily, increased spending on commissions and advertising and favorable liability frequency trends slowing, while severity in both liability and physical damage are expected to increase. In addition to the deteriorating underwriting cycle, a generally weakening economy leads to slower growth in automobile insurance exposure units and values. The Personal Lines business is focused on consolidation and improving operational efficiencies to reduce costs, as well as enhancing rating algorithms and creating a new aigdirect.com brand, as a result of the 2007 combination of AIG Direct and 21st Century Insurance Group (21st Century) operations, to support growth. The high net worth market continues to provide opportunities for growth as a result of AIG's innovative products and services specifically designed for that market.

Losses caused by catastrophes can fluctuate widely from year to year, making comparisons of results more difficult. With respect to catastrophe losses, AIG believes that it has taken appropriate steps, such as careful exposure selection and adequate reinsurance coverage, to reduce the effect of possible future losses. The occurrence of one or more catastrophic events of higher than anticipated frequency or severity, such as a terrorist attack, earthquake or hurricane, that causes insured losses, however, could have a material adverse effect on AIG's results of operations, liquidity or financial condition.

Life Insurance & Retirement Services

Disruption in the U.S. residential mortgage and credit markets had a significant adverse effect on Life Insurance & Retirement Services operating results in 2007 and will continue to be a key factor in 2008 and beyond, especially in the U.S.-based operations. The volatility in operating results will be further magnified by the continuing market shift to variable products with living benefits

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

and the adoption of FAS No. 157, "Fair Value Measurements" (FAS 157). Life Insurance & Retirement Services elected the fair value option under FAS No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities" (FAS 159), for two products beginning January 1, 2008 - a closed block of single premium variable life business in Japan and an investment-linked life insurance product sold principally in Asia. After adoption on January 1, 2008, subsequent changes in fair value for these products will be reported in operating income. The adoption of FAS 159 for these products is expected to result in a decrease to opening 2008 retained earnings of approximately \$600 million. For a description of these accounting standards, see Note 1 to Consolidated Financial Statements.

Life Insurance & Retirement Services uses various derivative instruments to hedge cash flows related to certain foreign currencies and fixed income related instruments. Although these derivatives are purchased to mitigate the economic effect of movements in foreign exchange rates and interest rates, reported earnings may be volatile due to certain hedges not qualifying for hedge accounting under FAS 133. The change in fair value of derivative instruments is reported in net realized capital gains (losses). Life Insurance & Retirement Services engages in hedging programs that use derivatives and other instruments to hedge the guaranteed living benefits associated with variable products. Nevertheless, short-term market movements will vary from long-term expectations underlying the product pricing assumptions and may cause volatility in reported earnings. The inclusion of risk margins in the valuation of embedded derivatives under FAS 157 will increase earnings volatility as differences emerge between the change in fair value of embedded derivatives and the change in fair value of hedging instruments. As variable products with guaranteed living benefits continue to grow, the reported earnings volatility associated with these programs will likely increase.

Life Insurance & Retirement Services may continue to experience volatility in net realized capital gains (losses) due to other-than-temporary impairment writedowns of the fair value of investments, primarily related to the significant disruption in the residential mortgage and credit markets and foreign currency related losses.

In Japan, given AIG's multi-channel, multi-product strategy, AIG expects its Life Insurance & Retirement Services operations to exceed industry growth in the long term, although downward pressure on earnings growth rates is anticipated due to the difficult market conditions. Market conditions remain challenging as a result of increased competition due to new market entrants, the increasing financial strength of the domestic companies as the economy has recovered, the effect of additional regulatory oversight, changes to the tax deductibility of insurance premiums and the regulatory claims review which has negatively affected consumer perceptions of the industry. While the market shift to variable products with living benefits will constrain fixed annuity sales, AIG is positioned to grow annuity sales overall with its annuity products designed to meet the needs of consumers in a range of market conditions. In addition, AIG expects that the planned integration of AIG Star Life and AIG Edison Life, which is anticipated to be completed in 2009, will provide enhanced

distribution opportunities and operational efficiencies pending regulatory approval.

Full deregulation of banks in Japan with respect to insurance product sales became effective in December 2007, and AIG expects that it will be able to leverage its existing bank relationships and innovative product expertise to expand sales of both life and accident and health products in 2008. Deregulation of Japan Post is also expected to provide additional growth opportunities during 2008 and beyond.

Although the Japanese Yen strengthened in the fourth quarter of 2007, historical volatility of Japanese Yen-dollar exchange rates has resulted in higher than normal surrenders, and if that trend returns, an acceleration of the amortization of deferred policy acquisition costs could occur.

Outside of Japan, ALICO continues to execute its strategy of diversifying distribution channels and developing new products. In particular, ALICO's Central and Eastern European operations performed well and demographic and economic conditions in these countries provide excellent opportunities for continued growth.

AIG's operations in China continue to expand, but AIG expects competition in China to remain strong. AIG's success in China will depend on its ability to execute its growth strategy. Key growth strategies in 2008 include expansion of sales and service centers, increased bank distribution and entering into strategic alliances with key partners. In Southeast Asia, AIG's operations are focused on growing market share and profits in Singapore, Malaysia, Thailand and Hong Kong with products focused on the life savings-oriented consumer along with high net worth consumers through the newly formed Wealth Management Group.

Domestically, AIG plans to continue expansion of its Life Insurance & Retirement Services businesses through direct marketing and independent agent distribution channels. The aging population in the United States provides a growth opportunity for a variety of products, including longevity, guaranteed income and supplemental accident and health products. Certain other demographic groups that have traditionally been underserved provide additional growth opportunities. The Domestic Life Insurance operations showed positive momentum in the second half of 2007 resulting from new products and expanded distribution. Domestic group life/health operations continue to face competitors with greater scale in group benefits.

The fixed annuities business experienced a difficult year as surrenders increased in 2007 due to both an increasing number of policies coming out of their surrender charge period and increased competition from bank deposit products. While surrenders are expected to continue to be higher than normal, the current interest rate environment should provide opportunities for improvements in net flows during 2008. AIG believes that improvement in net flows in the individual variable annuity market will be driven by variable annuity products with living benefits while the group retirement products will continue to experience a shift from group annuities to lower margin mutual fund products.

Since the beginning of 2000, the yield available on Taiwanese 10-year government bonds dropped from approximately 6 percent to less than 3 percent at December 31, 2007. Yields on most

other invested assets have correspondingly dropped over the same period. New regulatory capital requirements being developed in Taiwan, combined with growth opportunities in bancassurance and variable annuities with living benefits, may potentially create a need for capital contributions in 2008 and beyond to support local solvency requirements.

Financial Services

Within Financial Services, demand for International Lease Finance Corporation (ILFC's) modern, fuel efficient aircraft remains strong, and ILFC plans to increase its fleet by purchasing 73 aircraft in 2008. However, ILFC's margins may be adversely affected by increases in interest rates. AIG Financial Products Corp. and AIG Trading Group Inc. and their respective subsidiaries (collectively, AIGFP) expect opportunities for growth across their product segments, but AIGFP is a transaction-oriented business, and its operating results will depend to a significant extent on actual transaction flow, which is affected by market conditions and other variables outside its control. AIG continues to explore opportunities to expand its Consumer Finance operations into new domestic and foreign markets.

The ongoing disruption in the U.S. residential mortgage and credit markets and the recent downgrades of residential mortgage-backed securities and CDO securities by rating agencies continue to adversely affect the fair value of the super senior credit default swap portfolio written by AIGFP. AIG expects that continuing limitations on the availability of market observable data will affect AIG's determinations of the fair value of these derivatives, including by preventing AIG, for the foreseeable future, from recognizing the beneficial effect of the differential between credit spreads used to price a credit default swap and spreads implied from prices of the CDO bonds referenced by such swap. The fair value of these derivatives is expected to continue to fluctuate, perhaps materially, in response to changing market conditions, and AIG's estimates of the value of AIGFP's super senior credit derivative portfolio at future dates could therefore be materially different from current estimates. AIG continues to believe that the unrealized market valuation losses recorded on the AIGFP super senior credit default swap portfolio are not indicative of the losses AIGFP may realize over time. Under the terms of most of these credit derivatives, losses to AIG would generally result from the credit impairment of the referenced CDO bonds that AIG would acquire in satisfying its swap obligations. Based upon its most current analyses, AIG believes that any credit impairment losses realized over time by AIGFP will not be material to AIG's consolidated financial condition, although it is possible that such realized losses could be material to AIG's consolidated results of operations for an individual reporting period. Except to the extent of any such credit impairment losses, AIG expects the unrealized market valuation losses to reverse over the remaining life of the super senior credit default swap portfolio.

Approximately \$379 billion of the \$527 billion in notional exposure on AIGFP's super senior credit default swap portfolio as of December 31, 2007 were written to facilitate regulatory capital relief for financial institutions primarily in Europe. AIG expects that the majority of these transactions will be terminated within the

next 12 to 18 months by AIGFP's counterparties as they implement models compliant with the new Basel II Accord. As of February 26, 2008, \$54 billion in notional exposures have either been terminated or are in the process of being terminated. AIGFP was not required to make any payments as part of these terminations and in certain cases was paid a fee upon termination. In light of this experience to date and after other comprehensive analyses, AIG did not recognize an unrealized market valuation adjustment for this regulatory capital relief portfolio for the year ended December 31, 2007. AIG will continue to assess the valuation of this portfolio and monitor developments in the marketplace. There can be no assurance that AIG will not recognize unrealized market valuation losses from this portfolio in future periods. These transactions contributed approximately \$210 million to AIGFP's revenues in 2007. If AIGFP is not successful in replacing the revenues generated by these transactions, AIGFP's operating results could be materially adversely affected. For additional information on the AIGFP super senior credit default swap portfolio, see Risk Management — Segment Risk Management — Financial Services — Capital Markets Derivative Transactions and Note 8 to Consolidated Financial Statements.

In March 2007, the U.S. Treasury Department published proposed regulations that, had they been adopted in 2007, would have had the effect of limiting the ability of AIG to claim foreign tax credits with respect to certain transactions entered into by AIGFP. AIGFP is no longer a participant in those transactions and therefore, the proposed regulations, if adopted in their current form in 2008 or subsequent years, would not be expected to have any material effect on AIG's ability to claim foreign tax credits.

Effective January 1, 2008, AIGFP elected to apply the fair value option to all eligible assets and liabilities, other than equity method investments. The adoption of FAS 159 with respect to elections made by AIGFP is currently being evaluated for the effect of recently issued draft guidance by the FASB, anticipated to be issued in final form in early 2008, and its potential effect on AIG's consolidated financial statements.

Asset Management

In the Spread-Based Investment business, the Guaranteed Investment Contract (GIC) portfolio continues to run off and was replaced by the Matched Investment Program (MIP). The results from domestic GICs and the MIP have been adversely affected by the ongoing disruption in the credit markets, the weakening U.S. dollar and declining interest rates. The MIP is exposed to credit and market risk in the form of investments in, among other asset classes, U.S. residential mortgage-backed securities, asset-backed securities, commercial mortgage-backed securities and single name corporate credit default swaps entered into by the MIP. In addition, earnings volatility for the MIP may arise from investments in bank loans that are held for future collateralized loan obligations to be managed by AIG Investments. The value of the investments may fluctuate materially from period to period due to market movements, which may result in realized and unrealized net losses. Although it is difficult to estimate future movements in these markets, effective hedges exist to mitigate the effect of

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

interest rate and foreign currency exchange rate disruptions. Reported results may be volatile due to certain hedges not qualifying for hedge accounting treatment.

In the Institutional Asset Management business, carried interest, computed in accordance with each fund's governing agreement, is based on the investment's performance over the life of each fund. Unrealized carried interest is recognized based on

each fund's performance as of the balance sheet date. Future fund performance may negatively affect previously recognized carried interest.

For a description of important factors that may affect the operations and initiatives described above, see Item 1A. Risk Factors.

Consolidated Results

The following table summarizes AIG's consolidated revenues, income before income taxes, minority interest and cumulative effect of accounting changes and net income for the years ended December 31, 2007, 2006 and 2005:

Years Ended December 31, (in millions)	2007	2006	2005	Percentage Increase/(Decrease)	
				2007 vs. 2006	2006 vs. 2005
Total revenues	\$110,064	\$113,387	\$108,781	(3)%	4%
Income before income taxes, minority interest and cumulative effect of accounting changes	8,943	21,687	15,213	(59)	43
Net income	\$ 6,200	\$ 14,048	\$ 10,477	(56)%	34%

Effect of Credit Market Events in the Fourth Quarter of 2007

AIG reported a net loss of \$8.4 billion before tax (\$5.2 billion after tax) in the fourth quarter of 2007 as a result of severe credit market disruption. Contributing to this loss was an \$11.5 billion pre-tax charge for the unrealized market valuation loss on AIGFP's super senior credit default swap portfolio. Net realized capital losses totaled \$2.6 billion before tax in the fourth quarter of 2007, arising primarily from other-than-temporary impairment charges in AIG's investment portfolio, with an additional \$643 million impairment charge related to Financial Services securities available for sale reported in other income. Also contributing to the operating loss for the fourth quarter was an operating loss of \$348 million before tax from Mortgage Guaranty from continued deterioration in the U.S. residential housing market.

2007 and 2006 Comparison

AIG's consolidated revenues decreased in 2007 compared to 2006 as growth in Premiums and other considerations and Net investment income in the General Insurance and Life Insurance & Retirement Services segments were more than offset by higher Net realized capital losses compared to 2006 and an unrealized market valuation loss of \$11.5 billion on AIGFP's super senior credit default swap portfolio recorded in other income. Net realized capital losses of \$3.6 billion in 2007 included other-than-temporary impairment charges of the fair value of investments of \$4.1 billion, primarily related to the significant disruption in the residential mortgage and credit markets, and foreign currency related losses of \$500 million. Similarly, AIG recorded in other income, other-than-temporary impairment charges of \$643 million related to its Financial Services securities available for sale reported in other income. Total other-than-temporary impairment charges in 2006 were \$944 million. See Invested Assets — Other-than-temporary impairments herein.

Income before income taxes, minority interest and cumulative effect of accounting changes declined in 2007 due to the losses described above, partially offset by the favorable effects in 2007 of the application of hedge accounting under Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133). In 2007, AIGFP applied hedge accounting to certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. As a result, AIGFP recognized in earnings the change in the fair value of the hedged items attributable to the hedged risks, substantially offsetting the gains and losses on the derivatives designated as hedges. In 2006, AIGFP did not apply hedge accounting to any of its assets and liabilities.

2006 and 2005 Comparison

The increase in revenues in 2006 compared to 2005 was primarily attributable to the growth in Premiums and other considerations and Net investment income in the General Insurance and Life Insurance & Retirement Services segments. Revenues in the Financial Services segment declined as a result of the effect of hedging activities for AIGFP that did not qualify for hedge accounting treatment under FAS 133, decreasing revenues by \$1.8 billion in 2006 and increasing revenues by \$2.0 billion in 2005.

Income before income taxes, minority interest and cumulative effect of accounting changes increased in 2006 compared to 2005, reflecting higher General Insurance and Life Insurance & Retirement Services operating income. These increases were partially offset by lower Financial Services operating income reflecting the effects of hedging activities that did not qualify for hedge accounting treatment under FAS 133. Results in 2005 reflected the negative effect of \$3.3 billion (pre-tax) in catastrophe-related losses incurred that year. Net income in 2005 also reflected the charges related to regulatory settlements, as described in Item 3. Legal Proceedings, and the fourth quarter

charge resulting from the annual review of General Insurance loss and loss adjustment reserves.

Remediation

Throughout 2007 and 2006, as part of its continuing remediation efforts, AIG recorded out of period adjustments which are detailed below. In addition, certain revisions were made to the Consolidated Statement of Cash Flows.

2007 Adjustments

During 2007, out of period adjustments collectively decreased pre-tax operating income by \$372 million (\$399 million after tax). The adjustments were comprised of a charge of \$380 million (\$247 million after tax) to reverse net gains on transfers of investment securities among legal entities consolidated within AIGFP and a corresponding increase to accumulated other comprehensive income (loss); \$156 million of additional income tax expense related to the successful remediation of the material weakness in internal control over income tax accounting; \$142 million (\$92 million after tax) of additional expense related to insurance reserves and DAC in connection with improvements in internal control over financial reporting and consolidation processes; \$42 million (\$29 million after tax) of additional expense, primarily related to other remediation activities; and \$192 million (\$125 million after tax) of net realized capital gains related to foreign exchange.

2006 Adjustments

During 2006, out of period adjustments collectively increased pre-tax operating income by \$313 million (\$65 million after tax). The adjustments were comprised of \$773 million (\$428 million after tax) of additional investment income related to the accounting for certain interests in unit investment trusts (UCITS); \$300 million (\$145 million after tax) of charges primarily related to the remediation of the material weakness in internal control over the accounting for certain derivative transactions under FAS 133; \$58 million of additional income tax expense related to the remediation of the material weakness in internal control over income tax accounting; \$85 million (\$55 million after tax) of interest income related to interest earned on deposit contracts; \$61 million (before and after tax) of expenses related to the Starr International Company, Inc. (SICO) Deferred Compensation Profit Participation Plans (SICO Plans); \$59 million (\$38 million after

tax) of expenses related to deferred advertising costs; and \$125 million (\$116 million after tax) of additional expense, primarily related to other remediation activities.

Results in 2006 were also negatively affected by a one-time charge relating to the C.V. Starr & Co., Inc. (Starr) tender offer (\$54 million before and after tax) and an additional allowance for losses in AIG Credit Card Company (Taiwan) (\$88 million before and after tax), both of which were recorded in first quarter of 2006.

Cash Flows

As part of its ongoing remediation activities, AIG has made certain revisions to the Consolidated Statement of Cash Flows, primarily relating to the effect of reclassifying certain policyholders' account balances, the elimination of certain intercompany balances and revisions related to separate account assets. Accordingly, AIG revised the previous periods presented to conform to the revised presentation. See Note 24 to Consolidated Financial Statements for further information.

Income Taxes

The effective tax rate declined from 30.1 percent in 2006 to 16.3 percent in 2007, primarily due to the unrealized market valuation losses on AIGFP's super senior credit default swap portfolio and other-than-temporary impairment charges. These losses, which are taxed at a U.S. tax rate of 35 percent and are included in the calculation of income tax expense, reduced AIG's overall effective tax rate. In addition, other tax benefits, including tax exempt interest and effects of foreign operations are proportionately larger in 2007 than in 2006 due to the decline in pre-tax income in 2007. Furthermore, tax deductions taken in 2007 for SICO compensation plans for which the expense had been recognized in prior years also reduced the effective tax rate in 2007. AIG has now completed its claims for tax refunds attributable to adjustments made for 2004 and prior financial statements. Refund claims for tax years 1991-1996 were filed with the Internal Revenue Service in June 2007. Claims for tax years 1997-2004 will be filed before September 2008.

AIG expects to receive cash tax benefits in 2008 as a result of the unrealized market valuation losses on AIGFP's super senior credit default swap portfolio, whether AIG is in a regular or alternative minimum tax position.

Management's Discussion and Analysis of Financial Condition and Results of Operations

Continued

The following table summarizes the net effect of catastrophe-related losses for the years ended December 31, 2007 and 2005. There were no significant catastrophe-related losses for the year ended December 31, 2006.

(in millions)	2007	2005
Pretax	\$276	\$3,280*
Net of tax and minority interest	\$177	2,109

* Includes \$312 million in catastrophe-related losses from partially owned companies.

Segment Results

The following table summarizes AIG's operations by reporting segment for the years ended December 31, 2007, 2006 and 2005. See also Note 2 to Consolidated Financial Statements.

(in millions)	2007	2006 ^(a)	2005 ^(a)	Percentage Increase/(Decrease)	
				2007 vs. 2006	2006 vs. 2005
Revenues ^(b) :					
General Insurance ^(c)	\$ 51,708	\$ 49,206	\$ 45,174	5%	9%
Life Insurance & Retirement Services ^{(c)(d)}	53,570	50,878	48,020	5	6
Financial Services ^{(e)(f)}	(1,309)	7,777	10,677	—	(27)
Asset Management	5,625	4,543	4,582	24	(1)

Total	\$ 8,943	\$ 21,687	\$ 15,213	(59)%	43%

(a) Certain reclassifications have been made to prior period amounts to conform to the current period presentation.

(b) In 2007, 2006 and 2005, includes other-than-temporary impairment charges of \$4.7 billion, \$944 million and \$598 million, respectively. Also includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. In 2007, 2006, and 2005, respectively, the effect was \$(1.44) billion, \$(1.87) billion and \$2.02 billion in both revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings. These gains (losses) in 2007 include a \$380 million out of period charge to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIGFP. The gains (losses) in 2006 include an out of period charge of \$223 million related to the remediation of the material weakness in internal control over the accounting for certain derivative transactions under FAS 133.

(c) In 2006, includes the effect of out of period adjustments related to the accounting for UCITS. In 2006, the effect was an increase of \$490 million in both revenues and operating income for General Insurance and an increase of \$240 million and \$169 million in revenues and operating income, respectively, for Life Insurance & Retirement Services.

(d) In 2007, 2006 and 2005, includes other-than-temporary impairment charges of \$2.8 billion, \$641 million and \$425 million, respectively, for Life Insurance & Retirement Services.

(e) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. In 2007, 2006 and 2005, respectively, the effect was \$104 million, \$(1.97) billion, and \$2.19 billion in both revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings. The years ended December 31, 2007 and 2006 include out of period charges of \$380 million and \$223 million, respectively, as discussed in footnote (b). In the first quarter of 2007, AIG began applying hedge accounting for certain transactions, primarily in its Capital Markets operations. In the second quarter of 2007, AGF and ILFC began applying hedge accounting to most of their derivatives hedging interest rate and foreign exchange risks associated with their floating rate and foreign currency denominated borrowings.

(f) In 2007, both revenues and operating income (loss) include an unrealized market valuation loss of \$11.5 billion on AIGFP's super senior credit default swap portfolio and an other-than-temporary impairment charge of \$643 million on AIGFP's available for sale investment securities recorded in other income.

(g) Includes current year catastrophe-related losses of \$276 million in 2007 and \$3.28 billion in 2005. There were no significant catastrophe-related losses in 2006.

(h) In 2005, includes current year catastrophe-related losses from unconsolidated entities of \$312 million.

General Insurance

AIG's General Insurance operations provide property and casualty products and services throughout the world. Revenues in the General Insurance segment represent net premiums earned, net investment income and net realized capital gains (losses). The increase in General Insurance operating income in 2007 compared to 2006 was driven by strength in the Domestic Brokerage Group (DBG), partially offset by operating losses from the Mortgage Guaranty business and a decrease in Personal Lines operating income.

Life Insurance & Retirement Services

AIG's Life Insurance & Retirement Services operations provide insurance, financial and investment-oriented products throughout the world. Revenues in the Life Insurance & Retirement Services operations represent premiums and other considerations, net investment income and net realized capital gains (losses). Foreign operations contributed approximately 76 percent, 68 percent and 59 percent of AIG's Life Insurance & Retirement Services operating income in 2007, 2006 and 2005, respectively.

Life Insurance & Retirement Services operating income declined in 2007 compared to 2006 primarily due to higher net realized capital losses in 2007. In addition, operating income in 2007 was negatively affected by charges related to remediation activity in Asia; an industry wide regulatory claims review in Japan; the effect of Statement of Position 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts" (SOP 05-1), which was adopted in 2007; and investment losses where a FAS 115 trading election was made (trading account).

Financial Services

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance. Revenues in the Financial Services segment include interest, realized and unrealized gains and losses, including the unrealized market valuation losses on AIGFP's super senior credit default swap portfolio, lease and finance charges.

Financial Services reported an operating loss in 2007 compared to operating income in 2006, primarily due to an unrealized market valuation loss of \$11.5 billion on AIGFP's super senior credit default swap portfolio, an other-than-temporary impairment charge of \$643 million on AIGFP's investment portfolio of CDOs of asset-backed securities (ABS) and a decline in operating income for AGF. AGF's operating income declined in 2007 compared to 2006 due to reduced residential mortgage origination volume, lower revenues from its mortgage banking activities and increases in the provision for finance receivable losses. In 2007, AGF's mortgage banking operations recorded a pre-tax charge of \$178 million, representing the estimated cost of implementing the Supervisory Agreement entered into with the Office of Thrift Supervision (OTS), which is discussed in the Consumer Finance results of operations section.

Operating income for ILFC increased in 2007 compared to 2006, driven to a large extent by a larger aircraft fleet, higher lease rates and higher utilization.

In 2007, AIGFP began applying hedge accounting under FAS 133 to certain of its interest rate swaps and foreign currency forward contracts that hedge its investments and borrowings and AGF and ILFC began applying hedge accounting to most of their derivatives that hedge floating rate and foreign currency denominated borrowings. Prior to 2007, hedge accounting was not applied to any of AIG's derivatives and related assets and liabilities. Accordingly, revenues and operating income were exposed to volatility resulting from differences in the timing of revenue recognition between the derivatives and the hedged assets and liabilities.

Asset Management

AIG's Asset Management operations include institutional and retail asset management, broker-dealer services and spread-based investment businesses. Revenues in the Asset Management segment represent investment income with respect to spread-based products and management, advisory and incentive fees.

Asset Management operating income decreased in 2007 compared to 2006, due to realized capital losses on interest rate and foreign currency hedge positions not qualifying for hedge accounting and other-than-temporary impairment charges on fixed income investments due primarily to disruptions in the U.S. credit markets. These decreases were partially offset by higher partnership income from the Spread-Based Investment business, increased gains on real estate investments and a gain on the sale of a portion of AIG's investment in Blackstone Group, L.P. in connection with its initial public offering.

Capital Resources

At December 31, 2007, AIG had total consolidated shareholders' equity of \$95.8 billion and total consolidated borrowings of \$176.0 billion. At that date, \$67.9 billion of such borrowings were subsidiary borrowings not guaranteed by AIG.

In 2007, AIG issued an aggregate of \$5.6 billion of junior subordinated debentures in five series of securities. Substantially all of the proceeds from these sales, net of expenses, were used to repurchase shares of AIG's common stock. A total of 76,361,209 shares were repurchased during 2007.

In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. In November 2007, AIG's Board of Directors authorized the repurchase of an additional \$8 billion in common stock. At February 15, 2008, \$10.25 billion was available for repurchase under the aggregate authorization. AIG did not purchase shares of its common stock under its common stock repurchase authorization during 2006. AIG does not expect to purchase additional shares under its share repurchase program for the foreseeable future, other than pursuant to commitments that existed at December 31, 2007.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At December 31, 2007, AIG's consolidated invested assets, primarily held by its subsidiaries, included \$65.6 billion in cash and short-term investments. Consolidated net cash provided from operating activities in 2007 amounted to \$35.2 billion. At both the subsidiary and parent company level, liquidity management activities are intended to preserve and enhance funding stability, flexibility, and diversity through a wide range of potential operating environments and market conditions. AIG's primary sources of cash flow are dividends and other payments from its regulated and unregulated subsidiaries, as well as issuances of debt securities. Primary uses of cash flow are for debt service, subsidiary funding, shareholder dividend payments and common stock repurchases. As a result of disruption in the credit markets during 2007, AIG took steps to enhance the liquidity of its portfolios, including increasing the liquidity of the collateral in the securities lending program. Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements, including the funding of increased dividends under AIG's new dividend policy.

Critical Accounting Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires the application of accounting policies that often involve a significant degree of judgment. AIG considers that its accounting policies that are most dependent on the application of estimates and assumptions, and therefore viewed as critical accounting estimates, to be those relating to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts, recoverability of DAC, estimated gross profits for investment-oriented products, fair value measurements of certain financial assets and liabilities, other-than-temporary impairments, the allowance for finance receivable losses and flight equipment recoverability. These accounting estimates require the use of assumptions about matters, some of which are highly uncertain at the time of estimation. To the extent actual experience differs from the assumptions used, AIG's results of operations would be directly affected.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG's critical accounting estimates are discussed in detail. The major categories for which assumptions are developed and used to establish each critical accounting estimate are highlighted below.

Reserves for Losses and Loss Expenses (General Insurance):

- *Loss trend factors*: used to establish expected loss ratios for subsequent accident years based on premium rate adequacy and the projected loss ratio with respect to prior accident years.
- *Expected loss ratios for the latest accident year*: in this case, accident year 2007 for the year-end 2007 loss reserve analysis. For low-frequency, high-severity classes such as

excess casualty, expected loss ratios generally are utilized for at least the three most recent accident years.

- *Loss development factors*: used to project the reported losses for each accident year to an ultimate amount.
- *Reinsurance recoverable on unpaid losses*: the expected recoveries from reinsurers on losses that have not yet been reported and/or settled.

Future Policy Benefits for Life and Accident and Health Contracts (Life Insurance & Retirement Services):

- *Interest rates*: which vary by geographical region, year of issuance and products.
- *Mortality, morbidity and surrender rates*: based upon actual experience by geographical region modified to allow for variation in policy form, risk classification and distribution channel.

Deferred Policy Acquisition Costs (Life Insurance & Retirement Services):

- *Recoverability*: based on current and future expected profitability, which is affected by interest rates, foreign exchange rates, mortality experience and policy persistency.

Deferred Policy Acquisition Costs (General Insurance):

- *Recoverability*: based upon the current terms and profitability of the underlying insurance contracts.

Estimated Gross Profits (Life Insurance & Retirement Services):

- *Estimated gross profits*: to be realized over the estimated duration of the contracts (investment-oriented products) affect the carrying value of DAC, unearned revenue liability and associated amortization patterns under FAS 97, "Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments" (FAS 97); and Sales Inducement Assets under American Institute of Certified Public Accountants (AICPA) Statement of Position (SOP) 03-1, "Accounting and Reporting by Insurance Enterprises for Certain Nontraditional Long-Duration Contracts and for Separate Accounts" (SOP 03-1). Estimated gross profits include investment income and gains and losses on investments less required interest, actual mortality and other expenses.

Fair Value Measurements of Financial Instruments:

AIG measures financial instruments in its trading and available for sale securities portfolios, together with securities sold but not yet purchased, certain hybrid financial instruments, and derivative assets and liabilities at fair value. The fair value of a financial instrument is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The degree of judgment used in measuring the fair value of financial instruments generally correlates with the level of pricing observability. Financial instruments with quoted prices in active markets generally have more pricing observability and less judgment is used in measuring fair value. Conversely, financial instruments traded in other than active markets or that do not have quoted prices have less observability and are measured at fair value using valuation models or other pricing techniques that

require more judgment. Pricing observability is affected by a number of factors, including the type of financial instrument, whether the financial instrument is new to the market and not yet established, the characteristics specific to the transaction and general market conditions.

AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. AIG obtains market price data to value financial instruments whenever such information is available. Market price data generally is obtained from market exchanges or dealer quotations. The types of instruments valued based on market price data include G-7 government and agency securities, equities listed in active markets, investments in publicly traded mutual funds with quoted market prices and listed derivatives.

AIG estimates the fair value of fixed income instruments not traded in active markets by referring to traded securities with similar attributes and using a matrix pricing methodology. This methodology considers such factors as the issuer's industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, and other relevant factors. The types of fixed income instruments not traded in active markets include non-G-7 government securities, municipal bonds, certain hybrid financial instruments, most investment-grade and high-yield corporate bonds, and most mortgage- and asset-backed products.

AIG initially estimates the fair value of equity instruments not traded in active markets by reference to the transaction price. This valuation is adjusted only when changes to inputs and assumptions are corroborated by evidence such as transactions in similar instruments, completed or pending third-party transactions in the underlying investment or comparable entities, subsequent rounds of financing, recapitalizations and other transactions across the capital structure, offerings in the equity capital markets, and changes in financial ratios or cash flows.

For equity and fixed income instruments that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability, and such adjustments generally are based on available market evidence. In the absence of such evidence, management's best estimate is used.

AIG obtains the fair value of its investments in limited partnerships and hedge funds from information provided by the general partner or manager of the investments, the financial statements of which generally are audited annually.

Derivative assets and liabilities can be exchange-traded or traded over the counter (OTC). AIG generally values exchange-traded derivatives within portfolios using models that calibrate to market clearing levels and eliminate timing differences between the closing price of the exchange-traded derivatives and their underlying instruments.

OTC derivatives are valued using market transactions and other market evidence whenever possible, including market-based inputs to models, model calibration to market clearing transactions, broker or dealer quotations or alternative pricing sources with reasonable levels of price transparency. When models are used, the selection of a particular model to value an OTC derivative depends on the contractual terms of, and specific risks inherent

in, the instrument as well as the availability of pricing information in the market. AIG generally uses similar models to value similar instruments. Valuation models require a variety of inputs, including contractual terms, market prices and rates, yield curves, credit curves, measures of volatility, prepayment rates and correlations of such inputs. For OTC derivatives that trade in liquid markets, such as generic forwards, swaps and options, model inputs can generally be verified and model selection does not involve significant management judgment.

Certain OTC derivatives trade in less liquid markets with limited pricing information, and the determination of fair value for these derivatives is inherently more difficult. When AIG does not have corroborating market evidence to support significant model inputs and cannot verify the model to market transactions, transaction price is initially used as the best estimate of fair value. Accordingly, when a pricing model is used to value such an instrument, the model is adjusted so that the model value at inception equals the transaction price. Subsequent to initial recognition, AIG updates valuation inputs when corroborated by evidence such as similar market transactions, third-party pricing services and/or broker or dealer quotations, or other empirical market data. When appropriate, valuations are adjusted for various factors such as liquidity, bid/offer spreads and credit considerations. Such adjustments are generally based on available market evidence. In the absence of such evidence, management's best estimate is used.

AIGFP employs a modified version of the Binomial Expansion Technique (BET) model to value its super senior credit default swap portfolio, including maturity-shortening puts that allow the holders of the notes issued by certain multi-sector CDOs to treat the notes as short-term eligible 2a-7 investments under the Investment Company Act of 1940 (2a-7 Puts). The BET model utilizes default probabilities derived from credit spreads implied from market prices for the individual securities included in the underlying collateral pools securing the CDOs, as well as diversity scores, weighted average lives, recovery rates and discount rates. The determination of some of these inputs requires the use of judgment and estimates, particularly in the absence of market observable data. AIGFP also employs a Monte Carlo simulation to assist in quantifying the effect on the valuation of the CDOs of the unique aspects of the CDO's structure such as triggers that divert cash flows to the most senior part of the capital structure. In the final determination of fair value, AIGFP also considers the price estimates for the super senior CDO notes provided by third parties, including counterparties to these transactions, and makes adjustments when deemed necessary. See also Risk Management, Segment Risk Management, Financial Services — Capital Markets Derivative Transactions and Note 8 to Consolidated Financial Statements.

Other-Than-Temporary Impairments:

AIG evaluates its investments for impairment such that a security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par, amortized cost (if lower) or cost for an extended period of time (nine consecutive months or longer);

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

- The occurrence of a discrete credit event resulting in (i) the issuer defaulting on a material outstanding obligation; (ii) the issuer seeking protection from creditors under the bankruptcy laws or any similar laws intended for court supervised reorganization of insolvent enterprises; or (iii) the issuer proposing a voluntary reorganization pursuant to which creditors are asked to exchange their claims for cash or securities having a fair value substantially lower than par value of their claims; or
- AIG may not realize a full recovery on its investment, regardless of the occurrence of one of the foregoing events.

The above criteria also consider circumstances of a rapid and severe market valuation decline, such as that experienced in current credit markets, in which AIG could not reasonably assert that the recovery period would be temporary (severity losses).

In light of the recent significant disruption in the U.S. residential mortgage and credit markets, particularly in the fourth quarter, AIG has recognized an other-than-temporary impairment charge (severity loss) of \$2.2 billion (including \$643 million related to AIGFP's available for sale investment securities recorded in other income), primarily from certain residential mortgage-backed securities and other structured securities. Even while retaining their investment grade ratings, such securities were priced at a severe discount to cost. Notwithstanding AIG's intent and ability to hold such securities indefinitely, and despite structures which indicate that a substantial amount of the securities should continue to perform in accordance with their original terms, AIG concluded that it could not reasonably assert that the recovery period would be temporary.

At each balance sheet date, AIG evaluates its securities holdings with unrealized losses. When AIG does not intend to hold such securities until they have recovered their cost basis, AIG records the unrealized loss in income. If a loss is recognized from a sale subsequent to a balance sheet date pursuant to changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer existed.

In periods subsequent to the recognition of an other-than-temporary impairment charge for fixed maturity securities, which is not credit or foreign exchange related, AIG generally accretes into income the discount or amortizes the reduced premium resulting from the reduction in cost basis over the remaining life of the security.

Allowance for Finance Receivable Losses (Financial Services):

- *Historical defaults and delinquency experience:* utilizing factors, such as delinquency ratio, allowance ratio, charge-off ratio, and charge-off coverage.
- *Portfolio characteristics:* portfolio composition and consideration of the recent changes to underwriting criteria and portfolio seasoning.
- *External factors:* consideration of current economic conditions, including levels of unemployment and personal bankruptcies.
- *Migration analysis:* empirical technique measuring historical movement of similar finance receivables through various levels of repayment, delinquency, and loss categories to existing finance receivable pools.

Flight Equipment Recoverability (Financial Services):

- *Expected undiscounted future net cash flows:* based upon current lease rates, projected future lease rates and estimated terminal values of each aircraft based on third-party information.

Operating Review

General Insurance Operations

AIG's General Insurance subsidiaries write substantially all lines of commercial property and casualty insurance and various personal lines both domestically and abroad.

As previously noted, AIG believes it should present and discuss its financial information in a manner most meaningful to its financial statement users. Accordingly, in its General Insurance business, AIG uses certain regulatory measures, where AIG has determined these measurements to be useful and meaningful.

A critical discipline of a successful general insurance business is the objective to produce profit from underwriting activities taking into account costs of capital. AIG views underwriting results to be critical in the overall evaluation of performance.

Statutory underwriting profit is derived by reducing net premiums earned by net losses and loss expenses incurred and net expenses incurred. Statutory accounting generally requires immediate expense recognition and ignores the matching of revenues and expenses as required by GAAP. That is, for statutory purposes, expenses (including acquisition costs) are recognized immediately, not over the same period that the revenues are earned. Thus, statutory expenses exclude changes in DAC.

GAAP provides for the recognition of certain acquisition expenses at the same time revenues are earned, the accounting principle of matching. Therefore, acquisition expenses are deferred and amortized over the period the related net premiums written are earned. DAC is reviewed for recoverability, and such review requires management judgment. The most comparable GAAP measure to statutory underwriting profit is income before income taxes, minority interest and cumulative effect of an accounting change. A table reconciling statutory underwriting profit to income before income taxes, minority interest and cumulative effect of an accounting change is contained in footnote (d) to the following table. See also Critical Accounting Estimates herein and Notes 1 and 6 to Consolidated Financial Statements.

AIG, along with most general insurance companies, uses the loss ratio, the expense ratio and the combined ratio as measures of underwriting performance. The loss ratio is the sum of losses and loss expenses incurred divided by net premiums earned. The expense ratio is statutory underwriting expenses divided by net premiums written. These ratios are relative measurements that describe, for every \$100 of net premiums earned or written, the cost of losses and statutory expenses, respectively. The combined ratio is the sum of the loss ratio and the expense ratio. The combined ratio presents the total cost per \$100 of premium production. A combined ratio below 100 demonstrates underwriting profit; a combined ratio above 100 demonstrates underwriting loss.

Net premiums written are initially deferred and earned based upon the terms of the underlying policies. The net unearned premium reserve constitutes deferred revenues which are generally earned ratably over the policy period. Thus, the net unearned premium reserve is not fully recognized in income as net premiums earned until the end of the policy period.

The underwriting environment varies from country to country, as does the degree of litigation activity. Regulation, product type and competition have a direct effect on pricing and consequently on profitability as reflected in underwriting profit and statutory general insurance ratios.

General Insurance Results

General Insurance operating income is comprised of statutory underwriting profit (loss), changes in DAC, net investment income and net realized capital gains and losses. Operating income, as well as net premiums written, net premiums earned, net investment income and net realized capital gains (losses) and statutory ratios in 2007, 2006 and 2005 were as follows:

(in millions, except ratios)	2007	2006	2005	Percentage Increase/(Decrease)

AIG transacts business in most major foreign currencies. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of General Insurance net premiums written for the years ended December 31, 2007 and 2006:

	2007	2006
Growth in original currency*	3.5%	7.4%
Foreign exchange effect	1.4	(0.2)
Growth as reported in U.S. dollars	4.9%	7.2%

* Computed using a constant exchange rate for each period.

2007 and 2006 Comparison

General Insurance operating income increased in 2007 compared to 2006 due to growth in net investment income, partially offset by a decline in underwriting profit and Net realized capital losses. The 2007 combined ratio increased to 90.3, an increase of 1.2 points compared to 2006, primarily due to an increase in the loss ratio of 1.0 points. The loss ratio for accident year 2007 recorded in 2007 was 2.3 points higher than the loss ratio recorded in 2006 for accident year 2006. Increases in Mortgage Guaranty losses accounted for a 2.1 point increase in the 2007 accident year loss ratio. The downward cycle in the U.S. housing market is not expected to improve until residential inventories return to a more normal level, and AIG expects that this downward cycle will continue to adversely affect Mortgage Guaranty's loss ratios for the foreseeable future. The higher accident year loss ratio was partially offset by favorable development on prior years, which reduced incurred losses by \$606 million and \$53 million in 2007 and 2006, respectively. Additional favorable loss development of \$50 million (recognized in consolidation and related to certain asbestos settlements) reduced overall incurred losses.

General Insurance net premiums written increased in 2007 compared to 2006, reflecting growth in Foreign General Insurance from both established and new distribution channels, and the effect of changes in foreign currency exchange rates as well as growth in Mortgage Guaranty, primarily from international business.

General Insurance net investment income increased in 2007 by \$436 million. Interest and dividend income increased \$714 million in 2007 compared to 2006 as fixed maturities and equity securities increased by \$11.6 billion and the average yield increased 10 basis points. Income from partnership investments increased \$159 million in 2007 compared to 2006, primarily due to improved returns on underlying investments and higher levels of invested assets. Investment expenses in 2007 declined \$60 million compared to 2006, primarily due to decreased interest expense on deposit liabilities. These increases to net investment income were partially offset by \$490 million of income from an out of period UCITS adjustment recorded in 2006. Net realized capital losses in 2007 include other-than-temporary impairment charges of \$276 million compared to \$77 million in 2006. See also Capital Resources and Liquidity and Invested Assets herein.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers manage their businesses, commencing in 2007, the foreign aviation business, which was historically reported in DBG, is now reported as part of Foreign General Insurance, and the oil rig and marine businesses, which were historically reported in Foreign General Insurance, are now reported as part of DBG. Prior period amounts have been revised to conform to the current presentation.

2006 and 2005 Comparison

General Insurance operating income increased in 2006 compared to 2005 due to growth in net premiums, a reduction in both

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

catastrophe losses and prior accident year development, and growth in Net investment income. The combined ratio improved to 89.1, a reduction of 15.6 points from 2005, including an improvement in the loss ratio of 16.5 points. The reduction in catastrophe losses represented 6.9 points and the reduction in prior year adverse development represented 11.5 points of the overall reduction. Net premiums written increased \$3.0 billion or 7 percent in 2006 compared to 2005. Domestic General Insurance accounted for \$1.6 billion of the increase as property rates improved and submission activity increased due to the strength of AIG's capacity, commitment to difficult markets and diverse product offerings. Foreign General Insurance contributed \$1.4 billion to the increase in net premiums written. In 2005, Domestic General Insurance net premiums written increased by \$300 million and Foreign General Insurance net premiums written decreased by the same amount as a result of the commutation of the Richmond reinsurance contract. The commutation partially offset the increase in Domestic General Insurance net premiums written in 2006 compared to 2005 and increased Foreign General Insurance net premiums written in 2006 compared to 2005.

In 2006, certain adjustments were made in conjunction with the remediation of the material weakness relating to balance sheet account reconciliations which increased earned premiums by \$189 million and increased other expenses by \$415 million. The combined effect of these adjustments increased the expense ratio by 0.9 points and decreased the loss ratio by 0.3 points.

General Insurance net investment income increased \$1.67 billion in 2006 to \$5.7 billion on higher levels of invested assets, strong cash flows, slightly higher yields and increased partnership income, and included increases from out of period adjustments of \$490 million related to the accounting for certain interests in UCITS, \$43 million related to partnership income and \$85 million related to interest earned on a DBG deposit contract. See also Capital Resources and Liquidity — Liquidity and Invested Assets herein.

DBG Results

2007 and 2006 Comparison

DBG's operating income increased in 2007 compared to 2006 primarily due to growth in both net investment income and underwriting profit. The improvement is also reflected in the combined ratio, which declined 4.5 points in 2007 compared to 2006, primarily due to an improvement in the loss ratio of 3.3 points. Catastrophe-related losses increased the 2007 loss ratio by 0.4 points. The loss ratio for accident year 2007 recorded in 2007 was 0.9 points lower than the loss ratio recorded in 2006 for accident year 2006. The loss ratio for accident year 2006 has improved in each quarter since September 30, 2006. As a result, the 2007 accident year loss ratio is 2.8 points higher than the 2006 accident year loss ratio, reflecting reductions in 2006 accident year losses recorded through December 31, 2007. Prior year development reduced incurred losses by \$390 million in 2007 and increased incurred losses by \$175 million in 2006, accounting for 2.4 points of the improvement in the loss ratio.

DBG's net premiums written declined in 2007 compared to 2006 as ceded premiums as a percentage of gross written

premiums increased to 24 percent in 2007 compared to 23 percent in 2006, primarily due to additional reinsurance for property risks to manage catastrophe exposures.

DBG's expense ratio decreased to 18.7 in 2007 compared to 19.8 in 2006, primarily due to the 2006 charge related to the remediation of the material weakness in internal control over certain balance sheet reconciliations that accounted for 2.1 points of the decline. The decline was partially offset by increases in operating expenses for marketing initiatives and operations.

DBG's net investment income increased in 2007 compared to 2006, as interest income increased \$384 million in 2007, on growth in the bond portfolio resulting from investment of operating cash flows. Income from partnership investments increased \$159 million in 2007 compared to 2006, primarily due to improved returns on the underlying investments. Other investment income declined \$163 million in 2007 compared to 2006, primarily due to out of period adjustments of \$194 million recorded in 2006. DBG recorded net realized capital losses in 2007 compared to net realized capital gains in 2006 primarily due to other-than-temporary impairment charges of \$213 million in 2007 compared to \$73 million in 2006.

2006 and 2005 Comparison

DBG's operating income was \$5.85 billion in 2006 compared to a loss of \$820 million in 2005, an improvement of \$6.67 billion. The improvement is also reflected in the combined ratio, which declined to 89.9 in 2006 compared to 114.6 in 2005 primarily due to an improvement in the loss ratio of 24.9 points. The reduction in prior year adverse development and the reduction in catastrophe losses and related reinstatement premiums accounted for 20.7 points and 8.3 points, respectively, of the improvement.

DBG's net premiums written increased in 2006 compared to 2005 as property rates improved and submission activity increased due to the strength of AIG's capacity, commitment to difficult markets and diverse product offerings. Net premiums written in 2005 were reduced by \$136 million due to reinstatement premiums related to catastrophes, offset by increases of \$300 million for the Richmond commutation and \$147 million related to an accrual for workers compensation premiums for payroll not yet reported by insured employers. The combined effect of these items reduced the growth rate for net premiums written by 1.3 percent.

The loss ratio in 2006 declined 24.9 points to 70.2. The 2005 loss ratio was negatively affected by catastrophe-related losses of \$1.8 billion and related reinstatement premiums of \$136 million. Adverse development on reserves for loss and loss adjustment expenses declined to \$175 million in 2006 compared to \$4.9 billion in 2005, accounting for 20.7 points of the decrease in the loss ratio.

DBG's expense ratio increased to 19.8 in 2006 compared to 19.5 in 2005, primarily due to an increase in other expenses that amounted to \$498 million in 2006 (including out of period charges of \$356 million) compared to \$372 million in 2005. This increase added 0.4 points to the expense ratio.

DBG's net investment income increased by \$1.0 billion in 2006 compared to 2005, as interest income increased \$482 million on growth in the bond portfolio resulting from investment of operating cash flows and capital contributions. Partnership income increased from 2005 due to improved performance of the underlying investments, including initial public offering activity. Net investment income in 2006 included increases relating to out of period adjustments of \$109 million for the accounting for UCITS and partnerships and \$85 million related to interest earned on a deposit contract that did not exist in the prior year.

Transatlantic Results

2007 and 2006 Comparison

Transatlantic's net premiums written and net premiums earned increased in 2007 compared to 2006 due to increases in both domestic and international operations. The increase in statutory underwriting profit in 2007 compared to 2006 reflects improved underwriting results in Domestic operations. Operating income increased in 2007 compared to 2006 due principally to increased net investment income and improved underwriting results.

2006 and 2005 Comparison

Transatlantic's net premiums written and net premiums earned increased in 2006 compared to 2005 due primarily to increased writings in domestic operations. Operating income increased in 2006 compared to 2005 due largely to lower catastrophe losses and net ceded reinstatement premiums, and increased net investment income.

Personal Lines Results

2007 and 2006 Comparison

Personal Lines operating income in 2007 decreased by \$365 million compared to 2006, largely due to an increase in incurred losses from a number of sources, leading to an overall increase in the loss ratio of 6.8 points. Prior year net adverse reserve development contributed 2.5 points of this increase in the loss ratio, as Personal Lines experienced \$7 million in net adverse development (including \$64 million in adverse development from businesses placed in runoff), compared to \$111 million of favorable development in 2006. An additional 1.6 point increase in the loss ratio resulted from \$61 million of losses and \$14 million of reinstatement premiums due to the California wildfires. In addition, an increase in the loss ratio recorded in 2007 for accident year 2007 compared to the loss ratio recorded in 2006 for accident year 2006 of 2.7 points resulted, in part, from an increased frequency of large losses in the Private Client Group and average automobile premiums declining faster than loss trends.

Operating income also declined due to increased expenses. The expense ratio increased 1.1 points in 2007 compared to 2006, primarily due to \$63 million of transaction and integration costs associated with the 2007 acquisition of the minority interest in 21st Century.

Net premiums written increased in 2007 compared to 2006 due to continued growth in the Private Client Group and increased new business production in the aigdirect.com business partially offset by a reduction in the Agency Auto business.

On September 27, 2007, AIG completed its previously announced acquisition of 21st Century, paying \$759 million to acquire the remaining 39.2 percent of the shares of 21st Century that it did not previously own. As a result of the acquisition, the AIG Direct and 21st Century operations have been combined as aigdirect.com.

Under the purchase method of accounting, the assets and liabilities of 21st Century that were acquired were adjusted to their estimated fair values as of the date of the acquisition, and goodwill of \$342 million was recorded. A customer relationship intangible asset, initially valued at \$119 million, was also established.

2006 and 2005 Comparison

Personal Lines operating income increased \$237 million in 2006 compared to 2005 reflecting a reduction in the loss ratio of 5.8 points. Favorable development on prior accident years reduced incurred losses by \$111 million in 2006 compared to an increase of \$14 million in 2005, accounting for 2.7 points of the decrease in the loss ratio. The 2005 catastrophe-related losses of \$112 million added 2.4 points to the loss ratio. The loss ratio for the 2006 accident year improved 0.7 points primarily due to the termination of The Robert Plan relationship effective December 31, 2005 and growth in the Private Client Group. The improvement in the loss ratio was partially offset by an increase in the expense ratio of 0.6 points primarily due to investments in people and technology, national expansion efforts and lower response rates. Net premiums written were flat in 2006 compared to 2005, with growth in the Private Client Group and Agency Auto divisions offset by termination of The Robert Plan relationship. Growth in the Private Client Group spans multiple products, with a continued penetration of the high net worth market, strong brand promotion and innovative loss prevention programs.

Mortgage Guaranty Results

2007 and 2006 Comparison

Mortgage Guaranty's operating loss in 2007 was \$637 million compared to operating income of \$328 million in 2006 as the deteriorating U.S. residential housing market adversely affected losses incurred for both the domestic first- and second-lien businesses. Domestic first- and second-lien losses incurred increased 362 percent and 346 percent respectively, compared to 2006, resulting in loss ratios of 122.0 and 357.0, respectively, in 2007. Increases in domestic losses incurred resulted in an overall loss ratio of 168.6 in 2007 compared to 47.2 in 2006. Prior year development reduced incurred losses in 2007 by \$25 million compared to a reduction of \$115 million in 2006, which accounted for 12.7 points of the increase in the loss ratio.

Net premiums written increased in 2007 compared to 2006 primarily due to growth in the international markets, accounting for 19 percent of the increase in net premiums written. In addition

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

the increased use of mortgage insurance for credit enhancement as well as better persistency resulted in an increase in domestic first-lien premiums. UGC has taken steps to strengthen its underwriting guidelines and increase rates. It also discontinued new production for certain programs in the second-lien business beginning in the fourth quarter of 2006. However, UGC will continue to receive renewal premiums on that portfolio for the life of the loans, estimated to be three to five years, and will continue to be exposed to possible losses from future defaults.

The expense ratio in 2007 was 21.2, down from 23.4 in 2006 as premium growth offset the effect of increased expenses related to UGC's international expansion and the employment of additional operational resources in the second-lien business.

UGC domestic mortgage risk in force totaled \$29.8 billion as of December 31, 2007 and the 60-day delinquency ratio was 3.7 percent (based on number of policies, consistent with mortgage industry practice) compared to domestic mortgage risk in force of \$24.9 billion and a delinquency ratio of 2.1 percent at December 31, 2006. Approximately 81 percent of the domestic mortgage risk is secured by first-lien, owner-occupied properties.

2006 and 2005 Comparison

Mortgage Guaranty operating income declined in 2006 from 2005 due primarily to unfavorable loss experience on third-party originated second-lien business with a credit quality lower than typical for UGC and a softening U.S. housing market. This increased Mortgage Guaranty's consolidated loss ratio in 2006 to 47.2 compared to 26.0 in 2005. The writing of this second-lien coverage, which began in 2005, was discontinued as of year end 2006. Losses in the second-lien business have been mitigated by a policy year aggregate limitation provision that is typically established for each lender.

Net premiums written increased due to growth in the domestic second-lien and international businesses as well as improved persistency in the domestic first-lien business. The expense ratio remained flat as premium growth covered increased expenses related to expansion internationally and continued investment in risk management resources.

Foreign General Insurance Results

2007 and 2006 Comparison

Foreign General Insurance operating income decreased in 2007 compared to 2006, due primarily to decreases in Net investment income and statutory underwriting profit. Net investment income in 2006 included income of \$424 million from out of period UCITS adjustments. Statutory underwriting profit decreased due to losses from the June 2007 U.K. floods, an increase in severe but non-catastrophic losses and higher frequency of non-severe losses compared to 2006, partially offset by higher favorable loss development on prior accident years.

Net premiums written increased 14 percent (10 percent in original currency) in 2007 compared to 2006, reflecting growth in commercial and consumer lines driven by new business from both established and new distribution channels, including Central Insurance Co. Ltd. in Taiwan acquired in late 2006. Net premiums

written for commercial lines increased due to new business in the U.K. and Europe and decreases in the use of reinsurance, partially offset by declines in premium rates. Growth in consumer lines in Latin America, Asia and Europe also contributed to the increase. Net premiums written for the Lloyd's syndicate Ascot (Ascot) and Aviation declined due to rate decreases and increased market competition.

The 2007 loss ratio increased a total of 1.7 points compared to 2006. Losses of \$90 million from the June 2007 U.K. floods added 0.7 points to the loss ratio and higher severe but non-catastrophic losses and higher loss frequency for personal accident business in Japan and personal lines business in Asia and Latin America added 1.6 points to the loss ratio. Partially offsetting these increases was favorable loss development on prior accident years of \$286 million in 2007 compared to \$183 million in 2006, which decreased the loss ratio by 0.6 points.

The 2007 expense ratio increased 1.3 points compared to 2006. This increase reflected the cost of realigning certain legal entities through which Foreign General Insurance operates and the increased significance of consumer lines of business, which have higher acquisition costs. These factors contributed 0.7 points to the 2007 expense ratio. AIG expects the expense ratio to increase in 2008 due to the continued cost of realigning certain legal entities through which Foreign General Insurance operates.

Net investment income decreased in 2007 compared to 2006 as the 2006 period included the out of period UCITS adjustments, which more than offset increases resulting from higher interest rates, increased cash flows and mutual fund income. Mutual fund income was \$93 million higher than 2006 reflecting improved performance in the equity markets in 2007. Partnership income was essentially unchanged.

2006 and 2005 Comparison

Foreign General Insurance operating income increased in 2006 compared to 2005 due to out of period UCITS adjustments in 2006, the absence of significant catastrophe-related losses in 2006, rate increases and lower current accident year losses by Ascot on its U.S. book of business and lower asbestos and environmental reserve increases. These increases were partially offset by lower favorable loss development from prior accident years and adverse loss development on the 2005 hurricanes. Statutory underwriting profit increased \$104 million in 2006 compared to 2005. Catastrophes in 2005 resulted in losses of \$229 million and reinstatement premiums of \$80 million.

Net premiums written increased 14 percent (15 percent in original currency) in 2006 compared to 2005, reflecting growth in both commercial and consumer lines driven by new business from both established and new distribution channels, including a wholly owned insurance company in Vietnam and Central Insurance Co., Ltd. in Taiwan. Ascot also contributed to the growth in net premiums written as a result of rate increases on its U.S. business. Consumer lines in Latin America and commercial lines in Europe, including the U.K., also contributed to the increase. Net premiums written in 2005 were reduced by reinstatement premiums related to catastrophes and a portfolio

transfer of unearned premium reserves to DBG related to the Richmond commutation, accounting for 4 percent of the increase in 2006 compared to 2005.

The loss ratio decreased 3.1 points in 2006 compared to 2005, as the absence of significant catastrophes in 2006 resulted in a decrease in the loss ratio of 2.8 points. The loss ratio also decreased due to rate increases and lower current year losses by Ascot on its U.S. book of business and lower asbestos and environmental reserve increases. These declines were partially offset by lower favorable loss development from prior accident years and adverse development on 2005 hurricanes.

The expense ratio increased 1.8 points in 2006 compared to 2005 due to a \$59 million out of period adjustment for amortization of deferred advertising costs and a premium reduction of \$61 million related to reconciliation remediation activities, in aggregate accounting for 0.7 points of the increase in the expense ratio. The expense ratio also increased due to growth in consumer business lines, which have higher acquisition expenses but historically lower loss ratios.

Net investment income increased \$540 million in 2006 compared to 2005 primarily due to a \$424 million out of period UCITS adjustment.

Reserve for Losses and Loss Expenses

The following table presents the components of the General Insurance gross reserve for losses and loss expenses (loss reserves) as of December 31, 2007 and 2006 by major lines of business on a statutory Annual Statement basis^(a):

<i>(in millions)</i>	2007	2006 ^(b)
Other liability occurrence	\$20,580	\$19,327
Workers compensation	15,568	13,612
Other liability claims made	13,878	12,513
Auto liability	6,068	6,070
International	7,036	6,006
Property	4,274	5,499
Reinsurance	3,127	2,979
Medical malpractice	2,361	2,347
Products liability	2,416	2,239
Accident and health	1,818	1,693
Commercial multiple peril	1,900	1,651
Aircraft	1,623	1,629
Fidelity/surety	1,222	1,148
Mortgage Guaranty/Credit	1,426	567
Other	2,203	2,719
Total	\$85,500	\$79,999

(a) Presented by lines of business pursuant to statutory reporting requirements as prescribed by the National Association of Insurance Commissioners.

(b) Allocations among various lines were revised based on the 2007 presentation.

AIG's gross reserve for losses and loss expenses represents the accumulation of estimates of ultimate losses, including estimates for incurred but not yet reported reserves (IBNR) and loss expenses. The methods used to determine loss reserve

estimates and to establish the resulting reserves are continually reviewed and updated by management. Any adjustments resulting therefrom are reflected in operating income currently. Because loss reserve estimates are subject to the outcome of future events, changes in estimates are unavoidable given that loss trends vary and time is often required for changes in trends to be recognized and confirmed. Reserve changes that increase previous estimates of ultimate cost are referred to as unfavorable or adverse development or reserve strengthening. Reserve changes that decrease previous estimates of ultimate cost are referred to as favorable development.

Estimates for mortgage guaranty insurance losses and loss adjustment expense reserves are based on notices of mortgage loan delinquencies and estimates of delinquencies that have been incurred but have not been reported by loan servicers, based upon historical reporting trends. Mortgage Guaranty establishes reserves using a percentage of the contractual liability (for each delinquent loan reported) that is based upon past experience regarding certain loan factors such as age of the delinquency, dollar amount of the loan and type of mortgage loan. Because mortgage delinquencies and claims payments are affected primarily by macroeconomic events, such as changes in home price appreciation, interest rates and unemployment, the determination of the ultimate loss cost requires a high degree of judgment. AIG believes it has provided appropriate reserves for currently delinquent loans. Consistent with industry practice, AIG does not establish a reserve for loans that are not currently delinquent, but that may become delinquent in future periods.

At December 31, 2007, General Insurance net loss reserves increased \$6.66 billion from 2006 to \$69.29 billion. The net loss reserves represent loss reserves reduced by reinsurance recoverable, net of an allowance for unrecoverable reinsurance and applicable discount for future investment income.

The following table classifies the components of the General Insurance net loss reserve by business unit as of December 31, 2007 and 2006:

<i>(in millions)</i>	2007	2006
DBG ^(a)	\$47,392	\$44,119
Transatlantic	6,900	6,207
Personal Lines ^(b)	2,417	2,440
Mortgage Guaranty	1,339	460
Foreign General Insurance ^(c)	11,240	9,404
Total Net Loss Reserve	\$69,288	\$62,630

(a) At December 31, 2007 and 2006, respectively, DBG loss reserves include approximately \$3.13 billion and \$3.33 billion (\$3.34 billion and \$3.66 billion, respectively, before discount), related to business written by DBG but ceded to AIRCO and reported in AIRCO's statutory filings. DBG loss reserves also include approximately \$590 million and \$535 million related to business included in AIUO's statutory filings at December 31, 2007 and 2006, respectively.

(b) At December 31, 2007 and 2006, respectively, Personal Lines loss reserves include \$894 million and \$861 million related to business ceded to DBG and reported in DBG's statutory filings.

(c) At December 31, 2007 and 2006, respectively, Foreign General Insurance loss reserves include approximately \$3.02 billion and \$2.75 billion related to business reported in DBG's statutory filings.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

The DBG net loss reserve of \$47.4 billion is comprised principally of the business of AIG subsidiaries participating in the American Home Assurance Company (American Home)/National Union Fire Insurance Company of Pittsburgh, Pa. (National Union) pool (10 companies) and the surplus lines pool (Lexington, AIG Excess Liability Insurance Company and Landmark Insurance Company).

DBG cedes a quota share percentage of its other liability occurrence and products liability occurrence business to AIRCO. The quota share percentage ceded was 15 percent in 2007 and 20 percent in 2006 and covered all business written in these years for these lines by participants in the American Home/National Union pool. AIRCO's loss reserves relating to these quota share cessions from DBG are recorded on a discounted basis. As of December 31, 2007, AIRCO carried a discount of approximately \$210 million applicable to the \$3.34 billion in undiscounted reserves it assumed from the American Home/National Union pool via this quota share cession. AIRCO also carries approximately \$540 million in net loss reserves relating to Foreign General Insurance business. These reserves are carried on an undiscounted basis.

The companies participating in the American Home/National Union pool have maintained a participation in the business written by AIU for decades. As of December 31, 2007, these AIU reserves carried by participants in the American Home/National Union pool totaled approximately \$3.02 billion. The remaining Foreign General Insurance reserves are carried by AIUO, AIRCO, and other smaller AIG subsidiaries domiciled outside the United States. Statutory filings in the United States by AIG companies reflect all the business written by U.S. domiciled entities only, and therefore exclude business written by AIUO, AIRCO, and all other internationally domiciled subsidiaries. The total reserves carried at December 31, 2007 by AIUO and AIRCO were approximately \$5.16 billion and \$3.67 billion, respectively. AIRCO's \$3.67 billion in total general insurance reserves consist of approximately \$3.13 billion from business assumed from the American Home/National Union pool and an additional \$540 million relating to Foreign General Insurance business.

Discounting of Reserves

At December 31, 2007, AIG's overall General Insurance net loss reserves reflect a loss reserve discount of \$2.43 billion, including tabular and non-tabular calculations. The tabular workers compen-

sation discount is calculated using a 3.5 percent interest rate and the 1979-81 Decennial Mortality Table. The non-tabular workers compensation discount is calculated separately for companies domiciled in New York and Pennsylvania, and follows the statutory regulations for each state. For New York companies, the discount is based on a five percent interest rate and the companies' own payout patterns. For Pennsylvania companies, the statute has specified discount factors for accident years 2001 and prior, which are based on a six percent interest rate and an industry payout pattern. For accident years 2002 and subsequent, the discount is based on the yield of U.S. Treasury securities ranging from one to twenty years and the company's own payout pattern, with the future expected payment for each year using the interest rate associated with the corresponding Treasury security yield for that time period. The discount is comprised of the following: \$794 million — tabular discount for workers compensation in DBG; \$1.42 billion — non-tabular discount for workers compensation in DBG; and, \$210 million — non-tabular discount for other liability occurrence and products liability occurrence in AIRCO. The total undiscounted workers compensation loss reserve carried by DBG is approximately \$13.3 billion as of December 31, 2007. The other liability occurrence and products liability occurrence business in AIRCO that is assumed from DBG is discounted based on the yield of U.S. Treasury securities ranging from one to twenty years and the DBG payout pattern for this business. The undiscounted reserves assumed by AIRCO from DBG totaled approximately \$3.34 billion at December 31, 2007.

Results of the Reserving Process

Management believes that the General Insurance net loss reserves are adequate to cover General Insurance net losses and loss expenses as of December 31, 2007. While AIG regularly reviews the adequacy of established loss reserves, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's loss reserves as of December 31, 2007. In the opinion of management, such adverse development and resulting increase in reserves is not likely to have a material adverse effect on AIG's consolidated financial condition, although it could have a material adverse effect on AIG's consolidated results of operations for an individual reporting period. See also Item 1A. Risk Factors — Casualty Insurance and Underwriting Reserves.

The following table presents the reconciliation of net loss reserves for 2007, 2006 and 2005 as follows:

<i>(in millions)</i>	2007	2006	2005
Net reserve for losses and loss expenses at beginning of year	\$62,630	\$57,476	\$47,254

In determining the loss development from prior accident years, AIG conducts analyses to determine the change in estimated ultimate loss for each accident year for each profit center. For example, if loss emergence for a profit center is different than expected for certain accident years, the actuaries examine the indicated effect such emergence would have on the reserves of that profit center. In some cases, the higher or lower than expected emergence may result in no clear change in the ultimate loss estimate for the accident years in question, and no adjustment would be made to the profit center's reserves for prior accident years. In other cases, the higher or lower than expected emergence may result in a larger change, either favorable or unfavorable, than the difference between the actual and expected loss emergence. Such additional analyses were conducted for each profit center, as appropriate, in 2007 to determine the loss development from prior accident years for 2007. As part of its reserving process, AIG also considers notices of claims received with respect to emerging issues, such as those related to the U.S. mortgage and housing market.

The loss ratios recorded by AIG in 2006 took into account the results of the comprehensive reserve reviews that were completed in the fourth quarter of 2005. AIG's year-end 2005 reserve review reflected careful consideration of the reserve analyses prepared by AIG's internal actuarial staff with the assistance of third-party

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

actuaries. In determining the appropriate loss ratios for accident year 2006 for each class of business, AIG gave consideration to the loss ratios resulting from the 2005 reserve analyses as well as all other relevant information including rate changes, expected changes in loss costs, changes in coverage, reinsurance or mix of business, and other factors that may affect the loss ratios.

2007 Net Loss Development

In 2007, net loss development from prior accident years was favorable by approximately \$656 million, including approximately \$88 million of adverse development from Transatlantic; and excluding approximately \$327 million from accretion of loss reserve discount. Excluding Transatlantic, as well as accretion of discount, net loss development in 2007 from prior accident years was favorable by approximately \$744 million. The overall favorable development of \$656 million consisted of approximately \$2.12 billion of favorable development from accident years 2004 through 2006, partially offset by approximately \$1.43 billion of adverse development from accident years 2002 and prior and \$37 million of adverse development from accident year 2003. In 2007, most classes of AIG's business continued to experience favorable development for accident years 2004 through 2006. The majority of the adverse development from accident years 2002 and prior was related to development from excess casualty and primary workers compensation business within DBG and from Transatlantic. The development from accident year 2003 was primarily related to adverse development from excess casualty and primary workers compensation business within DBG offset by favorable development from most other classes of business. The overall favorable development of \$656 million includes approximately \$305 million pertaining to the D&O and related management liability classes of business within DBG, consisting of approximately \$335 million of favorable development from accident years 2003 through 2006, partially offset by approximately \$30 million of adverse development from accident years 2002 and prior. The overall favorable development of \$656 million also includes approximately \$300 million of adverse development from primary workers compensation business within DBG. See Volatility of Reserve Estimates and Sensitivity Analyses below.

2006 Net Loss Development

In 2006, net loss development from prior accident years was favorable by approximately \$53 million, including approximately \$198 million in net adverse development from asbestos and environmental reserves resulting from the updated ground up analysis of these exposures in the fourth quarter of 2006; approximately \$103 million of adverse development pertaining to the major hurricanes in 2004 and 2005; and \$181 million of adverse development from Transatlantic; and excluding approximately \$300 million from accretion of loss reserve discount. Excluding the fourth quarter asbestos and environmental reserve increase, catastrophes and Transatlantic, as well as accretion of discount, net loss development in 2006 from prior accident years was favorable by approximately \$535 million. The overall favorable development of \$53 million consisted of approximately \$2.30 bil-

lion of favorable development from accident years 2003 through 2005, partially offset by approximately \$2.25 billion of adverse development from accident years 2002 and prior. In 2006, most classes of AIG's business continued to experience favorable development for accident years 2003 through 2005. The adverse development from accident years 2002 and prior reflected development from excess casualty, workers compensation, excess workers compensation, and post-1986 environmental liability classes of business, all within DBG, from asbestos reserves within DBG and Foreign General Insurance, and from Transatlantic.

2005 Net Loss Development

In 2005, net loss development from prior accident years was adverse by approximately \$4.68 billion, including approximately \$269 million from Transatlantic. This \$4.68 billion adverse development in 2005 was comprised of approximately \$8.60 billion for the 2002 and prior accident years, partially offset by favorable development for accident years 2003 and 2004 for most classes of business, with the notable exception of D&O. The adverse loss development for 2002 and prior accident years was attributable to approximately \$4.0 billion of development from the D&O and related management liability classes of business, excess casualty, and excess workers compensation, and to approximately \$900 million of adverse development from asbestos and environmental claims. The remaining portion of the adverse development from 2002 and prior accident years included approximately \$520 million related to Transatlantic with the balance spread across many other classes of business. Most classes of business produced favorable development for accident years 2003 and 2004, and adverse development for accident years 2001 and prior.

Net Loss Development by Class of Business

The following is a discussion of the primary reasons for the development in 2007, 2006 and 2005 for those classes of business that experienced significant prior accident year developments during the three-year period. See Asbestos and Environmental Reserves below for a further discussion of asbestos and environmental reserves and developments.

Excess Casualty: Excess Casualty reserves experienced significant adverse loss development in 2005, but there was only a relatively minor amount of adverse development in 2006 and 2007. The adverse development for all periods shown related principally to accident years 2002 and prior, and resulted from significant loss cost increases due to both frequency and severity of claims. The increase in loss costs resulted primarily from medical inflation, which increased the economic loss component of tort claims, advances in medical care, which extended the life span of severely injured claimants, and larger jury verdicts, which increased the value of severe tort claims. An additional factor affecting AIG's excess casualty experience in recent years has been the accelerated exhaustion of underlying primary policies for homebuilders. This has led to increased construction defect-related claims activity on AIG's excess policies. Many excess casualty policies were written on a multi-year basis in the late

1990s, which limited AIG's ability to respond to emerging market trends as rapidly as would otherwise be the case. In subsequent years, AIG responded to these emerging trends by increasing rates and implementing numerous policy form and coverage changes. This led to a significant improvement in experience beginning with accident year 2001. In 2007, a significant portion of the adverse development from accident years 2002 and prior also related to other latent exposures, including pharmaceutical and product aggregate-related exposures as well as the construction defect exposures noted above. AIG's exposure to these latent exposures was sharply reduced after 2002 due to significant changes in policy terms and conditions as well as underwriting guidelines.

For the year-end 2005 loss reserve review, AIG's actuaries responded to the continuing adverse development by further increasing the loss development factors applicable to accident years 1999 and subsequent by approximately 5 percent. In addition, to more accurately estimate losses for construction defect-related claims, a separate review was performed by AIG claims staff for accounts with significant exposure to these claims.

For the year-end 2006 loss reserve review, AIG claims staff updated the separate review for accounts with significant exposure to construction defect-related claims in order to assist the actuaries in determining the proper reserve for this exposure. AIG's actuaries determined that no significant changes in the assumptions were required. Prior accident year loss development in 2006 was adverse by approximately \$100 million, a relatively minor amount for this class of business. However, AIG continued to experience adverse development for this class for accident years prior to 2003.

For the year-end 2007 loss reserve review, AIG claims staff updated its review of accounts with significant exposure to construction defect-related claims. AIG's actuaries determined that no significant changes in the assumptions were required. Prior accident year loss developments in 2007 were adverse by approximately \$75 million, a minor amount for this class of business. However, AIG continued to experience adverse development in this class for accident years 2002 and prior, amounting to approximately \$450 million in 2007. In addition, loss reserves developed adversely for accident year 2003 by approximately \$100 million in 2007 for this class. The loss ratio for accident year 2003 remains very favorable for this class and has been relatively stable over the past several years. Favorable developments in 2007 for accident years 2004 through 2006 largely offset the adverse developments from accident years 2003 and prior. A significant portion of the adverse development from accident years 2002 and prior related to the latent exposures described above.

Loss reserves pertaining to the excess casualty class of business are generally included in the other liability occurrence line of business, with a small portion of the excess casualty reserves included in the other liability claims made line of business, as presented in the table above.

D&O and Related Management Liability Classes of Business:
These classes of business experienced significant adverse devel-

opment in 2005, but experienced slightly favorable development in 2006 and more significantly favorable development in 2007. The adverse development in 2005 related principally to accident years 2002 and prior. This adverse development resulted from significant loss cost escalation due to a variety of factors, including the following: the increase in frequency and severity of corporate bankruptcies; the increase in frequency of financial statement restatements; the sharp rise in market capitalization of publicly traded companies; and the increase in the number of initial public offerings, which led to an unprecedented number of IPO allocation/laddering suits in 2001. In addition, extensive utilization of multi-year policies during this period limited AIG's ability to respond to emerging trends as rapidly as would otherwise be the case. AIG experienced significant adverse loss development during the period 2002 through 2005 as a result of these issues. AIG responded to this development with rate increases and policy form and coverage changes to better contain future loss costs in this class of business.

For the year-end 2005 loss reserve review, AIG's actuaries responded to the continuing adverse development by further increasing the loss development factor assumptions. The loss development factors applicable to 1997 and subsequent accident years were increased by approximately 4 percent. In addition, AIG's actuaries began to give greater weight to loss development methods for accident years 2002 and 2003, in order to more fully respond to the recent loss experience. AIG's claims staff also conducted a series of ground-up claim projections covering all open claims for this business through accident year 2004. AIG's actuaries benchmarked the loss reserve indications for all accident years through 2004 to these claim projections.

For the year-end 2006 loss reserve review, AIG's actuaries determined that no significant changes in the assumptions were required. Prior accident year loss development in 2006 was favorable by approximately \$20 million, an insignificant amount for these classes. AIG's actuaries continued to benchmark the loss reserve indications to the ground-up claim projections provided by AIG claims staff for this class of business. For the year-end 2006 loss reserve review, the ground-up claim projections included all accident years through 2005.

For the year-end 2007 loss reserve review, AIG's actuaries determined that no significant changes in the assumptions were required. Prior accident year reserve development in 2007 was favorable by approximately \$305 million, due primarily to favorable development from accident years 2004 and 2005, and to a lesser extent 2003 and 2006. AIG's actuaries continued to benchmark the loss reserve indications to the ground-up claim projections provided by AIG claims staff for this class of business. For the year-end 2007 loss reserve review, the ground-up claim projections included all accident years through 2006, and included stock options backdating-related exposures from accident year 2006. Accident year 2006 reserves developed favorably notwithstanding the effect of claims relating to stock options backdating, which totaled approximately \$300 million. Further, AIG is closely monitoring claims activity in accident year 2007 relating to the U.S. residential mortgage market, consistent with the manner in which claims relating to stock options backdating were monitored

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

in 2006, and believes that its reserves as of December 31, 2007 are adequate for its D&O and related management liability classes of business.

Loss reserves pertaining to D&O and related management liability classes of business are included in the other liability claims made line of business, as presented in the table above.

Excess Workers Compensation: This class of business experienced significant adverse development in 2005, a relatively minor amount of adverse development in 2006, and a minor amount of favorable development in 2007. The adverse development in 2005 related to 2002 and prior accident years. This adverse development resulted primarily from significant loss cost increases, primarily attributable to rapidly increasing medical inflation and advances in medical care, which increased the cost of covered medical care and extended the life span of severely injured workers. The effect of these factors on excess workers compensation claims experience is leveraged, as frequency is increased by the rising number of claims that reach the excess layers.

In response to the significantly adverse loss development in 2005, an additional study was conducted for the 2005 year-end actuarial reserve analysis for DBG pertaining to the selection of loss development factors for this class of business. Claims for excess workers compensation exhibit an exceptionally long-tail of loss development, running for decades from the date the loss is incurred. Thus, the adequacy of loss reserves for this class is sensitive to the estimated loss development factors, as such factors may be applied to many years of loss experience. In order to better estimate the tail development for this class, AIG claims staff conducted a claim-by-claim projection of the expected ultimate paid loss for each open claim for 1998 and prior accident years as these are the primary years from which the tail factors are derived. The objective of the study was to provide a benchmark against which loss development factors in the tail could be evaluated. The resulting loss development factors utilized by the actuaries in the year-end 2005 study reflected an increase of approximately 18 percent from the factors used in the prior year study without the benefit of the claims benchmark. In addition, the loss cost trend assumption for excess workers compensation was increased from approximately 2.5 percent to 6 percent for the 2005 study.

For the year-end 2006 loss reserve review, AIG claims staff updated the claim-by-claim projection for each open claim for accident years 1999 and prior. These updated claims projections were utilized by the actuaries as a benchmark for loss development factors in the year-end 2006 study. AIG's actuaries determined that no significant changes in the assumptions were required. Prior accident year development in 2006 was adverse by approximately \$70 million, a relatively minor amount for this class.

For the year-end 2007 loss reserve review, AIG claims staff again updated the claim-by-claim projection for each open claim for accident years 2000 and prior. These updated claims projections were utilized by the actuaries as a benchmark for loss development factors in the year-end 2007 study. AIG's actuaries determined that no significant changes in the assumptions were

required. Prior accident year development in 2007 was favorable by approximately \$15 million, an insignificant amount for this class.

Overview of Loss Reserving Process

The General Insurance loss reserves can generally be categorized into two distinct groups. One group is short-tail classes of business consisting principally of property, personal lines and certain casualty classes. The other group is long-tail casualty classes of business which includes excess and umbrella liability, D&O, professional liability, medical malpractice, workers compensation, general liability, products liability, and related classes.

Short-Tail Reserves

For operations writing short-tail coverages, such as property coverages, the process of recording quarterly loss reserves is generally geared toward maintaining an appropriate reserve for the outstanding exposure, rather than determining an expected loss ratio for current business. For example, the IBNR reserve required for a class of property business might be expected to approximate 20 percent of the latest year's earned premiums, and this level of reserve would generally be maintained regardless of the loss ratio emerging in the current quarter. The 20 percent factor would be adjusted to reflect changes in rate levels, loss reporting patterns, known exposure to unreported losses, or other factors affecting the particular class of business.

Long-Tail Reserves

Estimation of ultimate net losses and loss expenses (net losses) for long-tail casualty classes of business is a complex process and depends on a number of factors, including the class and volume of business involved. Experience in the more recent accident years of long-tail casualty classes of business shows limited statistical credibility in reported net losses because a relatively low proportion of net losses would be reported claims and expenses and an even smaller percentage would be net losses paid. Therefore, IBNR would constitute a relatively high proportion of net losses.

AIG's carried net long-tail loss reserves are tested using loss trend factors that AIG considers appropriate for each class of business. A variety of actuarial methods and assumptions is normally employed to estimate net losses for long-tail casualty classes of businesses. These methods ordinarily involve the use of loss trend factors intended to reflect the annual growth in loss costs from one accident year to the next. For the majority of long-tail casualty classes of business, net loss trend factors approximated five percent. Loss trend factors reflect many items including changes in claims handling, exposure and policy forms, current and future estimates of monetary inflation and social inflation and increases in litigation and awards. These factors are periodically reviewed and adjusted, as appropriate, to reflect emerging trends which are based upon past loss experience. Thus, many factors are implicitly considered in estimating the year to year growth in loss costs.

A number of actuarial assumptions are generally made in the review of reserves for each class of business. For longer tail classes of business, actuarial assumptions generally are made with respect to the following:

- Loss trend factors which are used to establish expected loss ratios for subsequent accident years based on the projected loss ratio for prior accident years.
- Expected loss ratios for the latest accident year (i.e., accident year 2007 for the year-end 2007 loss reserve analysis) and, in some cases for accident years prior to the latest accident year. The expected loss ratio generally reflects the projected loss ratio from prior accident years, adjusted for the loss trend (see above) and the effect of rate changes and other quantifiable factors on the loss ratio. For low-frequency, high-severity classes such as excess casualty, expected loss ratios generally are used for at least the three most recent accident years.
- Loss development factors which are used to project the reported losses for each accident year to an ultimate basis. Generally, the actual loss development factors observed from prior accident years would be used as a basis to determine the loss development factors for the subsequent accident years.

AIG records quarterly changes in loss reserves for each of its many General Insurance classes of business. The overall change in AIG's loss reserves is based on the sum of these classes of business changes. For most long-tail classes of business, the process of recording quarterly loss reserve changes involves determining the estimated current loss ratio for each class of coverage. This loss ratio is multiplied by the current quarter's net earned premium for that class of coverage to determine the current accident quarter's total estimated net incurred loss and loss expense. The change in loss reserves for the quarter for each class is thus the difference between the net incurred loss and loss expense, estimated as described above, and the net paid losses and loss expenses in the quarter. Also any change in estimated ultimate losses from prior accident years, either positive or negative, is reflected in the loss reserve for the current quarter.

Details of the Loss Reserving Process

The process of determining the current loss ratio for each class of business is based on a variety of factors. These include, but are not limited to, the following considerations: prior accident year and policy year loss ratios; rate changes; changes in coverage, reinsurance, or mix of business; and actual and anticipated changes in external factors affecting results, such as trends in loss costs or in the legal and claims environment. The current loss ratio for each class of business reflects input from actuarial, underwriting and claims staff and is intended to represent management's best estimate of the current loss ratio after reflecting all of the factors described above. At the close of each quarter, the assumptions underlying the loss ratios are reviewed to determine if the loss ratios based thereon remain appropriate. This process includes a review of the actual claims experience in the quarter, actual rate changes achieved, actual changes in coverage, reinsurance or mix of business, and changes in certain other factors that may affect the loss ratio. When this review

suggests that the initially determined loss ratio is no longer appropriate, the loss ratio for current business is changed to reflect the revised assumptions.

A comprehensive annual loss reserve review is completed in the fourth quarter of each year for each AIG general insurance subsidiary. These reviews are conducted in full detail for each class of business for each subsidiary, and thus consist of hundreds of individual analyses. The purpose of these reviews is to confirm the appropriateness of the reserves carried by each of the individual subsidiaries, and therefore of AIG's overall carried reserves. The reserve analysis for each class of business is performed by the actuarial personnel who are most familiar with that class of business. In completing these detailed actuarial reserve analyses, the actuaries are required to make numerous assumptions, including the selection of loss development factors and loss cost trend factors. They are also required to determine and select the most appropriate actuarial methods to employ for each business class. Additionally, they must determine the appropriate segmentation of data from which the adequacy of the reserves can be most accurately tested. In the course of these detailed reserve reviews a point estimate of the loss reserve is determined. The sum of these point estimates for each class of business for each subsidiary provides an overall actuarial point estimate of the loss reserve for that subsidiary. The ultimate process by which the actual carried reserves are determined considers both the actuarial point estimate and numerous other internal and external factors including a qualitative assessment of inflation and other economic conditions in the United States and abroad, changes in the legal, regulatory, judicial and social environment, underlying policy pricing, terms and conditions, and claims handling. Loss reserve development can also be affected by commutations of assumed and ceded reinsurance agreements.

Actuarial Methods for Major Classes of Business

In testing the reserves for each class of business, a determination is made by AIG's actuaries as to the most appropriate actuarial methods. This determination is based on a variety of factors including the nature of the claims associated with the class of business, such as frequency or severity. Other factors considered include the loss development characteristics associated with the claims, the volume of claim data available for the applicable class, and the applicability of various actuarial methods to the class. In addition to determining the actuarial methods, the actuaries determine the appropriate loss reserve groupings of data. For example, AIG writes a great number of unique subclasses of professional liability. For pricing or other purposes, it is appropriate to evaluate the profitability of each subclass individually. However, for purposes of estimating the loss reserves for professional liability, it is appropriate to combine the subclasses into larger groups. The greater degree of credibility in the claims experience of the larger groups may outweigh the greater degree of homogeneity of the individual subclasses. This determination of data segmentation and actuarial methods is carefully considered for each class of business. The segmentation and actuarial methods chosen are those which together are expected to produce the most accurate estimate of the loss reserves.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Actuarial methods used by AIG for most long-tail casualty classes of business include loss development methods and expected loss ratio methods, including "Bornhuetter Ferguson" methods described below. Other methods considered include frequency/severity methods, although these are generally used by AIG more for pricing analysis than for loss reserve analysis. Loss development methods utilize the actual loss development patterns from prior accident years to project the reported losses to an ultimate basis for subsequent accident years. Loss development methods generally are most appropriate for classes of business which exhibit a stable pattern of loss development from one accident year to the next, and for which the components of the classes have similar development characteristics. For example, property exposures would generally not be combined into the same class as casualty exposures, and primary casualty exposures would generally not be combined into the same class as excess casualty exposures. Expected loss ratio methods are generally utilized by AIG where the reported loss data lacks sufficient credibility to utilize loss development methods, such as for new classes of business or for long-tail classes at early stages of loss development.

Expected loss ratio methods rely on the application of an expected loss ratio to the earned premium for the class of business to determine the loss reserves. For example, an expected loss ratio of 70 percent applied to an earned premium base of \$10 million for a class of business would generate an ultimate loss estimate of \$7 million. Subtracting any reported paid losses and loss expense would result in the indicated loss reserve for this class. "Bornhuetter Ferguson" methods are expected loss ratio methods for which the expected loss ratio is applied only to the expected unreported portion of the losses. For example, for a long-tail class of business for which only 10 percent of the losses are expected to be reported at the end of the accident year, the expected loss ratio would be applied to the 90 percent of the losses still unreported. The actual reported losses at the end of the accident year would be added to determine the total ultimate loss estimate for the accident year. Subtracting the reported paid losses and loss expenses would result in the indicated loss reserve. In the example above, the expected loss ratio of 70 percent would be multiplied by 90 percent. The result of 63 percent would be applied to the earned premium of \$10 million resulting in an estimated unreported loss of \$6.3 million. Actual reported losses would be added to arrive at the total ultimate losses. If the reported losses were \$1 million, the ultimate loss estimate under the "Bornhuetter Ferguson" method would be \$7.3 million versus the \$7 million amount under the expected loss ratio method described above. Thus, the "Bornhuetter Ferguson" method gives partial credibility to the actual loss experience to date for the class of business. Loss development methods generally give full credibility to the reported loss experience to date. In the example above, loss development methods would typically indicate an ultimate loss estimate of \$10 million, as the reported losses of \$1 million would be estimated to reflect only 10 percent of the ultimate losses.

A key advantage of loss development methods is that they respond quickly to any actual changes in loss costs for the class of business. Therefore, if loss experience is unexpectedly deteriorating or improving, the loss development method gives full credibility to the changing experience. Expected loss ratio methods would be slower to respond to the change, as they would continue to give more weight to the expected loss ratio, until enough evidence emerged for the expected loss ratio to be modified to reflect the changing loss experience. On the other hand, loss development methods have the disadvantage of overreacting to changes in reported losses if in fact the loss experience is not credible. For example, the presence or absence of large losses at the early stages of loss development could cause the loss development method to overreact to the favorable or unfavorable experience by assuming it will continue at later stages of development. In these instances, expected loss ratio methods such as "Bornhuetter Ferguson" have the advantage of properly recognizing large losses without extrapolating unusual large loss activity onto the unreported portion of the losses for the accident year. AIG's loss reserve reviews for long-tail classes typically utilize a combination of both loss development and expected loss ratio methods. Loss development methods are generally given more weight for accident years and classes of business where the loss experience is highly credible. Expected loss ratio methods are given more weight where the reported loss experience is less credible, or is driven more by large losses. Expected loss ratio methods require sufficient information to determine the appropriate expected loss ratio. This information generally includes the actual loss ratios for prior accident years, and rate changes as well as underwriting or other changes which would affect the loss ratio. Further, an estimate of the loss cost trend or loss ratio trend is required in order to allow for the effect of inflation and other factors which may increase or otherwise change the loss costs from one accident year to the next.

Frequency/severity methods generally rely on the determination of an ultimate number of claims and an average severity for each claim for each accident year. Multiplying the estimated ultimate number of claims for each accident year by the expected average severity of each claim produces the estimated ultimate loss for the accident year. Frequency/severity methods generally require a sufficient volume of claims in order for the average severity to be predictable. Average severity for subsequent accident years is generally determined by applying an estimated annual loss cost trend to the estimated average claim severity from prior accident years. Frequency/severity methods have the advantage that ultimate claim counts can generally be estimated more quickly and accurately than can ultimate losses. Thus, if the average claim severity can be accurately estimated, these methods can more quickly respond to changes in loss experience than other methods. However, for average severity to be predictable, the class of business must consist of homogeneous types of claims for which loss severity trends from one year to the next are reasonably consistent. Generally these methods work best for high frequency, low severity classes of business such as personal auto. AIG also utilizes these methods in pricing subclasses of professional liability. However, AIG does not generally utilize

frequency/severity methods to test loss reserves, due to the general nature of AIG's reserves being applicable to lower frequency, higher severity commercial classes of business where average claim severity is volatile.

Excess Casualty: AIG generally uses a combination of loss development methods and expected loss ratio methods for excess casualty classes. Expected loss ratio methods are generally utilized for at least the three latest accident years, due to the relatively low credibility of the reported losses. The loss experience is generally reviewed separately for lead umbrella classes and for other excess classes, due to the relatively shorter tail for lead umbrella business. Automobile-related claims are generally reviewed separately from non-auto claims, due to the shorter tail nature of the automobile related claims. The expected loss ratios utilized for recent accident years are based on the projected ultimate loss ratios of prior years, adjusted for rate changes, estimated loss cost trends and all other changes that can be quantified. The estimated loss cost trend utilized in the year-end 2007 reviews averaged approximately five percent for excess casualty classes. Frequency/severity methods are generally not utilized as the vast majority of reported claims do not result in a claim payment. In addition, the average severity varies significantly from accident year to accident year due to large losses which characterize this class of business, as well as changing proportions of claims which do not result in a claim payment.

D&O: AIG generally utilizes a combination of loss development methods and expected loss ratio methods for D&O and related management liability classes of business. Expected loss ratio methods are given more weight in the two most recent accident years, whereas loss development methods are given more weight in more mature accident years. Beginning with the year-end 2005 loss reserve review, AIG's actuaries began to utilize claim projections provided by AIG claims staff as a benchmark for determining the indicated ultimate losses for accident years 2004 and prior. For the year end 2007 loss reserve review, claims projections for accident years 2006 and prior were utilized. In prior years, AIG's actuaries had utilized these claims projections as a benchmark for profitability studies for major classes of D&O and related management liability business. The track record of these claims projections has indicated a very low margin of error, thus providing support for their usage as a benchmark in determining the estimated loss reserve. These classes of business reflect claims made coverage, and losses are characterized by low frequency and high severity. Thus, the claim projections can produce an accurate overall indicator of the ultimate loss exposure for these classes by identifying and estimating all large losses. Frequency/severity methods are generally not utilized for these classes as the overall losses are driven by large losses more than by claim frequency. Severity trends have varied significantly from accident year to accident year.

Workers Compensation: AIG generally utilizes loss development methods for all but the most recent accident year. Expected loss ratio methods generally are given significant weight only in the most recent accident year. Workers compensation claims are generally characterized by high frequency, low severity, and

relatively consistent loss development from one accident year to the next. AIG is a leading writer of workers compensation, and thus has sufficient volume of claims experience to utilize development methods. AIG does not believe frequency/severity methods are as appropriate, due to significant growth and changes in AIG's workers compensation business over the years. AIG generally segregates California business from other business in evaluating workers compensation reserves. Certain classes of workers compensation, such as construction, are also evaluated separately. Additionally, AIG writes a number of very large accounts which include workers compensation coverage. These accounts are generally priced by AIG actuaries, and to the extent appropriate, the indicated losses based on the pricing analysis may be utilized to record the initial estimated loss reserves for these accounts.

Excess Workers Compensation: AIG generally utilizes a combination of loss development methods and expected loss ratio methods. Loss development methods are given the greater weight for mature accident years such as 2001 and prior. Expected loss ratio methods are given the greater weight for the more recent accident years. Excess workers compensation is an extremely long-tail class of business, with loss emergence extending for decades. Therefore there is limited credibility in the reported losses for many of the more recent accident years. Beginning with the year-end 2005 loss reserve review, AIG's actuaries began to utilize claims projections provided by AIG claims staff to help determine the loss development factors for this class of business.

General Liability: AIG generally uses a combination of loss development methods and expected loss ratio methods for primary general liability or products liability classes. For certain classes of business with sufficient loss volume, loss development methods may be given significant weight for all but the most recent one or two accident years, whereas for smaller or more volatile classes of business, loss development methods may be given limited weight for the five or more most recent accident years. Expected loss ratio methods would be utilized for the more recent accident years for these classes. The loss experience for primary general liability business is generally reviewed at a level that is believed to provide the most appropriate data for reserve analysis. For example, primary claims made business is generally segregated from business written on an occurrence policy form. Additionally, certain subclasses, such as construction, are generally reviewed separately from business in other subclasses. Due to the fairly long-tail nature of general liability business, and the many subclasses that are reviewed individually, there is less credibility in the reported losses and increased reliance on expected loss ratio methods. AIG's actuaries generally do not utilize frequency/severity methods to test reserves for this business, due to significant changes and growth in AIG's general liability and products liability business over the years.

Commercial Automobile Liability: AIG generally utilizes loss development methods for all but the most recent accident year for commercial automobile classes of business. Expected loss ratio methods are generally given significant weight only in the most recent accident year. Frequency/severity methods are generally

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

not utilized due to significant changes and growth in this business over the years.

Healthcare: AIG generally uses a combination of loss development methods and expected loss ratio methods for healthcare classes of business. The largest component of the healthcare business consists of coverage written for hospitals and other healthcare facilities. Reserves for excess coverage are tested separately from those for primary coverage. For primary coverages, loss development methods are generally given the majority of the weight for all but the latest three accident years, and are given some weight for all years other than the latest accident year. For excess coverages, expected loss methods are generally given all the weight for the latest three accident years, and are also given considerable weight for accident years prior to the latest three years. For other classes of healthcare coverage, an analogous weighting between loss development and expected loss ratio methods is utilized. The weights assigned to each method are those which are believed to result in the best combination of responsiveness and stability. Frequency/severity methods are sometimes utilized for pricing certain healthcare accounts or business. However, in testing loss reserves the business is generally combined into larger groupings to enhance the credibility of the loss experience. The frequency/severity methods that are applicable in pricing may not be appropriate for reserve testing and thus frequency/severity methods are not generally employed in AIG's healthcare reserve analyses.

Professional Liability: AIG generally uses a combination of loss development methods and expected loss ratio methods for professional liability classes of business. Loss development methods are used for the more mature accident years. Greater weight is given to expected loss ratio methods in the more recent accident years. Reserves are tested separately for claims made classes and classes written on occurrence policy forms. Further segmentations are made in a manner believed to provide an appropriate balance between credibility and homogeneity of the data. Frequency/severity methods are used in pricing and profitability analyses for some classes of professional liability; however, for loss reserve testing, the need to enhance credibility generally results in classes that are not sufficiently homogenous to utilize frequency/severity methods.

Catastrophic Casualty: AIG utilizes expected loss ratio methods for all accident years for catastrophic casualty business. This class of business consists of casualty or financial lines coverage which attaches in excess of very high attachment points; thus the claims experience is marked by very low frequency and high severity. Because of the limited number of claims, loss development methods are not utilized. The expected loss ratios and loss development assumptions utilized are based upon the results of prior accident years for this business as well as for similar classes of business written above lower attachment points. The business is generally written on a claims made basis. AIG utilizes ground-up claim projections provided by AIG claims staff to assist in developing the appropriate reserve.

Aviation: AIG generally uses a combination of loss development methods and expected loss ratio methods for aviation exposures. Aviation claims are not very long-tail in nature; however, they are driven by claim severity. Thus a combination of both development and expected loss ratio methods are used for all but the latest accident year to determine the loss reserves. Expected loss ratio methods are used to determine the loss reserves for the latest accident year. Frequency/severity methods are not employed due to the high severity nature of the claims and different mix of claims from year to year.

Personal Auto (Domestic): AIG generally utilizes frequency/severity methods and loss development methods for domestic personal auto classes. For many classes of business, greater reliance is placed on frequency/severity methods as claim counts emerge quickly for personal auto and allow for more immediate analysis of resulting loss trends and comparisons to industry and other diagnostic metrics.

Fidelity/Surety: AIG generally uses loss development methods for fidelity exposures for all but the latest accident year. Expected loss ratio methods are also given weight for the more recent accident years, and for the latest accident year they may be given 100 percent weight. For surety exposures, AIG generally uses the same method as for short-tail classes.

Mortgage Guaranty: AIG tests mortgage guaranty reserves using loss development methods, supplemented by an internal claim analysis by actuaries and staff who specialize in the mortgage guaranty business. The claim analysis projects ultimate losses for claims within each of several categories of delinquency based on actual historical experience and is essentially a frequency/severity analysis for each category of delinquency. Additional reserve tests using "Bornhuetter Ferguson" methods are also employed, as well as tests measuring losses as a percent of risk in force. Reserves are reviewed separately for each class of business to consider the loss development characteristics associated with the claims, the volume of claim data available for the applicable class and the applicability of various actuarial methods to the class.

Short-Tail Classes: AIG generally uses either loss development methods or IBNR factor methods to set reserves for short-tail classes such as property coverages. Where a factor is used, it generally represents a percent of earned premium or other exposure measure. The factor is determined based on prior accident year experience. For example, the IBNR for a class of property coverage might be expected to approximate 20 percent of the latest year's earned premium. The factor is continually reevaluated in light of emerging claim experience as well as rate changes or other factors that could affect the adequacy of the IBNR factor being employed.

International: Business written by AIG's Foreign General Insurance sub-segment includes both long-tail and short-tail classes of business. For long-tail classes of business, the actuarial methods utilized would be analogous to those described above. However, the majority of business written by Foreign General Insurance is short-tail, high frequency and low severity in nature. For this business, loss development methods are generally employed to

test the loss reserves. AIG maintains a data base of detailed historical premium and loss transactions in original currency for business written by Foreign General Insurance, thereby allowing AIG actuaries to determine the current reserves without any distortion from changes in exchange rates over time. In testing the Foreign General Insurance reserves, AIG's actuaries segment the data by region, country or class of business as appropriate to determine an optimal balance between homogeneity and credibility.

Loss Adjustment Expenses: AIG determines reserves for legal defense and cost containment loss adjustment expenses for each class of business by one or more actuarial methods. The methods generally include development methods analogous to those described for loss development methods. The developments could be based on either the paid loss adjustment expenses or the ratio of paid loss adjustment expenses to paid losses, or both. Other methods include the utilization of expected ultimate ratios of paid loss expense to paid losses, based on actual experience from prior accident years or from similar classes of business. AIG generally determines reserves for adjuster loss adjustment expenses based on calendar year ratios of adjuster expenses paid to losses paid for the particular class of business. AIG generally determines reserves for other unallocated loss adjustment expenses based on the ratio of the calendar year expenses paid to overall losses paid. This determination is generally done for all classes of business combined, and reflects costs of home office claim overhead as a percent of losses paid.

Catastrophes: Special analyses are conducted by AIG in response to major catastrophes in order to estimate AIG's gross and net loss and loss expense liability from the events. These analyses may include a combination of approaches, including modeling estimates, ground up claim analysis, loss evaluation reports from on-site field adjusters, and market share estimates.

AIG's loss reserve analyses do not calculate a range of loss reserve estimates. Because a large portion of the loss reserves from AIG's General Insurance business relates to longer-tail casualty classes of business driven by severity rather than frequency of claims, such as excess casualty and D&O, developing a range around loss reserve estimates would not be meaningful. Using the reserving methodologies described above, AIG's actuaries determine their best estimate of the required reserve and advise Management of that amount. AIG then adjusts its aggregate carried reserves as necessary so that the actual carried reserves as of December 31 reflect this best estimate.

Volatility of Reserve Estimates and Sensitivity Analyses

As described above, AIG uses numerous assumptions in determining its best estimate of reserves for each class of business. The importance of any specific assumption can vary by both class of business and accident year. If actual experience differs from key assumptions used in establishing reserves, there is potential for significant variation in the development of loss reserves, particularly for long-tail casualty classes of business such as excess casualty, D&O or workers compensation. Set forth below is a sensitivity analysis that estimates the effect on the loss reserve

position of using alternative loss trend or loss development factor assumptions rather than those actually used in determining AIG's best estimates in the year-end loss reserve analyses in 2007. The analysis addresses each major class of business for which a material deviation to AIG's overall reserve position is believed reasonably possible, and uses what AIG believes is a reasonably likely range of potential deviation for each class. There can be no assurance, however, that actual reserve development will be consistent with either the original or the adjusted loss trend or loss development factor assumptions, or that other assumptions made in the reserving process will not materially affect reserve development for a particular class of business.

Excess Casualty: For the excess casualty class of business, the assumed loss cost trend was approximately five percent. After evaluating the historical loss cost trends from prior accident years since the early 1990s, in AIG's judgment, it is reasonably likely that actual loss cost trends applicable to the year-end 2007 loss reserve review for excess casualty will range from negative five percent to positive 15 percent, or approximately ten percent lower or higher than the assumption actually utilized in the year-end 2007 reserve review. A ten percent change in the assumed loss cost trend for excess casualty would cause approximately a \$2.4 billion increase or a \$1.6 billion decrease in the net loss and loss expense reserve for this class of business. It should be emphasized that the ten percent deviations are not considered the highest possible deviations that might be expected, but rather what is considered by AIG to reflect a reasonably likely range of potential deviation. Actual loss cost trends in the early 1990s were negative for several years, including amounts below the negative five percent cited above, whereas actual loss cost trends in the late 1990s ran well into the double digits for several years, including amounts greater than the 15 percent cited above. Thus, there can be no assurance that loss trends will not deviate by more than ten percent. The loss cost trend assumption is critical for the excess casualty class of business due the long-tail nature of the claims and therefore is applied across many accident years.

For the excess casualty class of business, the assumed loss development factors are also a key assumption. After evaluating the historical loss development factors from prior accident years since the early 1990s, in AIG's judgment, it is reasonably likely that actual loss development factors will range from approximately 3.5 percent below those actually utilized in the year-end 2007 reserve review to approximately 6.5 percent above those factors actually utilized. If the loss development factor assumptions were changed by 3.5 percent and 6.5 percent, respectively, the net loss reserves for the excess casualty class would decrease by approximately \$600 million under the lower assumptions or increase by approximately \$1.0 billion under the higher assumptions. Generally, actual historical loss development factors are used to project future loss development. However there can be no assurance that future loss development patterns will be the same as in the past, or that they will not deviate by more than the amounts illustrated above. Moreover, as excess casualty is a long-tail class of business, any deviation in loss cost trends or in loss development factors might not be discernible for an extended

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for the reserves with respect to a number of accident years to be significantly affected by changes in the loss cost trends or loss development factors that were initially relied upon in setting the reserves. These changes in loss trends or loss development factors could be attributable to changes in inflation or in the judicial environment, or in other social or economic conditions affecting claims. Thus, there is the potential for variations greater than the amounts cited above, either positively or negatively.

D&O and Related Management Liability Classes of Business: For D&O and related management liability classes of business, the assumed loss cost trend was approximately four percent. After evaluating the historical loss cost trends from prior accident years since the early 1990s, in AIG's judgment, it is reasonably likely that actual loss cost trends applicable to the year-end 2007 loss reserve review for these classes will range from negative 11 percent to positive 19 percent, or approximately 15 percent lower or higher than the assumption actually utilized in the year-end 2007 reserve review. A 15 percent change in the assumed loss cost trend for these classes would cause approximately a \$550 million increase or a \$500 million decrease in the net loss and loss expense reserves for these classes of business. It should be emphasized that the 15 percent deviations are not considered the highest possible deviations that might be expected, but rather what is considered by AIG to reflect a reasonably likely range of potential deviation. Actual loss cost trends for these classes in the early 1990s were negative for several years, including amounts below the negative 11 percent cited above, whereas actual loss cost trends in the late 1990s ran at nearly 50 percent per year for several years, vastly exceeding the 19 percent figure cited above. Because the D&O class of business has exhibited highly volatile loss trends from one accident year to the next, there is the possibility of an exceptionally high deviation.

For D&O and related management liability classes of business, the assumed loss development factors are also an important assumption but less critical than for excess casualty. Because these classes are written on a claims made basis, the loss reporting and development tail is much shorter than for excess casualty. However, the high severity nature of the claims does create the potential for significant deviations in loss development patterns from one year to the next. After evaluating the historical loss development factors for these classes of business for accident years since the early 1990s, in AIG's judgment, it is reasonably likely that actual loss development factors will range approximately 6 percent lower to 3.5 percent higher than those factors actually utilized in the year-end 2007 loss reserve review for these classes. If the loss development factor assumptions were changed by 6 percent and 3.5 percent, respectively, the net loss reserves for these classes would be estimated to decrease or increase by approximately \$250 million and \$125 million, respectively. As noted above for excess casualty, actual historical loss development factors are generally used to project future loss development. However, there can be no assurance that future

loss development patterns will be the same as in the past, or that they will not deviate by more than the 6 percent or 3.5 percent amounts.

Excess Workers Compensation: For excess workers compensation business, loss costs were trended at six percent per annum. After reviewing actual industry loss trends for the past ten years, in AIG's judgment, it is reasonably likely that actual loss cost trends applicable to the year-end 2007 loss reserve review for excess workers compensation will range five percent lower or higher than this estimated loss trend. A five percent change in the assumed loss cost trend would cause approximately a \$425 million increase or a \$275 million decrease in the net loss reserves for this business. It should be emphasized that the actual loss cost trend could vary significantly from this assumption, and there can be no assurance that actual loss costs will not deviate, perhaps materially, by greater than five percent.

For excess workers compensation business, the assumed loss development factors are a critical assumption. Excess workers compensation is an extremely long-tail class of business, with a much greater than normal uncertainty as to the appropriate loss development factors for the tail of the loss development. After evaluating the historical loss development factors for prior accident years since the 1980s, in AIG's judgment, it is reasonably likely that actual loss development factors will range approximately 15 percent lower or higher than those factors actually utilized in the year-end 2007 loss reserve review for excess workers compensation. If the loss development factor assumptions were changed by 15 percent, the net loss reserves for excess workers compensation would increase or decrease by approximately \$600 million. Given the exceptionally long-tail for this class of business, there is the potential for actual deviations in the loss development tail to exceed the deviations assumed, perhaps materially.

Primary Workers Compensation: For primary workers compensation, the loss cost trend assumption is not believed to be material with respect to AIG's loss reserves. This is primarily because AIG's actuaries are generally able to use loss development projections for all but the most recent accident year's reserves, so there is limited need to rely on loss cost trend assumptions for primary workers compensation business.

However, for primary workers compensation business the loss development factor assumptions are important. Generally, AIG's actual historical workers compensation loss development factors would be expected to provide a reasonably accurate predictor of future loss development. However, workers compensation is a long-tail class of business, and AIG's business reflects a very significant volume of losses particularly in recent accident years due to growth of the business. After evaluating the actual historical loss developments since the 1980s for this business, in AIG's judgment, it is reasonably likely that actual loss development factors will fall within the range of approximately 3.5 percent below to 8.25 percent above those actually utilized in the year-end 2007 loss reserve review. If the loss development factor assumptions were changed by 3.5 percent and 8.25 percent, respectively, the net loss reserves for workers compensation

would decrease or increase by approximately \$800 million and \$1.9 billion, respectively. It should be noted that loss emergence in 2006 and 2007 for this class was higher than historical averages, resulting in an increase in loss reserves for prior accident years. During 2007, reserves from prior accident years developed adversely by approximately \$300 million for AIG's primary workers compensation business. AIG relies on longer term averages of historical loss development patterns in setting loss reserves; thus if loss emergence in subsequent years continues at the levels observed in 2006 and 2007 there could be additional adverse development for this class of business that could be more significant than the amount observed in 2007. However, AIG believes it is too soon to ascertain if this increased emergence represents a new trend in the pattern of loss development. For this class of business, there can be no assurance that actual deviations from the expected loss development factors will not exceed the deviations assumed, perhaps materially.

Other Casualty Classes of Business: For casualty business other than the classes discussed above, there is generally some potential for deviation in both the loss cost trend and loss development factor assumptions. However, the effect of such deviations is expected to be less material when compared to the effect on the classes cited above.

Asbestos and Environmental Reserves

The estimation of loss reserves relating to asbestos and environmental claims on insurance policies written many years ago is subject to greater uncertainty than other types of claims due to inconsistent court decisions as well as judicial interpretations and legislative actions that in some cases have tended to broaden coverage beyond the original intent of such policies and in others have expanded theories of liability. The insurance industry as a whole is engaged in extensive litigation over these coverage and liability issues and is thus confronted with a continuing uncertainty in its efforts to quantify these exposures.

AIG continues to receive claims asserting injuries and damages from toxic waste, hazardous substances, and other environmental pollutants and alleged claims to cover the cleanup costs of hazardous waste dump sites, referred to collectively as environmental claims, and indemnity claims asserting injuries from asbestos.

The vast majority of these asbestos and environmental claims emanate from policies written in 1984 and prior years. Commencing in 1985, standard policies contained an absolute exclusion for pollution-related damage and an absolute asbestos exclusion was also implemented. The current environmental policies that AIG underwrites on a claims-made basis have been excluded from the analysis herein.

The majority of AIG's exposures for asbestos and environmental claims are excess casualty coverages, not primary coverages. Thus, the litigation costs are treated in the same manner as indemnity amounts. That is, litigation expenses are included within the limits of the liability AIG incurs. Individual significant claim liabilities, where future litigation costs are reasonably determinable, are established on a case-by-case basis.

Estimation of asbestos and environmental claims loss reserves is a subjective process and reserves for asbestos and environmental claims cannot be estimated using conventional reserving techniques such as those that rely on historical accident year loss development factors. The methods used to determine asbestos and environmental loss estimates and to establish the resulting reserves are continually reviewed and updated by management.

Significant factors which affect the trends that influence the asbestos and environmental claims estimation process are the court resolutions and judicial interpretations which broaden the intent of the policies and scope of coverage. The current case law can be characterized as still evolving, and there is little likelihood that any firm direction will develop in the near future. Additionally, the exposures for cleanup costs of hazardous waste dump sites involve issues such as allocation of responsibility among potentially responsible parties and the government's refusal to release parties from liability.

Due to this uncertainty, it is not possible to determine the future development of asbestos and environmental claims with the same degree of reliability as with other types of claims. Such future development will be affected by the extent to which courts continue to expand the intent of the policies and the scope of the coverage, as they have in the past, as well as by the changes in Superfund and waste dump site coverage and liability issues. If the asbestos and environmental reserves develop deficiently, such deficiency would have an adverse effect on AIG's future results of operations.

With respect to known asbestos and environmental claims, AIG established over a decade ago specialized toxic tort and environmental claims units, which investigate and adjust all such asbestos and environmental claims. These units evaluate these asbestos and environmental claims utilizing a claim-by-claim approach that involves a detailed review of individual policy terms and exposures. Because each policyholder presents different liability and coverage issues, AIG generally evaluates exposure on a policy-by-policy basis, considering a variety of factors such as known facts, current law, jurisdiction, policy language and other factors that are unique to each policy. Quantitative techniques have to be supplemented by subjective considerations, including management judgment. Each claim is reviewed at least semi-annually utilizing the aforementioned approach and adjusted as necessary to reflect the current information.

In both the specialized and dedicated asbestos and environmental claims units, AIG actively manages and pursues early resolution with respect to these claims in an attempt to mitigate its exposure to the unpredictable development of these claims. AIG attempts to mitigate its known long-tail environmental exposures by utilizing a combination of proactive claim-resolution techniques, including policy buybacks, complete environmental releases, compromise settlements, and, where indicated, litigation.

With respect to asbestos claims handling, AIG's specialized claims staff operates to mitigate losses through proactive handling, supervision and resolution of asbestos cases. Thus, while AIG has resolved all claims with respect to miners and major manufacturers (Tier One), its claims staff continues to operate under the same proactive philosophy to resolve claims involving accounts with products containing asbestos (Tier Two), products

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

containing small amounts of asbestos, companies in the distribution process, and parties with remote, ill-defined involvement in asbestos (Tiers Three and Four). Through its commitment to appropriate staffing, training, and management oversight of asbestos cases, AIG seeks to mitigate its exposure to these claims.

To determine the appropriate loss reserve as of December 31, 2007 for its asbestos and environmental exposures, AIG performed a series of top-down and ground-up reserve analyses. In order to ensure it had the most comprehensive analysis possible, AIG engaged a third-party actuary to assist in a review of these exposures, including ground-up estimates for asbestos reserves consistent with the 2005 and 2006 reviews as well as a top-down report year projection for environmental reserves. Prior to 2005, AIG's reserve analyses for asbestos and environmental exposures was focused around a report year projection of aggregate losses for both asbestos and environmental reserves. Additional tests such as market share analyses were also performed. Ground-up analyses take into account policyholder-specific and claim-specific information that has been gathered over many years from a variety of sources. Ground-up studies can thus more accurately assess the exposure to AIG's layers of coverage for each policyholder, and hence for all policyholders in the aggregate, provided a sufficient sample of the policyholders can be modeled in this manner.

In order to ensure its ground-up analysis was comprehensive, AIG staff produced the information required at policy and claim level detail for nearly 1,000 asbestos defendants. This represented over 95 percent of all accounts for which AIG had received any claim notice of any amount pertaining to asbestos exposure. AIG did not set any minimum thresholds, such as amount of case reserve outstanding, or paid losses to date, that would have served to reduce the sample size and hence the comprehensiveness of the ground-up analysis. The results of the ground-up analysis for each significant account were examined by AIG's claims staff for reasonableness, for consistency with policy coverage terms, and any claim settlement terms applicable. Adjustments were incorporated accordingly. The results from the universe of modeled accounts, which as noted above reflects the vast majority of AIG's known exposures, were then utilized to estimate the ultimate losses from accounts or exposures that could not be modeled and to determine an appropriate provision for unreported claims.

AIG conducted a comprehensive analysis of reinsurance recoverability to establish the appropriate asbestos and environmental reserve net of reinsurance. AIG determined the amount of reinsurance that would be ceded to insolvent reinsurers or to commuted reinsurance contracts for both reported claims and for IBNR. These amounts were then deducted from the indicated amount of reinsurance recoverable. The year-end 2007 analysis reflected an update to the comprehensive analysis of reinsurance recoverability that was first completed in 2005 and updated in 2006. All asbestos accounts for which there was a significant change in estimated losses in the 2007 review were analyzed to determine the appropriate reserve net of reinsurance.

AIG also completed a top-down report year projection of its indicated asbestos and environmental loss reserves. These projections consist of a series of tests performed separately for asbestos and for environmental exposures.

For asbestos, these tests project the losses expected to be reported over the next nineteen years, i.e., from 2008 through 2026, based on the actual losses reported through 2007 and the expected future loss emergence for these claims. Three scenarios were tested, with a series of assumptions ranging from more optimistic to more conservative. In the first scenario, all carried asbestos case reserves are assumed to be within ten percent of their ultimate settlement value. The second scenario relies on an actuarial projection of report year development for asbestos claims reported from 1993 to the present to estimate case reserve adequacy as of year-end 2007. The third scenario relies on an actuarial projection of report year claims for asbestos but reflects claims reported from 1989 to the present to estimate case reserve adequacy as of year-end 2007. Based on the results of the prior report years for each of the three scenarios described above, the report year approach then projects forward to the year 2026 the expected future report year losses, based on AIG's estimate of reasonable loss trend assumptions. These calculations are performed on losses gross of reinsurance. The IBNR (including a provision for development of reported claims) on a net basis is based on applying a factor reflecting the expected ratio of net losses to gross losses for future loss emergence.

For environmental claims, an analogous series of frequency/severity tests are produced. Environmental claims from future report years, (i.e., IBNR) are projected out nine years, i.e., through the year 2016.

At year-end 2007, AIG considered a number of factors and recent experience in addition to the results of the respective top-down and ground-up analyses performed for asbestos and environmental reserves. AIG considered the significant uncertainty that remains as to AIG's ultimate liability relating to asbestos and environmental claims. This uncertainty is due to several factors including:

- The long latency period between asbestos exposure and disease manifestation and the resulting potential for involvement of multiple policy periods for individual claims;
- The increase in the volume of claims by currently unimpaired plaintiffs;
- Claims filed under the non-aggregate premises or operations section of general liability policies;
- The number of insureds seeking bankruptcy protection and the effect of prepackaged bankruptcies;
- Diverging legal interpretations; and
- With respect to environmental claims, the difficulty in estimating the allocation of remediation cost among various parties.

After carefully considering the results of the ground-up analysis, which AIG updates on an annual basis, as well as all of the above factors, including the recent report year experience, AIG increased its gross asbestos reserves by \$75 million, all of which was reinsured, resulting in no increase to net reserves. Additionally, during 2007 a reduction in estimated reinsurance recoverable, partially offset by several large favorable asbestos settlements, resulted in a minor amount of adverse incurred loss development.

Based on the environmental top-down report year analysis performed in the fourth quarter of 2007, a minor increase in both gross and net reserves was recognized, resulting in the relatively minor amount of development shown in the table below.

A summary of reserve activity, including estimates for applicable IBNR, relating to asbestos and environmental claims separately and combined at December 31, 2007, 2006 and 2005 appears in the table below. The vast majority of such claims arise from policies written in 1984 and prior years. The current environmental policies that AIG underwrites on a claims-made basis have been excluded from the table below.

(in millions)	2007		2006		2005	
	Gross	Net	Gross ^(e)	Net	Gross ^(e)	Net
Asbestos:						
Reserve for losses and loss expenses at beginning of year	\$ 4,523	\$1,889	\$4,501	\$1,840	\$2,622	\$1,060
Losses and loss expenses incurred ^(a)	96	5	572	267	2,206 ^(b)	903 ^(b)
Losses and loss expenses paid ^(a)	(755)	(440)	(550)	(218)	(327)	(123)
Reserve for losses and loss expenses at end of year	\$ 3,864	\$1,454	\$4,523	\$1,889	\$4,501	\$1,840
Environmental:						
Reserve for losses and loss expenses at beginning of year	\$ 629	\$ 290	\$ 969	\$ 410	\$1,018	\$ 451
Losses and loss expenses incurred ^(a)	10	13	(231)	(59)	47 ^(c)	27 ^(c)
Losses and loss expenses paid ^(a)	(124)	(66)	(109)	(61)	(96)	(68)
Reserve for losses and loss expenses at end of year	\$ 515	\$ 237	\$ 629	\$ 290	\$ 969	\$ 410
Combined:						
Reserve for losses and loss expenses at beginning of year	\$ 5,152	\$2,179	\$5,470	\$2,250	\$3,640	\$1,511
Losses and loss expenses incurred ^(a)	106	18	341	208	2,253 ^(d)	930 ^(d)
Losses and loss expenses paid ^(a)	(879)	(506)	(659)	(279)	(423)	(191)
Reserve for losses and loss expenses at end of year	\$ 4,379	\$1,691	\$5,152	\$2,179	\$5,470	\$2,250

(a) All amounts pertain to policies underwritten in prior years, primarily to policies issued in 1984 and prior.

(b) Includes increases to gross losses and loss expense reserves of \$2.0 billion and increases to net losses and loss expense reserves of \$843 million for the fourth quarter of 2005.

(c) Includes increases to gross losses and loss expense reserves of \$56 million and increases to net losses and loss expense reserves of \$30 million for the fourth quarter of 2005.

(d) Includes increases to gross losses and loss expense reserves of \$2.0 billion and increases to net losses and loss expense reserves of \$873 million for the fourth quarter of 2005.

(e) Gross amounts were revised from the previous presentation to reflect the inclusion of certain reserves not previously identified as asbestos and environmental related. This revision had no effect on net reserves.

The gross and net IBNR included in the reserve for losses and loss expenses, relating to asbestos and environmental claims separately and combined, at December 31, 2007, 2006 and 2005 were estimated as follows:

(in millions)	2007		2006		2005	
	Gross	Net	Gross*	Net	Gross*	Net
Asbestos	\$2,701	\$1,145	\$3,270	\$1,469	\$3,458	\$1,465
Environmental	325	131	378	173	625	266
Combined	\$3,026	\$1,276	\$3,648	\$1,642	\$4,083	\$1,731

* Gross amounts were revised from the previous presentation to reflect the inclusion of certain reserves not previously identified as asbestos and environmental related. This revision had no effect on net reserves.

A summary of asbestos and environmental claims count activity for the years ended December 31, 2007, 2006 and 2005 was as follows:

	2007			2006			2005		
	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined
Claims at beginning of year	6,878	9,442	16,320	7,293	9,873	17,166	7,575	8,216	15,791
Claims during year:									
Opened	656	937	1,593	643	1,383	2,026	854	5,253	6,107
Settled	(150)	(179)	(329)	(150)	(155)	(305)	(67)	(219)	(286)
Dismissed or otherwise resolved	(821)	(2,548)	(3,369)	(908)	(1,659)	(2,567)	(1,069)	(3,377)	(4,446)

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Survival Ratios — Asbestos and Environmental

The table below presents AIG's survival ratios for asbestos and environmental claims at December 31, 2007, 2006 and 2005. The survival ratio is derived by dividing the current carried loss reserve by the average payments for the three most recent calendar years for these claims. Therefore, the survival ratio is a simplistic measure estimating the number of years it would be before the current ending loss reserves for these claims would be paid off using recent year average payments. The December 31, 2007 survival ratio is lower than the ratio at December 31, 2006 because the more recent periods included in the rolling average reflect higher claims payments. In addition, AIG's survival ratio for asbestos claims was negatively affected by the favorable settlements described above, which reduced gross and net asbestos survival ratios at December 31, 2007 by approximately 1.3 years and 2.6 years, respectively. Many factors, such as aggressive settlement procedures, mix of business and level of coverage provided, have a significant effect on the amount of asbestos and environmental reserves and payments and the resultant survival ratio. Moreover, as discussed above, the primary basis for AIG's determination of its reserves is not survival ratios, but instead the ground-up and top-down analysis. Thus, caution should be exercised in attempting to determine reserve adequacy for these claims based simply on this survival ratio.

AIG's survival ratios for asbestos and environmental claims, separately and combined were based upon a three-year average payment. These ratios for the years ended December 31, 2007, 2006 and 2005 were as follows:

	Gross*	Net
2007		
Survival ratios:		
Asbestos	7.1	5.6
Environmental	4.7	3.7
Combined	6.7	5.2
2006		
Survival ratios:		
Asbestos	11.8	12.9
Environmental	5.6	4.5
Combined	10.4	10.3
2005		
Survival ratios:		
Asbestos	16.0	19.8
Environmental	7.2	6.2
Combined	13.1	14.2

* Gross amounts for 2006 and 2005 were revised from the previous presentation to reflect the inclusion of certain reserves not previously identified as asbestos and environmental related. This revision had no effect on net reserves.

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services operations offer a wide range of insurance and retirement savings products both domestically and abroad.

AIG's Foreign Life Insurance & Retirement Services operations include insurance and investment-oriented products such as whole

and term life, investment linked, universal life and endowments, personal accident and health products, group products including pension, life and health, and fixed and variable annuities. The Foreign Life Insurance & Retirement Services products are sold through independent producers, career agents, financial institutions and direct marketing channels.

AIG's Domestic Life Insurance operations offer a broad range of protection products, such as individual life insurance and group life and health products, including disability income products and payout annuities, which include single premium immediate annuities, structured settlements and terminal funding annuities. The Domestic Life Insurance products are sold through independent producers, career agents and financial institutions and direct marketing channels. Home service operations include an array of life insurance, accident and health and annuity products sold primarily through career agents.

AIG's Domestic Retirement Services operations include group retirement products, individual fixed and variable annuities sold through banks, broker-dealers and exclusive sales representatives, and annuity runoff operations, which include previously acquired "closed blocks" and other fixed and variable annuities largely sold through distribution relationships that have been discontinued.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers manage their businesses, commencing in 2007, revenues and operating income related to foreign investment-type contracts, which were historically reported as a component of the Asset Management segment, are now reported as part of Foreign Life Insurance & Retirement Services. Prior period amounts have been revised to conform to the current presentation.

AIG's Life Insurance & Retirement Services reports its operations through the following major internal reporting units and legal entities:

Foreign Life Insurance & Retirement Services

Japan and Other

- American Life Insurance Company (ALICO)
- AIG Star Life Insurance Co., Ltd. (AIG Star Life)
- AIG Edison Life Insurance Company (AIG Edison Life)

Asia

- American International Assurance Company, Limited, together with American International Assurance Company (Bermuda) Limited (AIA)
- Nan Shan Life Insurance Company, Ltd. (Nan Shan)
- American International Reinsurance Company Limited (AIRCO)
- The Philippine American Life and General Insurance Company (Philamlife)

Domestic Life Insurance

- American General Life Insurance Company (AIG American General)
- The United States Life Insurance Company in the City of New York (USLIFE)

- American General Life and Accident Insurance Company (AGLA)

Domestic Retirement Services

- The Variable Annuity Life Insurance Company (VALIC)
- AIG SunAmerica Life Assurance Company (AIG SunAmerica)
- AIG Annuity Insurance Company (AIG Annuity)

Life Insurance & Retirement Services Results

Life Insurance & Retirement Services results for 2007, 2006 and 2005 were as follows:

<i>(in millions)</i>	Premiums and Other Considerations	Net Investment Income	Net Realized Capital Gains (Losses)	Total Revenues	Operating Income
2007					
Foreign Life Insurance & Retirement Services	\$26,601	\$11,849	\$ (187)	\$38,263	\$ 6,197

Domestic Life Insurance	2	1	—	(1)	(39)
Domestic Retirement Services	13	4	—	4	7
Total	4%	7%	—%	6%	13%

* Included an out of period UCITS adjustment which increased net investment income by \$240 million and operating income by \$169 million.

The following table presents the gross insurance in force for Life Insurance & Retirement Services at December 31, 2007, 2006 and 2005:

<i>(in millions)</i>	2007	2006	2005
Foreign*	\$1,327,251	\$1,162,699	\$1,027,682
Domestic	984,794	907,901	825,151
Total	\$2,312,045	\$2,070,600	\$1,852,833

* Includes increases (decreases) of \$55.1 billion, \$41.5 billion and \$(76.5) billion related to changes in foreign exchange rates at December 31, 2007, 2006 and 2005, respectively.

2007 and 2006 Comparison

The severe credit market disruption was a key driver of operating results in 2007 principally due to significant net realized capital

losses resulting from other-than-temporary impairment charges of \$2.8 billion and losses on derivative instruments not qualifying for hedge accounting treatment of \$381 million compared to an other-than-temporary impairment charge of \$641 million and gains on derivative instruments of \$268 million in 2006. In addition, net investment income and certain products were negatively affected by the volatile markets. Life Insurance & Retirement Services continued its ongoing project to increase standardization of AIG's actuarial systems and processes throughout the world. Significant progress was made on these initiatives, with only a minimal effect on operating income in this segment. Premiums and other considerations increased in 2007 compared to 2006 despite a very competitive marketplace and a relatively flat yield curve for most of the year.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Life Insurance & Retirement Services total revenues in 2007 reflect growth in premiums and other considerations compared to 2006 due principally to strong life insurance production in the Foreign Life Insurance & Retirement Services operations, a growing block of U.K. single premium investment-oriented products and higher policyholder charges related to universal life and sales of payout annuities in the Domestic Life Insurance operations. Overall growth in premiums and other considerations was dampened by a continuing shift to interest sensitive products and the suspension of new sales on certain products in Japan resulting from an industry wide review by the tax authorities. Net investment income increased in 2007 compared to 2006 due to higher partnership and mutual fund income as well as higher policyholder investment income and trading gains and losses (together, policyholder trading gains). Policyholder trading gains are offset by a charge to incurred policy losses and benefits expense. Policyholder trading gains increased due to higher levels of assets and generally reflect the trend in equity markets. Policyholder trading gains were \$2.9 billion in 2007 compared to \$2.0 billion in 2006. Net investment income in 2006 included an increase of \$240 million for an out of period adjustment related to the accounting for UCITS.

Operating income in 2007 was significantly adversely affected by net realized capital losses which totaled \$2.4 billion, net of an out-of-period adjustment of \$158 million related to foreign exchange remediation activities, compared to net realized capital gains of \$88 million in 2006. Other factors affecting operating income include trading account losses of \$150 million in the U.K. associated with certain investment-linked products, the adverse effect of \$108 million related to SOP 05-1, which was adopted in 2007, additional claim expense of \$67 million relating to an industry wide regulatory review of claims in Japan (compared to additional claim expense of \$26 million in 2006) and a \$118 million charge related to remediation activities in Asia. Incurred policyholder benefits increased \$36 million in 2007 related to a closed block of Japanese business with guaranteed benefits. Partially offsetting these factors was a \$52 million recovery in 2007 related to the Superior National arbitration. SOP 05-1 generally requires DAC related to group contracts to be amortized over a shorter duration than in prior periods and also requires that DAC be expensed at the time an individual policy is terminated or lapses, even if reinstated shortly thereafter. The effect of SOP 05-1 was most significant to the group products line in the Domestic Life Insurance operations.

Changes in actuarial estimates, including DAC unlockings and refinements to estimates resulting from actuarial valuation system

enhancements and conversions, resulted in a net increase to operating income of \$19 million during 2007. However, this net increase resulted from a number of items that had varying effects on the results of operations of certain operating units and lines of business. These adjustments resulted in an increase of \$183 million in operating income for Foreign Life Insurance & Retirement Services and decreases in operating income of \$52 million and \$112 million for Domestic Life Insurance and Domestic Retirement Services, respectively. In addition, the related adjustments significantly affected both acquisition costs and incurred policy losses and benefits in the Consolidated Statement of Income.

Operating income in 2006 included an increase of \$169 million for an out of period adjustment related to the accounting for UCITS and an increase of \$163 million for an out-of-period adjustment related to corrections of par policyholder dividend reserves and allocations between participating and non-participating accounts, both of which were related to remediation efforts. In addition, operating income in 2006 included charges to Domestic Life Insurance operations of \$125 million for the adverse Superior National arbitration ruling, \$66 million related to the exit of the domestic financial institutions credit life business and \$55 million related to other litigation.

2006 and 2005 Comparison

Life Insurance & Retirement Services revenues in 2006 increased compared to 2005. Growth in premiums and other considerations was dampened by the effect of foreign exchange, most notably by the weakening Japanese Yen. Net investment income was higher in 2006 compared to 2005 due to higher partnership and mutual fund income, which in 2006 included a positive out-of-period adjustment of \$240 million related to the accounting for UCITS. Operating income grew by \$1.2 billion from 2005, reflecting higher revenues, including net realized capital gains, and out-of-period reductions of policy benefits expense of \$163 million in 2006 resulting from corrections of par policyholder dividend reserves and allocations between participating and non-participating accounts, both of which were related to remediation efforts. In addition, operating income in 2006 included charges for Domestic Life Insurance of \$125 million for the adverse Superior National arbitration ruling, \$66 million related to the exit of the domestic financial institutions credit life business and \$55 million related to other litigation.

Foreign Life Insurance & Retirement Services Results

Foreign Life Insurance & Retirement Services results on a sub-product basis for 2007, 2006 and 2005 were as follows:

<i>(in millions)</i>	Premiums and Other Considerations	Net Investment Income	Net Realized Capital Gains (Losses)	Total Revenues	Operating Income
2007					
Life insurance	\$16,630	\$ 7,473	\$ 85	\$24,188	\$ 3,898

Total	5%	12%	—%	8%	30%

(a) Includes the effect of an out of period UCITS adjustment in 2006, which increased net investment income by \$237 million and operating income by \$166 million.

AIG transacts business in most major foreign currencies and therefore premiums and other considerations reported in U.S. dollars vary by volume and from changes in foreign currency translation rates. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of the Foreign Life Insurance & Retirement Services premiums and other

considerations for the years ended December 31, 2007 and 2006:

	2007	2006
Growth in original currency*	7.6%	6.5%
Foreign exchange effect	2.5	(2.0)
Growth as reported in U.S. dollars	10.1%	4.5%

* Computed using a constant exchange rate each period.

(a) Includes the effect of an out of period UCITS adjustment in 2006, which increased both net investment income and operating income by \$29 million.

2007 and 2006 Comparison

Total revenues for Japan and Other in 2007 increased compared to 2006, primarily due to higher premiums and other considerations and net investment income partially offset by net realized capital losses. Net investment income increased in 2007 compared to 2006 due to higher levels of assets under management and higher policyholder trading gains partially offset by lower partnership and mutual fund income. Operating income decreased in 2007 compared to 2006 due principally to net realized capital losses, a \$187 million charge related to changes in actuarial

estimates, trading account losses of \$150 million in the U.K. associated with certain investment-linked products, \$67 million of additional claim expense related to the industry wide regulatory review of claims in Japan and increased incurred policyholder benefits of \$36 million related to a closed block of Japanese business with guaranteed benefits. These decreases were partially offset by the positive effect of foreign exchange rates.

Life insurance premiums and other considerations increased moderately in 2007 compared to 2006. In Japan, single premium sales of U.S. dollar denominated interest sensitive whole life

products remained strong. First year premium sales declined, however, due to the suspension in April 2007 of increasing term products pending completion of an industry wide review by the National Tax Authority. Although the review was completed with the issue of a draft paper for comment in December 2007, the product remains suspended pending finalization of the report. In Europe, growth in premiums and other considerations was driven by the growing block of U.K. single premium investment-oriented products and the positive effect of foreign exchange rates. The growth in net investment income was due to growth in underlying invested assets and higher partnership income. Life insurance operating income declined in 2007 compared to 2006 due to net realized capital losses, compared to net realized capital gains in 2006. In addition, 2007 operating income was negatively affected by a \$115 million charge related to changes in actuarial estimates, higher incurred policyholder benefits of \$36 million related to a closed block of Japanese business with guaranteed benefits and \$23 million of additional claim expense related to the claims review in Japan. Operating income in 2006 included the effect of an out of period UCITS adjustment, which increased both net investment income and operating income by \$29 million.

Personal accident premiums and other considerations grew modestly as strong growth in Europe was offset by lower growth in Japan, particularly from the direct marketing distribution channel. Net investment income increased in 2007 compared to 2006 primarily due to growth in invested assets. Operating income declined in 2007 compared to 2006 due to a net realized capital loss, a \$42 million charge related to changes in actuarial estimates, \$42 million of additional claim expense related to the claims review in Japan and \$20 million of additional expenses related to SOP 05-1.

Group products premiums and other considerations in 2007 increased significantly compared to 2006 primarily due to the growing credit business in Europe. Net investment income increased in 2007 compared to 2006, primarily due to higher assets under management related to the Brazil pension business. Operating income in 2007 declined compared to 2006 primarily due to \$19 million of additional expenses related to SOP 05-1 and lower net realized capital gains.

Individual fixed annuity deposits improved in 2007 primarily due to sales in the U.K. and were partially offset by declining sales in Japan due to the effect of a weak Japanese Yen for most of the year as well as the market shift to variable annuity products. Assets under management, however, continued to grow. Individual fixed annuities premiums and other considerations growth reflects a shift to front-end load products and higher

surrender charges from U.S. dollar products in Japan where a weak Japanese Yen makes it attractive for certain policyholders to lock-in foreign exchange gains in excess of surrender charges. Surrender charges were \$151 million and \$98 million in 2007 and 2006, respectively. Net investment income increased due to higher average investment yields and higher levels of assets under management. Operating income declined in 2007 compared to 2006 due to realized capital losses in 2007 versus realized capital gains in 2006.

Individual variable annuity deposits in 2007 declined compared to 2006 due to the effect of tax law changes in Europe that reduced tax benefits to policyholders, and lower sales in Japan due to increased competition and the introduction of a new law that increased sales compliance and customer suitability requirements. Variable annuity sales in Japan began to improve in the fourth quarter of 2007 as a new product, launched mid-year in 2007, gained acceptance and banks became more comfortable with the new law. The fees generated from the higher levels of assets under management increased premiums and other considerations in 2007 compared to 2006. Net investment income increased due to higher policyholder trading gains in 2007 compared to 2006. Operating income declined in 2007 compared to 2006 primarily due to \$150 million of trading account losses on certain investment-linked products in the U.K. and net realized capital losses.

2006 and 2005 Comparison

Total revenues for Japan and Other increased in 2006 compared to 2005. Premiums and other considerations growth rates were dampened by the effect of foreign exchange, most notably by the weakening of the Japanese Yen. Net investment income in 2006 declined compared to 2005 due to lower policyholder trading gains in the individual variable annuity line. Total revenues in 2006 increased compared to 2005 due to realized capital gains relating primarily to derivative instruments for transactions that did not qualify for hedge accounting treatment under FAS 133. Operating income in 2006 increased compared to 2005 due to growth in the underlying retirement services businesses and realized capital gains of \$406 million. Operating income in 2006 included the effect of an out of period UCITS adjustment which increased net investment income and operating income by \$32 million. Operating income in 2006 was negatively affected by the weakening of the Japanese Yen against the U.S. dollar and the continued runoff of the older, higher margin in-force businesses of AIG Star Life and AIG Edison Life.

(a) Includes the effect of an out of period UCITS adjustment in 2006, which increased net investment income and operating income by \$208 million and \$137 million, respectively.

2007 and 2006 Comparison

Total revenues in Asia in 2007 increased compared to 2006 primarily due to higher premiums and other considerations and net investment income, partially offset by lower net realized capital gains. Premiums and other considerations increased in 2007 compared to 2006, notwithstanding a continued trend toward investment-oriented products where only a portion of policy charges are reported as premiums. Sales of investment-oriented life products have been particularly strong in Hong Kong, Korea and Singapore and more recently in Taiwan. Net investment

income grew due to higher policyholder trading gains, higher partnership and unit investment trust income and growth in underlying invested assets. Net realized capital gains in 2007 were lower compared to 2006 due to an increase in other-than-temporary impairment charges and the change in fair value of derivatives that do not qualify for hedge accounting treatment under FAS 133, partially offset by a positive out-of-period adjustment of \$158 million related to foreign exchange remediation activities. Operating income in 2007 increased compared to 2006. Operating income in 2007 included a \$370 million positive effect of changes in actuarial estimates along with higher

partnership and UCITS income, partially offset by lower net realized capital gains and a \$118 million charge related to remediation activity. Operating income in 2006 included an increase of \$137 million from an out of period adjustment related to UCITS. In addition, operating income in 2006 included the positive effect of out of period reductions in participating policyholder dividend reserves of \$163 million, primarily as a result of tax remediation adjustments and a correction to expense allocations between participating and non-participating accounts.

Life insurance premiums and other considerations in 2007 reflected a moderate increase compared to 2006, benefiting from improved sales in Thailand and the favorable effect of foreign exchange rates, partially offset by the shift in product mix from traditional life insurance products to investment-oriented products. Net investment income grew in 2007 compared to 2006 due primarily to higher policyholder trading gains, the growth in the underlying invested assets and higher partnership income. Operating income increased in 2007 compared to 2006 due to a \$322 million positive effect of changes in actuarial estimates, partially offset by an \$86 million charge related to remediation activity. Operating income in 2006 included the effect of the out of period UCITS adjustment and reduction in participating policyholder dividend reserves discussed above.

Personal accident revenues grew in 2007 compared to 2006 primarily due to higher premiums and other considerations, particularly in Korea and Taiwan. Operating income reflects the combined effect of premium growth and stable loss ratios and a \$51 million positive effect related to changes in actuarial estimates in 2007.

Group products premiums and other considerations grew in 2007 compared to 2006 due to higher pension management fees

and sales. However, operating income declined in 2007 compared to 2006, primarily due to net realized capital losses resulting from other-than-temporary impairment charges, a \$29 million charge related to remediation activity and higher DAC amortization expense.

Individual fixed annuities total revenues grew in 2007 compared to 2006 due primarily to higher net investment income and increased net realized capital gains. Deposits in 2007 declined compared to 2006 due to increased competition and a market shift to variable life products, particularly in Korea.

2006 and 2005 Comparison

Revenues for Asia grew in 2006 compared to 2005. Premiums and other considerations in 2006 were negatively affected by the trend towards investment-oriented products as only a portion of the policy charges collected are reported as premiums. Net investment income in 2006 grew compared to 2005 due to higher policyholder trading gains. Net realized capital gains were significantly higher in 2006 compared to 2005 relating primarily to derivative instruments for transactions that do not qualify for hedge accounting treatment under FAS 133. Revenues and operating income in 2006 included increases of \$208 million and \$137 million, respectively, from out of period adjustments related to UCITS. In addition, operating income in 2006 increased due to a \$163 million out of period adjustment related to participating policyholder dividend reserves primarily as a result of tax remediation adjustments and a correction to expense allocations between participating and non-participating accounts.

Domestic Life Insurance Results

Domestic Life Insurance results, presented on a sub-product basis for 2007, 2006 and 2005, were as follows:

(a) Premiums and other considerations include structured settlements, single premium immediate annuities and terminal funding annuities.

2007 and 2006 Comparison

Total Domestic Life Insurance revenues in 2007 decreased compared to 2006 primarily due to higher net realized capital losses, partially offset by higher premiums and other considerations and net investment income. Domestic Life Insurance premiums and other considerations increased in 2007 compared to 2006 primarily due to the growth in life insurance business in force and payout annuity premiums, which were partially offset by a decline in group life/health premiums due to exiting the financial institutions credit life business at the end of 2006. Domestic Life Insurance operating income decreased in 2007 compared to 2006, primarily due to higher net realized capital losses which consisted of losses related to sales of securities, other-than-temporary impairment writedowns of fixed income securities as well as derivative losses. The higher net realized capital losses in 2007 were partially offset by increases in premiums and other considerations and net investment income, and an improvement in group life/health results compared to 2006, which included a \$125 million charge related to the Superior National workers compensation arbitration, a \$66 million loss related to the exit from the financial institutions credit life business and a \$55 million charge related to litigation reserves. Changes in actuarial estimates, including DAC unlockings and refinements in estimates resulting from actuarial valuation system enhancements, resulted in a net decrease in operating income of \$52 million in 2007. Operating income in 2007 was also negatively affected by a \$67 million increase in DAC amortization related to SOP 05-1, which was partially offset by a \$52 million decrease in policy

benefits due to additional reinsurance recoveries associated with Superior National.

Life insurance premiums and other considerations increased in 2007 compared to 2006 driven by growth in life insurance business in force and increased policyholder charges related to universal life and whole life products. Net investment income in 2007 compared to 2006 increased due to higher partnership income, higher call and tender income and positive changes from foreign denominated emerging market bonds. Life insurance operating income decreased in 2007 compared to 2006 primarily due to higher net realized capital losses and higher mortality in 2007, although mortality is still within expected ranges. In addition, operating income in 2007 included a \$25 million increase in reserves related to changes in actuarial estimates and an \$11 million increase in DAC amortization related to SOP 05-1.

Home service premiums and other considerations declined in 2007 compared to 2006 as the reduction in premiums in force from normal lapses and maturities exceeded sales growth. Net investment income in 2007 increased slightly compared to 2006 due to higher partnership income and positive changes from foreign denominated emerging market bonds. Home service operating income decreased largely due to higher net realized capital losses and an \$11 million increase in DAC amortization related to SOP 05-1, partially offset by continued improvement in profit margins.

Group life/health premiums and other considerations in 2007 declined compared to 2006, primarily due to the exit from the financial institutions credit life business at the end of 2006 and tightened pricing and underwriting in the group employer product

lines. Group life/health operating income increased in 2007 compared to 2006. Operating income in 2007 included a \$52 million decrease in policy benefits from additional reinsurance recoveries associated with Superior National, offset by an increase of \$45 million in DAC amortization related to SOP 05-1. The operating loss in 2006 included a \$125 million charge resulting from the loss of the Superior National arbitration, a \$66 million loss related to exiting the financial institutions credit business and a \$25 million charge for litigation reserves.

Payout annuities premiums and other considerations increased in 2007 compared to 2006 reflecting increased sales of structured settlements and terminal funding annuities. Net investment income increased in 2007 reflecting growth in insurance reserves and an increase in call and tender income on fixed income securities. Payout annuities operating income decreased slightly in 2007 as growth in the business was more than offset by higher net realized capital losses and by a \$30 million out of period adjustment to increase group annuity reserves for payout annuities. Operating income in 2006 included a \$24 million increase in reserves as various methodologies and assumptions were enhanced for payout annuity reserves.

Individual fixed and runoff annuities net investment income and operating income decreased in 2007 compared to 2006 reflecting declining insurance reserves. Operating income in 2006 included

\$30 million of increased amortization due to DAC unlocking to reflect lower in-force amounts.

2006 and 2005 Comparison

Premiums and other considerations for Domestic Life Insurance increased in 2006 compared to 2005 and were primarily driven by growth in the life insurance business in-force and payout annuity premiums, partially offset by declining in-force business in the home service and group life/health lines. Domestic Life Insurance operating income declined in 2006 compared to 2005 due to net realized capital losses and several significant transactions described below in 2006, partially offset by continued growth in life insurance and payout annuity business. Operating income in 2006 included a \$125 million charge resulting from the loss of the Superior National arbitration and a \$66 million loss related to exiting the financial institutions credit business both within the group life/health business. In addition, Domestic Life Insurance operating income was negatively affected by \$55 million in litigation accruals, an increase in reserves of \$24 million related to various methodologies and assumptions which were enhanced in the payout annuity business and a DAC unlocking charge of \$30 million in the individual fixed and runoff annuities line to reflect lower in-force amounts.

The following table reflects Domestic Life Insurance periodic premium sales by product for 2007, 2006 and 2005:

<i>(in millions)</i>	2007	2006	2005	Percentage Increase/(Decrease)	
				2007 vs. 2006	2006 vs. 2005
Periodic Premium Sales By Product*:					
Universal life	\$230	\$334	\$271	(31)%	23%
Variable universal life	55	56	44	(2)	27
Term life	219	240	229	(9)	5
Whole life/other	9	13	10	(31)	30
Total	\$513	\$643	\$554	(20)%	16%

* Periodic premium represents premium from new business expected to be collected over a one-year period.

2007 and 2006 Comparison

Domestic Life Insurance periodic premium sales declined in 2007 compared to 2006 primarily as a result of the repricing of certain universal life and term products and the tightening of underwriting standards during the second half of 2006. In the second half of 2007, AIG experienced positive sales growth in indexed universal life products and the sale of a large private placement variable universal life case.

2006 and 2005 Comparison

Domestic Life Insurance periodic premium sales increased in 2006 compared to 2005 primarily reflecting growth in the independent distribution platform. During the second half of 2006, certain universal life products were re-priced and underwriting standards were tightened.

* Primarily represents runoff annuity business sold through discontinued distribution relationships.

2007 and 2006 Comparison

Total revenues and operating income for Domestic Retirement Services declined in 2007 compared to 2006 primarily due to increased net realized capital losses. Net realized capital losses for Domestic Retirement Services increased due to higher other-than-temporary impairment charges of \$1.2 billion in 2007 compared to \$368 million in 2006 and sales to reposition assets in certain investment portfolios for both group retirement products and individual fixed annuities, as well as from changes in the value of certain individual variable annuity product guarantees and related hedges associated with living benefit features. Changes in actuarial estimates, including DAC unlockings and refinements to estimates resulting from actuarial valuation system enhancements, resulted in a net decrease to operating income of \$112 million in 2007.

Group retirement products operating income in 2007 decreased compared to 2006 primarily as a result of increased net

realized capital losses due to higher other-than-temporary impairment charges and an increase in DAC amortization related to both an increase in surrenders and to policy changes adding guaranteed minimum withdrawal benefit riders to existing contracts. Operating income was also negatively affected in 2007 by an \$18 million adjustment, primarily reflecting changes in actuarial estimates from the conversion to a new valuation system. These were partially offset by higher variable annuity fees which resulted from an increase in separate account assets compared to 2006.

Individual fixed annuities operating income in 2007 decreased compared to 2006 as a result of net realized capital losses due to higher other-than-temporary impairment charges partially offset by increases in partnership income. The decline in operating income also reflected higher DAC amortization and sales inducement costs related to increased surrenders and a \$33 million charge reflecting changes in actuarial estimates from the conver-

sion to a new valuation system, as well as unlocking future assumptions and experience updates.

Individual variable annuities operating income decreased in 2007 compared to 2006 largely due to an increase in DAC amortization and sales inducement costs related to a \$61 million adjustment reflecting changes in actuarial estimates. Net realized capital losses increased due to changes in the value of certain annuity product guarantees and related hedges associated with living benefit features and higher other-than-temporary impairment charges.

2006 and 2005 Comparison

Total Domestic Retirement Services operating income increased in 2006 compared to 2005 principally due to higher partnership and yield enhancement income in the individual fixed annuity product line. Group retirement products total revenues were flat in 2006 as improvements in partnership income and variable annuity fees were offset by increased net realized capital losses. The flat revenues, coupled with higher amortization of deferred acquisition costs related to internal replacements of existing contracts into new contracts, resulted in a decrease in group retirement operating income. Individual variable annuity total revenues increased in 2006, primarily driven by higher variable annuity fees resulting from an increase in assets under management. Partially offsetting these higher fees was an increase in DAC amortization resulting from increased surrender activity in the first half of 2006. In 2006, the individual annuities-runoff operating income increased, even though the underlying reserves decreased due to increased net spreads as a result of higher investment yields partially offset by increased realized capital losses.

The following table presents the account value roll forward for Domestic Retirement Services by product for 2007 and 2006:

<i>(in millions)</i>	2007	2006
Group retirement products		
Balance at beginning of year	\$ 64,357	\$ 59,312

Individual annuities runoff	5,690	6,326
Balance at end of year	\$157,415	\$154,461
General and separate account reserves and mutual funds		
General account reserve	\$ 88,801	\$ 92,070
Separate account reserve	60,461	55,988
Total general and separate account reserves	149,262	148,058
Group retirement mutual funds	8,153	6,403
Total reserves and mutual funds	\$157,415	\$154,461

2007 and 2006 Comparison

Domestic Retirement Services deposits increased in 2007 compared to 2006 primarily reflecting higher deposits in group retirement products and individual variable annuities, partially offset by a decrease in individual fixed annuities. Group retirement deposits increased 10 percent in 2007 compared to 2006 as a result of an increased focus on sales management and acquiring outside deposits. Mutual funds deposits increased 20 percent while group annuity deposits increased 8 percent. Over time,

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

growth in lower margin mutual fund products relative to annuity products will result in a gradual reduction in overall profit margins of this business. Individual fixed annuity sales continued to face increased competition from bank deposit products and money market funds offering very competitive short-term rates in the current yield curve environment, and as a result deposits decreased 5 percent in 2007 compared to 2006. Individual variable annuity deposits increased 5 percent in 2007 compared to 2006 despite the discontinuation of a major bank proprietary product.

Domestic Retirement Services surrenders and other withdrawals increased in 2007 compared to 2006. The increase primarily reflects higher surrenders in both group retirement products and individual fixed annuities. Group retirement surrenders increased as a result of both normal maturing of the business and higher large group surrenders in 2007 compared to 2006. Individual fixed annuity surrenders and withdrawals increased in 2007 due to both an increasing number of policies coming out of their surrender charge period and increased competition from bank deposit products. AIG expects this trend to continue into 2008 as a significant amount of business comes out of its surrender charge period.

The following table presents Domestic Retirement Services reserves by surrender charge category and surrender rates as of December 31, 2007 and 2006:

2007 (in millions)	Group Retirement Products*	Individual Fixed Annuities	Individual Variable Annuities
No surrender charge	\$49,770	\$11,316	\$13,014
0% – 2%	3,284	3,534	5,381
Greater than 2% – 4%	3,757	7,310	5,133
Greater than 4%	2,280	24,956	9,492
Non-Surrenderable	865	3,392	88
Total Reserves	\$59,956	\$50,508	\$33,108
Surrender rates	9.8%	14.6%	12.8%

2006 (in millions)	Group Retirement Products*	Individual Fixed Annuities	Individual Variable Annuities
No surrender charge	\$42,741	\$10,187	\$11,467
0% – 2%	6,921	4,503	4,869
Greater than 2% – 4%	4,573	6,422	4,830
Greater than 4%	2,842	28,109	9,836
Non-Surrenderable	877	3,464	91
Total Reserves	\$57,954	\$52,685	\$31,093
Surrender rates	9.9%	12.0%	13.3%

* Excludes mutual funds of \$8.2 billion and \$6.4 billion in 2007 and 2006, respectively.

Surrender rates increased for individual fixed annuities, while group retirement surrender rates decreased slightly in 2007 compared to 2006. Although group retirement surrenders increased compared to 2006, the surrender rate decreased slightly as a result of a 6 percent increase in reserves. The increase in the surrender rate for individual fixed annuities continues to be driven by a relatively flat yield curve and the general aging of the in-force block; however, less than 23 percent of the individual fixed annuity reserves as of December 31, 2007 were available for surrender without charge. Individual variable annuities surrender rates were slightly lower in 2007 compared to 2006.

An increase in the level of surrenders in any of these businesses or in the individual fixed annuities runoff block could accelerate the amortization of DAC and negatively affect fee income earned on assets under management.

Higher surrenders in the group retirement and individual fixed annuity blocks, offset somewhat by increased deposits in group retirement, resulted in negative net flows in 2007. The continuation of the current interest rate and competitive environment would prolong this trend.

Life Insurance & Retirement Services Net Investment Income and Net Realized Capital Gains (Losses)

The following table summarizes the components of net investment income for the years ended December 31, 2007, 2006 and 2005:

<i>(in millions)</i>	2007	2006	2005
Foreign Life Insurance & Retirement Services:			
Fixed maturities, including short-term investments	\$ 7,846	\$ 6,820	\$ 6,059
Equity securities	135	80	51
Interest on mortgage and other loans	466	454	447
Partnership income	128	94	57
Unit investment trusts ^(a)	439	259	4
Other ^(b)	275	301	357

Net investment income ^(d)	\$22,341	\$20,024	\$18,677

(a) Includes the effect of an out of period UCITS adjustment in 2006, which increased net investment income by \$240 million and operating income by \$169 million.

(b) Includes real estate income, income on non-partnership invested assets, securities lending and Foreign Life Insurance & Retirement Services' equal share of the results of AIG Credit Card Company (Taiwan).

(c) Relates principally to assets held in various trading securities accounts that do not qualify for separate account treatment under SOP 03-1. These amounts are principally offset by an equal change included in incurred policy losses and benefits.

(d) Includes call and tender income.

2007 and 2006 Comparison

Net investment income increased \$2.3 billion, or 12 percent in 2007 compared to 2006 as the invested asset base grew for fixed maturities, equity securities and mortgage and other loans. In addition, yield enhancement activity increased compared to 2006. Net investment income from UCITS in 2006 included a \$240 million out of period increase. Policyholder trading gains increased in 2007 compared to 2006 principally due to an increase in assets under management, partially offset by trading account losses of \$150 million on certain investment-linked products in the U.K. Net investment income for certain operations include investments in structured notes linked to emerging market sovereign debt that incorporates both interest rate risk and currency risk. These investments generated income of \$45 million in 2007 compared to losses of \$8 million in 2006. In addition, period to period comparisons of investment income for some investment activities, particularly partnership income, are affected by yield enhancement activity. See Invested Assets for further information.

AIG generates income tax credits as a result of investing in synthetic fuel production (synfuels) related to the partnership income (loss) shown in the above table and records those benefits separately from segment operating results in its consolidated provision for income taxes. The amounts of those income tax credits were \$84 million, \$127 million and \$203 million for 2007, 2006 and 2005, respectively. These tax credits will no longer be generated after December 31, 2007. Synfuel production has ceased and the investments have been fully written off as of December 31, 2007.

2006 and 2005 Comparison

Net investment income increased 7 percent in 2006 compared to 2005 as income from fixed maturities, equity securities and mortgage and other loans income rose as the underlying invested asset base grew. Net investment income in 2006 also included the out of period increase relating to UCITS of \$240 million.

The following table summarizes net realized capital gains (losses) for Life Insurance & Retirement Services by major category for the years ended December 31, 2007, 2006 and 2005:

<i>(in millions)</i>	2007	2006	2005
Foreign Life Insurance & Retirement Services:

Other ^(c)	70	108	198
Total	\$ (2,398)	\$ 88	\$ (158)

(a) See *Invested Assets — Other-than-temporary impairments* for additional information.

(b) Includes a positive out-of-period adjustment of \$158 million in 2007 related to foreign exchange remediation activities.

(c) Includes gains (losses) of \$(16) million, \$88 million and \$109 million in 2007, 2006 and 2005, respectively, allocated to participating policyholders.

2007 and 2006 Comparison

Net realized capital gains (losses) include normal portfolio transactions as well as derivative gains (losses) for transactions that did not qualify for hedge accounting treatment under FAS 133, foreign exchange gains and losses and other-than-temporary impairments. In 2007, Life Insurance & Retirement Services operations recorded \$2.8 billion of other-than-temporary impairment charges compared to \$641 million in 2006. For Foreign Life Insurance & Retirement Services operations, these losses were related to both the decline in value of U.S. dollar bonds held in Thailand and Singapore, which reflects the depreciation of the

U.S. dollar against local currencies, and impairments due, in part, to the recent volatility in the securities markets. Net realized capital losses in the Foreign Life Insurance & Retirement Services operations in 2007 included losses of \$135 million related to derivatives that did not qualify for hedge accounting treatment under FAS 133 compared to a gain of \$276 million in 2006. Derivatives in the Foreign Life Insurance & Retirement Services operations are primarily used to economically hedge cash flows related to U.S. dollar bonds back to the respective currency of the country, principally in Taiwan, Thailand and Singapore. The corresponding foreign exchange gain or loss with respect to the economically hedged bond is deferred in accumulated other

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

comprehensive income until the bond is sold or deemed to be other-than-temporarily impaired.

For the Domestic Life Insurance and Domestic Retirement Services operations, the higher net realized capital losses resulted principally from other-than-temporary impairment charges of \$1.8 billion in 2007 compared to \$560 million in 2006 and from the sale of securities in 2007 to reposition assets in certain investment portfolios. Net realized capital losses in the Domestic Life Insurance operations in 2007 included losses of \$186 million related to derivatives that did not qualify for hedge accounting treatment under FAS 133 compared to a gain of \$25 million in 2006. Derivatives in the Domestic Life Insurance operations include affiliated interest rate swaps used to economically hedge cash flows on bonds and option contracts used to economically hedge cash flows on indexed annuity and universal life products. The corresponding gain or loss with respect to the economically hedged bond is deferred in accumulated other comprehensive income until the bond is sold, matures or deemed to be other-than-temporarily impaired. See Invested Assets — Valuation of Invested Assets — Portfolio Review herein.

2006 and 2005 Comparison

Net realized capital gains (losses) in 2006 improved \$246 million compared to 2005 primarily due to gains on derivative instruments primarily used to economically hedge cash flows that did not qualify for hedge accounting treatment under FAS 133 and related primarily to the Foreign Life Insurance & Retirement Services operations.

Deferred Policy Acquisition Costs and Sales Inducement Assets

DAC for Life Insurance & Retirement Services products arises from the deferral of costs that vary with, and are directly related to, the acquisition of new or renewal business. Policy acquisition costs for life insurance products are generally deferred and amortized over the premium paying period in accordance with FAS 60. Policy acquisition costs that relate to universal life and investment-type products are deferred and amortized, with interest in relation to the incidence of estimated gross profits to be realized over the estimated lives of the contracts in accordance with FAS 97. Value of Business Acquired (VOBA) is determined at the time of acquisition and is reported on the consolidated balance sheet with DAC and amortized over the life of the business, similar to DAC. AIG offers sales inducements to contract holders (bonus interest) on certain annuity and investment contracts. Sales inducements are recognized as part of the liability for policyholders contract deposits on the consolidated balance sheet and are amortized over the life of the contract similar to DAC. Total deferred acquisition and sales inducement costs increased \$549 million in 2007 compared to 2006 primarily due to higher production in the Foreign Life Insurance operations partially offset by lower Domestic Life Insurance & Retirement Services sales. Total amortization expense decreased \$328 million compared to 2006. Annualized amortization expense levels in 2007 and 2006 were approximately 10 percent and 13 percent, respectively, of the opening DAC balance. The decline in amortization expense levels relates to changes in actuarial estimates, which is substantially offset by related adjustments to incurred policy losses and benefits.

The following table summarizes the major components of the changes in DAC/Value of Business Acquired (VOBA) and Sales Inducement Assets (SIA) for 2007 and 2006:

(in millions)	2007			2006

(a) In 2007, Foreign Life Insurance & Retirement Services includes lower amortization of \$836 million related to changes in actuarial estimates, mostly offset in incurred policy losses and benefits. Domestic Retirement Services includes a higher amortization of \$104 million related to changes in actuarial estimates.

(b) In 2007, includes \$(118) million for the cumulative effect of adoption of SOP 05-1 and \$189 million related to balance sheet reclassifications. In 2006, primarily represents a balance sheet reclassification.

Because AIG operates in various global markets, the estimated gross profits used to amortize DAC, VOBA and sales inducements can be subject to differing market returns and interest rate environments in any single period. The combination of market returns and interest rates may lead to acceleration of amortization in some products and regions and simultaneous deceleration of amortization in other products and regions.

DAC, VOBA and SIA for insurance-oriented, investment-oriented and retirement services products are reviewed for recoverability, which involves estimating the future profitability of current business. This review involves significant management judgment. If actual future profitability is substantially lower than estimated, AIG's DAC, VOBA and SIA may be subject to an impairment charge

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

and AIG's results of operations could be significantly affected in such future periods.

Future Policy Benefit Reserves

Periodically, the net benefit reserves (policy benefit reserves less DAC) established for Life Insurance & Retirement Services companies are tested to ensure that, including consideration of future expected premium payments, they are adequate to provide for future policyholder benefit obligations. The assumptions used to perform the tests are current best-estimate assumptions as to policyholder mortality, morbidity, terminations, company maintenance expenses and invested asset returns. For long duration traditional business, a "lock-in" principle applies, whereby the assumptions used to calculate the benefit reserves and DAC are set when a policy is issued and do not change with changes in actual experience. These assumptions include margins for adverse deviation in the event that actual experience might deviate from these assumptions. For business in-force outside of North America, 45 percent of total policyholder benefit liabilities at December 31, 2007 resulted from traditional business where the lock-in principle applies. In most foreign locations, various guarantees are embedded in policies in force that may remain applicable for many decades into the future.

As experience changes over time, the best-estimate assumptions are updated to reflect the observed changes. Because of the long-term nature of many of AIG's liabilities subject to the lock-in principle, small changes in certain of the assumptions may cause large changes in the degree of reserve adequacy. In particular, changes in estimates of future invested asset return assumptions have a large effect on the degree of reserve adequacy.

During 2007, Life Insurance & Retirement Services continued its ongoing project to increase standardization of AIG's actuarial systems and processes throughout the world. In particular, there is an initiative within the Domestic Life Insurance & Retirement Services operations to consolidate the numerous actuarial valuation systems onto common platforms. This initiative began in 2006 and will continue into 2008. In the Foreign Life Insurance operations, actuarial reserves for certain blocks of business have been computed outside of the primary actuarial valuation systems and/or used methodologies that approximate amounts that would have been reported had these blocks of business been included in the primary actuarial valuation systems.

During 2007, Life Insurance & Retirement Services completed various system migrations, implemented more robust models for certain blocks of business and refined its method of approximation on any remaining blocks of business. The majority of these actions occurred in the fourth quarter of 2007 and any resulting changes in actuarial estimates were recorded in the fourth quarter of 2007 results of operations. The above changes in

actuarial estimates, including unlockings, resulted in a net increase to operating income of \$19 million during 2007. However, this net increase resulted from a number of items that had varying effects on the results of operations of certain operating units and lines of business. These adjustments resulted in an increase of \$183 million in operating income for Foreign Life Insurance & Retirement Services and decreases in operating income of \$52 million and \$112 million for Domestic Life Insurance and Domestic Retirement Services, respectively. In addition, the related adjustments significantly affected both acquisition costs and incurred policy losses and benefits in the Consolidated Statement of Income due to reclassifications between DAC and future policy benefits reserves.

Taiwan

Beginning in 2000, the yield available on Taiwanese 10-year government bonds dropped from approximately 6 percent to 2.6 percent at December 31, 2007. Yields on most other invested assets have correspondingly dropped over the same period. Current sales are focused on products such as:

- variable separate account products which do not contain interest rate guarantees,
- participating products which contain very low implied interest rate guarantees, and
- accident and health policies and riders.

In developing the reserve adequacy analysis for Nan Shan, several key best estimate assumptions have been made:

- Observed historical mortality improvement trends have been projected to 2014;
- Morbidity, expense and termination rates have been updated to reflect recent experience;
- Taiwan government bond rates are expected to remain at current levels for 10 years and gradually increase to best estimate assumptions of a market consensus view of long-term interest rate expectations;
- Foreign assets are assumed to comprise 35 percent of invested assets, resulting in a composite long-term investment assumption of approximately 4.9 percent; and
- The currently permitted practice of offsetting positive mortality experience with negative interest margins, thus eliminating the need for mortality dividends, will continue.

Future results of the reserve adequacy tests will involve significant management judgment as to mortality, morbidity, expense and termination rates and investment yields. Adverse changes in these assumptions could accelerate DAC amortization and necessitate reserve strengthening.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance.

Financial Services Results

Financial Services results were as follows:

(in millions)	2007	2006	2005	Percentage Increase/(Decrease)	
				2007 vs. 2006	2006 vs. 2005
Revenues:					
Aircraft Leasing ^(a)	\$ 4,694	\$4,082	\$ 3,668	15%	11%

Other, including intercompany adjustments	(2)	10	72	—	(86)
Total	\$ (9,515)	\$ 383	\$ 4,424	—%	(91)%

(a) Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. In 2007, 2006 and 2005, the effect was \$(37) million, \$(73) million and \$93 million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings. In the second quarter of 2007, ILFC began applying hedge accounting to most of its derivatives hedging interest rate and foreign exchange risks associated with its floating rate and foreign currency denominated borrowings.

(b) Revenues, shown net of interest expense of \$4.6 billion, \$3.2 billion and \$3.0 billion in 2007, 2006 and 2005, respectively, were primarily from hedged financial positions entered into in connection with counterparty transactions. Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. In 2007, 2006 and 2005, the effect was \$211 million, \$(1.8) billion and \$2.0 billion, respectively. The year ended December 31, 2007 includes a \$380 million out of period charge to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIGFP. The year ended December 31, 2006 includes an out of period charge of \$223 million related to the remediation of the material weakness in internal control over the accounting for certain derivative transactions under FAS 133. In the first quarter of 2007, AIGFP began applying hedge accounting for certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. In 2007, both revenues and operating income (loss) include an unrealized market valuation loss of \$11.5 billion on AIGFP's super senior credit default swap portfolio and an other-than-temporary impairment charge of \$643 million on AIGFP's available for sale investment securities recorded in other income.

(c) Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. In 2007, 2006 and 2005, the effect was \$(20) million, \$(94) million and \$75 million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings. In the second quarter of 2007, AGF began applying hedge accounting to most of its derivatives hedging interest rate and foreign exchange risks associated with its floating rate and foreign currency denominated borrowings. In 2007, includes a pre-tax charge of \$178 million in connection with domestic consumer finance's mortgage banking activities.

2007 and 2006 Comparison

Financial Services reported an operating loss in 2007 compared to operating income in 2006 primarily due to an unrealized market valuation loss of \$11.5 billion on AIGFP's super senior credit default swap portfolio, an other-than-temporary impairment charge on AIGFP's available for sale investment securities recorded in other income, and a decline in operating income for AGF. AGF's operating income declined in 2007 compared to 2006, due to reduced residential mortgage origination volumes, lower revenues from its mortgage banking activities and increases in the provision for finance receivable losses. In 2007, AGF's mortgage banking operations also recorded a pre-tax charge of \$178 million, representing the estimated cost of implementing the Supervisory Agreement entered into with the OTS.

ILFC generated strong operating income growth in 2007 compared to 2006, driven to a large extent by a larger aircraft fleet, higher lease rates and higher utilization.

In 2007, AIGFP began applying hedge accounting under FAS 133 to certain of its interest rate swaps and foreign currency forward contracts that hedge its investments and borrowings and AGF and ILFC began applying hedge accounting to most of their derivatives that hedge floating rate and foreign currency denominated borrowings. Prior to 2007, hedge accounting was not applied to any of AIG's derivatives and related assets and liabilities. Accordingly, revenues and operating income were exposed to volatility resulting from differences in the timing of revenue recognition between the derivatives and the hedged assets and liabilities.

The year ended December 31, 2007 included an out of period charge of \$380 million to reverse net gains recognized on transfers of available for sale securities among legal entities

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

consolidated within AIGFP. The year ended December 31, 2006 included out of period charges of \$223 million related to the remediation of the material weakness in internal control over accounting for certain derivative transactions under FAS 133.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers manage their businesses, beginning in 2007, net realized capital gains and losses, including derivative gains and losses and foreign exchange transaction gains and losses for Financial Services entities other than AIGFP, which were historically reported as a component of AIG's Other category, are now reported in Financial Services revenues and operating income. Prior period amounts have been revised to conform to the current presentation.

2006 and 2005 Comparison

Financial Services operating income decreased in 2006 compared to 2005, due primarily to the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133.

Aircraft Leasing

Aircraft Leasing operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to foreign and domestic airlines. Revenues also result from the remarketing of commercial aircraft for ILFC's own account, and remarketing and fleet management services for airlines and financial institutions. ILFC finances its aircraft purchases primarily through the issuance of debt instruments. ILFC economically hedges part of its floating rate and substantially all of its foreign currency denominated debt using interest rate and foreign currency derivatives. Starting in the second quarter of 2007, ILFC began applying hedge accounting to most of its derivatives. All of ILFC's derivatives are effective economic hedges; however, since hedge accounting under FAS 133 was not applied prior to April 2, 2007, the benefits of using derivatives to hedge these exposures are not reflected in ILFC's 2006 corporate borrowing rate. The composite borrowing rates at December 31, 2007 and 2006 were 5.16 percent and 5.17 percent, respectively.

ILFC typically contracts to re-lease aircraft before the end of the existing lease term. For aircraft returned before the end of the lease term, ILFC has generally been able to re-lease such aircraft within two to six months of their return. As a lessor, ILFC considers an aircraft "idle" or "off lease" when the aircraft is not subject to a signed lease agreement or signed letter of intent. ILFC had no aircraft off lease at December 31, 2007, and all new aircraft scheduled for delivery through 2008 have been leased.

Aircraft Leasing Results

2007 and 2006 Comparison

ILFC's operating income increased in 2007 compared to 2006. Rental revenues increased by \$596 million or 15 percent, driven by a larger aircraft fleet and higher lease rates. As of December 31, 2007, 900 aircraft in ILFC's fleet were subject to operating leases compared to 824 aircraft as of December 31,

2006. During 2007, ILFC realized income of \$31 million from the sale of its rights against bankrupt airlines. The increase in revenues was partially offset by reduced flight equipment marketing revenues and increases in depreciation and interest expense. Flight equipment marketing revenues decreased by \$40 million compared to 2006 due to fewer aircraft sales. Depreciation expense increased by \$166 million, or 11 percent, in line with the increase in the size of the aircraft fleet. Interest expense increased by \$176 million, or 12 percent, driven by additional borrowings to fund aircraft purchases and the rising cost of funds. In 2007 and 2006, the losses from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses, were \$37 million and \$73 million, respectively, in both revenues and operating income. During 2006, ILFC recorded charges to income related to a tax settlement in Australia, increased credit reserves and increased lease accruals, all of which totaled \$37 million.

2006 and 2005 Comparison

ILFC's operating income decreased in 2006 compared to 2005. Rental revenues increased by \$536 million or 16 percent, driven by a larger aircraft fleet, increased utilization and higher lease rates. During 2006, ILFC's fleet subject to operating leases increased by 78 airplanes to a total of 824. The increase in rental revenues was offset in part by increases in depreciation expense and interest expense, charges related to bankrupt airlines, as well as the settlement of a tax dispute in Australia related to the restructuring of ownership of aircraft. Depreciation expense increased by \$200 million, or 14 percent, in line with the increase in the size of the aircraft fleet. Interest expense increased by \$317 million, or 28 percent, driven by rising cost of funds, a weaker U.S. dollar against the Euro and the British Pound and additional borrowings funding aircraft purchases. As noted above, ILFC's interest expense did not reflect the benefit of hedging these exposures. In 2006 and 2005, the effect from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses, was a \$73 million loss and a \$93 million gain, respectively, in both revenues and operating income.

Capital Markets

Capital Markets represents the operations of AIGFP, which engages as principal in a wide variety of financial transactions, including standard and customized financial products involving commodities, credit, currencies, energy, equities and rates. The credit products include credit protection written through credit default swaps on super senior risk tranches of diversified pools of loans and debt securities. AIGFP also invests in a diversified portfolio of securities and principal investments and engages in borrowing activities involving the issuance of standard and structured notes and other securities, and entering into guaranteed investment agreements (GIAs).

As Capital Markets is a transaction-oriented operation, current and past revenues and operating results may not provide a basis for predicting future performance. AIG's Capital Markets opera-

tions derive a significant portion of their revenues from hedged financial positions entered into in connection with counterparty transactions. AIGFP also participates as a dealer in a wide variety of financial derivatives transactions. Revenues and operating income of the Capital Markets operations and the percentage change in these amounts for any given period are significantly affected by the number, size and profitability of transactions entered into during that period relative to those entered into during the prior period. Generally, the realization of transaction revenues as measured by the receipt of funds is not a significant reporting event as the gain or loss on AIGFP's trading transactions is currently reflected in operating income as the fair values change from period to period.

AIGFP's products generally require sophisticated models and significant management assumptions to determine fair values and, particularly during times of market disruption, the absence of observable market data can result in fair values at any given balance sheet date which are not indicative of the ultimate settlement values of the products.

Beginning in 2007, AIGFP applied hedge accounting under FAS 133 to certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. As a result, AIGFP recognized in earnings the change in the fair value on the hedged items attributable to the hedged risks substantially offsetting the gains and losses on the derivatives designated as hedges. Prior to 2007, AIGFP did not apply hedge accounting under FAS 133 to any of its derivatives or related assets and liabilities. For further information on the effect of FAS 133 on AIGFP's business, see Risk Management — Segment Risk Management — Financial Services — Capital Markets Derivative Transactions and Note 8 to Consolidated Financial Statements.

Effective January 1, 2008, AIGFP elected to apply the fair value option to all eligible assets and liabilities, other than equity method investments. Electing the fair value option will allow AIGFP to more closely align its earnings with the economics of its transactions by recognizing the change in fair value on its derivatives and the offsetting change in fair value of the assets and liabilities being hedged concurrently through earnings. The adoption of FAS 159 with respect to elections made by AIGFP is currently being evaluated for the effect of recently issued draft guidance by the FASB, anticipated to be issued in final form in early 2008, and its potential effect on AIG's consolidated financial statements.

Capital Markets Results

2007 and 2006 Comparison

Capital Markets reported an operating loss in 2007 compared to operating income in 2006, primarily due to fourth quarter 2007 unrealized market valuation losses related to AIGFP's super senior credit default swap portfolio principally written on multi-sector CDOs and an other-than-temporary impairment charge on AIGFP's investment portfolio of CDOs of ABS. These losses were partially offset by the effect of applying hedge accounting to certain hedging activities beginning in 2007, as described below, and net unrealized market gains related to certain credit default swaps

purchased against the AAA to BBB-rated risk layers on portfolios of reference obligations. AIGFP experienced higher transaction flow in 2007 in its rate and currency products which contributed to its revenues.

The unrealized market valuation losses related to AIGFP's super senior credit default swap portfolio, the preponderance of which relates to credit derivatives written on multi-sector CDO super senior tranches, were as follows:

<i>(in millions)</i>	Three months ended December 31, 2007	Year ended December 31, 2007
Multi-sector CDO	\$10,894	\$11,246
Corporate Debt/CLOs	226	226
Total	\$11,120	\$11,472

Included in AIGFP's net operating loss was a net unrealized market valuation gain of \$401 million on certain credit default swaps and embedded credit derivatives in credit-linked notes in 2007. In these transactions, AIGFP purchased protection at the AAA- to BBB-rated risk layers on portfolios of reference obligations that include multi-sector CDO obligations.

During the fourth quarter of 2007, certain of AIGFP's available for sale investments in super senior and AAA-rated bonds issued by multi-sector CDOs experienced severe declines in their fair value. As a result, AIGFP recorded an other-than-temporary impairment charge in other income of \$643 million. Notwithstanding AIG's intent and ability to hold such securities until they recover in value, and despite structures which indicate that a substantial amount of the securities should continue to perform in accordance with their original terms, AIG concluded that it could not reasonably assert that the recovery period would be temporary. See also Invested Assets — Financial Services Invested Assets and Note 3 to Consolidated Financial Statements.

The change in fair value of AIGFP's credit default swaps that reference CDOs and the decline in fair value of its investments in CDOs were caused by the significant widening in spreads in the fourth quarter on asset-backed securities, principally those related to U.S. residential mortgages, the severe liquidity crisis affecting the structured finance markets and the effects of rating agency downgrades on those securities. AIG continues to believe that these unrealized market valuation losses are not indicative of the losses AIGFP may realize over time on this portfolio. Based upon its most current analyses, AIG believes that any credit impairment losses realized over time by AIGFP will not be material to AIG's consolidated financial condition, although it is possible that such realized losses could be material to AIG's consolidated results of operations for an individual reporting period.

In addition, in 2007 AIGFP recognized a net gain of \$211 million related to hedging activities that did not qualify for hedge accounting treatment under FAS 133, compared to a net loss of \$1.82 billion in 2006.

The year ended December 31, 2007 included an out of period charge of \$380 million to reverse net gains recognized in previous periods on transfers of available for sale securities among legal entities consolidated within AIGFP, and a \$166 million reduction in fair value at March 31, 2007 of certain derivatives that were an integral part of, and economically hedge, the structured transac-

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

tions that were potentially affected by the proposed regulations issued by the U.S. Treasury Department discussed above in Overview of Operations and Business Results — Outlook. The net loss on AIGFP's derivatives recognized in 2006 included an out of period charge of \$223 million related to the remediation of the material weakness in internal control over accounting for certain derivative transactions under FAS 133. The net loss also reflects the effect of increases in U.S. interest rates and a weakening of the U.S. dollar on derivatives hedging AIGFP's assets and liabilities.

Financial market conditions in 2007 were characterized by increases in global interest rates, widening of credit spreads, higher equity valuations and a slightly weaker U.S. dollar.

The most significant component of Capital Markets operating expenses is compensation, which was approximately \$423 million, \$544 million and \$481 million in 2007, 2006 and 2005, respectively. The amount of compensation was not affected by gains and losses arising from derivatives not qualifying for hedge accounting treatment under FAS 133. In light of the unrealized market valuation loss related to the AIGFP super senior credit default swap portfolio, to retain and motivate the affected AIGFP employees, a special incentive plan relating to 2007 was established. Under this plan, certain AIGFP employees were granted cash awards vesting over two years and payable in 2013. The expense related to these awards will be recognized ratably over the vesting period, beginning in 2008.

AIG elected to early adopt FAS 155, "Accounting for Certain Hybrid Financial Instruments" (FAS 155) in 2006. AIGFP elected to apply the fair value option permitted by FAS 155 to its structured notes and other financial liabilities containing embedded derivatives outstanding as of January 1, 2006. The cumulative effect of the adoption of FAS 155 on these instruments at January 1, 2006 was a pre-tax loss of \$29 million. AIGFP recognized a loss of \$351 million in 2007 and a loss of \$287 million in 2006 on hybrid financial instruments for which it applied the fair value option under FAS 155. These amounts were largely offset by gains and losses on economic hedge positions also reflected in AIGFP's operating income or loss.

2006 and 2005 Comparison

Capital Markets reported an operating loss in 2006 compared to operating income in 2005. Improved results, primarily from increased transaction flow in AIGFP's credit, commodity index, energy and equity products, were more than offset by the loss resulting from the effect of derivatives not qualifying for hedge accounting treatment under FAS 133. This loss was \$1.82 billion in 2006 compared to a gain of \$2.01 billion in 2005, a decrease of \$3.83 billion. A large part of the net loss on AIGFP's derivatives recognized in 2006 was due to the weakening of the U.S. dollar, primarily against the British Pound and Euro, resulting in a decrease in the fair value of the foreign currency derivatives hedging AIGFP's available for sale securities. The majority of the net gain on AIGFP's derivatives in 2005 was due to the strengthening of the U.S. dollar, primarily against the British Pound and Euro, which increased the fair value of the foreign currency derivatives hedging available for sale securities. To a

lesser extent, the net gain in 2005 was due to the decrease in long-term U.S. interest rates, which increased the fair value of derivatives hedging AIGFP's assets and liabilities.

Financial market conditions in 2006 were characterized by a general flattening of interest rate yield curves across fixed income markets globally, tightening of credit spreads, higher equity valuations and a weaker U.S. dollar.

Consumer Finance

AIG's Consumer Finance operations in North America are principally conducted through AGF. AGF derives a substantial portion of its revenues from finance charges assessed on outstanding real estate loans, secured and unsecured non-real estate loans and retail sales finance receivables and credit-related insurance.

AGF's finance receivables are primarily sourced through its branches, although many of AGF's real estate loans are sourced through its centralized real estate operations, which include AGF's mortgage banking activities. The majority of the real estate loans originated by AGF's mortgage banking subsidiary are originated through broker relationships and are sold to investors on a servicing-released basis. Beginning in July 2003, AGF's mortgage banking subsidiaries originated and sold loans through a services arrangement with AIG Federal Savings Bank (AIG Bank), a federally chartered thrift and non-subsidiary of AGF. The services relationship was terminated in the first quarter of 2006. Since terminating the services relationship with AIG Bank, AGF's mortgage banking subsidiaries have originated these non-conforming real estate loans using their own state licenses.

On June 7, 2007, AIG's domestic consumer finance operations, consisting of AIG Bank, AGF's mortgage banking subsidiary Wilmington Finance, Inc. (WFI) and AGF, entered into a Supervisory Agreement with the OTS. The Supervisory Agreement pertains to certain mortgage loans originated in the name of AIG Bank from July 2003 through early May 2006 pursuant to the services agreement between WFI and AIG Bank, which was terminated in the first quarter of 2006. Pursuant to the terms of the Supervisory Agreement, AIG Bank, WFI and AGF have implemented a financial remediation program whereby certain borrowers may be provided loans on more affordable terms and/or reimbursed for certain fees. Pursuant to the requirements of the Supervisory Agreement, the services of an external consultant have been engaged to monitor, evaluate and periodically report to the OTS on compliance with the remediation program. The Supervisory Agreement will remain in effect until terminated, modified, or suspended in writing by the OTS. Failure to comply with the terms of the Agreement could result in the initiation of formal enforcement action by the OTS. Separately, the domestic consumer finance operations also committed to donate \$15 million over a three-year period to certain not-for-profit organizations to support their efforts to promote financial literacy and credit counseling.

Management's best estimate of the cost of implementing the financial remediation plan contemplated by the Supervisory Agreement, including the \$15 million donation, was \$178 million which was recorded in 2007. The actual cost of implementing the financial remediation plan may differ from this estimate.

AIG's foreign consumer finance operations are principally conducted through AIG Consumer Finance Group, Inc. (AIGCFG). AIGCFG operates primarily in emerging and developing markets. AIGCFG has operations in Argentina, China, Hong Kong, Mexico, Philippines, Poland, Taiwan and Thailand and began operations in India in 2007 through the acquisition of a majority interest in a sales finance lending operation and the acquisition of a mortgage lending operation. In addition, in 2007, AIGCFG expanded its distribution channels in Thailand by acquiring an 80 percent interest in a company with a network of over 130 branches for secured consumer lending. AIGCFG is continuously exploring expansion opportunities in its existing operations as well as new geographic locations throughout the world.

Certain of the AIGCFG operations are partly or wholly owned by life insurance subsidiaries of AIG. Accordingly, the financial results of those companies are allocated between Financial Services and Life Insurance & Retirement Services according to their ownership percentages. While products vary by market, the businesses generally provide credit cards, unsecured and secured non-real estate loans, term deposits, savings accounts, retail sales finance and real estate loans. AIGCFG originates finance receivables through its branches and direct solicitation. AIGCFG also originates finance receivables indirectly through relationships with retailers, auto dealers, and independent agents.

Consumer Finance Results

2007 and 2006 Comparison

Consumer Finance operating income decreased in 2007 compared to 2006. Operating income from the domestic consumer finance operations, which include the operations of AGF and AIG Bank, decreased by \$509 million, or 77 percent, in 2007 compared to 2006. In 2007, domestic results were adversely affected by the weakening housing market and tighter underwriting guidelines, which resulted in lower originations of real estate loans as well as the \$178 million charge discussed above.

AGF's revenues decreased \$95 million or 3 percent during 2007 compared to 2006. Revenues from AGF's mortgage banking activities decreased \$389 million during 2007 compared to 2006, which includes the charges relating to the Supervisory Agreement. The decrease in revenues also reflects a significantly reduced origination volume, lower yields based on market conditions, tighter underwriting guidelines, reduced margins on loans sold and higher warranty reserves, which cover obligations to repurchase loans sold to third-party investors should there be a first payment default or breach of representations and warranties. AGF's revenues in 2007 also included a recovery of \$65 million from a favorable out of court settlement.

AGF's operating income decreased in 2007 compared to 2006, due to reduced residential mortgage origination volumes, lower revenues from its mortgage banking activities and increases in the provision for finance receivable losses. AGF's interest expense increased by \$81 million or seven percent as its borrowing rate increased in 2007 compared to 2006. During 2007, AGF recorded a net loss of \$28 million on its derivatives that did not qualify for hedge accounting under FAS 133, including the related foreign exchange losses, compared to a net loss of \$89 million in 2006.

Commencing in the second quarter of 2007, AGF began applying hedge accounting.

AGF's net finance receivables totaled \$25.5 billion at December 31, 2007, an increase of approximately \$1.2 billion compared to December 31, 2006, including \$19.5 billion of real estate secured loans, most of which were underwritten with full income verification. The increase in the net finance receivables resulted in a similar increase in revenues generated from these assets.

Although real estate loan originations declined in 2007, the softening of home price appreciation (reducing the equity customers may be able to extract from their homes by refinancing) contributed to an increase in non-real estate loans of 11 percent at December 31, 2007 compared to December 31, 2006. Retail sales finance receivables also increased 13 percent compared to December 31, 2006 due to increased marketing efforts and customer demand. AGF's centralized real estate operations finance receivables were essentially unchanged while branch business segment finance receivables increased by 8 percent during 2007.

AGF's allowance for finance receivable losses as a percentage of outstanding receivables was 2.36 percent at December 31, 2007 compared to 2.01 percent at December 31, 2006.

Revenues from the foreign consumer finance operations increased by 29 percent in 2007 compared to 2006. Loan growth, particularly in Poland, Thailand and Latin America, was the primary driver of the increased revenues. The increase in revenues was more than offset by higher expenses associated with branch expansions, acquisition activities and product promotion campaigns. Operating income in 2006 reflects AIGCFG's \$47 million share of the allowance for losses related to industry-wide credit deterioration in the Taiwan credit card market.

2006 and 2005 Comparison

Consumer Finance operating income decreased in 2006 compared to 2005. Operating income from domestic consumer finance operations declined by \$193 million, or 23 percent as a result of decreased originations and purchases of real estate loans and margin compression resulting from increased interest rates and flattened yield curves. The foreign operations operating income decreased primarily due to the credit deterioration in the Taiwan credit card market.

Domestically, the U.S. housing market deteriorated throughout 2006 and as a result, the real estate loan portfolio decreased slightly during 2006 due to lower refinancing activity. This lower refinancing activity also caused a significant decrease in originations and whole loan sales in AGF's mortgage banking operation, which resulted in a substantial reduction of revenue and operating income compared to the prior year. However, softening home prices (reducing the equity customers are able to extract from their homes when refinancing) and higher mortgage rates contributed to customers utilizing non-real estate loans, which increased 10 percent compared to 2005. Retail sales finance receivables also increased 23 percent due to increased marketing efforts and customer demand. Higher revenue resulting from portfolio growth was more than offset by higher interest expense. AGF's short-term borrowing rates were 5.14 percent in 2006 compared to

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

3.58 percent in 2005. AGF's long-term borrowing rates were 5.05 percent in 2006 compared to 4.41 percent in 2005. During 2006, AGF recorded a net loss of \$89 million on its derivatives that did not qualify for hedge accounting under FAS 133, including the related foreign exchange losses, compared to a net gain of \$69 million in 2005. AGF's net charge-off ratio improved to 0.95 percent in 2006 from 1.19 percent in 2005. The improvement in the net charge-off ratio in 2006 was primarily due to positive economic fundamentals. The U.S. economy continued to expand during the year, and the unemployment rate remained low, which improved the credit quality of AGF's portfolio. AGF's delinquency ratio remained relatively low, although it increased to 2.06 percent at December 31, 2006 from 1.93 percent at December 31, 2005. AGF reduced the hurricane Katrina portion of its allowance for finance receivable losses to \$15 million at December 31, 2006 after the reevaluation of its remaining estimated losses. AGF's allowance ratio was 2.01 percent at December 31, 2006 compared to 2.20 percent at December 31, 2005.

Revenues from the foreign consumer finance operations increased by approximately 13 percent in 2006 compared to 2005. Loan growth, particularly in Poland and Argentina, was the primary driver behind the higher revenues. Higher revenues were more

than offset, however, by AIGCFG's \$47 million share of the allowance for losses related to industrywide credit deterioration in the Taiwan credit card market, increased cost of funds, and higher operating expenses in connection with expansion into new markets and distribution channels and new product promotions, resulting in lower operating income in 2006 compared to 2005.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products. Such services and products are offered to individuals, pension funds and institutions (including AIG subsidiaries) globally through AIG's Spread-Based Investment business, Institutional Asset Management and Brokerage Services and Mutual Funds businesses. Also included in Asset Management operations are the results of certain SunAmerica sponsored partnership investments.

The revenues and operating income for this segment are affected by the general conditions in the equity and credit markets. In addition, net realized gains and performance fees are contingent upon various fund closings, maturity levels and market conditions.

Asset Management Results

Asset Management results were as follows:

(in millions)	2007	2006	2005	Percentage Increase/(Decrease)	
				2007 vs. 2006	2006 vs. 2005
Revenues:					
Spread-Based Investment business	\$2,023	\$2,713	\$2,973	(25)%	(9)%
Institutional Asset Management*	2,900	1,240	1,026	134	21
Brokerage Services and Mutual Funds	322	293	257	10	14
Other Asset Management	380	297	326	28	(9)
Total	\$5,625	\$4,543	\$4,582	24%	(1)%
Operating income:					
Spread-Based Investment business	\$ (89)	\$ 732	\$1,194	—%	(39)%
Institutional Asset Management*	784	438	387	79	13
Brokerage Services and Mutual Funds	100	87	66	15	32
Other Asset Management	369	281	316	31	(11)
Total	\$1,164	\$1,538	\$1,963	(24)%	(22)%

* Includes the effect of consolidating the revenues and operating loss of warehoused investments totaling \$778 million and \$164 million, respectively, in 2007, a portion of which is offset in minority interest expense.

2007 and 2006 Comparison

Asset Management revenues increased in 2007 compared to 2006 primarily due to increased partnership income, management fees, carried interest and the effect of consolidating several warehoused investments. AIG consolidates the operating results of warehoused investments until such time as they are sold or otherwise divested.

Asset Management operating income decreased in 2007 compared to 2006, due to foreign exchange, interest rate and credit-related mark to market losses and other-than-temporary impairment charges on fixed income investments. These other-than-temporary impairment charges were due primarily to changes

in market liquidity and spreads. Partially offsetting these decreases were higher partnership income, increased gains on real estate investments and a gain on the sale of a portion of AIG's investment in Blackstone Group, L.P. in connection with its initial public offering.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers manage their businesses, beginning in 2007, net realized capital gains and losses, and foreign exchange transaction gains and losses, which were previously reported as part of AIG's Other category, are now included in Asset Management revenues and operating income. In addition, revenues and operating income related to foreign

investment-type contracts, which were historically reported as a component of the Spread-Based Investment business, are now reported in the Life Insurance & Retirement Services segment. Also, commencing in 2007, the effect of consolidating managed partnerships and funds, which were historically reported as a component of the Institutional Asset Management business, are now reported in the Consolidation and eliminations category. Prior period amounts have been revised to conform to the current presentation.

2006 and 2005 Comparison

Asset Management operating income decreased in 2006 compared to 2005 as a decline in Spread-Based Investment operating income was partially offset by higher Institutional Asset Management operating income.

Spread-Based Investment Business Results

2007 and 2006 Comparison

The Spread-Based Investment business reported an operating loss in 2007 compared to operating income in 2006 due to foreign exchange, interest rate and credit-related mark to market losses and other-than-temporary impairment charges on fixed income investments, partially offset by increased partnership income. In 2007, the GIC program incurred foreign exchange losses of \$526 million on foreign-denominated GIC reserves. Partially offsetting these losses were \$269 million of net mark to market gains on derivative positions. These net gains included mark to market gains on foreign exchange derivatives used to economically hedge the effect of foreign exchange rate movements on foreign-denominated GIC reserves and mark to market losses on interest rate hedges that did not qualify for hedge accounting treatment.

The MIP experienced mark to market losses of \$193 million due to interest rate and foreign exchange derivative positions that, while partially effective in hedging interest rate and foreign exchange risk, did not qualify for hedge accounting treatment and an additional \$98 million due to credit default swap losses. The MIP credit default swaps are comprised of single-name high-grade corporate exposures. AIG enters into hedging arrangements to mitigate the effect of changes in currency and interest rates associated with the fixed and floating rate and foreign currency denominated obligations issued under these programs. Some of these hedging relationships qualify for hedge accounting treatment, while others do not. Commencing in the first quarter of 2007, AIG applied hedge accounting to certain derivative transactions related to the MIP. Income or loss from these hedges not qualifying for hedge accounting treatment are classified as net realized capital gains (losses) in AIG's Consolidated Statement of Income. The mark to market losses for 2007 were driven primarily by a decline in short-term interest rates, the decline in the value of the U.S. dollar and widening credit spreads.

Also contributing to the operating loss were other-than-temporary impairment charges on various fixed income investments held in the GIC and MIP portfolios of approximately \$836 million as a result of movements in credit spreads and decreased market

liquidity. See Invested Assets — Other-than-temporary impairments. These losses were partially offset by an increase in partnership income associated with the GIC. In addition to other-than-temporary impairments, unrealized losses on fixed income investments were driven by widening credit spreads, partially offset by gains due to falling interest rates. These unrealized losses are recorded in Accumulated other comprehensive income (loss).

During 2007, AIG has issued the equivalent of \$8.1 billion of securities to fund the MIP in the Euromarkets and the U.S. public and private markets compared to \$5.3 billion issued in 2006. At December 31, 2007, total issuances were \$13.4 billion.

The following table illustrates the anticipated runoff of the domestic GIC portfolio at December 31, 2007:

<i>(in billions)</i>	Less Than One Year	1-3 Years	3 ⁺ -5 Years	Over Five Years	Total
Domestic GICs	\$9.4	\$6.4	\$2.7	\$6.8	\$25.3

2006 and 2005 Comparison

Operating income related to the Spread-Based Investment business declined in 2006 compared to 2005 due primarily to the continued runoff of GIC balances and spread compression related to increases in short-term interest rates. A significant portion of the remaining GIC portfolio consists of floating rate obligations. AIG has entered into hedges to manage against increases in short-term interest rates. AIG believes these hedges are economically effective, but they did not qualify for hedge accounting treatment. The decline in operating income was partially offset by improved partnership income, particularly during the fourth quarter of 2006.

Institutional Asset Management Results

2007 and 2006 Comparison

Operating income for Institutional Asset Management increased in 2007 compared to 2006 reflecting increased carried interest revenues driven by higher valuations of portfolio investments that are generally associated with improved performance in the equity markets. The increase also reflects a \$398 million gain from the sale of a portion of AIG's investment in Blackstone Group, L.P. in connection with its initial public offering. Also contributing to this increase were higher base management fees driven by higher levels of third-party assets under management. Partially offsetting these increases were the operating losses from warehousing activities. The consolidated warehoused private equity investments are not wholly owned by AIG and thus, a significant portion of the effect of consolidating these operating losses is offset in minority interest, which is not a component of operating income.

AIG's unaffiliated client assets under management, including retail mutual funds and institutional accounts, increased 26 percent to \$94.2 billion at December 31, 2007 compared to December 31, 2006. Additionally, AIG Investments successfully launched several new private equity and real estate funds in 2007, which provide both a base management fee and the opportunity for future incentive fees.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

While unaffiliated client assets under management and the resulting management fees continue to increase, the growth in operating income has trailed the growth in revenues due to the additional costs associated with warehousing activities as well as the costs associated with sales and infrastructure enhancements. The sales and infrastructure enhancements are associated with AIG's planned expansion of marketing and distribution capabilities, combined with technology and operational infrastructure-related improvements.

2006 and 2005 Comparison

Operating income related to Institutional Asset Management increased in 2006 compared to 2005, primarily due to realized gains on real estate transactions as well as increased management fees. AIG's unaffiliated client assets under management, including both retail mutual funds and institutional accounts, increased 21 percent from year-end 2005 to \$75 billion, resulting in higher management fee income. Partially offsetting this growth were lower carried interest on private equity investments, and higher expenses related to the planned expansion of marketing and distribution capabilities, combined with technology and operational infrastructure-related enhancements.

Other Operations

The operating loss of AIG's Other category for the years ended December 31, 2007, 2006 and 2005 was as follows:

<i>(in millions)</i>	2007	2006	2005
Other Operating Income (Loss):			
Equity earnings in partially owned companies	\$ 157	\$ 193	\$ (124)
Interest expense	(1,223)	(859)	(541)
Unallocated corporate expenses*	(560)	(517)	(413)
Compensation expense — SICO Plans	(39)	(108)	(205)
Compensation expense — Starr tender offer	—	(54)	—
Net realized capital gains (losses)	(409)	(37)	269
Regulatory settlement costs	—	—	(1,644)
Other miscellaneous, net	(66)	(53)	(107)
Total Other	\$(2,140)	\$(1,435)	\$(2,765)

* Includes expenses of corporate staff not attributable to specific business segments, expenses related to efforts to improve internal controls, corporate initiatives and certain compensation plan expenses.

2007 and 2006 Comparison

The operating loss of AIG's Other category increased in 2007 compared to 2006 reflecting higher interest expense that resulted

from increased borrowings, higher unallocated corporate expenses and foreign exchange losses on foreign-denominated debt, a portion of which was economically hedged but did not qualify for hedge accounting treatment under FAS 133. In addition, Net realized capital gains (losses) in 2007 included an other-than-temporary impairment charge of \$144 million related to an investment in a partially owned company and foreign exchange losses of \$221 million on unhedged debt.

The operating loss in 2006 for AIG's Other category included an out of period charge of \$61 million related to the SICO Plans and a one-time charge related to the Starr tender offer of \$54 million. For a further discussion of these items, see Note 19 to Consolidated Financial Statements.

In 2007, no compensation cost was recognized, and compensation cost recognized in 2006 was reversed, with respect to awards under the Partners Plan because the performance threshold was not met. The amounts earned under the AIG Partners Plan will be determined by the Compensation Committee in the first quarter of 2008.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers manage their businesses, beginning in 2007, derivative gains and losses and foreign exchange transaction gains and losses for Asset Management and Financial Services entities (other than AIGFP) are now included in Asset Management and Financial Services revenues and operating income. These amounts were previously reported as part of AIG's Other category. Prior period amounts have been revised to conform to the current presentation.

2006 and 2005 Comparison

Operating loss for AIG's Other category declined in 2006 compared to 2005, reflecting the regulatory settlement costs of \$1.6 billion in 2005, as described under Item 3. Legal Proceedings, offset by increased interest expense in 2006 as a result of increased borrowings by the parent holding company and realized capital losses of \$37 million. These declines were partially offset by increased equity earnings in certain partially owned companies.

Capital Resources and Liquidity

At December 31, 2007, AIG had total consolidated shareholders' equity of \$95.8 billion and total consolidated borrowings of \$176.0 billion. At that date, \$67.9 billion of such borrowings were subsidiary borrowings not guaranteed by AIG.

In 2007, AIG issued an aggregate of \$5.6 billion of junior subordinated debentures in five series of securities. Substantially all of the proceeds from these sales, net of expenses, are being used to purchase shares of AIG's common stock. A total of 76,361,209 shares were purchased during 2007.

Borrowings

Total borrowings at December 31, 2007 and 2006 were as follows:

<i>(in millions)</i>	2007	2006
Borrowings issued by AIG:		
Notes and bonds payable	\$ 14,588	\$ 8,915

AIG (Parent Company)

AIG intends to continue its customary practice of issuing debt securities from time to time to meet its financing needs and those of certain of its subsidiaries for general corporate purposes, as well as for the MIP. As of December 31, 2007, AIG had up to \$17.5 billion of debt securities, preferred stock and other securities, and up to \$12.0 billion of common stock, registered and available for issuance under its universal shelf registration statement.

AIG maintains a medium-term note program under its shelf registration statement. As of December 31, 2007, approximately \$7.3 billion principal amount of senior notes were outstanding

under the medium-term note program, of which \$3.2 billion was used for AIG's general corporate purposes, \$873 million was used by AIGFP (referred to as "Series AIGFP" in the preceding tables) and \$3.2 billion was used to fund the MIP. The maturity dates of these notes range from 2008 to 2052. To the extent deemed appropriate, AIG may enter into swap transactions to manage its effective borrowing rates with respect to these notes.

AIG also maintains a Euro medium-term note program under which an aggregate nominal amount of up to \$20.0 billion of senior notes may be outstanding at any one time. As of December 31, 2007, the equivalent of \$12.7 billion of notes were outstanding under the program, of which \$9.8 billion were used to fund the MIP and the remainder was used for AIG's general

corporate purposes. The aggregate amount outstanding includes \$1.1 billion loss resulting from foreign exchange translation into U.S. dollars, of which \$332 million loss relates to notes issued by AIG for general corporate purposes and \$726 million loss relates to notes issued to fund the MIP. AIG has economically hedged the currency exposure arising from its foreign currency denominated notes.

During 2007, AIG issued in Rule 144A offerings an aggregate of \$3.0 billion principal amount of senior notes, of which \$650 million was used to fund the MIP and \$2.3 billion was used for AIG's general corporate purposes.

AIG maintains a shelf registration statement in Japan, providing for the issuance of up to Japanese Yen 300 billion principal amount of senior notes, of which the equivalent of \$450 million was outstanding as of December 31, 2007 and was used for AIG's general corporate purposes. AIG also maintains an Australian dollar debt program under which senior notes with an aggregate principal amount of up to 5 billion Australian dollars may be outstanding at any one time. Although as of December 31, 2007 there were no outstanding notes under the Australian program, AIG intends to use the program opportunistically to fund the MIP or for AIG's general corporate purposes.

During 2007, AIG issued an aggregate of \$5.6 billion of junior subordinated debentures in five series of securities. Substantially all of the proceeds from these sales, net of expenses, are being used to repurchase shares of AIG's common stock. In connection with each series of junior subordinated debentures, AIG entered into a Replacement Capital Covenant (RCC) for the benefit of the holders of AIG's 6.25 percent senior notes due 2036. The RCCs provide that AIG will not repay, redeem, or purchase the applicable series of junior subordinated debentures on or before a specified date, unless AIG has received qualifying proceeds from the sale of replacement capital securities.

In October 2007, AIG borrowed a total of \$500 million on an unsecured basis pursuant to a loan agreement with a third-party bank. The entire amount of the loan remained outstanding at December 31, 2007 and matures in October 2008.

AIG began applying hedge accounting for certain AIG parent transactions in the first quarter of 2007.

AIGFP

AIGFP uses the proceeds from the issuance of notes and bonds and GIA borrowings, as well as the issuance of Series AIGFP notes by AIG, to invest in a diversified portfolio of securities and derivative transactions. The borrowings may also be temporarily invested in securities purchased under agreements to resell. AIGFP's notes and bonds include structured debt instruments whose payment terms are linked to one or more financial or other indices (such as an equity index or commodity index or another measure that is not considered to be clearly and closely related to the debt instrument). These notes contain embedded derivatives that otherwise would be required to be accounted for separately under FAS 133. Upon AIG's early adoption of FAS 155, AIGFP elected the fair value option for these notes. The notes that are accounted for using the fair value option are reported separately under hybrid financial instrument liabilities. AIG guarantees the

obligations of AIGFP under AIGFP's notes and bonds and GIA borrowings. See Liquidity herein and Note 8 to Consolidated Financial Statements.

AIGFP has a Euro medium-term note program under which an aggregate nominal amount of up to \$20.0 billion of notes may be outstanding at any one time. As of December 31, 2007, \$6.2 billion of notes were outstanding under the program. The notes issued under this program are guaranteed by AIG and are included in AIGFP's notes and bonds payable in the table of total borrowings.

AIG Funding

AIG Funding, Inc. (AIG Funding) issues commercial paper that is guaranteed by AIG in order to help fulfill the short-term cash requirements of AIG and its subsidiaries. The issuance of AIG Funding's commercial paper, including the guarantee by AIG, is subject to the approval of AIG's Board of Directors or the Finance Committee of the Board if it exceeds certain pre-approved limits.

As backup for the commercial paper program and for other general corporate purposes, AIG and AIG Funding maintain revolving credit facilities, which, as of December 31, 2007, had an aggregate of \$9.3 billion available to be drawn and which are summarized below under Revolving Credit Facilities.

ILFC

ILFC fulfills its short-term cash requirements through operating cash flows and the issuance of commercial paper. The issuance of commercial paper is subject to the approval of ILFC's Board of Directors and is not guaranteed by AIG. ILFC maintains syndicated revolving credit facilities which, as of December 31, 2007, totaled \$6.5 billion and which are summarized below under Revolving Credit Facilities. These facilities are used as back up for ILFC's maturing debt and other obligations.

As a well-known seasoned issuer, ILFC has filed an automatic shelf registration statement with the SEC allowing ILFC immediate access to the U.S. public debt markets. At December 31, 2007, \$4.7 billion of debt securities had been issued under this registration statement and \$5.9 billion had been issued under a prior registration statement. In addition, ILFC has a Euro medium-term note program for \$7.0 billion, under which \$3.8 billion in notes were outstanding at December 31, 2007. Notes issued under the Euro medium-term note program are included in ILFC notes and bonds payable in the preceding table of borrowings. The cumulative foreign exchange adjustment loss for the foreign currency denominated debt resulting from the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133 was \$969 million at December 31, 2007 and \$733 million at December 31, 2006. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging the portion of the note exposure not already offset by Euro-denominated operating lease payments.

ILFC had a \$4.3 billion Export Credit Facility for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At December 31, 2007, ILFC had \$664 million outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured Export Credit Facility for up to a maximum of \$2.6 billion for Airbus aircraft to be delivered through May 31, 2005. The facility was subsequently increased to \$3.6 billion and extended to include aircraft to be delivered through May 31, 2008. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a nine-month forward-looking calendar, and the interest rate is determined through a bid process. At December 31, 2007, ILFC had \$1.9 billion outstanding under this facility. Borrowings with respect to these facilities are included in ILFC's notes and bonds payable in the preceding table of borrowings. The debt is collateralized by a pledge of shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

From time to time, ILFC enters into funded financing agreements. As of December 31, 2007, ILFC had a total of \$1.1 billion outstanding, which has varying maturities through February 2012. The interest rates are LIBOR-based, with spreads ranging from 0.30 percent to 1.625 percent.

The proceeds of ILFC's debt financing are primarily used to purchase flight equipment, including progress payments during the construction phase. The primary sources for the repayment of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. AIG does not guarantee the debt obligations of ILFC. See also Liquidity herein.

AGF

AGF fulfills most of its short-term cash borrowing requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of AGF's Board of Directors and is not guaranteed by AIG. AGF maintains committed syndicated revolving credit facilities which, as of December 31, 2007, totaled \$4.8 billion and which are summarized below under Revolving Credit Facilities. The facilities can be used for general

corporate purposes and to provide backup for AGF's commercial paper programs.

In January 2007, AGF issued junior subordinated debentures in an aggregate principal amount of \$350 million that mature in January 2067. The debentures underlie a series of trust preferred securities sold by a trust sponsored by AGF in a Rule 144A/Regulation S offering. AGF can redeem the debentures at par beginning in January 2017.

As of December 31, 2007, notes and bonds aggregating \$22.4 billion were outstanding with maturity dates ranging from 2008 to 2031 at interest rates ranging from 1.94 percent to 8.45 percent. To the extent deemed appropriate, AGF may enter into swap transactions to manage its effective borrowing rates with respect to these notes and bonds. As a well-known seasoned issuer, AGF filed an automatic shelf registration statement with the SEC allowing AGF immediate access to the U.S. public debt markets. At December 31, 2007, AGF had remaining corporate authorization to issue up to \$8.1 billion of debt securities under its shelf registration statements.

AGF's funding sources include a medium-term note program, private placement debt, retail note issuances, bank financing and securitizations of finance receivables that AGF accounts for as on-balance-sheet secured financings. In addition, AGF has become an established issuer of long-term debt in the international capital markets.

In addition to debt refinancing activities, proceeds from the collection of finance receivables are used to fund cash needs including the payment of principal and interest on AGF's debt. AIG does not guarantee any of the debt obligations of AGF. See also Liquidity.

AIGCFG

AIGCFG has a variety of funding mechanisms for its various markets, including retail and wholesale deposits, short and long-term bank loans, securitizations and intercompany subordinated debt. AIG Credit Card Company (Taiwan), a consumer finance business in Taiwan, and AIG Retail Bank PLC, a full service consumer bank in Thailand, have issued commercial paper for the funding of their respective operations. AIG does not guarantee any borrowings for AIGCFG businesses, including this commercial paper.

Revolving Credit Facilities

AIG, ILFC and AGF maintain committed, unsecured revolving credit facilities listed on the table below in order to support their respective commercial paper programs and for general corporate purposes. AIG, ILFC and AGF expect to replace or extend these As of December 31, 2007 (in millions)

credit facilities on or prior to their expiration. Some of the facilities, as noted below, contain a "term-out option" allowing for the conversion by the borrower of any outstanding loans at expiration into one-year term loans.

Facility	Size	Borrower(s)	Available Amount	Expiration	One-Year Term-Out Option
AIG:					
364-Day Syndicated Facility	\$2,125	AIG/AIG Funding ^(a)	\$ 2,125	July 2008	Yes

(a) Guaranteed by AIG.

(b) This facility can be drawn in the form of loans or letters of credit. All drawn amounts shown above are in the form of letters of credit.

(c) Subsidiaries of AIG are the lenders on this facility.

(d) American General Finance, Inc. is an eligible borrower for up to \$400 million only.

Credit Ratings

The cost and availability of unsecured financing for AIG and its subsidiaries are generally dependent on their short- and long-term debt ratings. The following table presents the credit ratings of AIG and certain of its subsidiaries as of February 15, 2008. In parentheses, following the initial occurrence in the table of each rating, is an indication of that rating's relative rank within the agency's rating categories. That ranking refers only to the generic or major rating category and not to the modifiers appended to the rating by the rating agencies to denote relative position within such generic or major category.

	Short-term Debt			Senior Long-term Debt		
	Moody's	S&P	Fitch	Moody's ^(a)	S&P ^(b)	Fitch ^(c)
AIG	P-1 (1st of 3)	A-1+ (1st of 6)	F1+ (1st of 5)	Aa2 ^(e) (2nd of 9)	AA (2nd of 8) ^(f)	AA (2nd of 9) ^(h)
AIG Financial Products Corp. ^(d)	P-1	A-1+	—	Aa2 ^(e)	AA ^(f)	—
AIG Funding, Inc. ^(d)	P-1	A-1+	F1+	—	—	—
ILFC	P-1	A-1+	F1 (1st of 5)	A1 (3rd of 9)	AA- (2nd of 8) ^(g)	A+ (3rd of 9) ^(h)
American General Finance Corporation	P-1	A-1 (1st of 6)	F1	A1	A+ (3rd of 8)	A+ ^(h)
American General Finance, Inc.	P-1	A-1	F1	—	—	A+ ^(h)

(a) Moody's Investors Service (Moody's) appends numerical modifiers 1, 2 and 3 to the generic rating categories to show relative position within rating categories.

(b) Standard & Poor's, a division of the McGraw-Hill Companies (S&P) ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(c) Fitch Ratings (Fitch) ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(d) AIG guarantees all obligations of AIG Financial Products Corp. and AIG Funding, Inc.

(e) Negative rating outlook on Senior Unsecured Debt Ratings. A negative outlook by Moody's indicates that a rating may be lowered but is not necessarily a precursor of a ratings change.

(f) Negative rating outlook on Counterparty Credit Ratings. A negative outlook by S&P indicates that a rating may be lowered but is not necessarily a precursor of a ratings change.

(g) Negative rating outlook on Corporate Credit Rating. A negative outlook by S&P indicates that a rating may be lowered but is not necessarily a precursor of a ratings change.

(h) Issuer Default and Senior Unsecured Debt Ratings on Rating Watch Negative. Rating Watch Negative indicates that a rating has been placed on active rating watch status.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

These credit ratings are current opinions of the rating agencies. As such, they may be changed, suspended or withdrawn at any time by the rating agencies as a result of changes in, or unavailability of, information or based on other circumstances. Ratings may also be withdrawn at AIG management's request. This discussion of ratings is not a complete list of ratings of AIG and its subsidiaries.

"Ratings triggers" have been defined by one independent rating agency to include clauses or agreements the outcome of which depends upon the level of ratings maintained by one or more rating agencies. "Ratings triggers" generally relate to events which (i) could result in the termination or limitation of credit availability, or require accelerated repayment, (ii) could result in the termination of business contracts or (iii) could require a company to post collateral for the benefit of counterparties.

AIG believes that any of its own or its subsidiaries' contractual obligations that are subject to "ratings triggers" or financial covenants relating to "ratings triggers" would not have a material adverse effect on its financial condition or liquidity. Ratings

downgrades could also trigger the application of termination provisions in certain of AIG's contracts, principally agreements entered into by AIGFP and assumed reinsurance contracts entered into by Transatlantic.

It is estimated that, as of the close of business on February 14, 2008, based on AIGFP's outstanding municipal GIAs and financial derivatives transactions as of such date, a downgrade of AIG's long-term senior debt ratings to 'Aa3' by Moody's or 'AA - ' by S&P would permit counterparties to call for approximately \$1.39 billion of collateral. Further, additional downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIGFP manages its liquidity. The actual amount of additional collateral that AIGFP would be required to post to counterparties in the event of such downgrades depends on market conditions, the fair value of the outstanding affected transactions and other factors prevailing at the time of the downgrade. Additional obligations to post collateral would increase the demand on AIGFP's liquidity.

Contractual Obligations**Contractual obligations in total, and by remaining maturity at December 31, 2007 were as follows:**

(in millions)	Total Payments	Payments due by Period			
		Less Than One Year	1-3 Years	3'-5 Years	Over Five Years
Borrowings ^(a)	\$ 156,014	\$ 43,891	\$ 32,261	\$ 26,032	\$ 53,830
Interest payments on borrowings	83,551	5,326	8,899	7,073	62,253
Loss reserves ^(b)	85,500	23,513	26,078	12,397	23,512
Insurance and investment contract liabilities ^(c)	645,583	32,359	42,768	42,282	528,174
GIC liabilities ^(d)	29,797	9,266	8,052	3,458	9,021
Aircraft purchase commitments	20,104	4,174	3,852	2,095	9,983

Other purchase obligations ^(e)	1,091	1,056	35	—	—
Total^(f)	\$1,026,066	\$120,332	\$122,986	\$ 94,030	\$688,718

(a) Excludes commercial paper and borrowings incurred by consolidated investments and includes hybrid financial instrument liabilities recorded at fair value.

(b) Represents future loss and loss adjustment expense payments estimated based on historical loss development payment patterns. Due to the significance of the assumptions used, the periodic amounts presented could be materially different from actual required payments.

(c) Insurance and investment contract liabilities include various investment-type products with contractually scheduled maturities, including periodic payments of a term certain nature. Insurance and investment contract liabilities also include benefit and claim liabilities, of which a significant portion represents policies and contracts that do not have stated contractual maturity dates and may not result in any future payment obligations. For these policies and contracts (i) AIG is currently not making payments until the occurrence of an insurable event, such as death or disability, (ii) payments are conditional on survivorship, or (iii) payment may occur due to a surrender or other non-scheduled event out of AIG's control. AIG has made significant assumptions to determine the estimated undiscounted cash flows of these contractual policy benefits, which assumptions include mortality, morbidity, future lapse rates, expenses, investment returns and interest crediting rates, offset by expected future deposits and premium on in-force policies. Due to the significance of the assumptions used, the periodic amounts presented could be materially different from actual required payments. The amounts presented in this table are undiscounted and therefore exceed the future policy benefits and policyholder contract deposits included in the balance sheet.

(d) Represents guaranteed maturities under GICs.

(e) Includes a \$1.0 billion commitment to purchase shares under AIG's share repurchase program which was paid in January 2008 and options to acquire aircraft.

(f) Does not reflect unrecognized tax benefits of \$1.3 billion, the timing of which is uncertain. However, it is reasonably possible that \$50 million to \$150 million may become payable during 2008. See Note 21 to Consolidated Financial Statements for a discussion on unrecognized tax benefits.

Off Balance Sheet Arrangements and Commercial Commitments**Off Balance Sheet Arrangements and Commercial Commitments in total, and by remaining maturity at December 31, 2007 were as follows:**

(in millions)	Total Amounts Committed	Amount of Commitment Expiration			
		Less Than One Year	1-3 Years	3'-5 Years	Over Five Years
Guarantees:					
Liquidity facilities ^(a)	\$ 2,495	\$ 8	\$ 8	\$ 1,503	\$ 976

Letters of credit	1,196	910	6	121	159
Investment protection agreements ^(d)	11,991	3,088	2,094	855	5,954
Maturity shortening puts ^(e)	2,333	1,234	1,099	—	—
Other commercial commitments	1,269	114	111	83	961
Total^(f)	\$ 33,971	\$ 11,217	\$ 7,646	\$ 5,057	\$ 10,051

(a) Primarily liquidity facilities provided in connection with certain municipal swap transactions and collateralized bond obligations.

(b) Primarily AIG SunAmerica construction guarantees connected to affordable housing investments.

(c) Includes commitments to invest in limited partnerships, private equity, hedge funds and mutual funds and commitments to purchase and develop real estate in the United States and abroad.

(d) Written generally with respect to investments in hedge funds and funds of hedge funds.

(e) Represents obligations under 2a-7 Puts to purchase certain multi-sector CDOs at pre-determined contractual prices.

(f) Excludes commitments with respect to pension plans. The annual pension contribution for 2008 is expected to be approximately \$118 million for U.S. and non-U.S. plans.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Arrangements with Variable Interest Entities

AIG enters into various off-balance-sheet (unconsolidated) arrangements with variable interest entities (VIEs) in the normal course of business. AIG's involvement with VIEs ranges from being a passive investor to designing and structuring, warehousing and managing the collateral of VIEs. AIG engages in transactions with VIEs as part of its investment activities to obtain funding and to facilitate client needs. AIG purchases debt securities (rated and unrated) and equity interests issued by VIEs, makes loans and provides other credit support to VIEs, enters into insurance, reinsurance and derivative transactions and leasing arrangements with VIEs, and acts as the warehouse agent and collateral manager for VIEs.

Under FIN 46(R), AIG consolidates a VIE when it is the primary beneficiary of the entity. The primary beneficiary is the party that either (i) absorbs a majority of the VIE's expected losses;

(ii) receives a majority of the VIE's expected residual returns; or (iii) both. For a further discussion of AIG's involvement with VIEs, see Note 7 of Notes to Consolidated Financial Statements.

A significant portion of AIG's overall exposure to VIEs results from AIG Investment's real estate and investment funds.

In certain instances, AIG Investments acts as the collateral manager or general partner of an investment fund, private equity fund or hedge fund. Such entities are typically registered investment companies or qualify for the specialized investment company accounting in accordance with the AICPA Investment Company Audit and Accounting Guide. For investment partnerships, hedge funds and private equity funds, AIG acts as the general partner or manager of the fund and is responsible for carrying out the investment mandate of the VIE. Often, AIG's insurance operations participate in these AIG managed structures as a passive investor in the debt or equity issued by the VIE. Typically, AIG does not provide any guarantees to the investors in the VIE.

The following table summarizes, by investment activity, AIG's involvement with VIEs. Maximum exposure to loss, as detailed in the table below, is considered to be the notional amount of credit lines, guarantees and other credit support, and liquidity facilities, notional amounts of credit default swaps and certain total return swaps, and the amount invested in the debt or equity issued by the VIEs.

(As of December 31,)	Primary Beneficiary		Significant Variable Interest Holder*	
	Total Assets	2006	Total Assets	Maximum Exposure to Loss
(in billions)	2007	2006	2007	2007
Description				
Real estate and investment funds	\$21.7	\$6.1	\$139.0	\$18.5
Tax planning VIEs	0.5	1.4	12.1	6.3
CLOs/CDOs/CBOs	0.4	—	107.8	9.7
Affordable housing partnerships	2.7	—	0.9	0.9
Other	1.7	1.6	15.3	9.2
Total	\$27.0	\$9.1	\$275.1	\$44.6

* Includes \$2.4 billion of assets held in an unconsolidated SIV sponsored by AIGFP in 2007. As of December 31, 2007, AIGFP's invested assets included \$1.7 billion of securities purchased under agreements to resell, commercial paper and medium-term and capital notes issued by this entity.

Following is additional information concerning AIG's involvement with collateralized debt obligations and its structured investment vehicle.

Collateralized Debt Obligations

In the normal course of its asset management operations, AIG manages or sponsors CDOs which issue debt and equity interests sold to third party investors. AIG's subsidiaries also invest in the debt and equity securities issued by these CDOs as part of their normal investment activities. AIG also invests in and manages CDOs sponsored by third parties, warehouses assets prior to the establishment of and sale of the warehoused assets to a CDO, enters into derivative contracts with CDOs, including credit default swaps, and acts as an asset manager to CDOs.

Categories of assets owned by these CDOs include residential and commercial mortgage and other asset-backed securities, corporate loans, high-yield and high-grade loans and bonds, and

credit default contracts, among other assets, that have ratings ranging from AAA to unrated. AIGFP's portfolio of multi-sector CDOs and, to a lesser extent, certain AIG insurance subsidiaries' direct investments in CDOs, have experienced some downgrades within their asset portfolios. AIG does not expect that it will have to consolidate any of these structures.

These CDOs typically are funded with commercial paper, medium and long-term financing and equity with ratings that range from AAA to unrated. AIG has no obligation to purchase, and has not purchased, any commercial paper issued by these CDOs or provided any support to these CDOs in obtaining financing, and does not intend to do so. However, AIGFP has written the 2a-7 Puts which are included as part of its multi-sector credit default swap portfolio. Under the terms of these securities the holders are permitted or required, in certain circumstances, on a regular basis to tender their securities to the issuers at par. If an issuer's remarketing agent is unable to resell

the securities so tendered within the maximum interest rate spread range specified in the terms of the securities, AIGFP must purchase the securities at par as long as the securities have not experienced a default. During 2007, AIGFP purchased securities with a principal amount of approximately \$754 million in connection with these obligations. In respect of certain of the 2a-7 Puts, AIGFP has contracted with third parties to provide liquidity for the securities if they are put to AIGFP for up to a three-year period. Such liquidity facilities totaled approximately \$3 billion at December 31, 2007. As of February 26, 2008, AIGFP has not utilized these liquidity facilities. At December 31, 2007, AIGFP had approximately \$6.5 billion of notional exposure on these 2a-7 Puts.

Structured Investment Vehicle

AIGFP sponsors one unconsolidated SIV that invests in variable rate, investment-grade debt securities with a weighted average remaining life of four years at December 31, 2007. Assets of the SIV totaled \$2.4 billion at December 31, 2007. Approximately \$31.9 million of these assets have been downgraded one notch from Aa3/AA- to A1/A+ by Moody's and S&P, respectively, since the purchase of these assets by the SIV. The SIV funds its assets by issuing secured financing, commercial paper, and medium-term notes that had a weighted-average remaining life of less than six months at December 31, 2007. The mismatch between the weighted average remaining life of the SIV's assets and liabilities has been removed through the funding support from AIGFP described in the next paragraph. The SIV also issued approximately \$300 million of capital notes originally rated Baa2 and BBB by Moody's and S&P, respectively, and subsequently downgraded in 2007 to B3 and BB- (credit watch negative), respectively, of which AIGFP owns 12 percent.

At December 31, 2007, AIGFP had \$1.7 billion of balance sheet exposure to this SIV representing investments in securities purchased under agreements to resell, commercial paper, and medium-term and capital notes. During the credit market disruptions during the last half of 2007, the SIV experienced difficulty attracting purchasers for its commercial paper and medium-term notes. In January 2008, AIGFP agreed to provide funding support to the SIV, as necessary, to allow the SIV to redeem its commercial paper and medium-term notes as they become due. Moody's affirmed the SIV's senior debt ratings of Aaa. S&P affirmed the SIV's long term issuer credit rating of AAA with a negative outlook and downgraded its capital notes from BB- to CCC- and this rating remains on credit watch negative. AIG does not believe its management of, and current or future investments in, the SIV could have any effect on AIG's debt ratings under any circumstances.

Shareholders' Equity

The changes in AIG's consolidated shareholders' equity during 2007 and 2006 follows:

<i>(in millions)</i>	2007	2006
Beginning of year	\$101,677	\$ 86,317
Net income	6,200	14,048
Unrealized appreciation (depreciation) of investments, net of tax	(5,708)	1,735
Cumulative translation adjustment, net of tax	1,185	936
Dividends to shareholders	(1,964)	(1,690)
Payments advanced to purchase shares, net	(912)	—
Share purchases	(5,104)	—
Other*	427	331
End of year	\$ 95,801	\$101,677

* Reflects the effects of employee stock transactions and cumulative effect of accounting changes.

As indicated in the table above, a significant portion of the 2007 decrease in AIG's consolidated equity during 2007 was the result of share purchases, substantially all of which were funded from the issuance of hybrid debt securities. The effect of these transactions was to replace high cost equity securities (common stock) with cost efficient hybrid securities, a substantial portion of which is treated as equity capital for the purpose of rating agency leverage calculations.

AIG has in the past reinvested most of its unrestricted earnings in its operations and believes such continued reinvestment in the future will be adequate to meet any foreseeable capital needs. However, AIG may choose from time to time to raise additional funds through the issuance of additional securities.

In February 2007, AIG's Board of Directors adopted a new dividend policy, which took effect with the dividend declared in the second quarter of 2007, providing that under ordinary circumstances, AIG's plan will be to increase its common stock dividend by approximately 20 percent annually. The payment of any dividend, however, is at the discretion of AIG's Board of Directors, and the future payment of dividends will depend on various factors, including the performance of AIG's businesses, AIG's consolidated financial position, results of operations and liquidity and the existence of investment opportunities.

Share Repurchases

From time to time, AIG may buy shares of its common stock for general corporate purposes, including to satisfy its obligations under various employee benefit plans. In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the purchase of shares with an aggregate purchase price of \$8 billion. In November 2007, AIG's Board of Directors authorized the purchase of an additional \$8 billion in common stock. From March through December 31, 2007, AIG entered into structured share repurchase arrangements providing for the purchase of shares over time with an aggregate purchase price of

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

\$7 billion, including a \$1.0 billion commitment entered into in December 2007 but not funded until January 2008.

A total of 76,361,209 shares were purchased during 2007. The portion of the payments advanced by AIG under the structured share repurchase arrangements that had not yet been utilized to repurchase shares at December 31, 2007, amounting to \$912 million, has been recorded as a component of shareholders' equity under the caption, Payments advanced to purchase shares. Purchases have continued subsequent to December 31, 2007, with an additional 12,196,187 shares purchased from January 1 through February 15, 2008. All shares purchased are recorded as treasury stock at cost.

At February 15, 2008, \$10.25 billion was available for purchases under the aggregate authorization. AIG does not expect to purchase additional shares under its share repurchase program for the foreseeable future, other than to meet commitments that existed at December 31, 2007.

Dividends from Insurance Subsidiaries

Payments of dividends to AIG by its insurance subsidiaries are subject to certain restrictions imposed by regulatory authorities. With respect to AIG's domestic insurance subsidiaries, the payment of any dividend requires formal notice to the insurance department in which the particular insurance subsidiary is domiciled. Under the laws of many states, an insurer may pay a dividend without prior approval of the insurance regulator when the amount of the dividend is below certain regulatory thresholds. Other foreign jurisdictions, notably Bermuda, Japan, Hong Kong, Taiwan, the U.K., Thailand and Singapore, may restrict the ability of AIG's foreign insurance subsidiaries to pay dividends. Largely as a result of these restrictions, approximately 81 percent of the aggregate equity of AIG's consolidated subsidiaries was restricted from immediate transfer to AIG parent at December 31, 2007. See Regulation and Supervision herein. AIG cannot predict how recent regulatory investigations may affect the ability of its regulated subsidiaries to pay dividends. To AIG's knowledge, no AIG company is currently on any regulatory or similar "watch list" with regard to solvency. See also Liquidity herein, Note 12 to Consolidated Financial Statements and Item 1A. Risk Factors — Liquidity.

Regulation and Supervision

AIG's insurance subsidiaries, in common with other insurers, are subject to regulation and supervision by the states and jurisdictions in which they do business. In the United States, the NAIC has developed Risk-Based Capital (RBC) requirements. RBC relates an individual insurance company's statutory surplus to the risk inherent in its overall operations.

AIG's insurance subsidiaries file financial statements prepared in accordance with statutory accounting practices prescribed or permitted by domestic and foreign insurance regulatory authorities. The principal differences between statutory financial statements and financial statements prepared in accordance with U.S. GAAP for domestic companies are that statutory financial statements do not reflect DAC, some bond portfolios may be

carried at amortized cost, assets and liabilities are presented net of reinsurance, policyholder liabilities are valued using more conservative assumptions and certain assets are non-admitted.

In connection with the filing of the 2005 statutory financial statements for AIG's Domestic General Insurance companies, AIG agreed with the relevant state insurance regulators on the statutory accounting treatment of various items. The regulatory authorities have also permitted certain of the domestic and foreign insurance subsidiaries to support the carrying value of their investments in certain non-insurance and foreign insurance subsidiaries by utilizing the AIG audited consolidated financial statements to satisfy the requirement that the U.S. GAAP-basis equity of such entities be audited. In addition, the regulatory authorities have permitted the Domestic General Insurance companies to utilize audited financial statements prepared on a basis of accounting other than U.S. GAAP to value investments in joint ventures, limited partnerships and hedge funds. AIG has received similar permitted practices authorizations from insurance regulatory authorities in connection with the 2007 and 2006 statutory financial statements. These permitted practices did not affect the Domestic General Insurance companies' compliance with minimum regulatory capital requirements.

Statutory capital of each company continued to exceed minimum company action level requirements following the adjustments, but AIG nonetheless contributed an additional \$750 million of capital into American Home effective September 30, 2005 and contributed a further \$2.25 billion of capital in February 2006 for a total of approximately \$3 billion of capital into Domestic General Insurance subsidiaries effective December 31, 2005. To enhance their current capital positions, AIG suspended dividends from the DBG companies from the fourth quarter 2005 through 2006, dividend payments resumed in the first quarter of 2007. AIG believes it has the capital resources and liquidity to fund any necessary statutory capital contributions.

As discussed under Item 3. Legal Proceedings, various regulators have commenced investigations into certain insurance business practices. In addition, the OTS and other regulators routinely conduct examinations of AIG and its subsidiaries, including AIG's consumer finance operations. AIG cannot predict the ultimate effect that these investigations and examinations, or any additional regulation arising therefrom, might have on its business. Federal, state or local legislation may affect AIG's ability to operate and expand its various financial services businesses, and changes in the current laws, regulations or interpretations thereof may have a material adverse effect on these businesses.

AIG's U.S. operations are negatively affected under guarantee fund assessment laws which exist in most states. As a result of operating in a state which has guarantee fund assessment laws, a solvent insurance company may be assessed for certain obligations arising from the insolvencies of other insurance companies which operated in that state. AIG generally records these assessments upon notice. Additionally, certain states permit at least a portion of the assessed amount to be used as a credit against a company's future premium tax liabilities. Therefore, the ultimate net assessment cannot reasonably be estimated. The guarantee fund assessments net of credits recognized

in 2007, 2006 and 2005, respectively, were \$87 million, \$97 million and \$124 million.

AIG is also required to participate in various involuntary pools (principally workers compensation business) which provide insurance coverage for those not able to obtain such coverage in the voluntary markets. This participation is also recorded upon notification, as these amounts cannot reasonably be estimated.

A substantial portion of AIG's General Insurance business and a majority of its Life Insurance & Retirement Services business are conducted in foreign countries. The degree of regulation and supervision in foreign jurisdictions varies. Generally, AIG, as well as the underwriting companies operating in such jurisdictions, must satisfy local regulatory requirements. Licenses issued by foreign authorities to AIG subsidiaries are subject to modification and revocation. Thus, AIG's insurance subsidiaries could be prevented from conducting future business in certain of the jurisdictions where they currently operate. AIG's international operations include operations in various developing nations. Both current and future foreign operations could be adversely affected by unfavorable political developments up to and including nationalization of AIG's operations without compensation. Adverse effects resulting from any one country may affect AIG's results of operations, liquidity and financial condition depending on the magnitude of the event and AIG's net financial exposure at that time in that country.

Foreign insurance operations are individually subject to local solvency margin requirements that require maintenance of adequate capitalization, which AIG complies with by country. In addition, certain foreign locations, notably Japan, have established regulations that can result in guarantee fund assessments. These have not had a material effect on AIG's financial condition or results of operations.

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At December 31, 2007, AIG's consolidated invested assets included \$65.6 billion in cash and short-term investments. Consolidated net cash provided from operating activities in 2007 amounted to \$35.2 billion. At both the subsidiary and parent company level, liquidity management activities are intended to preserve and enhance funding stability, flexibility, and diversity through a wide range of potential operating environments and market conditions.

As a result of market disruption in the credit markets, AIG took steps to enhance the liquidity of its portfolios. Cash and short-term investments increased in all of AIG's major operating segments. In addition, AIG created an interdisciplinary Liquidity Risk Committee to measure, monitor, control and aggregate liquidity risks across AIG. While this Committee's responsibilities are broad, the Committee's initial focus is on portfolios with shorter-term contractual liabilities, such as securities lending in the United States and retail deposit-like products in the United Kingdom.

Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to

meet its anticipated cash requirements, including the funding of increased dividends under AIG's current dividend policy. See also Item 1A. Risk Factors — Liquidity and Risk Management herein.

Insurance Operations

Insurance operating cash flow is derived from two sources, underwriting operations and investment operations. Cash flow from underwriting operations includes collections of periodic premiums and policyholders' contract deposits, and paid loss recoveries, less reinsurance premiums, losses, benefits, and acquisition and operating expenses. Generally, there is a time lag from when premiums are collected and losses and benefits are paid. Investment cash flow is primarily derived from interest and dividends received and includes realized capital gains net of realized capital losses.

Liquid assets include cash and short-term investments, fixed maturities that are not designated as held to maturity, and publicly traded equity securities. At December 31, 2007 and 2006, AIG's insurance operations had liquid assets of \$476.1 billion and \$428.4 billion, respectively. The portion of liquid assets comprised of cash and short-term investments was \$45.5 billion and \$19.9 billion at December 31, 2007 and 2006, respectively. At December 31, 2007, \$380.9 billion, or 95 percent of the fixed maturity investments that were not designated as held to maturity in AIG's insurance company general account portfolios were rated investment grade. Given the size and liquidity profile of AIG's investment portfolios, AIG believes that deviations from its projected claim experience do not constitute a significant liquidity risk. AIG's asset/liability management process takes into account the expected maturity of investments and expected benefit payments and policy surrenders as well as the specific nature and risk profile of these liabilities. Historically, there has been no significant variation between the expected maturities of AIG's investments and the payment of claims.

See also Operating Review — General Insurance Operations — General Insurance Net Investment Income and Life Insurance & Retirement Services Operations — Life Insurance & Retirement Services Net Investment Income and Realized Capital Gains (Losses) herein.

General Insurance

General Insurance operating cash flow is derived from underwriting and investment activities. With respect to General Insurance operations, if paid losses accelerated beyond AIG's ability to fund such paid losses from current operating cash flows, AIG might need to liquidate a portion of its General Insurance investment portfolio and/or arrange for financing. A liquidity strain could result from the occurrence of several significant catastrophic events in a relatively short period of time. Additional strain on liquidity could occur if the investments liquidated to fund such paid losses were sold into a depressed market place and/or reinsurance recoverable on such paid losses became uncollectible or collateral supporting such reinsurance recoverable significantly decreased in value.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Life Insurance & Retirement Services

Life Insurance & Retirement Services operating cash flow is derived from underwriting and investment activities. If a substantial portion of the Life Insurance & Retirement Services operations bond portfolio diminished significantly in value and/or defaulted, AIG might need to liquidate other portions of its Life Insurance & Retirement Services investment portfolio and/or arrange financing. Possible events causing such a liquidity strain could include economic collapse of a nation or region in which Life Insurance & Retirement Services operations exist, nationalization, catastrophic terrorist acts, or other economic or political upheaval. In addition, a significant rise in interest rates in a particular region or regions leading to a major increase in policyholder surrenders could also create a liquidity strain.

Financial Services

AIG's major Financial Services operating subsidiaries consist of AIGFP, ILFC, AGF and AIGCFG. Sources of funds considered in meeting the liquidity needs of AIGFP's operations include GIAs, issuance of long- and short-term debt, proceeds from maturities, sales of securities available for sale and securities and spot commodities leased or sold under repurchase agreements. ILFC, AGF and AIGCFG utilize the commercial paper markets, bank loans and bank credit facilities as sources of liquidity. ILFC and AGF also fund in the domestic and international capital markets without reliance on any guarantee from AIG. An additional source of liquidity for ILFC is the use of export credit facilities. AIGCFG also uses wholesale and retail bank deposits as sources of funds. On occasion, AIG has provided equity capital to ILFC, AGF and AIGCFG and provides intercompany loans to AIGCFG.

Financial Services liquidity could be impaired by an inability to access the capital markets or by collateral calls. The credit default swaps written by AIGFP on super senior tranches of multi-sector CDOs require, in most cases, physical settlement following an event constituting a failure to pay in respect of the underlying super senior CDO securities. The majority of the other credit default swaps are cash settled, whereby AIGFP would be required upon an event constituting a failure to pay in respect of the underlying super senior CDO securities to make cash payments to the counterparty equal to any actual losses that attach to the super senior risk layer, rather than to purchase the reference obligation. Additionally, certain of the credit default swaps are subject to collateral call provisions. In the case of such swaps written on CDOs, the amount of the collateral to be posted is determined based on the value of the CDO securities referenced in the documentation for the credit default swaps.

Asset Management

Asset Management's sources of funds include cash flows from investment management fees, carried interest and returns on various investments. These investments are financed through the issuance of AIG debt in the MIP, the issuance of GICs and funding from AIG. From time to time, AIG Investments utilizes temporary debt funding from AIG primarily to acquire warehoused investments. Subsequent to the initial investment, there are generally

no liquidity demands with respect to these warehoused investments. To the extent adverse market conditions prevent AIG Investments from transferring or otherwise divesting these warehoused investments, repayment of the temporary equity funding provided by AIG would be delayed until the investment is transferred or otherwise divested.

AIG Investments incurs expenses associated with cash outflows from the operation of its business, including costs related to portfolio management and related back and middle office costs. In addition, cash is used in association with investment warehousing activities wherein AIG Investments funds and temporarily holds an investment until transferred, sold or otherwise divested.

Cash needs for the Spread-Based Investment business are principally the result of GIC maturities. Significant blocks of the GIC portfolio will mature over the next five years. AIG utilizes asset liability matching to control liquidity risks associated with this business. In addition, AIG believes that its products incorporate certain restrictions which encourage persistency, limiting the magnitude of unforeseen early surrenders in the GIC portfolio.

Liquidity for Asset Management operations can be affected by significant credit or geopolitical events that might cause a delay in fund closings, securitizations or an inability of AIG's clients to fund their capital commitments.

AIG (Parent Company)

The liquidity of the parent company is principally derived from its subsidiaries. The primary sources of cash flow are dividends and other payments from its regulated and unregulated subsidiaries, as well as issuance of debt securities. Primary uses of cash flow are for debt service, subsidiary funding, shareholder dividend payments and common stock repurchases. In 2007, AIG parent collected \$4.9 billion in dividends and other payments from subsidiaries (primarily from insurance company subsidiaries), issued \$11.7 billion of debt and retired \$865 million of debt, excluding MIP and Series AIGFP debt. AIG parent also advanced \$6 billion for structured share repurchase arrangements. Excluding MIP and Series AIGFP debt, AIG parent made interest payments totaling \$550 million, made \$5.90 billion in capital contributions to subsidiaries, and paid \$1.93 billion in dividends to shareholders in 2007. In February 2008, AIG contributed approximately \$445 million in the form of forgiveness of Federal income tax recoverables to certain domestic general insurance subsidiaries and \$500 million to certain domestic life insurance subsidiaries, both effective December 31, 2007.

AIG parent funds its short-term working capital needs through commercial paper issued by AIG Funding. As of December 31, 2007, AIG Funding had \$4.2 billion of commercial paper outstanding with an average maturity of 29 days. As additional liquidity, AIG parent and AIG Funding maintain committed revolving credit facilities that, as of December 31, 2007, had an aggregate of \$9.3 billion available to be drawn, and which are summarized above under Revolving Credit Facilities.

At the parent company level, liquidity management activities are conducted in a manner intended to preserve and enhance funding stability, flexibility, and diversity through the full range of

potential operating environments and market conditions. Assessing liquidity risk involves forecasting of cash inflows and outflows on both a short- and long-term basis. Corporate Treasury is responsible for formulating the parent company's liquidity and contingency planning efforts, as well as for execution of AIG's specific funding activities. Through active liquidity management, AIG seeks to retain stable, reliable and cost-effective funding sources. In addition to current liquidity requirements, factors which affect funding decisions include market conditions, prevailing interest rates and the desired maturity profile of liabilities. The objectives of contingency planning are to ensure maintenance of appropriate liquidity during normal and stressed periods, to measure and project funding requirements during periods of stress, and to manage access to funding sources. Diversification of funding sources is an important element of AIG's liquidity risk management approach.

AIG's liquidity could be impaired by an inability to access the capital markets or by unforeseen significant outflows of cash. This

situation may arise due to circumstances that AIG may be unable to control, such as a general market disruption or an operational problem that affects third parties or AIG. Regulatory and other legal restrictions may limit AIG's ability to transfer funds freely, either to or from its subsidiaries. In particular, many of AIG's subsidiaries, including its insurance subsidiaries, are subject to laws and regulations that authorize regulatory bodies to block or reduce the flow of funds to the parent holding company, or that prohibit such transfers altogether in certain circumstances. These laws and regulations may hinder AIG's ability to access funds that it may need to make payments on its obligations. Because of the wide geographic profile of AIG's regulated subsidiaries, management believes that these cash flows represent a diversified source of liquidity for AIG. For a further discussion of the regulatory environment in which AIG subsidiaries operate and other issues affecting AIG's liquidity, see Item 1A. Risk Factors.

Invested Assets

The following tables summarize the composition of AIG's invested assets by segment:

<i>(in millions)</i>	General Insurance	Life Insurance & Retirement Services	Financial Services	Asset Management	Other	Total
2007

(a) Certain reclassifications and format changes have been made to prior period amounts to conform to the current period presentation.

(b) At December 31, 2006, approximately 68 percent and 32 percent of invested assets were held in domestic and foreign investments, respectively.

Investment Strategy

AIG's investment strategies are tailored to the specific business needs of each operating unit. The investment objectives are driven by the business model for each of the businesses: General Insurance, Life Insurance, Retirement Services and Asset Management's Spread-Based Investment business. The primary objectives are in terms of preservation of capital, growth of surplus and generation of investment income to support the insurance

products. At the local operating unit level, the strategies are based on considerations that include the local market, liability duration and cash flow characteristics, rating agency and regulatory capital considerations, legal investment limitations, tax optimization and diversification. In addition to local risk management considerations, AIG's corporate risk management guidelines impose limitations on concentrations to promote diversification by industry, asset class and geographic sector.

The amortized cost or cost and estimated fair value of AIG's available for sale and held to maturity securities at December 31, 2007 and 2006 were as follows:

(in millions)	December 31, 2007*				December 31, 2006

* At December 31, 2007 and 2006, fixed maturities held by AIG that were below investment grade or not rated totaled \$27.0 billion and \$26.6 billion, respectively.

AIG's held to maturity and available for sale fixed maturity investments totaled \$523.5 billion at December 31, 2007, compared to \$525.5 billion at December 31, 2006. At December 31, 2007, approximately 63 percent of the fixed maturities investments were in domestic portfolios. Approximately 53 percent of such domestic securities were rated AAA by one or more of the principal rating agencies. Approximately five percent were below investment grade or not rated. AIG's investment decision process relies primarily on internally generated fundamental analysis and internal risk ratings. Third party rating services' ratings and opinions provide one source of independent perspectives for consideration in the internal analysis.

A significant portion of the foreign fixed income portfolio is rated by Moody's, S&P or similar foreign rating services. Rating services are not available in all overseas locations. The Credit Risk Committee (CRC) closely reviews the credit quality of the foreign portfolio's non-rated fixed income investments. At December 31, 2007, approximately 19 percent of the foreign fixed income investments were either rated AAA or, on the basis of AIG's internal analysis, were equivalent from a credit standpoint to

securities so rated. Approximately five percent were below investment grade or not rated at that date. A large portion (approximately one third) of the foreign fixed income portfolio is sovereign fixed maturity securities supporting the policy liabilities in the country of issuance.

The credit ratings of AIG's fixed maturity investments, other than those of AIGFP, at December 31, 2007 and 2006 were as follows:

Rating	2007	2006
AAA	38%	37%
AA	28	26
A	18	20
BBB	11	12
Below investment grade	4	4
Non-rated	1	1
Total	100%	100%

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

The industry categories of AIG's available for sale corporate debt securities at December 31, 2007 were as follows:

Industry Category	Percentage
Industrials	47%
Financial Institutions	42
Utilities/Other	11
Total*	100%

* At December 31, 2007 approximately 95% of these investments were rated investment grade.

The amortized cost, gross unrealized gains (losses) and fair value of AIG's investments in mortgage-backed, asset-backed and collateralized securities at December 31, 2007 were as follows:

(in millions)	December 31, 2007			
	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
AIG, excluding AIGFP:				
RMBS	\$ 89,851	\$ 433	\$5,504	\$ 84,780

CDO/ABS	10,844	196	593	10,447
Subtotal, excluding AIGFP	124,613	866	7,253	118,226
Total AIGFP investments in mortgage-backed, asset-backed and collateralized securities	16,369	355	450	16,274
Total	\$140,982	\$1,221	\$7,703	\$134,500

Investments in Residential Mortgage-Backed Securities

As part of its strategy to diversify its investments, AIG invests in various types of securities, including residential mortgage-backed securities (RMBS).

The amortized cost, gross unrealized gains (losses) and estimated fair value of AIG's investments in RMBS securities, other than those of AIGFP, at December 31, 2007 were as follows:

(in millions)	December 31, 2007				
	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value	Percent of Total
Residential mortgage-backed securities:					
U.S. agencies	\$14,575	\$320	\$ 70	\$14,825	17%
Prime non-agency ^(a)	21,552	72	550	21,074	25
Alt-A	25,349	17	1,620	23,746	28
Other housing-related ^(b)	4,301	2	357	3,946	5
Subprime	24,074	22	2,907	21,189	25
Total	\$89,851	\$433	\$ 5,504	\$84,780	100%

(a) Includes foreign and jumbo RMBS-related securities.

(b) Primarily wrapped second-lien.

AIG's operations, other than AIGFP, held investments in RMBS with an estimated fair value of \$84.8 billion at December 31, 2007, or approximately 10 percent of AIG's total invested assets. In addition, AIG's insurance operations held investments with a fair value totaling \$4.0 billion in CDOs, of which \$58 million included some level of subprime exposure. AIG's RMBS investments are predominantly in highly-rated tranches that contain substantial protection features through collateral subordination. At December 31, 2007, approximately 92 percent of these investments were rated AAA, and approximately 6 percent were rated AA

by one or more of the principal rating agencies. AIG's investments rated BBB or below totaled \$621 million, or less than 0.1 percent of AIG's total invested assets at December 31, 2007. As of February 25, 2008, \$3.6 billion of AIG's RMBS backed primarily by subprime collateral had been downgraded as a result of rating agency actions since January 1, 2008, and \$6 million of such investments had been upgraded. Subsequent to December 31, 2007, rating agencies have placed on watch for downgrade a majority of 2006 and 2007 vintage AAA-rated subprime RMBS in the market. For AIG, \$9.7 billion was on watch for downgrade.

The fair value of AIG's RMBS investments, other than those of AIGFP, at December 31, 2007 by year of vintage and credit rating were as follows:

(in millions)	Year of Vintage						Total
	Prior	2003	2004	2005	2006	2007	
Rating:							
AAA	\$4,053	\$6,202	\$7,070	\$16,011	\$25,392	\$18,937	\$77,665
AA	63	785	555	1,092	2,117	512	5,124

BBB and below	—	53	74	214	114	37	492
Total	\$4,162	\$7,282	\$8,044	\$17,797	\$27,871	\$19,624	\$84,780

The fair value of AIG's Alt-A investments included in the RMBS investments above, other than those of AIGFP, at December 31, 2007 by year of vintage and credit rating were as follows:

(in millions)	Year of Vintage						Total
	Prior	2003	2004	2005	2006	2007	
Rating:							
AAA	\$208	\$623	\$ 960	\$4,899	\$9,301	\$6,512	\$22,503
AA	23	199	150	391	117	11	891
A	1	37	51	137	48	6	280
BBB and below	—	11	19	36	6	—	72
Total	\$232	\$870	\$1,180	\$5,463	\$9,472	\$6,529	\$23,746

The fair value of AIG's subprime RMBS investments, other than those of AIGFP, at December 31, 2007 by year of vintage and credit rating were as follows:

(in millions)	Year of Vintage						Total
	Prior	2003	2004	2005	2006	2007	
Rating:							
AAA	\$127	\$362	\$557	\$5,403	\$7,926	\$4,081	\$18,456
AA	6	35	116	277	1,562	357	2,353
A	10	82	100	120	34	26	372
BBB and below	—	—	—	8	—	—	8
Total	\$143	\$479	\$773	\$5,808	\$9,522	\$4,464	\$21,189

AIG's underwriting practices for investing in RMBS, other asset-backed securities and CDOs take into consideration the quality of the originator, the manager, the servicer, security credit ratings, underlying characteristics of the mortgages, borrower characteristics, and the level of credit enhancement in the transaction. AIG's strategy is typically to invest in securities rated AA or better and create diversification across multiple underlying asset classes.

General Insurance Invested Assets

In AIG's General Insurance business, the duration of liabilities for long-tail casualty lines is greater than other lines. As differentiated from the Life Insurance & Retirement Services companies, the focus is not on asset-liability matching, but on preservation of capital and growth of surplus.

Fixed income holdings of the Domestic General Insurance companies are comprised primarily of tax-exempt securities, which

provide attractive risk-adjusted after-tax returns. These high quality municipal investments have an average rating of AA.

Fixed income assets held in Foreign General Insurance are of high quality and short to intermediate duration, averaging 3.6 years compared to 7.0 years for those in Domestic General Insurance.

While invested assets backing reserves are invested in conventional fixed income securities in Domestic General Insurance, a modest portion of surplus is allocated to large capitalization, high-dividend, public equity strategies and to alternative investments, including private equity and hedge funds. These investments have provided a combination of added diversification and attractive long-term returns.

General Insurance invested assets grew by \$13.7 billion, or 12 percent, during 2007 as bond holdings grew by \$6 billion. Listed equity holdings grew by \$1.3 billion.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Life Insurance & Retirement Services Invested Assets

With respect to Life Insurance & Retirement Services, AIG uses asset-liability management as a tool worldwide in the life insurance business to influence the composition of the invested assets and appropriate marketing strategies. AIG's objective is to maintain a matched asset-liability structure. However, in certain markets, the absence of long-dated fixed income investment instruments may preclude a matched asset-liability position. In addition, AIG may occasionally determine that it is economically advantageous to be temporarily in an unmatched position. To the extent that AIG has maintained a matched asset-liability structure, the economic effect of interest rate fluctuations is partially mitigated.

AIG's investment strategy for the Life Insurance & Retirement Services segment is to produce cash flows greater than maturing insurance liabilities. AIG actively manages the asset-liability relationship in its foreign operations, even though certain territories lack qualified long-term investments or certain local regulatory authorities may impose investment restrictions. For example, in several Southeast Asian countries, the duration of investments is shorter than the effective maturity of the related policy liabilities. Therefore, there is risk that the reinvestment of the proceeds at the maturity of the initial investments may be at a yield below that of the interest required for the accretion of the policy liabilities. Additionally, there exists a future investment risk associated with certain policies currently in-force which will have premium receipts in the future. That is, the investment of these future premium receipts may be at a yield below that required to meet future policy liabilities.

AIG actively manages the interest rate assumptions and crediting rates used for its new and in force business. Business strategies continue to evolve to maintain profitability of the overall business. In some countries, new products are being introduced with minimal investment guarantees, resulting in a shift toward investment-linked savings products and away from traditional savings products with higher guarantees.

The investment of insurance cash flows and reinvestment of the proceeds of matured securities and coupons requires active management of investment yields while maintaining satisfactory investment quality and liquidity.

AIG may use alternative investments, including equities, real estate and foreign currency denominated fixed income instruments in certain foreign jurisdictions where interest rates remain low and there are limited long-dated bond markets to extend the duration or increase the yield of the investment portfolio to more closely match the requirements of the policyholder liabilities and DAC recoverability. This strategy has been effectively used in Japan and more recently by Nan Shan in Taiwan. In Japan, foreign assets, excluding those matched to foreign liabilities, were approximately 31 percent of statutory assets, which is below the maximum allowable percentage under current local regulation. Foreign assets comprised approximately 33 percent of Nan Shan's invested assets at December 31, 2007, slightly below the

maximum allowable percentage under current local regulation. The majority of Nan Shan's in-force policy portfolio is traditional life and endowment insurance products with implicit interest rate guarantees. New business with lower interest rate guarantees are gradually reducing the overall interest requirements, but asset portfolio yields have declined faster due to the prolonged low interest rate environment. As a result, although the investment margins for a large block of in-force policies are negative, the block remains profitable overall because the mortality and expense margins presently exceed the negative investment spread. In response to the low interest rate environment and the volatile exchange rate of the Taiwanese dollar, Nan Shan is emphasizing new products with lower implied guarantees, including participating endowments and investment-linked products. Although the risks of a continued low interest rate environment coupled with a volatile Taiwanese dollar could increase net liabilities and require additional capital to maintain adequate local solvency margins, Nan Shan currently believes it has adequate resources to meet all future policy obligations.

AIG actively manages the asset-liability relationship in its domestic operations. This relationship is more easily managed through the availability of qualified long-term investments.

A number of guaranteed benefits, such as living benefits or guaranteed minimum death benefits, are offered on certain variable life and variable annuity products. AIG manages its exposure resulting from these long-term guarantees through reinsurance or capital market hedging instruments.

AIG invests in equities for various reasons, including diversifying its overall exposure to interest rate risk. Available for sale bonds and equity securities are subject to declines in fair value. Such declines in fair value are presented in unrealized appreciation or depreciation of investments, net of taxes, as a component of Accumulated other comprehensive income. Declines that are determined to be other-than-temporary are reflected in income in the period in which the intent to hold the securities to recovery no longer exists. See Valuation of Invested Assets herein. Generally, insurance regulations restrict the types of assets in which an insurance company may invest. When permitted by regulatory authorities and when deemed necessary to protect insurance assets, including invested assets, from adverse movements in foreign currency exchange rates, interest rates and equity prices, AIG and its insurance subsidiaries may enter into derivative transactions as end users to hedge their exposures. For a further discussion of AIG's use of derivatives, see Risk Management — Credit Risk Management — Derivatives herein.

In certain jurisdictions, significant regulatory and/or foreign governmental barriers exist which may not permit the immediate free flow of funds between insurance subsidiaries or from the insurance subsidiaries to AIG parent. For a discussion of these restrictions, see Item 1. Business — Regulation.

Life Insurance & Retirement Services invested assets grew by \$41.7 billion, or 10 percent, during 2007 as bond holdings grew by \$5.3 billion, and listed equity holdings grew by \$9.3 billion, or 39 percent.

Financial Services Invested Assets

Financial Services Securities

Financial Services securities available for sale of \$40.3 billion at December 31, 2007 is predominantly a diversified portfolio of high-grade fixed income securities where the individual securities have varying degrees of credit risk. At December 31, 2007, the average credit rating of this portfolio was in the AA+ category or the equivalent thereto as determined through rating agencies or internal review. AIGFP has also entered into credit derivative transactions to economically hedge its credit risk associated with \$82 million of these securities. Securities deemed below investment grade at December 31, 2007 totalled \$797 million in fair value, representing two percent of Financial Services securities available for sale. There have been no significant downgrades of these securities through February 15, 2008.

AIGFP's management objective is to minimize interest rate, currency, commodity and equity risks associated with its securities available for sale. When AIGFP purchases a security for its securities available for sale investment portfolio, it simultaneously enters into an offsetting hedge such that the payment terms of the hedging transaction offset the payment terms of the investment security. This achieves the economic result of converting the return on the underlying security to U.S. dollar LIBOR plus or minus a spread based on the underlying profit on each security on the initial trade date. The market risk associated with such hedges is managed on a portfolio basis.

Because hedge accounting treatment was not applied in 2006, the unrealized gains and losses on the derivative transactions with unaffiliated third parties were reflected in operating income. The unrealized gains and losses on the underlying securities available for sale resulting from changes in interest rates and currency rates and commodity and equity prices were included in accumulated other comprehensive income (loss), or in operating income, as appropriate. When a security is sold, the realized gain or loss with respect to this security is included in operating income.

Securities purchased under agreements to resell are treated as collateralized financing transactions. AIGFP takes possession of or obtains a security interest in securities purchased under agreements to resell.

Capital Markets

AIGFP uses the proceeds from the issuance of notes and bonds and GIAs to invest in a diversified portfolio of securities, including securities available for sale, and derivative transactions. The funds may also be invested in securities purchased under agreements to resell. The proceeds from the disposal of the aforementioned securities available for sale and securities purchased under agreements to resell are used to fund the maturing GIAs or other AIGFP financings, or to invest in new assets. For a further discussion of AIGFP's borrowings, see Capital Resources and Liquidity — Borrowings herein.

Capital Markets derivative transactions are carried at fair value. AIGFP reduces its economic risk exposure through similarly valued offsetting transactions including swaps, trading securities,

options, forwards and futures. AIGFP's super senior credit default swaps include structural protection to help minimize risk. For a further discussion on the use of derivatives by Capital Markets, see Operating Review — Financial Services Operations — Capital Markets and Risk Management — Derivatives herein and Note 8 to Consolidated Financial Statements.

AIGFP owns inventories in certain commodities in which it trades, and may reduce the exposure to market risk through the use of swaps, forwards, futures, and option contracts. Physical commodities held in AIGFP's wholly owned broker-dealer subsidiary are recorded at fair value. All other commodities are recorded at the lower of cost or fair value.

Trading securities, at fair value, and securities and spot commodities sold but not yet purchased, at fair value, are marked to fair value daily with the unrealized gain or loss recognized in income. These trading securities are purchased and sold as necessary to meet the risk management and business objectives of Capital Markets operations.

The gross unrealized gains and gross unrealized losses of Capital Markets operations included in Financial Services assets and liabilities at December 31, 2007 were as follows:

<i>(in millions)</i>	Gross Unrealized Gains	Gross Unrealized Losses
Securities available for sale, at fair value	\$ 939	\$ 777
Unrealized gain/loss on swaps, options and forward transactions*	17,134	22,982

* These amounts are also presented as the respective balance sheet amounts.

ILFC

The cash used for the purchase of flight equipment is derived primarily from the proceeds of ILFC's debt financings. The primary sources for the repayment of this debt and the related interest expense are ILFC's cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. During 2007, ILFC acquired flight equipment costing \$4.7 billion. For a further discussion of ILFC's borrowings, see Operating Review — Financial Services Operations — Aircraft Leasing and Capital Resources and Liquidity — Borrowings herein.

At December 31, 2007, ILFC had committed to purchase 234 new aircraft deliverable from 2008 through 2017 for an estimated aggregate purchase price of \$20.1 billion. As of February 22, 2008, ILFC has entered into leases for all of the new aircraft to be delivered in 2008, and for 65 of 161 of the new aircraft to be delivered subsequent to 2008. ILFC will be required to find customers for any aircraft currently on order and any aircraft to be ordered, and it must arrange financing for portions of the purchase price of such equipment. ILFC has been successful to date both in placing its new aircraft on lease or under sales contract and obtaining adequate financing, but there can be no assurance that such success will continue in future environments.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Asset Management Invested Assets

Asset Management invested assets are primarily comprised of assets supporting AIG's Spread-Based Investment business, which includes AIG's MIP and domestic GIC programs.

The Spread-Based Investment business strategy is to generate spread income from investments yielding returns greater than AIG's cost of funds. The asset-liability relationship is actively managed. The goal of the MIP investment strategy is to capture a spread between income earned on investments and the funding costs of the program while mitigating interest rate and foreign currency exchange rate risk. The invested assets are predominantly fixed income securities and include U.S. residential mortgage-backed securities, asset-backed securities and commercial mortgage-backed securities. In addition, the MIP sold credit protection by issuing single-name high-grade corporate credit default swaps in 2007.

Asset Management invested assets grew by \$3.8 billion during 2007. The growth in invested assets was primarily attributable to growth in other invested assets and mortgage and other loans receivable partially offset by a decrease in bond holdings, and

short-term investments. These increases were primarily driven by continued growth of the MIP and the growth of AIG's Institutional Asset Management business. These increases were partially offset by the decrease in assets associated with the runoff of the domestic GIC program.

Securities Lending Activities

AIG's securities lending program is a centrally managed program facilitated by AIG Investments primarily for the benefit of certain of AIG's Insurance companies. Securities are loaned to various financial institutions, primarily major banks and brokerage firms. Cash collateral equal to 102 percent of the fair value of the loaned securities is received. The cash collateral is invested in highly-rated fixed income securities to earn a net spread.

AIG's liability to the borrower for collateral received was \$82.0 billion and the fair value of the collateral reinvested was \$75.7 billion as of December 31, 2007. In addition to the invested collateral, the securities on loan as well as all of the assets of the participating companies are generally available to satisfy the liability for collateral received.

The composition of the securities lending invested collateral by credit rating at December 31, 2007 was as follows:

<i>(in millions)</i>	AAA	AA	A	BBB/Not Rated	Short-Term	Total
Corporate debt	\$ 1,191	\$ 9,341	\$ 3,448	\$ 160	\$ —	\$ 14,140
Mortgage-backed, asset-backed and collateralized	47,180	2,226	22	82		49,510
Cash and short-term investments	—	—	—	—	12,012	12,012
Total	\$ 48,371	\$ 11,567	\$ 3,470	\$ 242	\$ 12,012	\$ 75,662

Participation in the securities lending program by reporting unit at December 31, 2007 was as follows:

	Percent Participation
Domestic Life Insurance and Retirement Services	79%
Foreign Life Insurance	10
Domestic General Insurance	3
Foreign General Insurance	4
Asset Management	4
Total	100.0%

On December 31, 2007, \$11.4 billion (or 13.7 percent) of the liabilities were one-day tenor. These one-day tenor loans do not have a contractual end date but are terminable by either party on demand. The balance of the liabilities contractually mature within three months; however, the maturing loans are frequently renewed and rolled over to extended dates. Collateral held for this program at December 31, 2007 included interest bearing cash equivalents with overnight maturities of \$12.0 billion.

Liquidity in the securities pool is managed based upon historical experience regarding volatility of daily, weekly and biweekly loan balances. Despite the current environment, the program has not experienced a significant decrease in loan balances.

In addition, the invested securities are carried at fair value with unrealized gains and losses recorded in accumulated other comprehensive income (loss) while net realized gains and losses are recorded in earnings. The net unrealized loss on the investments was \$5.0 billion as of December 31, 2007. During

2007, AIG incurred net realized losses of \$1.0 billion on this portfolio, predominantly related to other-than-temporary impairments.

Valuation of Invested Assets

Traded Securities

The valuation of AIG's investment portfolio involves obtaining a fair value for each security. The source for the fair value is generally from market exchanges or dealer quotations, with the exception of nontraded securities.

Nontraded Securities

AIG considers nontraded securities to mean certain fixed income investments, certain structured securities, direct private equities, limited partnerships, and hedge funds.

The aggregate carrying value of AIG's nontraded securities at December 31, 2007 was approximately \$70 billion. The methodology used to estimate fair value of nontraded fixed income investments is by reference to traded securities with similar attributes and using a matrix pricing methodology. This methodology takes into account such factors as the issuer's industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, and other relevant factors.

For certain structured securities, the carrying value is based on an estimate of the security's future cash flows pursuant to the requirements of Emerging Issues Task Force Issue No. 99-20,

“Recognition of Interest Income and Impairment on Purchased and Retained Beneficial Interests in Securitized Financial Assets.”

Hedge funds and limited partnerships in which AIG holds in the aggregate less than a five percent interest are carried at fair value.

With respect to hedge funds and limited partnerships in which AIG holds in the aggregate a five percent or greater interest, or less than a five percent interest but where AIG has more than a minor influence over the operations of the investee, AIG accounts for these investments using the equity method.

AIG obtains the fair value of its investments in limited partnerships and hedge funds from information provided by the general partner or manager of these investments, the accounts of which generally are audited on an annual basis.

Each of these investment categories is regularly tested to determine if impairment in value exists. Various valuation techniques are used with respect to each category in this determination.

For a discussion of accounting policies related to changes in fair value of invested assets, see Note 1 to Consolidated Financial Statements.

Portfolio Review

Other-Than-Temporary Impairments

AIG assesses its ability to hold any fixed maturity security in an unrealized loss position to its recovery, including fixed maturity securities classified as available for sale, at each balance sheet date. The decision to sell any such fixed maturity security classified as available for sale reflects the judgment of AIG's management that the security sold is unlikely to provide, on a relative value basis, as attractive a return in the future as alternative securities entailing comparable risks. With respect to distressed securities, the sale decision reflects management's judgment that the risk-discounted anticipated ultimate recovery is less than the value achievable on sale.

AIG evaluates its investments for impairments in valuation. The determination that a security has incurred an other-than-temporary

impairment in value and the amount of any loss recognition requires the judgment of AIG's management and a regular review of its investments. See Note 1(c) to Consolidated Financial Statements for further information on AIG's policy.

Once a security has been identified as other-than-temporarily impaired, the amount of such impairment is determined by reference to that security's contemporaneous fair value and recorded as a charge to earnings.

In light of the recent significant disruption in the U.S. residential mortgage and credit markets, particularly in the fourth quarter, AIG has recognized an other-than-temporary impairment charge (severity loss) of \$2.2 billion (including \$643 million related to AIGFP's available for sale investment securities recorded in other income), primarily with respect to certain residential mortgage-backed securities and other structured securities. Even while retaining their investment grade ratings, such securities were priced at a significant discount to cost. Notwithstanding AIG's intent and ability to hold such securities indefinitely, and despite structures which indicate that a substantial amount of the securities should continue to perform in accordance with original terms, AIG concluded that it could not reasonably assert that the recovery period would be temporary.

As a result of AIG's periodic evaluation of its securities for other-than-temporary impairments in value, AIG recorded other-than-temporary impairment charges of \$4.7 billion (including \$643 million related to AIGFP recorded on other income), \$944 million and \$598 million in 2007, 2006 and 2005, respectively.

In addition to the above severity losses, AIG recorded other-than-temporary impairment charges in 2007, 2006 and 2005 related to:

- securities which AIG does not intend to hold until recovery;
- declines due to foreign exchange;
- issuer-specific credit events;
- certain structured securities impaired under EITF No. 99-20; and
- other impairments, including equity securities and partnership investments.

Net realized capital gains (losses) for the years ended December 31, 2007, 2006 and 2005 were as follows:

<i>(in millions)</i>	2007	2006	2005
Sales of fixed maturities	\$ (468)	\$(382)	\$ 372
Sales of equity securities	1,087	813	643
Sales of real estate and other assets	619	303	88
Other-than-temporary impairments	(4,072)	(944)	(598)
Foreign exchange transactions	(643)	(382)	701
Derivative instruments	(115)	698	(865)
Total	\$ (3,592)	\$ 106	\$ 341
AIGFP other-than-temporary impairments*	\$ (643)	\$ —	\$ —

* Reported as part of other income.

Management's Discussion and Analysis of Financial Condition and Results of Operations

Continued

Other-than-temporary impairment charges for the years ended December 31, 2007, 2006 and 2005 were as follows:

(in millions)	2007	2006	2005
Impairment type:			
Severity*	\$2,200	\$ —	\$ —
Lack of intent to hold to recovery	1,054	619	335
Foreign currency declines	500	—	—
Issuer-specific credit events	515	279	257
Adverse projected cash flows on structured securities (EITF 99-20)	446	46	6
Total	\$4,715	\$944	\$598

* Includes \$643 million related to AIGFP reported in other income.

Other-than-temporary impairment charges for the year ended December 31, 2007 by Reporting Segment were as follows:

(in millions)	General Insurance	Life Insurance & Retirement Services	Financial Services	Asset Management	Other	Total
Impairment Type:						
Severity	\$ 71	\$1,070	\$643	\$416	\$ —	\$2,200
Lack of intent to hold to recovery	91	885	7	71	—	1,054
Foreign currency declines	—	500	—	—	—	500
Issuer-specific credit events	113	177	—	69	156	515
Adverse projected cash flows on structured securities	1	166	—	279	—	446
Total	\$276	\$2,798	\$650	\$835	\$156	\$4,715

Other-than-temporary severity-related impairment charges for the year ended December 31, 2007 were as follows:

Rating:	RMBS	CDO	CMBS	Other Securities	Total
AAA	\$ 168	\$621	\$ —	\$ —	\$ 789
AA	870	53	6	—	929
A	66	32	77	—	175
BBB and below	28	—	52	—	80
Nonrated	—	—	—	227	227
Total	\$1,132	\$706	\$135	\$227	\$2,200

No other-than-temporary impairment charge with respect to any one single credit was significant to AIG's consolidated financial condition or results of operations, and no individual other-than-temporary impairment charge exceeded two percent of consolidated net income in 2007.

In periods subsequent to the recognition of an other-than-temporary impairment charge for fixed maturity securities, which is not credit or foreign exchange related, AIG generally accretes into income the discount or amortizes the reduced premium resulting from the reduction in cost basis over the remaining life of the security.

Commercial Mortgage Loan Exposure

At December 31, 2007, AIG had direct commercial mortgage loan exposure of \$17.1 billion, with \$16.3 billion representing

U.S. loan exposure. At that date, none of the U.S. loans were in default or delinquent by 90 days or more. The remaining commercial mortgage loans are secured predominantly by properties in Japan. In addition, at December 31, 2007, AIG had approximately \$2.0 billion in residential mortgage loans in jurisdictions outside the United States, primarily backed by properties in Taiwan and Thailand.

At December 31, 2007, AIG owned \$23.9 billion in cost basis of CMBS. Approximately 78 percent of such holdings were rated "AAA", approximately 98 percent were rated "A" or higher, and less than 2 percent were rated "BBB" or below. At December 31, 2007, all such securities were current in the payment of principal and interest and none had default rates on underlying collateral at levels viewed by AIG as likely to result in the loss of principal or interest.

There have been disruptions in the commercial mortgage markets in general, and the CMBS market in particular, with credit default swaps indices and quoted prices of securities at levels consistent with a severe correction in lease rates, occupancy and fair value of properties. In addition, spreads in the primary mortgage market have widened significantly. While this capital market stress has not to date been reflected in the performance of commercial mortgage securitization in the form of increased defaults in underlying mortgage pools, pricing of CMBS has been

adversely affected by market perceptions that underlying mortgage defaults will increase. As a result, AIG recognized \$135 million of other-than-temporary impairment charges on CMBS trading at a severe discount to cost, despite the absence of any deterioration in performance of the underlying credits, because AIG concluded that it could not reasonably assert that the recovery period was temporary. At this time, AIG anticipates full recovery of principal and interest on the securities to which such other-than-temporary impairment charges were recorded.

An aging of the pre-tax unrealized losses of fixed maturity and equity securities, distributed as a percentage of cost relative to unrealized loss (the extent by which the fair value is less than amortized cost or cost), including the number of respective items, was as follows at December 31, 2007:

Aging ^(d) (dollars in millions)	Less than or equal to 20% of Cost ^(e)			Greater than 20% to 50% of Cost ^(e)			Greater than 50% of Cost ^(e)			Total

(a) For bonds, represents amortized cost.

(b) The effect on net income of unrealized losses after taxes will be mitigated upon realization because certain realized losses will be charged to participating policyholder accounts, or realization will result in current decreases in the amortization of certain DAC.

(c) Includes securities lending invested collateral.

(d) Represents the number of continuous months that fair value has been less than cost by any amount.

(e) Represents the percentage by which fair value is less than cost at the balance sheet date.

Unrealized gains and losses

At December 31, 2007, the fair value of AIG's fixed maturity and equity securities aggregated \$587.1 billion. At December 31,

2007, aggregate pre-tax unrealized gains for fixed maturity and equity securities were \$18.1 billion (\$11.8 billion after tax).

At December 31, 2007, the aggregate pre-tax gross unrealized losses on fixed maturity and equity securities were \$13.6 billion

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

(\$8.9 billion after tax). Additional information about these securities is as follows:

- These securities were valued, in the aggregate, at approximately 95 percent of their current amortized cost.
- Less than three percent of these securities were valued at less than 20 percent of their current cost, or amortized cost.
- Less than four percent of the fixed income securities had issuer credit ratings which were below investment grade.

AIG did not consider these securities in an unrealized loss position to be other-than-temporarily impaired at December 31, 2007, as management has the intent and ability to hold these investments until they recover their cost basis. AIG believes the securities will generally continue to perform in accordance with the original terms, notwithstanding the present price declines.

At December 31, 2007, unrealized losses for fixed maturity securities and equity securities did not reflect any significant industry concentrations.

In 2007, unrealized losses related to investment grade bonds increased \$9.3 billion (\$6.1 billion after tax), reflecting the widening of credit spreads, partially offset by the effects of a decline in risk-free interest rates.

The amortized cost and fair value of fixed maturity securities available for sale in an unrealized loss position at December 31, 2007, by contractual maturity, is shown below:

<i>(in millions)</i>	Amortized Cost	Fair Value
Due in one year or less	\$ 9,408	\$ 9,300
Due after one year through five years	36,032	35,267
Due after five years through ten years	54,198	52,394
Due after ten years	56,557	53,578
Mortgage-backed, asset-backed and collateralized	99,751	92,246
Total	\$255,946	\$242,785

For the year ended December 31, 2007, the pre-tax realized losses incurred with respect to the sale of fixed maturities and equity securities were \$1.3 billion. The aggregate fair value of securities sold was \$38.0 billion, which was approximately 94 percent of amortized cost. The average period of time that securities sold at a loss during 2007 were trading continuously at a price below book value was approximately five months. See Risk Management — Investments herein for an additional discussion of investment risks associated with AIG's investment portfolio.

Risk Management Overview

AIG believes that strong risk management practices and a sound internal control environment are fundamental to its continued success and profitable growth. Failure to manage risk properly exposes AIG to significant losses, regulatory issues and a damaged reputation.

The major risks to which AIG is exposed include the following:

- *Credit risk* — the potential loss arising from an obligor's inability or unwillingness to meet its obligations to AIG.

- *Market risk* — the potential loss arising from adverse fluctuations in interest rates, foreign currencies, equity and commodity prices, and their levels of volatility.
- *Operational risk* — the potential loss resulting from inadequate or failed internal processes, people, and systems, or from external events.
- *Liquidity risk* — the potential inability to meet all payment obligations when they become due.
- *General insurance risk* — the potential loss resulting from inadequate premiums, insufficient reserves and catastrophic exposures.
- *Life insurance risk* — the potential loss resulting from experience deviating from expectations for mortality, morbidity and termination rates in the insurance-oriented products and insufficient cash flows to cover contract liabilities in the retirement savings products.

AIG senior management establishes the framework, principles and guidelines for risk management. The primary focus of risk management is to assess the risk of AIG incurring economic losses from the risk categories outlined above. The business executives are responsible for establishing and implementing risk management processes and responding to the individual needs and issues within their business, including risk concentrations within their respective businesses with appropriate oversight by Enterprise Risk Management (ERM).

Corporate Risk Management

AIG's major risks are addressed at the corporate level through ERM, which is headed by AIG's Chief Risk Officer (CRO). ERM is responsible for assisting AIG's business leaders, executive management and the Board of Directors to identify, assess, quantify, manage and mitigate the risks incurred by AIG. Through the CRO, ERM reports to AIG's Chief Financial Officer, various senior management committees and the Board of Directors through the Finance and Audit Committees.

An important goal of ERM is to ensure that once appropriate governance, authorities, procedures and policies have been established, aggregated risks do not result in inappropriate concentrations. Senior management defines the policies, has established general operating parameters for its global businesses and has established various oversight committees to monitor the risks attendant to its businesses:

- The Financial Risk Committee (FRC) oversees AIG's market risk exposures to interest rates, foreign exchange and fair values of shares, partnership interests, real estate and other equity investments and provides strategic direction for AIG's asset-liability management. The FRC meets monthly and acts as a central mechanism for AIG senior management to review comprehensive information on AIG's financial exposures and to exercise broad control over these exposures. There are two subcommittees of the FRC.
 - The Foreign Exchange Committee monitors trends in foreign exchange rates, reviews AIG's foreign exchange exposures, and provides recommendations on foreign currency asset allocation and remittance hedging.

- The Liquidity Risk Committee is responsible for liquidity policy and implementation at AIG Parent and exercises oversight and control of liquidity policies at each AIG entity. See Capital Resources and Liquidity herein.
- The CRC is responsible for the following:
 - approving credit risk policies and procedures for use throughout AIG;
 - delegating credit authority to business unit credit officers and select business unit managers;
 - approving transaction requests and limits for corporate, sovereign and cross-border credit exposures that exceed the delegated authorities;
 - establishing and maintaining AIG's risk rating process for corporate, financial and sovereign obligors; and
 - conducting regular reviews of credit risk exposures in the portfolios of all credit-incurring business units.
- The Derivatives Committee (DC) reviews any proposed derivative transaction or program not otherwise managed by AIGFP. The DC examines, among other things, the nature and purpose of the derivative transaction, its potential credit exposure, if any, and the estimated benefits.
- The CSFTC has the authority and responsibility to review and approve any proposed CSFT. A CSFT is any transaction or product that may involve a heightened legal, regulatory, accounting or reputational risk that is developed, marketed or proposed by AIG or a third party. The CSFTC provides guidance to and monitors the activities of transaction review committees (TRCs) which have been established in all major business units. TRCs have the responsibility to identify, review and refer CSFTs to the CSFTC.

Credit Risk Management

AIG devotes considerable resources, expertise and controls to managing its direct and indirect credit exposures, such as investments, deposits, loans, reinsurance recoverables and leases, as well as counterparty risk in derivatives activities, cessions of insurance risk to reinsurers and customers and credit risk assumed through credit derivatives written and financial guarantees. Credit risk is defined as the risk that AIG's customers or counterparties are unable or unwilling to repay their contractual obligations when they become due. Credit risk may also be manifested: (i) through the downgrading of credit ratings of counterparties whose credit instruments AIG may be holding, or,

in some cases, insuring, causing the value of the assets to decline or insured risks to rise; and (ii) as cross-border risk where a country (sovereign government risk) or one or more non-sovereign obligors within a country are unable to repay an obligation or are unable to provide foreign exchange to service a credit or equity exposure incurred by another AIG business unit located outside that country.

AIG's credit risks are managed at the corporate level by the Credit Risk Management department (CRM) whose primary role is to support and supplement the work of the CRC. CRM is headed by AIG's Chief Credit Officer (CCO), who reports to AIG's CRO. AIG's CCO is primarily responsible for the development and maintenance of credit risk policies and procedures approved by the CRC. In discharging this function CRM has the following responsibilities:

- Manage the approval process for all requests for credit limits, program limits and transactions.
- Approve delegated credit authorities to CRM credit executives and business unit credit officers.
- Aggregate globally all credit exposure data by counterparty, country and industry and report risk concentrations regularly to the CRC and the Finance Committee of the Board of Directors.
- Administer regular in-depth portfolio credit reviews of all investment, derivative and credit-incurring business units and recommend any corrective actions where required.
- Develop methodologies for quantification and assessment of credit risks, including the establishment and maintenance of AIG's internal risk rating process.
- Approve appropriate credit reserves and methodologies at the business unit and enterprise levels.

AIG closely monitors and controls its company-wide credit risk concentrations and attempts to avoid unwanted or excessive risk accumulations, whether funded or unfunded. To minimize the level of credit risk in certain circumstances, AIG may require third-party guarantees, collateral, such as letters of credit or trust account deposits or reinsurance. These guarantees, letters of credit and reinsurance recoverables are also treated as credit exposure and are added to AIG's risk concentration exposure data.

AIG defines its aggregate credit exposures to a counterparty as the sum of its fixed maturities, loans, finance leases, derivatives (mark to market), deposits (in the case of financial institutions) and the specified credit equivalent exposure to certain insurance products which embody credit risk.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

The following table presents AIG's largest credit exposures at December 31, 2007 as a percentage of total shareholders' equity:

Category	Risk Rating ^(a)	Credit Exposure as a Percentage of Total Shareholders' Equity
<i>Investment Grade:</i>		
10 largest combined	A+ (weighted average) ^(b)	84.8%
Single largest non-sovereign (financial institution)	AA-	8.4
Single largest corporate	AAA	5.4
Single largest sovereign	A	15.7
<i>Non-Investment Grade:</i>		
Single largest sovereign	BB-	1.8
Single largest non-sovereign	B+	0.5

(a) Risk rating is based on external ratings, or equivalent, based on AIG's internal risk rating process.

(b) Six of the ten largest credit exposures are to highly-rated financial institutions and three are to investment-grade rated sovereigns; none is rated lower than BBB+ or its equivalent.

AIG closely controls its aggregate cross-border exposures to avoid excessive concentrations in any one country or regional group of countries. AIG defines its cross-border exposure to include both cross-border credit exposures and its large cross-border investments in its own international subsidiaries. Ten countries had cross-border exposures in excess of 10 percent of total shareholders' equity; seven are AAA-rated and three are AA-rated.

In addition, AIG closely monitors its industry concentrations, the risks of which are often mitigated by the breadth and scope of AIG's international operations.

- AIG's single largest industry credit exposure is to the highly-rated global financial institutions sector, accounting for 87 percent of total shareholders' equity at December 31, 2007.
- Excluding the U.S. residential and commercial mortgage sectors, AIG's other industry credit concentrations in excess of 10 percent of total shareholders' equity at December 31, 2007 are to the following industries (in descending order by approximate size):
 - Electric and water utilities;
 - Oil and gas;
 - European regional financial institutions;
 - Global telecommunications companies;
 - Global life insurance carriers;
 - U.S.-based regional financial institutions;
 - Global securities firms and exchanges; and
 - Global reinsurance firms.

AIG participates in the U.S. residential and commercial mortgage markets through AGF, which originates principally first-lien mortgage loans and, to a lesser extent, second-lien mortgage loans to buyers and owners of residential housing; UGC which provides first loss mortgage guaranty insurance for high loan-to-value first- and second-lien residential mortgages; AIG Investments which invests in mortgage-backed securities and collateralized debt obligations, on behalf of AIG insurance and financial services subsidiaries, in which the underlying collateral comprises residential or commercial mortgage loans; and AIGFP which invests in highly rated tranches of RMBS, CMBS and CDOs and provides credit protection through credit default swaps on certain super

senior tranches of CDOs. In addition, AIG Investments invests directly in commercial real estate properties and provides real estate commercial mortgage loans.

Some of AIG's exposures are insured ("wrapped") by financial guarantor insurance companies, also known as "monoline insurers", which at December 31, 2007, provide AIG over \$44 billion (carrying value) in financial support. The monoline insurers include MBIA, Ambac, FGIC, and others and provide support predominantly in the United States. AIG does not rely on the monoline insurance as its principal source of repayment when evaluating securities for purchase. All investment securities are evaluated primarily based on the underlying cash flow generation capacities of the issuer or cash flow characteristics of the security.

Approximately 96 percent of the monoline protection is provided on AIG Investments' fixed maturities exposures, of which municipal securities represent 74 percent of assets insured, substantially all of which had underlying credit ratings of "A" or higher. AIG considers that the monoline wrap for such securities is of limited support, as the default rate on single A and higher rated municipal bonds has historically been negligible. However, AIG anticipates that the failure of one or more monoline insurers may cause price volatility and other disruption in the municipal bond market, as market participants adjust to the absence of monoline credit support. AIG maintains a credit staff to evaluate its municipal bond holdings, and does not rely on monoline insurers in evaluating securities for its municipal bond portfolios.

Approximately four percent of AIG's monoline insurance supports AIGFP investment exposures.

For the non-municipal assets in the AIG Investments portfolio, at December 31, 2007, AIG owned \$9.5 billion in cost basis or \$8.8 billion in fair value of various types of asset-backed securities wrapped by one or more of the monoline insurers. Based on internal analysis, approximately \$6.7 billion in cost basis represented holdings with underlying ratings estimated at BBB or higher. AIG has generally viewed the monoline credit support on these securities as significant only to "tail" risk, that is, the risk that as pools of underlying assets amortize, the remaining assets, or "tail", may suffer from adverse selection on prepayments or from a lack of adequate risk diversification. While

these securities initially had underlying investment grade ratings, poor pool performance has in some cases resulted in current ratings of below investment grade. The amount of ultimate loss exposure of these securities to the monoline insurers is a function of the ultimate performance of the collateral pools and cannot be reliably estimated. AIG believes that monoline insurers are currently providing payment support on approximately \$380 million of such securities.

The CRC reviews quarterly concentration reports in all categories listed above as well as credit trends by risk ratings. The CRC may adjust limits to provide reasonable assurance that AIG does not incur excessive levels of credit risk and that AIG's credit risk profile is properly calibrated across business units.

Market Risk Management

AIG is exposed to market risks, primarily within its insurance and capital markets businesses. These asset-liability exposures are predominantly structural in nature, and not the result of speculative positioning to take advantage of short-term market opportunities. The Market Risk Management department (MRM), which reports to the CRO, is responsible for control and oversight of market risks in all aspects of AIG's financial services, insurance, and investment activities.

AIG's market exposures arise from the following:

- AIG is a globally diversified enterprise with capital deployed in a variety of currencies. Capital deployed in AIG's overseas businesses, when converted into U.S. dollars for financial reporting purposes, constitutes a "long foreign currency/short U.S. dollar" market exposure on AIG's balance sheet. Similarly, overseas earnings denominated in foreign currency also represent a "long foreign currency/short U.S. dollar" market exposure on AIG's income statement.
- Much of AIG's domestic capital is invested in U.S. fixed income or equity securities, leading to exposures to U.S. yields and equity markets.
- Several of AIG's Foreign Life Insurance subsidiaries operate in developing markets where maturities on longer-term life insurance liabilities exceed the maximum maturities of available local currency assets.

As a globally diversified enterprise, AIG is exposed to a variety of foreign currency risks. AIG earns a significant portion of its income from operations conducted in foreign currencies which must be translated into U.S. dollars for consolidated reporting purposes. Consequently, exchange rate fluctuations can cause volatility in AIG's reported earnings. When the U.S. dollar weakens against other currencies, AIG's earnings increase. When the U.S. dollar strengthens against other currencies, AIG's earnings decline.

The sensitivity of AIG's consolidated shareholders' equity to foreign exchange volatility is more complex. AIG has significant capital committed overseas, which rises in value on AIG's consolidated balance sheet when the U.S. dollar weakens. AIG also has significant U.S. dollar asset holdings overseas, which offset the foreign exchange exposure arising from AIG's overseas

capital. Similar to the income statement, AIG's overall balance sheet is net long foreign currencies and net short U.S. dollars.

The table below provides an estimate of the sensitivity of shareholders' equity and net income to 10 percent changes in the value of the U.S. dollar relative to foreign currencies as of December 31, 2007, assuming a tax rate of 35 percent:

<i>(in millions)</i>	U.S. dollar up 10 percent	U.S. dollar down 10 percent
Shareholders' equity	\$(466)	\$466
Net income	\$(220)	\$220

AIG analyzes market risk using various statistical techniques including Value at Risk (VaR). VaR is a summary statistical measure that uses the estimated volatility and correlation of market factors to calculate the maximum loss that could occur over a defined period of time with a specified level of statistical confidence. VaR measures not only the size of individual exposures but also the interaction between different market exposures, thereby providing a portfolio approach to measuring market risk. Similar VaR methodologies are used to determine capital requirements for market risk within AIG's economic capital framework.

Insurance, Asset Management and Non-Trading Financial Services VaR

AIG performs one comprehensive VaR analysis across all of its non-trading businesses, and a separate VaR analysis for its trading business at AIGFP. The comprehensive VaR is categorized by AIG business segment (General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management) and also by market risk factor (interest rate, currency and equity). AIG's market risk VaR calculations include exposures to benchmark Treasury or swap interest rates, but do not include exposures to credit-based factors such as credit spreads. AIG's credit exposures within its invested assets and credit derivative portfolios are discussed in Credit Risk Management — Financial Services herein.

For the insurance segments, assets included are invested assets (excluding direct holdings of real estate) and liabilities included are reserve for losses and loss expenses, reserve for unearned premiums, future policy benefits for life and accident and health insurance contracts and other policyholders' funds. For financial services companies, loans and leases represent the majority of assets represented in the VaR calculation, while bonds and notes issued represent the majority of liabilities.

AIG calculated the VaR with respect to net fair values as of December 31, 2007 and 2006. The VaR number represents the maximum potential loss as of those dates that could be incurred with a 95 percent confidence (i.e., only five percent of historical scenarios show losses greater than the VaR figure) within a one-month holding period. AIG uses the historical simulation methodology that entails repricing all assets and liabilities under explicit changes in market rates within a specific historical time period. AIG uses the most recent three years of historical market information for interest rates, foreign exchange rates, and equity

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

index prices. For each scenario, each transaction was repriced. Segment and AIG-wide scenario values are then calculated by netting the values of all the underlying assets and liabilities.

The following table presents the period-end, average, high and low VaRs on a diversified basis and of each component of market risk for AIG's non-trading businesses. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

(in millions)	2007				2006			
	As of December 31	For the Year Ended December 31,			As of December 31	For the Year Ended December 31,		
		Average	High	Low		Average	High	Low

AIG's total non-trading VaR increased from \$5.1 billion at December 31, 2006 to \$5.6 billion at December 31, 2007, primarily due to higher exposures to U.S. equity risk. The higher contribution of U.S. equity risk during 2007 was driven by a combination of three factors:

- increased U.S. equity investment allocation in the General Insurance and Life Insurance & Retirement Services segments,
- increased volatility in U.S. equity prices, and
- rising correlations between U.S. equities and AIG's structural duration exposures in Asia.

Interest rate and foreign exchange volatilities generally moderated during 2007.

Operational Risk Management

AIG's corporate-level Operational Risk Management department (ORM) oversees AIG's operational risk management practices. The Director of ORM reports to the CRO. ORM is responsible for establishing the framework, principles and guidelines for operational risk management. ORM also manages compliance with the requirements of the Sarbanes-Oxley Act of 2002.

Each business unit is responsible for implementing the components of AIG's operational risk management program to ensure that effective operational risk management practices are utilized throughout AIG.

Upon full implementation, the program will consist of a risk and control self assessment (RCSA) process, risk event data analysis, key risk indicators and governance. To date, AIG has developed the methodology for performing a combined operational risk and compliance RCSA in each of AIG's key business units.

Insurance Risk Management

Reinsurance

AIG uses reinsurance programs for its insurance risks as follows:

- facultative to cover large individual exposures;
- quota share treaties to cover specific books of business;
- excess of loss treaties to cover large losses;
- excess or surplus automatic treaties to cover individual life risks in excess of stated per-life retention limits; and
- catastrophe treaties to cover specific catastrophes including earthquake, windstorm and flood.

AIG's Reinsurance Security Department (RSD) conducts periodic detailed assessments of the financial status and condition of current and potential reinsurers, both foreign and domestic. The RSD monitors both the nature of the risks ceded to the reinsurers and the aggregation of total reinsurance recoverables ceded to reinsurers. Such assessments may include, but are not limited to, identifying if a reinsurer is appropriately licensed and has sufficient financial capacity, and evaluating the local economic environment in which a foreign reinsurer operates.

The RSD reviews the nature of the risks ceded to reinsurers and the need for credit risk mitigants. For example, in AIG's treaty reinsurance contracts, AIG frequently includes provisions that require a reinsurer to post collateral when a referenced event occurs. Furthermore, AIG limits its unsecured exposure to reinsurers through the use of credit triggers, which include, but are not limited to, insurer financial strength rating downgrades, declines in policyholders surplus below predetermined levels, decreases in the NAIC risk-based capital (RBC) ratio or reaching maximum limits of reinsurance recoverables. In addition, AIG's CRC reviews all reinsurer exposures and credit limits and approves most large reinsurer credit limits that represent actual or potential credit concentrations. AIG believes that no exposure to a single reinsurer represents an inappropriate concentration of risk to AIG, nor is AIG's business substantially dependent upon any single reinsurance contract.

AIG enters into intercompany reinsurance transactions for its General Insurance and Life Insurance & Retirement Services operations. AIG enters into these transactions as a sound and prudent business practice in order to maintain underwriting control and spread insurance risk among AIG's various legal entities and to leverage economies of scale with external reinsurers. When required for statutory recognition, AIG obtains letters of credit from third-party financial institutions to collateralize these intercompany transactions. At December 31, 2007, approximately \$8.8 billion of letters of credit were outstanding to cover intercompany reinsurance transactions between subsidiaries.

Although reinsurance arrangements do not relieve AIG subsidiaries from their direct obligations to insureds, an efficient and effective reinsurance program substantially mitigates AIG's exposure to potentially significant losses. AIG continually evaluates the reinsurance markets and the relative attractiveness of various arrangements for coverage, including structures such as catastrophe bonds, insurance risk securitizations, "sidecars" and similar vehicles.

Based on this ongoing evaluation and other factors, effective December 31, 2007, Lexington and Concord Re Limited agreed to commute their quota share reinsurance agreement covering U.S. commercial property insurance business written by Lexington on a risk attaching basis. This agreement was effective in July 2006 and was due to expire on January 15, 2008.

For 2008, AIG purchased a U.S. catastrophe coverage of approximately \$1.1 billion in excess of a per occurrence deductible of \$1.5 billion. For Life Insurance & Retirement Services, AIG's 2008 catastrophe program covers losses of \$250 million in excess of \$200 million for Japan and Taiwan only.

Reinsurance Recoverable

General reinsurance recoverable assets are comprised of:

- balances due from reinsurers for indemnity losses and loss expenses billed to, but not yet collected from, reinsurers (Paid Losses Recoverable);
- ultimate ceded reserves for indemnity losses and expenses includes reserves for claims reported but not yet paid and estimates for IBNR (collectively, Ceded Loss Reserves); and
- Ceded Reserves for Unearned Premiums.

At December 31, 2007, general reinsurance assets of \$21.5 billion include Paid Losses Recoverable of \$1.8 billion and Ceded Loss Reserves of \$16.2 billion, and \$4.0 billion of Ceded Reserves for Unearned Premiums. The methods used to estimate IBNR and to establish the resulting ultimate losses involve projecting the frequency and severity of losses over multiple years and are continually reviewed and updated by management. Any adjustments are reflected in income currently. It is AIG's belief that the ceded reserves for losses and loss expenses at December 31, 2007 were representative of the ultimate losses recoverable. Actual losses may differ from the reserves currently ceded.

AIG manages the credit risk in its reinsurance relationships by transacting with reinsurers that it considers financially sound, and when necessary AIG requires reinsurers to post substantial collateral in the form of funds, securities and/or irrevocable letters of credit. This collateral can be drawn on for amounts that remain unpaid beyond specified time periods on an individual reinsurer basis. At December 31, 2007, approximately 55 percent of the general reinsurance assets were from unauthorized reinsurers. The terms authorized and unauthorized pertain to regulatory categories, not creditworthiness. More than 50 percent of these balances were collateralized, permitting statutory recognition. Additionally, with the approval of insurance regulators, AIG posted approximately \$1.8 billion of letters of credit issued by commercial banks in favor of certain Domestic General Insurance companies to permit those companies statutory recognition of balances otherwise uncollateralized at December 31, 2007. The remaining 45 percent of the general reinsurance assets were from authorized reinsurers. At December 31, 2007, approximately 87 percent of the balances with respect to authorized reinsurers are from reinsurers rated A (excellent) or better, as rated by A.M. Best, or A (strong) or better, as rated by S&P. These ratings are measures of financial strength.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

The following table provides information for each reinsurer representing in excess of five percent of AIG's reinsurance assets at December 31, 2007:

<i>(in millions)</i>	S&P Rating ^(a)	A.M. Best Rating ^(a)	Gross General Reinsurance Assets	Percent of General Reinsurance Assets, Net	Collateral Held ^(b)	Uncollateralized General Reinsurance Assets
Reinsurer:						
Swiss Reinsurance Group	AA-	A+	\$1,818	8.5%	\$372	\$1,446
Berkshire Hathaway Insurance Group	AAA	A++	\$1,618	7.5%	\$212	\$1,406
Munich Reinsurance Group	AA-	A+	\$1,200	5.6%	\$430	\$ 770
Lloyd's Syndicates — Lloyd's of London ^(c)	A+	A	\$1,089	5.1%	\$113	\$ 976

(a) Rating designations as of February 19, 2008.

(b) Excludes collateral held in excess of applicable treaty balances.

(c) Excludes Equitas gross reinsurance assets that are unrated, which are less than five percent of AIG's general reinsurance assets.

AIG maintains an allowance for estimated unrecoverable reinsurance of \$520 million. At December 31, 2007, AIG had no significant reinsurance recoverables due from any individual reinsurer that was financially troubled (i.e., liquidated, insolvent, in receivership or otherwise subject to formal or informal regulatory restriction).

Segment Risk Management

Other than as described above, AIG manages its business risk oversight activities through its business segments.

Insurance Operations

AIG's multiple insurance businesses conducted on a global basis expose AIG to a wide variety of risks with different time horizons.

These risks are managed throughout the organization, both centrally and locally, through a number of procedures, including:

- (i) pre-launch approval of product design, development and distribution;
- (ii) underwriting approval processes and authorities;
- (iii) exposure limits with ongoing monitoring;
- (iv) modeling and reporting of aggregations and limit concentrations at multiple levels (policy, line of business, product group, country, individual/group, correlation and catastrophic risk events);
- (v) compliance with financial reporting and capital and solvency targets;
- (vi) extensive use of reinsurance, both internal and third-party; and
- (vii) review and establishment of reserves.

AIG closely manages insurance risk by overseeing and controlling the nature and geographic location of the risks in each line of business underwritten, the terms and conditions of the underwriting and the premiums charged for taking on the risk. Concentrations of risk are analyzed using various modeling techniques and include, but are not limited to, wind, flood, earthquake, terrorism and accident.

AIG has two major categories of insurance risks as follows:

- **General Insurance** — risks covered include property, casualty, fidelity/surety, management liability and mortgage insurance. Risks in the general insurance segment are managed through aggregations and limitations of concentrations at multiple levels: policy, line of business, correlation and catastrophic risk events.
- **Life Insurance & Retirement Services** — risks include mortality and morbidity in the insurance-oriented products and insuffi-

cient cash flows to cover contract liabilities in the retirement savings-oriented products. Risks are managed through product design, sound medical underwriting, external traditional reinsurance programs and external catastrophe reinsurance programs.

AIG is a major purchaser of reinsurance for its insurance operations. The use of reinsurance facilitates insurance risk management (retention, volatility, concentrations) and capital planning locally (branch and subsidiary). AIG may purchase reinsurance on a pooling basis. Pooling of AIG's reinsurance risks enables AIG to purchase reinsurance more efficiently at a consolidated level, manage global counterparty risk and relationships and manage global catastrophe risks, both for the General Insurance and Life Insurance & Retirement Services businesses.

General Insurance

In General Insurance, underwriting risks are managed through the application approval process, exposure limitations as well as through exclusions, coverage limits and reinsurance. The risks covered by AIG are managed through limits on delegated underwriting authority, the use of sound underwriting practices, pricing procedures and the use of actuarial analysis as part of the determination of overall adequacy of provisions for insurance contract liabilities.

A primary goal of AIG in managing its General Insurance operations is to achieve an underwriting profit. To achieve this goal, AIG must be disciplined in its risk selection, and premiums must be adequate and terms and conditions appropriate to cover the risk accepted.

Catastrophe Exposures

The nature of AIG's business exposes it to various catastrophic events in which multiple losses across multiple lines of business can occur in any calendar year. In order to control this exposure, AIG uses a combination of techniques, including setting aggregate limits in key business units, monitoring and modeling accumulated exposures, and purchasing catastrophe reinsurance to supplement its other reinsurance protections.

Natural disasters such as hurricanes, earthquakes and other catastrophes have the potential to adversely affect AIG's operating results. Other risks, such as an outbreak of a pandemic disease, such as the Avian Influenza A Virus (H5N1), could

adversely affect AIG's business and operating results to an extent that may be only partially offset by reinsurance programs.

AIG evaluates catastrophic events and assesses the probability of occurrence and magnitude of catastrophic events through the use of industry recognized models, among other techniques. AIG updates these models by periodically monitoring the exposure to risks of AIG's worldwide General Insurance operations and adjusting such models accordingly. Following is an overview of modeled losses associated with the more significant natural perils, which includes exposures for DBG, Personal Lines, Foreign General (other than Ascot), and The Hartford Steam Boiler Inspection and Insurance Company. Transatlantic and Ascot utilize a different model, and their combined results are presented separately below. Significant life insurance and accident and health (A&H) exposures have been added to these results as well. The modeled results assume that all reinsurers fulfill their obligations to AIG in accordance with their terms.

It is important to recognize that there is no standard methodology to project the possible losses from total property and workers compensation exposures. Further, there are no industry standard assumptions to be utilized in projecting these losses. The use of different methodologies and assumptions could materially change the projected losses. Therefore, these modeled losses may not be comparable to estimates made by other companies.

These estimates are inherently uncertain and may not reflect AIG's maximum exposures to these events. It is highly likely that AIG's losses will vary, perhaps significantly, from these estimates.

AIG has revised the catastrophe exposure disclosures presented below from those included in the 2006 Annual Report on Form 10-K to reflect more recent data, as well as reinsurance programs in place as of January 31, 2008. The modeled results provided in the table below were based on the aggregate exceedence probability (AEP) losses which represent total property, workers compensation, life insurance, and A&H losses that may occur in any single year from one or more natural events. The life insurance and A&H data include exposures for United States, Japan, and Taiwan earthquakes. These represent the largest share of life insurance and A&H exposures to earthquake. A&H losses were modeled using December 2006 data, and life insurance losses were modeled using March 2006 data. Modeled life insurance results using more recent data will be available by May 2008. However, management does not believe that changes in the life insurance and A&H exposures will materially increase AIG's overall exposures. The updated property exposures were generally modeled with exposure data as of June 2007. Lexington commercial lines exposure, which represents the largest share of the modeled losses, was based on data as of October 2007. All reinsurance program structures, including both domestic and international structures, have also been updated. The values provided are based on 100-year return period losses, which have a one percent likelihood of being exceeded in any single year. Thus, the model projects that there is a one percent probability that AIG could incur in any year losses in excess of the modeled amounts for these perils. Losses include loss adjustment expenses and the net values include reinstatement premiums.

<i>(in millions)</i>	Gross	Net of 2008 Reinsurance	Net After Income Tax	% of Consolidated Shareholders' Equity at December 31, 2007
Natural Peril:				
Earthquake	\$5,625	\$3,397	\$2,208	2.3%
Tropical Cyclone*	\$5,802	\$3,430	\$2,230	2.3%

* Includes hurricanes, typhoons and other wind-related events.

Gross earthquake and tropical cyclone modeled losses increased \$1.9 billion and \$1.0 billion, respectively, while net losses increased \$923 million and \$234 million, respectively. The earthquake probable maximum loss for 2007 now includes AIG's life insurance and A&H exposures that were previously not included. These changes also reflect overall increased exposure, changes in the Lexington quota share program, the inclusion of loss adjustment expenses, and changes in corporate catastrophe structure.

In addition to the return period loss, AIG evaluates potential single event earthquake and hurricane losses that may be incurred. The single events utilized are a subset of potential events identified and utilized by Lloyd's (as described in Lloyd's *Realistic Disaster Scenarios, Scenario Specifications, April 2006*) and referred to as Realistic Disaster Scenarios (RDSs). The purpose of this analysis is to utilize these RDSs to provide a reference frame and place into context the model results. However, it is important to note that the specific events used for this analysis do not necessarily represent the worst case loss that

AIG could incur from this type of an event in these regions. The losses associated with the RDSs are included in the table below.

Single event modeled property and workers compensation losses to AIG's worldwide portfolio of risk for key geographic areas are set forth below. Gross values represent AIG's liability after the application of policy limits and deductibles, and net values represent losses after reinsurance is applied and include reinsurance reinstatement premiums. Both gross and net losses include loss adjustment expenses.

<i>(in millions)</i>	Gross	Net of 2008 Reinsurance
Natural Peril:		
San Francisco Earthquake	\$6,236	\$3,809
Miami Hurricane	\$5,829	\$3,280
Northeast Hurricane	\$5,287	\$3,739
Los Angeles Earthquake	\$5,375	\$3,297
Gulf Coast Hurricane	\$3,730	\$2,088
Japanese Earthquake	\$1,109	\$ 406
European Windstorm	\$ 252	\$ 89
Japanese Typhoon	\$ 177	\$ 103

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

AIG also monitors key international property risks utilizing modeled statistical return period losses. Based on these simulations, the 100-year return period loss for Japanese Earthquake is \$510 million gross, and \$170 million net, the 100-year return period loss for European Windstorm is \$448 million gross, and \$154 million net, and the 100-year return period loss for Japanese Typhoon is \$340 million gross, and \$212 million net.

The losses provided above do not include Transatlantic and Ascot. The combined earthquake and tropical cyclone 100-year return period modeled losses for Ascot and Transatlantic together are estimated to be \$1.0 billion, on a gross basis, \$749 million, net of reinsurance.

ACTUAL RESULTS IN ANY PERIOD ARE LIKELY TO VARY, PERHAPS MATERIALLY, FROM THE MODELED SCENARIOS, AND THE OCCURRENCE OF ONE OR MORE SEVERE EVENTS COULD HAVE A MATERIAL ADVERSE EFFECT ON AIG'S FINANCIAL CONDITION, RESULTS OF OPERATIONS AND LIQUIDITY.

Measures Implemented to Control Hurricane and Earthquake Catastrophic Risk

Catastrophic risk from the earthquake and hurricane perils is proactively managed through reinsurance programs, and aggregate accumulation monitoring. Catastrophe reinsurance is purchased by AIG from financially sound reinsurers. Recoveries under this program, along with other non-catastrophic reinsurance protections, are reflected in the net values provided in the tables above. In addition to catastrophic reinsurance programs, hurricane and earthquake exposures are controlled by periodically monitoring aggregate exposures. The aggregate exposures are calculated by compiling total liability within AIG defined hurricane and earthquake catastrophe risk zones and therefore represent the maximum that could be lost in any individual zone. These aggregate accumulations are tracked over time in order to monitor both long- and short-term trends. AIG's major property writers, Lexington and AIG Private Client Group, have also implemented catastrophe-related underwriting procedures and manage their books at an account level. Lexington individually models most accounts prior to binding in order to specifically quantify catastrophic risk for each account.

Terrorism

Exposure to loss from terrorist attack is controlled by limiting the aggregate accumulation of workers compensation and property insurance that is underwritten within defined target locations. Modeling is used to provide projections of probable maximum loss by target location based upon the actual exposures of AIG policyholders.

Terrorism risk is monitored to manage AIG's exposure. AIG shares its exposures to terrorism risks under the Terrorism Risk Insurance Act, which was recently extended through December 31, 2014 by the Terrorism Risk Insurance Program Reauthorization Act of 2007 (TRIA). During 2007, AIG's deductible under TRIA was approximately \$4.0 billion, with a 15 percent share of certified terrorism losses in excess of the deductible. As of January 1, 2008, the deductible increased to \$4.2 billion, with a 15 percent share of certified terrorism losses in excess of the deductible. AIG

actively monitors and controls its aggregate accumulated exposure within the parameters of the protection provided by the TRIA.

Life Insurance & Retirement Services

In Life Insurance & Retirement Services, the primary risks are the following:

- underwriting, which represents the exposure to loss resulting from the actual policy experience emerging adversely in comparison to the assumptions made in the product pricing associated with mortality, morbidity, termination and expenses; and
- investment risk which represents the exposure to loss resulting from the cash flows from the invested assets being less than the cash flows required to meet the obligations of the expected policy and contract liabilities and the necessary return on investments.

AIG businesses manage these risks through exposure limitations and the active management of the asset-liability relationship in their operations. The emergence of significant adverse experience would require an adjustment to DAC and benefit reserves that could have a material adverse effect on AIG's consolidated results of operations for a particular period.

AIG's Foreign Life Insurance & Retirement Services companies generally limit their maximum underwriting exposure on life insurance of a single life to approximately \$1.7 million of coverage. AIG's Domestic Life Insurance & Retirement Services companies limit their maximum underwriting exposure on life insurance of a single life to \$15 million of coverage in certain circumstances by using yearly renewable term reinsurance. In Life Insurance & Retirement Services, the reinsurance programs provide risk mitigation per policy, per individual life for life and group covers and for catastrophic risk events.

Pandemic Influenza

The potential for a pandemic influenza outbreak has received much recent attention. While outbreaks of the Avian Flu continue to occur among poultry or wild birds in a number of countries in Asia, Europe, including the U.K., and Africa, transmission to humans has been rare to date. If the virus mutates to a form that can be transmitted from human to human, it has the potential to spread rapidly worldwide. If such an outbreak were to take place, early quarantine and vaccination could be critical to containment.

The contagion and mortality rates of any mutated H5N1 virus that can be transmitted from human to human are highly speculative. AIG continues to monitor the developing facts. A significant global outbreak could have a material adverse effect on Life Insurance & Retirement Services operating results and liquidity from increased mortality and morbidity rates. AIG continues to analyze its exposure to this serious threat and has engaged an external risk management firm to model loss scenarios associated with an outbreak of Avian Flu. For a "mild" scenario, AIG estimates its after-tax net losses under its life insurance policies due to Avian Flu at approximately 2 percent of consolidated shareholders' equity as of December 31, 2007. This estimate was calculated over a 3-year period, although the

majority of the losses would be incurred in the first year. The modeled losses calculated were based on 2006 policy data representing approximately 92 percent of AIG's individual life, group life and credit life books of business, net of reinsurance. This estimate does not include claims that could be made under other policies, such as business interruption or general liability policies, and does not reflect estimates for losses resulting from disruption of AIG's own business operations or asset losses that may arise out of such a pandemic. The model used to generate this estimate has only recently been developed. The reasonableness of the model and its underlying assumptions cannot readily be verified by reference to comparable historical events. As a result, AIG's actual losses from a pandemic influenza outbreak are likely to vary significantly from those predicted by the model.

Financial Services

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance.

Capital Markets

The Capital Markets operations of AIG are conducted primarily through AIGFP, which engages as principal in standard and customized interest rate, currency, equity, commodity, energy and credit products with top-tier corporations, financial institutions, governments, agencies, institutional investors and high-net-worth individuals throughout the world.

The senior management of AIG defines the policies and establishes general operating parameters for Capital Markets operations. AIG's senior management has established various oversight committees to monitor on an ongoing basis the various financial market, operational and credit risk attendant to the Capital Markets operations. The senior management of AIGFP reports the results of its operations to and reviews future strategies with AIG's senior management.

AIGFP actively manages its exposures to limit potential economic losses, while maximizing the rewards afforded by these business opportunities even though some products or derivatives may result in operating income volatility. In doing so, AIGFP must continually manage a variety of exposures including credit, market, liquidity, operational and legal risks.

Derivative Transactions

A counterparty may default on any obligation to AIG, including a derivative contract. Credit risk is a consequence of extending credit and/or carrying trading and investment positions. Credit risk exists for a derivative contract when that contract has a positive fair value to AIG. The maximum potential exposure will increase or decrease during the life of the derivative commitments as a function of maturity and market conditions. To help manage this risk, AIGFP's credit department operates within the guidelines set by the CRC. Transactions which fall outside these pre-established guidelines require the specific approval of the CRC. It is also AIG's policy to establish reserves for potential credit impairment when necessary.

In addition, AIGFP utilizes various credit enhancements, including letters of credit, guarantees, collateral, credit triggers, credit derivatives and margin agreements to reduce the credit risk relating to its outstanding financial derivative transactions. AIGFP requires credit enhancements in connection with specific transactions based on, among other things, the creditworthiness of the counterparties, and the transaction's size and maturity. Furthermore, AIGFP generally seeks to enter into agreements that have the benefit of set-off and close-out netting provisions. These provisions provide that, in the case of an early termination of a transaction, AIGFP can setoff its receivables from a counterparty against its payables to the same counterparty arising out of all covered transactions. As a result, where a legally enforceable netting agreement exists, the fair value of the transaction with the counterparty represents the net sum of estimated positive fair values. The fair value of AIGFP's interest rate, currency, commodity and equity swaps, options, swaptions, and forward commitments, futures, and forward contracts approximated \$17.13 billion at December 31, 2007 and \$19.61 billion at December 31, 2006. Where applicable, these amounts have been determined in accordance with the respective master netting agreements.

AIGFP evaluates the counterparty credit quality by reference to ratings from rating agencies or, where such ratings are not available, by internal analysis consistent with the risk rating policies of the CRC. In addition, AIGFP's credit approval process involves pre-set counterparty and country credit exposure limits and, for particularly credit-intensive transactions, requires approval from the CRC. AIG estimates that the average credit rating of Capital Markets derivatives counterparties, measured by reference to the fair value of its derivative portfolio as a whole, is equivalent to the AA rating category.

At December 31, 2007 and 2006, the fair value of Capital Markets derivatives portfolios by counterparty credit rating was as follows:

<i>(in millions)</i>	2007	2006
Rating:		
AAA	\$ 5,069	\$ 5,465
AA	5,166	8,321
A	4,796	3,690
BBB	1,801	2,032
Below investment grade	302	99
Total	\$17,134	\$19,607

Credit Derivatives

AIGFP enters into credit derivative transactions in the ordinary course of its business. The majority of AIGFP's credit derivatives require AIGFP to provide credit protection on a designated portfolio of loans or debt securities. AIGFP provides such credit protection on a "second loss" basis, under which AIGFP's payment obligations arise only after credit losses in the designated portfolio exceed a specified threshold amount or level of "first losses." The threshold amount of credit losses that must be realized before AIGFP has any payment obligation is negotiated

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

by AIGFP for each transaction to provide that the likelihood of any payment obligation by AIGFP under each transaction is remote, even in severe recessionary market scenarios. The underwriting process for these derivatives included assumptions of severely stressed recessionary market scenarios to minimize the likelihood of realized losses under these obligations.

In certain cases, the credit risk associated with a designated portfolio is tranching into different layers of risk, which are then analyzed and rated by the credit rating agencies. Typically, there will be an equity layer covering the first credit losses in respect of the portfolio up to a specified percentage of the total portfolio, and then successive layers ranging from generally a BBB-rated layer to one or more AAA-rated layers. In transactions that are rated with respect to the risk layer or tranche that is immediately junior to the threshold level above which AIGFP's payment obligation would generally arise, a significant majority are rated AAA by the rating agencies. In transactions that are not rated, AIGFP applies the same risk criteria for setting the threshold level for its payment obligations. Therefore, the risk layer assumed by AIGFP with respect to the designated portfolio in these transactions is often called the "super senior" risk layer, defined as the layer of credit risk senior to a risk layer that has been rated AAA by the credit rating agencies, or if the transaction is not rated, equivalent thereto.

At December 31, 2007 the notional amounts and unrealized market valuation loss of the super senior credit default swap portfolio by asset classes were as follows:

	Notional Amount (in billions)	Unrealized Market Valuation Loss (in millions)
Corporate loans ^(a)	\$230	\$ —
Prime residential mortgages ^(a)	149	—
Corporate Debt/CLOs	70	226
Multi-sector CDO ^(b)	78	11,246
Total	\$527	\$11,472

(a) Predominantly represent transactions written to facilitate regulatory capital relief.

(b) Approximately \$61.4 billion in notional amount of the multi-sector CDO pools include some exposure to U.S. subprime mortgages.

Approximately \$379 billion (consisting of the corporate loans and prime residential mortgages) of the \$527 billion in notional exposure of AIGFP's super senior credit default swap portfolio as of December 31, 2007 represents derivatives written for financial institutions, principally in Europe, for the purpose of providing them with regulatory capital relief rather than risk mitigation. In exchange for a minimum guaranteed fee, the counterparties receive credit protection in respect of diversified loan portfolios they own, thus improving their regulatory capital position. These derivatives are generally expected to terminate at no additional cost to the counterparty upon the counterparty's adoption of models compliant with the Basel II Accord. AIG expects that the majority of these transactions will be terminated within the next 12 to 18 months by AIGFP's counterparties as they implement models compliant with the new Basel II Accord. As of February 26, 2008, \$54 billion in notional exposures have either been terminated or are in the process of being terminated. AIGFP was

not required to make any payments as part of these terminations and in certain cases was paid a fee upon termination. In light of this experience to date and after other comprehensive analyses, AIG did not recognize an unrealized market valuation adjustment for this regulatory capital relief portfolio for the year ended December 31, 2007. AIG will continue to assess the valuation of this portfolio and monitor developments in the marketplace. There can be no assurance that AIG will not recognize unrealized market valuation losses from this portfolio in future periods. In addition to writing credit protection on the super senior risk layer on designated portfolios of loans or debt securities, AIGFP also wrote protection on tranches below the super senior risk layer. At December 31, 2007 the notional amount of the credit default swaps in the regulatory capital relief portfolio written on tranches below the super senior risk layer was \$5.8 billion, with an estimated fair value of \$(25) million.

AIGFP has also written credit protection on the super senior risk layer of diversified portfolios of investment grade corporate debt, collateralized loan obligations (CLOs) and multi-sector CDOs. AIGFP is at risk only on the super senior portion related to a diversified portfolio referenced to loans or debt securities. The super senior risk portion is the last tranche to suffer losses after significant subordination. Credit losses would have to erode all tranches junior to the super senior tranche before AIGFP would suffer any realized losses. The subordination level required for each transaction is determined based on internal modeling and analysis of the pool of underlying assets and is not dependent on ratings determined by the rating agencies. While the credit default swaps written on corporate debt obligations are cash settled, the majority of the credit default swaps written on CDOs and CLOs require physical settlement. Under a physical settlement arrangement, AIGFP would be required to purchase the referenced super senior security at par in the event of a non-payment on that security.

Certain of these credit derivatives are subject to collateral posting provisions. These provisions differ among counterparties and asset classes. In the case of most of the multi-sector CDO transactions, the amount of collateral required is determined based on the change in value of the underlying cash security that represents the super senior risk layer subject to credit protection, and not the change in value of the super senior credit derivative.

AIGFP is indirectly exposed to U.S. residential mortgage subprime collateral in the CDO portfolios, the majority of which is from 2004 and 2005 vintages. However, certain of the CDOs on which AIGFP provided credit protection permit the collateral manager to substitute collateral during the reinvestment period, subject to certain restrictions. As a result, in certain transactions, U.S. residential mortgage subprime collateral of 2006 and 2007 vintages has been added to the collateral pools. At December 31, 2007, U.S. residential mortgage subprime collateral of 2006 and 2007 vintages comprised approximately 4.9 percent of the total collateral pools underlying the entire portfolio of CDOs with credit protection.

AIGFP has written 2a-7 Puts in connection with certain multi-sector CDOs that allow the holders of the securities to treat the securities as eligible short-term 2a-7 investments under the

Investment Company Act of 1940. Holders of securities are permitted, in certain circumstances, to tender their securities to the issuers at par. If an issuer's remarketing agent is unable to resell the securities so tendered, AIGFP must purchase the securities at par as long as the security has not experienced a default. During 2007, AIGFP repurchased securities with a principal amount of approximately \$754 million pursuant to these obligations. In certain transactions, AIGFP has contracted with third parties to provide liquidity for the securities if they are put to AIGFP for up to a three-year period. Such liquidity facilities totaled approximately \$3 billion at December 31, 2007. As of February 26, 2008, AIGFP has not utilized these liquidity facilities. At December 31, 2007, AIGFP had approximately \$6.5 billion of notional exposure on 2a-7 Puts, included as part of the multi-sector CDO portfolio discussed herein.

As of January 31, 2008, a significant majority of AIGFP's super senior exposures continued to have tranches below AIGFP's attachment point that have been explicitly rated AAA or, in AIGFP's judgment, would have been rated AAA had they been rated. AIGFP's portfolio of credit default swaps undergoes regular monitoring, modeling and analysis and contains protection through collateral subordination.

AIGFP accounts for its credit default swaps in accordance with FAS 133 "Accounting For Derivative Instruments and Hedging Activities" and Emerging Issues Task Force 02-3, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities" (EITF 02-3). In accordance with EITF 02-3, AIGFP does not recognize income in earnings at the inception of each transaction because the inputs to value these instruments are not derivable from observable market data.

The valuation of the super senior credit derivatives has become increasingly challenging given the limitation on the availability of market observable information due to the lack of trading and price transparency in the structured finance market, particularly in the fourth quarter of 2007. These market conditions have increased the reliance on management estimates and judgments in arriving at an estimate of fair value for financial reporting purposes. Further, disparities in the valuation methodologies employed by market participants and the varying judgments reached by such participants when assessing volatile markets has increased the likelihood that the various parties to these instruments may arrive at significantly different estimates as to their fair values.

AIGFP's valuation methodologies for the super senior credit default swap portfolio have evolved in response to the deteriorating market conditions and the lack of sufficient market observable information. AIG has sought to calibrate the model to market information and to review the assumptions of the model on a regular basis.

AIGFP employs a modified version of the BET model to value its super senior credit default swap portfolio, including the 2a-7 Puts. The BET model utilizes default probabilities derived from credit spreads implied from market prices for the individual securities included in the underlying collateral pools securing the CDOs.

AIGFP obtained prices on these securities from the CDO collateral managers.

The BET model also utilizes diversity scores, weighted average lives, recovery rates and discount rates. The determination of some of these inputs require the use of judgment and estimates, particularly in the absence of market observable data. AIGFP also employed a Monte Carlo simulation to assist in quantifying the effect on valuation of the CDO of the unique features of the CDO's structure such as triggers that divert cash flows to the most senior level of the capital structure.

The credit default swaps written by AIGFP cover only the failure of payment on the super senior CDO security. AIGFP does not own the securities in the CDO collateral pool. The credit spreads implied from the market prices of the securities in the CDO collateral pool incorporate the risk of default (credit risk), the market's price for liquidity risk and in distressed markets, the risk aversion costs. Spreads on credit derivatives tend to be narrower because, unlike in the case of investing in a bond, there is no need to fund the position (except when an actual credit event occurs). In times of illiquidity, the difference between spreads on cash securities and derivative instruments (the "negative basis") may be even wider for high quality assets. AIGFP was unable to reliably verify this negative basis due to the accelerating severe dislocation, illiquidity and lack of trading in the asset backed securities market during the fourth quarter of 2007 and early 2008. The valuations produced by the BET model therefore represent the valuations of the underlying super senior CDO cash securities with no recognition of the effect of the basis differential on that valuation.

AIGFP also considered the valuation of the super senior CDO securities provided by third parties, including counterparties to these transactions, and made adjustments as necessary.

As described above, AIGFP uses numerous assumptions in determining its best estimate of the fair value of the super senior credit default swap portfolio. The most significant assumption utilized in developing the estimate is the pricing of the securities within the CDO collateral pools. If the actual pricing of the securities within the collateral pools differs from the pricing used in estimating the fair value of the super senior credit default swap portfolio, there is potential for significant variation in the fair value estimate. A decrease by five points (for example, from 87 cents per dollar to 82 cents per dollar) in the aggregate price of the securities would cause an additional unrealized market valuation loss of approximately \$3.7 billion, while an increase in the aggregate price of the securities by five points (for example, from 90 cents per dollar to 95 cents per dollar) would reduce the unrealized market valuation loss by approximately \$3 billion. The effect on the unrealized market valuation loss is not proportional to the change in the aggregate price of the securities.

In the case of credit default swaps written on investment grade corporate debt and CLOs, AIGFP estimated the value of its obligations by reference to the relevant market indices or third party quotes on the underlying super senior tranches where available.

AIGFP monitors the underlying portfolios to determine whether the credit loss experience for any particular portfolio has caused

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

the likelihood of AIGFP having a payment obligation under the transaction to be greater than super senior risk.

As of February 26, 2008, AIGFP had received collateral calls from counterparties in respect of certain super senior credit default swaps (including those entered into by counterparties for regulatory capital relief purposes and those in respect of corporate debt/CLOs). AIG is aware that valuation estimates made by certain of the counterparties with respect to certain super senior credit default swaps or the underlying reference CDO securities, for purposes of determining the amount of collateral required to be posted by AIGFP in connection with such instruments, differ significantly from AIGFP's estimates. AIGFP has been able to successfully resolve some of the differences, including in certain cases entering into compromise collateral arrangements, some of which are for specified periods of time. AIGFP is also in discussions with other counterparties to resolve such valuation differences. As of February 26, 2008, AIGFP had posted collateral (or had received collateral, where offsetting exposures on other transactions resulted in the counterparty posting to AIGFP) based on exposures, calculated in respect of super senior default swaps, in an aggregate amount of approximately \$5.3 billion. Valuation estimates made by counterparties for collateral purposes were considered in the determination of the fair value estimates of AIGFP's super senior credit default swap portfolio.

Both AIG's ERM department and AIGFP have conducted risk analyses of the super senior multi-sector CDO credit default swap portfolio of AIGFP. There is currently no probable and reasonably estimable realized loss in this portfolio at December 31, 2007. AIG's analyses have been conducted to assess the risk of incurring net realized losses over the remaining life of the portfolio. In addition to analyses of each individual risk in the portfolio, AIG conducted certain ratings-based stress tests, which centered around scenarios of further stress on the portfolio resulting from downgrades by the rating agencies from current levels on the underlying collateral in the CDO structures supported by AIGFP's credit default swaps. These rating actions would be prompted by factors such as the worsening beyond current estimates of delinquency and residential housing price deterioration in the underlying assets in the collateral securities of the CDO structures. The results of these stress tests indicated possible realized losses on a static basis, since the assumptions of losses in these stress tests assumed immediate realization of loss. Actual realized losses would only be experienced over time given the timing of losses incurred in the underlying portfolios and the timing of breaches of the subordination afforded to AIGFP

through the structures of the CDO. No benefit was taken in these stress tests for cash flow diversion features, recoveries upon default or other risk mitigant benefits. Based on these analyses and stress tests, AIG believes that any losses realized over time by AIGFP as a result of meeting its obligations under these derivatives will not be material to AIG's consolidated financial condition, although it is possible that such realized losses could be material to AIG's consolidated results of operations for an individual reporting period.

Capital Markets Trading VaR

AIGFP attempts to minimize risk in benchmark interest rates, equities, commodities and foreign exchange. Market exposures in option implied volatilities, correlations and basis risks are also minimized over time but those are the main types of market risks that AIGFP manages.

AIGFP's minimal reliance on market risk driven revenue is reflected in its VaR. AIGFP's VaR calculation is based on the interest rate, equity, commodity and foreign exchange risk arising from its portfolio. Credit-related factors, such as credit spreads or credit default, are not included in AIGFP's VaR calculation. Because the market risk with respect to securities available for sale, at market, is substantially hedged, segregation of the financial instruments into trading and other than trading was not deemed necessary. AIGFP operates under established market risk limits based upon this VaR calculation. In addition, AIGFP backtests its VaR.

In the calculation of VaR for AIGFP, AIG uses the historical simulation methodology based on estimated changes to the value of all transactions under explicit changes in market rates and prices within a specific historical time period. AIGFP attempts to secure reliable and independent current market prices, such as published exchange prices, external subscription services such as Bloomberg or Reuters, or third-party or broker quotes. When such prices are not available, AIGFP uses an internal methodology which includes extrapolation from observable and verifiable prices nearest to the dates of the transactions. Historically, actual results have not deviated from these models in any material respect.

AIGFP reports its VaR level using a 95 percent confidence interval and a one-day holding period, facilitating risk comparison with AIGFP's trading peers and reflecting the fact that market risks can be actively assumed and offset in AIGFP's trading portfolio.

The following table presents the year-end, average, high, and low VaRs* on a diversified basis and of each component of market risk for Capital Markets operations for the years 2007 and 2006. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

(in millions)	As of December 31	For the Year Ended December 31, 2007			As of December 31	For the Year Ended December 31, 2006		
		Average	High	Low		Average	High	Low
Total AIG trading market risk:								
Diversified	\$5	\$5	\$8	\$4	\$4	\$4	\$7	\$3
Interest rate	3	2	3	2	2	2	3	1
Currency	1	1	2	1	1	1	3	1
Equity	3	3	5	2	3	3	4	2
Commodity	3	3	7	2	5	3	5	2

* The VaR calculation has been changed from a 3-year time series to a 5-year time series. The December 31, 2006 VaR reflects this change.

Aircraft Leasing

AIG's Aircraft Leasing operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to foreign and domestic airlines and companies associated with the airline industry. Risks inherent in this business, and which are managed at the business unit level, include the following:

- the risk that there will be no market for the aircraft acquired;
- the risk that aircraft cannot be placed with lessees;
- the risk of nonperformance by lessees; and
- the risk that aircraft and related assets cannot be disposed of at the time and in a manner desired.

The airline industry is sensitive to changes in economic conditions and is cyclical and highly competitive. Airlines and related companies may be affected by political or economic instability, terrorist activities, changes in national policy, competitive pressures on certain air carriers, fuel prices and shortages, labor stoppages, insurance costs, recessions, world health issues and other political or economic events adversely affecting world or regional trading markets.

ILFC's revenues and operating income may be adversely affected by the volatile competitive environment in which its customers operate. ILFC is exposed to operating loss and liquidity strain through nonperformance of aircraft lessees, through owning aircraft which it is unable to sell or re-lease at acceptable rates at lease expiration and, in part, through committing to purchase aircraft which it is unable to lease.

ILFC manages the risk of nonperformance by its lessees with security deposit requirements, repossession rights, overhaul requirements and close monitoring of industry conditions through its marketing force. Approximately 90 percent of ILFC's fleet is leased to non-U.S. carriers, and the fleet, comprised of the most efficient aircraft in the airline industry, continues to be in high demand from such carriers.

Management formally reviews regularly, and no less frequently than quarterly, issues affecting ILFC's fleet, including events and circumstances that may cause impairment of aircraft values. Management evaluates aircraft in the fleet as necessary based on these events and circumstances in accordance with Statement of Financial Accounting Standards No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets" (FAS 144). ILFC has not recognized any impairment related to its fleet in 2007, 2006

or 2005. ILFC has been able to re-lease the aircraft without diminution in lease rates that would result in an impairment under FAS 144.

Consumer Finance

AIG's Consumer Finance operations provide a wide variety of consumer finance products, including real estate and other consumer loans, credit card loans, retail sales finance and credit-related insurance to customers both domestically and overseas, particularly in emerging markets. Consumer Finance operations include AGF as well as AIGCFG. AGF provides a wide variety of consumer finance products, including real estate loans, non-real estate loans, retail sales finance and credit-related insurance to customers in the United States, the U.K., Puerto Rico and the U.S. Virgin Islands. AIGCFG, through its subsidiaries, is engaged in developing a multi-product consumer finance business with an emphasis on emerging markets.

Many of AGF's borrowers are non-prime or subprime. The real estate loans are comprised principally of first-lien mortgages on residential real estate generally having a maximum term of 360 months, and are considered non-conforming. The real estate loans may be closed-end accounts or open-end home equity lines of credit and are principally fixed rate products. AGF does not offer mortgage products with borrower payment options that allow for negative amortization of the principal balance. The secured non-real estate loans are secured by consumer goods, automobiles or other personal property. Both secured and unsecured non-real estate loans and retail sales finance receivables generally have a maximum term of 60 months.

Current economic conditions, such as interest rate and employment levels, can have a direct effect on the borrowers' ability to repay these loans. AGF manages the credit risk inherent in its portfolio by using credit scoring models at the time of credit applications, established underwriting criteria, and, in certain cases, individual loan reviews. AGF monitors the quality of the finance receivables portfolio and determines the appropriate level of the allowance for losses through its Credit Strategy and Policy Committee. This Committee bases its conclusions on quantitative analyses, qualitative factors, current economic conditions and trends, and each Committee member's experience in the consumer finance industry.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Through 2007, the overall credit quality of AGF's finance receivables portfolio deteriorated modestly primarily due to negative economic fundamentals, a higher proportion of non-real estate loans and retail sales finance loans and the aging of the real estate loan portfolio. As of December 31, 2007, the 60-day delinquency rate for the entire portfolio increased by 78 basis points to 2.84 percent compared to 2006, while the 60-day delinquency rate for the real estate loans increased by 88 basis points to 2.64 percent. In 2007, AGF's net charge-off rate increased to 1.16 percent compared to 0.95 percent in 2006, which reflected \$6 million of non-recurring recoveries. Further weakening in the U.S. housing market or the overall U.S. economy may adversely affect the credit quality of AGF's finance receivables.

AIGCFG monitors the quality of its finance receivable portfolio and determines the appropriate level of the allowance for losses through several internal committees. These committees base their conclusions on quantitative analysis, qualitative factors, current economic conditions and trends, political and regulatory implications, competition and the judgment of the committees' members.

AIG's Consumer Finance operations are exposed to credit risk and risk of loss resulting from adverse fluctuations in interest rates and payment defaults. Credit loss exposure is managed through a combination of underwriting controls, mix of finance receivables, collateral and collection efficiency. Large product programs are subject to CRC approval.

Over half of the finance receivables are real estate loans which are collateralized by the related properties. With respect to credit losses, the allowance for losses is maintained at a level considered adequate to absorb anticipated credit losses existing in that portfolio as of the balance sheet date.

Asset Management

AIG's Asset Management operations are exposed to various forms of credit, market and operational risks. Asset Management complies with AIG's corporate risk management guidelines and framework and is subject to periodic reviews by the CRC. In addition, transactions are referred to the Asset Management investment committees for approval of investment decisions.

The majority of the credit and market risk exposures within Asset Management results from the Spread-Based Investment business and the investment activities of AIG Global Real Estate.

In the Spread-Based Investment businesses, GIC and MIP, the primary risk is investment risk, which represents the exposure to loss resulting from the cash flows from the invested assets being less than the cash flows required to meet the obligations of the liabilities and the necessary return on investments. Credit risk is also a significant component of the investment strategy for these businesses. Market risk is taken in the form of duration and convexity risk. While AIG generally maintains a matched asset-liability relationship, it may occasionally determine that it is economically advantageous to be in an unmatched duration position. The risks in the spread-based businesses are managed through exposure limitations, active management of the investment portfolios and close oversight of the asset-liability relationship.

AIG Global Real Estate is exposed to the general conditions in global real estate markets and the credit markets. Such exposure can subject Asset Management to delays in real estate property development and sales, additional carrying costs and in turn affect operating results within the segment. These risks are mitigated through the underwriting process, transaction and contract terms and conditions and portfolio diversification by type of project, sponsor, real estate market and country. AIG's exposure to real estate investments is monitored on an ongoing basis by the Asset Management Real Estate Investment Committee.

Asset Management is also exposed to market risk with respect to the warehoused investing activities of AIG Investments. During the warehousing period, AIG bears the cost and risks associated with carrying these investments and consolidates them on its balance sheet and records the operating results until the investments are transferred, sold or otherwise divested. Changes in market conditions may negatively affect the fair value of these warehoused investments. Market conditions may impede AIG from launching new investment products for which these warehoused assets are being held, which could result in AIG not recovering its investment upon transfer or divestment. In the event that AIG is unable to transfer or otherwise divest its interest in the warehoused investment to third parties, AIG could be required to hold these investments indefinitely.

Economic Capital

Since mid-2005, AIG has been developing a firm-wide economic capital model to improve decision making and to enhance shareholder value. Economic Capital is the amount of capital the organization, its segments, profit centers, products or transactions require to cover potential, unexpected losses within a confidence level consistent with the risk appetite and risk tolerances specified by management. The Economic Capital requirement can then be compared with the Economic Capital resources available to AIG.

The Economic Capital requirement is driven by exposures to risks and interrelationships among various types of risks. As a global leader in insurance and financial services, AIG is exposed to various risks including underwriting, financial and operational risks. The Economic Capital initiative has modeled these risks into five major categories: property & casualty insurance risk, life insurance risk, market risk, credit risk and operational risk. Within each risk category, there are sub-risks that have been modeled in greater detail. The Economic Capital initiative also analyzes the interrelationships among various types of risk, aggregate exposure accumulation and concentration, and includes diversification benefits within and across risk categories and business segments.

A primary objective of the Economic Capital initiative is to develop a comprehensive framework to discuss capital and performance on a risk-adjusted basis internally with AIG management and externally with the investment community, credit providers, regulators and rating agencies. Economic Capital analysis provides a framework to validate AIG's capital adequacy, to measure more precisely capital efficiency at various levels throughout the organization, to allocate capital consistently among

AIG's businesses, to quantify the specific areas of diversification benefits and to assess relative economic value added by a business, product or transaction to AIG as a whole. The Economic Capital initiative will also provide necessary and relevant analyses and inputs in developing a more efficient capital structure. Other key areas of Economic Capital applications include strategic decision-making for mergers, acquisitions and divestitures, risk accumulation and concentration, risk retention, reinsurance and hedging strategies and product development and pricing.

During 2006, AIG developed a methodology framework that incorporates financial services industry best practices, maintains consistency with regulatory frameworks and reflects AIG's distinct global business and management strategies. By utilizing stochastic simulation techniques, where appropriate, AIG enhanced existing models or developed new ones through a collaborative effort among business executives, actuaries, finance specialists and risk professionals. The initial assessments provided useful insight into the overall capital strength of AIG and its segments.

Throughout 2007, AIG's focus has been on a wide range of business applications of the model together with the continued enhancement of the granularity of the model. Key methodology enhancements introduced during 2007 include capital fungibility and diversification among legal entities, business units and geographic regions, consistent economic scenarios in developed and developing markets, and extensive catastrophic scenario analysis and stress testing. Furthermore, AIG enhanced its comprehensive set of risk governance structures to support the model's inputs, assumptions and methodologies. Finally, AIG has engaged a panel of independent experts to provide further assurance to AIG's senior management, business segment executives and external constituents as to the validity of the model and its results for business segments and for AIG in the aggregate.

Besides model enhancements and firm-wide capital strength analysis, during 2007 AIG also incorporated its Economic Capital model and analysis into a number of specific business issues and in developing new business strategies. For example, economic capital analysis is being incorporated into the assessment phase for mergers, acquisitions and divestitures, and in the development of capital markets solutions. In the reinsurance area, economic capital considerations are fundamental to the development of optimal risk retention and reinsurance strategies and management of credit exposures to reinsurance counterparties. In the Life Insurance & Retirement Services segment, the Economic Capital model has been used for product development, pricing and hedging strategies for living benefits in the variable annuity business. For life insurance products in Asian markets, enhanced asset-liability management strategies have been formulated for long duration liability structures and low interest rate environments in certain markets using the technology developed for AIG's Economic Capital model.

In 2008, AIG plans to extend the model's application by building on the work performed in 2007 for a wider range of

businesses, segments, geographies and product lines. Commencing in 2008, the economic value added for each of AIG's business segments will be considered as an element, alongside other existing measures, in the evaluation of senior management performance. The capital planning and allocation process will continue to be enhanced by incorporating the regulatory, rating agency and economic capital requirements for business segments as well as the assessment of the mobility of excess economic capital.

Recent Accounting Standards Accounting Changes

In September 2005, the American Institute of Certified Public Accountants (AICPA) issued Statement of Position 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts."

In February 2006, the Financial Accounting Standards Board (FASB) issued FAS 155, "Accounting for Certain Hybrid Financial Instruments — an amendment of FAS 140 and FAS 133."

In July 2006, the FASB issued FASB Interpretation No. 48, "Accounting for Uncertainty in Income Taxes — an interpretation of FASB Statement No. 109."

In July 2006, the FASB issued FASB Staff Position (FSP) No. 13-2, "Accounting for a Change or Projected Change in the Timing of Cash Flows Relating to Income Taxes Generated by a Leveraged Lease Transaction."

In September 2006, the FASB issued FAS No. 157, "Fair Value Measurements."

In September 2006, the FASB issued FAS 158, "Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans — an amendment of FASB Statements No. 87, 88, 106 and 132R."

In February 2007, the FASB issued FAS No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities."

In June 2007, the AICPA issued Statement of Position No. 07-1, "Clarification of the Scope of the Audit and Accounting Guide 'Audits of Investment Companies' and Accounting by Parent Companies and Equity Method Investors for Investments in Investment Companies." (Indefinitely deferred by the FASB)

In December 2007, the FASB issued FAS No. 141 (revised 2007), "Business Combinations."

In December 2007, the FASB issued FAS No. 160, "Noncontrolling Interests in Consolidated Financial Statements, an amendment of ARB No. 51."

For further discussion of these recent accounting standards and their application to AIG, see Note 1(hh) to Consolidated Financial Statements.

Notes to Consolidated Financial Statements	137		

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of American International Group, Inc.:

In our opinion, the consolidated financial statements listed in the accompanying index present fairly, in all material respects, the financial position of American International Group, Inc. and its subsidiaries (AIG) at December 31, 2007 and 2006, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2007 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedules listed in the accompanying index present fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. Also in our opinion, AIG did not maintain, in all material respects, effective internal control over financial reporting as of December 31, 2007, based on criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) because a material weakness in internal control over financial reporting related to the AIGFP super senior credit default swap portfolio valuation process and oversight thereof existed as of that date. A material weakness is a deficiency, or a combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the annual or interim financial statements will not be prevented or detected on a timely basis. The material weakness referred to above is described in Management's Report on Internal Control Over Financial Reporting appearing under Item 9A. We considered this material weakness in determining the nature, timing, and extent of audit tests applied in our audit of the 2007 consolidated financial statements, and our opinion regarding the effectiveness of AIG's internal control over financial reporting does not affect our opinion on those consolidated financial statements. AIG's management is responsible for these financial statements and financial statement schedules, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in management's report referred to above. Our responsibility is to express opinions on these financial statements, on the financial statement schedules, and on AIG's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial

statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

As described in Note 1 to the consolidated financial statements, as of January 1, 2007, AIG changed the manner in which it accounts for internal replacements of certain insurance and investment contracts, uncertainty in income taxes, and changes or projected changes in the timing of cash flows relating to income taxes generated by leveraged lease transactions.

As described in Notes 1 and 17 to the consolidated financial statements, AIG changed its accounting for certain hybrid financial instruments, life settlement contracts and share based compensation as of January 1, 2006, and certain employee benefit plans as of December 31, 2006.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Notes to Consolidated Financial Statements

1. Summary of Significant Accounting Policies

Basis of Presentation

The consolidated financial statements include the accounts of AIG, its controlled subsidiaries, and variable interest entities in which AIG is the primary beneficiary. Entities that AIG does not consolidate but in which it holds 20 percent to 50 percent of the voting rights and/or has the ability to exercise significant influence are accounted for under the equity method.

Certain of AIG's foreign subsidiaries included in the consolidated financial statements report on a fiscal year ending November 30. The effect on AIG's consolidated financial condition and results of operations of all material events occurring between November 30 and December 31 for all periods presented has been recorded.

The accompanying consolidated financial statements have been prepared in accordance with U.S. generally accepted accounting principles (GAAP). All material intercompany accounts and transactions have been eliminated.

Description of Business

See Note 2 herein for a description of AIG's businesses.

Use of Estimates

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods. Actual results could differ, possibly materially, from those estimates.

AIG considers its most critical accounting estimates to be those with respect to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts, estimated gross profits for investment-oriented products, recoverability of deferred policy acquisition costs (DAC), fair value measurements of certain assets and liabilities, including the super senior credit default swaps written by AIGFP, other-than-temporary impairments in the value of investments, the allowance for finance receivable losses and flight equipment recoverability.

During the second half of 2007, disruption in the global credit markets, coupled with the repricing of credit risk, and the U.S. housing market deterioration, particularly in the fourth quarter, created increasingly difficult conditions in the financial markets. These conditions have resulted in greater volatility, less liquidity, widening of credit spreads and a lack of price transparency in certain markets and have made it more difficult to value certain of AIG's invested assets and the obligations and collateral relating to certain financial instruments issued or held by AIG, such as AIGFP's super senior credit default swap portfolio.

Revisions and Reclassifications

In 2007, AIG determined that certain products that were historically reported as separate account assets under American Institute of Certified Public Accountants (AICPA) Statement of Position (SOP) 03-1, "Accounting and Reporting by Insurance Enterprises for

Certain Nontraditional Long-Duration Contracts and for Separate Accounts" (SOP 03-1) should have been reported as general account assets. Accordingly, the December 31, 2006 consolidated balance sheet has been revised to reflect the transfer of \$2.4 billion of assets from separate account assets to general account assets, and the same amount of liabilities from separate account liabilities to policyholders' contract deposits. This revision had no effect on consolidated income before income taxes, net income, or shareholders' equity for any period presented.

Certain reclassifications and format changes have been made to prior period amounts to conform to the current period presentation.

Out-of-Period Adjustments

During 2007 and 2006, AIG recorded the effects of certain out-of-period adjustments, which (decreased) increased net income by \$(399) million and \$65 million, respectively. During 2007, out-of-period adjustments collectively decreased pre-tax operating income by \$372 million (\$399 million after tax). The adjustments were comprised of a charge of \$380 million (\$247 million after tax) to reverse net gains on transfers of investment securities among legal entities consolidated within AIGFP and a corresponding increase to accumulated other comprehensive income (loss); \$156 million of additional income tax expense related to the successful remediation of the material weakness in internal control over income tax accounting; \$142 million (\$92 million after tax) of additional expense related to insurance reserves and DAC in connection with improvements in its internal control over financial reporting and consolidation processes; \$42 million (\$29 million after tax) of additional expense, primarily related to other remediation activities; and \$192 million (\$125 million after tax) of net realized capital gains related to foreign exchange.

Accounting Policies

(a) Revenue Recognition and Expenses:

Premiums and Other Considerations: Premiums for short duration contracts and considerations received from retailers in connection with the sale of extended service contracts are earned primarily on a pro rata basis over the term of the related coverage. The reserve for unearned premiums includes the portion of premiums written and other considerations relating to the unexpired terms of coverage.

Premiums for long duration insurance products and life contingent annuities are recognized as revenues when due. Estimates for premiums due but not yet collected are accrued. Consideration for universal life and investment-type products consists of policy charges for the cost of insurance, administration, and surrenders during the period. Policy charges collected with respect to future services are deferred and recognized in a manner similar to DAC related to such products.

Net Investment Income: Net investment income represents income primarily from the following sources in AIG's insurance operations:

- Interest income and related expenses, including amortization of premiums and accretion of discounts on bonds with changes in

1. Summary of Significant Accounting Policies

Continued

the timing and the amount of expected principal and interest cash flows reflected in the yield, as applicable.

- Dividend income and distributions from common and preferred stock and other investments when receivable.
- Realized and unrealized gains and losses from investments in trading securities accounted for at fair value.
- Earnings from hedge funds and limited partnership investments accounted for under the equity method.
- The difference between the carrying amount of a life settlement contract and the life insurance proceeds of the underlying life insurance policy recorded in income upon the death of the insured.

Realized Capital Gains (Losses): Realized capital gains and losses are determined by specific identification. The realized capital gains and losses are generated primarily from the following sources:

- Sales of fixed maturity securities and equity securities (except trading securities accounted for at fair value), real estate, investments in joint ventures and limited partnerships and other types of investments.
- Reductions to the cost basis of fixed maturity securities and equity securities (except trading securities accounted for at fair value) and other invested assets for other-than-temporary impairments.
- Changes in fair value of derivatives that are not involved in qualifying hedging activities.
- Exchange gains and losses resulting from foreign currency transactions.

Other Income: Other income includes income from flight equipment, Asset Management operations, the operations of AIGFP and finance charges on consumer loans.

Income from flight equipment under operating leases is recognized over the life of the lease as rentals become receivable under the provisions of the lease or, in the case of leases with varying payments, under the straight-line method over the noncancelable term of the lease. In certain cases, leases provide for additional payments contingent on usage. Rental income is recognized at the time such usage occurs less a provision for future contractual aircraft maintenance. Gains and losses on flight equipment are recognized when flight equipment is sold and the risk of ownership of the equipment is passed to the new owner.

Income from Asset Management operations is generally recognized as revenues as services are performed. Certain costs incurred in the sale of mutual funds are deferred and subsequently amortized.

Income from the operations of AIGFP included in other income consists of the following:

- Interest income and related expenses, including amortization of premiums and accretion of discounts on bonds with changes in the timing and the amount of expected principal and interest cash flows reflected in the yield, as applicable.
- Dividend income and distributions from common and preferred stock and other investments when receivable.

- Changes in the fair value of derivatives (excluding the super senior credit default swap portfolio). In certain instances, no initial gain or loss is recognized in accordance with Emerging Issues Task Force Issue (EITF) 02-3, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities" (EITF 02-3). The initial gain or loss is recognized in income over the life of the transaction or when observable market data becomes available.
- Realized and unrealized gains and losses from trading securities and spot commodities sold but not yet purchased, futures and hybrid financial instruments.
- Realized gains and losses from the sale of available for sale securities and investments in private equities, joint ventures, limited partnerships and other investments.
- Exchange gains and losses resulting from foreign currency transactions.
- Reductions to the cost basis of securities available for sale for other-than-temporary impairments.
- Earnings from hedge funds and limited partnership investments accounted for under the equity method.

Finance charges on consumer loans are recognized as revenue using the interest method. Revenue ceases to be accrued when contractual payments are not received for four consecutive months for loans and retail sales contracts, and for six months for revolving retail accounts and private label receivables. Extension fees, late charges, and prepayment penalties are recognized as revenue when received.

Incurred Policy Losses and Benefits: Incurred policy losses for short duration insurance contracts consist of the estimated ultimate cost of settling claims incurred within the reporting period, including incurred but not reported claims, plus the changes in estimates of current and prior period losses resulting from the continuous review process. Benefits for long duration insurance contracts consist of benefits paid and changes in future policy benefits liabilities. Benefits for universal life and investment-type products primarily consist of interest credited to policy account balances and benefit payments made in excess of policy account balances.

(b) Income Taxes: Deferred tax assets and liabilities are recorded for the effects of temporary differences between the tax basis of an asset or liability and its reported amount in the consolidated financial statements. AIG assesses its ability to realize deferred tax assets primarily based on the earnings history, the future earnings potential, the reversal of taxable temporary differences, and the tax planning strategies available to the legal entities when recognizing deferred tax assets in accordance with Statement of Financial Accounting Standards No. (FAS) 109, "Accounting for Income Taxes" (FAS 109). See Note 21 herein for a further discussion of income taxes.

(c) Investments in Fixed Maturities and Equity Securities: Bonds held to maturity are principally owned by insurance subsidiaries and are carried at amortized cost when AIG has the ability and positive intent to hold these securities until maturity.

Notes to Consolidated Financial Statements *Continued*

1. Summary of Significant Accounting Policies

Continued

When AIG does not have the positive intent to hold bonds until maturity, these securities are classified as available for sale or as trading and are carried at fair value.

Premiums and discounts arising from the purchase of bonds classified as held to maturity or available for sale are treated as yield adjustments over their estimated lives, until maturity, or call date, if applicable.

Common and preferred stocks are carried at fair value.

AIG also enters into dollar roll agreements. These are agreements to sell mortgage-backed securities and to repurchase substantially similar securities at a specified price and date in the future. At December 31, 2007 and 2006, there were no dollar roll agreements outstanding.

For AIG's insurance subsidiaries, unrealized gains and losses on investments in trading securities are reported in Net investment income. Unrealized gains and losses from available for sale investments in equity and fixed maturity securities are reported as a separate component of Accumulated other comprehensive income (loss), net of deferred income taxes, in consolidated shareholders' equity. Investments in fixed maturities and equity securities are recorded on a trade-date basis.

AIG evaluates its investments for other-than-temporary impairment. The determination that a security has incurred an other-than-temporary impairment in value and the amount of any loss recognized requires the judgment of AIG's management and a continual review of its investments.

AIG evaluates its investments for other-than-temporary impairment such that a security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par, amortized cost (if lower) or cost for an extended period of time (nine consecutive months or longer);
- The occurrence of a discrete credit event resulting in (i) the issuer defaulting on a material outstanding obligation; (ii) the issuer seeking protection from creditors under the bankruptcy laws or any similar laws intended for court supervised reorganization of insolvent enterprises; or (iii) the issuer proposing a voluntary reorganization pursuant to which creditors are asked to exchange their claims for cash or securities having a fair value substantially lower than par value of their claims; or
- AIG may not realize a full recovery on its investment regardless of the occurrence of one of the foregoing events.

The above criteria also consider circumstances of a rapid and severe market valuation decline, such as that experienced in current credit markets, in which AIG could not reasonably assert that the recovery period would be temporary.

At each balance sheet date, AIG evaluates its securities holdings with unrealized losses. When AIG does not intend to hold such securities until they have recovered their cost basis, based on the circumstances at the date of evaluation, AIG records the unrealized loss in income. If a loss is recognized from a sale subsequent to a balance sheet date pursuant to changes in

circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer existed.

In periods subsequent to the recognition of an other-than-temporary impairment charge for fixed maturity securities, which is not credit or foreign exchange related, AIG generally accretes the discount or amortizes the reduced premium resulting from the reduction in cost basis over the remaining life of the security.

For certain investments in beneficial interests in securitized financial assets of less than high quality with contractual cash flows, including asset-backed securities, EITF 99-20, "Recognition of Interest Income and Impairment on Purchased Beneficial Interests and Beneficial Interests that Continued to Be Held by a Transferor in Securitized Financial Assets" requires periodic updates of AIG's best estimate of cash flows over the life of the security. If the fair value of an investment in beneficial interests in a securitized financial asset is less than its cost or amortized cost and there has been a decrease in the present value of the estimated cash flows since the last revised estimate, considering both their timing and amount, an other-than-temporary impairment charge is recognized. Interest income is recognized based on changes in the timing and the amount of expected principal and interest cash flows reflected in the yield.

AIG also considers its intent and ability to retain a temporarily depressed security until recovery. Estimating future cash flows is a quantitative and qualitative process that incorporates information received from third-party sources along with certain internal assumptions and judgments regarding the future performance of the underlying collateral. In addition, projections of expected future cash flows may change based upon new information regarding the performance of the underlying collateral.

(d) Mortgage and Other Loans Receivable — net: Mortgage and other loans receivable includes mortgage loans on real estate, policy loans and collateral, commercial and guaranteed loans. Mortgage loans on real estate and collateral, commercial and guaranteed loans are carried at unpaid principal balances less credit allowances and plus or minus adjustments for the accretion or amortization of discount or premium. Interest income on such loans is accrued as earned.

Impairment of mortgage loans on real estate and collateral and commercial loans is based on certain risk factors and when collection of all amounts due under the contractual terms is not probable. This impairment is generally measured based on the present value of expected future cash flows discounted at the loan's effective interest rate subject to the fair value of underlying collateral. Interest income on such impaired loans is recognized as cash is received.

Policy loans are carried at unpaid principal amount. There is no allowance for policy loans because these loans serve to reduce the death benefit paid when the death claim is made and the balances are effectively collateralized by the cash surrender value of the policy.

(e) Financial Services — Flight Equipment: Flight equipment is stated at cost, net of accumulated depreciation. Major additions, modifications and interest are capitalized. Normal maintenance and repairs, airframe and engine overhauls and

1. Summary of Significant Accounting Policies

Continued

compliance with return conditions of flight equipment on lease are provided by and paid for by the lessee. Under the provisions of most leases for certain airframe and engine overhauls, the lessee is reimbursed for certain costs incurred up to but not exceeding contingent rentals paid to AIG by the lessee. AIG provides a charge to income for such reimbursements based on the expected reimbursements during the life of the lease. For passenger aircraft, depreciation is generally computed on the straight-line basis to a residual value of approximately 15 percent of the cost of the asset over its estimated useful life of 25 years. For freighter aircraft, depreciation is computed on the straight-line basis to a zero residual value over its useful life of 35 years. At December 31, 2007, ILFC had twelve freighter aircraft in its fleet. Aircraft in the fleet are evaluated for impairment in accordance with FAS 144. FAS 144 requires long-lived assets to be evaluated for impairment whenever events or changes in circumstances indicate the carrying amount of an asset may not be recoverable. Recoverability of assets is measured by comparing the carrying amount of an asset to future undiscounted net cash flows expected to be generated by the asset. These evaluations for impairment are significantly affected by estimates of future net cash flows and other factors that involve uncertainty.

When assets are retired or disposed of, the cost and associated accumulated depreciation are removed from the related accounts and the difference, net of proceeds, is recorded as a gain or loss in Other income.

(f) Financial Services — Securities Available for Sale, at fair value: These securities are held to meet long-term investment objectives and are accounted for as available for sale, carried at fair values and recorded on a trade-date basis. This portfolio is hedged using interest rate, foreign exchange, commodity and equity derivatives. The market risk associated with such hedges is managed on a portfolio basis, with third-party hedging transactions executed as necessary. Because hedge accounting treatment is not achieved in accordance with FAS 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133), the unrealized gains and losses on these securities resulting from changes in interest rates, currency rates and equity prices are recorded in Accumulated other comprehensive income (loss) in consolidated shareholders' equity while the unrealized gains and losses on the hedging instruments are reflected in Other income.

(g) Financial Services — Trading Securities, at fair value: Trading securities are held to meet short-term investment objectives and to economically hedge other securities. Trading securities are recorded on a trade-date basis and carried at fair value. Realized and unrealized gains and losses are reflected in Other income.

(h) Financial Services — Spot Commodities: Spot commodities held in AIGFP's wholly owned broker-dealer subsidiary are recorded at fair value. All other commodities are recorded at the lower of cost or fair value. Spot commodities are recorded on a trade-date basis. The exposure to market risk may be reduced

through the use of forwards, futures and option contracts. Lower of cost or fair value reductions in commodity positions and unrealized gains and losses in related derivatives are reflected in Other income.

(i) Financial Services — Unrealized Gain and Unrealized Loss on Swaps, Options and Forward Transactions: Interest rate, currency, equity and commodity swaps (including AIGFP's super senior credit default swap portfolio), swaptions, options and forward transactions are accounted for as derivatives recorded on a trade-date basis, and carried at fair value. Unrealized gains and losses are reflected in income, when appropriate. In certain instances, when income is not recognized at inception of the contract under EITF 02-3, income is recognized over the life of the contract and as observable market data becomes available.

(j) Financial Services — Trade Receivables and Trade Payables: Trade receivables and Trade payables include option premiums paid and received and receivables from and payables to counterparties that relate to unrealized gains and losses on futures, forwards, and options and balances due from and due to clearing brokers and exchanges.

(k) Financial Services — Securities Purchased (Sold) Under Agreements to Resell (Repurchase), at contract value: Securities purchased under agreements to resell and Securities sold under agreements to repurchase are accounted for as collateralized borrowing or lending transactions and are recorded at their contracted resale or repurchase amounts, plus accrued interest. AIG's policy is to take possession of or obtain a security interest in securities purchased under agreements to resell.

AIG minimizes the credit risk that counterparties to transactions might be unable to fulfill their contractual obligations by monitoring customer credit exposure and collateral value and generally requiring additional collateral to be deposited with AIG when necessary.

(l) Financial Services — Finance Receivables: Finance receivables, which are reported net of unearned finance charges, are held for both investment purposes and for sale. Finance receivables held for investment purposes are carried at amortized cost, which includes accrued finance charges on interest bearing finance receivables, unamortized deferred origination costs, and unamortized net premiums and discounts on purchased finance receivables. The allowance for finance receivable losses is established through the provision for finance receivable losses charged to expense and is maintained at a level considered adequate to absorb estimated credit losses in the portfolio. The portfolio is periodically evaluated on a pooled basis and factors such as economic conditions, portfolio composition, and loss and delinquency experience are considered in the evaluation of the allowance.

Direct costs of originating finance receivables, net of nonrefundable points and fees, are deferred and included in the carrying amount of the related receivables. The amount deferred is amortized to income as an adjustment to finance charge revenues using the interest method.

Notes to Consolidated Financial Statements *Continued*

1. Summary of Significant Accounting Policies

Continued

Finance receivables originated and intended for sale in the secondary market are carried at the lower of cost or fair value, as determined by aggregate outstanding commitments from investors or current investor yield requirements. American General Finance, Inc. (AGF) recognizes net unrealized losses through a valuation allowance by charges to income.

(m) Securities Lending Invested Collateral, at Fair Value and Securities Lending Payable: AIG's insurance and asset management operations lend their securities and primarily take cash as collateral with respect to the securities lent. Invested collateral consists of interest-bearing cash equivalents and floating rate bonds, whose changes in fair value are recorded as a separate component of Accumulated other comprehensive income (loss), net of deferred income taxes. The invested collateral is evaluated for other-than-temporary impairment by applying the same criteria used for investments in fixed maturities. Income earned on invested collateral, net of interest payable to the collateral provider, is recorded in Net investment income.

The fair value of securities pledged under securities lending arrangements was \$76 billion and \$69 billion at December 31, 2007 and 2006, respectively. These securities are included in bonds available for sale in AIG's consolidated balance sheet.

(n) Other Invested Assets: Other invested assets consist primarily of investments by AIG's insurance operations in hedge funds, private equity and limited partnerships.

Hedge funds and limited partnerships in which AIG's insurance operations hold in the aggregate less than a five percent interest are reported at fair value. The change in fair value is recognized as a component of Accumulated other comprehensive income (loss).

With respect to hedge funds and limited partnerships in which AIG holds in the aggregate a five percent or greater interest or less than a five percent interest but in which AIG has more than a minor influence over the operations of the investee, AIG's carrying value is its share of the net asset value of the funds or the partnerships. The changes in such net asset values, accounted for under the equity method, are recorded in Net investment income.

In applying the equity method of accounting, AIG consistently uses the most recently available financial information provided by the general partner or manager of each of these investments, which is one to three months prior to the end of AIG's reporting period. The financial statements of these investees are generally audited on an annual basis.

Also included in Other invested assets are real estate held for investment, aircraft asset investments held by non-financial services subsidiaries and investments in life settlement contracts. See Note 3(g) herein for further information.

(o) Short-term Investments: Short-term investments consist of interest-bearing cash equivalents, time deposits, and investments with original maturities within one year from the date of purchase, such as commercial paper.

(p) Cash: Cash represents cash on hand and non-interest bearing demand deposits.

(q) Reinsurance Assets: Reinsurance assets include the balances due from reinsurance and insurance companies under the terms of AIG's reinsurance agreements for paid and unpaid losses and loss expenses, ceded unearned premiums and ceded future policy benefits for life and accident and health insurance contracts and benefits paid and unpaid. Amounts related to paid and unpaid losses and benefits and loss expenses with respect to these reinsurance agreements are substantially collateralized.

(r) Deferred Policy Acquisition Costs:

Policy acquisition costs represent those costs, including commissions, premium taxes and other underwriting expenses that vary with and are primarily related to the acquisition of new business.

General Insurance: Policy acquisition costs are deferred and amortized over the period in which the related premiums written are earned. DAC is grouped consistent with the manner in which the insurance contracts are acquired, serviced and measured for profitability and is reviewed for recoverability based on the profitability of the underlying insurance contracts. Investment income is not anticipated in assessing the recoverability of DAC.

Life Insurance & Retirement Services: Policy acquisition costs for traditional life insurance products are generally deferred and amortized over the premium paying period in accordance with FAS 60, "Accounting and Reporting by Insurance Enterprises" (FAS 60). Policy acquisition costs and policy issuance costs related to universal life, participating life, and investment-type products (investment-oriented products) are deferred and amortized, with interest, in relation to the incidence of estimated gross profits to be realized over the estimated lives of the contracts in accordance with FAS 97, "Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments" (FAS 97). Estimated gross profits are composed of net interest income, net realized investment gains and losses, fees, surrender charges, expenses, and mortality and morbidity gains and losses. If estimated gross profits change significantly, DAC is recalculated using the new assumptions. Any resulting adjustment is included in income as an adjustment to DAC. DAC is grouped consistent with the manner in which the insurance contracts are acquired, serviced and measured for profitability and is reviewed for recoverability based on the current and projected future profitability of the underlying insurance contracts.

The DAC for investment-oriented products is also adjusted with respect to estimated gross profits as a result of changes in the net unrealized gains or losses on fixed maturity and equity securities available for sale. Because fixed maturity and equity securities available for sale are carried at aggregate fair value, an adjustment is made to DAC equal to the change in amortization that would have been recorded if such securities had been sold at their stated aggregate fair value and the proceeds reinvested at current yields. The change in this adjustment, net of tax, is included with the change in net unrealized gains/losses on fixed

1. Summary of Significant Accounting Policies

Continued

maturity and equity securities available for sale that is credited or charged directly to Accumulated other comprehensive income (loss). Value of Business Acquired (VOBA) is determined at the time of acquisition and is reported in the consolidated balance sheet with DAC. This value is based on the present value of future pre-tax profits discounted at yields applicable at the time of purchase. For products accounted for under FAS 60, VOBA is amortized over the life of the business similar to that for DAC based on the assumptions at purchase. For products accounted for under FAS 97, VOBA is amortized in relation to the estimated gross profits to date for each period. As of December 31, 2007 and 2006, there had been no impairments of VOBA.

(s) Investments in Partially Owned Companies: Investments in partially owned companies represents investments entered into for strategic purposes and not solely for capital appreciation or for income generation. These investments are accounted for under the equity method. All other equity method investments are reported in Other invested assets. At December 31, 2007, AIG's significant investments in partially owned companies included its 26.0 percent interest in Tata AIG Life Insurance Company, Ltd., its 26.0 percent interest in Tata AIG General Insurance Company, Ltd. and its 25.4 percent interest in The Fuji Fire and Marine Insurance Co., Ltd. Dividends received from unconsolidated entities in which AIG's ownership interest is less than 50 percent were \$30 million, \$28 million and \$146 million for the years ended December 31, 2007, 2006 and 2005, respectively. The undistributed earnings of unconsolidated entities in which AIG's ownership interest is less than 50 percent were \$266 million, \$300 million and \$179 million at December 31, 2007, 2006 and 2005, respectively.

(t) Real Estate and Other Fixed Assets: The costs of buildings and furniture and equipment are depreciated principally on the straight-line basis over their estimated useful lives (maximum of 40 years for buildings and ten years for furniture and equipment). Expenditures for maintenance and repairs are charged to income as incurred; expenditures for betterments are capitalized and depreciated. AIG periodically assesses the carrying value of its real estate for purposes of determining any asset impairment.

Also included in Real Estate and Other Fixed Assets are capitalized software costs, which represent costs directly related to obtaining, developing or upgrading internal use software. Such costs are capitalized and amortized using the straight-line method over a period generally not exceeding five years.

(u) Separate and Variable Accounts: Separate and variable accounts represent funds for which investment income and investment gains and losses accrue directly to the policyholders who bear the investment risk. Each account has specific investment objectives, and the assets are carried at fair value. The assets of each account are legally segregated and are not subject to claims that arise out of any other business of AIG. The liabilities for these accounts are equal to the account assets.

(v) Goodwill: Goodwill is the excess of cost over the fair value of identifiable net assets acquired. Goodwill is reviewed for impairment on an annual basis, or more frequently if circumstances indicate that a possible impairment has occurred. The assessment of impairment involves a two-step process whereby an initial assessment for potential impairment is performed, followed by a measurement of the amount of impairment, if any. Impairment testing is performed using the fair value approach, which requires the use of estimates and judgment, at the "reporting unit" level. A reporting unit is the operating segment, or a business that is one level below the operating segment if discrete financial information is prepared and regularly reviewed by management at that level. The determination of a reporting unit's fair value is based on management's best estimate, which generally considers the market-based earning multiples of the unit's peer companies or expected future cash flows. If the carrying value of a reporting unit exceeds its fair value, an impairment is recognized as a charge against income equal to the excess of the carrying value of goodwill over its fair value. No impairments were recorded in 2007, 2006 or 2005. Changes in the carrying amount of goodwill result from business acquisitions, the payment of contingent consideration, foreign currency translation adjustments and purchase price adjustments.

(w) Other Assets: Other assets consist of prepaid expenses, including deferred advertising costs, sales inducement assets, non-AIGFP derivatives assets carried at fair value, deposits, other deferred charges and other intangible assets.

Certain direct response advertising costs are deferred and amortized over the expected future benefit period in accordance with SOP 93-7, "Reporting on Advertising Costs." When AIG can demonstrate that its customers have responded specifically to direct-response advertising, the primary purpose of which is to elicit sales to customers, and when it can be shown such advertising results in probable future economic benefits, the advertising costs are capitalized. Deferred advertising costs are amortized on a cost-pool-by-cost-pool basis over the expected future economic benefit period and are reviewed regularly for recoverability. Deferred advertising costs totaled \$1.35 billion and \$1.05 billion at December 31, 2007 and 2006, respectively. The amount of expense amortized into income was \$395 million, \$359 million and \$272 million, for the years ended 2007, 2006, and 2005, respectively.

AIG offers sales inducements, which include enhanced crediting rates or bonus payments to contract holders (bonus interest) on certain annuity and investment contract products. Sales inducements provided to the contractholder are recognized as part of the liability for policyholders' contract deposits in the consolidated balance sheet. Such amounts are deferred and amortized over the life of the contract using the same methodology and assumptions used to amortize DAC. To qualify for such accounting treatment, the bonus interest must be explicitly identified in the contract at inception, and AIG must demonstrate that such amounts are incremental to amounts AIG credits on similar contracts without bonus interest, and are higher than the contract's expected ongoing crediting rates for periods after the bonus period. The deferred bonus interest and other deferred

Notes to Consolidated Financial Statements *Continued*

1. Summary of Significant Accounting Policies

Continued

sales inducement assets totaled \$1.7 billion and \$1.3 billion at December 31, 2007 and 2006, respectively. The amortization expense associated with these assets is reported within Incurred policy losses and benefits expense in the consolidated statement of income. Such amortization expense totaled \$149 million, \$132 million and \$127 million for the years ended December 31, 2007, 2006 and 2005, respectively.

See Note 8 herein for a discussion of derivatives.

(x) Reserve for Losses and Loss Expenses: Losses and loss expenses are charged to income as incurred. The reserve for losses and loss expenses represents the accumulation of estimates for unpaid reported losses and includes provisions for losses incurred but not reported. The methods of determining such estimates and establishing resulting reserves, including amounts relating to allowances for estimated unrecoverable reinsurance, are reviewed and updated. If the estimate of reserves is determined to be inadequate or redundant, the increase or decrease is reflected in income. AIG discounts its loss reserves relating to workers compensation business written by its U.S. domiciled subsidiaries as permitted by the domiciliary statutory regulatory authorities.

(y) Future Policy Benefits for Life and Accident and Health Contracts and Policyholders' Contract Deposits:

The liability for future policy benefits and policyholders' contract deposits are established using assumptions described in Note 9 herein. Future policy benefits for life and accident and health insurance contracts include provisions for future dividends to participating policyholders, accrued in accordance with all applicable regulatory or contractual provisions. Policyholders' contract deposits include AIG's liability for certain guarantee benefits accounted for as embedded derivatives at fair value in accordance with FAS 133.

(z) Other Policyholders' Funds: Other policyholders' funds are reported at cost and include any policyholders' funds on deposit that encompass premium deposits and similar items.

(aa) Financial Services — Securities and Spot Commodities Sold but not yet Purchased, at Fair Value: Securities and spot commodities sold but not yet purchased represent sales of securities and spot commodities not owned at the time of sale. The obligations arising from such transactions are recorded on a trade-date basis and carried at fair value. Also included are obligations under gold leases, which are accounted for as a debt host with an embedded gold derivative.

(bb) Commercial Paper and Extendible Commercial Notes and Long-Term Borrowings:

AIG's funding is principally obtained from medium and long-term borrowings and commercial paper. Commercial paper, when issued at a discount, is recorded at the proceeds received and accreted to its par value. Extendible commercial notes are issued by AGF with initial maturities of up to 90 days, which AGF may extend to 390 days. Long-term borrowings are carried at the principal amount borrowed, net of

unamortized discounts or premiums. See Note 11 herein for additional information.

Long-term borrowings also include liabilities connected to trust preferred stock principally related to outstanding securities issued by AIG Life Holdings (US), Inc. (AIGLH), a wholly owned subsidiary of AIG. Cash distributions on such preferred stock are accounted for as interest expense.

(cc) Other Liabilities: Other liabilities consist of other funds on deposit, non-AIGFP free-standing derivatives liabilities carried at fair value, and other payables. See Note 8 herein for a discussion of derivatives. AIG has entered into certain insurance and reinsurance contracts, primarily in its General Insurance segment, that do not contain sufficient insurance risk to be accounted for as insurance or reinsurance. Accordingly, the premiums received on such contracts, after deduction for certain related expenses, are recorded as deposits within Other liabilities in the consolidated balance sheet. Net proceeds of these deposits are invested and generate net investment income. As amounts are paid, consistent with the underlying contracts, the deposit liability is reduced.

(dd) Contingent Liabilities: Amounts are accrued for the resolution of claims that have either been asserted or are deemed probable of assertion if, in the opinion of management, it is both probable that a liability has been incurred and the amount of the liability can be reasonably estimated. In many cases, it is not possible to determine whether a liability has been incurred or to estimate the ultimate or minimum amount of that liability until years after the contingency arises, in which case, no accrual is made until that time.

(ee) Preferred Shareholders' Equity in Subsidiary Companies: Preferred shareholders' equity in subsidiary companies relates principally to outstanding preferred stock or interest of ILFC, a wholly owned subsidiary of AIG. Cash distributions on such preferred stock or interest are accounted for as interest expense.

(ff) Foreign Currency: Financial statement accounts expressed in foreign currencies are translated into U.S. dollars in accordance with FAS 52, "Foreign Currency Translation" (FAS 52). Under FAS 52, functional currency assets and liabilities are translated into U.S. dollars generally using rates of exchange prevailing at the balance sheet date of each respective subsidiary and the related translation adjustments are recorded as a separate component of Accumulated other comprehensive income (loss), net of any related taxes, in consolidated shareholders' equity. Functional currencies are generally the currencies of the local operating environment. Income statement accounts expressed in functional currencies are translated using average exchange rates during the period. The adjustments resulting from translation of financial statements of foreign entities operating in highly inflationary economies are recorded in income. Exchange gains and losses resulting from foreign currency transactions are recorded in income.

(gg) Earnings per Share: Basic earnings per share is based on the weighted average number of common shares outstanding, adjusted to reflect all stock dividends and stock splits. Diluted

1. Summary of Significant Accounting Policies

Continued

earnings per share is based on those shares used in basic earnings per share plus shares that would have been outstanding assuming issuance of common shares for all dilutive potential common shares outstanding, adjusted to reflect all stock dividends and stock splits.

(hh) Recent Accounting Standards:

Accounting Changes

SOP 05-1

In September 2005, the AICPA issued SOP 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts" (SOP 05-1). SOP 05-1 provides guidance on accounting for internal replacements of insurance and investment contracts other than those specifically described in FAS 97. SOP 05-1 defines an internal replacement as a modification in product benefits, features, rights, or coverage that occurs by the exchange of a contract for a new contract, or by amendment, endorsement, or rider to a contract, or by the election of a feature or coverage within a contract. Internal replacements that result in a substantially changed contract are accounted for as a termination and a replacement contract.

SOP 05-1 became effective on January 1, 2007 and generally affects the accounting for internal replacements occurring after that date. In the first quarter of 2007, AIG recorded a cumulative effect reduction of \$82 million, net of tax, to the opening balance of retained earnings on the date of adoption. This adoption reflected changes in unamortized DAC, VOBA, deferred sales inducement assets, unearned revenue liabilities and future policy benefits for life and accident and health insurance contracts resulting from a shorter expected life related to certain group life and health insurance contracts and the effect on the gross profits of investment-oriented products related to previously anticipated future internal replacements. This cumulative effect adjustment affected only the Life Insurance & Retirement Services segment.

FAS 155

In February, 2006, the Financial Accounting Standards Board (FASB) issued FAS 155, "Accounting for Certain Hybrid Financial Instruments — an amendment of FAS 140 and FAS 133" (FAS 155). FAS 155 allows AIG to include changes in fair value in earnings on an instrument-by-instrument basis for any hybrid financial instrument that contains an embedded derivative that would otherwise be required to be bifurcated and accounted for separately under FAS 133. The election to measure the hybrid instrument at fair value is irrevocable at the acquisition or issuance date.

AIG elected to early adopt FAS 155 as of January 1, 2006, and apply FAS 155 fair value measurement to certain structured note liabilities and structured investments in AIG's available for sale portfolio that existed at December 31, 2005. The effect of this adoption resulted in an \$11 million after-tax (\$18 million pre-tax) decrease to opening retained earnings as of January 1, 2006,

representing the difference between the fair value of these hybrid financial instruments and the prior carrying value as of December 31, 2005. The effect of adoption on after-tax gross gains and losses was \$218 million (\$336 million pre-tax) and \$229 million (\$354 million pre-tax), respectively.

In connection with AIG's early adoption of FAS 155, structured note liabilities of \$8.9 billion, other structured liabilities in conjunction with equity derivative transactions of \$111 million, and hybrid financial instruments of \$522 million at December 31, 2006 are now carried at fair value. The effect on earnings for 2006, for changes in the fair value of hybrid financial instruments, was a pre-tax loss of \$313 million, of which \$287 million was reflected in Other income and was largely offset by gains on economic hedge positions which were also reflected in operating income, and \$26 million was reflected in Net investment income.

FAS 158

In September 2006, the FASB issued FAS 158, "Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans — an amendment of FASB Statements No. 87, 88, 106 and 132R" (FAS 158). FAS 158 requires AIG to prospectively recognize the overfunded or underfunded status of defined benefit postretirement plans as an asset or liability in AIG's consolidated balance sheet and to recognize changes in that funded status in the year in which the changes occur through Other comprehensive income. FAS 158 also requires AIG to measure the funded status of plans as of the date of its year-end balance sheet, with limited exceptions. AIG adopted FAS 158 for the year ended December 31, 2006. The cumulative effect, net of deferred income taxes, on AIG's consolidated balance sheet at December 31, 2006 was a net reduction in shareholders' equity through a charge to Accumulated other comprehensive income (loss) of \$532 million, with a corresponding net decrease of \$538 million in total assets, and a net decrease of \$6 million in total liabilities. See Note 18 herein for additional information on the adoption of FAS 158.

FIN 48

In July 2006, the FASB issued FASB Interpretation No. (FIN) 48, "Accounting for Uncertainty in Income Taxes — an interpretation of FASB Statement No. 109" (FIN 48), which clarifies the accounting for uncertainty in income tax positions. FIN 48 prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of an income tax position taken or expected to be taken in a tax return. FIN 48 also provides guidance on derecognition, classification, interest and penalties, accounting in interim periods, and additional disclosures. AIG adopted FIN 48 on January 1, 2007. Upon adoption, AIG recognized a \$71 million increase in the liability for unrecognized tax benefits, which was accounted for as a decrease to opening retained earnings as of January 1, 2007. See Note 21 for additional FIN 48 disclosures.

FSP 13-2

In July 2006, the FASB issued FASB Staff Position No. (FSP) FAS 13-2, "Accounting for a Change or Projected

Notes to Consolidated Financial Statements *Continued*

1. Summary of Significant Accounting Policies

Continued

Change in the Timing of Cash Flows Relating to Income Taxes Generated by a Leveraged Lease Transaction” (FSP 13-2). FSP 13-2 addresses how a change or projected change in the timing of cash flows relating to income taxes generated by a leveraged lease transaction affects the accounting for the lease by the lessor, and directs that the tax assumptions be consistent with any FIN 48 uncertain tax position related to the lease. AIG adopted FSP 13-2 on January 1, 2007. Upon adoption, AIG recorded a \$50 million decrease in the opening balance of retained earnings, net of tax, to reflect the cumulative effect of this change in accounting.

As a result of adopting SOP 05-1, FIN 48 and FSP 13-2, AIG recorded a total decrease to opening retained earnings of \$203 million as of January 1, 2007.

Future Application of Accounting Standards

FAS 157

In September 2006, the FASB issued FAS 157, “Fair Value Measurements” (FAS 157). FAS 157 defines fair value, establishes a framework for measuring fair value and expands disclosure requirements regarding fair value measurements but does not change existing guidance about whether an instrument is carried at fair value. FAS 157 nullifies the guidance in EITF 02-3 that precluded the recognition of a trading profit at the inception of a derivative contract unless the fair value of such contract was obtained from a quoted market price or other valuation technique incorporating observable market data. FAS 157 also clarifies that an issuer’s credit standing should be considered when measuring liabilities at fair value.

AIG adopted FAS 157 on January 1, 2008, its required effective date. FAS 157 must be applied prospectively, except that the difference between the carrying amount and fair value of a stand-alone derivative or hybrid instrument measured using the guidance in EITF 02-3 on recognition of a trading profit at the inception of a derivative, is to be applied as a cumulative-effect adjustment to opening retained earnings on January 1, 2008. The adoption of FAS 157 was not material to AIG’s financial condition. However, the adoption of FAS 157 is expected to affect first quarter 2008 earnings, due to changes in the valuation methodology for hybrid financial instrument and derivative liabilities (both freestanding and embedded) currently carried at fair value. These methodology changes primarily include the incorporation of AIG’s own credit risk and the inclusion of explicit risk margins, where appropriate.

FAS 159

In February 2007, the FASB issued FAS 159, “The Fair Value Option for Financial Assets and Financial Liabilities” (FAS 159). FAS 159 permits entities to choose to measure at fair value many financial instruments and certain other items that are not required to be measured at fair value. Subsequent changes in fair value for designated items are required to be reported in income. FAS 159

also establishes presentation and disclosure requirements for similar types of assets and liabilities measured at fair value. FAS 159 permits the fair value option election on an instrument-by-instrument basis for eligible items existing at the adoption date and at initial recognition of an asset or liability or upon an event that gives rise to a new basis of accounting for that instrument.

AIG adopted FAS 159 on January 1, 2008, its required effective date. The adoption of FAS 159 with respect to elections made in the Life Insurance & Retirement Services segment is expected to result in a decrease to opening 2008 retained earnings of approximately \$600 million. The adoption of FAS 159 with respect to elections made by AIGFP is currently being evaluated for the effect of recently issued draft guidance by the FASB, anticipated to be issued in final form in early 2008, and its potential effect on AIG’s consolidated financial statements.

SOP 07-1

In June 2007, the AICPA issued SOP No. 07-1 (SOP 07-1), “Clarification of the Scope of the Audit and Accounting Guide ‘Audits of Investment Companies’ and Accounting by Parent Companies and Equity Method Investors for Investments in Investment Companies.” SOP 07-1 amends the guidance for whether an entity may apply the Audit and Accounting Guide, “Audits of Investment Companies” (the Guide). In February 2008, the FASB issued an FSP indefinitely deferring the effective date of SOP 07-1.

FAS 141(R)

In December 2007, the FASB issued FAS 141 (revised 2007), “Business Combinations” (FAS 141(R)). FAS 141(R) changes the accounting for business combinations in a number of ways, including broadening the transactions or events that are considered business combinations, requiring an acquirer to recognize 100 percent of the fair values of assets acquired, liabilities assumed, and noncontrolling interests in acquisitions of less than a 100 percent controlling interest when the acquisition constitutes a change in control of the acquired entity, recognizing contingent consideration arrangements at their acquisition-date fair values with subsequent changes in fair value generally reflected in income, and recognizing preacquisition loss and gain contingencies at their acquisition-date fair values, among other changes.

FAS 141(R) is required to be adopted for business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 15, 2008 (January 1, 2009 for AIG). Early adoption is prohibited. AIG is evaluating the effect FAS 141(R) will have on its consolidated financial statements.

FAS 160

In December 2007, the FASB issued FAS 160, “Noncontrolling Interests in Consolidated Financial Statements, an amendment of ARB No. 51” (FAS 160). FAS 160 requires noncontrolling (i.e., minority) interests in partially owned consolidated subsidiaries to be classified in the consolidated balance sheet as a separate component of consolidated shareholders’ equity. FAS 160 also

1. Summary of Significant Accounting Policies

Continued

establishes accounting rules for subsequent acquisitions and sales of noncontrolling interests and how noncontrolling interests should be presented in the consolidated statement of income. The noncontrolling interests' share of subsidiary income should be reported as a part of consolidated net income with disclosure of the attribution of consolidated net income to the controlling and noncontrolling interests on the face of the consolidated statement of income.

FAS 160 is required to be adopted in the first annual reporting period beginning on or after December 15, 2008 (January 1, 2009 for AIG) and earlier application is prohibited. FAS 160 must be adopted prospectively, except that noncontrolling interests should be reclassified from liabilities to a separate component of shareholders' equity and consolidated net income should be recast to include net income attributable to both the controlling and noncontrolling interests retrospectively. Had AIG adopted FAS 160 at December 31, 2007, AIG would have reclassified \$10.4 billion of minority (i.e., noncontrolling) interests from liabilities to Shareholders' equity.

2. Segment Information

AIG identifies its reportable segments by product line consistent with its management structure. These segments and their respective operations are as follows:

General Insurance: AIG's General Insurance subsidiaries write substantially all lines of commercial property and casualty insurance and various personal lines both domestically and abroad. Revenues in the General Insurance segment represent General Insurance net Premiums and other considerations earned, Net investment income and Net realized capital gains (losses). AIG's principal General Insurance operations are as follows:

Domestic Brokerage Group (DBG) writes substantially all classes of business insurance in the U.S. and Canada, accepting such business mainly from insurance brokers.

Transatlantic Holdings, Inc. (Transatlantic) subsidiaries offer reinsurance on both a treaty and facultative basis to insurers in the U.S. and abroad. Transatlantic structures programs for a full range of property and casualty products with an emphasis on specialty risks.

AIG's Personal Lines operations provide automobile insurance through aigdirect.com, the newly formed operation resulting from the merger of AIG Direct and 21st Century Insurance Group (21st Century), and the Agency Auto Division, as well as a broad range of coverages for high net worth individuals through the AIG Private Client Group.

Mortgage Guaranty operations provide residential mortgage guaranty insurance that covers the first loss for credit defaults on high loan-to-value conventional first- and second-lien mortgages for the purchase or refinance of one to four family residences.

AIG's Foreign General Insurance group accepts risks primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance group also includes

business written by AIG's foreign-based insurance subsidiaries. The Foreign General Insurance group uses various marketing methods to write both business and consumer lines insurance with certain refinements for local laws, customs and needs. AIU operates in Asia, the Pacific Rim, Europe, including the United Kingdom, Africa, the Middle East and Latin America.

Each of the General Insurance sub-segments is comprised of groupings of major products and services as follows: DBG is comprised of domestic commercial insurance products and services; Transatlantic is comprised of reinsurance products and services sold to other general insurance companies; Personal Lines is comprised of general insurance products and services sold to individuals; Mortgage Guaranty is comprised of products insuring against losses arising under certain loan agreements; and Foreign General is comprised of general insurance products sold overseas.

Life Insurance & Retirement Services: AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad. Insurance-oriented products consist of individual and group life, payout annuities (including structured settlements), endowment and accident and health policies. Retirement savings products consist generally of fixed and variable annuities. Revenues in the Life Insurance & Retirement Services segment represent Life Insurance & Retirement Services Premiums and other considerations, Net investment income and Net realized capital gains (losses).

AIG's principal Foreign Life Insurance & Retirement Services operations are American Life Insurance Company (ALICO), American International Assurance Company, Limited, together with American International Assurance Company (Bermuda) Limited (AIA), Nan Shan Life Insurance Company, Ltd. (Nan Shan), The Philippine American Life and General Insurance Company (Philamlife), AIG Edison Life Insurance Company (AIG Edison Life) and AIG Star Life Insurance Co. Ltd. (AIG Star Life).

AIG's principal Domestic Life Insurance & Retirement Services operations are American General Life Insurance Company (AG Life), The United States Life Insurance Company in the City of New York (USLIFE), American General Life and Accident Insurance Company (AGLA and, collectively with AG Life and USLIFE, the Domestic Life Insurance internal reporting unit), AIG Annuity Insurance Company (AIG Annuity), The Variable Annuity Life Insurance Company (VALIC) and AIG Retirement Services, Inc (AIG SunAmerica and, collectively with AIG Annuity and VALIC, the Domestic Retirement Services internal reporting unit).

American International Reinsurance Company (AIRCO) acts primarily as an internal reinsurance company for AIG's insurance operations.

Life Insurance & Retirement Services is comprised of two major groupings of products and services: insurance-oriented products and services and retirement savings products and services.

Financial Services: AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing,

Notes to Consolidated Financial Statements *Continued*

2. Segment Information

Continued

capital markets, consumer finance and insurance premium finance.

AIG's Aircraft Leasing operations represent the operations of International Lease Finance Corporation (ILFC), which generates its revenues primarily from leasing new and used commercial jet aircraft to domestic and foreign airlines. Revenues also result from the remarketing of commercial jets for its own account, and remarketing and fleet management services for airlines and for financial institutions.

Capital Markets represents the operations of AIGFP, which engages as principal in a wide variety of financial transactions, including standard and customized financial products involving commodities, credit, currencies, energy, equities and rates and provides credit protection through credit default swaps on certain super senior tranches of collateralized debt obligations (CDOs). AIGFP also invests in a diversified portfolio of securities and principal investments and engages in borrowing activities that

include issuing standard and structured notes and other securities and entering into guaranteed investment agreements (GIAs).

Consumer Finance operations include American General Finance Inc. (AGF) as well as AIG Consumer Finance Group Inc. (AIGCFG). AGF and AIGCFG provide a wide variety of consumer finance products, including non-conforming real estate mortgages, consumer loans, retail sales finance and credit-related insurance to customers both domestically and overseas, particularly in emerging and developing markets.

Asset Management: AIG's Asset Management operations comprise a wide variety of investment-related services and investment products. Such services and products are offered to individuals, pension funds and institutions globally through AIG's Spread-Based Investment business, Institutional Asset Management, and Brokerage Services and Mutual Funds business. Revenues in the Asset Management segment represent investment income with respect to spread-based products and management, advisory and incentive fees.

2. Segment Information

(a) Beginning in 2007, revenues and operating income related to certain foreign investment contracts, which were historically reported as a component of the Asset Management segment, are now reported in the Life Insurance & Retirement Services segment, net realized capital gains and losses; including derivative gains and losses and foreign exchange transaction gains and losses for Financial Services entities other than AIGFP and Asset Management entities, which were previously reported as part of AIG's Other category, are now included in Asset Management and Financial Services revenues and operating income; and revenues and operating income related to consolidated managed partnerships and funds, which were historically reported in the Asset Management segment, are now being reported in Consolidation and eliminations. All prior periods have been revised to conform to the current presentation.

(b) Includes AIG Parent and other operations that are not required to be reported separately. The following table presents the operating loss for AIG's Other category for the years ended December 31, 2007, 2006 and 2005:

For the Years Ended December 31, (in millions)	2007	2006	2005
Operating income (loss):			
Equity earnings in partially owned companies*	\$ 157	\$ 193	\$ (124)
Interest expense	(1,223)	(859)	(541)
Unallocated corporate expenses	(560)	(517)	(413)
Compensation expense — SICO Plans	(39)	(108)	(205)
Compensation expense — Starr tender offer	—	(54)	—
Net realized capital gains (losses)	(409)	(37)	269

(a) Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. In 2007, 2006 and 2005, the effect was \$(37) million, \$(73) million and \$93 million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings. In the second quarter of 2007, ILFC began applying hedge accounting to most of its derivatives hedging interest rate and foreign exchange risks associated with its floating rate and foreign currency denominated borrowings.

(b) Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. In 2007, 2006 and 2005, the effect was \$211 million, \$(1.82) billion and \$2.01 billion, respectively. The year ended December 31, 2007 includes a \$380 million out of period charge to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIGFP. The year ended December 31, 2006 includes an out of period charge of \$223 million related to the remediation of the material weakness in internal control over the accounting for certain derivative transactions under FAS 133. In the first quarter of 2007, AIGFP began applying hedge accounting for certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings.

(c) Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. In 2007, 2006 and 2005, the effect was \$(20) million, \$(94) million and \$75 million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings. In the second quarter of 2007, AGF began applying hedge accounting to most of its derivatives hedging interest rate and foreign exchange risks associated with its floating rate and foreign currency denominated borrowings.

(d) Represents primarily the sum of aircraft lease rentals from ILFC, AIGFP hedged financial positions entered into in connection with counterparty transactions, the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses, and finance charges from consumer finance operations.

(e) Interest expense for the Capital Markets business is included in Revenues above and in Other income in the consolidated statement of income.

(f) Both revenues and operating income (loss) include an unrealized market valuation loss of \$11.5 billion on AIGFP's super senior credit default swap portfolio and an other-than-temporary impairment charge of \$643 million on AIGFP's available for sale investment securities reported in other income.

(g) Includes a pre-tax charge of \$178 million in connection with domestic consumer finance's mortgage banking activities.

2. Segment Information

Continued

A substantial portion of AIG's operations is conducted in countries other than the United States and Canada. The following table summarizes AIG's operations by major geographic segment. Allocations have been made on the basis of the location of operations and assets.

(in millions)	Geographic Segments			Consolidated
	Domestic ^(a)	Far East	Other Foreign	
2007				
Total revenues	\$46,402	\$36,512	\$27,150	\$110,064
Real estate and other fixed assets, net of accumulated depreciation	3,202	1,404	912	5,518
Flight equipment primarily under operating leases, net of accumulated depreciation ^(b)	41,984	—	—	41,984
2006				
Total revenues	\$57,984	\$33,883	\$21,520	\$113,387
Real estate and other fixed assets, net of accumulated depreciation	2,432	1,082	867	4,381

The following table presents the amortized cost and estimated fair values of AIG's available for sale and held to maturity fixed maturity securities at December 31, 2007, by contractual maturity. Actual maturities may differ from contractual maturities because certain borrowers have the right to call or prepay certain obligations with or without call or prepayment penalties.

(in millions)	Available for Sale		Held to Maturity	
	Amortized Cost	Fair Value	Amortized Cost	Fair Value
Due in one year or less	\$ 25,844	\$ 25,994	\$ 72	\$ 69
Due after one year through five years	95,494	97,466	284	277
Due after five years through ten years	121,961	123,196	1,511	1,547
Due after ten years	117,589	120,170	19,714	20,264
Mortgage-backed, asset-backed and collateralized	140,982	134,500	—	—
Total available for sale	\$501,870	\$501,326	\$ 21,581	\$ 22,157

AIG's available for sale securities are recorded on the consolidated balance sheet at December 31, 2007 and 2006 as follows:

(in millions)	Fair Value	
	2007	2006
Bonds available for sale	\$397,372	\$386,869
Common stocks available for sale	17,900	13,256
Preferred stocks available for sale	2,370	2,539
Financial Services securities available for sale	40,305	47,205
Securities lending invested collateral	63,649	69,306
Total	\$521,596	\$519,175

(e) **Non-Income Producing Invested Assets:** At December 31, 2007, non-income producing invested assets were insignificant.

(f) **Gross Unrealized Losses and Estimated Fair Values on Investments:**

The following table summarizes the cost basis and gross unrealized losses on AIG's available for sale securities, aggregated by major investment category and length of time that individual securities have been in a continuous unrealized loss position, at December 31, 2007 and 2006:

(in millions)	12 Months or less		More than 12 Months		Total	
	Cost ^(a)	Unrealized Losses	Cost ^(a)	Unrealized Losses	Cost ^(a)	Unrealized Losses
2007						
Bonds ^(b)	\$190,809	\$ 9,935	\$65,137	\$ 3,226	\$255,946	\$13,161
Equity securities	4,433	463	—	—	4,433	463
Total	\$195,242	\$10,398	\$65,137	\$ 3,226	\$260,379	\$13,624
2006						
Bonds ^(b)	\$ 69,656	\$ 1,257	\$84,040	\$ 2,428	\$153,696	\$ 3,685
Equity securities	2,734	159	—	—	2,734	159
Total	\$ 72,390	\$ 1,416	\$84,040	\$ 2,428	\$156,430	\$ 3,844

(a) For bonds, represents amortized cost.

(b) Primarily relates to the corporate debt category.

At December 31, 2007, AIG held 37,281 and 2,307 of individual bond and stock investments, respectively, that were in an unrealized loss position, of which 9,930 individual investments were in an unrealized loss position for a continuous 12 months or longer.

AIG recorded other-than-temporary impairment charges of \$4.7 billion (including \$643 million related to AIGFP recorded in Other income), \$944 million and \$598 million in 2007, 2006 and 2005, respectively. See Note 1(c) herein for AIG's other-than-temporary impairment accounting policy.

Notes to Consolidated Financial Statements *Continued*

3. Investments

Continued

(g) Other Invested Assets:

Other invested assets at December 31, 2007 and 2006 consisted of the following:

At December 31, (in millions)	2007	2006
Partnerships ^(a)	\$ 28,938	\$21,657
Mutual funds	4,891	4,892
Investment real estate ^(b)	9,877	5,694
Aircraft asset investments ^(c)	1,689	1,784
Life settlement contracts ^(d)	1,627	1,090
Consolidated managed partnerships and funds ^(e)	6,614	2,923
All other investments	5,187	4,071
Other invested assets	\$ 58,823	\$42,111

(a) Includes private equity partnerships and hedge funds.

(b) Net of accumulated depreciation of \$548 million and \$585 million in 2007 and 2006, respectively.

(c) Consist primarily of Life Insurance & Retirement Services investments in aircraft equipment.

(d) See paragraph (h) below for additional information.

(e) Represents AIG managed partnerships and funds that are consolidated.

At December 31, 2007 and 2006, \$7.2 billion and \$5.3 billion of Other invested assets related to available for sale investments carried at fair value, with unrealized gains and losses recorded in of Accumulated other comprehensive income (loss), net of deferred taxes, with almost all of the remaining investments being accounted for on the equity method of accounting. All of the investments are subject to impairment testing (see Note 1(c) herein). The gross unrealized loss on the investments accounted for as available for sale at December 31, 2007 was \$621 million, the majority of which represents investments that have been in a continuous unrealized loss position for less than 12 months.

(h) Investments in Life Settlement Contracts: At December 31, 2007, the carrying value of AIG's life settlement contracts

was \$1.6 billion, and is included in Other invested assets in the consolidated balance sheet. These investments are monitored for impairment on a contract by contract basis quarterly. During 2007, income recognized on life settlement contracts previously held in non-consolidated trusts was \$32 million, and is included in net investment income in the consolidated statement of income.

Further information regarding life settlement contracts at December 31, 2007 is as follows:

(dollars in millions)

Remaining Life Expectancy of Insureds	Number of Contracts	Carrying Value	Face Value (Death Benefits)
0 – 1 year	11	\$ 7	\$ 9
1 – 2 years	34	34	47
2 – 3 years	79	61	98
3 – 4 years	151	111	210
4 – 5 years	176	130	277
Thereafter	2,181	1,284	5,400
Total	2,632	\$1,627	\$6,041

At December 31, 2007, the anticipated life insurance premiums required to keep the life settlement contracts in force, payable in the ensuing twelve months ending December 31, 2008 and the four succeeding years ending December 31, 2012 are \$132 million, \$141 million, \$149 million, \$146 million, and \$152 million, respectively.

In June 2006, AIG restructured its ownership of life settlement contracts with no effect on the economic substance of these investments. At the same time, AIG paid \$610 million to its former co-investors to acquire all the remaining interests in life settlement contracts held in previously non-consolidated trusts. The life insurers for a small portion of AIG's consolidated life settlement contracts include AIG subsidiaries. As a result, amounts related to life insurance issued by AIG subsidiaries are eliminated in consolidation.

4. Lending activities

Mortgages and other loans receivable at December 31, 2007 and 2006 are comprised of the following:

Years Ended December 31, (in millions)	2007	2006
Mortgages – commercial	\$17,105	\$15,219
Mortgages – residential*	2,153	1,903
Life insurance policy loans	8,099	7,501
Collateral, guaranteed, and other commercial loans	6,447	3,859
Total mortgage and other loans receivable	33,804	28,482
Allowance for losses	(77)	(64)
Mortgage and other loans receivable, net	\$33,727	\$28,418

* Primarily consists of foreign mortgage loans.

4. Lending activities

Continued

Finance receivables, net of unearned finance charges, were as follows:

Years Ended December 31, (in millions)	2007	2006
Real estate loans	\$20,023	\$20,321
Non-real estate loans	5,447	4,506
Retail sales finance	3,659	3,092
Credit card loans	1,566	1,413
Other loans	1,417	978
Total finance receivables	32,112	30,310
Allowance for losses	(878)	(737)
Finance receivables, net	\$31,234	\$29,573

5. Reinsurance

In the ordinary course of business, AIG's General Insurance and Life Insurance companies place reinsurance with other insurance companies in order to provide greater diversification of AIG's business and limit the potential for losses arising from large risks. In addition, AIG's General Insurance subsidiaries assume reinsurance from other insurance companies.

Supplemental information for gross loss and benefit reserves net of ceded reinsurance at December 31, 2007 and 2006 follows:

(in millions)	As Reported	Net of Reinsurance
2007		
Reserve for losses and loss expenses	\$ (85,500)	\$ (69,288)
Future policy benefits for life and accident and health insurance contracts	(136,068)	(134,461)
Reserve for unearned premiums	(28,022)	(24,029)
Reinsurance assets*	21,811	—
2006		
Reserve for losses and loss expenses	\$ (79,999)	\$ (62,630)
Future policy benefits for life and accident and health insurance contracts	(121,004)	(119,430)
Reserve for unearned premiums	(26,271)	(22,759)
Reinsurance assets*	22,456	—

* Represents gross reinsurance assets, excluding allowances and reinsurance recoverable on paid losses.

AIRCO acts primarily as an internal reinsurance company for AIG's insurance operations. This facilitates insurance risk manage-

ment (retention, volatility, concentrations) and capital planning locally (branch and subsidiary). It also allows AIG to pool its insurance risks and purchase reinsurance more efficiently at a consolidated level, manage global counterparty risk and relationships and manage global life catastrophe risks.

General Reinsurance

General reinsurance is effected under reinsurance treaties and by negotiation on individual risks. Certain of these reinsurance arrangements consist of excess of loss contracts which protect AIG against losses over stipulated amounts. Ceded premiums are considered prepaid reinsurance premiums and are recognized as a reduction of premiums earned over the contract period in proportion to the protection received. Amounts recoverable from general reinsurers are estimated in a manner consistent with the claims liabilities associated with the reinsurance and presented as a component of reinsurance assets. Assumed reinsurance premiums are earned primarily on a pro-rata basis over the terms of the reinsurance contracts. For both ceded and assumed reinsurance, risk transfer requirements must be met in order for reinsurance accounting to apply. If risk transfer requirements are not met, the contract is accounted for as a deposit, resulting in the recognition of cash flows under the contract through a deposit asset or liability and not as revenue or expense. To meet risk transfer requirements, a reinsurance contract must include both insurance risk, consisting of both underwriting and timing risk, and a reasonable possibility of a significant loss for the assuming entity. Similar risk transfer criteria are used to determine whether directly written insurance contracts should be accounted for as insurance or as a deposit.

Notes to Consolidated Financial Statements *Continued*

5. Reinsurance

Continued

General Insurance premiums written and earned were comprised of the following:

Years Ended December 31, (in millions)	2007	2006	2005
Premiums written:			
Direct	\$ 52,055	\$ 49,609	\$ 46,689
Assumed	6,743	6,671	6,036
Ceded	(11,731)	(11,414)	(10,853)
Total	\$ 47,067	\$ 44,866	\$ 41,872
Premiums earned:			
Direct	\$ 50,403	\$ 47,973	\$ 45,794
Assumed	6,530	6,449	5,921
Ceded	(11,251)	(10,971)	(10,906)
Total	\$ 45,682	\$ 43,451	\$ 40,809

For the years ended December 31, 2007, 2006 and 2005, reinsurance recoveries, which reduced loss and loss expenses incurred, amounted to \$9.0 billion, \$8.3 billion and \$20.7 billion, respectively.

Life Reinsurance

Life reinsurance is effected principally under yearly renewable term treaties. The premiums with respect to these treaties are considered prepaid reinsurance premiums and are recognized as a reduction of premiums earned over the contract period in proportion to the protection provided. Amounts recoverable from life reinsurers are estimated in a manner consistent with the assumptions used for the underlying policy benefits and are presented as a component of reinsurance assets.

Life Insurance & Retirement Services premiums were comprised of the following:

Years Ended December 31, (in millions)	2007	2006	2005
Gross premiums	\$34,585	\$32,247	\$30,818
Ceded premiums	(1,778)	(1,481)	(1,317)
Premiums	\$32,807	\$30,766	\$29,501

Life Insurance recoveries, which reduced death and other benefits, approximated \$1.1 billion, \$806 million and \$770 million, respectively, for the years ended December 31, 2007, 2006 and 2005.

Life Insurance in-force ceded to other insurance companies was as follows:

At December 31, (in millions)	2007	2006	2005
Life Insurance in force ceded	\$402,654	\$408,970	\$365,082

Life Insurance assumed represented less than 0.1 percent, 0.1 percent and 0.8 percent of gross Life Insurance in force at December 31, 2007, 2006 and 2005, respectively, and Life Insurance & Retirement Services premiums assumed represented 0.1 percent, 0.1 percent and 0.3 percent of gross premiums and other considerations for the years ended December 31, 2007, 2006 and 2005, respectively.

AIG's Domestic Life Insurance & Retirement Services operations utilize internal and third-party reinsurance relationships to manage insurance risks and to facilitate capital management strategies. Pools of highly-rated third-party reinsurers are utilized to manage net amounts at risk in excess of retention limits. AIG's Domestic Life Insurance companies also cede excess, non-economic reserves carried on a statutory-basis only on certain term and universal life insurance policies and certain fixed annuities to an offshore affiliate.

AIG generally obtains letters of credit in order to obtain statutory recognition of its intercompany reinsurance transactions. For this purpose, AIG has a \$2.5 billion syndicated letter of credit facility outstanding at December 31, 2007, all of which relates to life intercompany reinsurance transactions.

AIG is also a party to a 364-day bilateral revolving credit facility for an aggregate amount of \$3.2 billion. The facility can be drawn in the form of letters of credit with terms of up to eight years. At December 31, 2007, approximately \$3.0 billion principal amount of letters of credit are outstanding under this facility, of which approximately \$2.1 billion relates to life intercompany reinsurance transactions. AIG has also obtained approximately \$377 million of letters of credit on a bilateral basis.

Reinsurance Security

AIG's third-party reinsurance arrangements do not relieve AIG from its direct obligation to its insureds. Thus, a credit exposure exists with respect to both general and life reinsurance ceded to the extent that any reinsurer fails to meet the obligations assumed under any reinsurance agreement. AIG holds substantial collateral as security under related reinsurance agreements in the form of funds, securities, and/or letters of credit. A provision has been recorded for estimated unrecoverable reinsurance. AIG has been largely successful in prior recovery efforts.

AIG evaluates the financial condition of its reinsurers and establishes limits per reinsurer through AIG's Credit Risk Committee. AIG believes that no exposure to a single reinsurer represents an inappropriate concentration of risk to AIG, nor is AIG's business substantially dependent upon any single reinsurer.

6. Deferred Policy Acquisition Costs

The following reflects the policy acquisition costs deferred for amortization against future income and the related amortization charged to income for General Insurance and Life Insurance & Retirement Services operations:

Years Ended December 31, (in millions)	2007	2006	2005
General Insurance operations:			
Balance at beginning of year	\$ 4,355	\$ 4,048	\$ 3,998
Acquisition costs deferred	8,661	8,115	7,480
Amortization expense	(8,235)	(7,866)	(7,365)
Increase (decrease) due to foreign exchange and other	(138)	58	(65)
Balance at end of year	\$ 4,643	\$ 4,355	\$ 4,048
Life Insurance & Retirement Services operations:			
Balance at beginning of year	\$32,810	\$28,106	\$25,080
Acquisition costs deferred	7,276	6,823	6,513
Amortization expense ^(a)	(3,367)	(3,712)	(3,328)
Change in net unrealized gains (losses) on securities	745	646	977
Increase (decrease) due to foreign exchange	916	947	(1,136)
Other ^(b)	65	—	—
Subtotal	\$38,445	\$32,810	\$28,106
Consolidation and eliminations	62	70	—
Balance at end of year ^(c)	\$38,507	\$32,880	\$28,106
Total deferred policy acquisition costs	\$43,150	\$37,235	\$32,154

(a) In 2007, amortization expense was reduced by \$733 million related to changes in actuarial estimates, which was mostly offset in incurred policy losses and benefits.

(b) In 2007, includes the cumulative effect of the adoption of SOP 05-1 of \$(118) million and a balance sheet reclassification of \$189 million.

(c) Includes \$5 million and \$(720) million at December 31, 2007 and 2006, respectively, related to the effect of net unrealized gains and losses on available for sale securities.

Included in the above table is the VOBA, an intangible asset recorded during purchase accounting, which is amortized in a manner similar to DAC. Amortization of VOBA was \$213 million, \$239 million and \$291 million in 2007, 2006 and 2005, respectively, while the unamortized balance was \$1.86 billion, \$1.98 billion and \$2.14 billion at December 31, 2007, 2006 and 2005, respectively. The percentage of the unamortized balance of VOBA at 2007 expected to be amortized in 2008 through 2012 by year is: 11.7 percent, 10.2 percent, 8.4 percent, 6.6 percent and 5.9 percent, respectively, with 57.2 percent being amortized after five years. These projections are based on current estimates for investment, persistency, mortality and morbidity assumptions. The DAC amortization charged to income includes the increase or decrease of amortization for FAS 97-related realized capital gains (losses), primarily in the Domestic Retirement Services business. In 2007, 2006 and 2005, the rate of amortization expense decreased by \$291 million, \$90 million and \$46 million, respectively.

There were no impairments of DAC or VOBA for the years ended December 31, 2007, 2006 and 2005.

7. Variable Interest Entities

FIN 46R, "Consolidation of Variable Interest Entities" clarifies the consolidation accounting for certain entities in which equity investors do not have the characteristics of a controlling financial

interest or do not have sufficient equity that is at risk which would allow the entity to finance its activities without additional subordinated financial support. FIN 46R recognizes that consolidation based on majority voting interest should not apply to certain types of entities that are defined as VIEs. A VIE is consolidated by its primary beneficiary, which is the party that absorbs a majority of the expected losses or a majority of the expected residual returns of the VIE, or both.

AIG, in the normal course of business, is involved with various VIEs. In some cases, AIG has participated to varying degrees in the design of the entity. AIG's involvement in VIEs varies from being a passive investor to managing and structuring the activities of the VIE. AIG engages in transactions with VIEs to manage its investment needs, obtain funding as well as facilitate client needs through a global network of operating subsidiaries comprising AIG Global Asset Management Holdings Corp. and its subsidiaries and affiliated companies (collectively, AIG Investments) and AIGFP. AIG purchases debt securities (rated and unrated) and equity interests issued by VIEs, makes loans and provides other credit support to VIEs, enters into insurance and reinsurance transactions with VIEs, enters into leasing arrangements with VIEs, enters into derivative transactions with VIEs through AIGFP and acts as the collateral manager of VIEs through AIG Investments and AIGFP. Obligations to outside interest holders in VIEs consolidated by AIG are reported as liabilities in the consolidated financial statements. These interest holders generally have recourse only to the assets

Notes to Consolidated Financial Statements *Continued*

7. Variable Interest Entities

Continued

and cash flows of the VIEs and do not have recourse to AIG, except when AIG has provided a guarantee to the VIE's interest holders.

AIG determines whether an entity is a VIE, who the variable interest holders are, and which party is the primary beneficiary of the VIE by performing an analysis of the design of the VIE that includes a review of, among other factors, its capital structure, contractual relationships and terms, nature of the entity's operations and purpose, nature of the entity's interests issued, AIG's interests in the entity which either create or absorb variability and related party relationships. AIG consolidates a VIE when all of AIG's interests in the VIE, when combined, absorb a majority of the expected losses or a majority of the expected residual returns of the VIE, or both. Assets held by VIEs which are currently consolidated because AIG is primary beneficiary (except for those VIEs where AIG also owns a majority voting interest), approximated \$27.0 billion and \$9.1 billion at December 31, 2007 and 2006, respectively. These consolidated assets are reflected in AIG's consolidated balance sheet as Investments and financial services assets.

In addition to the VIEs that are consolidated in accordance with FIN 46R, the Company has significant variable interests in certain other VIEs that are not consolidated because the Company is not the primary beneficiary. AIG applies quantitative and qualitative measures in identifying whether it is a primary beneficiary of a VIE and whether it holds a significant variable interest in a VIE.

For all VIEs in which it has a significant variable interest, including those in which it is the primary beneficiary, AIG reconsiders if it is the current primary beneficiary whenever a VIE's governing documents or contractual arrangements are changed in a manner that reallocates between the primary beneficiary and other unrelated parties, the obligation to absorb expected losses or right to receive expected residual returns. It also reconsiders its role as primary beneficiary when it sells or otherwise disposes of all or part of its variable interests in a VIE or when it acquires additional variable interests in a VIE. AIG does not reconsider whether it is a primary beneficiary solely as the result of operating losses incurred by an entity. Assets of VIEs where AIG has a significant variable interest and does not consolidate the VIE because AIG is not the primary beneficiary, approximated \$275.1 billion at December 31, 2007. AIG's maximum exposure to loss from its involvement with these consolidated VIEs approximated \$44.6 billion at December 31, 2007. For this purpose, maximum loss is considered to be the notional amount of credit lines, guarantees and other credit support, and liquidity facilities, the notional amounts of credit default swaps and certain total return swaps, and the amount invested in the debt or equity issued by the VIEs.

Entities for which AIG is the primary beneficiary and consolidates or in which AIG has a significant variable interest are described below.

Asset Management

In certain instances, AIG Investments acts as the collateral manager or general partner of an investment fund, collateralized debt obligation (CDO), collateralized loan obligation (CLO), private equity fund or hedge fund. Such entities are typically registered investment companies or qualify for the specialized investment company accounting in accordance with the AICPA Audit and Accounting Guide - Investment Companies. In CDO and CLO transactions, AIG establishes a trust or other special purpose entity that purchases a portfolio of assets such as bank loans, corporate debt, or non-performing credits and issues trust certificates or debt securities that represent interests in the portfolio of assets. These transactions can be cash-based or synthetic and are actively or passively managed. For investment partnerships, hedge funds and private equity funds, AIG acts as the general partner or manager of the fund and is responsible for carrying out the investment mandate of the VIE. Often, AIG's insurance operations participate in these AIG managed structures as a passive investor in the debt or equity issued by the VIE. Typically, AIG does not provide any guarantees to the investors in the VIE.

AIG Investments is an investor in various real estate investments. These investments are typically with unaffiliated third-party developers via a partnership or limited liability company structure. Some of these entities are VIEs. The activities of these VIEs principally consist of the development or redevelopment of all major types of commercial (retail, office, industrial, logistics parks, mixed use, etc.) and residential real estate. AIG's involvement varies from being a passive equity investor to actively managing the activities of the VIE.

In addition to changes in a VIE's governing documentation or capitalization structure, AIG reconsiders its decision with respect to whether it is the primary beneficiary for these VIEs, when AIG purchases, or when a VIE sells or otherwise disposes of, variable interests in the CDO, CLO, investment, partnership, hedge fund or private equity fund to other unrelated parties.

SunAmerica Affordable Housing Partnerships

SunAmerica Affordable Housing Partners, Inc. (SAAHP) organizes limited partnerships (investment partnerships) that are considered to be VIEs, and that are consolidated by AIG when AIG has determined that it is the primary beneficiary. The investment partnerships invest as limited partners in operating partnerships that develop and operate affordable housing qualifying for federal tax credits and a few market rate properties across the United States. The general partners in the operating partnerships are almost exclusively unaffiliated third-party developers. AIG does not normally consolidate an operating partnership if the general partner is an unaffiliated person. Through approximately 1,200 partnerships, SAAHP has invested in developments with approximately 157,000 apartment units nationwide, and has

7. Variable Interest Entities

Continued

syndicated over \$7 billion in partnership equity since 1991 to other investors who will receive, among other benefits, tax credits under certain sections of the Internal Revenue Code. AIG Retirement Services, Inc. functions as the general partner in certain investment partnerships and acts both as a credit enhancer in certain transactions, through differing structures with respect to funding development costs for the operating partnerships, and as guarantor that investors will receive the tax benefits projected at the time of syndication. AIG Retirement Services, Inc. consolidates these investment partnerships as a result of the guarantee provided to the investors. As part of their incentive compensation, certain key SAAHP employees have been awarded residual cash flow interests in the partnerships, subject to certain vesting requirements. The operating income of SAAHP is reported, along with other SunAmerica partnership income, as a component of AIG's Asset Management segment.

Insurance Investments

As part of its investment activities, AIG's insurance operations invest in obligations which include debt and equity securities and interests issued by VIEs. These investments include investments in AIG sponsored and non-sponsored investment funds, hedge funds, private equity funds, and structured financing arrangements. The investments in these VIEs allow AIG's insurance entities to purchase assets permitted by insurance regulations while maximizing their return on these assets. AIG's insurance operations typically are not involved in the design or establishment of the VIE, nor do they actively participate in the management of the VIE.

In addition to changes in a VIE's governing documentation or capitalization structure, AIG reconsiders its position as to whether it is the primary beneficiary as the result of investments in these VIEs when AIG purchases or sells VIE issued debt and equity interests to other unrelated parties.

AIGFP

The variable interests that AIGFP may hold in VIEs include debt securities, equity interests, loans, derivative instruments and other credit support arrangements. Transactions associated with VIEs include an asset-backed commercial paper conduit, asset securitizations, collateralized debt obligations, investment vehicles and other structured financial transactions. AIGFP engages in these transactions to facilitate client needs for investment purposes and to obtain funding.

AIGFP invests in preferred securities issued by VIEs. Additionally, AIGFP establishes VIEs that issue preferred interests to third parties and uses the proceeds to provide financing to AIGFP subsidiaries. In certain instances, AIGFP consolidates these VIEs. Consistent with FIN 46R requirements, AIGFP reviews any changes in its holdings of a VIEs preferred stock investment as part of its reconsideration review to determine a VIE's primary beneficiary. In

addition, AIG reviews all changes in such VIEs' governing documentation or capitalization structures as part of the determination of whether there is a change in the VIEs' primary beneficiaries.

AIGFP is the primary beneficiary of an asset-backed commercial paper conduit with which it entered into several total return swaps covering all the conduit's assets that absorb the majority of the expected losses of the entity. The assets of the conduit serve as collateral for the conduit's obligations. AIGFP is also the primary beneficiary of several structured financing transactions in which AIGFP holds the first loss position either by investing in the equity of the VIE or implicitly through a lending or derivative arrangement. These VIEs are subject to the reconsideration event reviews noted above.

In certain instances, AIGFP enters into liquidity facilities with various SPEs when AIGFP provides liquidity to the SPE in the form of a guarantee, derivative, or a letter of credit and does not consolidate the VIE. AIGFP also executes various swap and option transactions with VIEs. Such contractual arrangements are done in the ordinary course of business. Typically, interest rate derivatives such as interest rate swaps and options executed with VIEs are not deemed to be variable interests or significant variable interests because the underlying is an observable market interest rate and AIGFP as the derivative counterparty to the VIE is senior to the debt and equity holders.

In 2007, AIGFP sponsored its only structured investment vehicle (SIV) which invests in variable rate, investment-grade debt securities. The SIV is a VIE because it does not have sufficient equity to operate without subordinated capital notes which serve as equity though they are legally debt instruments. The capital notes absorb losses prior to the senior debt. Based on the sale of more than 88 percent of its capital notes to unrelated third-party investors and the continued holding by those investors of their capital notes, AIGFP is not the primary beneficiary of the SIV. AIGFP reviews its primary beneficiary position when the governing document or capital structure changes or the amount of senior or capital note holdings change. Based on a change in the governing documents under which AIGFP committed to provide short-term funding to the SIV, as necessary, a quantitative analysis performed under FIN 46R as of December 31, 2007 showed that AIGFP is not the primary beneficiary. This outcome is a result of the high credit quality of the assets and the fact that 85 percent of credit losses, if any, would be shared by other capital note holders. At December 31, 2007 assets of this unconsolidated SIV totaled \$2.4 billion. AIGFP's invested assets at December 31, 2007 included \$1.7 billion of securities purchased under agreements to resell and commercial paper and medium-term and capital notes issued by this entity.

AIGFP has entered into transactions with VIEs that are used, in part, to provide tax planning strategies to investors and/or AIGFP through an enhanced yield investment security. These structures typically provide financing to AIGFP and/or the investor at enhanced rates. AIGFP may be either the primary beneficiary of and consolidate the VIE, or may be a significant variable interest holder in the VIE.

Notes to Consolidated Financial Statements *Continued*

8. Derivatives and Hedge Accounting

AIG uses derivatives and other financial instruments as part of its financial risk management programs and as part of its investment operations. AIGFP also transacts in derivatives as a dealer.

Derivatives, as defined in FAS 133, are financial arrangements among two or more parties with returns linked to or "derived" from some underlying equity, debt, commodity or other asset, liability, or foreign exchange rate or other index or the occurrence of a specified payment event. Derivative payments may be based on interest rates, exchange rates, prices of certain securities, commodities, or financial or commodity indices or other variables.

Unless subject to a scope exclusion, AIG carries all derivatives on the consolidated balance sheet at fair value. The changes in fair value of the derivative transactions of AIGFP are presented as a component of AIG's operating income.

AIGFP

AIGFP, in the ordinary course of operations and as principal, structures and enters into derivative transactions to meet the needs of counterparties who may be seeking to hedge certain aspects of such counterparties' operations or obtain a desired financial exposure. In most cases AIGFP does not hedge its exposures related to the credit default swaps it has written. AIGFP also enters into derivative transactions to mitigate risk in its exposures (interest rates, currencies, commodities, credit and equities) arising from such transactions. Such instruments are carried at market or fair value, whichever is appropriate, and are reflected on the balance sheet in "Unrealized gain on swaps, options and forward transactions" and "Unrealized loss on swaps, options and forward contracts."

Beginning in 2007, AIGFP designated certain interest rate swaps as fair value hedges of the benchmark interest rate risk on certain of its interest bearing financial assets and liabilities. In these hedging relationships, AIG is hedging its fixed rate available for sale securities and fixed rate borrowings. AIGFP also designated foreign currency forward contracts as fair value hedges for changes in spot foreign exchange rates of the non-U.S. dollar denominated available for sale debt securities. Under these strategies, all or portions of individual or multiple derivatives may be designated against a single hedged item.

At inception of each hedging relationship, AIGFP performs and documents its prospective assessments of hedge effectiveness to demonstrate that the hedge is expected to be highly effective. For hedges of interest rate risk, AIGFP uses regression to demonstrate the hedge is highly effective, while it uses the periodic dollar offset method for its foreign currency hedges. AIGFP uses the periodic dollar offset method to assess whether its hedging relationships were highly effective on a retrospective basis. The prospective and retrospective assessments are updated on a daily basis. The passage of time component of the hedging instruments and the forward points on foreign currency hedges are excluded from the assessment of hedge effectiveness and measurement of hedge ineffectiveness. AIGFP does not utilize the shortcut, matched terms or equivalent methods to assess hedge effectiveness.

The change in fair value of the derivative that qualifies under the requirements of FAS 133 as a fair value hedge is recorded in current period earnings along with the gain or loss on the hedged item for the hedged risk. For interest rate hedges, the adjustments to the carrying value of the hedged items are amortized into income using the effective yield method over the remaining life of the hedged item. Amounts excluded from the assessment of hedge effectiveness are recognized in current period earnings.

For the year ended December 31, 2007, AIGFP recognized net losses of \$0.7 million in earnings, representing hedge ineffectiveness, and also recognized net losses of \$456 million related to the portion of the hedging instruments excluded from the assessment of hedge effectiveness.

AIGFP's derivative transactions involving interest rate swap transactions generally involve the exchange of fixed and floating rate interest payment obligations without the exchange of the underlying notional amounts. AIGFP typically becomes a principal in the exchange of interest payments between the parties and, therefore, is exposed to counterparty credit risk and may be exposed to loss, if counterparties default. Currency, commodity, and equity swaps are similar to interest rate swaps, but involve the exchange of specific currencies or cashflows based on the underlying commodity, equity securities or indices. Also, they may involve the exchange of notional amounts at the beginning and end of the transaction. Swaptions are options where the holder has the right but not the obligation to enter into a swap transaction or cancel an existing swap transaction. At December 31, 2007, the aggregate notional amount of AIGFP's outstanding swap transactions approximated \$2,133 billion, primarily related to interest rate swaps of approximately \$1,167 billion.

AIGFP follows a policy of minimizing interest rate, currency, commodity, and equity risks associated with securities available for sale by entering into internal offsetting positions, on a security by security basis within its derivatives portfolio, thereby offsetting a significant portion of the unrealized appreciation and depreciation. In addition, to reduce its credit risk, AIGFP has entered into credit derivative transactions with respect to \$82 million of securities available for sale to economically hedge its credit risk. As previously discussed, these economic offsets did not meet the hedge accounting requirements of FAS 133 and, therefore, are recorded in Other income in the Consolidated Statement of Income.

Notional amount represents a standard of measurement of the volume of swaps business of Capital Markets operations. Notional amount is not a quantification of market risk or credit risk and is not recorded on the consolidated balance sheet. Notional amounts generally represent those amounts used to calculate contractual cash flows to be exchanged and are not paid or received, except for certain contracts such as currency swaps.

The timing and the amount of cash flows relating to Capital Markets foreign exchange forwards and exchange traded futures and options contracts are determined by each of the respective contractual agreements.

8. Derivatives and Hedge Accounting

The following table presents the notional amounts by remaining maturity of Capital Markets' interest rate, credit default and currency swaps and swaptions derivatives portfolio at December 31, 2007 and 2006:

(in millions)	Remaining Life of Notional Amount*				Total 2007	Total 2006
	One Year	Two Through Five Years	Six Through Ten Years	After Ten Years		
Interest rate swaps	\$441,801	\$ 554,917	\$156,634	\$ 14,112	\$1,167,464	\$1,058,279
Credit default swaps	184,924	286,069	85,792	5,028	561,813	483,648
Currency swaps	38,384	135,187	41,675	9,029	224,275	218,091
Swaptions, equity and commodity swaps	57,709	62,849	35,270	23,139	178,967	180,040
Total	\$722,818	\$1,039,022	\$319,371	\$ 51,308	\$2,132,519	\$1,940,058

* Notional amount is not representative of either market risk or credit risk and is not recorded in the consolidated balance sheet.

Futures and forward contracts are contracts that obligate the holder to sell or purchase foreign currencies, commodities or financial indices in which the seller/purchaser agrees to make/take delivery at a specified future date of a specified instrument, at a specified price or yield. Options are contracts that allow the holder of the option to purchase or sell the underlying commodity, currency or index at a specified price and within, or at, a specified period of time. As a writer of options, AIGFP generally

receives an option premium and then manages the risk of any unfavorable change in the value of the underlying commodity, currency or index by entering into offsetting transactions with third-party market participants. Risks arise as a result of movements in current market prices from contracted prices, and the potential inability of the counterparties to meet their obligations under the contracts.

The following table presents Capital Markets futures, forward and option contracts portfolio by maturity and type of derivative at December 31, 2007 and 2006:

(in millions)	Remaining Life				Total 2007	Total 2006
	One Year	Two Through Five Years	Six Through Ten Years	After Ten Years		
Exchange traded futures and options contracts contractual amount	\$ 27,588	\$1,359	\$ —	\$ —	\$ 28,947	\$ 27,271
Over the counter forward contracts contractual amount	485,332	5,864	1,850	—	493,046	492,913
Total	\$512,920	\$7,223	\$1,850	\$ —	\$521,993	\$520,184

AIGFP Credit Default Swaps

AIGFP enters into credit derivative transactions in the ordinary course of its business. The majority of AIGFP's credit derivatives require AIGFP to provide credit protection on a designated portfolio of loans or debt securities. AIGFP provides such credit protection on a "second loss" basis, under which AIGFP's payment obligations arise only after credit losses in the designated portfolio exceed a specified threshold amount or level of "first losses." The threshold amount of credit losses that must be realized before AIGFP has any payment obligation is negotiated by AIGFP for each transaction to provide that the likelihood of any payment obligation by AIGFP under each transaction is remote. The underwriting process for these derivatives included assumptions of severely stressed recessionary market scenarios to minimize the likelihood of realized losses under these obligations.

In certain cases, the credit risk associated with a designated portfolio is tranching into different layers of risk, which are then

analyzed and rated by the credit rating agencies. Typically, there will be an equity layer covering the first credit losses in respect of the portfolio up to a specified percentage of the total portfolio, and then successive layers ranging from generally a BBB-rated layer to one or more AAA-rated layers. In transactions that are rated with respect to the risk layer or tranche that is immediately junior to the threshold level above which AIGFP's payment obligation would generally arise, a significant majority are rated AAA by the rating agencies. In transactions that are not rated, AIGFP applies the same risk criteria for setting the threshold level for its payment obligations. Therefore, the risk layer assumed by AIGFP with respect to the designated portfolio in these transactions is often called the "super senior" risk layer, defined as the layer of credit risk senior to a risk layer that has been rated AAA by the credit rating agencies, or if the transaction is not rated, equivalent thereto.

Notes to Consolidated Financial Statements *Continued*

8. Derivatives and Hedge Accounting

Continued

At December 31, 2007 and 2006, the notional amounts and unrealized market valuation loss of the super senior credit default swap portfolio by asset classes were as follows:

	<i>Notional Amount (in billions)</i>	<i>Unrealized Market Valuation Loss (in millions)</i>
Corporate loans ^(a)	\$230	\$ —
Prime residential mortgages ^(a)	149	—
Corporate Debt/CLOs	70	226
Multi-sector CDO ^(b)	78	11,246
Total	\$527	\$11,472

(a) *Predominantly represent transactions written to facilitate regulatory capital relief.*

(b) *Approximately \$61.4 billion, in notional amount, of the multi-sector CDO pools includes some exposure to U.S. subprime mortgages.*

Approximately \$379 billion of the \$527 billion in notional exposure of AIGFP's super senior credit default swap portfolio as of December 31, 2007 represents derivatives written for financial institutions, principally in Europe, for the purpose of providing them with regulatory capital relief rather than risk mitigation. In exchange for a minimum guaranteed fee, the counterparties receive credit protection in respect of portfolios of various debt securities or loans they own, thus improving their regulatory capital position. These derivatives are generally expected to terminate at no additional cost to the counterparty upon the counterparty's adoption of models compliant with the Basel II Accord. AIG expects that the majority of these transactions will terminate within the next 12 to 18 months. As of February 26, 2008, approximately \$54 billion in notional exposures have either been terminated or are in the process of being terminated. AIGFP was not required to make any payments as part of these terminations and in certain cases was paid a fee upon termination. In light of this experience to date and after other comprehensive analyses, AIG did not recognize an unrealized market valuation adjustment for this regulatory capital relief portfolio for the year ended December 31, 2007. AIG will continue to assess the valuation of this portfolio and monitor developments in the marketplace. There can be no assurance that AIG will not recognize unrealized market valuation losses from this portfolio in future periods. In addition to writing credit protection on the super senior risk layer on designated portfolios of loans or debt securities, AIGFP also wrote protection on tranches below the super senior risk layer. At December 31, 2007 the notional amount of the credit default swaps in the regulatory capital relief portfolio written on tranches below the super senior risk layer was \$5.8 billion, with an estimated fair value of \$(25) million.

AIGFP has also written credit protection on the super senior risk layer of diversified portfolios of investment grade corporate debt, collateralized loan obligations (CLOs) and multi-sector CDOs. AIGFP is at risk only on the super senior portion related to a diversified portfolio of credits referenced to loans or debt securities. The super senior risk portion is the last tranche to

suffer losses after significant subordination. Credit losses would have to erode all tranches junior to the super senior tranche before AIGFP would suffer any realized losses. The subordination level required for each transaction is determined based on internal modeling and analysis of the pool of underlying assets and is not dependent on ratings determined by the rating agencies. While the credit default swaps written on corporate debt obligations are cash settled, the majority of the credit default swaps written on CDOs and CLOs require physical settlement. Under a physical settlement arrangement, AIGFP would be required to purchase the referenced super senior note obligation at par in the event of a non-payment on that security.

Certain of these credit derivatives are subject to collateral posting provisions. These provisions differ among counterparties and asset classes. In the case of most of the multi-sector CDO transactions, the amount of collateral required is determined based on the change in value of the underlying cash security that represents the super senior risk layer subject to credit protection, and not the change in value of the super senior credit derivative.

AIGFP is indirectly exposed to U.S. residential mortgage subprime collateral in the CDO portfolios, the majority of which is from 2004 and 2005 vintages. However, certain of the CDOs on which AIGFP provided credit protection permit the collateral manager to substitute collateral during the reinvestment period, subject to certain restrictions. As a result, in certain transactions, U.S. residential mortgage subprime collateral of 2006 and 2007 vintages has been added to the collateral pools. At December 31, 2007, U.S. residential mortgage subprime collateral of 2006 and 2007 vintages comprised approximately 4.9 percent of the total collateral pools underlying the entire portfolio of CDOs with credit protection.

AIGFP has written maturity-shortening puts that allow the holders of the securities issued by certain multi-sector CDOs to treat the securities as eligible short-term 2a-7 investments under the Investment Company Act of 1940 (2a-7 Puts). Holders of securities are permitted, in certain circumstances, to tender their securities to the issuers at par. If an issuer's remarketing agent is unable to resell the securities so tendered, AIGFP must purchase the securities at par as long as the securities have not experienced a default. During 2007, AIGFP repurchased securities with a principal amount of approximately \$754 million pursuant to these obligations. In certain transactions, AIGFP has contracted with third parties to provide liquidity for the notes if they are put to AIGFP for up to a three-year period. Such liquidity facilities totaled approximately \$3 billion at December 31, 2007. As of February 26, 2008, AIGFP has not utilized these liquidity facilities. At December 31, 2007, AIGFP had approximately \$6.5 billion of notional exposure on 2a-7 Puts, included as part of the multi-sector CDO portfolio discussed herein.

As of January 31, 2008, a significant majority of AIGFP's super senior exposures continued to have tranches below AIGFP's attachment point that have been explicitly rated AAA or, in AIGFP's judgment, would have been rated AAA had they been rated. AIGFP's portfolio of credit default swaps undergoes regular

8. Derivatives and Hedge Accounting

Continued

monitoring, modeling and analysis and contains protection through collateral subordination.

AIGFP accounts for its credit default swaps in accordance with FAS 133 "Accounting For Derivative Instruments and Hedging Activities" and Emerging Issues Task Force 02-3, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities" (EITF 02-3). In accordance with EITF 02-3, AIGFP does not recognize income in earnings at the inception of each transaction because the inputs to value these instruments are not derivable from observable market data.

The valuation of the super senior credit derivatives has become increasingly challenging given the limitation on the availability of market observable information due to the lack of trading and price transparency in the structured finance market, particularly in the fourth quarter of 2007. These market conditions have increased the reliance on management estimates and judgments in arriving at an estimate of fair value for financial reporting purposes. Further, disparities in the valuation methodologies employed by market participants and the varying judgments reached by such participants when assessing volatile markets has increased the likelihood that the various parties to these instruments may arrive at significantly different estimates as to their fair values.

AIGFP's valuation methodologies for the super senior credit default swap portfolio have evolved in response to the deteriorating market conditions and the lack of sufficient market observable information. AIG has sought to calibrate the model to market information and to review the assumptions of the model on a regular basis.

AIGFP employs a modified version of the BET model to value its super senior credit default swap portfolio, including the 2a-7 Puts. The BET model utilizes default probabilities derived from credit spreads implied from market prices for the individual securities included in the underlying collateral pools securing the CDOs. AIGFP obtained prices on these securities from the CDO collateral managers.

The BET model also utilizes diversity scores, weighted average lives, recovery rates and discount rates. The determination of some of these inputs require the use of judgment and estimates, particularly in the absence of market observable data. AIGFP also employed a Monte Carlo simulation to assist in quantifying the effect on valuation of the CDO of the unique features of the CDO's structure such as triggers that divert cash flows to the most senior level of the capital structure.

The credit default swaps written by AIGFP cover only the failure of payment on the super senior CDO security. AIGFP does not own the securities in the CDO collateral pool. The credit spreads implied from the market prices of the securities in the CDO collateral pool incorporate the risk of default (credit risk), the market's price for liquidity risk and in distressed markets, the risk

aversion costs. Spreads on credit derivatives tend to be narrower because, unlike in the case of investing in a bond, there is no need to fund the position (except when an actual credit event occurs). In times of illiquidity, the difference between spreads on cash securities and derivative instruments (the "negative basis") may be even wider for high quality assets. AIGFP was unable to reliably verify this negative basis due to the accelerating severe dislocation, illiquidity and lack of trading in the asset backed securities market during the fourth quarter of 2007 and early 2008. The valuations produced by the BET model therefore represent the valuations of the underlying super senior CDO cash securities with no recognition of the effect of the basis differential on that valuation.

AIGFP also considered the valuation of the super senior CDO securities provided by third parties, including counterparties to these transactions, and made adjustments as necessary.

As described above, AIGFP uses numerous assumptions in determining its best estimate of the fair value of the super senior credit default swap portfolio. The most significant assumption utilized in developing the estimate is the pricing of the securities within the CDO collateral pools. If the actual pricing of the securities within the collateral pools differs from the pricing used in estimating the fair value of the super senior credit default swap portfolio, there is potential for significant variation in the fair value estimate.

In the case of credit default swaps written on investment grade corporate debt and CLOs, AIGFP estimated the value of its obligations by reference to the relevant market indices or third party quotes on the underlying super senior tranches where available.

AIGFP monitors the underlying portfolios to determine whether the credit loss experience for any particular portfolio has caused the likelihood of AIGFP having a payment obligation under the transaction to be greater than super senior risk.

Other Derivative Users

AIG and its subsidiaries (other than AIGFP) also use derivatives and other instruments as part of their financial risk management programs. Interest rate derivatives (such as interest rate swaps) are used to manage interest rate risk associated with investments in fixed income securities, commercial paper issuances, medium- and long-term note offerings, and other interest rate sensitive assets and liabilities. In addition, foreign exchange derivatives (principally cross currency swaps, forwards and options) are used to economically mitigate risk associated with non-U.S. dollar denominated debt, net capital exposures and foreign exchange transactions. The derivatives are effective economic hedges of the exposures they are meant to offset.

In 2007, AIG and its subsidiaries other than AIGFP designated certain derivatives as either fair value or cash flow hedges of their debt. The fair value hedges included (i) interest rate swaps that were designated as hedges of the change in the fair value of fixed

Notes to Consolidated Financial Statements *Continued*

8. Derivatives and Hedge Accounting

Continued

rate debt attributable to changes in the benchmark interest rate and (ii) foreign currency swaps designated as hedges of the change in fair value of foreign currency denominated debt attributable to changes in foreign exchange rates and/or the benchmark interest rate. With respect to the cash flow hedges, (i) interest rate swaps were designated as hedges of the changes in cash flows on floating rate debt attributable to changes in the benchmark interest rate, and (ii) foreign currency swaps were designated as hedges of changes in cash flows on foreign currency denominated debt attributable to changes in the benchmark interest rate and foreign exchange rates.

AIG assesses, both at the hedge's inception and on an ongoing basis, whether the derivatives used in hedging transactions are highly effective in offsetting changes in fair values or cash flows of hedged items. Regression analysis is employed to assess the effectiveness of these hedges both on a prospective and retrospective basis. AIG does not utilize the shortcut, matched terms or equivalent methods to assess hedge effectiveness.

The change in fair value of derivatives designated and effective as fair value hedges along with the gain or loss on the hedged item are recorded in current period earnings. Upon discontinuation of hedge accounting, the cumulative adjustment to the carrying value of the hedged item resulting from changes in the benchmark interest rate or exchange rate is amortized into income using the effective yield method over the remaining life of the hedged item. Amounts excluded from the assessment of hedge effectiveness are recognized in current period earnings. During the year ended December 31, 2007, AIG recognized a loss of \$1 million in earnings related to the ineffective portion of the hedging instruments. During the year ended December 31, 2007, AIG also recognized gains of \$3 million related to the change in the hedging instruments forward points excluded from the assessment of hedge effectiveness.

The effective portion of the change in fair value of a derivative qualifying as a cash flow hedge is recorded in Accumulated other comprehensive income (loss), until earnings are affected by the variability of cash flows in the hedged item. The ineffective portion of these hedges is recorded in net realized capital gains (losses). During the year ended December 31, 2007, AIG recognized gains of \$1 million in earnings representing hedge ineffectiveness. At December 31, 2007, \$36 million of the deferred net loss in Accumulated other comprehensive income is expected to be recognized in earnings during the next 12 months. All components of the derivatives' gains and losses were included in the assessment of hedge effectiveness. There were no instances of the discontinuation of hedge accounting in 2007.

In addition to hedging activities, AIG also uses derivative instruments with respect to investment operations, which include,

among other things, credit default swaps, and purchasing investments with embedded derivatives, such as equity linked notes and convertible bonds. All changes in the fair value of these derivatives are recorded in earnings. AIG bifurcates an embedded derivative where: (i) the economic characteristics of the embedded instruments are not clearly and closely related to those of the remaining components of the financial instrument; (ii) the contract that embodies both the embedded derivative instrument and the host contract is not remeasured at fair value; and (iii) a separate instrument with the same terms as the embedded instrument meets the definition of a derivative under FAS 133.

9. Reserve for Losses and Loss Expenses and Future Life Policy Benefits and Policyholders' Contract Deposits

The following analysis provides a reconciliation of the activity in the reserve for losses and loss expenses:

Years Ended December 31, (in millions)	2007	2006	2005
At beginning of year:			
Reserve for losses and loss expenses	\$79,999	\$ 77,169	\$ 61,878
Reinsurance recoverable	(17,369)	(19,693)	(14,624)
Total	62,630	57,476	47,254
Foreign exchange effect	955	741	(628)
Acquisitions ^(a)	317	55	—
Losses and loss expenses incurred:			
Current year	30,261	27,805	28,426
Prior years, other than accretion of discount	(656)	(53)	4,680 ^(b)
Prior years, accretion of discount	327	300	(15)
Total	29,932	28,052	33,091
Losses and loss expenses paid:			
Current year	9,684	8,368	7,331
Prior years	14,862	15,326	14,910
Total	24,546	23,694	22,241
At end of year:			
Net reserve for losses and loss expenses	69,288	62,630	57,476
Reinsurance recoverable	16,212	17,369	19,693
Total	\$85,500	\$ 79,999	\$ 77,169

(a) Reflects the opening balance with respect to the acquisition of WüBa and the Central Insurance Co., Ltd. in 2007 and 2006, respectively.

(b) Includes a fourth quarter charge of \$1.8 billion resulting from the annual review of General Insurance loss and loss adjustment reserves.

9. Reserve for Losses and Loss Expenses and Future Life Policy Benefits and Policyholders' Contract Deposits

Continued

The analysis of the future policy benefits and policyholders' contract deposits liabilities follows:

At December 31, (in millions)	2007	2006
Future policy benefits:		
Long duration contracts	\$135,202	\$120,138
Short duration contracts	866	866
Total	\$136,068	\$121,004
Policyholders' contract deposits:		
Annuities	\$140,444	\$141,826
Guaranteed investment contracts	25,321	33,054
Universal life products	27,114	22,497
Variable products	46,407	34,821
Corporate life products	2,124	2,083
Other investment contracts	17,049	13,983
Total	\$258,459	\$248,264

Long duration contract liabilities included in future policy benefits, as presented in the preceding table, result primarily from life products. Short duration contract liabilities are primarily accident and health products. The liability for future life policy benefits has been established based upon the following assumptions:

- Interest rates (exclusive of immediate/terminal funding annuities), which vary by territory, year of issuance and products, range from 1.0 percent to 12.5 percent within the first 20 years. Interest rates on immediate/terminal funding annuities are at a maximum of 11.5 percent and grade to not greater than 6.0 percent.
- Mortality and surrender rates are based upon actual experience by geographical area modified to allow for variations in policy form. The weighted average lapse rate, including surrenders, for individual and group life approximated 5.7 percent.
- The portions of current and prior net income and of current unrealized appreciation of investments that can inure to the benefit of AIG are restricted in some cases by the insurance contracts and by the local insurance regulations of the jurisdictions in which the policies are in force.
- Participating life business represented approximately 12 percent of the gross insurance in force at December 31, 2007 and 25 percent of gross premiums and other considerations in 2007. The amount of annual dividends to be paid is determined locally by the boards of directors. Provisions for future dividend payments are computed by jurisdiction, reflecting local regulations.

The liability for policyholders' contract deposits has been established based on the following assumptions:

- Interest rates credited on deferred annuities, which vary by territory and year of issuance, range from 1.4 percent to,

including bonuses, 13.0 percent. Less than 1.0 percent of the liabilities are credited at a rate greater than 9.0 percent. Current declared interest rates are generally guaranteed to remain in effect for a period of one year though some are guaranteed for longer periods. Withdrawal charges generally range from zero percent to 20.0 percent grading to zero over a period of zero to 19 years.

- Domestically, guaranteed investment contracts (GICs) have market value withdrawal provisions for any funds withdrawn other than benefit responsive payments. Interest rates credited generally range from 2.8 percent to 9.0 percent. The vast majority of these GICs mature within five years.
- Interest rates on corporate life insurance products are guaranteed at 4.0 percent and the weighted average rate credited in 2007 was 5.2 percent.
- The universal life funds have credited interest rates of 1.0 percent to 7.0 percent and guarantees ranging from 1.0 percent to 5.5 percent depending on the year of issue. Additionally, universal life funds are subject to surrender charges that amount to 12.0 percent of the aggregate fund balance grading to zero over a period not longer than 20 years.
- For variable products and investment contracts, policy values are expressed in terms of investment units. Each unit is linked to an asset portfolio. The value of a unit increases or decreases based on the value of the linked asset portfolio. The current liability at any time is the sum of the current unit value of all investment units plus any liability for guaranteed minimum death or withdrawal benefits.

Certain products are subject to experience adjustments. These include group life and group medical products, credit life contracts, accident and health insurance contracts/riders attached to life policies and, to a limited extent, reinsurance agreements with other direct insurers. Ultimate premiums from these contracts are estimated and recognized as revenue, and the unearned portions of the premiums recorded as liabilities. Experience adjustments vary according to the type of contract and the territory in which the policy is in force and are subject to local regulatory guidance.

10. Variable Life and Annuity Contracts

AIG follows American Institute of Certified Public Accountants Statement of Position 03-1 (SOP 03-1), which requires recognition of a liability for guaranteed minimum death benefits and other living benefits related to variable annuity and variable life contracts as well as certain disclosures for these products.

AIG reports variable contracts through separate and variable accounts when investment income and investment gains and losses accrue directly to, and investment risk is borne by, the contract holder (traditional variable annuities), and the separate account qualifies for separate account treatment under SOP 03-1. In some foreign jurisdictions, separate accounts are not legally insulated from general account creditors and therefore do not qualify for separate account treatment under SOP 03-1. In such cases, the variable contracts are reported as general account contracts even though the policyholder bears the risks associated with the performance of the assets. AIG also reports variable

10. Variable Life and Annuity Contracts

Continued

annuity and life contracts through separate and variable accounts, or general accounts when not qualified for separate account reporting, when AIG contractually guarantees to the contract holder (variable contracts with guarantees) either (a) total deposits made to the contract less any partial withdrawals plus a minimum return (and in minor instances, no minimum returns) (Net Deposits Plus a Minimum Return) or (b) the highest contract value attained, typically on any anniversary date minus any subsequent withdrawals following the contract anniversary (Highest Contract Value Attained). These guarantees include benefits that are payable in the event of death, annuitization, or, in other instances, at specified dates during the accumulation period. Such benefits are referred to as guaranteed minimum death benefits (GMDB), guaranteed minimum income benefits (GMIB), guaranteed minimum withdrawal benefits (GMWB) and guaranteed minimum account value benefits (GMAV). For AIG, GMDB is by far the most widely offered benefit.

The assets supporting the variable portion of both traditional variable annuities and variable contracts with guarantees are carried at fair value and reported as Separate and variable account assets with an equivalent summary total reported as Separate and variable account liabilities when the separate account qualifies for separate account treatment under SOP 03-1. Assets for separate accounts that do not qualify for separate account treatment are reported as trading account assets, and liabilities are included in the respective policyholder liability account of the general account. Amounts assessed against the contract holders for mortality, administrative, and other services are included in revenue and changes in liabilities for minimum guarantees are included in incurred policy losses and benefits in the consolidated statement of income. Separate and variable account net investment income, net investment gains and losses, and the related liability changes are offset within the same line item in the consolidated statement of income for those accounts that qualify for separate account treatment under SOP 03-1. Net investment income and gains and losses on trading accounts for contracts that do not qualify for separate account treatment under SOP 03-1 are reported in net investment income and are principally offset by amounts reported in incurred policy losses and benefits.

The vast majority of AIG's exposure on guarantees made to variable contract holders arises from GMDB. Details concerning AIG's GMDB exposures at December 31, 2007 and 2006 are as follows:

<i>(dollars in billions)</i>	Net Deposits Plus a Minimum Return	Highest Contract Value Attained
2007		
Account value ^(a)	\$66	\$17
Amount at risk ^(b)	5	1
Average attained age of contract holders by product	38-69 years	55-72 years
Range of guaranteed minimum return rates	3-10%	
2006		
Account value ^(a)	\$64	\$15
Amount at risk ^(b)	6	1
Average attained age of contract holders by product	38-70 years	56-71 years
Range of guaranteed minimum return rates	0-10%	

(a) Included in Policyholders' contract deposits in the consolidated balance sheet.

(b) Represents the amount of death benefit currently in excess of Account value.

The following summarizes GMDB liabilities for guarantees on variable contracts reflected in the general account.

<i>(in millions)</i>	2007	2006
Balance at January 1	\$406	\$442
Reserve increase	111	35
Benefits paid	(54)	(71)
Balance at December 31	\$463	\$406

The GMDB liability is determined each period end by estimating the expected value of death benefits in excess of the projected account balance and recognizing the excess ratably over the accumulation period based on total expected assessments. AIG regularly evaluates estimates used and adjusts the additional liability balance, with a related charge or credit to benefit expense, if actual experience or other evidence suggests that earlier assumptions should be revised.

The following assumptions and methodology were used to determine the GMDB liability at December 31, 2007:

- Data used was up to 1,000 stochastically generated investment performance scenarios.
- Mean investment performance assumptions ranged from three percent to approximately ten percent depending on the block of business.
- Volatility assumptions ranged from eight percent to 23 percent depending on the block of business.
- Mortality was assumed at between 50 percent and 102 percent of various life and annuity mortality tables.
- For domestic contracts, lapse rates vary by contract type and duration and ranged from zero percent to 40 percent. For

10. Variable Life and Annuity Contracts

Continued

Japan, lapse rates ranged from zero percent to 20 percent depending on the type of contract.

- For domestic contracts, the discount rate ranged from 3.25 percent to 11 percent. For Japan, the discount rate ranged from two percent to seven percent.

In addition to GMDB, AIG's contracts currently include to a lesser extent GMIB. The GMIB liability is determined each period end by estimating the expected value of the annuitization benefits in excess of the projected account balance at the date of

annuitization and recognizing the excess ratably over the accumulation period based on total expected assessments. AIG periodically evaluates estimates used and adjusts the additional liability balance, with a related charge or credit to benefit expense, if actual experience or other evidence suggests that earlier assumptions should be revised.

AIG contracts currently include a minimal amount of GMAV and GMWB. GMAV and GMWB are considered to be embedded derivatives and are recognized at fair value through earnings. AIG enters into derivative contracts to economically hedge a portion of the exposure that arises from GMAV and GMWB.

Notes to Consolidated Financial Statements *Continued*

11. Debt Outstanding

At December 31, 2007 and 2006, AIG's total borrowings were as follows:

<i>(in millions)</i>	2007	2006
Total long-term borrowings	\$162,935	\$135,316
Commercial paper and extendible commercial notes	13,114	13,363
Total borrowings	\$176,049	\$148,679

Maturities of Long-term borrowings at December 31, 2007, excluding borrowings of consolidated investments, are as follows:

<i>(in millions)</i>	Total	2008	2009	2010	2011	2012	Thereafter
AIG:

AIGF —					
Thailand ^(a)	136	1	137	3.36	50
Total^(b)	\$12,599	\$42	\$12,641	—	—

(a) Issued in local currencies at prevailing local interest rates.

(b) Excludes \$321 million of borrowings of consolidated investments and \$194 million of extendible commercial notes.

At December 31, 2007, AIG did not guarantee the commercial paper of any of its subsidiaries other than AIG Funding.

(b) AIG Borrowings:

(i) **Notes and bonds issued by AIG:** AIG maintains a medium-term note program under its shelf registration statement. At December 31, 2007, approximately \$7.3 billion principal amount of senior notes were outstanding under the medium-term note program, of which \$3.2 billion was used for AIG's general corporate purposes, \$873 million was used by AIGFP and \$3.2 billion was used to fund the Matched Investment Program (MIP). The maturity dates of these notes range from 2008 to 2052. To the extent deemed appropriate, AIG may enter into swap transactions to manage its effective borrowing rates with respect to these notes.

AIG also maintains a Euro medium-term note program under which an aggregate nominal amount of up to \$20.0 billion of senior notes may be outstanding at any one time. At December 31, 2007, the equivalent of \$12.7 billion of notes were outstanding under the program, of which \$9.8 billion were used to fund the MIP and the remainder was used for AIG's general corporate purposes. The aggregate amount outstanding includes a \$1.1 billion loss resulting from foreign exchange translation into U.S. dollars, of which a \$332 million loss relates to notes issued by AIG for general corporate purposes and a \$726 million loss relates to notes issued to fund the MIP.

During 2007, AIG issued in Rule 144A offerings an aggregate of \$3.0 billion principal amount of senior notes, of which \$650 million was used to fund the MIP and \$2.3 billion was used for AIG's general corporate purposes.

AIG maintains a shelf registration statement in Japan, providing for the issuance of up to Japanese Yen 300 billion principal amount of senior notes, of which the equivalent of \$450 million

was outstanding at December 31, 2007, and was used for AIG's general corporate purposes.

(ii) **Junior subordinated debt:** During 2007, AIG issued an aggregate of \$5.6 billion of junior subordinated debentures in five series of securities. Substantially all of the proceeds from these sales, net of expenses, are being used to repurchase shares of AIG's common stock. In connection with each series of junior subordinated debentures, AIG entered into a Replacement Capital Covenant (RCC) for the benefit of the holders of AIG's 6.25 percent senior notes due 2036. The RCCs provide that AIG will not repay, redeem, or purchase the applicable series of junior subordinated debentures on or before a specified date, unless AIG has received qualifying proceeds from the sale of replacement capital securities.

(c) AIGFP Borrowings:

(i) **Borrowings under Obligations of Guaranteed Investment Agreements:** Borrowings under obligations of guaranteed investment agreements (GIAs), which are guaranteed by AIG, are recorded at the amount outstanding under each contract. Obligations may be called at various times prior to maturity at the option of the counterparty. Interest rates on these borrowings are primarily fixed, vary by maturity, and range up to 9.8 percent.

Funds received from GIA borrowings are invested in a diversified portfolio of securities and derivative transactions. At December 31, 2007, the fair value of securities pledged as collateral with respect to these obligations approximated \$14.5 billion.

(ii) **Notes and Bonds issued by AIGFP:**

At December 31, 2007, AIGFP's notes and bonds outstanding, the proceeds of which are invested in a diversified portfolio of securities and derivative transactions, were as follows:

Range of Maturities (dollars in millions)	Currency	Range of Interest Rates	U.S. Dollar Carrying Value
2008 - 2054	U.S. dollar	0.26 - 9.00%	\$ 29,490
2008 - 2049	Euro	1.25 - 6.53	8,819
2008 - 2012	United Kingdom pound	4.67 - 6.31	3,936
2008 - 2037	Japanese Yen	0.01 - 2.9	2,025
2008 - 2024	Swiss francs	0.25	512
2008	New Zealand dollar	8.35	386
2009 - 2017	Australian dollar	1.14 - 2.65	177
2008 - 2017	Other	4.39 - 4.95	194
Total			\$ 45,539

AIGFP economically hedges its notes and bonds. AIG guarantees all of AIGFP's debt.

(iii) **Hybrid financial instrument liabilities:** AIGFP's notes and bonds include structured debt instruments whose payment terms are linked to one or more financial or other indices (such as an equity index or commodity index or another measure that is not considered to be clearly and closely related to the debt instrument). These notes contain embedded derivatives that otherwise

Notes to Consolidated Financial Statements *Continued*

11. Debt Outstanding

Continued

would be required to be accounted for separately under FAS 133. Upon AIG's early adoption of FAS 155, AIGFP elected the fair value option for these notes. The notes that are accounted for using the fair value option are reported separately under hybrid financial instrument liabilities at fair value.

(d) AIGLH Borrowings: At December 31, 2007, AIGLH notes aggregating \$797 million were outstanding with maturity dates ranging from 2010 to 2029 at interest rates from 6.625 percent to 7.50 percent. AIG guarantees the notes and bonds of AIGLH.

(e) Liabilities Connected to Trust Preferred Stock: AIGLH issued Junior Subordinated Debentures (liabilities) to certain trusts established by AIGLH, which represent the sole assets of the trusts. The trusts have no independent operations. The trusts issued mandatory redeemable preferred stock to investors. The interest terms and payment dates of the liabilities correspond to those of the preferred stock. AIGLH's obligations with respect to the liabilities and related agreements, when taken together, constitute a full and unconditional guarantee by AIGLH of payments due on the preferred securities. AIG guarantees the obligations of AIGLH with respect to these liabilities and related agreements. The liabilities are redeemable, under certain conditions, at the option of AIGLH on a proportionate basis.

At December 31, 2007, the preferred stock outstanding consisted of \$300 million liquidation value of 8.5 percent preferred stock issued by American General Capital II in June 2000, \$500 million liquidation value of 8.125 percent preferred stock issued by American General Institutional Capital B in March 1997, and \$500 million liquidation value of 7.57 percent preferred stock issued by American General Institutional Capital A in December 1996.

(f) ILFC Borrowings:

(i) Notes and Bonds issued by ILFC: At December 31, 2007, notes aggregating \$23.1 billion were outstanding, consisting of \$10.8 billion of term notes, \$11.3 billion of medium-term notes with maturities ranging from 2008 to 2014 and interest rates ranging from 2.75 percent to 5.75 percent and \$1.0 billion of junior subordinated debt as discussed below. Notes aggregating \$5.3 billion are at floating interest rates and the remainder are at fixed rates. To the extent deemed appropriate, ILFC may enter into swap transactions to manage its effective borrowing rates with respect to these notes.

As a well-known seasoned issuer, ILFC has filed an automatic shelf registration statement with the SEC allowing ILFC immediate access to the U.S. public debt markets. At December 31, 2007, \$4.7 billion of debt securities had been issued under this registration statement and \$5.9 billion had been issued under a prior registration statement. In addition, ILFC has a Euro medium term note program for \$7.0 billion, under which \$3.8 billion in notes were outstanding at December 31, 2007. Notes issued under the Euro medium-term note program are included in ILFC notes and bonds payable in the preceding table of borrowings. The cumulative foreign exchange adjustment loss for the foreign currency denominated debt was

\$969 million at December 31, 2007 and \$733 million at December 31, 2006. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging the portion of the note exposure not already offset by Euro-denominated operating lease payments.

(ii) Junior subordinated debt: In December 2005, ILFC issued two tranches of junior subordinated debt totaling \$1.0 billion to underlie trust preferred securities issued by a trust sponsored by ILFC. Both tranches mature on December 21, 2065, but each tranche has a different call option. The \$600 million tranche has a call date of December 21, 2010 and the \$400 million tranche has a call date of December 21, 2015. The note with the 2010 call date has a fixed interest rate of 5.90 percent for the first five years. The note with the 2015 call date has a fixed interest rate of 6.25 percent for the first ten years. Both tranches have interest rate adjustments if the call option is not exercised. The new interest rate is a floating quarterly reset rate based on the initial credit spread plus the highest of (i) 3 month LIBOR, (ii) 10-year constant maturity treasury and (iii) 30-year constant maturity treasury.

(iii) Export credit facility: ILFC had a \$4.3 billion Export Credit Facility (ECA) for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At December 31, 2007, ILFC had \$664 million outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured ECA for up to a maximum of \$2.6 billion for Airbus aircraft to be delivered through May 31, 2005. The facility was subsequently increased to \$3.6 billion and extended to include aircraft to be delivered through May 31, 2008. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a six-month forward-looking calendar, and the interest rate is determined through a bid process. At December 31, 2007, ILFC had \$1.9 billion outstanding under this facility.

(iv) Bank Financings: From time to time, ILFC enters into various bank financings. At December 31, 2007, the total funded amount was \$1.1 billion. The financings mature through 2012. AIG does not guarantee any of the debt obligations of ILFC.

(g) AGF Borrowings:

(i) Notes and bonds issued by AGF: At December 31, 2007, notes and bonds aggregating \$22.4 billion were outstanding with maturity dates ranging from 2008 to 2031 at interest rates ranging from 1.94 percent to 8.45 percent. To the extent deemed appropriate, AGF may enter into swap transactions to manage its effective borrowing rates with respect to these notes.

As a well-known seasoned issuer, AGF has filed an automatic shelf registration statement with the SEC allowing AGF immediate access to the U.S. public debt markets.

AGF uses the proceeds from the issuance of notes and bonds for the funding of its finance receivables.

11. Debt Outstanding

Continued

(ii) Junior subordinated debt: In January 2007, AGF issued junior subordinated debentures in an aggregate principal amount of \$350 million that mature in January 2067. The debentures underlie a series of trust preferred securities sold by a trust sponsored by AGF in a Rule 144A/Regulation S offering. AGF can redeem the debentures at par beginning in January 2017.

AIG does not guarantee any of the debt obligations of AGF.

(h) Other Notes, Bonds, Loans and Mortgages Payable at December 31, 2007, consisted of the following:

<i>(in millions)</i>	Uncollateralized Notes/Bonds/Loans Payable	Collateralized Loans and Mortgages Payable
AIGCFG	\$1,839	\$ —
AIG	729	—
Other subsidiaries	600	175
Total	\$3,168	\$175

(i) Interest Expense for All Indebtedness: Total interest expense for all indebtedness, net of capitalized interest, aggregated \$9.69 billion in 2007, \$6.95 billion in 2006 and \$5.7 billion in 2005. Capitalized interest was \$37 million in 2007, \$59 million in 2006 and \$64 million in 2005. Cash distributions on the preferred shareholders' equity in subsidiary companies of ILFC and liabilities connected to trust preferred stock of AIGLH subsidiaries are accounted for as interest expense in the consolidated statement of income. The cash distributions for ILFC were approximately \$5 million for each of the years ended December 31, 2007, 2006 and 2005. The cash distributions for AIGLH subsidiaries were approximately \$107 million, \$107 million and \$112 million for the years ended December 31, 2007, 2006 and 2005, respectively.

12. Commitments, Contingencies and Guarantees

In the normal course of business, various commitments and contingent liabilities are entered into by AIG and certain of its subsidiaries. In addition, AIG guarantees various obligations of certain subsidiaries.

(a) Litigation and Investigations

Litigation Arising from Operations. AIG and its subsidiaries, in common with the insurance and financial services industries in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. In AIG's insurance operations, litigation arising from claims settlement activities is generally considered in the establishment of AIG's reserve for losses and loss expenses. However, the potential for increasing jury awards and settlements makes it difficult to assess the ultimate outcome of such litigation.

Litigation Arising from Insurance Operations — Caremark. AIG and certain of its subsidiaries have been named defendants in two putative class actions in state court in Alabama that arise out

of the 1999 settlement of class and derivative litigation involving Caremark Rx, Inc. (Caremark). The plaintiffs in the second-filed action have intervened in the first-filed action, and the second-filed action has been dismissed. An excess policy issued by a subsidiary of AIG with respect to the 1999 litigation was expressly stated to be without limit of liability. In the current actions, plaintiffs allege that the judge approving the 1999 settlement was misled as to the extent of available insurance coverage and would not have approved the settlement had he known of the existence and/or unlimited nature of the excess policy. They further allege that AIG, its subsidiaries, and Caremark are liable for fraud and suppression for misrepresenting and/or concealing the nature and extent of coverage. In addition, the intervenor-plaintiffs allege that various lawyers and law firms who represented parties in the underlying class and derivative litigation (the "Lawyer Defendants") are also liable for fraud and suppression, misrepresentation, and breach of fiduciary duty. The complaints filed by the plaintiffs and the intervenor-plaintiffs request compensatory damages for the 1999 class in the amount of \$3.2 billion, plus punitive damages. AIG and its subsidiaries deny the allegations of fraud and suppression and have asserted that information concerning the excess policy was publicly disclosed months prior to the approval of the settlement. AIG and its subsidiaries further assert that the current claims are barred by the statute of limitations and that plaintiffs' assertions that the statute was tolled cannot stand against the public disclosure of the excess coverage. The plaintiffs and intervenor-plaintiffs, in turn, have asserted that the disclosure was insufficient to inform them of the nature of the coverage and did not start the running of the statute of limitations. On November 26, 2007, the trial court issued an order that dismissed the intervenors' complaint against the Lawyer Defendants and entered a final judgment in favor of the Lawyer Defendants. The intervenors are appealing the dismissal of the Lawyer Defendants and have requested a stay of all trial court proceedings pending the appeal. If the motion to stay is granted, no further proceedings at the trial court level will occur until the appeal is resolved. If the motion to stay is denied, the next step will be to proceed with class discovery so that the trial court can determine, under standards mandated by the Alabama Supreme Court, whether the action should proceed as a class action. AIG cannot reasonably estimate either the likelihood of its prevailing in these actions or the potential damages in the event liability is determined.

Litigation Arising from Insurance Operations — Gunderson. A subsidiary of AIG has been named as a defendant in a putative class action lawsuit in the 14th Judicial District Court for the State of Louisiana. The *Gunderson* complaint alleges failure to comply with certain provisions of the Louisiana Any Willing Provider Act (the Act) relating to discounts taken by defendants on bills submitted by Louisiana medical providers and hospitals that provided treatment or services to workers compensation claimants and seeks monetary penalties and injunctive relief. On July 20, 2006, the court denied defendants' motion for summary judgment and granted plaintiffs' partial motion for summary judgment, holding that the AIG subsidiary was a "group purchaser" and, therefore, potentially subject to liability under the

Notes to Consolidated Financial Statements *Continued*

12. Commitments, Contingencies and Guarantees

Continued

Act. On November 28, 2006, the court issued an order certifying a class of providers and hospitals. In an unrelated action also arising under the Act, a Louisiana appellate court ruled that the district court lacked jurisdiction to adjudicate the claims at issue. In response, defendants in *Gunderson* filed an exception for lack of subject matter jurisdiction. On January 19, 2007, the court denied the motion, holding that it has jurisdiction over the putative class claims. The AIG subsidiary has appealed the class certification and jurisdictional rulings. While the appeal was pending, the AIG subsidiary settled the lawsuit. On January 25, 2008, plaintiffs and the AIG subsidiary agreed to resolve the lawsuit on a class-wide basis for approximately \$29 million. The court has preliminarily approved the settlement and will hold a final approval hearing on May 29, 2008. In the event that the settlement is not finally approved, AIG believes that it has meritorious defenses to plaintiffs' claims and expects that the ultimate resolution of this matter will not have a material adverse effect on AIG's consolidated financial condition or results of operations for any period.

2006 Regulatory Settlements. In February 2006, AIG reached a resolution of claims and matters under investigation with the United States Department of Justice (DOJ), the Securities and Exchange Commission (SEC), the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). AIG recorded an after-tax charge of \$1.15 billion relating to these settlements in the fourth quarter of 2005.

The settlements resolved investigations conducted by the SEC, NYAG and DOI in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. These settlements did not, however, resolve investigations by regulators from other states into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Nor did the settlements resolve any obligations that AIG may have to state guarantee funds in connection with any of these matters.

As a result of these settlements, AIG made payments or placed amounts in escrow in 2006 totaling approximately \$1.64 billion, \$225 million of which represented fines and penalties. Amounts held in escrow totaling \$347 million, including interest thereon, are included in other assets at December 31, 2007. At that date, approximately \$330 million of the funds were escrowed for settlement of claims resulting from the underpayment by AIG of its residual market assessments for workers compensation. On May 24, 2007, The National Workers Compensation Reinsurance Pool, on behalf of its participant members, filed a lawsuit against AIG with respect to the underpayment of such assessments. On August 6, 2007, the court denied AIG's motion seeking to dismiss or stay the complaint based on *Colorado River* abstention or *forum non conveniens*, or in the alternative, to transfer to the Southern District of New York. On December 26, 2007, the court denied AIG's motion to dismiss the complaint. AIG filed its answer on January 22, 2008. On

February 5, 2008, following agreement of the parties, the court entered an order staying all proceedings through March 3, 2008. In addition, a similar lawsuit filed by the Minnesota Workers Compensation Reinsurance Association and the Minnesota Workers Compensation Insurers Association is pending. On August 6, 2007, AIG moved to dismiss the complaint and that motion is *sub judice*. A purported class action was filed in South Carolina Federal Court on January 25, 2008 against AIG and certain of its subsidiaries, on behalf of a class of employers that obtained workers compensation insurance from AIG companies and allegedly paid inflated premiums as a result of AIG's alleged underreporting of workers compensation premiums. AIG cannot currently estimate whether the amount ultimately required to settle these claims will exceed the funds escrowed or otherwise accrued for this purpose. AIG has settled litigation that was filed by the Minnesota Attorney General with respect to claims by the Minnesota Department of Revenue and the Minnesota Special Compensation Fund.

The National Association of Insurance Commissioners has formed a Market Analysis Working Group directed by the State of Indiana, which has commenced its own investigation into the underreporting of workers compensation premium. In early 2008, AIG was informed that the Market Analysis Working Group had been disbanded in favor of a multi-state targeted market conduct exam focusing on worker's compensation insurance.

The remaining escrowed funds, which amounted to \$17 million at December 31, 2007, are set aside for settlements for certain specified AIG policyholders. As of February 20, 2008, eligible policyholders entitled to receive approximately \$359 million (or 95 percent) of the excess casualty fund had opted to receive settlement payments in exchange for releasing AIG and its subsidiaries from liability relating to certain insurance brokerage practices. Amounts remaining in the excess casualty fund may be used by AIG to settle claims from other policyholders relating to such practices through February 29, 2008 (originally set for January 31, 2008 and later extended), after which they will be distributed pro rata to participating policyholders.

In addition to the escrowed funds, \$800 million was deposited into a fund under the supervision of the SEC as part of the settlements to be available to resolve claims asserted against AIG by investors, including the shareholder lawsuits described herein.

Also, as part of the settlements, AIG agreed to retain, for a period of three years, an independent consultant to conduct a review that will include, among other things, the adequacy of AIG's internal control over financial reporting, the policies, procedures and effectiveness of AIG's regulatory, compliance and legal functions and the remediation plan that AIG has implemented as a result of its own internal review.

Other than as described above, at the current time, AIG cannot predict the outcome of the matters described above, or estimate any potential additional costs related to these matters.

Private Litigation

Securities Actions. Beginning in October 2004, a number of putative securities fraud class action suits were filed against AIG and consolidated as *In re American International Group, Inc.*

12. Commitments, Contingencies and Guarantees

Continued

Securities Litigation. Subsequently, a separate, though similar, securities fraud action was also brought against AIG by certain Florida pension funds. The lead plaintiff in the class action is a group of public retirement systems and pension funds benefiting Ohio state employees, suing on behalf of themselves and all purchasers of AIG's publicly traded securities between October 28, 1999 and April 1, 2005. The named defendants are AIG and a number of present and former AIG officers and directors, as well as Starr, SICO, General Reinsurance Corporation, and PricewaterhouseCoopers LLP (PwC), among others. The lead plaintiff alleges, among other things, that AIG: (1) concealed that it engaged in anti-competitive conduct through alleged payment of contingent commissions to brokers and participation in illegal bid-rigging; (2) concealed that it used "income smoothing" products and other techniques to inflate its earnings; (3) concealed that it marketed and sold "income smoothing" insurance products to other companies; and (4) misled investors about the scope of government investigations. In addition, the lead plaintiff alleges that AIG's former Chief Executive Officer manipulated AIG's stock price. The lead plaintiff asserts claims for violations of Sections 11 and 15 of the Securities Act of 1933, Section 10(b) of the Exchange Act, and Rule 10b-5 promulgated thereunder, Section 20(a) of the Exchange Act, and Section 20A of the Exchange Act. In April 2006, the court denied the defendants' motions to dismiss the second amended class action complaint and the Florida complaint. In December 2006, a third amended class action complaint was filed, which does not differ substantially from the prior complaint. Fact and class discovery is currently ongoing. On February 20, 2008, the lead plaintiff filed a motion for class certification.

ERISA Action. Between November 30, 2004 and July 1, 2005, several Employee Retirement Income Security Act of 1974 (ERISA) actions were filed on behalf of purported class of participants and beneficiaries of three pension plans sponsored by AIG or its subsidiaries. A consolidated complaint filed on September 26, 2005 alleges a class period between September 30, 2000 and May 31, 2005 and names as defendants AIG, the members of AIG's Retirement Board and the Administrative Boards of the plans at issue, and four present or former members of AIG's Board of Directors. The factual allegations in the complaint are essentially identical to those in the securities actions described above. The parties have reached an agreement in principle to settle this matter for an amount within AIG's insurance coverage limits.

Securities Action — Oregon State Court. On February 27, 2008, The State of Oregon, by and through the Oregon State Treasurer, and the Oregon Public Employee Retirement Board, on behalf of the Oregon Public Employee Retirement Fund, filed a lawsuit against American International Group, Inc. for damages arising out of plaintiffs' purchase of AIG common stock at prices that allegedly were inflated. Plaintiffs allege, among other things, that AIG: (1) made false and misleading statements concerning its accounting for a \$500 million transaction with

General Re; (2) concealed that it marketed and misrepresented its control over off-shore entities in order to improve financial results; (3) improperly accounted for underwriting losses as investment losses in connection with transactions involving CAPCO Reinsurance Company, Ltd. and Union Excess; (4) misled investors about the scope of government investigations; and (5) engaged in market manipulation through its then Chairman and CEO Maurice R. Greenburg. The complaint asserts claims for violations of Oregon Securities Law, and seeks compensatory damages in an amount in excess of \$15 million, and prejudgment interest and costs and fees.

Derivative Actions — Southern District of New York. On November 20, 2007, two purported shareholder derivative actions were filed in the Southern District of New York naming as defendants the current directors of AIG and certain senior officers of AIG and its subsidiaries. Plaintiffs assert claims for breach of fiduciary duty, waste of corporate assets and unjust enrichment, as well as violations of Section 10(b) of the Exchange Act and Rule 10b-5 promulgated thereunder, and Section 20(a) of the Exchange Act, among other things, in connection with AIG's public disclosures regarding its exposure to what the lawsuits describe as the subprime market crisis. The actions were consolidated as *In re American International Group, Inc. 2007 Derivative Litigation*. On February 15, 2008, plaintiffs filed a consolidated amended complaint alleging the same causes of action. AIG may become subject to litigation with respect to these or similar issues.

Between October 25, 2004 and July 14, 2005, seven separate derivative actions were filed in the Southern District of New York, five of which were consolidated into a single action. The New York derivative complaint contains nearly the same types of allegations made in the securities fraud and ERISA actions described above. The named defendants include current and former officers and directors of AIG, as well as Marsh & McLennan Companies, Inc. (Marsh), SICO, Starr, ACE Limited and subsidiaries (ACE), General Reinsurance Corporation, PwC, and certain employees or officers of these entity defendants. Plaintiffs assert claims for breach of fiduciary duty, gross mismanagement, waste of corporate assets, unjust enrichment, insider selling, auditor breach of contract, auditor professional negligence and disgorgement from AIG's former Chief Executive Officer and Chief Financial Officer of incentive-based compensation and AIG share proceeds under Section 304 of the Sarbanes-Oxley Act, among others. Plaintiffs seek, among other things, compensatory damages, corporate governance reforms, and a voiding of the election of certain AIG directors. AIG's Board of Directors has appointed a special committee of independent directors (special committee) to review the matters asserted in the operative consolidated derivative complaint. The court has entered an order staying the derivative case in the Southern District of New York pending resolution of the consolidated derivative action in the Delaware Chancery Court (discussed below). The court also has entered an order that termination of certain named defendants from the Delaware derivative action applies to the New York derivative action without further order of the court. On October 17, 2007, plaintiffs and those AIG officer and director defendants against whom the shareholder plaintiffs in the Delaware action are no longer

Notes to Consolidated Financial Statements *Continued*

12. Commitments, Contingencies and Guarantees

Continued

pursuing claims filed a stipulation providing for all claims in the New York action against such defendants to be dismissed with prejudice. Former directors and officers Maurice R. Greenberg and Howard I. Smith have asked the court to refrain from so ordering this stipulation.

Derivative Actions — Delaware Chancery Court. From October 2004 to April 2005, AIG shareholders filed five derivative complaints in the Delaware Chancery Court. All of these derivative lawsuits were consolidated into a single action as *In re American International Group, Inc. Consolidated Derivative Litigation*. The amended consolidated complaint named 43 defendants (not including nominal defendant AIG) who, like the New York consolidated derivative litigation, were current and former officers and directors of AIG, as well as other entities and certain of their current and former employees and directors. The factual allegations, legal claims and relief sought in the Delaware action are similar to those alleged in the New York derivative actions, except that shareholder plaintiffs in the Delaware derivative action assert claims only under state law. Earlier in 2007, the Court approved an agreement that AIG be realigned as plaintiff, and, on June 13, 2007, acting on the direction of the special committee, AIG filed an amended complaint against former directors and officers Maurice R. Greenberg and Howard I. Smith, alleging breach of fiduciary duty and indemnification. Also on June 13, 2007, the special committee filed a motion to terminate the litigation as to certain defendants, while taking no action as to others. Defendants Greenberg and Smith filed answers to AIG's complaint and brought third-party complaints against certain current and former AIG directors and officers, PwC and Regulatory Insurance Services, Inc. On September 28, 2007, AIG and the shareholder plaintiffs filed a combined amended complaint in which AIG continued to assert claims against defendants Greenberg and Smith and took no position as to the claims asserted by the shareholder plaintiffs in the remainder of the combined amended complaint. In that pleading, the shareholder plaintiffs are no longer pursuing claims against certain AIG officers and directors. In November 2007, the shareholder plaintiffs moved to sever their claims to a separate action. AIG joined the motion to the extent that, among other things, the claims against defendants Greenberg and Smith would remain in prosecution in the pending action. In addition, a number of parties, including AIG, filed motions to stay discovery. On February 12, 2008, the court granted AIG's motion to stay discovery pending the resolution of claims against AIG in the New York consolidated securities action. The court also denied plaintiff's motion to sever and directed the parties to coordinate a briefing schedule for the motions to dismiss.

A separate derivative lawsuit was filed in the Delaware Chancery Court against twenty directors and executives of AIG as well as against AIG as a nominal defendant that alleges, among other things, that the directors of AIG breached the fiduciary duties of loyalty and care by approving the payment of commissions to Starr and of rental and service fees to SICO and the executives breached their duty of loyalty by causing AIG to enter

into contracts with Starr and SICO and their fiduciary duties by usurping AIG's corporate opportunity. The complaint further alleges that the Starr agencies did not provide any services that AIG was not capable of providing itself, and that the diversion of commissions to these entities was solely for the benefit of Starr's owners. The complaint also alleged that the service fees and rental payments made to SICO and its subsidiaries were improper. Under the terms of a stipulation approved by the Court on February 16, 2006, the claims against the outside independent directors were dismissed with prejudice, while the claims against the other directors were dismissed without prejudice. On October 31, 2005, Defendants Greenberg, Matthews and Smith, SICO and Starr filed motions to dismiss the amended complaint. In an opinion dated June 21, 2006, the Court denied defendants' motion to dismiss, except with respect to plaintiff's challenge to payments made to Starr before January 1, 2000. On July 21, 2006, plaintiff filed its second amended complaint, which alleges that, between January 1, 2000 and May 31, 2005, individual defendants breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and breached their fiduciary duties by usurping AIG's corporate opportunity. Starr is charged with aiding and abetting breaches of fiduciary duty and unjust enrichment for its acceptance of the fees. SICO is no longer named as a defendant. On April 20, 2007, the individual defendants and Starr filed a motion seeking leave of the Court to assert a cross-claim against AIG and a third-party complaint against PwC and the directors previously dismissed from the action, as well as certain other AIG officers and employees. On June 13, 2007, the Court denied the individual defendants' motion to file a third-party complaint, but granted the proposed cross-claim against AIG. On June 27, 2007, Starr filed its cross-claim against AIG, alleging one count that includes contribution, unjust enrichment and setoff. AIG has filed an answer and moved to dismiss Starr's cross-claim to the extent it seeks affirmative relief, as opposed to a reduction in the judgment amount. On November 15, 2007, the court granted AIG's motion to dismiss the cross-claim by Starr to the extent that it sought affirmative relief from AIG. On November 21, 2007, shareholder plaintiff submitted a motion for leave to file its Third Amended Complaint in order to add Thomas Tizzio as a defendant. On February 14, 2008, the court granted this motion and allowed Mr. Tizzio until April 2008 to take additional discovery. Document discovery and depositions are otherwise complete.

Policyholder Actions. After the NYAG filed its complaint against insurance broker Marsh, policyholders brought multiple federal antitrust and Racketeer Influenced and Corrupt Organizations Act (RICO) class actions in jurisdictions across the nation against insurers and brokers, including AIG and a number of its subsidiaries, alleging that the insurers and brokers engaged in a broad conspiracy to allocate customers, steer business, and rig bids. These actions, including 24 complaints filed in different federal courts naming AIG or an AIG subsidiary as a defendant, were consolidated by the judicial panel on multi-district litigation and transferred to the United States District Court for the District of New Jersey for coordinated pretrial proceedings. The consolidated actions have proceeded in that court in two parallel actions, *In re*

12. Commitments, Contingencies and Guarantees

Continued

Insurance Brokerage Antitrust Litigation (the *First Commercial Complaint*) and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the *First Employee Benefits Complaint*, and, together with the *First Commercial Complaint*, the multi-district litigation).

The plaintiffs in the *First Commercial Complaint* are nineteen corporations, individuals and public entities that contracted with the broker defendants for the provision of insurance brokerage services for a variety of insurance needs. The broker defendants are alleged to have placed insurance coverage on the plaintiffs' behalf with a number of insurance companies named as defendants, including AIG subsidiaries. The *First Commercial Complaint* also named ten brokers and fourteen other insurers as defendants (two of which have since settled). The *First Commercial Complaint* alleges that defendants engaged in a widespread conspiracy to allocate customers through "bid-rigging" and "steering" practices. The *First Commercial Complaint* also alleges that the insurer defendants permitted brokers to place business with AIG subsidiaries through wholesale intermediaries affiliated with or owned by those same brokers rather than placing the business with AIG subsidiaries directly. Finally, the *First Commercial Complaint* alleges that the insurer defendants entered into agreements with broker defendants that tied insurance placements to reinsurance placements in order to provide additional compensation to each broker. Plaintiffs assert that the defendants violated the Sherman Antitrust Act, RICO, the antitrust laws of 48 states and the District of Columbia, and are liable under common law breach of fiduciary duty and unjust enrichment theories. Plaintiffs seek treble damages plus interest and attorneys' fees as a result of the alleged RICO and Sherman Antitrust Act violations.

The plaintiffs in the *First Employee Benefits Complaint* are nine individual employees and corporate and municipal employers alleging claims on behalf of two separate nationwide purported classes: an employee class and an employer class that acquired insurance products from the defendants from August 26, 1994 to the date of any class certification. The *First Employee Benefits Complaint* names AIG, as well as eleven brokers and five other insurers, as defendants. The activities alleged in the *First Employee Benefits Complaint*, with certain exceptions, track the allegations of contingent commissions, bid-rigging and tying made in the *First Commercial Complaint*.

On October 3, 2006, Judge Hochberg of the District of New Jersey reserved in part and denied in part motions filed by the insurer defendants and broker defendants to dismiss the multi-district litigation. The Court also ordered the plaintiffs in both actions to file supplemental statements of particularity to elaborate on the allegations in their complaints. Plaintiffs filed their supplemental statements on October 25, 2006, and the AIG defendants, along with other insurer and broker defendants in the two consolidated actions, filed renewed motions to dismiss on November 30, 2006. On February 16, 2007, the case was transferred to Judge Garrett E. Brown, Chief Judge of the District

of New Jersey. On April 5, 2007, Chief Judge Brown granted the defendants' renewed motions to dismiss the *First Commercial Complaint* and *First Employee Benefits Complaint* with respect to the antitrust and RICO claims. The claims were dismissed without prejudice and the plaintiffs were given 30 days, later extended to 45 days, to file amended complaints. On April 11, 2007, the Court stayed all proceedings, including all discovery, that are part of the multi-district litigation until any renewed motions to dismiss the amended complaints are resolved.

A number of complaints making allegations similar to those in the *First Commercial Complaint* have been filed against AIG and other defendants in state and federal courts around the country. The defendants have thus far been successful in having the federal actions transferred to the District of New Jersey and consolidated into the multi-district litigation. The AIG defendants have also sought to have state court actions making similar allegations stayed pending resolution of the multi-district litigation proceeding. In one state court action pending in Florida, the trial court recently decided not to grant an additional stay, but instead to allow the case to proceed. Defendants filed their motions to dismiss, and on September 24, 2007, the court denied the motions with respect to the state antitrust, RICO, and common law claims and granted the motions with respect to both the Florida insurance bad faith claim against AIG (with prejudice) and the punitive damages claim (without prejudice). Discovery in this action is ongoing.

Plaintiffs filed amended complaints in both *In re Insurance Brokerage Antitrust Litigation* (the *Second Commercial Complaint*) and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the *Second Employee Benefits Complaint*) along with revised particularized statements in both actions on May 22, 2007. The allegations in the *Second Commercial Complaint* and the *Second Employee Benefits Complaint* are substantially similar to the allegations in the *First Commercial Complaint* and *First Employee Benefits Complaint*, respectively. The complaints also attempt to add several new parties and delete others; the *Second Commercial Complaint* adds two new plaintiffs and twenty seven new defendants (including three new AIG defendants), and the *Second Employee Benefits Complaint* adds eight new plaintiffs and nine new defendants (including two new AIG defendants). The defendants filed motions to dismiss the amended complaints and to strike the newly added parties. The Court granted (without leave to amend) defendants' motions to dismiss the federal antitrust and RICO claims on August 31, 2007 and September 28, 2007, respectively. The Court declined to exercise supplemental jurisdiction over the state law claims in the *Second Commercial Complaint* and therefore dismissed it in its entirety. On January 14, 2008, the court granted defendants' motion for summary judgment on the ERISA claims in the *Second Employee Benefits Complaint* and subsequently dismissed the remaining state law claims without prejudice, thereby dismissing the *Second Employee Benefits Complaint* in its entirety. On February 12, 2008, plaintiffs filed a notice of appeal to the United States Court of Appeals for the Third Circuit with respect to the dismissal of the *Second Employee Benefits Complaint*. Plaintiffs previously appealed the dismissal of the *Second Commercial Complaint* to the United

Notes to Consolidated Financial Statements *Continued*

12. Commitments, Contingencies and Guarantees

Continued

States Court of Appeals for the Third Circuit on October 10, 2007. Several similar actions that were consolidated before Chief Judge Brown are still pending in the District Court. Those actions are currently stayed pending a decision by the court on whether they will proceed during the appeal of the dismissal of the Second Commercial Complaint and the Second Employee Benefits Complaint.

On August 24, 2007, the Ohio Attorney General filed a complaint in the Ohio Court of Common Pleas against AIG and a number of its subsidiaries, as well as several other broker and insurer defendants, asserting violation of Ohio's antitrust laws. The complaint, which is similar to the *Second Commercial Complaint*, alleges that AIG and the other broker and insurer defendants conspired to allocate customers, divide markets, and restrain competition in commercial lines of casualty insurance sold through the broker defendant. The complaint seeks treble damages on behalf of Ohio public purchasers of commercial casualty insurance, disgorgement on behalf of both public and private purchasers of commercial casualty insurance, as well as a \$500 per day penalty for each day of conspiratorial conduct. AIG, along with other co-defendants, moved to dismiss the complaint on November 16, 2007. Discovery is stayed in the case pending a ruling on the motion to dismiss or until May 15, 2008, whichever occurs first.

SICO. In July, 2005, SICO filed a complaint against AIG in the Southern District of New York, claiming that AIG had refused to provide SICO access to certain artwork and asked the court to order AIG immediately to release the property to SICO. AIG filed an answer denying SICO's allegations and setting forth defenses to SICO's claims. In addition, AIG filed counterclaims asserting breach of contract, unjust enrichment, conversion, breach of fiduciary duty, a constructive trust and declaratory judgment, relating to SICO's breach of its commitment to use its AIG shares only for the benefit of AIG and AIG employees. Fact and expert discovery has been concluded and SICO's motion for summary judgment is pending.

Regulatory Investigations. Regulators from several states have commenced investigations into insurance brokerage practices related to contingent commissions and other industry wide practices as well as other broker-related conduct, such as alleged bid-rigging. In addition, various federal, state and foreign regulatory and governmental agencies are reviewing certain transactions and practices of AIG and its subsidiaries in connection with industry wide and other inquiries. AIG has cooperated, and will continue to cooperate, in producing documents and other information in response to subpoenas and other requests. On January 29, 2008, AIG reached settlement agreements with nine states and the District of Columbia. The settlement agreements call for AIG to pay a total of \$12.5 million to be allocated among the ten jurisdictions and also require AIG to continue to maintain certain producer compensation disclosure and ongoing compliance initiatives. AIG will also continue to cooperate with these states in their ongoing investigations. AIG has not admitted liability under

the settlement agreements and continues to deny the allegations. Nevertheless, AIG agreed to settle in order to avoid the expense and uncertainty of protracted litigation. The settlement agreements, which remain subject to court approvals, were reached with the Attorneys General of the States of Florida, Hawaii, Maryland, Michigan, Oregon, Texas and West Virginia, the Commonwealths of Massachusetts and Pennsylvania, and the District of Columbia, the Florida Department of Financial Services, and the Florida Office of Insurance Regulation. The agreement with the Texas Attorney General also settles allegations of anticompetitive conduct relating to AIG's relationship with Allied World Assurance Company and includes an additional settlement payment of \$500,000 related thereto.

Wells Notices. AIG understands that some of its employees have received Wells notices in connection with previously disclosed SEC investigations of certain of AIG's transactions or accounting practices. Under SEC procedures, a Wells notice is an indication that the SEC staff has made a preliminary decision to recommend enforcement action that provides recipients with an opportunity to respond to the SEC staff before a formal recommendation is finalized. It is possible that additional current and former employees could receive similar notices in the future as the regulatory investigations proceed.

Effect on AIG

In the opinion of AIG management, AIG's ultimate liability for the unresolved litigation and investigation matters referred to above is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

(b) Commitments

Flight Equipment

At December 31, 2007, ILFC had committed to purchase 234 new aircraft deliverable from 2008 through 2017 at an estimated aggregate purchase price of \$20.1 billion. ILFC will be required to find customers for any aircraft acquired, and it must arrange financing for portions of the purchase price of such equipment.

Minimum future rental income on noncancelable operating leases of flight equipment which have been delivered at December 31, 2007 was as follows:

<i>(in millions)</i>	
2008	\$ 4,142
2009	3,783
2010	3,274
2011	2,726
2012	2,075
Remaining years after 2012	4,921
Total	\$20,921

Flight equipment is leased, under operating leases, with remaining terms ranging from 1 to 12 years.

12. Commitments, Contingencies and Guarantees

Continued

Lease Commitments

AIG and its subsidiaries occupy leased space in many locations under various long-term leases and have entered into various leases covering the long-term use of data processing equipment.

At December 31, 2007, the future minimum lease payments under operating leases were as follows:

<i>(in millions)</i>	
2008	\$ 747
2009	581
2010	460
2011	371
2012	322
Remaining years after 2012	1,945
Total	\$4,426

Rent expense approximated \$771 million, \$657 million, and \$597 million for the years ended December 31, 2007, 2006, and 2005, respectively.

Other Commitments

In the normal course of business, AIG enters into commitments to invest in limited partnerships, private equities, hedge funds and mutual funds and to purchase and develop real estate in the U.S. and abroad. These commitments totaled \$9.1 billion at December 31, 2007.

On June 27, 2005, AIG entered into an agreement pursuant to which AIG agrees, subject to certain conditions, to make any payment that is not promptly paid with respect to the benefits accrued by certain employees of AIG and its subsidiaries under the SICO Plans (as discussed in Note 19 herein).

(c) Contingencies

Loss Reserves

Although AIG regularly reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, directors and officers liability (D&O), professional liability, medical malpractice, workers compensation, general liability, products liability and related classes, as well as for asbestos and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the

potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss cost trends or loss development factors could be attributable to changes in inflation, in labor and material costs or in the judicial environment, or in other social or economic phenomena affecting claims.

Synthetic Fuel Tax Credits. AIG generated income tax credits as a result of investing in synthetic fuel production. Tax credits generated from the production and sale of synthetic fuel under the Internal Revenue Code were subject to an annual phase-out provision based on the average wellhead price of domestic crude oil. The price range within which the tax credits are phased-out was originally established in 1980 and is adjusted annually for inflation. Depending on the price of domestic crude oil for a particular year, all or a portion of the tax credits generated in that year might be eliminated. AIG evaluated the production levels of its synthetic fuel production facilities in light of the risk of phase-out of the associated tax credits. As a result of fluctuating domestic crude oil prices, AIG evaluated and adjusted production levels when appropriate in light of this risk. Under current legislation, the opportunity to generate additional tax credits from the production and sale of synthetic fuel expired on December 31, 2007.

Lease Transactions. In June and August, 2007, field agents at the Internal Revenue Service (IRS) issued Notices of Proposed Adjustment (NOPAs) relating to a series of lease transactions by an AIG subsidiary. In the NOPAs, the field agents asserted that the leasing transactions were "lease-in lease-out" transactions described in Revenue Ruling 2002-69 and proposed adjustments to taxable income of approximately \$203 million in the aggregate for the years 1998, 1999, 2001 and 2002.

(d) Guarantees

AIG and certain of its subsidiaries become parties to derivative financial instruments with market risk resulting from both dealer and end-user activities and to reduce currency, interest rate, equity and commodity exposures. These instruments are carried at their estimated fair values in the consolidated balance sheet. The vast majority of AIG's derivative activity is transacted by AIGFP. See also Note 8 herein.

AIG has issued unconditional guarantees with respect to the prompt payment, when due, of all present and future payment obligations and liabilities of AIGFP arising from transactions entered into by AIGFP.

SAI Deferred Compensation Holdings, Inc., a wholly owned subsidiary of AIG, has established a deferred compensation plan for registered representatives of certain AIG subsidiaries, pursuant to which participants have the opportunity to invest deferred commissions and fees on a notional basis. The value of the deferred compensation fluctuates with the value of the deferred investment alternatives chosen. AIG has provided a full and unconditional guarantee of the obligations of SAI Deferred Compensation Holdings, Inc. to pay the deferred compensation under the plan.

Notes to Consolidated Financial Statements *Continued*

13. Preferred Shareholders' Equity in Subsidiary Companies

At December 31, 2007, preferred shareholders' equity in subsidiary companies represents preferred stocks issued by ILFC, a wholly owned subsidiary of AIG.

At December 31, 2007, the preferred stock consists of 1,000 shares of market auction preferred stock (MAPS) in two series (Series A and B) of 500 shares each. Each of the MAPS shares has a liquidation value of \$100,000 per share and is not convertible. The dividend rate, other than the initial rate, for each dividend period for each series is reset approximately every seven weeks (49 days) on the basis of orders placed in an auction. During 2006, ILFC extended each of the MAPS dividend periods for three years. At December 31, 2007, the dividend rate for Series A MAPS was 4.70 percent and the dividend rate for Series B MAPS was 5.59 percent.

14. Shareholders' Equity and Earnings Per Share

Shareholders' Equity

AIG parent depends on its subsidiaries for cash flow in the form of loans, advances, reimbursement for shared expenses, and dividends. AIG's insurance subsidiaries are subject to regulatory restrictions on the amount of dividends that can be remitted to AIG parent. These restrictions vary by jurisdiction. For example, unless permitted by the New York Superintendent of Insurance, general insurance companies domiciled in New York may not pay dividends to shareholders that, in any twelve-month period, exceed the lesser of ten percent of such company's statutory policyholders' surplus or 100 percent of its "adjusted net investment income," as defined. Generally, less severe restrictions applicable to both general and life insurance companies exist in most of the other states in which AIG's insurance subsidiaries are domiciled. Certain foreign jurisdictions have restrictions that could delay or limit the remittance of dividends. There are also various local restrictions limiting cash loans and advances to AIG by its subsidiaries. Largely as a result of these restrictions, approximately 81 percent of the aggregate equity of AIG's consolidated subsidiaries was restricted from immediate transfer to AIG parent at December 31, 2007.

Dividends declared per common share were \$0.77, \$0.65, and \$0.63 in 2007, 2006, and 2005, respectively.

During 2007 and 2005, AIG repurchased 76 million and 2 million shares of its common stock, respectively, at a total cost of \$5.1 billion and \$165 million, respectively. The average price paid per share for repurchased shares was \$66.84 and \$66.46 in 2007 and 2005, respectively. During 2006, AIG did not purchase any shares of its common stock under its existing share repurchase authorization.

At December 31, 2007, there were 6,000,000 shares of AIG's \$5 par value serial preferred stock authorized, issuable in series, none of which were outstanding.

14. Shareholders' Equity and Earnings Per Share

Continued

Earnings Per Share

Basic earnings per share is based on the weighted average number of common shares outstanding, adjusted to reflect all stock dividends and stock splits. Diluted earnings per share is based on those shares used in basic earnings per share plus shares that would have been outstanding assuming issuance of common shares for all dilutive potential common shares outstanding, adjusted to reflect all stock dividends and stock splits.

The computation of earnings per share for the years ended December 31, 2007, 2006 and 2005 was as follows:

Years Ended December 31, (in millions, except per share data)	2007	2006	2005
Numerator for earnings per share:			
Income before cumulative effect of an accounting change	\$ 6,200	\$14,014	\$10,477
Cumulative effect of an accounting change, net of tax	—	34	—
Net income applicable to common stock for basic EPS	6,200	14,048	10,477
Interest on contingently convertible bonds, net of tax	—	10	11
Net income applicable to common stock for diluted EPS	6,200	14,058	10,488
Cumulative effect of an accounting change, net of tax	—	(34)	—
Income before cumulative effect of an accounting change applicable to common stock for diluted EPS	\$ 6,200	\$14,024	\$10,488
Denominator for earnings per share:			
Weighted average shares outstanding used in the computation of EPS:			
Common stock issued	2,751	2,751	2,751
Common stock in treasury	(179)	(153)	(155)
Deferred shares	13	10	1
Weighted average shares outstanding — basic	2,585	2,608	2,597
Incremental shares from potential common stock:			
Weighted average number of shares arising from outstanding employee stock plans (treasury stock method)*	13	7	21
Contingently convertible bonds	—	8	9
Weighted average shares outstanding — diluted*	2,598	2,623	2,627
Earnings per share:			
Basic:			
Income before cumulative effect of an accounting change	\$ 2.40	\$ 5.38	\$ 4.03
Cumulative effect of an accounting change, net of tax	—	0.01	—
Net income	\$ 2.40	\$ 5.39	\$ 4.03
Diluted:			
Income before cumulative effect of an accounting change	\$ 2.39	\$ 5.35	\$ 3.99
Cumulative effect of an accounting change, net of tax	—	0.01	—
Net income	\$ 2.39	\$ 5.36	\$ 3.99

* Certain shares arising from employee stock plans were not included in the computation of diluted earnings per share if the exercise price of the options exceeded the average market price and were antidilutive. The number of shares excluded were 8 million, 13 million and 19 million for the years ended December 31, 2007, 2006 and 2005, respectively.

Notes to Consolidated Financial Statements *Continued*

15. Statutory Financial Data

Statutory surplus and net income for General Insurance and Life Insurance & Retirement Services operations in accordance with statutory accounting practices were as follows:

Years Ended December 31, (in millions)	2007	2006	2005
Statutory surplus ^(a) :			
General Insurance	\$37,705	\$32,665	\$24,508
Life Insurance & Retirement Services	33,212	35,058	30,739
Statutory net income ^{(a)(b)} :			
General Insurance ^(c)	8,018	8,010	1,713
Life Insurance & Retirement Services ^(a)	4,465	5,088	4,762

(a) Statutory surplus and net income with respect to foreign operations are estimated at November 30. The basis of presentation for branches of AIA is the Hong Kong statutory filing basis. The basis of presentation for branches of ALICO is the U.S. statutory filing basis. AIG Star Life, AIG Edison Life, Nan Shan and Philamlife are estimated based on their respective local country filing basis.

(b) Includes realized capital gains and losses and taxes.

(c) Includes catastrophe losses, net of tax, of \$177 million and \$1.9 billion in 2007 and 2005, respectively.

AIG's insurance subsidiaries file financial statements prepared in accordance with statutory accounting practices prescribed or permitted by domestic and foreign insurance regulatory authorities. The differences between statutory financial statements and financial statements prepared in accordance with U.S. GAAP vary between domestic and foreign by jurisdiction. The principal differences are that statutory financial statements do not reflect DAC, some bond portfolios may be carried at amortized cost, assets and liabilities are presented net of reinsurance, policyholder liabilities are generally valued using more conservative assumptions and certain assets are non-admitted.

At December 31, 2007, 2006 and 2005, statutory capital of AIG's insurance subsidiaries exceeded minimum company action level requirements. In 2005, AIG nonetheless contributed an additional \$750 million of capital into American Home Assurance Company (American Home) effective September 30, 2005 and contributed a further \$2.25 billion of capital in February 2006 for a total of approximately \$3 billion of capital into Domestic General Insurance subsidiaries effective December 31, 2005.

16. Fair Value of Financial Instruments

FAS 107, "Disclosures about Fair Value of Financial Instruments" (FAS 107), requires disclosure of fair value information about financial instruments for which it is practicable to estimate such fair value. FAS 107 excludes certain financial instruments, including those related to insurance contracts and lease contracts.

The fair value of a financial instrument is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The degree of judgment used in measuring the fair

value of financial instruments generally correlates with the level of pricing observability. Financial instruments with quoted prices in active markets generally have more pricing observability and less judgment is used in measuring fair value. Conversely, financial instruments traded in other than active markets or that do not have quoted prices have less observability and are measured at fair value using valuation models or other pricing techniques that require more judgment. Pricing observability is affected by a number of factors, including the type of financial instrument, whether the financial instrument is new to the market and not yet established, the characteristics specific to the transaction and general market conditions.

Fixed maturities, equity securities, securities available for sale, trading securities and securities sold under agreements to repurchase: AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. AIG obtains market price data to value financial instruments whenever such information is available. Market price data generally is obtained from market exchanges or dealer quotations. The types of instruments valued based on market price data include G-7 government and agency securities, equities listed in active markets, and investments in publicly traded mutual funds with quoted market prices.

AIG estimates the fair value of fixed income instruments not traded in active markets by referring to traded securities with similar attributes and using a matrix pricing methodology. This methodology considers such factors as the issuer's industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, and other relevant factors. The types of fixed income instruments not traded in active markets include non-G-7 government securities, municipal bonds, certain hybrid financial instruments, most investment-grade and high-yield corporate bonds, and most mortgage- and asset-backed products.

AIG initially estimates the fair value of equity instruments not traded in active markets by reference to the transaction price. This valuation is adjusted only when changes to inputs and assumptions are corroborated by evidence such as transactions in similar instruments, completed or pending third-party transactions in the underlying investment or comparable entities, subsequent rounds of financing, recapitalizations and other transactions across the capital structure, offerings in the equity capital markets, and changes in financial ratios or cash flows.

For equity and fixed income instruments that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability, and such adjustments generally are based on available market evidence. In the absence of such evidence, management's best estimate is used.

Unrealized gain (loss) on swaps, options and forward transactions: Unrealized gain (loss) on swaps, options and forward transactions (derivative assets and liabilities) can be exchange-traded or traded over the counter (OTC). AIG generally values exchange-traded derivatives within portfolios using models that calibrate to market clearing levels and that eliminate timing

16. Fair Value of Financial Instruments

Continued

differences between the closing price of the exchange-traded derivatives and their underlying instruments.

OTC derivatives are valued using market transactions and other market evidence whenever possible, including market-based inputs to models, model calibration to market clearing transactions, broker or dealer quotations or alternative pricing sources with reasonable levels of price transparency. When models are used, the selection of a particular model to value an OTC derivative depends on the contractual terms of, and specific risks inherent in, the instrument as well as the availability of pricing information in the market. AIG generally uses similar models to value similar instruments. Valuation models require a variety of inputs, including contractual terms, market prices and rates, yield curves, credit curves, measures of volatility, prepayment rates and correlations of such inputs. For OTC derivatives that trade in liquid markets, such as generic forwards, swaps and options, model inputs can generally be verified and model selection does not involve significant management judgment.

Certain OTC derivatives trade in less liquid markets with limited pricing information, and the determination of fair value for these derivatives is inherently more difficult. When AIG does not have corroborating market evidence to support significant model inputs and cannot verify the model to market transactions, transaction price is initially used as the best estimate of fair value. Accordingly, when a pricing model is used to value such an instrument, the model is adjusted so that the model value at inception equals the transaction price. Subsequent to initial recognition, AIG updates valuation inputs when corroborated by evidence such as similar market transactions, third-party pricing services and/or broker or dealer quotations, or other empirical market data. When appropriate, valuations are adjusted for various factors such as liquidity, bid/offer spreads and credit considerations. Such adjustments are generally based on available market evidence. In the absence of such evidence, management's best estimate is used.

Mortgage and other loans receivable: When practical, the fair values of loans on real estate and collateral loans were estimated using discounted cash flow calculations based upon AIG's current incremental lending rates for similar type loans. The fair values of the policy loans were not calculated as AIG believes it would have to expend excessive costs for the benefits derived.

Finance receivables: Fair values were estimated using discounted cash flow calculations based upon the weighted average rates currently being offered for similar finance receivables.

Securities lending invested collateral and securities lending payable: Securities lending collateral are floating rate fixed maturity securities recorded at fair value. Fair values were based upon quoted market prices or internally developed models consistent with the methodology for other fixed maturity securities. The contract values of securities lending payable approximate fair value as these obligations are short-term in nature.

Spot commodities: Fair values were based on current market prices of reference spot futures contracts traded on exchanges.

Cash, short-term investments, trade receivables, trade payables, securities purchased (sold) under agreements to resell (repurchase), commercial paper and extendible commercial notes: The carrying values of these assets and liabilities approximate fair values because of the relatively short period of time between origination and expected realization.

Other invested assets: Consisting principally of hedge funds and limited partnerships. Fair values are determined based on the net asset values provided by the general partner or manager of each investment. AIG obtains the fair value of its investments in limited partnerships and hedge funds from information provided by the general partner or manager of these investments, the accounts of which generally are audited on an annual basis. The transaction price is used as the best estimate of fair value at inception.

Policyholders' contract deposits: Fair values were estimated using discounted cash flow calculations based upon interest rates currently being offered for similar contracts with maturities consistent with those remaining for the contracts being valued.

Securities and spot commodities sold but not yet purchased: The carrying amounts for the securities and spot commodities sold but not yet purchased approximate fair values. Fair values for securities and spot commodities sold short were based on current market prices.

Trust deposits and deposits due to banks and other depositors: To the extent certain amounts are not demand deposits or certificates of deposit which mature in more than one year, fair values were not calculated as AIG believes it would have to expend excessive costs for the benefits derived.

Commercial paper and extendible commercial notes: The carrying amount approximates fair value.

Long-term borrowings: When practical, the fair values of these obligations were estimated using discounted cash flow calculations based upon AIG's current incremental borrowing rates for similar types of borrowings with maturities consistent with those remaining for the debt being valued.

Notes to Consolidated Financial Statements *Continued*

16. Fair Value of Financial Instruments

Continued

The carrying values and fair values of AIG's financial instruments at December 31, 2007 and 2006 were as follows:

(in millions)	2007		2006	
	Carrying Value ^(a)	Fair Value	Carrying Value ^(a)	Fair Value
Assets:				
Fixed maturities	\$428,935	\$429,511	\$419,142	\$419,859
Equity securities	41,646	41,646	30,650	30,650
Mortgage and other loans receivable	33,727	34,123	28,418	28,655
Securities available for sale	40,305	40,305	47,205	47,205
Trading securities	4,197	4,197	5,031	5,031
Spot commodities	238	238	220	220
Unrealized gain on swaps, options and forward transactions	16,442	16,442	19,252	19,252
Trade receivables	6,467	6,467	4,317	4,317
Securities purchased under agreements to resell	20,950	20,950	30,291	30,291
Finance receivables, net of allowance	31,234	28,693	29,573	26,712
Securities lending invested collateral	75,662	75,662	69,306	69,306
Other invested assets ^(b)	57,134	57,979	42,111	42,418
Short-term investments	51,351	51,351	27,483	27,483
Cash	2,284	2,284	1,590	1,590
Liabilities:				
Policyholders' contract deposits	258,459	259,045	248,264	243,570
Securities sold under agreements to repurchase	8,331	9,048	19,677	19,677
Trade payables	10,568	10,568	6,174	6,174
Securities and spot commodities sold but not yet purchased	4,709	4,709	4,076	4,076
Unrealized loss on swaps, options and forward transactions	20,613	20,613	11,401	11,401
Trust deposits and deposits due to banks and other depositors	4,903	4,986	5,249	5,261
Commercial paper and extendible commercial notes	13,114	13,114	13,363	13,363
Long-term borrowings	162,935	165,064	135,316	135,605
Securities lending payable	81,965	81,965	70,198	70,198

(a) The carrying value of all other financial instruments approximates fair value.

(b) Excludes aircraft asset investments held by non-Financial Services subsidiaries.

17. Share-based Employee Compensation Plans

During the year ended December 31, 2007, AIG employees had received compensation pursuant to awards under seven different share-based employee compensation plans: (i) AIG 1999 Stock Option Plan, as amended (1999 Plan); (ii) AIG 1996 Employee Stock Purchase Plan, as amended (1996 Plan); (iii) AIG 2002 Stock Incentive Plan, as amended (2002 Plan) under which AIG has issued time-vested restricted stock units (RSUs) and performance restricted stock units (performance RSUs); (iv) AIG 2007 Stock Incentive Plan, as amended (2007 Plan); (v) SICO's Deferred Compensation Profit Participation Plans (SICO Plans); (vi) AIG's 2005-2006 Deferred Compensation Profit Participation Plan (AIG DCPPP) and (vii) the AIG Partners Plan. The AIG DCPPP was adopted as a replacement for the SICO Plans for the 2005-2006 period, and the AIG Partners Plan replaced the AIG DCPPP. Share-based employee compensation earned under the AIG DCPPP was granted as time-vested RSUs under the 2002 Plan. Share-based employee compensation awarded under the AIG Partners Plan was granted as performance-based RSUs under the 2002 Plan, except for the December 2007 grant which was made under the 2007 Plan. All future grants will be made under the 2007

Plan. Although awards granted under all the plans described above remained outstanding at December 31, 2007, future grants of options, RSUs and performance RSUs can be made only under the 2007 Plan. AIG currently settles share option exercises and other share awards to participants by issuing shares it previously acquired and holds in its treasury account, except for share awards made by SICO, which are settled by SICO.

In 2006 and for prior years, AIG's non-employee directors received share-based compensation in the form of options granted pursuant to the 1999 Plan and grants of AIG common stock with delivery deferred until retirement from the Board, pursuant to the AIG Director Stock Plan, which was approved by the shareholders at the 2004 Annual Meeting of Shareholders and which is now a subplan under the 2007 Plan. From and after May 16, 2007, non-employee directors receive deferred stock units (DSUs) under the 2007 Plan with delivery deferred until retirement from the Board.

From January 1, 2003 through December 31, 2005, AIG accounted for share-based payment transactions with employees under FAS 123, "Accounting for Stock-Based Compensation." Share-based employee compensation expense from option awards was not recognized in the consolidated statement of income in prior periods. Effective January 1, 2006, AIG adopted the fair

17. Share-based Employee Compensation Plans

Continued

value recognition provisions of FAS 123R. FAS 123R requires that companies use a fair value method to value share-based payments and recognize the related compensation expense in net earnings. AIG adopted FAS 123R using the modified prospective application method, and accordingly, financial statement amounts for the prior periods presented have not been restated to reflect the fair value method of expensing share-based compensation under FAS 123R. The modified prospective application method requires recognition of the fair value of share-based compensation for shares subscribed for or granted on or after January 1, 2006 and all previously granted but unvested awards at January 1, 2006.

The adoption of FAS 123R resulted in share-based compensation expense of approximately \$17 million during 2006, related to awards that were accounted for under Accounting Principles Board Opinion 25, "Accounting for Stock Issued to Employees." FAS 123R also requires AIG to estimate forfeitures in calculating the expense relating to share-based compensation, rather than recognizing these forfeitures and corresponding reductions in expense as they occur. The cumulative effect of adoption of \$46 million was recorded as a cumulative effect of an accounting change, net of tax. FAS 123R requires AIG to reflect the cash savings resulting from excess tax benefits in its financial statements as cash flow from financing activities, rather than as cash flow from operating activities as in prior periods. The amount of this excess tax benefit in 2007 and 2006 was \$26.1 million and \$27.9 million, respectively.

Included in AIG's consolidated statement of income for the years ended December 31, 2007 and 2006 was pre-tax share-based compensation expense of \$275 million (\$216 million after tax), and \$353 million (\$326 million after tax), respectively. Share-based compensation expense in 2006 included a one-time compensation cost of approximately \$54 million related to the Starr tender offer and various out of period adjustments totaling \$61 million, primarily relating to stock splits and other miscellaneous items for the SICO Plans. See Note 19 herein for a discussion of the Starr tender offer.

1999 Stock Option Plan

The 1999 Plan was approved by the shareholders at the 2000 Annual Meeting of Shareholders, with certain amendments ap-

proved at the 2003 Annual Meeting of Shareholders. The 1999 Plan superseded the 1991 Employee Stock Option Plan (the 1991 Plan), although outstanding options granted under the 1991 Plan continue until exercise or expiration. Options granted under the 1999 Plan generally vest over four years (25 percent vesting per year) and expire 10 years from the date of grant. The 2007 Plan supersedes the 1999 Plan.

At December 31, 2007, there were no shares reserved for future grants under the 1999 Plan and 36,363,769 shares reserved for issuance under the 1999 and 1991 Plans.

Deferrals

At December 31, 2007, AIG was obligated to issue 12,521,342 shares in connection with previous exercises of options with delivery deferred.

Valuation

AIG uses a binomial lattice model to calculate the fair value of stock option grants. A more detailed description of the valuation methodology is provided below.

The following weighted-average assumptions were used for stock options granted in 2007, 2006 and 2005:

	2007	2006	2005
Expected annual dividend yield ^(a)	1.39%	0.92%	0.71%
Expected volatility ^(b)	32.82%	23.50%	27.30%
Risk-free interest rate ^(c)	4.08%	4.61%	4.17%
Expected term ^(d)	7 years	7 years	7 years

(a) The dividend yield is determined at the grant date.

(b) In 2007, expected volatility is the average of historical volatility (based on seven years of daily stock price changes) and the implied volatility of actively traded options on AIG shares.

(c) The interest rate curves used in the valuation model were the U.S. Treasury STRIP rates with terms from 3 months to 10 years.

(d) The contractual term of the option is generally 10 years with an expected term of 7 years calculated based on an analysis of historical employee exercise behavior and employee turnover (post-vesting terminations). The early exercise rate is a function of time elapsed since the grant. Fifteen years of historical data were used to estimate the early exercise rate.

Notes to Consolidated Financial Statements *Continued***17. Share-based Employee Compensation Plans***Continued*

Additional information with respect to AIG's stock option plans at December 31, 2007, and changes for the year then ended, were as follows:

Options:	Shares	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life	Aggregate Intrinsic Values (in millions)
Outstanding at beginning of year	47,655,720	\$ 57.99		
Granted	1,738,530	\$ 57.43		
Exercised*	(12,308,493)	\$ 40.00		
Forfeited or expired	(721,988)	\$ 69.00		
Outstanding at end of year	36,363,769	\$ 63.83	4.81	\$59
Options exercisable at end of year	30,703,527	\$ 63.98	4.10	\$57
Weighted average fair value per share of options granted		\$ 20.97		

* Includes options with respect to 8,489,584 shares exercised with delivery deferred, resulting in obligations to issue 4,138,713 shares.

Vested and expected-to-vest options at December 31, 2007, included in the table above, totaled 34,349,762, with a weighted average exercise price of \$64.14, a weighted average contractual life of 4.46 years and an aggregate intrinsic value of \$57 million.

At December 31, 2007, total unrecognized compensation cost (net of expected forfeitures) was \$100 million and \$3 million related to non-vested share-based compensation awards granted under the 1999 Plan and the 1996 Plan, respectively, with blended weighted average periods of 1.38 years and 0.41 years, respectively. The cost of awards outstanding under these plans at December 31, 2007 is expected to be recognized over approximately four years and one year, respectively, for the 1999 Plan and the 1996 Plan.

The intrinsic value of options exercised during 2007 was approximately \$360 million. The fair value of options vesting during 2007 was approximately \$63 million. AIG received \$482 million and \$104 million in cash during 2007 and 2006, respectively, from the exercise of stock options. The tax benefits realized as a result of stock option exercises were \$16 million and \$35 million in 2007 and 2006, respectively.

2002 Stock Incentive Plan

The 2002 Plan was adopted at the 2002 Annual Meeting of shareholders and amended and restated by AIG's Board of Directors on September 18, 2002. During 2007 and 2006, 179,106 and 6,836,785 RSUs, respectively, including performance RSUs, were granted under the 2002 Plan. Because the 2002 Plan has been superseded by the 2007 Plan, there were no shares reserved for issuance in connection with future awards at December 31, 2007. Substantially all time-vested RSUs granted

under the 2002 Plan vest on the fourth anniversary of the date of grant.

2007 Stock Incentive Plan

The 2007 Plan was adopted at the 2007 Annual Meeting of shareholders and amended and restated by AIG's Board of Directors on November 14, 2007. The 2007 Plan supersedes the 1999 Plan and the 2002 Plan. During 2007, 7,121,252 RSUs, including performance RSUs were granted under the 2007 Plan. Each RSU, performance RSU and DSU awarded reduces the number of shares available for future grants by 2.9 shares. At December 31, 2007, there were 157,562,672 shares reserved for issuance under the 2007 Plan. A significant majority of the time-vested RSUs granted in 2007 under the 2007 Plan vest on the fourth anniversary of the date of grant.

Non-Employee Director Stock Awards

The methodology used for valuing employee stock options is also used to value director stock options. Director stock options vest one year after the grant date, but are otherwise the same as employee stock options. Commencing in 2007, directors no longer receive awards of options. Options with respect to 40,000 shares and 32,500 shares were granted during 2006 and 2005, respectively.

In 2007, AIG granted to directors 22,542 DSUs, including DSUs representing dividend-equivalent amounts. AIG also granted to directors 6,375 shares, 14,000 shares and 6,250 shares, with delivery deferred, during 2007, 2006 and 2005, respectively, under the Director Stock Plan.

17. Share-based Employee Compensation Plans

Continued

Employee Stock Purchase Plan

AIG's 1996 Plan provides that eligible employees (those employed at least one year) may receive privileges to purchase up to an aggregate of 10,000,000 shares of AIG common stock, at a price equal to 85 percent of the fair market value on the date of the grant of the purchase privilege. Purchase privileges are granted quarterly and are limited to the number of whole shares that can be purchased on an annual basis by an amount equal to the lesser of 10 percent of an employee's annual salary or \$10,000.

SICO Plans

The SICO Plans provide that shares of AIG common stock currently held by SICO are set aside for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of shares under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's termination of employment with AIG prior to normal retirement age.

Historically, SICO's Board of Directors could elect to pay a participant cash in lieu of shares of AIG common stock. On December 9, 2005, SICO notified participants that essentially all subsequent distributions would be made only in shares, and not cash. At that date, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. Variable measurement accounting is used for those few awards for which cash elections had been made prior to March 2005. At December 9, 2005, there were 12,650,292 non-vested AIG shares under the SICO Plans with a weighted average fair value per share of \$61.92. The SICO Plans are also described in Note 19 herein.

Although none of the costs of the various benefits provided under the SICO Plans have been paid by AIG, AIG has recorded compensation expense for the deferred compensation amounts payable to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts deemed contributed by SICO.

A significant portion of the awards under the SICO Plans vest the year after the participant reaches age 65, provided that the participant remains employed by AIG through age 65. The portion of the awards for which early payout is available vest on the applicable payout date.

AIG DCPPP

In September 2005, AIG adopted the AIG DCPPP to provide share-based compensation to key AIG employees, including senior executive officers. The AIG DCPPP was modeled on the SICO Plans.

The AIG DCPPP contingently allocated a fixed number of time-vested RSUs to each participant if AIG's cumulative adjusted earnings per share in 2005 and 2006 exceeded that in 2003 and 2004 as determined by AIG's Compensation Committee. This goal was met, and pursuant to the terms of the DCPPP Plan, 3,696,836 time-vested RSUs were awarded in 2007. These RSUs vest in three pre-retirement installments and a final retirement installment at age 65.

At December 31, 2007, RSU awards with respect to 3,272,268 shares remained outstanding.

AIG Partners Plan

On June 26, 2006, AIG's Compensation Committee approved two grants under the AIG Partners Plan. The first grant had a performance period that ran from January 1, 2006 through December 31, 2007. The second grant has a performance period that runs from January 1, 2007 through December 31, 2008. In December 2007, the Compensation Committee approved a grant with a performance period from January 1, 2008 through December 31, 2009. The Compensation Committee will approve the performance metrics for this grant in the first quarter of 2008. All grants vest 50 percent on the fourth and sixth anniversaries of the first day of the related performance period. The Compensation Committee approved the performance metrics for the first two grants prior to the date of grant. The measurement of the first two grants is deemed to have occurred on June 26, 2006 when there was mutual understanding of the key terms and conditions of the first two grants. In 2007, no compensation cost was recognized, and compensation cost recognized in 2006 was reversed, for the first grant under the Partners Plan because the performance threshold for these awards was not met.

Valuation

The fair value of each award granted under the plans described above is based on the closing price of AIG stock on the date of grant.

Notes to Consolidated Financial Statements *Continued*

17. Share-based Employee Compensation Plans

Continued

The following table presents a summary of shares relating to outstanding awards invested under the foregoing plans at December 31, 2007, and changes for the year then ended*:

	Number of Shares					Weighted Average Grant-Date Fair Value				
	Time-vested RSUs	AIG DCPPP	Partners Plan	Total AIG Plan	Total SICO Plans	Time-vested RSUs	AIG DCPPP	Partners Plan	Total AIG Plans	Total SICO Plans
Unvested at January 1, 2007	7,181,595	4,590,622	3,607,040	15,379,257	11,443,772	\$66.56	\$52.09	\$56.50	\$59.88	\$61.72
Granted	4,752,738	—	2,547,620	7,300,358	—	57.90	—	53.93	56.51	—
Vested	(168,214)	(196,690)	(550)	(365,454)	(1,691,306)	63.82	61.44	66.97	62.55	64.18
Forfeited	(422,431)	(173,472)	(1,212,585)	(1,808,488)	(282,657)	65.34	53.25	56.83	58.47	59.93
Unvested at December 31, 2007	11,343,688	4,220,460	4,941,525	20,505,673	9,469,809	\$63.01	\$54.53	\$55.08	\$59.36	\$61.27

* Options and DSUs awarded under the 2007 Plan are not included. For the AIG DCPPP, includes all incremental shares granted or to be granted.

The total unrecognized compensation cost (net of expected forfeitures) related to non-vested share-based compensation awards granted under the 2002 Plan, the 2007 Plan, the AIG DCPPP, and the SICO Plans at December 31, 2007 and the blended weighted-average periods over which those costs are expected to be recognized at December 31, 2007 are as follows:

(in millions)	Unrecognized Compensation Cost	Blended Weighted-Average Period
Time-vested RSUs - 2002 Plan	\$218	1.35 years
Time-vested RSUs - 2007 Plan	\$209	2.05 years
AIG DCPPP	\$146	5.47 years
Total AIG Plans	\$573	2.65 years
Total SICO Plans	\$249	5.93 years

The total cost for awards outstanding at December 31, 2007 under the 2002 Plan, the 2007 Plan, the AIG DCPPP and the SICO Plans is expected to be recognized over approximately 4 years, 4 years, 32 years and 32 years, respectively.

18. Employee Benefits

Pension Plans

AIG, its subsidiaries and certain affiliated companies, offer various defined benefit plans to eligible employees based on either completion of a specified period of continuous service or date of hire, subject to age limitations.

AIG's U.S. retirement plan is a qualified, noncontributory defined benefit plan which is subject to the provisions of ERISA. U.S. employees who are employed by a participating company, have attained age 21 and completed twelve months of continuous service are eligible to participate in this plan. Employees generally vest after 5 years of service. Unreduced benefits are paid to retirees at normal retirement (age 65) and are based upon a percentage of final average compensation multiplied by years of credited service, up to 44 years. Non-U.S. defined benefit plans are generally either based on the employee's years of credited service and compensation in the years preceding retirement, or on points accumulated based on the employee's job grade and other factors during each year of service.

In 2007, AIG acquired the outstanding minority interest of 21st Century. Assets, obligations and costs with respect to 21st Century's plans are included herein. The assumptions used by 21st Century in its plans were not significantly different from those used by AIG in AIG's U.S. plans.

AIG also sponsors several unfunded defined benefit plans for certain employees, including key executives, designed to supplement pension benefits provided by AIG's other retirement plans. These include the AIG Excess Retirement Income Plan, which provides a benefit equal to the reduction in benefits payable to certain employees under the AIG U.S. retirement plan as a result of federal tax limitations on compensation and benefits payable, and the Supplemental Executive Retirement Plan (Supplemental Plan), which provides additional retirement benefits to designated executives. Under the Supplemental Plan, an annual benefit accrues at a percentage of final average pay multiplied by each year of credited service, not greater than 60 percent of final average pay, reduced by any benefits from the current and any predecessor retirement plans (including the AIG Excess Retirement Income Plan and any comparable plans), Social Security, if any, and from any qualified pension plan of prior employers.

Postretirement Plans

AIG and its subsidiaries also provide postretirement medical care and life insurance benefits in the U.S. and in certain non-U.S. countries. Eligibility in the various plans is generally based upon completion of a specified period of eligible service and attaining a specified age. Overseas, benefits vary by geographic location.

U.S. postretirement medical and life insurance benefits are based upon the employee electing immediate retirement and having a minimum of ten years of service. Medical benefits are contributory, while the life insurance benefits are non-contributory. Retiree medical contributions vary with age and length of service and range from requiring no cost for pre-1989 retirees to requiring actual premium payments reduced by certain credits for post-1993 retirees. These contributions are subject to adjustment annually. Other cost sharing features of the medical plan include deductibles, coinsurance and Medicare coordination and a lifetime maximum benefit of \$2 million.

18. Employee Benefits

Continued

The following table presents the funded status of the plans, reconciled to the amount reported in the consolidated balance sheet at December 31, 2007 and 2006. The measurement date for some of the non-U.S. defined benefit pension and postretirement plans is November 30, consistent with the fiscal year end of the sponsoring companies. For all other plans, measurement occurs as of December 31, 2007.

(in millions)	Pension				Postretirement ^(a)			
	Non-U.S. Plans ^(b)		U.S. Plans ^(c)		Non-U.S. Plans		U.S. Plans

(a) AIG does not currently fund postretirement benefits.

(b) Includes unfunded plans for which the aggregate pension benefit obligation was \$559 million and \$494 million at December 2007, and 2006, respectively. For 2007 and 2006, approximately 83% pertain to Japanese plans, which are not required by local regulation to be funded. The projected benefit obligation for these plans total \$464 million and \$414 million, respectively.

(c) Includes non-qualified unfunded plans, for which the aggregate projected benefit obligation was \$240 million and \$228 million at December 2007 and 2006, respectively.

Notes to Consolidated Financial Statements *Continued*

18. Employee Benefits

Continued

The accumulated benefit obligations for both non-U.S. and U.S. pension benefit plans at December 31, 2007 and 2006 were as follows:

<i>(in millions)</i>	2007	2006
Non-U.S. pension benefit plans	\$1,504	\$1,384
U.S. pension benefit plans	\$2,752	\$2,689

Defined benefit pension plan obligations in which the projected benefit obligation was in excess of the related plan assets and in which the accumulated benefit obligation was in excess of the related plan assets at December 31, 2007 and 2006 were as follows:

<i>(in millions)</i>	PBO exceeds fair value of plan assets				ABO exceeds fair value of plan assets			
	Non-U.S. Plans		U.S. Plans		Non-U.S. Plans		U.S. Plans	
	2007	2006	2007	2006	2007	2006	2007	2006
Projected benefit obligation	\$ 1,676	\$1,486	\$ 368	\$3,079	\$ 1,415	\$1,465	\$ 240	\$240
Accumulated benefit obligation	1,462	1,323	317	2,689	1,277	1,311	206	204
Fair value of plan assets	855	740	113	2,760	652	723	—	11

The following table presents the components of net periodic benefit cost recognized in income and other amounts recognized in Accumulated other comprehensive income (loss) with respect to the defined benefit pension plans and other postretirement benefit plans for the year ended December 31, 2007 and 2006 (no amounts related to the adoption of FAS 158 were recognized in Accumulated other comprehensive income (loss) for the year ended 2005):

<i>(in millions)</i>	Pension						Postretirement					
	Non-U.S. Plans			U.S. Plans			Non-U.S. Plans			U.S. Plans		
	2007	2006	2005	2007	2006	2005	2007	2006	2005	2007	2006	2005
Components of net periodic benefit cost:												
Service cost	\$ 90	\$ 78	\$ 71	\$ 135	\$ 130	\$ 111	\$ 5	\$ 4	\$ 4	\$ 11	\$ 6	\$ 5
Interest cost	50	36	32	186	169	153	3	2	2	15	11	11
Expected return on assets	(36)	(28)	(21)	(216)	(201)	(180)	—	—	—	—	—	—
Amortization of prior service cost	(10)	(9)	(10)	(3)	(3)	(3)	—	—	—	(2)	(6)	(6)
Amortization of transitional obligation	1	1	1	—	—	—	—	—	—	—	—	—
Recognition of net actuarial (gains)/losses	9	16	21	43	75	55	—	—	—	—	—	—
Other	1	1	7	14	6	1	—	—	—	—	—	—
Net periodic benefit cost	\$105	\$ 95	\$101	\$ 159	\$ 176	\$ 137	\$ 8	\$ 6	\$ 6	\$ 24	\$ 11	\$ 10
Total recognized in Accumulated other comprehensive income (loss)	\$ (10)	\$ 38	—	\$(155)	\$ 24	—	\$ (2)	\$ —	—	\$ (7)	\$ —	\$ —
Total recognized in net periodic benefit cost and other comprehensive income	\$ 95	\$133	\$101	\$ 4	\$ 200	\$ 137	\$ 6	\$ 6	\$ 6	\$ 17	\$ 11	\$ 10

The estimated net loss and prior service credit that will be amortized from Accumulated other comprehensive income into net periodic benefit cost over the next fiscal year are \$31 million and \$11 million, respectively, for AIG's combined defined benefit pension plans. For the defined benefit postretirement plans, the estimated amortization from Accumulated other comprehensive income for net loss, prior service credit and transition obligation that will be amortized into net periodic benefit cost over the next fiscal year will be less than \$5 million in the aggregate.

18. Employee Benefits

Continued

Assumptions

The weighted average assumptions used to determine the benefit obligations at December 31, 2007 and 2006 are as follows:

	Pension		Postretirement	
	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans	U.S. Plans
2007				
Discount rate	2.00 - 11.00%	6.50%	2.75 - 6.50%	6.50%
Rate of compensation increase	1.50 - 9.00%	4.25%	3.00 - 3.50%	4.25%
2006				
Discount rate	2.25 - 10.75%	6.00%	4.00 - 5.75%	6.00%
Rate of compensation increase	1.50 - 10.00%	4.25%	3.00%	4.25%

The benefit obligations for non-U.S. plans reflect those assumptions that were most appropriate for the local economic environments of each of the subsidiaries providing such benefits.

Assumed health care cost trend rates for the U.S. plans were as follows:

	2007	2006
Following year:		
Medical (before age 65)	9.00%	8.00%
Medical (age 65 and older)	7.00%	6.70%
Ultimate rate to which cost increase is assumed to decline	5.00%	5.00%
Year in which the ultimate trend rate is reached:		
Medical (before age 65)	2015	2013
Medical (age 65 and older)	2015	2013

A one percent point change in the assumed healthcare cost trend rate would have the following effect on AIG's postretirement benefit obligations at December 31, 2007 and 2006:

(in millions)	One Percent Increase		One Percent Decrease	
	2007	2006	2007	2006
Non-U.S. plans	\$12	\$10	\$(8)	\$(7)
U.S. plans	\$ 6	\$ 3	\$(5)	\$(3)

AIG's postretirement plans provide benefits primarily in the form of defined employer contributions rather than defined employer benefits. Changes in the assumed healthcare cost trend rate are subject to caps for U.S. plans. AIG's non-U.S. postretirement plans are not subject to caps.

Notes to Consolidated Financial Statements *Continued*

18. Employee Benefits

Continued

The weighted average assumptions used to determine the net periodic benefit costs for the years ended December 31, 2007, 2006 and 2005 were as follows:

	Pension		Postretirement	
	Non-U.S. Plans*	U.S. Plans	Non-U.S. Plans*	U.S. Plans
2007				
Discount rate	2.25 - 10.75%	6.00%	4.00 - 5.75%	6.00%
Rate of compensation increase	1.50 - 10.00%	4.25%	3.00%	4.25%
Expected return on assets	2.50 - 10.50%	8.00%	N/A	N/A
2006				
Discount rate	1.75 - 12.00%	5.50%	4.50 - 5.50%	5.50%
Rate of compensation increase	1.50 - 10.00%	4.25%	2.50 - 3.00%	4.25%
Expected return on assets	2.50 - 13.50%	8.00%	N/A	N/A
2005				
Discount rate	1.75 - 12.00%	5.75%	4.50 - 6.00%	5.75%
Rate of compensation increase	1.50 - 10.00%	4.25%	3.00%	4.25%
Expected return on assets	2.15 - 13.50%	8.00%	N/A	N/A

* The benefit obligations for non-U.S. plans reflect those assumptions that were most appropriate for the local economic environments of the subsidiaries providing such benefits.

Discount Rate Methodology

The projected benefit cash flows under the AIG U.S. Retirement Plan were discounted using the spot rates derived from the Citigroup Pension Discount Curve at December 31, 2007 and 2006 and an equivalent single discount rate was derived resulting in the same liability. This single discount rate was rounded to the nearest 25 basis points, namely 6.5 percent and 6.0 percent at December 31, 2007 and 2006, respectively. The rates applied to

other U.S. plans were not significantly different from those discussed above.

Both funded and unfunded plans for Japan represent over 62 percent of the liabilities of the non-U.S. pension plans at December 31, 2007 and 2006, respectively. The discount rate for Japan was selected by reference to the published Moody's/S&P AA Corporate Bond Universe at the measurement date having regard to the duration of the plans' liabilities.

Plan assets

The asset allocation percentage by major asset class for AIG's plans at December 31, 2007 and 2006, and the target allocation for 2008 follow:

Asset class:	Non-U.S. Plans-Allocation			U.S. Plans-Allocation		
	Target 2008	Actual 2007	Actual 2006	Target 2008	Actual 2007	Actual 2006
Equity securities	50%	50%	47%	42%	56%	64%
Debt securities	28	28	32	32	30	26
Other	22	22	21	26	14	10
Total	100%	100%	100%	100%	100%	100%

Other includes cash, insurance contracts, real estate, private equity and hedge funds asset classes.

No shares of AIG common stock were included in the U.S. plans at December 31, 2007 and 55,680 shares of AIG common stock with a value of \$4 million were included in the U.S. plans at December 31, 2006.

The investment strategy with respect to AIG's pension plan assets is designed to achieve investment returns that will fully fund the pension plan over the long term, while limiting the risk of under funding over shorter time periods.

The expected rate of return with respect to AIG's domestic pension plan was 8.0 percent for years ended December 31, 2007 and 2006. This rate of return is an aggregation of expected returns within each asset category that, when combined with AIG's contribution to the plan, will maintain the plan's ability to meet all required benefit obligations. The return with respect to each asset class considers both historical returns and the future expectations for such returns.

18. Employee Benefits

Continued

Expected Cash Flows

Funding for the U.S. pension plan ranges from the minimum amount required by ERISA to the maximum amount that would be deductible for U.S. tax purposes. This range is generally not determined until the fourth quarter. Contributed amounts in excess of the minimum amounts are deemed voluntary. Amounts in excess of the maximum amount would be subject to an excise tax and may not be deductible under the Internal Revenue Code. Supplemental and excess plans' payments and postretirement plan payments are deductible when paid.

During 2007 AIG contributed \$396 million to its U.S. and non-U.S. pension plans. The annual pension contribution in 2008 is expected to be approximately \$118 million for U.S. and non-U.S. plans.

The expected future benefit payments, net of participants' contributions, with respect to the defined benefit pension plans and other postretirement benefit plans, are as follows:

(in millions)	Pension		Postretirement	
	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans	U.S. Plans
2008	\$ 74	\$ 135	\$ 1	\$ 17
2009	79	130	1	17
2010	79	139	1	18
2011	85	150	1	18
2012	85	163	2	19
2013-2017	474	1,022	10	102

Defined Contribution Plans

In addition to several small defined contribution plans, AIG sponsors a voluntary savings plan for domestic employees (the AIG Incentive Savings plan), which provides for salary reduction contributions by employees and matching contributions by AIG of up to seven percent of annual salary depending on the employees' years of service. Pre-tax expense associated with this plan was \$114 million, \$104 million and \$96 million in 2007, 2006 and 2005, respectively.

19. Benefits Provided by Starr International Company, Inc. and C.V. Starr & Co., Inc.

SICO has provided a series of two-year Deferred Compensation Profit Participation Plans (SICO Plans) to certain AIG employees. The SICO Plans came into being in 1975 when the voting shareholders and Board of Directors of SICO, a private holding company whose principal asset is AIG common stock, decided that a portion of the capital value of SICO should be used to provide an incentive plan for the current and succeeding managements of all American International companies, including AIG.

None of the costs of the various benefits provided under the SICO Plans has been paid by AIG, although AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting

amount credited to additional paid-in capital reflecting amounts deemed contributed by SICO. The SICO Plans provide that shares currently owned by SICO are set aside by SICO for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's voluntary termination of employment with AIG prior to normal retirement age. Under the SICO Plans, SICO's Board of Directors may elect to pay a participant cash in lieu of shares of AIG common stock. Following notification from SICO to participants in the SICO Plans that it will settle specific future awards under the SICO Plans with shares rather than cash, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. AIG gave effect to this change in settlement method beginning on December 9, 2005, the date of SICO's notice to participants in the SICO Plans. See also Note 12(a) Commitments herein.

Compensation expense in 2006 included various out of period adjustments totaling \$61 million, primarily relating to stock-splits and other miscellaneous items for the SICO plans. See also Note 17 herein.

In January 2006, C.V. Starr & Co., Inc. (Starr) completed its tender offer to purchase Starr interests from AIG employees. In conjunction with AIG's adoption of FAS 123R, Starr is considered to be an "economic interest holder" in AIG. As a result, compensation expense of \$54 million was recorded in 2006 results with respect to the Starr tender offer.

As a result of its changing relationship with Starr and SICO, AIG has established new executive compensation plans to replace the SICO plans and investment opportunities previously provided by Starr. See Note 17 for a description of these plans.

Compensation expense with respect to the SICO Plans aggregated \$39 million, \$108 million and \$205 million in 2007, 2006 and 2005, respectively.

20. Ownership and Transactions With Related Parties

(a) Ownership: According to the Schedule 13D filed on March 20, 2007 by Starr, SICO, Edward E. Matthews, Maurice R. Greenberg, the Maurice R. and Corinne P. Greenberg Family Foundation, Inc., the Universal Foundation, Inc., the Maurice R. and Corinne P. Greenberg Joint Tenancy Company, LLC and the C.V. Starr & Co., Inc. Trust, these reporting persons could be deemed to beneficially own 354,987,261 shares of AIG's common stock at that date. Based on the shares of AIG's common stock outstanding at January 31, 2008, this ownership would represent approximately 14.1 percent of the voting stock of AIG. Although these reporting persons have made filings under Section 16 of the Exchange Act, reporting sales of shares of common stock, no amendment to the Schedule 13D has been filed to report a change in ownership subsequent to March 20, 2007.

(b) Transactions with Related Parties: Prior to the termination of their agency relationships with Starr during 2006, AIG and

Notes to Consolidated Financial Statements *Continued*

20. Ownership and Transactions With Related Parties

Continued

its subsidiaries paid commissions to Starr and its subsidiaries for the production and management of insurance business in the ordinary course of business. Payment for the production of insurance business to Starr aggregated approximately \$12 million in 2007, \$47 million in 2006, and \$214 million in 2005. AIG also received no rental fees in 2007, approximately \$4 million in 2006, and \$23 million in 2005 from Starr, and paid no rental fees in 2007 or 2006 and approximately \$20,000 in 2005 to Starr. AIG also received none in 2007 and 2006 and approximately \$2 million in 2005, respectively, from SICO, and paid none in 2007 and 2006 and approximately \$1 million in 2005 to SICO, as reimbursement for services rendered at cost. AIG also paid to SICO \$2 million in 2007, \$2 million in 2006, and \$3 million in 2005 in rental fees. There are no significant receivables from/payables to related parties at December 31, 2007.

21. Federal Income Taxes

Tax Filings

AIG and its eligible U.S. subsidiaries file a consolidated U.S. federal income tax return. Prior to 2007, Life Insurance subsidiaries of AIG Life Holdings (US), Inc. (AIGLH), formerly known as American General Corporation, also filed a consolidated U.S. federal income tax return and were not eligible to be included in AIG's consolidated federal income tax return. AIGLH will be included in the 2007 AIG consolidated federal income tax return. Other U.S. subsidiaries included in the consolidated financial statements also file separate U.S. federal income tax returns. Subsidiaries operating outside the U.S. are taxed, and income tax expense is recorded, based on applicable U.S. and foreign statutes.

Undistributed Earnings and Distributions from Life Surplus

U.S. federal income taxes have not been provided on \$1.5 billion of undistributed earnings of certain U.S. subsidiaries that are not included in the consolidated AIG U.S. federal income tax return. Tax planning strategies are available, and would be utilized, to eliminate the tax liability related to these earnings. U.S. federal income taxes have not been provided on the undistributed earnings of certain non-U.S. subsidiaries to the extent that such earnings have been reinvested abroad indefinitely. At December 31, 2007, the cumulative amount of undistributed earnings in these subsidiaries approximated \$21.2 billion. Determining the deferred tax liability that would arise if these earnings were not permanently reinvested abroad is not practicable.

A component of life insurance surplus accumulated prior to 1984 is not taxable unless it exceeds certain statutory limitations or is distributed to shareholders. The American Jobs Creation Act

of 2004 amended the federal income tax law to permit life insurance companies to distribute amounts from their policyholders' surplus accounts in 2005 and 2006 without incurring federal income tax on the distributions. In 2005 and 2006, AIG made distributions and eliminated the aggregate balance of \$945 million from its policyholders' surplus accounts.

Tax Examinations

In December 2007, AIG reached a settlement with the IRS in the United States Tax Court for SunAmerica, Inc. and Subsidiaries ("SunAmerica") for tax years ended September 30, 1993 and September 30, 1994, which are years prior to AIG's 1999 acquisition of SunAmerica. The terms of this settlement will be incorporated into the IRS examinations for tax years of SunAmerica from September 30, 1995 through December 31, 1998, and for SunAmerica Life Insurance Company and Subsidiaries for tax year December 31, 1999, to resolve these years. As a result of this settlement, a net refund is due AIG for the periods from 1993 to 1999, the amount of which is immaterial to AIG's consolidated financial condition. The IRS's examination of the separate life consolidated federal return for SunAmerica Life and its subsidiaries for years 2000-2002 was closed in January 2008 with a signed settlement agreement. An immaterial amount is payable to the IRS for these years. AIG is in a net refund position for all years 1993-2002 for aggregated SunAmerica audits.

AIGLH's tax years prior to 2000 are closed. Although a Revenue Agent's Report has not yet been issued to AIGLH for years ended December 31, 2000, August 29, 2001, December 31, 2001, and December 31, 2002, AIGLH has received from the IRS a notice of proposed adjustment for certain items during that period.

The statute of limitations for all tax years prior to 1997 has now expired for AIG's consolidated federal income tax return. In June, 2007, AIG filed a refund claim for years 1991-1996. The refund claim relates to the tax effects of the restatements of AIG's 2004 and prior financial statements. A refund claim for the tax years ending December 31, 1997-2004 will be filed before September 30, 2008.

AIG has executed a partial settlement with the IRS for tax years 1997 through 1999. Two issues remain open, neither one of which, separately or in total, is material to AIG's consolidated financial condition. The statute of limitations for these years expires on March 31, 2008. AIG is currently under examination for the tax years 2000 through 2002.

AIG believes there are substantial arguments in support of the tax positions taken in its tax returns. Although the final outcome of any issue still outstanding is uncertain, AIG believes that any tax obligation, including interest thereon, would not be material to AIG's consolidated financial condition, results of operations, or liquidity.

21. Federal Income Taxes

Continued

The pretax components of U.S. and foreign income reflect the locations in which such pretax income was generated. The pretax U.S. and foreign income was as follows for the years ended December 31, 2007, 2006 and 2005:

<i>(in millions)</i>	2007	2006	2005
U.S.	\$ (3,957)	\$ 9,862	\$ 6,103
Foreign	12,900	11,825	9,110
Total	\$ 8,943	\$21,687	\$15,213

The provision for income taxes for the years ended December 31, 2007, 2006 and 2005 consists of the following:

<i>Years Ended December 31, (in millions)</i>	2007	2006	2005
Foreign and U.S. components of actual income tax expense:			
Foreign:			
Current	\$ 3,157	\$ 2,725	\$ 974
Deferred	461	933	426
U.S.:			
Current	62	2,764	1,613
Deferred	(2,225)	115	1,245
Total	\$ 1,455	\$ 6,537	\$ 4,258

The U.S. federal income tax rate was 35 percent for 2007, 2006 and 2005. Actual tax expense on income differs from the "expected" amount computed by applying the federal income tax rate because of the following:

<i>Years Ended December 31, (dollars in millions)</i>	2007		2006		2005	
	Amount	Percent of Pretax Income	Amount	Percent of Pretax Income	Amount	Percent of Pretax Income
U.S. federal income tax at statutory rate	\$3,130	35.0%	\$7,591	35.0%	\$5,325	35.0%
Adjustments:						
Tax exempt interest	(823)	(9.2)	(718)	(3.3)	(566)	(3.7)
Partnerships and joint ventures	(312)	(3.5)	(265)	(1.2)	(85)	(0.5)
Synthetic fuel and other tax credits	(127)	(1.4)	(196)	(0.9)	(296)	(1.9)
Effect of foreign operations	(294)	(3.3)	(132)	(0.6)	(253)	(1.7)
Dividends received deduction	(129)	(1.4)	(102)	(0.5)	(117)	(0.8)
State income taxes	45	0.5	59	0.3	86	0.6
Nondeductible compensation	41	0.5	61	0.3	83	0.5
SICO benefit	(194)	(2.2)	—	—	—	—
Other	118	1.3	239	1.0	81	0.5
Actual income tax expense	\$1,455	16.3%	\$6,537	30.1%	\$4,258	28.0%

Notes to Consolidated Financial Statements *Continued*

21. Federal Income Taxes

Continued

The components of the net deferred tax liability at December 31, 2007 and 2006 were as follows:

<i>(in millions)</i>	2007	2006
Deferred tax assets:		
Loss reserve discount	\$ 2,249	\$ 1,969
Unearned premium reserve reduction	1,743	1,352
Unrealized depreciation of investments	104	—
Loan loss and other reserves	1,408	1,054
Investments in foreign subsidiaries and joint ventures	1,121	420
Adjustment to life policy reserves	3,213	3,584
NOL's and tax attributes	1,814	222
Accruals not currently deductible, and other	1,305	1,209
Deferred tax assets*	12,957	9,810
Valuation allowance	(223)	(11)
Net deferred tax assets	12,734	9,799
Deferred tax liabilities:		
Deferred policy acquisition costs	11,716	10,396
Flight equipment, fixed assets and intangible assets	5,239	4,377
Unrealized appreciation of investments	—	3,370
Other	1,041	508
Total deferred tax liabilities	17,996	18,651
Net deferred tax liability	\$ 5,262	\$ 8,852

* AIG has recorded deferred tax assets for alternative minimum tax credit carry forwards of \$101 million and \$222 million at December 31, 2007 and 2006, respectively. In 2007, AIG generated net operating loss carryforwards, unused foreign tax credits and general business tax credits in the amount of \$4.2 billion, \$130 million and \$125 million, respectively. Net operating loss carryforwards and general business tax credits may be carried forward for twenty years while foreign tax credits may be carried forward for ten years. Unused minimum tax credits are available for future use without expiration.

A reconciliation of the beginning and ending balances of the total amounts of gross unrecognized tax benefits is as follows:

<i>(in millions)</i>	2007
Gross unrecognized tax benefits at January 1, 2007	\$ 1,138
Agreed audit adjustments with taxing authorities included in the beginning balance	(188)
Increases in tax positions for prior years	646
Decreases in tax positions for prior years	(189)
Increases in tax positions for current year	82
Lapse in statute of limitations	(1)
Settlements	(178)
Gross unrecognized tax benefits at December 31, 2007	\$ 1,310

At December 31, 2007, AIG's unrecognized tax benefits, excluding interest and penalties, were \$1.3 billion, which includes \$299 million related to tax positions the disallowance of which would not affect the annual effective income tax rate. Accordingly, the amount of unrecognized tax benefits that, if recognized, would favorably affect the effective tax rate were \$1.0 billion.

Interest and penalties related to unrecognized tax benefits are recognized in income tax expense. At January 1, 2007 and December 31, 2007, AIG had accrued \$175 million and \$281 million, respectively, for the payment of interest (net of the federal benefit) and penalties. For the year ended December 31, 2007, AIG recognized \$170 million of interest (net of the federal benefit) and penalties in the Consolidated Statement of Income.

AIG continually evaluates adjustments proposed by taxing authorities. At December 31, 2007, such proposed adjustments would not result in a material change to AIG's consolidated financial condition. However, AIG believes that it is reasonably possible that the balance of the unrecognized tax benefits could decrease by \$50 to \$150 million within the next twelve months due to settlements or the expiration of statutes.

Listed below are the tax years that remain subject to examination by major tax jurisdictions:

Major Tax Jurisdictions	Open Tax Years
United States	1997-2006
United Kingdom	2003-2006
Hong Kong	1997-2006
Malaysia	1999-2006
Singapore	1993-2006
Thailand	2001-2006
Taiwan	2000-2006
Japan	2000-2006
Korea	2001-2006
France	2003-2006

The reserve for uncertain tax positions increased in the fourth quarter 2007 by \$210 million for items attributable to prior restatements, including certain tax positions associated with compensation deductions. In addition, income tax expense has been reduced by \$162 million for interest receivable from the IRS attributable to refund claims for prior restatements.

22. Quarterly Financial Information (Unaudited)

The following quarterly financial information for each of the three months ended March 31, June 30, September 30 and December 31, 2007 and 2006 is unaudited. However, in the opinion of management, all adjustments (consisting only of normal recurring adjustments) necessary for a fair statement of the results of operations for such periods, have been made.

Consolidated Statements of Operations

(in millions, except per share data)	Three Months Ended							
	March 31,		June 30,		September 30,		December 31,	
	2007	2006	2007	2006	2007*	2006	2007*	2006

* Both revenues and operating income include (i) an unrealized market valuation loss of \$352 million and \$11.1 billion in the third quarter and fourth quarter of 2007, respectively, on AIGFP's super senior credit default swap portfolio and (ii) other-than-temporary impairment charges of \$3.3 billion in the fourth quarter of 2007.

Notes to Consolidated Financial Statements *Continued***23. Information Provided in Connection With Outstanding Debt**

The following condensed consolidating financial statements reflect the following:

- AIGLH, formerly known as American General Corporation, is a holding company and a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all outstanding debt of AIGLH.
- AIG Liquidity Corp. is a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all obligations of AIG Liquidity Corp.
- AIG Program Funding, Inc. is a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all obligations of AIG Program Funding, Inc., which was established in 2007.

24. Cash Flows

As part of its ongoing remediation activities, AIG has made certain revisions to the Consolidated Statement of Cash Flows, primarily relating to the effect of reclassifying certain policyholders' account balances, the elimination of certain intercompany balances and revisions related to separate account assets. Accordingly, AIG revised the previous periods presented to conform to the revised presentation.

The revisions and their effect in the consolidated statement of cash flows for the years ended 2006 and 2005 are presented below:

<i>(in millions)</i>	For the Years Ended December 31,	
	2006	2005
Cash flows from operating activities — As previously reported	\$ 6,829	\$ 25,382
Revisions	(542)	(1,969)
Cash flows from operating activities — As revised	\$ 6,287	\$ 23,413
Cash flows from investing activities — As previously reported	\$(67,040)	\$(62,500)
Revisions	(912)	1,041
Cash flows from investing activities — As revised	\$(67,952)	\$(61,459)
Cash flows from financing activities — As previously reported	\$ 59,790	\$ 37,169
Revisions	1,454	928
Cash flows from financing activities — As revised	\$ 61,244	\$ 38,097

There was no effect on ending cash balances.

Part II – Other Information

Item 9. Changes in and Disagreements With Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures Evaluation of Disclosure Controls and Procedures

In connection with the preparation of this Annual Report on Form 10-K, an evaluation was carried out by AIG's management, with the participation of AIG's Chief Executive Officer and Chief Financial Officer, of the effectiveness of AIG's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (Exchange Act)) as of December 31, 2007. Disclosure controls and procedures are designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms and that such information is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial Officer, to allow timely decisions regarding required disclosures.

During the evaluation of disclosure controls and procedures as of December 31, 2007 conducted during the preparation of AIG's financial statements to be included in this Annual Report on Form 10-K, a material weakness in internal control over financial reporting relating to the fair value valuation of the AIGFP super senior credit default swap portfolio was identified. As a result of this material weakness, described more fully below, AIG's Chief Executive Officer and Chief Financial Officer concluded that, as of December 31, 2007, AIG's disclosure controls and procedures were ineffective.

As of December 31, 2007 and as described under Remediation of Prior Material Weaknesses in Internal Control Over Financial Reporting below, the material weakness relating to the controls over income tax accounting no longer existed.

Notwithstanding the existence of this material weakness in internal control over financial reporting relating to the fair value valuation of the AIGFP super senior credit default swap portfolio, AIG believes that the consolidated financial statements in this Annual Report on Form 10-K fairly present, in all material respects, AIG's consolidated financial condition as of December 31, 2007 and 2006, and consolidated results of its operations and cash flows for the years ended December 31, 2007, 2006 and 2005, in conformity with U.S. generally accepted accounting principles (GAAP).

Management's Report on Internal Control Over Financial Reporting

Management of AIG is responsible for establishing and maintaining adequate internal control over financial reporting. AIG's internal control over financial reporting is a process, under the supervision of AIG's Chief Executive Officer and Chief Financial

Officer, designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of AIG's financial statements for external purposes in accordance with GAAP.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

AIG management conducted an assessment of the effectiveness of AIG's internal control over financial reporting as of December 31, 2007 based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

A material weakness is a deficiency, or a combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of AIG's annual or interim financial statements will not be prevented or detected on a timely basis. AIG management has concluded that, as of December 31, 2007, the following material weakness existed relating to the fair value valuation of the AIGFP super senior credit default swap portfolio.

As of December 31, 2007, controls over the AIGFP super senior credit default swap portfolio valuation process and oversight thereof were not effective. AIG had insufficient resources to design and carry out effective controls to prevent or detect errors and to determine appropriate disclosures on a timely basis with respect to the processes and models introduced in the fourth quarter of 2007. As a result, AIG had not fully developed its controls to assess, on a timely basis, the relevance to its valuation of all third party information. Also, controls to permit the appropriate oversight and monitoring of the AIGFP super senior credit default swap portfolio valuation process, including timely sharing of information at the appropriate levels of the organization, did not operate effectively. As a result, controls over the AIGFP super senior credit default swap portfolio valuation process and oversight thereof were not adequate to prevent or detect misstatements in the accuracy of management's fair value estimates and disclosures on a timely basis, resulting in adjustments for purposes of AIG's December 31, 2007 consolidated financial statements. In addition, this deficiency could result in a misstatement in management's fair value estimates or disclosures that could be material to AIG's annual or interim consolidated financial statements that would not be prevented or detected on a timely basis.

Solely as a result of the material weakness in internal control over the fair value valuation of the AIGFP super senior credit default swap portfolio described above, AIG management has concluded that, as of December 31, 2007, AIG's internal control over financial reporting was not effective based on the criteria in *Internal Control — Integrated Framework* issued by the COSO.

The effectiveness of AIG's internal control over financial reporting as of December 31, 2007 has been audited by PricewaterhouseCoopers LLP, an independent registered public

accounting firm, as stated in their report, which is included in this Annual Report on Form 10-K.

Remediation of Prior Material Weakness in Internal Control Over Financial Reporting

AIG has been actively engaged in the implementation of remediation efforts to address the material weakness in controls over income tax accounting that was in existence at December 31, 2006. These remediation efforts, outlined below, are specifically designed to address the material weakness identified by AIG management. As a result of its assessment of the effectiveness of internal control over financial reporting, AIG management determined that as of December 31, 2007, the material weakness relating to the controls over income tax accounting no longer existed.

AIG's remediation efforts were governed by a Steering Committee, under the direction of AIG's Chief Risk Officer and included AIG's Chief Executive Officer, Chief Financial Officer and Comptroller. The status of remediation was reviewed with the Audit Committee who was advised of issues encountered and key decisions reached by AIG management.

As of December 31, 2006, AIG did not maintain effective controls over the determination and reporting of certain components of the provision for income taxes and related income tax balances. Specifically, AIG did not maintain effective controls to review and monitor the accuracy of the components of the income tax provision calculations and related income tax balances and to monitor the differences between the income tax basis and the financial reporting basis of assets and liabilities to effectively reconcile the differences to the deferred income tax balances.

During 2007, AIG management took the following actions to remediate this material weakness:

- Implemented standard key controls to review and monitor the income tax provision and related income tax balances at applicable AIG business units globally and parent company, and conducted testing of these controls to verify their effectiveness,
- Completed the evaluation and reconciliation of certain historical balance sheet income tax accounts at applicable AIG business units globally and parent company, as well as a more detailed financial statement exposure analysis of income tax balances,
- Hired additional qualified staff, including Tax Directors and Tax Accountants, at designated business units globally and parent company, and
- Continued the development and dissemination of income tax accounting training and education programs at parent company and business unit levels through site visits and training conferences.

AIG continues to develop further enhancements to its controls over income tax accounting at certain business units. Based upon the significant actions taken and the testing and evaluation of the effectiveness of the controls, AIG management has concluded the material weakness in AIG's controls over income tax accounting no longer existed as of December 31, 2007.

Continuing Remediation

AIG is actively engaged in the development and implementation of a remediation plan to address the material weakness in controls over the fair value valuation of the AIGFP super senior credit default swap portfolio and oversight thereof as of December 31, 2007. The components of this remediation plan, once implemented, are intended to ensure that the key controls over the valuation process are operating effectively and are sustainable. These components include assigning dedicated and experienced resources at AIGFP with the responsibility for valuation, enhancing the technical resources at AIG over the valuation of the super senior credit default swap portfolio and strengthening corporate oversight over the valuation methodologies and processes. AIG management continues to assign the highest priority to AIG's remediation efforts in this area, with the goal of remediating this material weakness by year-end 2008.

AIG'S remediation efforts will be governed by a Steering Committee under the direction of AIG's Chief Risk Officer and also including AIG's Chief Executive Officer, Chief Financial Officer and Comptroller. The status of remediation of the material weakness will be reviewed with the Audit Committee and this Committee will be advised of issues encountered and key decisions reached by AIG management relating to the remediation efforts.

Notwithstanding the existence of this material weakness in internal control over financial reporting relating to the fair value valuation of the AIGFP super senior credit default swap portfolio, due to the substantive alternative procedures performed and compensating controls introduced after December 31, 2007, AIG believes that the consolidated financial statements fairly present, in all material respects, AIG's consolidated financial condition as of December 31, 2007 and 2006, and consolidated results of its operations and cash flows for the years ended December 31, 2007, 2006 and 2005, in conformity with GAAP.

AIG recognizes that continued improvement in its internal controls over financial reporting and consolidation processes, investment accounting, reinsurance accounting and income tax accounting, is necessary. Over time, AIG intends to reduce its reliance on certain manual controls that have been established. AIG is currently developing new systems and processes which will allow it to rely on front-end preventive and detective controls which will be more sustainable over the long term. To accomplish its goals, AIG recognizes its need to continue strengthening and investing in financial personnel, systems and processes. AIG is committed to continuing the significant investments over the next several years necessary to make these improvements.

Changes in Internal Control over Financial Reporting

Changes in AIG's internal control over financial reporting during the quarter ended December 31, 2007 that have materially affected, or are reasonably likely to materially affect, AIG's internal control over financial reporting have been described above.

Part II – Other Information *Continued*

Item 9B. Other Information

None.

Part III

Item 10. Directors, Executive Officers and Corporate Governance

Except for the information provided in Part I under the heading "Directors and Executive Officers of AIG", this item, including information regarding AIG's audit committee and audit committee financial expert, any material changes to the procedures by which security holders may recommend nominees to AIG's board of directors, if any, and information relating to AIG's code of ethics that applies to its directors, executive officers and senior financial officers, is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

Item 11. Executive Compensation

This item is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

This item is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

Item 13. Certain Relationships and Related Transactions, and Director Independence

This item is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

Item 14. Principal Accountant Fees and Services

This item is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

Computation of Ratios of Earnings to Fixed Charges

Exhibit 12

Years Ended December 31, (in millions, except ratios)	2007	2006	2005	2004	2003
Income before income taxes, minority interest and cumulative effect of accounting changes	\$ 8,943	\$21,687	\$15,213	\$14,845	\$11,907
Less — Equity income of less than 50% owned companies	160	188	(129)	164	146
Add — Dividends from less than 50% owned companies	30	28	146	22	13
	8,813	21,527	15,488	14,703	11,774
Add — Fixed charges	11,470	9,062	7,663	6,049	5,762
Less — Capitalized interest	37	59	64	59	52
Income before income taxes, minority interest, cumulative effect of accounting changes and fixed charges	\$20,246	\$30,530	\$23,087	\$20,693	\$17,484
Fixed charges:					
Interest costs	\$11,213	\$ 8,843	\$ 7,464	\$ 5,860	\$ 5,588
Rental expense*	257	219	199	189	174
Total fixed charges	\$11,470	\$ 9,062	\$ 7,663	\$ 6,049	\$ 5,762
Ratio of earnings to fixed charges	1.77	3.37	3.01	3.42	3.03
Secondary Ratio					
Interest credited to GIC and GIA policy and contract holders	\$ (6,660)	\$ (5,128)	\$ (4,760)	\$ (3,674)	\$ (3,578)
Total fixed charges excluding interest credited to GIC and GIA policy and contract holders	\$ 4,810	\$ 3,934	\$ 2,903	\$ 2,375	\$ 2,184
Secondary ratio of earnings to fixed charges	2.82	6.46	6.31	7.17	6.37

* The proportion deemed representative of the interest factor.

The secondary ratio is disclosed for the convenience of fixed income investors and the rating agencies that serve them and is more comparable to the ratios disclosed by all issuers of fixed income securities. The secondary ratio removes interest credited to guaranteed investment contract (GIC) policyholders and guaranteed investment agreement (GIA) contractholders. Such interest expenses are also removed from earnings used in this calculation. GICs and GIAs are entered into by AIG's insurance subsidiaries,

principally SunAmerica Life Insurance Company and AIG Financial Products Corp. and its subsidiaries, respectively. The proceeds from GICs and GIAs are invested in a diversified portfolio of securities, primarily investment grade bonds. The assets acquired yield rates greater than the rates on the related policyholders obligation or contract, with the intent of earning a profit from the spread.

CERTIFICATIONS

I, Martin J. Sullivan, certify that:

1. I have reviewed this Annual Report on Form 10-K of American International Group, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited)*

1. Summary of Significant Accounting Policies

Basis of Presentation

These unaudited condensed consolidated financial statements do not include all disclosures required by accounting principles generally accepted in the United States (GAAP) for complete financial statements and should be read in conjunction with the audited consolidated financial statements and the related notes included in the Annual Report on Form 10-K of American International Group, Inc. (AIG) for the year ended December 31, 2007 (2007 Annual Report on Form 10-K).

In the opinion of management, these consolidated financial statements contain the normal recurring adjustments necessary for a fair statement of the results presented herein. All material intercompany accounts and transactions have been eliminated.

Certain reclassifications and format changes have been made to prior period amounts to conform to the current period presentation.

Recent Accounting Standards

Accounting Changes

FAS 157

In September 2006, the Financial Accounting Standards Board (FASB) issued Statement of Financial Accounting Standards (FAS) No. 157, "Fair Value Measurements" (FAS 157). FAS 157 defines fair value, establishes a framework for measuring fair value and expands disclosure requirements regarding fair value measurements but does not change existing guidance about whether an asset or liability is carried at fair value. FAS 157 nullifies the guidance in Emerging Issues Task Force (EITF) Issue No. 02-3, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities," (EITF 02-3) that precluded the recognition of a trading profit at the inception of a derivative contract unless the fair value of such contract was obtained from a quoted market price or other valuation technique incorporating observable market data. FAS 157 also clarifies that an issuer's credit standing should be considered when measuring liabilities at fair value. The fair value measurement and related disclosure guidance in FAS 157 do not apply to fair value measurements associated with AIG's share-based employee compensation awards accounted for in accordance with FAS 123(R), "Share-Based Payment."

AIG adopted FAS 157 on January 1, 2008, its required effective date. FAS 157 must be applied prospectively, except for certain stand-alone derivatives and hybrid instruments initially measured using the guidance in EITF 02-3, which must be applied as a cumulative effect accounting change to retained earnings at January 1, 2008. The cumulative effect, net of taxes, of adopting FAS 157 on AIG's consolidated

balance sheet was an increase in retained earnings of \$4 million.

The most significant effect of adopting FAS 157 on AIG's first quarter 2008 results related to changes in fair value methodologies with respect to both liabilities already carried at fair value, primarily hybrid notes and derivatives, and newly elected liabilities measured at fair value (see FAS 159 discussion below). Specifically, the incorporation of AIG's own credit spreads and the incorporation of explicit risk margins (embedded policy derivatives only) resulted in an increase of \$2.8 billion to pre-tax income (\$1.8 billion after tax) for the first three months of 2008. The total increase in pre-tax income attributable to changes in AIG's own credit spreads of \$2,648 million for AIG Financial Products Corp. and AIG Trading Group Inc. and their respective subsidiaries (collectively, AIGFP) was substantially offset by the effect of changes in counterparty credit spreads for assets measured at fair value at AIGFP of \$2,620 million.

See Note 3 to the Consolidated Financial Statements for additional FAS 157 disclosures.

FAS 159

In February 2007, the FASB issued FAS 159, "The Fair Value Option for Financial Assets and Financial Liabilities" (FAS 159). FAS 159 permits entities to choose to measure at fair value many financial instruments and certain other items that are not required to be measured at fair value. Subsequent changes in fair value for designated items are required to be reported in income. FAS 159 also establishes presentation and disclosure requirements for similar types of assets and liabilities measured at fair value. FAS 159 permits the fair value option election on an instrument-by-instrument basis for eligible items existing at the adoption date and at initial recognition of an asset or liability or upon an event that gives rise to a new basis of accounting for that instrument.

AIG adopted FAS 159 on January 1, 2008, its required effective date. The adoption of FAS 159 with respect to elections made in the Life Insurance & Retirement Services segment resulted in an after-tax decrease to 2008 opening retained earnings of \$559 million. The adoption of FAS 159 with respect to elections made by AIGFP resulted in an after-tax decrease to 2008 opening retained earnings of \$448 million. Included in this amount are net unrealized gains of \$105 million that were reclassified to retained earnings from accumulated other comprehensive income (loss) related to available for sale securities recorded on the consolidated balance sheet at January 1, 2008 for which the fair value option was elected.

See Note 3 to the Consolidated Financial Statements for additional FAS 159 disclosures.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**1. Summary of Significant Accounting Policies** (continued)**FAS 157 and FAS 159**

The following table summarizes the after-tax increase (decrease) from adopting FAS 157 and FAS 159 on the opening shareholders' equity accounts at January 1, 2008:

(in millions)	At January 1, 2008		
	Accumulated Other Comprehensive Income/(Loss)	Retained Earnings	Cumulative Effect of Accounting Changes
FAS 157	\$ —	\$ 4	\$ 4
FAS 159	(105)	(1,007)	(1,112)
Cumulative effect of accounting changes	\$(105)	\$(1,003)	\$(1,108)

FIN 39-1

In April 2007, the FASB directed the FASB Staff to issue FSP No. FIN 39-1, "Amendment of FASB Interpretation No. 39" (FSP FIN 39-1). FSP FIN 39-1 modifies FIN No. 39, "Offsetting of Amounts Related to Certain Contracts," and permits companies to offset cash collateral receivables or payables against derivative instruments under certain circumstances. FSP FIN 39-1 became effective on January 1, 2008 for AIG. Consistent with prior practice, AIG elected not to offset cash collateral receivables or payables against derivative instruments. At March 31, 2008, the amounts of cash collateral received and paid were \$8.7 billion and \$7.2 billion, respectively.

Future Application of Accounting Standards**FAS 141(R)**

In December 2007, the FASB issued FAS 141 (revised 2007), "Business Combinations" (FAS 141(R)). FAS 141(R) changes the accounting for business combinations in a number of ways, including broadening the transactions or events that are considered business combinations; requiring an acquirer to recognize 100 percent of the fair value of assets acquired, liabilities assumed, and noncontrolling (i.e., minority) interests; recognizing contingent consideration arrangements at their acquisition-date fair values with subsequent changes in fair value generally reflected in income; and recognizing preacquisition loss and gain contingencies at their acquisition-date fair values, among other changes.

AIG is required to adopt FAS 141(R) for business combinations for which the acquisition date is on or after January 1, 2009. Early adoption is prohibited.

FAS 160

In December 2007, the FASB issued FAS 160, "Noncontrolling Interests in Consolidated Financial Statements, an

amendment of ARB No. 51" (FAS 160). FAS 160 requires noncontrolling (i.e., minority) interests in partially owned consolidated subsidiaries to be classified in the consolidated balance sheet as a separate component of consolidated shareholders' equity. FAS 160 also establishes accounting rules for subsequent acquisitions and sales of noncontrolling interests and how noncontrolling interests should be presented in the consolidated statement of income. The noncontrolling interests' share of subsidiary income should be reported as a part of consolidated net income with disclosure of the attribution of consolidated net income to the controlling and noncontrolling interests on the face of the consolidated statement of income.

FAS 160 is required to be adopted by AIG on January 1, 2009 and early adoption is prohibited. FAS 160 must be adopted prospectively, except that noncontrolling interests should be reclassified from liabilities to a separate component of shareholders' equity and consolidated net income should be recast to include net income attributable to both the controlling and noncontrolling interests retrospectively. Had AIG adopted FAS 160 at March 31, 2008, AIG would have reclassified \$10.8 billion of noncontrolling (i.e., minority) interests from liabilities to shareholders' equity. Additionally, both consolidated net income (loss) and consolidated comprehensive income (loss) for the three-month periods ended March 31, 2008 and 2007 would have increased by \$78 million and \$316 million, respectively, to include the net income (loss) attributed to the noncontrolling interests.

FAS 161

In March 2008, the FASB issued FAS 161, "Disclosures about Derivative Instruments and Hedging Activities – an amendment of FASB Statement No. 133" (FAS 161). FAS 161 requires enhanced disclosures about (a) how and why AIG uses derivative instruments, (b) how derivative instruments and related hedged items are accounted for under FAS No. 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133), and its related interpretations, and (c) how derivative instruments and related hedged items affect AIG's consolidated financial condition, results of operations, and cash flows. FAS 161 is effective for AIG beginning with financial statements issued in the first quarter of 2009. Because FAS 161 only requires additional disclosures about derivatives, it will have no effect on AIG's consolidated financial condition, results of operations or cash flows.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information**

AIG identifies its reportable segments by product line consistent with its management structure. These segments are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management.

AIG's operations by major operating segment were as follows:

Operating Segments (in millions)	Three Months Ended March 31,	
	2008	2007
Total revenues ^(a) :		
General Insurance	\$ 12,289	\$12,903
Life Insurance & Retirement Services ^(b)	8,752	13,682
Financial Services ^{(c)(d)}	(6,560)	2,201
Asset Management ^(e)	(149)	1,669
Other	(128)	131
Consolidation and eliminations	(173)	59
Total	\$ 14,031	\$30,645
Operating income (loss) ^(a) :		
General Insurance	\$ 1,337	\$ 3,096
Life Insurance & Retirement Services ^(b)	(1,831)	2,281
Financial Services ^{(c)(d)}	(8,772)	292
Asset Management ^(e)	(1,251)	758
Other ^(f)	(768)	(470)
Consolidation and eliminations	21	215
Total	\$ (11,264)	\$ 6,172

(a) For the three-month periods ended March 31, 2008 and 2007, includes other-than-temporary impairment charges of \$5.6 billion and \$467 million, respectively. Also includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended March 31, 2008 and 2007, the effect was \$(748) million and \$(452) million, respectively, in both revenues and operating income (loss). These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings.

(b) For the three-month periods ended March 31, 2008 and 2007, includes other-than-temporary impairment charges of \$4.4 billion and \$392 million, respectively.

(c) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended March 31, 2008 and 2007, the effect was \$(204) million and \$(160) million, respectively, in both revenues and operating income (loss). These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings.

(d) For the three-month period ended March 31, 2008, both revenues and operating income (loss) include an unrealized market valuation loss of \$9.1 billion on AIGFP's super senior credit default swap portfolio.

(e) Includes net realized capital losses of \$1.4 billion for the three-month period ended March 31, 2008, including other-than-temporary impairment charges of \$1.0 billion.

(f) Includes AIG parent and other operations that are not required to be reported separately. The following table presents the operating loss for AIG's Other category:

Other (in millions)	Three Months Ended March 31,	
	2008	2007
Operating income (loss):		
Equity earnings in partially owned companies	\$ 8	\$ 41
Interest expense	(368)	(252)
Unallocated corporate expenses ^(a)	(93)	(172)
Net realized capital gains (losses) ^(b)	(265)	(49)
Other miscellaneous, net	(50)	(38)
Total Other	\$(768)	\$(470)

(a) Includes expenses of corporate staff not attributable to specific operating segments, expenses related to efforts to improve internal controls, corporate initiatives and certain compensation plan expenses.

(b) The increase in net realized capital losses reflected higher foreign exchange losses on foreign-denominated debt, a portion of which was economically hedged but did not qualify for hedge accounting treatment under FAS 133, and losses on non-hedged derivatives in the first three months of 2008.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information** (continued)**AIG's General Insurance operations by major internal reporting unit were as follows:**

General Insurance (in millions)	Three Months Ended March 31,

(a) Revenues, shown net of interest expense of \$511 million and \$1.1 billion in the three-month periods ended March 31, 2008 and 2007, respectively, were primarily from hedged financial positions entered into in connection with counterparty transactions. In the three-month period ended March 31, 2008, both revenues and operating income (loss) include an unrealized market valuation loss of \$9.1 billion on AIGFP's super senior credit default swap portfolio.

(b) For the three-month period ended March 31, 2007 includes a pre-tax charge of \$128 million in connection with domestic Consumer Finance's mortgage banking activities.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements**

Effective January 1, 2008 AIG adopted FAS 157 and FAS 159, which specify measurement and disclosure standards related to assets and liabilities measured at fair value. See Note 1 to the Consolidated Financial Statements for additional information.

The most significant effect of adopting FAS 157 on AIG's first quarter 2008 results related to changes in fair value methodologies with respect to both liabilities already carried at fair

value, primarily hybrid notes and derivatives, and newly elected liabilities measured at fair value (see FAS 159 discussion below). Specifically, the incorporation of AIG's own credit spreads and the incorporation of explicit risk margins (embedded policy derivatives only) resulted in an increase of \$2.8 billion to pre-tax income (\$1.8 billion after tax) for the first three months of 2008 as follows:

<i>(in millions)</i>	Net Pre-tax Increase (Decrease)	Liabilities Carried at Fair Value	Business Segment Affected
Income statement caption:			
Net realized capital gains (losses)	\$ 288 (155)	Freestanding derivatives	All segments - excluding AIGFP
Unrealized market valuation losses on AIGFP super senior credit default swap portfolio	65*	Embedded policy derivatives	Life Insurance & Retirement Services
Other income	2,583*	Super senior credit default swap portfolio	AIGFP
		Notes, GICs, derivatives, other liabilities	AIGFP
Net pre-tax increase	\$2,781		
Liabilities already carried at fair value	\$1,334		
Newly elected liabilities measured at fair value (FAS 159 elected)	1,447		
Net pre-tax increase	\$2,781		

* The total increase to pre-tax income attributable to changes in AIG's own credit spreads of \$2,648 million for AIGFP was substantially offset by the effect of changes in counterparty credit spreads for assets measured at fair value at AIGFP of \$2,620 million.

Fair Value Measurements on a Recurring Basis

AIG measures at fair value on a recurring basis financial instruments in its trading and available for sale securities portfolios, certain mortgage and other loans receivable, certain spot commodities, derivative assets and liabilities, securities purchased (sold) under agreements to resell (repurchase), securities lending invested collateral, non-traded equity investments included in other invested assets, certain short-term investments, separate and variable account assets, certain policyholders' contract deposits, securities and spot commodities sold but not yet purchased, certain trust deposits and deposits due to banks and other depositors, certain long-term borrowings, and certain hybrid financial instruments included in other liabilities. The fair value of a financial instrument is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The degree of judgment used in measuring the fair value of financial instruments generally correlates with the level of pricing observability. Financial instruments with quoted prices in active markets generally have more pricing observability and less judgment is used in measuring fair value. Conversely, financial instruments traded in other-than-active markets or that do not have quoted prices have less observability and are measured at fair value using valuation models or other pricing techniques that require more judgment. Pricing observability is affected by a number of factors, including the type of financial instrument, whether the financial instrument is new to the market and not

yet established, the characteristics specific to the transaction and general market conditions.

Fixed Maturities — Trading and Available for Sale

AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. Whenever available, AIG obtains quoted prices in active markets for identical assets at the balance sheet date to measure at fair value fixed maturity instruments in its trading and available for sale portfolios. Market price data generally is obtained from exchange or dealer markets.

AIG estimates the fair value of fixed maturity instruments not traded in active markets, including securities purchased (sold) under agreements to resell (repurchase), and mortgage and other loans receivable for which AIG elected the fair value option, by referring to traded securities with similar attributes, using dealer quotations and a matrix pricing methodology, or discounted cash flow analyses. This methodology considers such factors as the issuer's industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, yield curves, credit curves, prepayment rates and other relevant factors. For fixed maturity instruments that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability, and such adjustments generally are based on available market evidence. In the absence of such evidence, management's best estimate is used.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***3. Fair Value Measurements** *(continued)**Equity Securities Traded in Active Markets — Trading and Available for Sale*

AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. Whenever available, AIG obtains quoted prices in active markets for identical assets at the balance sheet date to measure at fair value marketable equity securities in its trading and available for sale portfolios. Market price data generally is obtained from exchange or dealer markets.

Direct Private Equity Securities Not Traded in Active Markets — Other Invested Assets

AIG initially estimates the fair value of equity instruments not traded in active markets by reference to the transaction price. This valuation is adjusted only when changes to inputs and assumptions are corroborated by evidence such as transactions in similar instruments, completed or pending third-party transactions in the underlying investment or comparable entities, subsequent rounds of financing, recapitalizations and other transactions across the capital structure, offerings in the equity capital markets, and changes in financial ratios or cash flows. For equity securities that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability and such adjustments generally are based on available market evidence. In the absence of such evidence, management's best estimate is used. AIG initially estimates the fair value of investments in private limited partnerships and hedge funds by reference to the transaction price. Subsequently, AIG obtains the fair value of these investments generally from net asset value information provided by the general partner or manager of the investments, the financial statements of which generally are audited annually.

Separate and Variable Account Assets

Separate and variable account assets are composed primarily of registered and unregistered open-end mutual funds that generally trade daily and are measured at fair value in the manner discussed above for equity securities traded in active markets.

Freestanding Derivatives

Derivative assets and liabilities can be exchange-traded or traded over the counter (OTC). AIG generally values exchange-traded derivatives within portfolios using models that calibrate to market clearing levels and eliminate timing differences between the closing price of the exchange-traded derivatives and their underlying instruments.

OTC derivatives are valued using market transactions and other market evidence whenever possible, including market-based inputs to models, model calibration to market clearing transactions, broker or dealer quotations or alternative pricing sources with reasonable levels of price transparency. When models are used, the selection of a particular model to value an OTC derivative depends on the contractual terms of, and specific risks inherent in, the instrument as well as the availability of pricing information in the market. AIG generally uses similar models to value similar instruments. Valuation models require a variety of inputs, including contractual terms, market prices and rates, yield curves, credit curves, measures of volatility, prepayment rates and correlations of such inputs. For OTC derivatives that trade in liquid markets, such as generic forwards, swaps and options, model inputs can generally be corroborated by observable market data by correlation or other means, and model selection does not involve significant management judgment.

Certain OTC derivatives trade in less liquid markets with limited pricing information, and the determination of fair value for these derivatives is inherently more difficult. When AIG does not have corroborating market evidence to support significant model inputs and cannot verify the model to market transactions, the transaction price is initially used as the best estimate of fair value. Accordingly, when a pricing model is used to value such an instrument, the model is adjusted so the model value at inception equals the transaction price. Subsequent to initial recognition, AIG updates valuation inputs when corroborated by evidence such as similar market transactions, third-party pricing services and/or broker or dealer quotations, or other empirical market data. When appropriate, valuations are adjusted for various factors such as liquidity, bid/offer spreads and credit considerations. Such adjustments are generally based on available market evidence. In the absence of such evidence, management's best estimate is used.

With the adoption of FAS 157 on January 1, 2008, AIG's own credit risk has been considered and is incorporated into the fair value measurement of all freestanding derivative liabilities.

Embedded Policy Derivatives

The fair value of embedded policy derivatives contained in certain variable annuity and equity-indexed annuity and life contracts is measured based on actuarial and capital market assumptions related to projected cash flows over the expected lives of the contracts. These cash flow estimates primarily include benefits and related fees assessed, when applicable, and incorporate expectations about policyholder behavior. Estimates of future policyholder behavior are subjective and based primarily on AIG's historical experience. With respect to embedded policy derivatives in AIG's variable annuity contracts, because of the dynamic and complex nature of the expected

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***3. Fair Value Measurements** *(continued)*

cash flows, risk neutral valuations are used. Estimating the underlying cash flows for these products involves many estimates and judgments, including those regarding expected market rates of return, market volatility, correlations of market index returns to funds, fund performance, discount rates and policyholder behavior. With respect to embedded policy derivatives in AIG's equity-indexed annuity and life contracts, option pricing models are used to estimate fair value, taking into account assumptions for future equity indexed growth rates, volatility of the equity index, future interest rates, and determination on adjusting the participation rate and the cap on equity indexed credited rates in light of market conditions and policyholder behavior assumptions. With the adoption of FAS 157, these methodologies were not changed, with the exception of incorporating an explicit risk margin to take into consideration market participant estimates of projected cash flows and policyholder behavior.

AIGFP's Super Senior Credit Default Swap Portfolio

AIGFP values its credit default swaps written on the most senior risk layers (super senior) of designated pools of debt securities or loans using internal valuation models, third-party prices and market indices. The specific valuation methodologies vary based on the nature of the referenced obligations and availability of market prices. AIGFP uses a modified version of the Binomial Expansion Technique (BET) model to value its credit default swap portfolio written on super senior tranches of collateralized debt obligations (CDOs), including maturity-shortening puts that allow the holders of the securities issued by certain CDOs to treat the securities as short-term eligible 2a-7 investments under the Investment Company Act of 1940 (2a-7 Puts). The BET model uses default probabilities derived from credit spreads implied from market prices for the individual securities included in the underlying collateral pools securing the CDOs, as well as diversity scores, weighted average lives, recovery rates and discount rates. The determination of some of these inputs requires the use of judgment and estimates, particularly in the absence of market observable data. AIGFP also employs a Monte Carlo simulation to assist in quantifying the effect on the valuation of the CDOs of the unique aspects of the CDOs' structures such as triggers that divert cash flows to the most senior part of the capital structure. In the determination of fair value, AIGFP also considers collateral calls and the price estimates for the super senior CDO securities provided by third parties, including counterparties to these transactions.

In the case of credit default swaps written on investment-grade corporate debt and collateralized loan obligations (CLOs), AIGFP estimates the value of its obligations by reference to the relevant market indices or third-party quotes on the underlying super senior tranches where available.

In the case of credit default swaps written to facilitate regulatory capital relief for AIGFP's European financial institution counterparties, AIGFP estimates the fair value of these derivatives by considering observable market transactions, including the early termination of these transactions by counterparties, and other market data, to the extent relevant.

Policyholders' Contract Deposits

Policyholders' contract deposits accounted for at fair value beginning January 1, 2008 are measured using an income approach by taking into consideration the following factors:

- Current policyholder account values and related surrender charges,
- The present value of estimated future cash inflows (policy fees) and outflows (benefits and maintenance expenses) associated with the product using risk neutral valuations, incorporating expectations about policyholder behavior, market returns and other factors, and
- A risk margin that market participants would require for a market return and the uncertainty inherent in the model inputs.

The change in fair value of these policyholders' contract deposits is recorded as incurred policy losses and benefits in the consolidated statement of income (loss).

Fair Value Measurements on a Non-Recurring Basis

AIG also measures the fair value of certain assets on a non-recurring basis, generally quarterly, annually, or when events or changes in circumstances indicate that the carrying amount of the asset may not be recoverable. These assets include held to maturity securities, cost and equity-method investments, life settlement contracts, aircraft, collateral securing foreclosed loans and real estate and other fixed assets, goodwill, and other intangible assets. AIG uses a variety of techniques to measure the fair value of these assets when appropriate, as described below:

- *Held to Maturity Securities, Cost and Equity-Method Investments:* When AIG determines the carrying value of these assets may not be recoverable, AIG records the assets at fair value with the loss recognized in income. In such cases, AIG measures the fair value of these assets using the techniques discussed above for fixed maturities and equity securities.
- *Life Settlement Contracts:* AIG measures the fair value of individual life settlement contracts (which are included in other invested assets) whenever the carrying value plus the undiscounted future costs that are expected to be incurred to keep the life settlement contract in force exceed the expected proceeds from the contract. In those situations, the fair value is determined on a discounted cash flows basis, incorporating current life expectancy assumptions.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)

The discount rate incorporates current information about market interest rates, the credit exposure to the insurance company that issued the life settlement contract and AIG's estimate of the risk margin an investor in the contracts would require.

- *Flight Equipment Primarily Under Operating Leases:* When AIG determines the carrying value of its commercial aircraft may not be recoverable, AIG records the aircraft at fair value with the loss recognized in income. AIG measures the fair value of its commercial aircraft using an income approach based on the present value of all cash flows from existing and projected lease payments (based on historical experience and current expectations of market participants) including net contingent rentals for the period extending to the end of the aircraft's economic life in its highest and best use configuration, plus its disposition value.
- *Collateral Securing Foreclosed Loans and Real Estate and Other Fixed Assets:* When AIG takes collateral in connection with foreclosed loans, AIG generally bases its estimate of fair value on the price that would be received in a current transaction to sell the asset by itself.
- *Goodwill:* AIG tests goodwill for impairment whenever events or changes in circumstances indicate the carrying amount of goodwill may not be recoverable, but at least annually. When AIG determines goodwill may be impaired, AIG uses techniques that consider market-based earnings multiples of the unit's peer companies or discounted cash flow techniques based on the price that could be received in a current transaction to sell the asset assuming the asset would be used with other assets as a group (in-use premise).
- *Intangible Assets:* AIG tests its intangible assets for impairment whenever events or changes in circumstances indicate the carrying amount of an intangible asset may not be recoverable. AIG measures the fair value of intangible assets based on an in-use premise that considers the same factors used to estimate the fair value of its real estate and other fixed assets under an in-use premise discussed above.

See Notes 1(c), (d), (e), (t), and (v) to Consolidated Financial Statements included in the 2007 Annual Report on Form 10-K for additional information about how AIG tests various asset classes for impairment.

Fair Value Hierarchy

Beginning January 1, 2008, assets and liabilities recorded at fair value in the consolidated balance sheet are measured and classified in a hierarchy for disclosure purposes consisting of three "levels" based on the observability of inputs available

in the marketplace used to measure the fair values as discussed below:

- *Level 1:* Fair value measurements that are quoted prices (unadjusted) in active markets that AIG has the ability to access for identical assets or liabilities. Market price data generally is obtained from exchange or dealer markets. AIG does not adjust the quoted price for such instruments. Assets and liabilities measured at fair value on a recurring basis and classified as Level 1 include certain government and agency securities, actively traded listed common stocks and derivative contracts, most separate account assets and most mutual funds.
- *Level 2:* Fair value measurements based on inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly or indirectly. Level 2 inputs include quoted prices for similar assets and liabilities in active markets, and inputs other than quoted prices that are observable for the asset or liability, such as interest rates and yield curves that are observable at commonly quoted intervals. Assets and liabilities measured at fair value on a recurring basis and classified as Level 2 generally include certain government securities, most investment-grade and high-yield corporate bonds, certain asset-backed securities, certain listed equities, state, municipal and provincial obligations, hybrid securities, mutual fund and hedge fund investments, derivative contracts, guaranteed investment agreements at AIGFP and physical commodities.
- *Level 3:* Fair value measurements based on valuation techniques that use significant inputs that are unobservable. These measurements include circumstances in which there is little, if any, market activity for the asset or liability. In certain cases, the inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, the level in the fair value hierarchy within which the fair value measurement in its entirety falls is determined based on the lowest level input that is significant to the fair value measurement in its entirety. AIG's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment. In making the assessment, AIG considers factors specific to the asset or liability. Assets and liabilities measured at fair value on a recurring basis and classified as Level 3 include certain distressed asset-backed securities, structured credit products, certain derivative contracts (including AIGFP's super senior credit default swap portfolio), policyholders' contract deposits carried at fair value, private equity and real estate fund investments, and direct private equity investments. AIG's non-financial-instrument assets that are measured at fair value on a non-recurring basis generally are classified as Level 3.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)**Assets and Liabilities Measured at Fair Value on a Recurring Basis**

The following table presents information about assets and liabilities measured at fair value on a recurring basis at March 31, 2008, and indicates the level of the fair value measurement based on the levels of the inputs used:

<i>(in millions)</i>	Level 1	Level 2	Level 3	Counterparty Netting	Total March 31, 2008
Assets:

Unrealized loss on swaps, options and forward transactions ^(c)	—	60,989	24,442	(55,055)	30,376
Trust deposits and deposits due to banks and other depositors	—	262	—	—	262
Long-term borrowings	—	56,416	2,838	—	59,254
Other liabilities	2	6,453	108	(268)	6,295
Total	\$ 401	\$135,578	\$ 31,726	\$ (55,323)	\$112,382

(a) Included in Level 2 securities lending invested collateral and short-term investments are securities that are carried at cost, which approximates fair value, of \$1.1 billion and \$18.5 billion, respectively.

(b) Approximately 13 percent of the fair value of the assets recorded as Level 3 are a result of the consolidation of various private equity, hedge fund and fund-of-funds investments. AIG's ownership in these funds represented 23 percent, or \$1.5 billion of the Level 3 amount.

(c) Included in Level 3 are unrealized market valuation losses of \$20.6 billion on AIGFP super senior credit default swap portfolio.

At March 31, 2008, Level 3 assets totaled \$48.5 billion, representing 5 percent of total assets, and Level 3 liabilities totaled \$31.7 billion, representing 3 percent of total liabilities.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)

The following table presents changes during the three-month period ended March 31, 2008 in Level 3 assets and liabilities measured at fair value on a recurring basis, together with the balances of such assets and liabilities at January 1, 2008 and March 31, 2008, and the realized and unrealized gains (losses) recorded in income during the three-month period ended March 31, 2008 related to the Level 3 assets and liabilities that remained on the consolidated balance sheet at March 31, 2008:

<i>(in millions)</i>	Balance January 1, 2008	Net Realized and Unrealized Gains (Losses) Included in Income	Accumulated Other Comprehensive Income (Loss)	Purchases, Sales, Issuances and Settlements-net	Transfers In (out)	Balance March 31, 2008	Unrealized Gains (Losses) on Instruments Held at March 31, 2008

Policyholders' contract deposits	<ul style="list-style-type: none"> • Incurred policy losses and benefits • Net realized capital gains (losses)

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***3. Fair Value Measurements** *(continued)*

Both observable and unobservable inputs may be used to determine the fair values of positions classified in Level 3 in the tables above. As a result, the unrealized gains (losses) on instruments held at March 31, 2008 may include changes in fair value that were attributable to both observable (e.g., changes in market interest rates) and unobservable inputs (e.g., changes in unobservable long-dated volatilities).

AIG uses various hedging techniques to manage risks associated with certain positions, including those classified within Level 3. Such techniques may include the purchase or sale of financial instruments that are classified within Level 1 and/or Level 2. As a result, the realized and unrealized gains (losses) for assets and liabilities classified within Level 3 presented in the table above do not reflect the related realized or unrealized gains (losses) on hedging instruments that are classified within Level 1 and/or Level 2.

Changes in the fair value of separate and variable account assets are completely offset in the consolidated statement of income (loss) by changes in separate and variable account liabilities, which are not carried at fair value and therefore not included in the foregoing tables.

Fair Value Measured on a Non-Recurring Basis

At March 31, 2008, AIG had assets measured at fair value on a non-recurring basis on which it recorded an impairment charge totaling \$45 million during the three-month period ended March 31, 2008. This charge resulted from the write-off of goodwill related to Mortgage Guaranty.

Fair Value Option

FAS 159 permits a company to choose to measure at fair value many financial instruments and certain other assets and liabilities that are not required to be measured at fair value. Subsequent changes in fair value for designated items are required to be reported in income. Unrealized gains and losses on financial instruments in AIG's insurance businesses and in AIGFP for which the fair value option was elected under FAS 159 are classified in incurred policy losses and benefits and in other income, respectively, in the consolidated statement of income (loss).

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)

The following table presents the gains or losses recorded during the three-month period ended March 31, 2008 related to the eligible instruments for which AIG elected the fair value option and the related transition adjustment recorded as a decrease to opening shareholders' equity at January 1, 2008^(a):

<i>(in millions)</i>	January 1, 2008 prior to Adoption	Transition Adjustment upon Adoption	January 1, 2008 after Adoption	Gain (Loss) Three Months Ended March 31, 2008

Pre-tax cumulative effect of adopting the fair value option		(1,638)		
Decrease in deferred tax liabilities		526		
Cumulative effect of adopting the fair value option		\$(1,112)		

(a) Certain of AIG's financial instruments are required to be accounted for at fair value, with changes in fair value included in earnings, under FAS 115, "Accounting for Certain Investments in Debt and Equity Securities," or FAS 133 and are not included in the table above.

(b) AIGFP elected to apply the fair value option to all eligible assets and liabilities (other than equity method investments, trade receivables and trade payables) because electing the fair value option will allow AIGFP to more closely align its earnings with the economics of its transactions by recognizing concurrently through earnings the change in fair value of its derivatives and the offsetting change in fair value of the assets and liabilities being hedged as well as the manner in which the business is evaluated by management. Substantially all of the gain (loss) amounts shown above are reported in other income on the consolidated statement of income (loss).

(c) AIG elected to apply the fair value option to certain single premium variable life products in Japan and an investment-linked life insurance product sold principally in Asia, both classified within policyholders' contract deposits in the consolidated balance sheet. AIG elected the fair value option for these liabilities to more closely align its accounting with the economics of its transactions. For the investment-linked product sold principally in Asia, the election will more effectively align changes in the fair value of assets with a commensurate change in the fair value of policyholders' liabilities. For the single premium life products in Japan, the fair value option election will allow AIG to economically hedge the inherent market risks associated with this business in an efficient and effective manner through the use of derivative instruments. The hedging program, once finalized and implemented, will result in the accounting presentation for this business more closely mirroring the underlying economics and the way the business is managed, with the change in the fair value of derivatives and underlying assets largely offsetting the change in fair value of the policy liabilities. AIG did not elect the fair value option for other liabilities classified in policyholders' contract deposits because other contracts do not share the same contract features that created the disparity between the accounting presentation and the economic performance.

Interest income and expense and dividend income on assets and liabilities elected under the fair value option are recognized and classified in the consolidated statement of income (loss) depending on the nature of the instrument and related market conventions. At AIGFP, interest and dividends and interest expense are included in other income. Otherwise, interest and dividends are included in interest and dividend income or interest expense. See Note 1(a) to the Consolidated Financial Statements included in the 2007 Annual Report on

Form 10-K for additional information about AIG's policies for recognition, measurement, and disclosure of interest and dividend income and interest expense.

During the three-month period ended March 31, 2008, AIG recognized gains of \$1.4 billion attributable to the observable effect of the widening of credit spreads on AIG's own liabilities for which the fair value option was elected. AIG calculates the effect of these credit spread changes using discounted cash flow techniques that incorporate current

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)

market interest rates, AIG's observable credit spreads on these liabilities and other factors that mitigate the risk of nonperformance such as collateral posted.

The following table presents the difference between fair values and the aggregate contractual principal amounts of mortgage and other loans receivable and long-term borrowings, for which the fair value option was elected.

<i>(in millions)</i>	Fair Value at March 31, 2008	Principal Amount Due Upon Maturity	Difference
Assets:			
Mortgage and other loans receivable	\$ 810	\$ 774	\$ 36
Liabilities:			
Long-term borrowings	\$ 53,057	\$ 51,769	\$ 1,288

At March 31, 2008, there were no mortgage and other loans receivable for which the fair value option was elected, that were 90 days or more past due and in non-accrual status.

**4. Shareholders' Equity and Earnings
(Loss) Per Share****Shareholders' Equity**

The changes in AIG's consolidated shareholders' equity were as follows:

<i>(in millions)</i>	Three Months Ended March 31,	
	2008	2007
Beginning of year	\$95,801	\$101,677
Net income (loss)	(7,805)	4,130
Unrealized (depreciation) appreciation of investments, net of tax	(6,824)	851
Cumulative translation adjustment, net of tax	1,095	(137)
Dividends to shareholders	(488)	(430)
Payments advanced to purchase shares, net	733	(2,851)
Share purchases	(1,733)	—
Cumulative effect of accounting changes, net of tax	(1,108)	(203)
Other*	32	18
End of period	\$79,703	\$103,055

* Reflects the effects of employee stock transactions.

From time to time, AIG may buy shares of its common stock for general corporate purposes, including to satisfy its obligations under various share-based employee compensation plans. In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the purchase of shares with an aggregate purchase price of \$8 billion. In November 2007, AIG's Board of Directors authorized the purchase of an additional \$8 billion in common stock. In

2007, AIG entered into structured share repurchase arrangements providing for the purchase of shares over time with an aggregate purchase price of \$7 billion.

A total of 34,093,783 shares were purchased during the first quarter of 2008 to meet commitments that existed at December 31, 2007. The portion of the payments advanced by AIG under the structured share purchase arrangements that had not yet been utilized to purchase shares at March 31, 2008, amounting to \$179 million, has been recorded as a component of shareholders' equity under the caption, Payments advanced to purchase shares. Subsequent to March 31, 2008, an additional 3,832,276 shares were purchased, satisfying the balance of the commitments existing at December 31, 2007 that had not been satisfied at March 31, 2008. All shares purchased are recorded as treasury stock at cost.

At May 7, 2008, \$9 billion was available for purchases under the aggregate authorization. AIG does not expect to purchase additional shares under its share repurchase program for the foreseeable future.

The quarterly dividend of \$0.20 per common share declared in November 2007 was paid on March 21, 2008.

Share-based Employee Compensation Plans

During the first quarter of 2008, AIG reviewed the vesting schedules of its share-based employee compensation plans, and on March 11, 2008, AIG's management and the Compensation Committee of AIG's Board of Directors determined that, to fulfill the objective of attracting and retaining high quality personnel, the vesting schedules of certain awards outstanding under these plans and all awards made in the future under these plans should be shortened. As a result, the unamortized share-based employee compensation cost related to the affected awards will be amortized over shorter periods. AIG estimates the modifications will accelerate the amortization of this cost by \$116 million and \$90 million in 2008 and 2009, respectively, with a corresponding reduction in amortization expense related to these awards of \$206 million in 2010 through 2013.

Earnings (Loss) Per Share (EPS)

Basic EPS is based on the weighted average number of common shares outstanding, adjusted to reflect all stock dividends and stock splits. Diluted EPS is based on those shares used in basic EPS plus shares that would have been outstanding assuming issuance of common shares for all dilutive potential common shares outstanding, adjusted to reflect all stock dividends and stock splits.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**4. Shareholders' Equity and Earnings (Loss) Per Share** (continued)**The computation of basic and diluted EPS was as follows:**

	Three Months Ended March 31,	
	2008	2007
<i>(in millions, except per share data)</i>		
Numerator for EPS:		
Net income (loss)	\$ (7,805)	\$4,130
Denominator for EPS:		
Weighted average shares outstanding used in the computation of EPS:		
Common stock issued	2,751	2,751
Common stock in treasury	(237)	(150)
Deferred shares	14	11
Weighted average shares outstanding – basic	2,528	2,612
Incremental shares arising from awards outstanding under share-based employee compensation plans *	–	9
Weighted average shares outstanding – diluted*	2,528	2,621
EPS:		
Basic	\$ (3.09)	\$ 1.58
Diluted	\$ (3.09)	\$ 1.58

* Calculated using the treasury stock method. Certain potential common shares arising from share-based employee compensation plans were not included in the computation of diluted EPS because the effect would have been antidilutive. The number of potential shares excluded was 7 million for the three-month period ended March 31, 2007.

5. Ownership

According to the Schedule 13D filed on March 20, 2007 by Starr, SICO, Edward E. Matthews, Maurice R. Greenberg, the Maurice R. and Corinne P. Greenberg Family Foundation, Inc., the Universal Foundation, Inc., the Maurice R. and Corinne P. Greenberg Joint Tenancy Company, LLC and the C.V. Starr & Co., Inc. Trust, these reporting persons could be considered to beneficially own 354,987,261 shares of AIG's common stock at that date. Based on the shares of AIG's common stock outstanding at April 30, 2008, this ownership would represent approximately 14 percent of the voting stock of AIG. Although these reporting persons have made filings under Section 16 of the Exchange Act, reporting sales of shares of common stock, no amendment to the Schedule 13D has been filed to report a change in ownership subsequent to March 20, 2007.

6. Commitments, Contingencies and Guarantees

AIG and its subsidiaries, in common with the insurance and financial services industries in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. At the current time, AIG cannot predict the outcome of the matters described below, or estimate any potential additional costs related to these matters, unless otherwise indicated. In AIG's insurance operations, litigation arising from claims settlement activities is generally considered in the establishment of AIG's reserve for losses and loss expenses. However, the potential for increasing jury awards and settlements makes it difficult to assess the ultimate outcome of such litigation. In addition, in the normal course of business, various

commitments and contingent liabilities are entered into by AIG and certain of its subsidiaries. AIG also guarantees various obligations of certain subsidiaries.

(a) Litigation and Investigations

Litigation Arising from Insurance Operations – Caremark. AIG and certain of its subsidiaries have been named defendants in two putative class actions in state court in Alabama that arise out of the 1999 settlement of class and derivative litigation involving Caremark Rx, Inc. (Caremark). The plaintiffs in the second-filed action have intervened in the first-filed action, and the second-filed action has been dismissed. An excess policy issued by a subsidiary of AIG with respect to the 1999 litigation was expressly stated to be without limit of liability. In the current actions, plaintiffs allege that the judge approving the 1999 settlement was misled as to the extent of available insurance coverage and would not have approved the settlement had he known of the existence and/or unlimited nature of the excess policy. They further allege that AIG, its subsidiaries, and Caremark are liable for fraud and suppression for misrepresenting and/or concealing the nature and extent of coverage. In addition, the intervenor-plaintiffs allege that various lawyers and law firms who represented parties in the underlying class and derivative litigation (the Lawyer Defendants) are also liable for fraud and suppression, misrepresentation, and breach of fiduciary duty. The complaints filed by the plaintiffs and the intervenor-plaintiffs request compensatory damages for the 1999 class in the amount of \$3.2 billion, plus punitive damages. AIG and its subsidiaries deny the allegations of fraud and suppression

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

and have asserted that information concerning the excess policy was publicly disclosed months prior to the approval of the settlement. AIG and its subsidiaries further assert that the current claims are barred by the statute of limitations and that plaintiffs' assertions that the statute was tolled cannot stand against the public disclosure of the excess coverage. The plaintiffs and intervenor-plaintiffs, in turn, have asserted that the disclosure was insufficient to inform them of the nature of the coverage and did not start the running of the statute of limitations. On November 26, 2007, the trial court issued an order that dismissed the intervenors' complaint against the Lawyer Defendants and entered a final judgment in favor of the Lawyer Defendants. The intervenors are appealing the dismissal of the Lawyer Defendants and on January 2, 2008, requested a stay of all trial court proceedings pending the appeal. On March 4, 2008, the trial court granted the motion for a stay. No further proceedings at the trial court level will occur until the appeal of the dismissal of the Lawyer Defendants is resolved. AIG cannot reasonably estimate either the likelihood of its prevailing in these actions or the potential damages in the event liability is determined.

Litigation Arising from Insurance Operations – Gunderson. A subsidiary of AIG has been named as a defendant in a putative class action lawsuit in the 14th Judicial District Court for the State of Louisiana. The *Gunderson* complaint alleges failure to comply with certain provisions of the Louisiana Any Willing Provider Act (the Act) relating to discounts taken by defendants on bills submitted by Louisiana medical providers and hospitals that provided treatment or services to workers compensation claimants and seeks monetary penalties and injunctive relief. On July 20, 2006, the court denied defendants' motion for summary judgment and granted plaintiffs' partial motion for summary judgment, holding that the AIG subsidiary was a "group purchaser" and, therefore, potentially subject to liability under the Act. On November 28, 2006, the court issued an order certifying a class of providers and hospitals. In an unrelated action also arising under the Act, a Louisiana appellate court ruled that the district court lacked jurisdiction to adjudicate the claims at issue. In response, defendants in *Gunderson* filed an exception for lack of subject matter jurisdiction. On January 19, 2007, the court denied the motion, holding that it has jurisdiction over the putative class claims. The AIG subsidiary appealed the class certification and jurisdictional rulings. While the appeal was pending, the AIG subsidiary settled the lawsuit. On January 25, 2008, plaintiffs and the AIG subsidiary agreed to resolve the lawsuit on a class-wide basis for approximately \$29 million. The court has preliminarily approved the settlement and will hold a final approval hearing on May 29, 2008. In the event that the settlement is not

finally approved, AIG believes that it has meritorious defenses to plaintiffs' claims and expects that the ultimate resolution of this matter will not have a material adverse effect on AIG's consolidated financial condition or results of operations for any period.

2006 Regulatory Settlements. In February 2006, AIG reached a resolution of claims and matters under investigation with the United States Department of Justice (DOJ), the Securities and Exchange Commission (SEC), the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). AIG recorded an after-tax charge of \$1.15 billion relating to these settlements in the fourth quarter of 2005.

The settlements resolved investigations conducted by the SEC, NYAG and DOI in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. These settlements did not, however, resolve investigations by regulators from other states into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Nor did the settlements resolve any obligations that AIG may have to state guarantee funds in connection with any of these matters.

As a result of these settlements, AIG made payments or placed amounts in escrow in 2006 totaling approximately \$1.64 billion, \$225 million of which represented fines and penalties. Amounts held in escrow totaling \$346 million, including interest thereon, are included in other assets at March 31, 2008. At that date, approximately \$332 million of the funds were escrowed for settlement of claims resulting from the underpayment by AIG of its residual market assessments for workers compensation.

The remaining escrowed funds, which amounted to \$14 million, were set aside to pay certain AIG insurance company subsidiary policyholders who purchased excess casualty policies through Marsh & McLennan Companies, Inc. (Marsh) and Marsh Inc. (the Excess Casualty Fund). As of February 29, 2008, eligible policyholders entitled to receive approximately \$359 million (or 95 percent) of the Excess Casualty Fund had opted to receive settlement payments in exchange for releasing AIG and its subsidiaries from liability relating to certain insurance brokerage practices. In accordance with the settlement agreements, all amounts remaining in the Excess Casualty Fund were used by AIG to settle claims asserted by other policyholders relating to such practices.

In addition to the escrowed funds, \$800 million was deposited into a fund under the supervision of the SEC as part of the settlements to be available to resolve claims asserted

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

against AIG by investors, including the shareholder lawsuits described herein.

Also, as part of the settlements, AIG agreed to retain, for a period of three years, an independent consultant to conduct a review that will include, among other things, the adequacy of AIG's internal control over financial reporting, the policies, procedures and effectiveness of AIG's regulatory, compliance and legal functions and the remediation plan that AIG has implemented as a result of its own internal review.

Other Regulatory Settlements. As noted above, AIG's 2006 regulatory settlements with the SEC, DOJ and NYAG did not resolve investigations by regulators from other states into insurance brokerage practices. AIG entered into agreements effective January 29, 2008 with the Attorneys General of the States of Florida, Hawaii, Maryland, Michigan, Oregon, Texas and West Virginia; the Commonwealths of Massachusetts and Pennsylvania; and the District of Columbia; as well as the Florida Department of Financial Services and the Florida Office of Insurance Regulation, relating to their respective industry wide investigations into producer compensation and insurance placement practices. The settlements call for total payments of \$12.5 million to be allocated among the ten jurisdictions representing restitution to state agencies and reimbursement of the costs of the investigation. During the term of the settlement agreements, AIG will continue to maintain certain producer compensation disclosure and ongoing compliance initiatives. AIG will also continue to cooperate with the industry wide investigations. The agreement with the Texas Attorney General also settles allegations of anticompetitive conduct relating to AIG's relationship with Allied World Assurance Company and includes an additional settlement payment of \$500,000 related thereto.

AIG also entered into an agreement effective March 13, 2008 with the Pennsylvania Insurance Department relating to the Department's investigation into the affairs of AIG and certain of its Pennsylvania-domiciled insurance company subsidiaries. The settlement calls for total payments of approximately \$13.5 million, of which approximately \$4.4 million was paid under previous settlement agreements. During the term of the settlement agreement, AIG will provide annual reinsurance reports, as well as maintain certain producer compensation disclosure and ongoing compliance initiatives.

In addition, AIG has settled litigation that was filed by the Minnesota Attorney General with respect to claims by the Minnesota Department of Revenue and the Minnesota Special Compensation Fund that AIG underreported its workers' compensation premium.

Private Litigation

Securities Actions – Southern District of New York. Beginning in October 2004, a number of putative securities fraud class action suits were filed in the Southern District of New York against AIG and consolidated as *In re American International Group, Inc. Securities Litigation*. Subsequently, a separate, though similar, securities fraud action was also brought against AIG by certain Florida pension funds. The lead plaintiff in the class action is a group of public retirement systems and pension funds benefiting Ohio state employees, suing on behalf of themselves and all purchasers of AIG's publicly traded securities between October 28, 1999 and April 1, 2005. The named defendants are AIG and a number of present and former AIG officers and directors, as well as Starr, SICO, General Reinsurance Corporation, and PricewaterhouseCoopers LLP (PwC), among others. The lead plaintiff alleges, among other things, that AIG: (1) concealed that it engaged in anti-competitive conduct through alleged payment of contingent commissions to brokers and participation in illegal bid-rigging; (2) concealed that it used "income smoothing" products and other techniques to inflate its earnings; (3) concealed that it marketed and sold "income smoothing" insurance products to other companies; and (4) misled investors about the scope of government investigations. In addition, the lead plaintiff alleges that AIG's former Chief Executive Officer manipulated AIG's stock price. The lead plaintiff asserts claims for violations of Sections 11 and 15 of the Securities Act of 1933, Section 10(b) of the Exchange Act and Rule 10b-5 promulgated thereunder, Section 20(a) of the Exchange Act, and Section 20A of the Exchange Act. In April 2006, the court denied the defendants' motions to dismiss the second amended class action complaint and the Florida complaint. In December 2006, a third amended class action complaint was filed, which does not differ substantially from the prior complaint. Fact and class discovery is currently ongoing. On February 20, 2008, the lead plaintiff filed a motion for class certification.

ERISA Actions – Southern District of New York. Between November 30, 2004 and July 1, 2005, several Employee Retirement Income Security Act of 1974 (ERISA) actions were filed in the Southern District of New York on behalf of purported class participants and beneficiaries of three pension plans sponsored by AIG or its subsidiaries. A consolidated complaint filed on September 26, 2005 alleges a class period between September 30, 2000 and May 31, 2005 and names as defendants AIG, the members of AIG's Retirement Board and the Administrative Boards of the plans at issue, and present or former members of AIG's Board of Directors. The factual allegations in the complaint are essentially identical to those in the securities actions described above. The parties have reached an agreement in principle to settle this matter for an amount within AIG's insurance cov-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

erage limits. The court has scheduled a hearing for May 29, 2008 to consider preliminary approval of the settlement, prior to which a formal settlement agreement is to be submitted by the parties.

Securities Action – Oregon State Court. On February 27, 2008, the State of Oregon, by and through the Oregon State Treasurer, and the Oregon Public Employee Retirement Board, on behalf of the Oregon Public Employee Retirement Fund, filed a lawsuit in Oregon state court against AIG for damages arising out of plaintiffs' purchase of AIG common stock at prices that allegedly were inflated. Plaintiffs allege, among other things, that AIG: (1) made false and misleading statements concerning its accounting for a \$500 million transaction with General Re; (2) concealed that it marketed and misrepresented its control over off-shore entities in order to improve financial results; (3) improperly accounted for underwriting losses as investment losses in connection with transactions involving CAPCO Reinsurance Company, Ltd. and Union Excess; (4) misled investors about the scope of government investigations; and (5) engaged in market manipulation through its then Chairman and CEO Maurice R. Greenberg. The complaint asserts claims for violations of Oregon securities law, and seeks compensatory damages in an amount in excess of \$15 million, and prejudgment interest and costs and fees. On April 9, 2008, AIG removed the case to federal court and filed a motion to have the case transferred to the Southern District of New York.

Derivative Actions – Southern District of New York. On November 20, 2007, two purported shareholder derivative actions were filed in the Southern District of New York naming as defendants the current directors of AIG and certain senior officers of AIG and its subsidiaries. Plaintiffs assert claims for breach of fiduciary duty, waste of corporate assets and unjust enrichment, as well as violations of Section 10(b) of the Exchange Act and Rule 10b-5 promulgated thereunder, and Section 20(a) of the Exchange Act, among other things, in connection with AIG's public disclosures regarding its exposure to what the lawsuits describe as the subprime market crisis. The actions were consolidated as *In re American International Group, Inc. 2007 Derivative Litigation*. On February 15, 2008, plaintiffs filed a consolidated amended complaint alleging the same causes of action. On April 15, 2008, motions to dismiss the action were filed on behalf of all defendants. AIG may become subject to litigation with respect to these or similar issues.

Between October 25, 2004 and July 14, 2005, seven separate derivative actions were filed in the Southern District of New York, five of which were consolidated into a single action. The New York derivative complaint contains nearly

the same types of allegations made in the securities fraud action. The named defendants include current and former officers and directors of AIG, as well as Marsh, SICO, Starr, ACE Limited and subsidiaries (ACE), General Reinsurance Corporation, PwC, and certain employees or officers of these entity defendants. Plaintiffs assert claims for breach of fiduciary duty, gross mismanagement, waste of corporate assets, unjust enrichment, insider selling, auditor breach of contract, auditor professional negligence and disgorgement from AIG's former Chief Executive Officer and Chief Financial Officer of incentive-based compensation and AIG share proceeds under Section 304 of the Sarbanes-Oxley Act, among others. Plaintiffs seek, among other things, compensatory damages, corporate governance reforms, and a voiding of the election of certain AIG directors. AIG's Board of Directors has appointed a special committee of independent directors (special committee) to review the matters asserted in the operative consolidated derivative complaint. The court has entered an order staying the derivative case in the Southern District of New York pending resolution of the consolidated derivative action in the Delaware Chancery Court (discussed below). The court also has entered an order that termination of certain named defendants from the Delaware derivative action applies to the New York derivative action without further order of the court. On October 17, 2007, plaintiffs and those AIG officer and director defendants against whom the shareholder plaintiffs in the Delaware action are no longer pursuing claims filed a stipulation providing for all claims in the New York action against such defendants to be dismissed with prejudice. Former directors and officers Maurice R. Greenberg and Howard I. Smith have asked the court to refrain from so ordering this stipulation.

Derivative Actions – Delaware Chancery Court. From October 2004 to April 2005, AIG shareholders filed five derivative complaints in the Delaware Chancery Court. All of these derivative lawsuits were consolidated into a single action as *In re American International Group, Inc. Consolidated Derivative Litigation*. The amended consolidated complaint named 43 defendants (not including nominal defendant AIG) who, like the New York consolidated derivative litigation, were current and former officers and directors of AIG, as well as other entities and certain of their current and former employees and directors. The factual allegations, legal claims and relief sought in the Delaware action are similar to those alleged in the New York derivative actions, except that shareholder plaintiffs in the Delaware derivative action assert claims only under state law. Earlier in 2007, the court approved an agreement that AIG be realigned as plaintiff, and, on June 13, 2007, acting on the direction of the special committee, AIG filed an amended complaint against former directors and officers Maurice R. Greenberg and Howard I. Smith, alleging breach of fiduciary duty and indemnification. Also on June 13, 2007, the special committee filed a motion to

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)*

6. Commitments, Contingencies and Guarantees *(continued)*

terminate the litigation as to certain defendants, while taking no action as to others. Defendants Greenberg and Smith filed answers to AIG's complaint and brought third-party complaints against certain current and former AIG directors and officers, PwC and Regulatory Insurance Services, Inc. On September 28, 2007, AIG and the shareholder plaintiffs filed a combined amended complaint in which AIG continued to assert claims against defendants Greenberg and Smith and took no position as to the claims asserted by the shareholder plaintiffs in the remainder of the combined amended complaint. In that pleading, the shareholder plaintiffs are no longer pursuing claims against certain AIG officers and directors. In November 2007, the shareholder plaintiffs moved to sever their claims to a separate action. AIG joined the motion to the extent that, among other things, the claims against defendants Greenberg and Smith would remain in prosecution in the pending action. In addition, a number of parties, including AIG, filed motions to stay discovery. On February 12, 2008, the court granted AIG's motion to stay discovery pending the resolution of claims against AIG in the New York consolidated securities action. The court also denied plaintiff's motion to sever and directed the parties to coordinate a briefing schedule for the motions to dismiss. On April 11, 2008, the shareholder plaintiffs filed the First Amended Combined Complaint, which adds claims against Maurice Greenberg, Edward Matthews, and Thomas Tizzio for breach of fiduciary duty based on alleged bid-rigging in the municipal derivatives market. On April 15, 2008, shareholder plaintiffs submitted a stipulation dismissing Evan Greenberg without prejudice.

A separate derivative lawsuit was filed in the Delaware Chancery Court against twenty directors and executives of AIG as well as against AIG as a nominal defendant that alleges, among other things, that the directors of AIG breached the fiduciary duties of loyalty and care by approving the payment of commissions to Starr and of rental and service fees to SICO and the executives breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and their fiduciary duties by usurping AIG's corporate opportunity. The complaint further alleges that the Starr agencies did not provide any services that AIG was not capable of providing itself, and that the diversion of commissions to these entities was solely for the benefit of Starr's owners. The complaint also alleges that the service fees and rental payments made to SICO and its subsidiaries were improper. Under the terms of a stipulation approved by the court on February 16, 2006, the claims against the outside independent directors were dismissed with prejudice, while the claims against the other directors were dismissed without prejudice. On October 31, 2005, Defendants Greenberg, Matthews and

Smith, SICO and Starr filed motions to dismiss the amended complaint. In an opinion dated June 21, 2006, the Court denied defendants' motion to dismiss, except with respect to plaintiff's challenge to payments made to Starr before January 1, 2000. On July 21, 2006, plaintiff filed its second amended complaint, which alleges that, between January 1, 2000 and May 31, 2005, individual defendants breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and breached their fiduciary duties by usurping AIG's corporate opportunity. Starr is charged with aiding and abetting breaches of fiduciary duty and unjust enrichment for its acceptance of the fees. SICO is no longer named as a defendant. On April 20, 2007, the individual defendants and Starr filed a motion seeking leave of the Court to assert a cross-claim against AIG and a third-party complaint against PwC and the directors previously dismissed from the action, as well as certain other AIG officers and employees. On June 13, 2007, the court denied the individual defendants' motion to file a third-party complaint, but granted the proposed cross-claim against AIG. On June 27, 2007, Starr filed its cross-claim against AIG, alleging one count that includes contribution, unjust enrichment and set-off. AIG has filed an answer and moved to dismiss Starr's cross-claim to the extent it seeks affirmative relief, as opposed to a reduction in the judgment amount. On November 15, 2007, the court granted AIG's motion to dismiss the cross-claim by Starr to the extent that it sought affirmative relief from AIG. On November 21, 2007, shareholder plaintiff submitted a motion for leave to file its third amended complaint in order to add Thomas Tizzio as a defendant. On February 14, 2008, the court granted this motion and allowed Mr. Tizzio until April 2008 to take additional discovery. Document discovery and depositions are otherwise complete. Plaintiff has informed the court that the parties do not intend to file motions for summary judgment. Trial is currently scheduled to begin in September 2008.

Derivative Action – Supreme Court of New York, Nassau County. On February 29, 2008, a purported shareholder derivative complaint was filed in the Supreme Court of Nassau County, asserting the same state law claims against the same defendants as in the consolidated amended complaint filed on February 15, 2008 in the Southern District of New York, *In re American International Group, Inc. 2007 Derivative Litigation*, which is discussed above.

Policyholder Actions. After the NYAG filed its complaint against insurance broker Marsh, policyholders brought multiple federal antitrust and Racketeer Influenced and Corrupt Organizations Act (RICO) class actions in jurisdictions across the nation against insurers and brokers, including AIG and a number of its subsidiaries, alleging that the insurers and brokers engaged in a broad conspiracy to allocate customers, steer business, and rig bids. These actions,

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)*

6. Commitments, Contingencies and Guarantees *(continued)*

including 24 complaints filed in different federal courts naming AIG or an AIG subsidiary as a defendant, were consolidated by the judicial panel on multi-district litigation and transferred to the United States District Court for the District of New Jersey for coordinated pretrial proceedings. The consolidated actions have proceeded in that court in two parallel actions, *In re Insurance Brokerage Antitrust Litigation* (the *Commercial Complaint*) and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the *Employee Benefits Complaint*), and, together with the *Commercial Complaint*, the multi-district litigation).

The plaintiffs in the *Commercial Complaint* are a group of corporations, individuals and public entities that contracted with the broker defendants for the provision of insurance brokerage services for a variety of insurance needs. The broker defendants are alleged to have placed insurance coverage on the plaintiffs' behalf with a number of insurance companies named as defendants, including AIG subsidiaries. The *Commercial Complaint* also named various brokers and other insurers as defendants (two of which have since settled). The *Commercial Complaint* alleges, among other things, that defendants engaged in a widespread conspiracy to allocate customers through "bid-rigging" and "steering" practices. Plaintiffs assert that the defendants violated the Sherman Antitrust Act, RICO, and the antitrust laws of 48 states and the District of Columbia, and are liable under common law breach of fiduciary duty and unjust enrichment theories. Plaintiffs seek treble damages plus interest and attorneys' fees as a result of the alleged RICO and Sherman Antitrust Act violations.

The plaintiffs in the *Employee Benefits Complaint* are a group of individual employees and corporate and municipal employers alleging claims on behalf of two separate nationwide purported classes: an employee class and an employer class that acquired insurance products from the defendants from August 26, 1994 to the date of any class certification. The *Employee Benefits Complaint* names AIG, as well as various other brokers and insurers, as defendants. The activities alleged in the *Employee Benefits Complaint*, with certain exceptions, track the allegations made in the *Commercial Complaint*.

The Court in connection with the *Commercial Complaint* granted (without leave to amend) defendants' motions to dismiss the federal antitrust and RICO claims on August 31, 2007 and September 28, 2007, respectively. The court declined to exercise supplemental jurisdiction over the state law claims in the *Commercial Complaint* and therefore dismissed it in its entirety. On January 14, 2008, the court granted defendants' motion for summary judgment on the

ERISA claims in the *Employee Benefits Complaint* and subsequently dismissed the remaining state law claims without prejudice, thereby dismissing the *Employee Benefits Complaint* in its entirety. On February 12, 2008, plaintiffs filed a notice of appeal to the United States Court of Appeals for the Third Circuit with respect to the dismissal of the *Employee Benefits Complaint*. Plaintiffs previously appealed the dismissal of the *Commercial Complaint* to the United States Court of Appeals for the Third Circuit on October 10, 2007. On February 19, 2008, appellants filed their appeal brief with the Third Circuit with respect to the *Commercial Complaint*, and appellees filed their brief on April 7, 2008. Oral argument has not yet been scheduled in that appeal.

A number of complaints making allegations similar to those in the multi-district litigation have been filed against AIG and other defendants in state and federal courts around the country. The defendants have thus far been successful in having the federal actions transferred to the District of New Jersey and consolidated into the multi-district litigation. These additional consolidated actions are still pending in the District Court, but are currently stayed pending a decision by the court on whether they will proceed during the appeal of the dismissal of the multi-district litigation. The AIG defendants have also sought to have state court actions making similar allegations stayed pending resolution of the multi-district litigation proceeding. These efforts have generally been successful, although plaintiffs in one case pending in Texas state court have moved to re-open discovery; a hearing on that motion was held on April 9, 2008 at which the court deferred ruling on the motion until defendants file their Special Exceptions. Using amounts from the Excess Casualty Fund described above, AIG has recently settled several of the various federal and state actions alleging claims similar to those in the multi-district litigation, including a state court action pending in Florida in which discovery had been allowed to proceed.

Ohio Attorney General Action. On August 24, 2007, the Ohio Attorney General filed a complaint in the Ohio Court of Common Pleas against AIG and a number of its subsidiaries, as well as several other broker and insurer defendants, asserting violation of Ohio's antitrust laws. The complaint, which is similar to the *Commercial Complaint*, alleges that AIG and the other broker and insurer defendants conspired to allocate customers, divide markets, and restrain competition in commercial lines of casualty insurance sold through the broker defendant. The complaint seeks treble damages on behalf of Ohio public purchasers of commercial casualty insurance, disgorgement on behalf of both public and private purchasers of commercial casualty insurance, as well as a \$500 per day penalty for each day of conspiratorial conduct. AIG, along with other co-defendants, moved to dismiss the complaint on November 16, 2007. Discovery is

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

stayed in the case pending a ruling on the motion to dismiss or until May 15, 2008, whichever occurs first.

Workers' Compensation Litigation. On May 24, 2007, the National Workers Compensation Reinsurance Pool (the NWCRP), on behalf of its participant members, filed a lawsuit in the United States District Court for the Northern District of Illinois against AIG with respect to the underpayment by AIG of its residual market assessments for workers compensation. The complaint alleges claims for violations of RICO, breach of contract, fraud and related state law claims arising out of AIG's alleged underpayment of these assessments between 1970 and the present and seeks damages purportedly in excess of \$1 billion. On August 6, 2007, the court denied AIG's motion seeking to dismiss or stay the complaint or, in the alternative, to transfer to the Southern District of New York. On December 26, 2007, the court denied AIG's motion to dismiss the complaint. AIG filed its answer on January 22, 2008. On March 17, 2008, AIG filed an amended answer, counterclaims and third-party claims against NCCI (in its capacity as attorney-in-fact for the NWCRP), the NWCRP, its board members, and certain of the other insurance companies that are members of the NWCRP. The counterclaims and third-party claims allege violations of RICO, as well as claims for conspiracy, fraud, and other state law claims. On April 3, 2008, the court entered an order staying discovery through June 17, 2008.

In addition, a similar lawsuit was filed by the Minnesota Workers Compensation Reinsurance Association and the Minnesota Workers Compensation Insurers Association in the United States District Court for the District of Minnesota. On August 6, 2007, AIG moved to dismiss the complaint. On March 28, 2008, the court granted that motion and dismissed the case in its entirety. On April 25, 2008, plaintiffs filed a notice of appeal of the dismissal with the United States Court of Appeals for the Eighth Circuit. On the same day, plaintiffs filed a new complaint making similar allegations in Minnesota state court. A purported class action was also filed in the United States District Court for the District of South Carolina on January 25, 2008 against AIG and certain of its subsidiaries, on behalf of a class of employers that obtained workers' compensation insurance from AIG companies and allegedly paid inflated premiums as a result of AIG's alleged underreporting of workers' compensation premiums. An amended complaint in the South Carolina action was filed on March 24, 2008, and AIG filed a motion to dismiss the amended complaint on April 21, 2008.

SICO. In July, 2005, SICO filed a complaint against AIG in the Southern District of New York, claiming that AIG had refused to provide SICO access to certain artwork and

asked the court to order AIG immediately to release the property to SICO. AIG filed an answer denying SICO's allegations and setting forth defenses to SICO's claims. In addition, AIG filed counterclaims asserting breach of contract, unjust enrichment, conversion, breach of fiduciary duty, a constructive trust and declaratory judgment, relating to SICO's breach of its commitment to use its AIG shares only for the benefit of AIG and AIG employees. Fact and expert discovery has been concluded and SICO's motion for summary judgment is pending.

Starr Foundation. On May 7, 2008, the Starr Foundation filed a complaint in New York State Supreme Court against AIG, Martin Sullivan and Steven Bensinger, asserting a claim for common law fraud. The Starr Foundation is a not-for-profit corporation that holds approximately 15.4 million shares of AIG stock, and was created by AIG's founder, Cornelius Vander Starr. The complaint alleges that the defendants made materially misleading statements and omissions concerning alleged multi-billion dollar losses in AIG's portfolio of credit default swaps. The complaint asserts that if the Starr Foundation had known the truth about the alleged losses, it would have sold its remaining shares of AIG stock. The complaint alleges that the Starr Foundation has suffered damages of at least \$300 million.

Regulatory Investigations. Various federal, state and foreign regulatory and governmental agencies are reviewing certain public disclosures, transactions and practices of AIG and its subsidiaries in connection with industry wide and other inquiries. AIG has cooperated, and will continue to cooperate, in producing documents and other information in response to subpoenas and other requests. During 2006, the Settlement Review Working Group of the National Association of Insurance Commissioners (NAIC), under the direction of Indiana, Minnesota and Rhode Island, began an investigation into the underreporting of workers' compensation premiums. In late 2007, the Settlement Review Working Group recommended that a multi-state targeted market conduct examination focusing on workers' compensation insurance be commenced under the direction of the NAIC's Market Analysis Working Group. AIG was informed of the multi-state targeted market conduct examination in January of 2008. AIG has been advised that the lead states in the multi-state examination are Delaware, Florida, Indiana, Massachusetts, Minnesota, Pennsylvania and Rhode Island and that all other states (and the District of Columbia) have agreed to participate with the exception of New York, Ohio and Nevada. AIG has also been advised that the examination will focus on both legacy issues and AIG's current compliance with legal requirements applicable to AIG's writing and reporting of workers' compensation insurance. Although AIG has been advised by counsel engaged by the lead states to assist in their investigation, to date no determinations have been made with

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

respect to these issues. AIG cannot predict the outcome of the investigation and there can be no assurance that any regulatory action resulting from the investigation will not have a material adverse effect on AIG's consolidated results of operations for an individual reporting period as well as on the ongoing operations of certain of AIG's businesses.

Wells Notices. AIG understands that some of its employees have received Wells notices in connection with previously disclosed SEC investigations of certain of AIG's transactions or accounting practices. Under SEC procedures, a Wells notice is an indication that the SEC staff has made a preliminary decision to recommend enforcement action that provides recipients with an opportunity to respond to the SEC staff before a formal recommendation is finalized. It is possible that additional current and former employees could receive similar notices in the future as the regulatory investigations proceed.

Effect on AIG

In the opinion of AIG management, AIG's ultimate liability for the unresolved litigation and investigation matters referred to above is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

(b) Commitments**Flight Equipment**

At March 31, 2008, ILFC had committed to purchase 211 new aircraft deliverable from 2008 through 2017 at an estimated aggregate purchase price of \$18.8 billion. ILFC will be required to find customers for any aircraft acquired, and it must arrange financing for portions of the purchase price of such equipment.

ILFC ordered 74 Boeing 787 aircraft with the first ten originally scheduled to be delivered in 2010. Boeing has made several announcements concerning the delays in the deliveries of the 787s. Boeing has informed ILFC that its 787 deliveries will be delayed by an average in excess of 27 months per aircraft and span across ILFC's entire order, with the original contracted deliveries running from 2010 through 2017.

Other Commitments

In the normal course of business, AIG enters into commitments to invest in limited partnerships, private equities, hedge funds and mutual funds and to purchase and develop real estate in the U.S. and abroad. These commitments totaled \$8.5 billion at March 31, 2008.

On June 27, 2005, AIG entered into an agreement pursuant to which AIG agreed, subject to certain conditions, to make any payment that is not promptly paid with respect to the benefits accrued by certain employees of AIG and its subsidiaries under the SICO Plans (as discussed in the 2007 Annual Report on Form 10-K).

(c) Contingencies

Loss Reserves. Although AIG regularly reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, directors and officers liability (D&O), professional liability, medical malpractice, workers' compensation, general liability, products liability and related classes, as well as for asbestos and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss cost trends or loss development factors could be attributable to changes in inflation, in labor and material costs or in the judicial environment, or in other social or economic phenomena affecting claims.

Benefits Provided by Starr International Company, Inc. and C.V. Starr & Co., Inc. SICO has provided a series of two-year Deferred Compensation Profit Participation Plans (SICO Plans) to certain AIG employees. The SICO Plans were created in 1975 when the voting shareholders and Board of Directors of SICO, a private holding company whose principal asset is AIG common stock, decided that a portion of the capital value of SICO should be used to provide an incentive plan for the current and succeeding managements of all American International companies, including AIG.

None of the costs of the various benefits provided under the SICO Plans has been paid by AIG, although AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts considered to be contributed by SICO. The SICO Plans provide that shares currently owned by SICO are

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***6. Commitments, Contingencies and Guarantees** *(continued)*

set aside by SICO for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's voluntary termination of employment with AIG prior to normal retirement age. Under the SICO Plans, SICO's Board of Directors may elect to pay a participant cash in lieu of shares of AIG common stock. Following notification from SICO to participants in the SICO Plans that it will settle specific future awards under the SICO Plans with shares rather than cash, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. AIG gave effect to this change in settlement method beginning on December 9, 2005, the date of SICO's notice to participants in the SICO Plans.

(d) Guarantees

AIG and certain of its subsidiaries become parties to derivative financial instruments with market risk resulting from

both dealer and end-user activities and to reduce currency, interest rate, equity and commodity exposures. These instruments are carried at their estimated fair values in the consolidated balance sheet. The majority of AIG's derivative activity is transacted by AIGFP. See Note 8 to the 2007 Annual Report on Form 10-K.

AIG has issued unconditional guarantees with respect to the prompt payment, when due, of all present and future payment obligations and liabilities of AIGFP arising from transactions entered into by AIGFP.

SAI Deferred Compensation Holdings, Inc., a wholly owned subsidiary of AIG, has established a deferred compensation plan for registered representatives of certain AIG subsidiaries, pursuant to which participants have the opportunity to invest deferred commissions and fees on a notional basis. The value of the deferred compensation fluctuates with the value of the deferred investment alternatives chosen. AIG has provided a full and unconditional guarantee of the obligations of SAI Deferred Compensation Holdings, Inc. to pay the deferred compensation under the plan.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**7. Employee Benefits**

The components of the net periodic benefit costs with respect to pensions and other postretirement benefits were as follows:

(in millions)	Pensions			Postretirement		
	Non-U.S. Plans	U.S. Plans	Total	Non-U.S. Plans	U.S. Plans	Total

8. Federal Income Taxes**Interim Period Tax Assumptions and Effective Tax Rates**

AIG's interim period tax expense or benefit is measured using an estimated annual effective tax rate. To the extent that a portion of AIG's annual pretax income or loss cannot be reliably estimated, the actual tax expense or benefit applicable to that income or loss is reported in the interim period in which the related income or loss is reported. AIG is unable to reliably estimate other-than-temporary impairments and the operating results of AIGFP. Therefore, the related tax effects calculated at the statutory tax rate of 35 percent are reported as discrete adjustments to the estimated annual effective tax rate that AIG applies to all other pretax income.

The effective tax rate on pre-tax income for the year ended December 31, 2007 was 16.3 percent. The effective rate was low due to the unrealized market valuation losses on AIGFP's super senior credit default swap portfolio and other-than-temporary impairment charges. The effective tax rate on the pre-tax loss for the first three months of 2008 was 31.4 percent. The effective rate was lower than the statutory rate of 35 percent due primarily to \$703 million of tax charges for the first three months of 2008, comprised of increases in the reserves for uncertain tax positions and other discrete period items.

Tax Filings and Examinations

On April 3, 2008, AIG filed a refund claim for tax years 1997 through 2004. The refund claim relates to the tax effect of the restatement of AIG's 2004 and prior financial statements.

On March 20, 2008, AIG received a Statutory Notice of Deficiency (the Notice) from the United States Internal Revenue Service (IRS) asserting liability for additional taxes for the 1997 through 1999 tax years. The Notice asserted that AIG owes additional taxes of \$329 million, including penalties, and focuses principally on two issues: the timing of deductions and the disallowance of foreign tax credits associated with cross border financing transactions. The transactions that are the subject of the Notice (the Affected Transactions) extend beyond the period covered by the Notice, and it is likely that the IRS will seek to challenge those later periods. It is also possible that the IRS will consider other transactions to be similar to the Affected Transactions. AIG disagrees with the Notice and plans to contest the IRS' assertions. AIG believes that it is adequately reserved for any liability that could result from the IRS actions.

In April 2008, two separate court decisions were rendered relating to certain "lease-in, lease-out" transactions, which were adverse to the taxpayers. In accordance with FIN 48, AIG will evaluate in the second quarter of 2008 the effect of these decisions on lease transactions of AIG subsidi-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***8. Federal Income Taxes** *(continued)*

aries. Any resulting adjustment is not expected to be material to AIG's consolidated results of operations or its consolidated financial condition.

FIN 48

As of March 31, 2008 and December 31, 2007, AIG's unrecognized tax benefits, excluding interest and penalties, were \$2.5 billion and \$1.3 billion, respectively. The increase during the period is attributable to foreign tax credits associated with cross border financing transactions and to income and expense allocations across jurisdictions. As of March 31, 2008 and December 31, 2007, AIG's unrecognized tax benefits included \$923 million and \$299 million, respectively, related to tax positions the disallowance of which would not affect the effective tax rate. The increase during the period is attributable to U.S. deferred taxes associated with income and expense allocations across jurisdictions. Accordingly, as

of March 31, 2008 and December 31, 2007, the amount of unrecognized tax benefits that, if recognized, would favorably affect the effective tax rate were \$1.5 billion and \$1.0 billion, respectively.

Interest and penalties related to unrecognized tax benefits are recognized in income tax expense. At March 31, 2008, AIG had accrued \$351 million, for the payment of interest (net of the federal benefit) and penalties.

AIG continually evaluates proposed adjustments by taxing authorities. At March 31, 2008, such proposed adjustments would not result in a material change to AIG's consolidated financial condition, although it is possible that the effect could be material to AIG's consolidated results of operations for an individual reporting period. Although it is reasonably possible that a significant change in the balance of unrecognized tax benefits may occur within the next twelve months, at this time it is not possible to estimate the range of the change due to the uncertainty of the potential outcomes.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**9. Information Provided in Connection
with Outstanding Debt**

The following condensed consolidating financial statements reflect the following:

- **AIG Life Holdings (US), Inc. (AIGLH)**, formerly known as American General Corporation, is a holding company and a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all outstanding debt of AIGLH.
- **AIG Liquidity Corp.** is a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all obligations of AIG Liquidity Corp.
- **AIG Program Funding, Inc.** is a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all obligations of AIG Program Funding, Inc., which was established in 2007.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***10. Cash Flows**

AIG has made certain revisions to the Consolidated Statement of Cash Flows, primarily relating to the effect of reclassifying certain policyholders' account balances, the elimination of certain intercompany balances and revisions related to separate account assets. Accordingly, AIG revised the previous periods presented to conform to the revised presentation. There was no effect on ending cash balances.

The revisions and their effect on the Consolidated Statement of Cash Flows for the three months ended March 31, 2007 were as follows:

<i>(in millions)</i>	Originally Reported March 31, 2007	Revisions	As Revised
Cash flows from operating activities	\$ 8,633	\$ 1,297	\$ 9,930
Cash flows from investing activities	(16,863)	(1,161)	(18,024)
Cash flows from financing activities	8,352	(136)	8,216

ITEM 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

Management's Discussion and Analysis of Financial Condition and Results of Operations is designed to provide the reader a narrative with respect to AIG's operations, financial condition and liquidity and certain other significant matters.

Cautionary Statement Regarding Projections and Other Information About Future Events

This Quarterly Report on Form 10-Q and other publicly available documents may include, and AIG's officers and representatives may from time to time make, projections concerning financial information and statements concerning future economic performance and events, plans and objectives relating to management, operations, products and services, and assumptions underlying these projections and statements. These projections and statements are not historical facts but instead represent only AIG's belief regarding future events, many of which, by their nature, are inherently uncertain and outside AIG's control. These projections and statements may address, among other things, the status and potential future outcome of the current regulatory and civil proceedings against AIG and their potential effect on AIG's businesses, financial condition, results of operations, cash flows and liquidity, AIG's exposures to subprime mortgages, monoline insurers and the residential real estate market and AIG's strategy for growth, product development, market position, financial results and reserves. It is possible that AIG's actual results and financial condition may differ, possibly materially, from the anticipated results and financial condition indicated in these projections and statements. Factors that could cause AIG's actual results to differ, possibly materially, from those in the specific projections and statements are discussed in Outlook and throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations and in Item 1A. Risk Factors of AIG's Annual Report on Form 10-K for the year ended December 31, 2007 (2007 Annual Report on Form 10-K). AIG is not under any obligation (and expressly disclaims any such obligations) to update or alter any projection or other statement, whether written or oral, that may be made from time to time, whether as a result of new information, future events or otherwise.

In addition to reviewing AIG's results for the first three months of 2008, this Management's Discussion and Analysis of Financial Condition and Results of Operations supplements and updates the information and discussion included in the 2007 Annual Report on Form 10-K. Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG presents its operations in the way it believes will be most meaningful. Statutory loss ratios and combined ratios are presented in accordance with accounting principles prescribed by insurance regulatory authorities because these are standard measures of performance filed with insurance regulatory authorities and used for analysis in the insurance industry and thus allow more meaningful comparisons with AIG's insurance competitors. AIG also uses cross-references to additional information included in this Quarterly Report on Form 10-Q and in the 2007 Annual Report on Form 10-K to assist readers seeking related information on a particular subject.

Overview of Operations and Business Results

AIG identifies its reportable segments by product line, consistent with its management structure. These segments are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management. Through these operating segments, AIG provides insurance, financial and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. This geographic, product and service diversification is one of AIG's major strengths and sets it apart from its competitors. AIG's Other category consists of items not allocated to AIG's operating segments.

AIG's subsidiaries serve commercial, institutional and individual customers through an extensive property-casualty and life insurance and retirement services network. In the United States, AIG companies are the largest underwriters of commercial and industrial insurance and are among the largest life insurance and retirement services operations as well. AIG's Financial Services businesses include commercial aircraft and equipment leasing, capital markets operations and consumer finance, both in the United States and abroad. AIG also provides asset management services to institutions and individuals. As part of its Spread-Based Investment activities, and to finance its operations, AIG issues various debt instruments in the public and private markets.

Outlook

The following paragraphs supplement and update the information and discussion included in Management's Discussion and Analysis of Financial Condition and Results of Operations — Outlook in the 2007 Annual Report on Form 10-K to reflect developments in or affecting AIG's business to date during 2008. These paragraphs also

supplement and update Item 1A. Risk Factors in the 2007 Annual Report on Form 10-K.

General Trends

In mid-2007, the U.S. residential mortgage market began to experience serious disruption due to credit quality deterioration in a significant portion of loans originated, particularly to non-prime and subprime borrowers; evolving changes in the regulatory environment; a slower residential housing market; increased cost of borrowings for mortgage participants; and illiquid credit markets. The conditions continued and worsened throughout 2007 and the first quarter of 2008, expanding into the broader U.S. credit markets and resulting in greater volatility, less liquidity, widening of credit spreads, a lack of price transparency and increased credit losses in certain markets.

AIG participates in the U.S. residential mortgage market in several ways: American General Finance, Inc. (AGF) originates principally first-lien mortgage loans and to a lesser extent second-lien mortgage loans to buyers and owners of residential housing; United Guaranty Corporation (UGC) provides first loss mortgage guaranty insurance for high loan-to-value first- and second-lien residential mortgages; AIG insurance and financial services subsidiaries invest in mortgage-backed securities and collateralized debt obligations (CDOs), in which the underlying collateral is composed in whole or in part of residential mortgage loans; and AIG Financial Products Corp. and AIG Trading Group Inc. and their respective subsidiaries (collectively, AIGFP) provides credit protection through credit default swaps on certain super senior tranches of CDOs, a significant majority of which have AAA underlying or subordinate layers.

Continuing disruption in the U.S. residential mortgage and other credit markets may also increase claim activity in the financial institution segment of AIG's directors and officers liability (D&O) and professional liability classes of business. However, based on its review of information currently available, AIG believes overall loss activity for the broader D&O and professional liability classes is likely to remain within or near the levels observed during the last several years, which include losses related to stock options backdating as well as to the U.S. residential mortgage market.

The operating results of AIG's consumer finance and mortgage guaranty operations in the United States have been and are likely to continue to be adversely affected by the factors referred to above. The downward cycle in the U.S. housing market is not expected to improve until residential inventories return to a more normal level and the mortgage credit market stabilizes. The duration and severity of the downward cycle could be further negatively affected in the event of an economic recession. AIG expects that this downward cycle will continue to adversely affect UGC's operating results for the foreseeable future and will result in a

significant operating loss for UGC in 2008 and possibly beyond. AIG also incurred substantial unrealized market valuation losses on AIGFP's super senior credit default swap portfolio and substantial other-than-temporary impairment charges on AIG's available for sale securities in the first quarter of 2008 and fourth quarter of 2007. The results from AIG's operations with exposure to the U.S. residential mortgage market will be highly dependent on future market conditions. Continuing market deterioration will cause AIG to report additional unrealized market valuation losses and impairment charges.

The ongoing effect of the downward cycle in the U.S. housing market on AIG's consolidated financial condition could be material if the market disruption continues to expand beyond the residential mortgage markets, although AIG seeks to mitigate the risks to its business by disciplined underwriting and active risk management.

Credit ratings are important to AIG's business, results of operations and liquidity. Downgrades in AIG's credit ratings could increase AIG's borrowing costs and could adversely affect its competitive position and liquidity. With respect to AIG's liquidity, it is estimated that, as of the close of business on April 30, 2008, based on AIGFP's outstanding municipal guaranteed investment agreements (GIAs) and financial derivative transactions at that date, a downgrade of AIG's longer-term senior debt ratings to 'Aa3' by Moody's Investors Service (Moody's) or 'AA-' by Standard & Poor's, a division of the McGraw-Hill Companies (S&P) would permit counterparties to call for approximately \$1.8 billion of collateral, while a downgrade to 'A1' by Moody's or A+ by S&P would permit counterparties to call for approximately \$9.8 billion of additional collateral. Further downgrades could result in requirements for substantial additional collateral, which could have a material adverse effect on how AIGFP manages its liquidity. The actual amount of collateral that AIGFP would be required to post to counterparties in the event of such downgrades depends on market conditions, the fair value of outstanding affected transactions and other factors prevailing at the time of the downgrade. Additional obligations to post collateral would increase the demands on AIGFP's liquidity.

Globally, heightened regulatory scrutiny of financial services companies in many jurisdictions has the potential to affect future financial results through higher compliance costs. This is particularly true in the United States, where federal and state authorities have commenced various investigations of the financial services industry, and in Japan and Southeast Asia, where financial institutions have received remediation orders affecting consumer and policyholder rights.

Capital Resources

In light of the ongoing significant effects the disruption in the U.S. housing and credit markets is having on AIG's results, AIG is planning to raise additional capital to fortify its balance sheet and increase financial flexibility.

General Insurance

The commercial property and casualty insurance industry has historically experienced cycles of price erosion followed by rate strengthening as a result of catastrophes or other significant losses that affect the overall capacity of the industry to provide coverage. As premium rates decline, AIG will generally experience higher current accident year loss ratios, as the written premiums are earned, and higher expense ratios if written premiums decline more quickly than expenses. Despite industry price erosion in commercial lines, AIG expects to continue to identify profitable opportunities and build attractive new general insurance businesses as a result of AIG's broad product line and extensive distribution networks in the United States and abroad.

Workers' compensation remains under considerable pricing pressure, as statutory rates continue to decline. Rates for most casualty lines of insurance continue to decline due to competitive pressures, particularly for aviation, excess casualty and D&O exposures. Rates for commercial property lines are also declining following another year of relatively low catastrophe losses. Further price erosion is expected during the remainder of 2008 for the commercial lines; AIG seeks to mitigate the decline by constantly seeking out profitable opportunities across its diverse product lines and distribution networks while maintaining a commitment to underwriting discipline. There can be no assurance that price erosion will not become more widespread or that AIG's profitability will not deteriorate from current levels in major commercial lines.

The personal lines market has softened considerably and further deterioration in underwriting results is expected to continue through 2009. A generally weakening economy and increasing loss trends are contributing factors. AIG is filing for rate increases and tightening underwriting guidelines where necessary in response to the changing market conditions.

Life Insurance & Retirement Services

Disruption in the U.S. residential mortgage and credit markets had a significant adverse effect on Life Insurance & Retirement Services operating results, specifically its net investment income and net realized capital losses in 2007 and the first three months of 2008, and AIG expects that this disruption will continue to be a key factor in the remainder of 2008 and beyond, especially in its U.S.-based operations. The volatility in operating results will be further magnified by the

continuing market shift to variable products with living benefits.

In response to the market disruption, AIG, including Domestic Life and Domestic Retirement Services, has been increasing its liquidity position and investing in shorter duration investments. While prudent in the current environment, such actions will reduce overall investment yields.

Recent capital markets volatility has put pressure on credit lenders resulting in increased costs for premium financing, which could affect future sales of products where such financing is used, primarily in large universal life policies in Domestic Life Insurance.

The U.S. dollar has significantly weakened against many currencies, resulting in a favorable effect on operating results due to the translation of foreign currencies to the U.S. dollar. However, the weakened dollar has an unfavorable effect on other-than-temporary impairments in Foreign Life Insurance & Retirement Services and will continue to affect operating results throughout 2008.

An additional capital contribution to operations in Taiwan is planned for the second quarter of 2008 in order to meet the needs of this growing business and increased risk-based capital requirements. The amount of the additional capital contribution is expected to be approximately \$400 million.

Financial Services

AIG exercises significant judgment in the valuation of its various credit default swap portfolios. AIG uses pricing models and other methodologies to value these portfolios that take into account, where applicable, and to the extent possible, third-party prices, pricing matrices, the movement of indices (such as the CDX and iTraxx), collateral calls and other observable market data. There is no uniform methodology used by market participants in valuing these types of portfolios. AIG believes that the assumptions and judgments it makes are reasonable and lead to an overall methodology that is reasonable, but other market participants may use other methodologies, including, among other things, models, indices and selection of third-party pricing sources, that are based upon different assumptions and judgments, and these methodologies may generate materially different values. AIG regularly updates and analyzes the appropriateness of its valuation methodologies. Updates to or changes in AIG's methodologies or assumptions may materially change AIG's estimates of the value of its credit default swap portfolios.

For additional information regarding AIG's methodology, models and assumptions with respect to the valuation and credit-based analyses of the AIGFP super senior credit default swap portfolio see Critical Accounting

Estimates — Fair Value Measurements of Certain Financial Assets and Liabilities — AIGFP's Super Senior Credit Default Swap Portfolio, and — Valuation of Level 3 Assets and Liabilities — Super senior credit default swap portfolio. Also refer to Risk Management — Credit Derivatives.

The ongoing disruption in the U.S. residential mortgage and credit markets and the downgrades of residential mortgage-backed securities and CDO securities by rating agencies continue to adversely affect the fair value of the super senior credit default swap portfolio written by AIGFP. AIG expects that continuing limitations on the availability of market observable data will affect AIG's determinations of the fair value of these derivatives, including by preventing AIG, for the foreseeable future, from recognizing the beneficial effect of the differential between credit spreads used to price a credit default swap and spreads implied from prices of the CDO bonds referenced by such swap. The fair value of these derivatives is expected to continue to fluctuate, perhaps materially, in response to changing market conditions, and AIG's estimates of the value of AIGFP's super senior credit derivative portfolio at future dates could therefore be materially different from current estimates. Further declines in the fair values of these derivatives may require AIGFP to post additional collateral which may be material to AIGFP's financial condition.

Under the terms of most of these credit derivatives, losses to AIG would generally result from the credit impairment of the referenced CDO bonds that AIG would acquire in satisfying its swap obligations. Based upon its most current analyses, AIG believes that any credit impairment losses which may emerge over time at AIGFP will not be material to AIG's consolidated financial condition, but could be material to the manner in which AIG manages its liquidity. In making this assessment, AIG uses a credit-based analysis to estimate potential realized credit impairment losses from AIGFP's super senior credit default swap portfolio. This analysis makes various assumptions as to estimates of future stresses on the portfolio resulting from further downgrades by the rating agencies of the CDO collateral. In addition, during the first quarter of 2008, AIG introduced another methodology called a roll rate analysis. This methodology rolls forward current and estimated future delinquencies and defaults in underlying mortgages in the CDO collateral pools to estimate potential losses in the CDOs. Due to the dislocation in the market for CDO collateral, AIG does not use the market values of the underlying CDO collateral in estimating its potential realized credit impairment losses. The use of factors derived from market-observable prices in models used to determine the estimates for future realized credit impairment losses would result in materially higher estimates of realized credit impairment losses. AIG's credit-based analyses estimate potential realized credit impairment pre-tax losses at

approximately \$1.2 billion to approximately \$2.4 billion. Other types of analyses or models could result in materially different estimates. AIG is aware that other market participants have used different assumptions and methodologies to estimate the potential realized credit impairment losses on AIGFP's super senior credit default swap portfolio, resulting in a significantly higher estimate than that resulting from AIG's credit-based analysis. For example, a third-party analysis provided to AIG, that AIG understands uses credit and market value inputs, estimates the potential realized pre-tax losses on AIGFP's super senior credit default swap portfolio at between approximately \$9 billion and approximately \$11 billion. (AIG expresses no view as to the reasonableness of this third-party estimate and does not intend to seek an update of this estimate.) There can be no assurance that AIG's estimate will not change or that the ultimate realized losses on AIGFP's super senior credit default swap portfolio will not exceed any current estimates.

Approximately \$335 billion of the \$469 billion in notional exposure on AIGFP's super senior credit default swap portfolio as of March 31, 2008 was written to facilitate regulatory capital relief for financial institutions primarily in Europe. AIG expects that the majority of these transactions will be terminated within the next 12 to 24 months by AIGFP's counterparties as they implement models compliant with the new Basel II Accord. As of April 30, 2008, \$55 billion in notional exposures have either been terminated or are in the process of being terminated at the request of counterparties. In its 2007 Annual Report on Form 10-K, AIG had previously reported that as of February 26, 2008, \$54 billion in notional exposures have either been terminated or are in the process of being terminated. AIG has recently refined its approach to estimating its net notional exposures on certain of these transactions that have unique features. The notional exposures on transactions terminated or that were in the process of being terminated as of February 26, 2008 is \$46 billion under the refined method. AIGFP was not required to make any payments as part of these terminations and in certain cases was paid a fee upon termination.

Consolidated Results

AIG's consolidated revenues, income (loss) before income taxes, minority interest and net income (loss) were as follows:

(in millions)	Three Months Ended		Percentage Increase/Decrease
	March 31, 2008	2007	
Total revenues	\$ 14,031	\$30,645	(54)%
Income (loss) before income taxes and minority interest	(11,264)	6,172	—
Net income (loss)	\$ (7,805)	\$ 4,130	—%

AIG's consolidated revenues decreased in the three months ended March 31, 2008 compared to the same period in 2007 due to an unrealized market valuation loss of \$9.1 billion on AIGFP's super senior credit default swap portfolio recorded in other income, higher net realized capital losses and a decline in net investment income, which more than

In light of this experience to date and after other comprehensive analyses, AIG determined that there was no unrealized market valuation adjustment to be recognized for this regulatory capital relief portfolio for the three months ended March 31, 2008. AIG will continue to assess the valuation of this portfolio and monitor developments in the marketplace. Given the significant deterioration in the global credit markets and the risk that AIGFP's expectations with respect to the termination of these transactions by its counterparties may not materialize, there can be no assurance that AIG will not recognize unrealized market valuation losses from this portfolio in future periods, and recognition of even a small percentage decline in the fair value of this portfolio could be material to an individual reporting period. These transactions contributed approximately \$89 million to AIGFP's revenues in the three-months ended March 31, 2008. If AIGFP is not successful in replacing the revenues generated by these transactions, AIGFP's operating results could be materially adversely affected.

Approximately \$57 billion of the \$469 billion in notional exposure on AIGFP's super senior credit default swaps as of March 31, 2008 was written on investment grade corporate debt and CLOs. There is no uniform methodology to estimate the fair value of corporate super senior credit default swaps. AIG estimates the fair value of its corporate credit default swap portfolio by reference to benchmark indices, including the CDX and iTraxx, and third-party prices and collateral calls. AIG believes that its methodology to value the corporate credit default swap portfolio is reasonable, but other market participants use other methodologies and these methodologies may generate materially different fair value estimates. No assurance can be given that the fair value of AIG's corporate credit default swap portfolio would not change materially if other market indices or pricing sources were used to estimate the fair value of the portfolio.

For a description of important factors that may affect the operations and initiatives described above, see Item 1A. Risk Factors in the 2007 Annual Report on Form 10-K.

offset growth in premiums and other considerations in the Life Insurance & Retirement Services segment. Net realized capital losses of \$6.1 billion in the three months ended March 31, 2008 included other-than-temporary impairment charges of \$5.6 billion, primarily related to the significant disruption in the residential mortgage and credit markets and investment-

related losses of \$779 million where AIG lacks the intent to hold the investments to recovery. Total other-than-temporary impairment charges in the three months ended March 31, 2007 were \$467 million. See Invested Assets — Portfolio Review — Other-than-temporary impairments herein. The decline in net investment income reflects lower returns from partnerships, hedge funds and mutual funds as well as lower policyholder trading gains in Life Insurance & Retirement Services. Policyholder trading gains are offset by a charge to incurred policy losses and benefits expense.

Income (loss) before income taxes and minority interest declined in the three months ended March 31, 2008 due primarily to the losses described above.

Segment Results

The following table summarizes the operations of each principal segment. (See also Note 2 to Consolidated Financial Statements.)

Operating Segments (in millions)	Three Months Ended March 31,		Percentage Increase/ (Decrease)
	2008	2007	
Total revenues ^(a) :			
General Insurance	\$ 12,289	\$12,903	(5)%
Life Insurance & Retirement Services ^(b)	8,752	13,682	(36)
Financial Services ^{(c)(d)}	(6,560)	2,201	—
Asset Management ^(e)	(149)	1,669	—
Other	(128)	131	—
Consolidation and eliminations	(173)	59	—
Total	\$ 14,031	\$30,645	(54)%
Operating income (loss) ^(a) :			
General Insurance	\$ 1,337	\$ 3,096	(57)%
Life Insurance & Retirement Services ^(b)	(1,831)	2,281	—
Financial Services ^{(c)(d)}	(8,772)	292	—
Asset Management ^(e)	(1,251)	758	—
Other	(768)	(470)	—
Consolidation and eliminations	21	215	(90)
Total	\$(11,264)	\$ 6,172	—%

(a) For the three-month periods ended March 31, 2008 and 2007, includes other-than-temporary impairment charges of \$5.6 billion and \$467 million, respectively. Also includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under Statement of Financial Accounting Standards (FAS) No. 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133), including the related foreign exchange gains and losses. For the three-month periods ended March 31, 2008 and 2007, the effect was \$(748) million and \$(452) million, respectively, in both revenues and operating income (loss). These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings.

(b) For the three-month periods ended March 31, 2008 and 2007, includes other-than-temporary impairment charges of \$4.4 billion and \$392 million, respectively.

(c) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended March 31, 2008 and 2007, the effect was \$(204) million and \$(160) million, respectively, in both revenues and operating income (loss). These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings.

(d) For the three-month period ended March 31, 2008, both revenues and operating income (loss) include an unrealized market valuation loss of \$9.1 billion on AIGFP's super senior credit default swap portfolio.

(e) Includes net realized capital losses of \$1.4 billion for the three-month period ended March 31, 2008, including other-than-temporary impairment charges of \$1.0 billion.

General Insurance

AIG's General Insurance operations provide property and casualty products and services throughout the world. Revenues in the General Insurance segment represent net premiums earned, net investment income and net realized capital gains (losses). The decrease in General Insurance revenues in the first three months of 2008 compared to the same period in 2007 was due to net realized capital losses for the first three months of 2008 compared to net realized capital gains in the same period of 2007 and lower net

Income Taxes

The effective tax rate on pre-tax income for the year ended December 31, 2007 was 16.3 percent. The effective rate was low due to the unrealized market valuation losses on AIGFP's super senior credit default swap portfolio and other-than-temporary impairment charges. The effective tax rate on the pre-tax loss for the first three months of 2008 was 31.4 percent. The effective rate was lower than the statutory rate of 35 percent due primarily to \$703 million of tax charges for the first three months of 2008, comprised of increases in the reserves for uncertain tax positions and other discrete period items. See also Note 8 to Consolidated Financial Statements.

investment income as returns on partnership investments declined. The decrease in General Insurance operating income in the first three months of 2008 compared to the same period in 2007 was driven by AIG Commercial Insurance (Commercial Insurance), reflecting lower underwriting profit and net investment income, as well as net realized capital losses incurred by Commercial Insurance in 2008. Operating losses from the Mortgage Guaranty business and a decline in Foreign General Insurance net investment income in the first three months of 2008 also contributed to the decrease in General Insurance operating income.

Life Insurance & Retirement Services

AIG's Life Insurance & Retirement Services operations provide insurance, financial and investment-oriented products throughout the world. Revenues in the Life Insurance & Retirement Services operations represent premiums and other considerations, net investment income and net realized capital gains (losses). Foreign operations contributed approximately 80 percent and 78 percent of AIG's Life Insurance & Retirement Services premiums and other considerations for the first three months of 2008 and 2007, respectively.

Life Insurance & Retirement Services operating income (loss) declined in the first three months of 2008 compared to the same period in 2007 primarily due to higher net realized capital losses in 2008. In addition, the operating loss in the first three months of 2008 was negatively affected by trading account losses in the U.K. associated with certain investment-linked products and an increase in incurred policyholder benefits related to a closed block of Japan business with guaranteed benefits. These declines were partially offset by reductions in deferred policy acquisition costs (DAC) and sales inducement asset (SIA) amortization related to realized capital losses and growth in the underlying reserves which reflects increased assets under management.

Financial Services

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance. Revenues in the Financial Services segment include interest, realized and unrealized gains and losses, including the unrealized market valuation losses on AIGFP's super senior credit default swap portfolio, and lease and finance charges.

Financial Services reported an operating loss in the first three months of 2008 compared to operating income in the same period in 2007, primarily due to an unrealized market valuation loss of \$9.1 billion on AIGFP's super senior credit default swap portfolio and a decline in operating income for AGF. Capital Markets net operating loss for the first three months of 2008 was \$8.9 billion, reflecting the pre-tax unrealized market valuation loss on the super senior credit default swap portfolio. The net loss also includes an increase to pre-tax earnings of \$2,648 million attributable to changes in AIG's credit spreads which were substantially offset by the effect of changes in counterparty credit spreads on assets measured at fair value of \$2,620 million. On January 1, 2008, AIGFP elected the fair value option for almost all of its eligible financial assets and liabilities. Included in the first quarter 2008 net operating loss is the transition amount of \$291 million related to the adoption of FAS 157 and FAS 159.

In the first three months of 2007, AGF's mortgage banking operations recorded a pre-tax charge of

\$128 million, representing the estimated cost of implementing the Supervisory Agreement entered into with the Office of Thrift Supervision (OTS).

Operating income for ILFC increased in the first three months of 2008 compared to the same period in 2007 driven to a large extent by a larger aircraft fleet, higher lease rates and higher utilization.

Asset Management

AIG's Asset Management operations include institutional and retail asset management, broker-dealer services and Spread-Based Investment businesses. Revenues in the Asset Management segment represent investment income with respect to spread-based products and management, advisory and incentive fees.

Asset Management operating income decreased in the first three months of 2008 compared to the same period in 2007, due to other-than-temporary impairment charges on fixed income investments, lower partnership income and mark to market losses on interest rate and foreign currency hedge positions not qualifying for hedge accounting related to the Spread-Based Investment business.

Capital Resources

At March 31, 2008, AIG had total consolidated shareholders' equity of \$79.7 billion and total consolidated borrowings of \$172.2 billion. At that date, \$68.3 billion of such borrowings were subsidiary borrowings not guaranteed by AIG.

In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the purchase of shares with an aggregate purchase price of \$8 billion. In November 2007, AIG's Board of Directors authorized the purchase of an additional \$8 billion in common stock. At May 7, 2008, \$9 billion was available for purchase under the aggregate authorization. A total of 34,093,783 shares were purchased during the first three months of 2008. Subsequent to March 31, 2008, an additional 3,832,276 shares were purchased, satisfying the balance of the commitments existing at December 31, 2007 that had not been satisfied at March 31, 2008. AIG does not expect to purchase additional shares under its share repurchase program for the foreseeable future.

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At March 31, 2008, AIG's consolidated invested assets, primarily held by its subsidiaries, included \$63.6 billion in cash and short-term investments. Consolidated net cash provided from operating activities in the first three months of 2008 amounted to \$8.3 billion. At both the subsidiary and parent company level, liquidity management activities are intended to preserve and enhance

funding stability, flexibility, and diversity through a wide range of potential operating environments and market conditions. AIG's primary sources of cash flow are dividends and other payments from its regulated and unregulated subsidiaries, as well as issuances of debt securities. Primary uses of cash flow are for debt service, subsidiary funding, shareholder dividend payments and common stock repurchases. Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements, including the funding of dividends under AIG's dividend policy.

Critical Accounting Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America (GAAP) requires the application of accounting policies that often involve a significant degree of judgment. AIG considers that its accounting policies that are most dependent on the application of estimates and assumptions, and therefore viewed as critical accounting estimates, to be those relating to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts, recoverability of DAC, estimated gross profits for investment-oriented products, fair value measurements of certain financial assets and liabilities, other-than-temporary impairments, the allowance for finance receivable losses and flight equipment recoverability. These accounting estimates require the use of assumptions about matters, some of which are highly uncertain at the time of estimation. To the extent actual experience differs from the assumptions used, AIG's results of operations would be directly affected.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG's critical accounting estimates are discussed in detail. The major categories for which assumptions are developed and used to establish each critical accounting estimate are highlighted below.

Reserves for Losses and Loss Expenses (General Insurance):

- *Loss trend factors:* used to establish expected loss ratios for subsequent accident years based on premium rate adequacy and the projected loss ratio with respect to prior accident years.
- *Expected loss ratios for the latest accident year:* in this case, accident year 2007 for the year-end 2007 loss reserve analysis. For low-frequency, high-severity classes such as excess casualty, expected loss ratios generally are utilized for at least the three most recent accident years.
- *Loss development factors:* used to project the reported losses for each accident year to an ultimate amount.

- *Reinsurance recoverable on unpaid losses:* the expected recoveries from reinsurers on losses that have not yet been reported and/or settled.

Future Policy Benefits for Life and Accident and Health Contracts (Life Insurance & Retirement Services):

- *Interest rates:* which vary by geographical region, year of issuance and products.
- *Mortality, morbidity and surrender rates:* based upon actual experience by geographical region modified to allow for variation in policy form, risk classification and distribution channel.

Deferred Policy Acquisition Costs (Life Insurance & Retirement Services):

- *Recoverability:* based on current and future expected profitability, which is affected by interest rates, foreign exchange rates, mortality experience and policy persistency.

Deferred Policy Acquisition Costs (General Insurance):

- *Recoverability:* based upon the current terms and profitability of the underlying insurance contracts.

Estimated Gross Profits for Investment-Oriented Products (Life Insurance & Retirement Services):

- *Estimated gross profits:* to be realized over the estimated duration of the contracts (investment-oriented products) affect the carrying value of DAC, unearned revenue liability, SIAs and associated amortization patterns. Estimated gross profits include investment income and gains and losses on investments less required interest, actual mortality and other expenses.

Allowance for Finance Receivable Losses (Financial Services):

- *Historical defaults and delinquency experience:* utilizing factors, such as delinquency ratio, allowance ratio, charge-off ratio and charge-off coverage.
- *Portfolio characteristics:* portfolio composition and consideration of the recent changes to underwriting criteria and portfolio seasoning.
- *External factors:* consideration of current economic conditions, including levels of unemployment and personal bankruptcies.
- *Migration analysis:* empirical technique measuring historical movement of similar finance receivables through various levels of repayment, delinquency, and loss categories to existing finance receivable pools.

Flight Equipment Recoverability (Financial Services):

- *Expected undiscounted future net cash flows:* based upon current lease rates, projected future lease rates and estimated terminal values of each aircraft based on expectations of market participants.

Other-Than-Temporary Impairments:

AIG evaluates its investments for impairment such that a security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par, amortized cost (if lower) or cost for an extended period of time (nine consecutive months or longer);
- The occurrence of a discrete credit event resulting in (i) the issuer defaulting on a material outstanding obligation; (ii) the issuer seeking protection from creditors under the bankruptcy laws or any similar laws intended for court supervised reorganization of insolvent enterprises; or (iii) the issuer proposing a voluntary reorganization pursuant to which creditors are asked to exchange their claims for cash or securities having a fair value substantially lower than par value of their claims; or
- AIG may not realize a full recovery on its investment, regardless of the occurrence of one of the foregoing events.

The determination that a security has incurred an other-than-temporary decline in value requires the judgment of management and consideration of the fundamental condition of the issuer, its near-term prospects and all the relevant facts and circumstances. The above criteria also consider circumstances of a rapid and severe market valuation decline, such as that experienced in current credit markets, in which AIG could not reasonably assert that the recovery period would be temporary (severity losses). For further discussion, see Portfolio Review — Other-Than-Temporary Impairments.

At each balance sheet date, AIG evaluates its securities holdings with unrealized losses. When AIG does not intend to hold such securities until they have recovered their cost basis, AIG records the unrealized loss in income. If a loss is recognized from a sale subsequent to a balance sheet date pursuant to changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer existed.

In periods subsequent to the recognition of an other-than-temporary impairment charge for fixed maturity securities, which is not credit or foreign exchange related, AIG generally accretes into income the discount or amortizes the reduced premium resulting from the reduction in cost basis over the remaining life of the security.

Fair Value Measurements of Certain Financial Assets and Liabilities:

AIG measures at fair value on a recurring basis financial instruments in its trading and available for sale securities portfolios, certain mortgage and other loans receivable, certain spot commodities, derivative assets and liabilities,

securities purchased (sold) under agreements to resell (repurchase), securities lending invested collateral, non-marketable equity investments, included in other invested assets, certain policyholders' contract deposits, securities and spot commodities sold but not yet purchased, certain trust deposits and deposits due to banks and other depositors, certain long-term borrowings, and certain hybrid financial instruments included in other liabilities. The fair value of a financial instrument is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The degree of judgment used in measuring the fair value of financial instruments generally correlates with the level of pricing observability. Financial instruments with quoted prices in active markets generally have more pricing observability and less judgment is used in measuring fair value. Conversely, financial instruments traded in other-than-active markets or that do not have quoted prices have less observability and are measured at fair value using valuation models or other pricing techniques that require more judgment. Pricing observability is affected by a number of factors, including the type of financial instrument, whether the financial instrument is new to the market and not yet established, the characteristics specific to the transaction and general market conditions.

Fixed Maturities — Trading and Available for Sale

AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. Whenever available, AIG obtains quoted prices in active markets for identical assets at the balance sheet date to measure at fair value fixed maturity instruments in its trading and available for sale portfolios. Market price data generally is obtained from exchange or dealer markets.

AIG estimates the fair value of fixed maturity instruments not traded in active markets, including securities purchased (sold) under agreements to resell (repurchase) and mortgage and other loans receivable, for which AIG elected the fair value option by referring to traded securities with similar attributes, using dealer quotations and matrix pricing methodologies, or discounted cash flow analyses. This methodology considers such factors as the issuer's industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, yield curves, credit curves, prepayment rates and other relevant factors. For fixed maturity instruments that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability, and such adjustments generally are based on available market evidence. In the absence of such evidence, management's best estimate is used.

Equity Securities Traded in Active Markets — Trading and Available for Sale

AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. Whenever available, AIG obtains quoted prices in active markets for identical assets at the balance sheet date to measure at fair value marketable equity securities in its trading and available for sale portfolios. Market price data generally is obtained from exchange or dealer markets.

Direct Private Equity Securities Not Traded in Active Markets — Other Invested Assets

AIG initially estimates the fair value of equity securities not traded in active markets by reference to the transaction price. This valuation is adjusted only when changes to inputs and assumptions are corroborated by evidence such as transactions in similar instruments, completed or pending third-party transactions in the underlying investment or comparable entities, subsequent rounds of financing, recapitalizations and other transactions across the capital structure, offerings in the equity capital markets, and changes in financial ratios or cash flows. For equity securities that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability and such adjustments generally are based on available market evidence. In the absence of such evidence, management's best estimate is used. AIG initially estimates the fair value of investments in private limited partnerships and hedge funds by reference to the transaction price. Subsequently, AIG obtains the fair value of these investments generally from net asset value information provided by the general partner or manager of the investments, the financial statements of which generally are audited annually.

Separate and Variable Account Assets

Separate and variable account assets are composed primarily of registered and unregistered open-end mutual funds that generally trade daily and are measured at fair value in the manner discussed above for equity securities traded in active markets.

Freestanding Derivatives

Derivative assets and liabilities can be exchange-traded or traded over the counter (OTC). AIG generally values exchange-traded derivatives within portfolios using models that calibrate to market clearing levels and eliminate timing differences between the closing price of the exchange-traded derivatives and their underlying instruments.

OTC derivatives are valued using market transactions and other market evidence whenever possible, including market-based inputs to models, model calibration to market clearing transactions, broker or dealer quotations or

alternative pricing sources with reasonable levels of price transparency. When models are used, the selection of a particular model to value an OTC derivative depends on the contractual terms of, and specific risks inherent in, the instrument as well as the availability of pricing information in the market. AIG generally uses similar pricing models to value similar instruments. Valuation models require a variety of inputs, including contractual terms, market prices and rates, yield curves, credit curves, measures of volatility, prepayment rates and correlations of such inputs. For OTC derivatives that trade in liquid markets, such as generic forwards, swaps and options, model inputs can generally be corroborated by observable market data by correlation or other means and model selection does not involve significant management judgment.

Certain OTC derivatives trade in less liquid markets with limited pricing information and the determination of fair value for these derivatives is inherently more difficult. When AIG does not have corroborating market evidence to support significant model inputs and cannot verify the model to market transactions, the transaction price is initially used as the best estimate of fair value. Accordingly, when a pricing model is used to value such an instrument, the model is adjusted so the model value at inception equals the transaction price. Subsequent to initial recognition, AIG updates valuation inputs when corroborated by evidence such as similar market transactions, third-party pricing services and/or broker or dealer quotations, or other empirical market data. When appropriate, valuations are adjusted for various factors such as liquidity, bid/offer spreads and credit considerations. Such adjustments are generally based on available market evidence. In the absence of such evidence, management's best estimate is used.

With the adoption of FAS 157 on January 1, 2008, AIG's own credit risk has been considered and is incorporated into the fair value measurement of all freestanding derivative liabilities.

Embedded Policy Derivatives

The fair value of embedded policy derivatives contained in certain variable annuity and equity-indexed annuity and life contracts is measured based on actuarial and capital market assumptions related to projected cash flows over the expected lives of the contracts. These cash flow estimates primarily include benefits and related fees assessed, when applicable, and incorporate expectations about policyholder behavior. Estimates of future policyholder behavior are subjective and based primarily on AIG's historical experience. With respect to embedded policy derivatives in AIG's variable annuity contracts, because of the dynamic and complex nature of the expected cash flows, risk neutral valuations are used. Estimating the underlying cash flows for these products involves many estimates and judgments, including those regarding expected market rates of return, market volatility,

correlations of market index returns to funds, fund performance, discount rates and policyholder behavior. With respect to embedded policy derivatives in AIG's equity-indexed annuity and life contracts, option pricing models are used to estimate fair value, taking into account assumptions for future equity indexed growth rates, volatility of the equity index, future interest rates, and determination on adjusting the participation rate and the cap on equity indexed credited rates in light of market conditions and policyholder behavior assumptions. With the adoption of FAS 157, these methodologies were not changed, with the exception of incorporating an explicit risk margin to take into consideration market participant estimates of projected cash flows and policyholder behavior.

AIGFP's Super Senior Credit Default Swap Portfolio

AIGFP values its credit default swaps written on the most senior risk layers (super senior) of designated pools of debt securities or loans using internal valuation models, third-party prices and market indices. The specific valuation methodologies vary based on the nature of the referenced obligations and availability of market prices. AIGFP uses a modified version of the Binomial Expansion Technique (BET) model to value its credit default swap portfolio written on super senior tranches of CDOs, including maturity-shortening puts that allow the holders of the securities issued by certain CDOs to treat the securities as short-term eligible 2a-7 investments under the Investment Company Act of 1940 (2a-7 Puts). The BET model uses default probabilities derived from credit spreads implied from market prices for the individual securities included in the underlying collateral pools securing the CDOs, as well as diversity scores, weighted average lives, recovery rates and discount rates. The determination of some of these inputs requires the use of judgment and estimates, particularly in the absence of market observable data. AIGFP also employs a Monte Carlo simulation to assist in quantifying the effect on the valuation of the CDOs of the unique aspects of the CDOs' structure such as triggers that divert cash flows to the most senior part of the capital structure. In the determination of fair value, AIGFP also considers collateral calls and the price estimates for the super senior CDO securities provided by third parties, including counterparties to these transactions. See Note 3 to Consolidated Financial Statements for additional information about fair value measurements.

In the case of credit default swaps written on investment-grade corporate debt and CLOs, AIGFP estimates the value of its obligations by reference to the relevant market indices or third-party quotes on the underlying super senior tranches where available.

In the case of credit default swaps written to facilitate regulatory capital relief for AIGFP's European financial institution counterparties, AIGFP estimates the fair value of these derivatives by considering observable market

transactions, including the early termination of these transactions by counterparties, and other market data, to the extent relevant.

Policyholders' Contract Deposits

Policyholders' contract deposits accounted for at fair value beginning January 1, 2008 are measured using an income approach by taking into consideration the following factors:

- Current policyholder account values and related surrender charges,
- The present value of estimated future cash inflows (policy fees) and outflows (benefits and maintenance expenses) associated with the product using risk neutral valuations, incorporating expectations about policyholder behavior, market returns and other factors, and
- A risk margin that market participants would require for a market return and the uncertainty inherent in the model inputs.

The change in fair value of these policyholders' contract deposits is recorded as incurred policy losses and benefits in the consolidated statement of income (loss).

Level 3 Assets and Liabilities

Under FAS 157, assets and liabilities recorded at fair value in the consolidated balance sheet are classified in a hierarchy for disclosure purposes consisting of three "levels" based on the observability of inputs available in the marketplace used to measure the fair value. See Note 3 to the Consolidated Financial Statements for additional information about fair value measurements.

At March 31, 2008, AIG classified \$48.5 billion and \$31.7 billion of assets and liabilities, respectively, measured at fair value on a recurring basis as Level 3. This represented 5 percent and 3 percent of the total assets and liabilities, respectively, measured at fair value on a recurring basis. Level 3 fair value measurements are based on valuation techniques that use at least one significant input that is unobservable. These measurements are made under circumstances in which there is little, if any, market activity for the asset or liability. AIG's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment.

In making the assessment, AIG considers factors specific to the asset or liability. In certain cases, the inputs used to measure fair value of an asset or a liability may fall into different levels of the fair value hierarchy. In such cases, the level in the fair value hierarchy within which the fair value measurement in its entirety is classified is determined based on the lowest level input that is significant to the fair value measurement in its entirety.

Valuation of Level 3 Assets and Liabilities

AIG values its assets and liabilities classified as Level 3 using judgment and valuation models or other pricing techniques that require a variety of inputs including contractual terms, market prices and rates, yield curves, credit curves, measures of volatility, prepayment rates and correlations of such inputs, some of which may be unobservable. The following paragraphs describe the methods AIG uses to measure on a recurring basis the fair value of the major classes of assets and liabilities classified in Level 3.

Private equity and real estate fund investments: These assets initially are valued at the transaction price, i.e., the price paid to acquire the asset. Subsequently, they are measured based on net asset value using information provided by the general partner or manager of these investments, the accounts of which generally are audited on an annual basis.

Corporate bonds and private placement debt: These assets initially are valued at the transaction price. Subsequently, they are valued using market data for similar instruments (e.g., recent transactions, bond spreads or credit default swap spreads), comparisons to benchmark derivative indices or movements in underlying credit spreads. When observable price quotations are not available, fair value is determined based on cash flow models with yield curves, bond or single-name credit default swap spreads and recovery rates based on collateral values as key inputs.

Certain Residential Mortgage-Backed Securities (RMBS): These assets initially are valued at the transaction price. Subsequently, they may be valued by comparison to transactions in instruments with similar collateral and risk profiles, remittances received and updated cumulative loss data on underlying obligations, discounted cash flow techniques, and/or option adjusted spread analyses.

Certain Asset-Backed Securities (ABS) — non-mortgage: These assets initially are valued at the transaction price. Subsequently, they may be valued based on external price/spread data. When position-specific external price data are not observable, the valuation is based on prices of comparable securities.

CDOs: These assets initially are valued at the transaction price. Subsequently, they are valued based on external price/spread data from independent third parties, matrix pricing, or using the BET model.

Super senior credit default swap portfolio: AIGFP writes credit protection on the super senior risk layer of diversified portfolios of investment-grade corporate debt, collateralized loan obligations (CLOs) and multi-sector CDOs. AIGFP is at risk only on the super senior portion related to a diversified portfolio referenced to loans or debt securities, which is the last tranche to suffer losses after significant subordination.

At March 31, 2008 the notional amounts and unrealized market valuation loss of the super senior credit default swap portfolio, including certain regulatory capital relief driven trades, by asset class were as follows:

	Unrealized Market Valuation Loss		
	Notional Amount (in billions)	Three Months	
		Ended March 31, 2008 (in millions)	Cumulative At March 31, 2008 (in millions)
Corporate loans ^(a)	\$192	\$ —	\$ —
Prime residential mortgages ^(a)	143	—	—
Corporate debt/CLOs	57	896	1,123
Multi-sector CDOs ^(b)	77	8,037	19,281
Mezzanine tranches ^(c)	6	174	174
Total	\$475	\$9,107	\$20,578

(a) Predominantly represent transactions written to facilitate regulatory capital relief.

(b) Approximately \$60.6 billion in notional amount of the multi-sector CDO pools include some exposure to U.S. sub-prime mortgages.

(c) Represents credit default swaps written by AIGFP on tranches below super senior on certain regulatory capital relief trades.

The valuation of the super senior credit derivatives has become increasingly challenging given the limitation on the availability of market observable information due to the lack of trading and price transparency in the structured finance market, particularly during and since the fourth quarter of 2007. These market conditions have increased the reliance on management estimates and judgments in arriving at an estimate of fair value for financial reporting purposes. Further, disparities in the valuation methodologies employed by market participants and the varying judgments reached by such participants when assessing volatile markets has increased the likelihood that the various parties to these instruments may arrive at significantly different estimates as to their fair values.

AIGFP's valuation methodologies for the super senior credit default swap portfolio have evolved in response to the deteriorating market conditions and the lack of sufficient market observable information. AIG has sought to calibrate the model to market information and to review the assumptions of the model on a regular basis.

AIGFP employs a modified version of the BET model to value its credit default swap portfolio written on the super senior securities issued by CDOs, including the embedded 2a-7 Puts. The BET model uses default probabilities derived from credit spreads implied from market prices for the individual securities included in the underlying collateral pools securing the CDOs. AIGFP obtained prices on these securities from the CDO collateral managers.

The BET model also uses diversity scores, weighted average lives, recovery rates and discount rates. The

determination of some of these inputs requires the use of judgment and estimates, particularly in the absence of market observable data. AIGFP also employs a Monte Carlo simulation to assist in quantifying the effect on valuation of the CDO of the unique features of the CDOs' structure such as triggers that divert cash flows to the most senior level of the capital structure.

AIG selected the BET model for the following reasons:

- it is known and utilized by other institutions;
- it has been studied extensively, documented and enhanced over many years;
- it is transparent and relatively simple to apply;
- the parameters required to run the BET model are generally observable; and
- it can easily be modified to use probabilities of default and expected losses derived from the underlying collateral securities market prices instead of using rating-based historical probabilities of default.

AIG's implementation of the BET model uses a Monte Carlo simulation of the cash flows of each underlying CDO for various scenarios of defaults by the underlying collateral securities. The Monte Carlo simulation allows the model to take into account the cash flow waterfall and to capture the benefits due to cash flow diversion within each CDO.

The BET model has certain limitations. A well known limitation of the BET model is that it can understate the expected losses for super senior tranches when default correlations are high. The model uses correlations implied from diversity scores which do not capture the tendency for correlations to increase as defaults increase. Recognizing this concern, AIG tested the sensitivity of the valuations to the diversity scores. The results of the testing demonstrated that the valuations are not very sensitive to the diversity scores because the expected losses generated from the prices of the collateral pool securities are currently high, breaching the attachment point in most transactions. Once the attachment point is breached by a sufficient amount, the diversity scores, and their implied correlations, are no longer a significant driver of the valuation of a super senior tranche.

The credit default swaps written by AIGFP generally cover the failure of payment on the super senior CDO security. AIGFP does not own the securities in the CDO collateral pool. The credit spreads implied from the market prices of the securities in the CDO collateral pool incorporate the risk of default (credit risk), the market's price for liquidity risk and in distressed markets, the risk aversion costs. Spreads on credit derivatives tend to be narrower than the credit spreads implied from the market prices of the securities in the CDO collateral pool because, unlike investing in a bond, there is no need to fund the position (except when an actual credit event occurs). In times of illiquidity, the difference between spreads on cash securities and derivative instruments

(the negative basis) may be even wider for high quality assets. AIGFP was unable to reliably verify this negative basis with market observable inputs due to the accelerating severe dislocation, illiquidity and lack of trading in the asset-backed securities market during the fourth quarter of 2007 and the first quarter of 2008. The valuations produced by the BET model therefore represent the valuations of the underlying super senior CDO cash securities based on AIG's assumptions about those securities, albeit with no recognition of any potential favorable effect of the basis differential on that valuation. AIGFP also considered the valuation of the super senior CDO securities provided by third parties, including counterparties to these transactions, and made adjustments as necessary.

The most significant assumption used in developing the estimate is the pricing of the securities within the CDO collateral pools. These prices are used to derive default probabilities that are used in the BET model. If the actual pricing of the securities within the collateral pools differs from the pricing used in estimating the fair value of the super senior credit default swap portfolio, there is potential for material variation in the fair value estimate. A decrease by five points (for example, from 87 cents per dollar to 82 cents per dollar) in the aggregate price of the securities would cause an additional unrealized market valuation loss of approximately \$3.9 billion, while an increase in the aggregate price of the securities by five points (for example, from 90 cents per dollar to 95 cents per dollar) would reduce the unrealized market valuation loss by approximately \$3.7 billion. The effect on the unrealized market valuation loss is not directly proportional to the change in the aggregate price of the securities.

The following table presents other key inputs used in the valuation of the credit derivative portfolio written on the super senior securities issued by multi-sector CDOs, and the potential increase (decrease) to the unrealized market valuation loss at March 31, 2008 calculated using the BET model for changes in these key inputs. The adjustments to the key inputs incorporated in the sensitivity analysis below are based on management's judgment of reasonably possible ranges for these inputs:

<i>(in millions)</i>	Increase (Decrease) To Unrealized Market Valuation Loss
Weighted average lives	
Effect of an increase of 1 year	\$ 375
Effect of a decrease of 1 year	(620)
Recovery rates	
Effect of an increase of 10%	(103)
Effect of a decrease of 10%	194
Diversity scores	
Effect of an increase of 5	(40)
Effect of a decrease of 5	15
Discount curve	
Effect of an increase of 100 basis points	70

These results are calculated by stressing a particular assumption independently of changes in any other assumption. No assurance can be given that the actual levels of the key inputs will not exceed, perhaps significantly, the ranges assumed by AIG for purposes of the above analysis. No assumption should be made that results calculated from the use of other changes in these key inputs can be interpolated or extrapolated from the results set forth above.

In the case of credit default swaps written on investment grade corporate debt and CLOs, AIGFP estimates the value of its obligations by reference to the relevant market indices or third-party quotes on the underlying super senior tranches where available.

The following table represents the relevant market credit indices and index CDS maturity used in the valuation of the credit default swap portfolio written on investment-grade corporate debt and the increase (decrease) to the unrealized market valuation loss at March 31, 2008 corresponding to changes in these market credit indices and maturity:

<i>(in millions)</i>	Increase (Decrease) To Unrealized Market Valuation Loss		
CDS maturity (in years)	5	7	10
CDX Index			
Effect of an increase of 10 basis points	\$26	\$51	\$ 5
Effect of a decrease of 10 basis points	(26)	(51)	(5)
iTraxx Index			
Effect of an increase of 10 basis points	11	37	13
Effect of a decrease of 10 basis points	(11)	(37)	(13)

These results are calculated by stressing a particular assumption independently of changes in any other assumption. No assurance can be given that the actual levels of the indices and maturity will not exceed, perhaps significantly, the ranges assumed by AIG for purposes of the above analysis. No assumption should be made that results calculated from the use of other changes in these indices and maturity can be interpolated or extrapolated from the results set forth above.

For additional information about AIG's super senior credit default swap portfolio, see Operating Review — Capital Markets Results and Risk Management — Credit Derivatives.

Other derivatives. Valuation models that incorporate unobservable inputs initially are calibrated to the transaction price. Subsequent valuations are based on observable inputs to the valuation model (e.g., interest rates, credit spreads, volatilities, etc.). Model inputs are changed only when corroborated by market data.

Valuation Controls

AIG is actively developing and implementing a remediation plan to address the material weakness in internal control relating to the fair value valuation of the AIGFP super senior credit default swap portfolio, and oversight thereof as described in Item 9A. of the 2007 Annual Report on Form 10-K. AIG is developing new systems and processes to reduce reliance on certain manual controls that have been established as compensating controls over valuation of this portfolio and in other areas, and is strengthening the resources required to remediate this weakness. Notwithstanding this need to continue strengthening these controls, AIG has an oversight structure that includes appropriate segregation of duties with respect to the valuation of its financial instruments. Senior management, independent of the trading and investing functions, is responsible for the oversight of control and valuation policies and for reporting the results of these controls and policies to AIG's Audit Committee. AIG employs procedures for the approval of new transaction types and markets, price verification, periodic review of profit and loss, and review of valuation models by personnel with appropriate technical knowledge of relevant products and markets. These procedures are performed by personnel independent of the trading and investing functions. For valuations that require inputs with little or no market observability, AIG compares the results of its valuation models to actual subsequent transactions.

Operating Review

General Insurance Operations

AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of property and casualty insurance and various personal lines both domestically and abroad and constitute the AIG Property Casualty Group (formerly known as Domestic General Insurance) and the Foreign General Insurance Group.

AIG Property Casualty Group is comprised of Commercial Insurance, Transatlantic, Personal Lines and Mortgage Guarantee businesses.

Commercial Insurance writes substantially all classes of business insurance, accepting such business mainly from insurance brokers. This provides Commercial Insurance the opportunity to select specialized markets and retain underwriting control. Any licensed broker is able to submit business to Commercial Insurance without the traditional agent-company contractual relationship, but such broker usually has no authority to commit Commercial Insurance to accept a risk.

Transatlantic Holdings, Inc. (Transatlantic) subsidiaries offer reinsurance capacity on both a treaty and facultative basis both in the U.S. and abroad. Transatlantic structures

programs for a full range of property and casualty products with an emphasis on specialty risk.

AIG's Personal Lines operations provide automobile insurance through aigdirect.com, the newly formed operation resulting from the 2007 combination of AIG Direct and 21st Century Insurance Group (21st Century) operations, and the Agency Auto Division, as well as a broad range of coverages for high net worth individuals through the AIG Private Client Group.

The main business of the subsidiaries of UGC is the issuance of residential mortgage guaranty insurance, both domestically and internationally, that covers the first loss for

credit defaults on high loan-to-value conventional first-lien mortgages for the purchase or refinance of one to four family residences. UGC subsidiaries also write second-lien and private student loan guaranty insurance.

AIG's Foreign General Insurance Group writes both commercial and consumer lines of insurance which is primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance Group also includes business written by AIG's foreign-based insurance subsidiaries.

General Insurance Results

General Insurance operating income is comprised of statutory underwriting profit (loss), changes in DAC, net investment income and net realized capital gains and losses. Operating income, as well as net premiums written, net premiums earned, net investment income and net realized capital gains (losses) and statutory ratios were as follows:

(in millions, except ratios)	Three Months Ended March 31,		Percentage Increase/ (Decrease)
	2008	2007

(a) Includes amortization of advertising costs.

(b) Statutory underwriting profit (loss) is a measure that U.S. domiciled insurance companies are required to report to their regulatory authorities. The following table reconciles statutory underwriting profit (loss) to operating income for General Insurance:

<i>(in millions)</i>	Commercial Insurance	Transatlantic	Personal Lines	Mortgage Guaranty	Foreign General Insurance	Reclassifications and Eliminations	Total
Three Months Ended March 31, 2008:							
Statutory underwriting profit (loss)	\$ 218	\$ 54	\$ (63)	\$(407)	\$364	\$ -	\$ 166

AIG transacts business in most major foreign currencies. The effects of changes in foreign currency exchange rates on the growth of General Insurance net premiums written were as follows:

	Three Months Ended March 31,	
	2008	2007
Growth in original currency*	(3.3)%	6.2%
Foreign exchange effect	3.1	1.4
Growth as reported in U.S. dollars	(0.2)%	7.6%

* Computed using a constant exchange rate throughout each period.

General Insurance operating income decreased in the first three months of 2008 compared to the same period in 2007 due to declines in both net investment income and underwriting profit as well as net realized capital losses in the first three months of 2008. The combined ratio for the three months ended March 31, 2008 increased to 96.8, an increase of 9.3 points compared to the same period in 2007, primarily due to an increase in the loss ratio of 6.2 points. The loss ratio for accident year 2008 recorded in the first three months of 2008 was 4.1 points higher than the loss ratio recorded in the first three months of 2007 for accident year 2007. The increase in the accident year loss ratio was due to an increase in Mortgage Guaranty losses as well as declining premium rates in most casualty lines of insurance due to competitive pressures. Increases in Mortgage Guaranty losses accounted for a 2.9 point increase in the 2008 accident year loss ratio. The downward cycle in the U.S. housing market is not expected to improve until residential inventories return to a more normal level, and AIG expects that this downward cycle will continue to adversely affect Mortgage Guaranty's loss ratios for the foreseeable future. Favorable development from prior years reduced incurred losses by \$127 million and \$131 million in the first three months of 2008 and 2007, respectively. The favorable development in 2008 includes \$339 million of favorable development related to policies whose premiums vary with the level of losses incurred (loss sensitive policies). Loss sensitive policies did not have a significant effect in 2007. The favorable development on loss sensitive policies had no effect on underwriting profit as it was entirely offset by a reduction in earned premiums.

However, this reduction in earned premiums reduced the loss ratio by 0.9 points compared to the same period in 2007. Other loss development for the first three months of 2008 increased incurred losses by \$212 million, accounting for 3.0 points of the increase in the loss ratio compared to the same period of 2007. Additional favorable loss development in the first three months of 2008 and 2007, of \$37 million and \$17 million, respectively (recognized in consolidation and related to certain asbestos settlements), reduced overall incurred losses.

General Insurance net premiums written decreased in the first three months of 2008 compared to the same period in 2007, primarily due to a reduction of \$339 million in Commercial Insurance loss sensitive policies and declines in Commercial Insurance workers' compensation premiums due to reductions in statutory rates and increased competition. The decline in Commercial Insurance was partially offset by growth in Foreign General Insurance from both established and new distribution channels, and the effect of changes in foreign currency exchange rates as well as growth in Mortgage Guaranty, primarily the domestic first-lien business.

General Insurance net investment income declined in the first three months of 2008 by \$358 million compared to the same period in 2007. Interest and dividend income increased \$109 million in the first three months of 2008 compared to the same period in 2007 as fixed maturities and equity securities increased by \$8.8 billion and the average yield was substantially unchanged for both periods. Income from partnership and mutual fund investments declined \$524 million in the first three months of 2008 compared to the same period in 2007, primarily due to poor performance in the equity markets in 2008. Investment expenses in the first three months of 2008 declined \$50 million compared to the same period in 2007, primarily due to decreased interest expense on deposit liabilities. Net realized capital losses in the first three months of 2008 include other-than-temporary impairment charges of \$155 million compared to \$46 million in the same period of 2007. See also Capital Resources and Liquidity and Invested Assets herein.

Commercial Insurance Results

Commercial Insurance's operating income decreased in the first three months of 2008 compared to the same period in 2007 primarily due to declines in both net investment income and underwriting profit. The decline is also reflected in the combined ratio, which increased 10.5 points in the first three months of 2008 compared to the same period in 2007. The loss ratio for accident year 2008, including 1.4 points related to Atlanta catastrophe tornado losses, recorded in the first three months of 2008 was 3.8 points higher than the loss ratio recorded in the first three months of 2007 for accident year 2007. Prior year development reduced incurred losses by \$217 million in the first three months of 2008 compared to \$87 million in the first three months of 2007. The favorable development for 2008 includes \$339 million of favorable development related to loss sensitive policies. The favorable development on loss sensitive policies had no effect on underwriting profit as it was entirely offset by a reduction in earned premiums. However, given the reduction in earned premiums, there was a reduction in the loss ratio of 1.6 points compared to the same period of 2007 related to loss sensitive policies. Other loss development for the first three months of 2008 increased incurred losses by \$122 million, accounting for 3.6 points of the increase in the loss ratio compared to the same period of 2007.

Commercial Insurance's net premiums written declined in the first three months of 2008 compared to the same period in 2007 primarily due to declines in workers' compensation premiums and the effect of the loss sensitive policies described above.

Commercial Insurance's expense ratio increased to 23.9 in the first three months of 2008 compared to 19.2 in the same period of 2007. Return premiums on loss sensitive policies reduced net premiums written, without a corresponding reduction in expenses, increasing the expense ratio by 1.4 points for the first three months of 2008 compared to the same period in 2007. The ratio of general expenses to current period net premiums written increased 1.9 points in the first three months of 2008 compared to the same period in 2007 as Commercial Insurance continued to invest in systems and process improvements to enhance operating efficiency over the long term. The ratio of net acquisition expenses to current period net premiums written increased 1.0 points in the first three months of 2008 compared to the same period in 2007 due to higher commissions to brokers and a reduction in ceding commissions resulting from increased retention of business.

Commercial Insurance's net investment income declined in the first three months of 2008 compared to the same period in 2007, as income from partnership and mutual fund investments decreased \$409 million in the first three months of 2008 compared to the same period in 2007, primarily due

to poor performance in the equity markets in 2008. This decrease was partially offset by an increase in interest income of \$40 million in the first three months of 2008, due to growth in the bond portfolio resulting from investment of operating cash flows. Commercial Insurance recorded net realized capital losses in the first three months of 2008 compared to net realized capital gains in the same period of 2007 primarily due to other-than-temporary impairment charges of \$144 million in the first three months of 2008, primarily related to equity securities, compared to \$36 million in the first three months of 2007.

Transatlantic Results

Transatlantic's net premiums written increased in the first three months of 2008 compared to the same period in 2007 due to growth in domestic operations and changes in foreign exchange rates. The increase in statutory underwriting profit in the first three months of 2008 compared to the same period in 2007 reflects improved underwriting results in international operations. The 2007 international underwriting results were adversely affected by European windstorm losses. Operating income increased in the first three months of 2008 compared to the same period in 2007 primarily due to improved underwriting results, partially offset by net realized capital losses in 2008 compared to net realized capital gains in 2007.

Personal Lines Results

Personal Lines operating income decreased \$103 million in the first three months of 2008 compared to the same period in 2007 due to a deterioration in underwriting performance as reflected by the combined ratio, which increased to 103.4 in the first three months of 2008 compared to 95.5 in the same period in 2007. The loss ratio increased 8.5 points, including an increase in the 2008 accident year loss ratio of 3.0 points, due primarily to increased frequency of homeowner claims in the Private Client Group and declining rates for automobile policies. Prior year development increased incurred losses by \$36 million in the first three months of 2008 compared to a reduction of \$29 million in the same period in 2007, accounting for 5.5 points of the increase in the loss ratio.

The expense ratio decreased 0.6 points in the first three months of 2008 compared to the same period in 2007, primarily due to expense savings following the integration of the 21st Century operations.

Net premiums written increased in the first three months of 2008 compared to the same period in 2007 primarily due to continued growth in the Private Client Group, and an increase in aigdirect.com, partially offset by a reduction from the Agency Auto business.

Mortgage Guaranty Results

Mortgage Guaranty's operating loss in the first three months of 2008 was \$354 million compared to operating income of \$8 million in the first three months of 2007 as the deteriorating U.S. residential housing market adversely affected losses incurred for both the domestic first- and second-lien businesses. Domestic first- and second-lien losses incurred increased 363 percent and 123 percent respectively, compared to the first three months of 2007, resulting in loss ratios of 203.6 and 442.4, respectively, in the first three months of 2008. Increases in domestic losses incurred resulted in an overall loss ratio of 235.6 in the first three months of 2008 compared to 92.2 in the first three months of 2007. Prior year development increased incurred losses by \$68 million and \$31 million for the first three months of 2008 and 2007, respectively, accounting for 12.0 points of the increase in the 2008 loss ratio.

Net premiums written increased in the first three months of 2008 compared to the same period in 2007 primarily due to growth in domestic first-lien premiums due to the increased use of mortgage insurance for credit enhancement as well as better persistency. UGC has taken steps to strengthen its underwriting guidelines and increase rates. It also discontinued new production for certain programs in the second-lien business beginning in the fourth quarter of 2006. However, UGC will continue to receive renewal premiums on that portfolio for the life of the loans, estimated to be three to five years, and will continue to be exposed to losses from future defaults.

The expense ratio in the first three months of 2008 was 19.8, down from 21.7 in the same period of 2007 as premium growth offset the effect of increased expenses related to UGC's international expansion and the employment of additional operational resources in the second-lien business.

UGC domestic mortgage risk in force totaled \$31.5 billion as of March 31, 2008 and the 60-day delinquency ratio was 4.0 percent (based on number of policies, consistent with mortgage industry practice) compared to domestic mortgage risk in force of \$25.4 billion and a delinquency ratio of 2.1 percent at March 31, 2007. Approximately 82 percent of the domestic mortgage risk is secured by first-lien, owner-occupied properties.

Foreign General Insurance Results

Foreign General Insurance operating income decreased in the first three months of 2008 compared to the same period in

2007, due primarily to decreases in net investment income and net realized capital losses in the first three months of 2008.

Net premiums written increased 20 percent (11 percent in original currency) in the first three months of 2008 compared to the same period in 2007, reflecting strong growth in commercial and consumer lines driven by new business from both established and new distribution channels, including the late 2007 acquisition of Württembergische und Badische Versicherungs – AG (WüBa) in Germany. Net premiums written for commercial lines increased due to new business in the U.K. and Europe and decreases in the use of reinsurance, partially offset by declines in premium rates. Growth in personal accident business in Latin America, Asia and Europe also contributed to the increase. Net premiums written for the Lloyd's syndicate Ascot and aviation continued to decline due to rate decreases and increased market competition. Auto production declined due to increased price competition and underwriting actions taken to improve profitability.

The loss ratio in the first three months 2008 increased 1.2 points compared to the same period in 2007. The increase is due to favorable loss development on prior accident years of \$17 million in the first three months of 2008 compared to \$64 million in the first three months of 2007, higher severe but non-catastrophic losses and higher losses in aviation. Partially offsetting these increases was an improvement in the personal accident loss ratio, particularly in Asia.

The expense ratio in the first three months of 2008 increased 1.6 points compared to the same period in 2007. This increase reflects the cost of realigning certain legal entities through which Foreign General Insurance operates, the acquisition of WüBa and the increased significance of consumer lines of business, which have higher acquisition costs. These factors contributed 0.8 points to the expense ratio in the first three months of 2008. AIG expects the expense ratio to continue to increase in 2008 due to the cost of realigning certain legal entities through which Foreign General Insurance operates.

Net investment income decreased in the first three months of 2008 compared to the same period in 2007. Mutual fund income was \$105 million lower than the first three months of 2007 reflecting weak performance in the equity markets in 2008, partially offset by higher interest income of \$34 million.

Reserve for Losses and Loss Expenses

The following table presents the components of the General Insurance gross reserve for losses and loss expenses (loss reserves) by major lines of business on a statutory Annual Statement basis*:

<i>(in millions)</i>	March 31, 2008	December 31, 2007
Other liability occurrence	\$ 20,635	\$ 20,580
Workers compensation	15,080	15,568
Other liability claims made	13,709	13,878
International	8,348	7,036
Auto liability	6,157	6,068
Property	4,431	4,274
Reinsurance	3,234	3,127
Products liability	2,417	2,416
Medical malpractice	2,301	2,361
Mortgage guaranty/credit	1,832	1,426
Accident and health	1,815	1,818
Commercial multiple peril	1,796	1,900
Aircraft	1,731	1,623
Fidelity/surety	1,201	1,222
Other	2,173	2,203
Total	\$ 86,860	\$ 85,500

* Presented by lines of business pursuant to statutory reporting requirements as prescribed by the National Association of Insurance Commissioners.

AIG's gross reserve for losses and loss expenses represents the accumulation of estimates of ultimate losses, including estimates for incurred but not yet reported reserves (IBNR) and loss expenses. The methods used to determine loss reserve estimates and to establish the resulting reserves are continually reviewed and updated by management. Any adjustments resulting therefrom are reflected in operating income currently. Because loss reserve estimates are subject to the outcome of future events, changes in estimates are unavoidable given that loss trends vary and time is often required for changes in trends to be recognized and confirmed. Reserve changes that increase previous estimates of ultimate cost are referred to as unfavorable or adverse development or reserve strengthening. Reserve changes that decrease previous estimates of ultimate cost are referred to as favorable development.

Estimates for mortgage guaranty insurance losses and loss adjustment expense reserves are based on notices of mortgage loan delinquencies and estimates of delinquencies that have been incurred but have not been reported by loan servicers, based upon historical reporting trends. Mortgage Guaranty establishes reserves using a percentage of the contractual liability (for each delinquent loan reported) that is based upon past experience regarding certain loan factors such as age of the delinquency, dollar amount of the loan and type of mortgage loan. Because mortgage delinquencies and claims payments are affected primarily by macroeconomic events, such as changes in home price appreciation, interest rates and unemployment, the determination of the ultimate loss cost requires a high degree of judgment. AIG believes it has provided appropriate reserves for currently delinquent

loans. Consistent with industry practice, AIG does not establish a reserve for insured loans that are not currently delinquent, but that may become delinquent in future periods.

At March 31, 2008, General Insurance net loss reserves increased \$1.22 billion from the prior year-end to \$70.51 billion. The net loss reserves represent loss reserves reduced by reinsurance recoverable, net of an allowance for unrecoverable reinsurance and applicable discount for future investment income.

The following table classifies the components of the General Insurance net loss reserve by business unit:

<i>(in millions)</i>	March 31, 2008	December 31, 2007
Commercial Insurance ^(a)	\$47,751	\$47,392
Transatlantic	7,136	6,900
Personal Lines ^(b)	2,409	2,417
Mortgage Guaranty	1,598	1,339
Foreign General Insurance ^(c)	11,613	11,240
Total Net Loss Reserve	\$70,507	\$69,288

(a) At March 31, 2008 and December 31, 2007, respectively, Commercial Insurance loss reserves include approximately \$2.99 billion and \$3.13 billion (\$3.19 billion and \$3.34 billion, respectively, before discount), related to business written by Commercial Insurance but ceded to American International Reinsurance Company Limited (AIRCO) and reported in AIRCO's statutory filings. Commercial Insurance loss reserves also include approximately \$624 million and \$590 million related to business included in AIUO's statutory filings at March 31, 2008 and December 31, 2007, respectively.

(b) At March 31, 2008 and December 31, 2007, respectively, Personal Lines loss reserves include \$971 million and \$894 million related to business ceded to Commercial Insurance and reported in Commercial Insurance's statutory filings.

(c) At March 31, 2008 and December 31, 2007, respectively, Foreign General Insurance loss reserves include approximately \$1.97 billion and \$3.02 billion related to business reported in Commercial Insurance's statutory filings.

The Commercial Insurance net loss reserve of \$47.8 billion is comprised principally of the business of AIG subsidiaries participating in the American Home Assurance Company (American Home)/National Union Fire Insurance Company of Pittsburgh, Pa. (National Union) pool (10 companies) and the surplus lines pool (Lexington Insurance Company, AIG Excess Liability Insurance Company and Landmark Insurance Company).

Commercial Insurance cedes a quota share percentage of its other liability occurrence and products liability occurrence business to AIRCO. The quota share percentage ceded was 10 percent in the first three months of 2008 and 15 percent in 2007 and covered all business written in these years for these lines by participants in the American Home/National Union pool. AIRCO's loss reserves relating to these quota share cessions from Commercial Insurance are recorded on a discounted basis. As of March 31, 2008, AIRCO carried a discount of approximately \$200 million applicable to the \$3.19 billion in undiscounted reserves it assumed from the

American Home/National Union pool via this quota share cession. AIRCO also carries approximately \$537 million in net loss reserves relating to Foreign General Insurance business. These reserves are carried on an undiscounted basis.

The companies participating in the American Home/National Union pool have maintained a participation in the business written by AIU for decades. As of March 31, 2008, these AIU reserves carried by participants in the American Home/National Union pool totaled approximately \$1.97 billion. The remaining Foreign General Insurance reserves are carried by American International Underwriter Overseas, Ltd. (AIUO), AIRCO, AIG U.K., and other smaller AIG subsidiaries domiciled outside the United States. Statutory filings in the United States by AIG companies reflect all the business written by U.S. domiciled entities only, and therefore exclude business written by AIUO, AIRCO, and all other internationally domiciled subsidiaries. The total reserves carried at March 31, 2008 by AIUO and AIRCO were approximately \$3.41 billion and \$3.53 billion, respectively. AIRCO's \$3.53 billion in total general insurance reserves consist of approximately \$2.99 billion from business assumed from the American Home/National Union pool and an additional \$537 million relating to Foreign General Insurance business.

Discounting of Reserves

At March 31, 2008, AIG's overall General Insurance net loss reserves reflect a loss reserve discount of \$2.43 billion, including tabular and non-tabular calculations. The tabular workers compensation discount is calculated using a 3.5 percent interest rate and the 1979-81 Decennial Mortality Table. The non-tabular workers' compensation discount is calculated separately for companies domiciled in New York and Pennsylvania, and follows the statutory regulations for each state. For New York companies, the discount is based on a five percent interest rate and the companies' own payout patterns. For Pennsylvania companies, the statute has specified discount factors for accident years 2001 and prior, which are based on a six percent interest rate and an industry payout pattern. For accident years 2002 and subsequent, the discount is based on the yield of U.S. Treasury securities ranging from one to twenty years and the company's own payout pattern, with the future expected payment for each year using the interest rate associated with the corresponding Treasury security yield for that time period. The discount is

comprised of the following: \$794 million — tabular discount for workers' compensation in Commercial Insurance; \$1.44 billion — non-tabular discount for workers' compensation in Commercial Insurance; and \$200 million — non-tabular discount for other liability occurrence and products liability occurrence in AIRCO. The total undiscounted workers' compensation loss reserve carried by Commercial Insurance is approximately \$13.3 billion as of March 31, 2008. The other liability occurrence and products liability occurrence business in AIRCO that is assumed from Commercial Insurance is discounted based on the yield of U.S. Treasury securities ranging from one to twenty years and the Commercial Insurance payout pattern for this business. The undiscounted reserves assumed by AIRCO from Commercial Insurance totaled approximately \$3.19 billion at March 31, 2008.

Quarterly Reserving Process

Management believes that the General Insurance net loss reserves are adequate to cover General Insurance net losses and loss expenses as of March 31, 2008. While AIG regularly reviews the adequacy of established loss reserves, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's loss reserves as of March 31, 2008. In the opinion of management, such adverse development and resulting increase in reserves is not likely to have a material adverse effect on AIG's consolidated financial condition, although it could have a material adverse effect on AIG's consolidated results of operations for an individual reporting period.

The reconciliation of net loss reserves was as follows:

<i>(in millions)</i>	Three Months Ended March 31,	
	2008	2007
Net reserve for losses and loss expenses at beginning of year	\$69,288	\$62,630
Foreign exchange effect	70	(38)
Losses and loss expenses incurred:		
Current year	8,021	7,215
Prior years, other than accretion of discount	(164)	(148)
Prior years, accretion of discount	104	116
Losses and loss expenses incurred	7,961	7,183
Losses and loss expenses paid	6,812	5,741
Net reserve for losses and loss expenses at end of period	\$70,507	\$64,034

The following tables summarize development, (favorable) or unfavorable, of incurred losses and loss expenses for prior years (other than accretion of discount):

(in millions)	Three Months Ended March 31,	
	2008	2007
Prior Accident Year Development by Reporting Unit:

In determining the quarterly loss development from prior accident years, AIG conducts analyses to determine the change in estimated ultimate loss for each accident year for each profit center. For example, if loss emergence for a profit center is different than expected for certain accident years, the actuaries examine the indicated effect such emergence would have on the reserves of that profit center. In some cases, the higher or lower than expected emergence may result in no clear change in the ultimate loss estimate for the accident years in question, and no adjustment would be made to the profit center's reserves for prior accident years. In other cases, the higher or lower than expected emergence may result in a larger change, either favorable or unfavorable, than the difference between the actual and expected loss emergence. Such additional analyses were conducted for each profit center, as appropriate, in the first three months of 2008 to determine the loss development from prior accident years for the first three months of 2008. As part of its quarterly reserving process, AIG also considers notices of claims received with respect to emerging issues, such as those related to the U.S. mortgage and housing market.

2008 Net Loss Development

In the first three months of 2008, net loss development from prior accident years was favorable by approximately \$164 million, including approximately \$339 million of favorable development relating to loss sensitive business

(which was offset by an equal amount of negative earned premium development), and excluding approximately \$104 million from accretion of loss reserve discount. Excluding both the favorable development relating to loss sensitive business and accretion of loss reserve discount, net loss development from prior accident years in the first three months of 2008 was adverse by approximately \$175 million. The overall favorable development of \$164 million consisted of approximately \$572 million of favorable development from accident years 2003 through 2007 partially offset by approximately \$408 million of adverse loss development from accident years 2002 and prior. Excluding the favorable development from loss sensitive business, the overall adverse development of \$175 million consisted of approximately \$269 million of favorable development from accident years 2003 through 2007 offset by approximately \$444 million of adverse development from accident years 2002 and prior. The adverse development from accident years 2002 and prior was primarily related to excess casualty business within Commercial Insurance for the 2000 and prior accident years. The favorable development from accident years 2003 through 2007 included approximately \$300 million in favorable development from loss sensitive business written by AIG Risk Management, and approximately \$160 million in favorable development from business written by Lexington Insurance Company, including Healthcare, AIG CAT Excess, Casualty and Program business. AIG Executive Liability business contributed approximately \$50 million to the favorable development from accident years 2004 and 2005, relating primarily to D&O. Accident year 2007 produced overall favorable development of approximately \$35 million, which included approximately \$76 million of adverse development from Mortgage Guaranty and \$18 million of adverse development from Personal Lines, offset by favorable development from most classes of business in Commercial Insurance and from Transatlantic.

2007 Net Loss Development

In the first three months of 2007, net loss development from prior accident years was favorable by approximately \$148 million, including approximately \$36 million of adverse development pertaining to the major hurricanes in 2004 and 2005; and \$18 million of adverse development from the general reinsurance operations of Transatlantic; and excluding approximately \$116 million from accretion of loss reserve discount. Excluding catastrophes and Transatlantic, as well as accretion of discount, net loss development in the first three months of 2007 from prior accident years was favorable by approximately \$202 million. The overall favorable development of \$148 million consisted of approximately \$265 million of favorable development from accident years 2003 through 2006, partially offset by approximately \$117 million of adverse development from accident years 2002 and prior. For the first three months of 2007, most classes of AIG's business continued to experience

favorable development for accident years 2003 through 2006. The adverse development from accident years 2002 and prior reflected development from excess casualty within Commercial Insurance and from Transatlantic.

Asbestos and Environmental Reserves

The estimation of loss reserves relating to asbestos and environmental claims on insurance policies written many years ago is subject to greater uncertainty than other types of claims due to inconsistent court decisions as well as judicial interpretations and legislative actions that in some cases have tended to broaden coverage beyond the original intent of such policies and in others have expanded theories of liability.

As described more fully in the 2007 Annual Report on Form 10-K, AIG's reserves relating to asbestos and environmental claims reflect a comprehensive ground-up analysis. In the first three months of 2008, AIG maintained the ultimate loss estimates for asbestos and environmental claims resulting from the recently completed reserve analyses. A relatively minor amount of favorable incurred loss development pertaining to asbestos was reflected in the first three months of 2008, as presented in the table that follows. This development was primarily attributable to one large settlement.

A summary of reserve activity, including estimates for applicable IBNR, relating to asbestos and environmental claims separately and combined appears in the following table. The vast majority of such claims arise from policies written in 1984 and prior years. The current environmental policies that AIG underwrites on a claims-made basis have been excluded from the following table.

<i>(in millions)</i>	Three Months Ended March 31,			
	2008		2007	
	Gross	Net	Gross ^(a)	Net
Asbestos:				
Reserve for losses and loss expenses at beginning of year	\$3,864	\$1,454	\$4,523	\$1,889
Losses and loss expenses incurred ^(b)	(29)	(33)	(10)	(17)
Losses and loss expenses paid ^(b)	(237)	(121)	(200)	(128)
Reserve for losses and loss expenses at end of period	\$3,598	\$1,300	\$4,313	\$1,744
Environmental:				
Reserve for losses and loss expenses at beginning of year	\$ 515	\$ 237	\$ 629	\$ 290
Losses and loss expenses incurred ^(b)	(5)	—	—	—
Losses and loss expenses paid ^(b)	(14)	(10)	(15)	(9)
Reserve for losses and loss expenses at end of period	\$ 496	\$ 227	\$ 614	\$ 281
Combined:				
Reserve for losses and loss expenses at beginning of year	\$4,379	\$1,691	\$5,152	\$2,179
Losses and loss expenses incurred ^(b)	(34)	(33)	(10)	(17)
Losses and loss expenses paid ^(b)	(251)	(131)	(215)	(137)
Reserve for losses and loss expenses at end of period	\$4,094	\$1,527	\$4,927	\$2,025

(a) Gross amounts were revised from the presentation in prior periods to reflect the inclusion of certain reserves not previously identified as asbestos and environmental related. This revision had no effect on net reserves.

(b) All amounts pertain to policies underwritten in prior years, primarily to policies issued in 1984 and prior.

The gross and net IBNR included in the reserve for losses and loss expenses, relating to asbestos and environmental claims separately and combined, were estimated as follows:

<i>(in millions)</i>	Three Months Ended March 31,			
	2008		2007	
	Gross	Net	Gross*	Net
Asbestos	\$2,409	\$1,052	\$3,249	\$1,436
Environmental	344	132	368	161
Combined	\$2,753	\$1,184	\$3,617	\$1,597

* Gross amounts were revised from the presentation in prior periods to reflect the inclusion of certain reserves not previously identified as asbestos and environmental related. This revision had no effect on net reserves.

A summary of asbestos and environmental claims count activity was as follows:

	Three Months Ended March 31,					
	2008			2007		
	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined
Claims at beginning of year	6,563	7,652	14,215	6,878	9,442	16,320
Claims during year:						
Opened	198	321	519	200	411	611
Settled	(30)	(39)	(69)	(32)	(13)	(45)
Dismissed or otherwise resolved	(344)	(669)	(1,013)	(246)	(389)	(635)
Claims at end of period	6,387	7,265	13,652	6,800	9,451	16,251

Survival Ratios — Asbestos and Environmental

The following table presents AIG's survival ratios for asbestos and environmental claims at March 31, 2008 and 2007. The survival ratio is derived by dividing the current carried loss reserve by the average payments for the three most recent calendar years for these claims. Therefore, the survival ratio is a simplistic measure estimating the number of years it would be before the current ending loss reserves for these claims would be paid off using recent year average payments. The March 31, 2008 survival ratio is lower than the ratio at March 31, 2007 because the more recent periods included in the rolling average reflect higher claims payments. In addition, AIG's survival ratio for asbestos claims was negatively affected by the favorable settlement described above, as well as several similar settlements during 2007. These settlements reduced gross and net asbestos survival ratios at March 31, 2008 by approximately 1.6 years and 3.2 years, respectively, and reduced gross and net asbestos survival ratios at March 31, 2007 by approximately 1.0 year and 2.4 years, respectively. Many factors, such as aggressive settlement procedures, mix of business and level of coverage provided, have a significant effect on the amount of asbestos and environmental reserves and payments and the resultant survival ratio. Moreover, as discussed above, the primary basis for AIG's determination of its reserves is not survival ratios, but instead the ground-up and top-down analysis. Thus, caution should be exercised in attempting to determine reserve adequacy for these claims based simply on this survival ratio.

AIG's survival ratios for asbestos and environmental claims, separately and combined were based upon a three-year average payment. These ratios at March 31, 2008 and 2007 were as follows:

	Gross*	Net
2008		
Survival ratios:		
Asbestos	6.1	4.5
Environmental	4.8	3.6
Combined	5.9	4.3
2007		
Survival ratios:		
Asbestos	10.4	9.9
Environmental	5.8	4.4
Combined	9.5	8.4

* Gross amounts for 2007 were revised from the presentation in prior periods to reflect the inclusion of certain reserves not previously identified as asbestos and environmental related. This revision had no effect on net reserves.

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services operations offer a wide range of insurance and retirement savings products both domestically and abroad.

AIG's Foreign Life Insurance & Retirement Services operations include insurance and investment-oriented products such as whole and term life, investment linked, universal life and endowments, personal accident and health products; group products including pension, life and health; and fixed and variable annuities. The Foreign Life Insurance & Retirement Services products are sold through independent producers, career agents, financial institutions and direct marketing channels.

AIG's Domestic Life Insurance operations offer a broad range of protection products, such as individual life insurance and group life and health products (including disability income products and payout annuities), which include single premium immediate annuities, structured settlements and terminal funding annuities. The Domestic Life Insurance products are sold through independent producers, career agents and financial institutions and direct marketing channels. Home service operations include an array of life insurance, accident and health and annuity products sold primarily through career agents.

AIG's Domestic Retirement Services operations include group retirement products, individual fixed and variable annuities sold through banks, broker-dealers and exclusive sales representatives, and annuity runoff operations, which include previously acquired "closed blocks" and other fixed and variable annuities largely sold through distribution relationships that have been discontinued.

AIG's Life Insurance & Retirement Services reports its operations through the following major internal reporting units and legal entities:

Foreign Life Insurance & Retirement Services**Japan and Other**

- American Life Insurance Company (ALICO)
- AIG Star Life Insurance Co., Ltd. (AIG Star Life)
- AIG Edison Life Insurance Company (AIG Edison Life)

Asia

- American International Assurance Company, Limited, together with American International Assurance Company (Bermuda) Limited (AIA)
- Nan Shan Life Insurance Company, Ltd. (Nan Shan)
- American International Reinsurance Company Limited (AIRCO)
- The Philippine American Life and General Insurance Company (Philamlife)

Domestic Life Insurance

- American General Life Insurance Company (AIG American General)

- The United States Life Insurance Company in the City of New York (USLIFE)
- American General Life and Accident Insurance Company (AGLA)

Domestic Retirement Services

- The Variable Annuity Life Insurance Company (VALIC)
- AIG Annuity Insurance Company (AIG Annuity)
- AIG SunAmerica Life Assurance Company (AIG SunAmerica)

Total	11%	(31)%	-%	(36)%	-%

The gross insurance in force for Life Insurance & Retirement Services was as follows:

<i>(in millions)</i>	March 31, 2008	December 31, 2007
Foreign*	\$1,411,374	\$ 1,327,251
Domestic	998,771	984,794
Total	\$2,410,145	\$ 2,312,045

* Includes an increase of \$46.6 billion related to changes in foreign exchange rates at March 31, 2008.

Disruption in the U.S. residential mortgage and credit markets was the key driver of operating results for the first three months of 2008 primarily due to significant net realized capital losses resulting from other-than-temporary impairment charges of \$4.4 billion compared to other-than-temporary impairment charges of \$392 million in the same period of 2007. In addition, net investment income and certain products continued to be negatively affected by the volatile markets.

Life Insurance & Retirement Services total revenues in the first three months of 2008 reflect growth in premiums and other considerations compared to the same period in 2007, primarily due to strong life insurance production in the Foreign Life Insurance & Retirement Services operations, growth in a block of U.K. investment-oriented products and higher sales of payout annuities in the Domestic Life Insurance operations. Overall growth in premiums and other considerations was dampened by a continuing shift to investment-oriented products and the suspension in the second quarter of 2007 of new sales on certain products in Japan pending completion of an industry wide review by the tax authorities. This review was finalized in March 2008 and resulted in lower tax deductibility of these products. Although sales of these products have restarted in Japan, it is expected that sales will be at lower than historical levels.

Net investment income decreased in the first three months of 2008 compared to the same period in 2007 due to

lower partnership and mutual fund income as well as lower policyholder investment income and trading gains and losses (together, policyholder trading gains (losses)) reflecting equity market declines. Policyholder trading gains and losses are offset by a charge to incurred policy losses and benefits expense. Policyholder trading gains and losses generally reflect the trends in equity markets, principally in Japan and Asia. Policyholder trading losses were \$785 million in the first three months of 2008 compared to gains of \$797 million in the same period of 2007.

The operating loss in the first three months of 2008 was significantly affected by net realized capital losses which totaled \$4.4 billion compared to net realized capital losses of \$256 million in the same period in 2007. The higher net realized capital losses were primarily related to severity impairments and foreign exchange losses due to the credit market disruption and weakening of the dollar against Asian currencies. The higher net realized capital losses and lower yield enhancement investment income more than offset the positive effect of growth in underlying reserves which reflects increased assets under management. Other factors that negatively affected operating income in the first three months of 2008 were trading account losses of \$88 million in the U.K. associated with certain investment-linked products and an increase in incurred policyholder benefits of \$80 million related to a closed block of Japan business with guaranteed benefits, partially offset by the favorable effect of foreign exchange rates. Operating income in the first three months of 2008 included a DAC and SIA benefit of \$267 million related to net realized capital losses in the first three months of 2008 compared to \$11 million in the same period in 2007.

Operating income in the first three months of 2007 included additional claim expense of \$37 million related to the industry wide regulatory review of claims in Japan and a \$50 million charge related to balance sheet reconciliation remediation activities in Asia.

The most significant effect on the Life Insurance & Retirement Services results from AIG's adoption of FAS 157 was the change in measurement of fair value for embedded policy derivatives. The pre-tax effect of adoption related to embedded policy derivatives was an increase in net realized capital losses of \$155 million as of January 1, 2008, partially offset by a \$47 million DAC benefit related to these losses. The effect of initial adoption was primarily due to an increase in the embedded policy derivative liability valuations resulting from the inclusion of explicit risk margins.

AIG adopted FAS 159 on January 1, 2008 and elected to apply the fair value option to a closed block of single premium variable life business in Japan and for an investment-linked product sold principally in Asia. The adoption of FAS 159 with respect to these fair value elections resulted in a decrease to 2008 opening retained earnings of \$559 million, net of tax. The fair value of the liabilities for these policies totaled \$3.5 billion at March 31, 2008 and is reported in policyholders' contract deposits.

Foreign Life Insurance & Retirement Services Results

Foreign Life Insurance & Retirement Services results on a sub-product basis were as follows:

<i>(in millions)</i>	Premiums and Other Considerations	Net Investment Income	Net Realized Capital Gains (Losses)	Total Revenues	Operating Income (Loss)

Total revenues for Japan and Other in the first three months of 2008 decreased compared to the same period in 2007 primarily due to higher net realized capital losses and lower net investment income from partnerships and mutual funds, which more than offset growth in premiums and other considerations and net investment income from fixed maturity securities. Operating income decreased in the first three months of 2008 compared to the same period in 2007 primarily due to the effect of market volatility which resulted in higher net realized capital losses, trading account losses of \$88 million in the U.K. associated with certain investment-linked products, and increased incurred policyholder benefits of \$80 million related to a closed block of Japan single premium variable life business with guaranteed benefits. A hedging strategy is being implemented for the Japan block of business which is expected to help mitigate the effect of equity market volatility on these liabilities beginning in the second half of 2008. Growth of in force reserves and the positive effect of foreign exchange rates partially offset the losses caused by market volatility.

Life insurance premiums and other considerations increased in the first three months of 2008 compared to the same period in 2007 reflecting growth in new business as further described below. Net investment income declined due to policyholder trading losses of \$224 million compared to policyholder trading gains of \$95 million in 2007 along with lower partnership income. Life insurance operating income declined in the first three months of 2008 compared to the same period in 2007 due to increased net realized capital losses and increased policyholder benefits related to a closed block of Japan business, which were partially offset by claims expense in the first three months of 2007 of \$12 million

related to the industry wide regulatory review of claims in Japan.

Personal accident premiums and other considerations reflected growth due to the launch of a new single premium product in Japan and a favorable foreign exchange effect. Net investment income increased modestly in the first three months of 2008 compared to the same period in 2007 primarily due to growth in invested assets. Operating income increased in the first three months of 2008 compared to the same period in 2007 due to growth in in force reserves and lower claim expense of \$28 million associated with the claims review in Japan, partially offset by net realized capital losses. Loss ratios for this product continue to be stable.

Group products premiums and other considerations in the first three months of 2008 increased compared to the same period in 2007 primarily due to the growing credit business in Europe and the employee benefits group life and medical business in Europe, Brazil and the Middle East. Net investment income declined in the first three months of 2008 compared to the same period in 2007 primarily due to lower policyholder trading gains. Operating income in the first three months of 2008 declined slightly compared to the same period in 2007 primarily due to net realized capital losses.

Individual fixed annuities premiums and other considerations in the first three months of 2008 were essentially unchanged compared to the same period in 2007 as surrender charges on non-Yen annuity products declined in Japan. Net investment income declined due to policyholder trading losses in Europe compared to gains in the first quarter of 2007, which more than offset the effect of higher assets under management and increased net investment spreads in

Japan. Although fixed annuity reserves were higher in the first three months of 2008 compared to the same period in 2007, operating income declined due to higher net realized capital losses and the lower surrender charge income in Japan.

Individual variable annuities premiums and other considerations increased in the first three months of 2008 compared to the same period in 2007 due to the fees generated from the higher levels of assets under management. Net investment income decreased reflecting the effect of equity market volatility which resulted in policyholder trading losses of \$195 million for the first three months of 2008 compared to gains of \$494 million for the same period in 2007. Variable annuity reserves at the end of the first quarter of 2008 were higher than at the same period in 2007 due to deposit growth in Japan and the U.K. However, operating income declined in the first three months of 2008 compared to the same period in 2007 due to \$88 million of trading account losses in the U.K.

First year premium, single premium and annuity deposits for Japan and Other were as follows:

	Three Months Ended March 31,		Percentage Increase/ (Decrease)	
	2008	2007	U.S.\$	Original Currency
<i>(in millions)</i>				
First year premium	\$ 642	\$ 620	4%	(6)%
Single premium	2,956	1,997	48%	44%
Annuity deposits	5,507	4,071	35%	33%

First year premium sales in the first three months of 2008 grew modestly in U.S. dollar terms, but declined on an original currency basis compared to the same period in 2007. First year premium life insurance sales in Japan continue to reflect the effect of the suspension of the increasing term product in April 2007, but sales in Europe remained robust. Personal accident first year premium sales declined due to lower direct marketing sales in Japan. Sales in Europe were strong, particularly in the credit and group life and medical lines, and in Brazil as pension sales increased.

Single premium interest sensitive life insurance sales remained strong in Japan while guaranteed income bond sales continued to perform well in Europe. A new single premium personal accident and health product was launched in Japan during the first quarter of 2008 with the majority of sales coming through banks which were recently deregulated and are now able to sell accident and health products.

Annuity deposits increased in the first three months of 2008 compared to the same period in 2007 as both fixed and variable products performed well. In Japan, fixed annuity products improved as the Japanese Yen strengthened making non-Yen products more attractive to Japanese consumers. In the U.K., variable annuity deposits continued to reflect strong growth.

*Asia Results***Asia results, presented on a sub-product basis were as follows:**

Total revenues in Asia in the first three months of 2008 decreased compared to the same period in 2007 primarily due to the negative effect of policyholder trading losses on net investment income and higher net realized capital losses, which more than offset the growth in premiums and other considerations. Premiums and other considerations increased in the first three months of 2008 compared to the same period in 2007, notwithstanding a continued trend toward investment-oriented products where only a portion of policy charges are reported as premiums. Net investment income declined due to policyholder trading losses in 2008 compared to gains in the same period in 2007 and lower partnership and unit investment trust income. Net realized capital losses in the first three months of 2008 included higher other-than-temporary impairment charges partially offset by a positive change in the fair value of derivatives that do not qualify for hedge accounting treatment under FAS 133 compared to the same period last year. Operating income in the first three months of 2008 decreased compared to the same period in 2007 due to higher net realized capital losses and lower net investment income. Operating income in the first three months of 2007 included a \$50 million charge related to balance sheet reconciliation remediation activity.

Life insurance premiums and other considerations in the first three months of 2008 increased compared to the same period in 2007, benefiting from improved sales in Singapore, Malaysia and Thailand and the favorable effect of foreign exchange rates, partially offset by a shift in product mix from traditional life insurance products to investment-oriented products. Net investment income decreased in the first three

months of 2008 due to \$336 million of policyholder trading losses compared to gains of \$76 million for the same period in 2007. Operating income decreased in the first three months of 2008 compared to the same period in 2007 primarily due to market volatility, which resulted in higher net realized capital losses and lower net investment income which more than offset the benefit of strong growth in reserves and the favorable effect of foreign exchange. Operating income in the first three months of 2007 included a \$50 million charge related to balance sheet reconciliation remediation activity.

Personal accident revenues grew in the first three months of 2008 compared to the same period in 2007 primarily due to higher premiums and other considerations, particularly in Korea, and an increase in net investment income resulting from growth in invested assets. Operating income declined slightly due to higher claims in Taiwan.

Group products premiums and other considerations grew in the first three months of 2008 compared to the same period in 2007 due to new group contracts in Singapore, Korea and Australia. Operating income increased in the first three months of 2008 compared to the same period in 2007 primarily due to improved production results. In addition, operating income in the first three months of 2007 included a \$13 million reserve charge.

The operating loss in 2008 for individual variable annuities resulted from start-up costs for new variable annuity products launched in Taiwan during the quarter.

First year premium, single premium and annuity deposits for Asia were as follows:

(in millions)	Three Months Ended March 31,		Percentage Increase/ (Decrease)	
	2008	2007	U.S.\$	Original Currency
First year premium	\$718	\$674	7%	4%
Single premium	957	648	48%	42%
Annuity deposits	332	131	153%	150%

First year premium sales in the first three months of 2008 grew moderately compared to the same period in 2007 as the sales focus shifted more to single premium products. In China and Taiwan, life insurance first year premium sales declined as China sales continued to focus on single premium

* Premiums and other considerations include structured settlements, single premium immediate annuities and terminal funding annuities.

Total Domestic Life Insurance revenues decreased in the first three months of 2008 compared to the same period in 2007 primarily due to significantly higher net realized capital losses, partially offset by slightly higher premiums and other considerations. Domestic Life Insurance premiums and other considerations increased in the first three months of 2008 compared to the same period in 2007 primarily due to strong payout annuity sales and growth in life insurance business in force. Net investment income decreased in the first three months of 2008 compared to the same period in 2007 primarily from lower call and tender income and higher policyholder trading losses which result in a direct offset in incurred policy losses and benefits. Net investment income in the first three months of 2008 benefited from lower losses of \$29 million from investments in synthetic fuel production

investment-oriented products, and in Taiwan sales shifted to a newly launched single premium variable annuity product. The group products business performed well in Singapore, Korea and Australia.

Single premium sales in the first three months of 2008 grew significantly compared to the same period in 2007 primarily due to investment-oriented life insurance sales, particularly in Singapore, Hong Kong, China and Malaysia, as well as strong group pension sales in Thailand.

Annuity deposits in the first three months of 2008 more than doubled the level reported for the same period in 2007 due to the launch of the new variable annuity product in Taiwan and higher deposits in Korea as a result of an improved interest rate environment.

(Synfuel) compared to the same period in 2007. Domestic Life Insurance operating income decreased in the first three months of 2008 compared to the same period in 2007 primarily due to higher net realized capital losses including other-than-temporary impairment charges and derivative losses. The operating results for the first three months of 2008 benefited from increased premiums and other considerations, underwriting gains in certain product lines and \$20 million of lower DAC amortization related to net realized capital losses associated with both investment losses and embedded policy derivatives related to the adoption of FAS 157.

Life insurance premiums and other considerations increased in the first three months of 2008 compared to the

same period in 2007 driven by growth in life insurance business in force and increased policyholder charges related to universal life and whole life products. Net investment income in the first three months of 2008 increased slightly compared to the same period in 2007 due to lower Synfuel losses, offset by lower call and tender income and higher policyholder trading losses. The policyholder trading losses result in a direct offset in incurred policy losses and benefits. Life insurance operating results were lower in the first three months of 2008 compared to the same period in 2007 primarily due to higher net realized capital losses which were partially offset by continued growth in the in force business.

Home service premiums and other considerations declined in the first three months of 2008 compared to the same period in 2007 as the reduction of premiums in force from normal lapses and maturities exceeded sales growth. Net investment income in the first three months of 2008 decreased compared to the same period in 2007 due to lower call and tender income which was partially offset by lower Synfuel losses. The home service operating results were also affected by higher net realized capital losses which were partially offset by continued improvement in profit margins on both the in force and new business.

Group life/health premiums and other considerations declined in the first three months of 2008 compared to the same period in 2007 primarily due to continued tightened underwriting in the group employer product lines. Group life/health operating income decreased in the first three months of 2008 compared to the same period in 2007 primarily due to higher net realized capital losses, partially offset by a lower effect of AICPA SOP 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts" (SOP 05-1) compared to the same period in 2007. Group life and health operating results also benefited from underwriting gains across several product lines.

Payout annuities premiums and other considerations increased in the first three months of 2008 compared to the same period in 2007 reflecting strong sales of structured

settlements and terminal funding annuities in the U.S. and Canada. Net investment income increased in the first three months of 2008 reflecting growth in insurance reserves, partially offset by a \$20 million decrease in call and tender income. Payout annuities operating results in the first three months of 2008 benefited from growth of the in force business and favorable mortality experience which were partially offset by higher net realized capital losses.

Individual fixed and runoff annuities premiums and other considerations along with net investment income decreased in the first three months of 2008 compared to the same period in 2007 reflecting declining insurance reserves. Operating results for the first three months of 2008 are lower compared to the same period in 2007. Higher net realized capital losses were partially offset by lower amortization of DAC of \$15 million, primarily related to net realized capital losses associated with both investment losses and embedded policy derivatives related to the adoption of FAS 157.

Domestic Life Insurance periodic premium sales by product were as follows:

<i>(in millions)</i>	Three Months Ended		Percentage Increase/ (Decrease)
	2008	March 31, 2007	
Periodic Premium Sales By Product*:			
Universal life	\$ 47	\$ 51	(8)%
Variable universal life	27	13	108
Term life	52	55	(5)
Whole life/other	3	2	50
Total	\$129	\$121	7%

* Periodic premium represents premium from new business expected to be collected over a one-year period.

Domestic Life Insurance periodic premium sales increased in the first three months of 2008 compared to the same period in 2007 primarily as a result of strong private placement variable universal life sales. The U.S. life insurance market remains highly competitive and Domestic Life's emphasis on maintaining new business margins continues to affect production activity, particularly within the term life product category.

*Domestic Retirement Services Results***Domestic Retirement Services results, presented on a sub-product basis were as follows:**

* Primarily represents runoff annuity business sold through discontinued distribution relationships.

Total revenues and operating income for Domestic Retirement Services declined in the first three months of 2008 compared to the same period in 2007 primarily due to significantly increased net realized capital losses and lower partnership and yield enhancement income. Net realized capital losses for Domestic Retirement Services increased primarily due to higher other-than-temporary impairment charges of \$2.2 billion in the first three months of 2008 compared to \$42 million in the same period in 2007.

Both group retirement products and individual fixed annuities operating income in the first three months of 2008 decreased compared to the same period in 2007 primarily as a result of increased net realized capital losses due to higher other-than-temporary impairment charges, and lower net investment income due to lower partnership and yield

enhancement income. In addition, increased levels of short-term investments further reduced the overall investment yield. These decreases were partially offset by decreases in DAC amortization and sales inducement costs of \$168 million related to the net realized capital losses.

Individual variable annuities operating income decreased in the first three months of 2008 compared to the same period in 2007 primarily as a result of increased net realized capital losses largely due to increased embedded policy derivative liability valuations primarily as a result of the adoption of FAS 157, as well as higher other-than-temporary impairment charges. The increase in net realized capital losses was partially offset by decreases in DAC amortization and sales inducement costs of \$77 million related to the net realized capital losses.

The account value rollforward for Domestic Retirement Services by product was as follows:

(in millions)	Three Months Ended March 31,	
	2008	2007

Total reserves and mutual funds	\$153,590	\$155,122

Higher deposits in the individual fixed annuity blocks in combination with lower surrenders in all product lines resulted in positive net flows in the first three months of 2008.

Domestic Retirement Services deposits increased in the first three months of 2008 compared to the same period in

2007 primarily reflecting higher deposits in individual fixed annuities. Group retirement and individual variable annuity deposits were essentially unchanged in the first three months of 2008 compared to the same period in 2007. The significant improvement in individual fixed annuity sales was due to continued steepening of the yield curve and mutual fund money market products offering less competitive crediting rates than those currently available on fixed annuities.

Domestic Retirement Services surrenders and other withdrawals decreased in all product lines in the first three months of 2008 compared to the same period in 2007. Group retirement surrenders decreased in the first three months of 2008 compared to the same period in 2007 as a result of a few large group mutual fund surrenders in the first three months of 2007. Individual fixed annuity surrenders decreased in the first three months of 2008 due to decreasing competition from bank deposit and mutual fund money market products.

Domestic Retirement Services reserves by surrender charge category and surrender rates were as follows:

(in millions)	Group Retirement Products*	Individual Fixed Annuities	Individual Variable Annuities
March 31, 2008			
No surrender charge	\$48,890	\$11,410	\$12,072
0% - 2%	2,520	3,359	4,627
Greater than 2% - 4%	2,901	7,490	4,156
Greater than 4%	2,363	25,932	9,568
Non-Surrenderable	904	3,349	407
Total reserves	\$57,578	\$51,540	\$30,830
Surrender rates	9.1%	12.5%	11.7%
March 31, 2007			
No surrender charge	\$43,889	\$10,513	\$11,721
0% - 2%	6,323	4,406	5,022
Greater than 2% - 4%	3,732	6,395	4,960
Greater than 4%	3,523	27,579	9,640
Non-Surrenderable	879	3,446	89
Total reserves	\$58,346	\$52,339	\$31,432
Surrender rates	11.9%	12.7%	12.6%

* Excludes mutual funds of \$8.1 billion and \$6.9 billion at March 31, 2008 and 2007, respectively.

Surrender rates decreased for all three product lines in the first three months of 2008 compared to the same period in 2007. The surrender rate for individual fixed annuities continues to be driven by the yield curve and the general aging of the in force block. However, less than 23 percent of the individual fixed annuity reserves as of March 31, 2008 were available for surrender without charge.

An increase in the level of surrenders in any of these businesses or in the individual fixed annuities runoff block could accelerate the amortization of DAC and negatively affect fee income earned on assets under management.

*Life Insurance & Retirement Services Net Investment Income and Net Realized Capital Gains (Losses)***The components of net investment income for Life Insurance & Retirement Services were as follows:**

<i>(in millions)</i>	Three Months Ended March 31,	
	2008	2007

Investment expenses	145	106
Net investment income	\$3,803	\$5,513

(a) Includes real estate income, income on non-partnership invested assets, securities lending and Foreign Life Insurance & Retirement Services' equal share of the results of AIG Credit Card Company (Taiwan).

(b) Relates principally to assets held in various trading securities accounts that do not qualify for separate account treatment under AICPA SOP 03-1, "Accounting and Reporting by Insurance Enterprises for Certain Nontraditional Long-Duration Contracts and for Separate Accounts" (SOP 03-1). These amounts are principally offset by an equal change included in incurred policy losses and benefits.

Net investment income decreased \$1.7 billion, or 31 percent in the first three months of 2008 compared to the same period in 2007, reflective of the recent market volatility. For the first three months of 2008, policyholder trading losses were \$785 million compared to gains of \$797 million in the same period of 2007 reflecting equity market declines in Japan and Asia. In addition, lower yield enhancement income from equity investments was negatively affected.

Historically, AIG generated income tax credits as a result of investing in Synfuels related to the partnership income (loss) shown in the table above. Synfuel production ceased effective December 31, 2007.

(a) See *Invested Assets — Other-than-temporary impairments* for additional information.

(b) Includes losses of \$11 million and \$71 million in the first three months of 2008 and 2007, respectively, allocated to participating policyholders.

(c) Includes losses of \$12 million and \$143 million for Domestic Life Insurance and Domestic Retirement Services, respectively, related to the adoption of FAS 157 related to embedded policy derivatives.

Included in net realized capital gains (losses) are gains (losses) on sales of investments, derivative gains (losses) for transactions that did not qualify for hedge accounting treatment under FAS 133, foreign exchange gains and losses, other-than-temporary impairments and the effects of the adoption of FAS 157 further described below. In the first three months of 2008, Life Insurance & Retirement Services operations recorded \$4.4 billion of other-than-temporary impairment charges compared to \$392 million in the same period in 2007. The increased other-than-temporary Foreign Life Insurance & Retirement Services losses were primarily driven by severity losses and foreign currency declines. See *Invested Assets — Valuation of Invested Assets — Portfolio Review* herein for further information. Foreign currency losses of \$401 million related primarily to the decline in value of U.S. dollar bonds held in Taiwan, Singapore and Thailand against those respective currencies. Derivatives in the Foreign

Life Insurance & Retirement Services operations are primarily used to economically hedge cash flows related to U.S. dollar bonds back to the respective currency of the country, principally in Taiwan, Thailand and Singapore. These derivatives do not qualify for hedge accounting treatment under FAS 133 and are recorded in net realized capital gains (losses). The corresponding foreign exchange gain or loss with respect to the economically hedged bond is deferred in accumulated other comprehensive income (loss) until the bond is sold or deemed to be other-than-temporarily impaired.

In the first three months of 2008, the Domestic Life Insurance and Domestic Retirement Services operations incurred higher net realized capital losses primarily due to other-than-temporary impairment charges related to severity. Derivatives in the Domestic Life Insurance operations include

affiliated interest rate swaps used to economically hedge cash flows on bonds and option contracts used to economically hedge cash flows on indexed annuity and universal life products. These derivatives do not qualify for hedge accounting treatment under FAS 133 and are recorded in net realized capital gains (losses). The corresponding gain or loss with respect to the economically hedged bond is deferred in accumulated other comprehensive income (loss) until the bond is sold, matures or deemed to be other-than-temporarily impaired.

The most significant effect of AIG's adoption of FAS 157 was the change in measurement of fair value for embedded policy derivatives. The pre-tax effect of adoption related to embedded policy derivatives was an increase in net realized capital losses of \$155 million as of January 1, 2008. The effect of initial adoption was primarily due to an increase in the embedded policy derivative liability valuations resulting from the inclusion of explicit risk margins.

Deferred Policy Acquisition Costs and Sales Inducement Assets

DAC for Life Insurance & Retirement Services products arises from the deferral of costs that vary with, and are directly related to, the acquisition of new or renewal business. Policy acquisition costs for life insurance products are generally deferred and amortized over the premium paying period in accordance with FAS 60, "Accounting and Reporting by Insurance Enterprises" (FAS 60). Policy acquisition costs that relate to universal life and investment-type products are generally deferred and amortized, with interest in relation to the incidence of estimated gross profits to be realized over the estimated lives of the contracts in

accordance with FAS 97. Value of Business Acquired (VOBA) is determined at the time of acquisition and is reported on the consolidated balance sheet with DAC and amortized over the life of the business, similar to DAC. AIG offers sales inducements to contract holders (bonus interest) on certain annuity and investment contracts. Sales inducements are recognized as part of the liability for policyholders' contract deposits on the consolidated balance sheet and are amortized over the life of the contract similar to DAC. Total deferred acquisition and sales inducement costs increased \$186 million in the first three months of 2008 compared to the same period in 2007 primarily due to higher production in the Foreign Life Insurance operations partially offset by lower Domestic Life Insurance and Domestic Retirement Services sales. Total amortization expense decreased slightly in the first three months of 2008 compared to the same period in 2007. The amortization in 2008 was reduced by the adoption of FAS 159 and \$267 million credited to operating income related to net realized capital losses in the first three months of 2008 compared to \$11 million in the same period of 2007 reflecting significantly higher other-than-temporary impairment charges. As a result, annualized amortization expense levels in the first three months of 2008 and 2007 were approximately 11 percent and 13 percent, respectively, of the opening DAC balance.

AIG adopted FAS 159 on January 1, 2008 and elected to apply fair value accounting for an investment-linked product sold principally in Asia. Upon fair value election, all DAC and SIA are written off and there is no further deferral or amortization of DAC and SIA for that product. The amount of DAC and SIA written off as of January 1, 2008 was \$1.1 billion and \$299 million, respectively.

The major components of the changes in DAC/VOBA and SIA were as follows:

(in millions)	Three Months Ended March 31,					
	2008			2007		
	DAC/VOBA	SIA	Total	DAC/VOBA	SIA	Total
Foreign Life Insurance & Retirement Services

* In 2008, primarily represents the cumulative effect of adoption of FAS 159. In 2007, primarily represents the cumulative effect of adoption of SOP 05-1.

Because AIG operates in various global markets, the estimated gross profits used to amortize DAC, VOBA and SIA can be subject to differing market returns and interest rate environments in any single period. The combination of market returns and interest rates may lead to acceleration of

amortization in some products and regions and simultaneous deceleration of amortization in other products and regions.

DAC, VOBA and SIA for insurance-oriented, investment-oriented and retirement services products are reviewed for recoverability, which involves estimating the

future profitability of current business. This review involves significant management judgment. If actual future profitability is substantially lower than estimated, AIG's DAC, VOBA and SIA may be subject to an impairment charge and AIG's results of operations could be significantly affected in future periods.

Future Policy Benefit Reserves

Periodically, the net benefit reserves (policy benefit reserves less DAC) established for Life Insurance & Retirement Services companies are tested to ensure that, including consideration of future expected premium payments, they are adequate to provide for future policyholder benefit obligations. The assumptions used to perform the tests are current best-estimate assumptions as to policyholder mortality, morbidity, terminations, company maintenance expenses and invested asset returns. For long duration traditional business, a "lock-in" principle applies, whereby the assumptions used to calculate the benefit reserves and DAC are set when a policy is issued and do not change with changes in actual experience. These assumptions include margins for adverse deviation in the event that actual experience might deviate from these assumptions. For business in force outside of North America, 46 percent of total policyholder benefit liabilities at March 31, 2008 represent traditional business where the lock-in principle applies. In most foreign locations, various guarantees are embedded in policies in force that may remain applicable for many decades into the future.

As experience changes over time, the best-estimate assumptions are updated to reflect observed changes. Because of the long-term nature of many of AIG's liabilities subject to the lock-in principle, small changes in certain of the assumptions may cause large changes in the degree of reserve adequacy. In particular, changes in estimates of future invested asset return assumptions have a large effect on the degree of reserve adequacy.

Taiwan

Beginning in 2000, the yield available on Taiwanese 10-year government bonds dropped from approximately 6 percent to 2.4 percent at March 31, 2008. Yields on most other invested assets have correspondingly dropped over the same period. Current sales are focused on products such as:

- variable separate account products which do not contain interest rate guarantees,
- participating products which contain very low implied interest rate guarantees, and
- accident and health policies and riders.

In developing the reserve adequacy analysis for Nan Shan, several key best-estimate assumptions have been made:

- Observed historical mortality improvement trends have been projected to 2014;
- Morbidity, expense and termination rates have been updated to reflect recent experience;
- Taiwan government bond rates are expected to remain at current levels for 10 years and gradually increase to best-estimate assumptions of a market consensus view of long-term interest rate expectations;
- Foreign assets are assumed to comprise 35 percent of invested assets, resulting in a composite long-term investment assumption of approximately 4.8 percent; and
- The currently permitted practice of offsetting positive mortality experience with negative interest margins, thus eliminating the need for mortality dividends, will continue.

Future results of the reserve adequacy tests will involve significant management judgment as to mortality, morbidity, expense and termination rates and investment yields. Adverse changes in these assumptions could accelerate DAC amortization and necessitate reserve strengthening.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance.

Financial Services Results

Financial Services results were as follows:

<i>(in millions)</i>	Three Months Ended March 31,		Percentage Increase/ (Decrease)
	2008	2007	
Total revenues:			
Aircraft Leasing	\$ 1,165	\$ 1,058	10%
Capital Markets ^(a)	(8,743)	228	—
Consumer Finance ^(b)	931	845	10
Other, including intercompany adjustments	87	70	24
Total	\$ (6,560)	\$ 2,201	—%
Operating income (loss):			
Aircraft Leasing	\$ 221	\$ 164	35%
Capital Markets ^(a)	(8,927)	68	—
Consumer Finance ^(b)	(52)	36	—
Other, including intercompany adjustments	(14)	24	—
Total	\$ (8,772)	\$ 292	—%

(a) Revenues, shown net of interest expense of \$511 million and \$1.1 billion in the three-month periods ended March 31, 2008 and 2007, respectively, were primarily from hedged financial positions entered into in connection with counterparty transactions. In the three-month period ended March 31, 2008, both revenues and operating income (loss) include an unrealized market valuation loss of \$9.1 billion on AIGFP's super senior credit default swap portfolio.

(b) For the three-month period ended March 31, 2007, includes a pre-tax charge of \$128 million in connection with domestic consumer finance's mortgage banking activities.

Financial Services reported an operating loss in the first three months of 2008 compared to operating income in the same period of 2007 primarily due to an unrealized market valuation loss of \$9.1 billion on AIGFP's super senior credit default swap portfolio and a decline in operating income for AGF. AGF's operating income declined in the first three months of 2008 compared to the same period in 2007 primarily due to increases in the provision for finance receivable losses and unfavorable variances related to derivatives.

ILFC generated strong operating income growth in the first three months of 2008 compared to the same period in 2007, driven to a large extent by a larger aircraft fleet, higher lease rates and higher utilization.

Aircraft Leasing

Aircraft Leasing operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to foreign and domestic airlines. Revenues also result from the remarketing of commercial aircraft for ILFC's own account, and remarketing and fleet management services for airlines and financial institutions. ILFC finances its aircraft purchases primarily through the issuance of debt instruments. ILFC economically hedges part of its floating rate and substantially all of its foreign currency denominated debt using interest rate and foreign currency derivatives. Starting in the second quarter of 2007, ILFC began applying hedge accounting to most of its derivatives. The composite borrowing rates at March 31, 2008 and 2007 were 4.79 percent and 5.19 percent, respectively.

ILFC typically contracts to re-lease aircraft before the end of the existing lease term. For aircraft returned before the end of the lease term, ILFC has generally been able to re-lease such aircraft within two to six months of their return. As a lessor, ILFC considers an aircraft "idle" or "off lease" when the aircraft is not subject to a signed lease agreement or signed letter of intent. Subsequent to March 31, 2008, thirteen planes were returned to ILFC by bankrupt lessees. ILFC expects to re-lease these planes to other lessees and may incur related costs. As of April 30, 2008, ILFC had leased 10 of the thirteen aircraft.

Aircraft Leasing Results

ILFC's operating income increased in the first three months of 2008 compared to the same period in 2007. Rental revenues increased by \$121 million or 11 percent, driven by a larger aircraft fleet and higher lease rates. As of March 31, 2008, 921 aircraft in ILFC's fleet were subject to operating leases compared to 856 aircraft as of March 31, 2007. ILFC had one aircraft off lease at March 31, 2008 and 2007, and all new aircraft scheduled for delivery through 2008 have been leased. Flight equipment marketing revenues increased by \$8 million in the first three months of 2008 compared to the same period in 2007 due to an increase in aircraft sales. The increase in revenues was partially offset by an increase in depreciation and a credit value adjustment on derivatives as a result of the adoption of FAS 157. Depreciation expense increased by \$44 million, or 11 percent, in line with the increase in the size of the aircraft fleet. In the first three months of 2008 and 2007, the losses from hedging activities that did not qualify for hedge accounting treatment under

FAS 133, including the related foreign exchange gains and losses, were \$48 million and \$37 million, respectively, in both revenues and operating income. The net derivative loss for the three-month period ended March 31, 2008 includes the effect of changes in AIG's credit spreads of \$39 million, of which \$12 million represents the transition amount from the adoption of FAS 157.

Capital Markets

Capital Markets represents the operations of AIGFP, which engages as principal in a wide variety of financial transactions, including standard and customized financial products involving commodities, credit, currencies, energy, equities and rates. The credit products include credit protection written through credit default swaps on super senior risk tranches of diversified pools of loans and debt securities. AIGFP also invests in a diversified portfolio of securities and principal investments and engages in borrowing activities involving the issuance of standard and structured notes and other securities, and entering into GIAs.

As Capital Markets is a transaction-oriented operation, current and past revenues and operating results may not provide a basis for predicting future performance. AIG's Capital Markets operations derive a significant portion of their revenues from hedged financial positions entered into in connection with counterparty transactions. AIGFP also participates as a dealer in a wide variety of financial derivatives transactions. Revenues and operating income of the Capital Markets operations and the percentage change in these amounts for any given period are significantly affected by changes in the fair value of AIGFP's assets and liabilities and by the number, size and profitability of transactions entered into during that period relative to those entered into during the prior period. Generally, the realization of transaction revenues as measured by the receipt of funds is not a significant reporting event as the gain or loss on AIGFP's trading transactions is currently reflected in operating income as the fair values change from period to period.

AIGFP's products generally require sophisticated models and significant management assumptions to determine fair values and, particularly during times of market disruption, the absence of observable market data can result in fair values at any given balance sheet date that are not indicative of the ultimate settlement values of the products.

Capital Markets Results

Capital Markets reported an operating loss in the first three months of 2008 compared to operating income in the same period of 2007, primarily due to unrealized market valuation losses related to AIGFP's super senior credit default swap portfolio principally written on multi-sector CDOs. These losses were partially offset by net unrealized market gains

related to certain credit default swaps purchased against the AAA to BBB-rated risk layers on portfolios of reference obligations. Financial market conditions in the first three months of 2008 were characterized by widening credit spreads and declining interest rates.

In addition to writing credit protection on the super senior risk layer on designated portfolios of loans or debt securities, AIGFP also wrote protection on tranches below the super senior risk layer. At March 31, 2008, the net notional amount of the credit default swaps in the regulatory capital relief portfolio written on tranches below the super senior risk layer was \$5.7 billion, with an estimated fair value loss of \$174 million.

At March 31, 2008 the notional amounts and unrealized market valuation loss of the super senior credit default swap portfolio, including certain regulatory capital relief driven trades, by asset class were as follows:

	Unrealized Market Valuation Loss		
	Notional Amount (in billions)	Three Months Ended March 31, 2008 (in millions)	Cumulative At March 31, 2008 (in millions)
Corporate loans ^(a)	\$192	\$ -	\$ -
Prime residential mortgages ^(a)	143	-	-
Corporate debt/CLOs	57	896	1,123
Multi-sector CDOs ^(b)	77	8,037	19,281
Mezzanine tranches ^(c)	6	174	174
Total	\$475	\$9,107	\$20,578

(a) Predominantly represent transactions written to facilitate regulatory capital relief.

(b) Approximately \$60.6 billion in notional amount of the multi-sector CDO pools include some exposure to U.S. sub-prime mortgages.

(c) Represents credit default swaps written by AIGFP on tranches below super senior on certain regulatory capital relief trades.

AIGFP purchased protection at the AAA- to BBB-rated risk layers on portfolios of reference obligations that include multi-sector CDO obligations. During the first three months of 2008, unrealized market valuation gains of \$130 million on the related credit default swaps and embedded credit derivatives in credit-linked notes were fully offset by the fair value adjustment on the underlying assets.

The change in fair value of AIGFP's credit default swaps was caused by the significant widening in spreads in the first quarter of 2008 driven by the credit concerns resulting from U.S. residential mortgages, the severe liquidity crisis affecting the markets and the effects of rating agency downgrades on structured securities. Based upon its most current analyses, AIG believes that any credit impairment losses which may emerge over time at AIGFP will not be material to AIG's consolidated financial condition, but could be material to the manner in which AIG manages its liquidity.

The net loss recognized for the first three months of 2007 included a \$166 million reduction in fair value of

certain derivatives that are an integral part of, and economically hedge, the structured transactions potentially affected by the proposed guidance by the U.S. Treasury Department affecting the ability to claim foreign tax credits.

The most significant component of Capital Markets operating expenses is compensation, which was approximately \$143 million and \$123 million in the first three months of 2008 and 2007, respectively. The amount of compensation was not affected by gains and losses arising from derivatives not qualifying for hedge accounting treatment under FAS 133. In the first quarter of 2008, AIGFP established an employee retention plan, which guarantees a broad group of AIGFP's employees and consultants a minimum level of compensation for each of the 2008 and 2009 compensation years, subject to mandatory partial deferral which, in certain circumstances, will be indexed to the price of AIG stock. The deferred amounts may be reduced in the event of losses prior to payment. The expense related to the plan is being recognized over the vesting period, beginning in the first quarter of 2008.

Effective January 1, 2008, AIGFP adopted FAS 157. The most significant effect of adopting FAS 157 was a change in the valuation methodologies for hybrid financial instruments and derivative liabilities (both freestanding and embedded) historically carried at fair value. The changes were primarily to incorporate AIGFP's own credit risk, when appropriate, in the fair value measurements.

Effective January 1, 2008, AIGFP also elected to apply the fair value option to all eligible assets and liabilities, other than equity method investments and trade receivables and trade payables. Electing the fair value option allows AIGFP to more closely align its earnings with the economics of its transactions by recognizing the change in fair value of its derivatives and the offsetting change in fair value of the assets and liabilities being hedged concurrently through earnings.

Capital Markets net operating loss for the first three months of 2008 includes an increase to pre-tax earnings of \$2,648 million attributable to changes in AIG's credit spreads which were substantially offset by the effect of changes in counterparty credit spreads on assets measured at fair value of \$2,620 million. Included in the first quarter 2008 net operating loss is the transition amount of \$291 million related to the adoption of FAS 157 and FAS 159, as well as a credit valuation adjustment gain of \$217 million for derivatives AIGFP entered into with other AIG entities, which is eliminated in consolidation.

The following table presents AIGFP's credit spread gains (losses) for the three-month period ended March 31, 2008 (excluding intercompany transactions):

(in millions)

Counterparty Credit Spread Sensitivity on Assets		AIG Inc.'s Own Credit Spread Sensitivity on Liabilities	
Available for sale bonds	\$(2,148)	Term notes	\$ 261
Loans and other assets	(24)	Hybrid term notes	662
Derivative assets	(448)	GIC's	1,156
		Other liabilities	30
		Derivative liabilities*	539
Decrease in assets	\$(2,620)	Decrease in liabilities	\$2,648
Net pre-tax increase to other income	\$ 28		

*Includes super senior CDS portfolio

AIGFP recognized a loss of \$166 million in the first three months of 2007 on hybrid financial instruments for which it applied the fair value option under FAS 155, "Accounting for Certain Hybrid Financial Instruments — an amendment of FASB Statements No. 133 and 140" (FAS 155). These amounts were largely offset by gains and losses on economic hedge positions also reflected in AIGFP's operating income or loss.

Consumer Finance

AIG's Consumer Finance operations in North America are principally conducted through AGF. AGF derives a substantial portion of its revenues from finance charges assessed on outstanding real estate loans, secured and unsecured non-real estate loans and retail sales finance receivables and credit-related insurance.

Effective February 29, 2008, AGF purchased a portion of Equity One, Inc.'s consumer finance receivable portfolio consisting of \$1.0 billion of real estate loans, \$290 million of non-real estate loans, and \$156 million of retail sales finance receivables.

AIG's foreign consumer finance operations are principally conducted through AIG Consumer Finance Group, Inc. (AIGCFG). AIGCFG operates primarily in emerging and developing markets. AIGCFG has operations in Argentina, China, Hong Kong, Mexico, Philippines, Poland, Taiwan, Thailand and India. In April 2008, AIGCFG decided to sell or liquidate its existing operations in Taiwan.

Certain of the AIGCFG operations are partly or wholly owned by life insurance subsidiaries of AIG. Accordingly, the financial results of those companies are allocated between Financial Services and Life Insurance & Retirement Services according to their ownership percentages. While products vary by market, the businesses generally provide credit cards, unsecured and secured non-real estate loans, term deposits, savings accounts, retail sales finance and real estate loans. AIGCFG originates finance receivables through its branches

and direct solicitation. AIGCFG also originates finance receivables indirectly through relationships with retailers, auto dealers, and independent agents.

Consumer Finance Results

Consumer Finance operating income decreased in the first three months of 2008 compared to the same period in 2007. Operating income from the domestic consumer finance operations, which include the operations of AGF and AIG Federal Savings Bank, decreased by \$75 million in the first three months of 2008 compared to the same period in 2007. In the first three months of 2007, domestic results were adversely affected by the weakening housing market and tighter underwriting guidelines, which resulted in lower originations of real estate loans as well as the \$128 million charge relating to the estimated cost of implementing the Supervisory Agreement entered into with the OTS.

AGF's revenues increased \$23 million or 3 percent during the first three months of 2008 compared to the same period in 2007. Revenues from AGF's finance receivables benefited from the \$1.5 billion finance receivable purchase in first quarter 2008, but were partially offset by reduced residential mortgage originations reflecting the slower U.S. housing market. Revenues from AGF's mortgage banking activities increased \$111 million during the first three months of 2008 compared to the same period in 2007 (which included the first quarter 2007 charge of \$128 million related to the Supervisory Agreement). The first three months of 2007 included a recovery of \$65 million from a favorable out of court settlement.

AGF's operating income declined in the first three months of 2008 compared to the same period in 2007 primarily due to increases in the provision for finance receivable losses and unfavorable variances related to derivatives. During the first three months of 2008, AGF recorded a net loss of \$43 million on its derivatives that did not qualify for hedge accounting under FAS 133, including the related foreign exchange losses, compared to a net loss of \$36 million in the same period in 2007. The net derivative loss for the three-month period ended March 31, 2008 includes the effect of changes in AIG's credit spreads amounting to \$39 million, of which \$13 million represents the transition amount from the adoption of FAS 157. Commencing in the second quarter of 2007, AGF began applying hedge accounting.

AGF's net finance receivables totaled \$26.7 billion at March 31, 2008, an increase of approximately \$2.2 billion compared to the prior year period, including the purchase of \$1.5 billion of finance receivables from Equity One, Inc. on February 29, 2008. The increase in the net finance receivables resulted in a similar increase in revenues generated from these assets.

Revenues from the foreign consumer finance operations increased by 40 percent in the first three months of 2008

compared to the same period in 2007. Loan growth, particularly in Poland, Mexico and Latin America, was the primary driver of the increased revenues. In addition, revenues from recently acquired businesses in India and Thailand contributed to the increase. The increase in revenues was more than offset by higher expenses associated with branch expansions, acquisition activities and product promotion campaigns.

Credit Quality of Finance Receivables

The overall credit quality of AGF's finance receivables portfolio deteriorated due to negative economic fundamentals, a higher proportion of non-real estate loans and retail sales finance receivables and the aging of the real estate loan portfolio.

At March 31, 2008, the 60-day delinquency rate for the entire portfolio increased by 106 basis points to 3.11 percent compared to the same period in 2007, while the 60-day delinquency rate for the real estate loans increased by 116 basis points to 2.99 percent. For the three months ended March 31, 2008, AGF's net charge-off rate increased to 1.53 percent compared to 0.97 percent for the same period in 2007.

AGF's allowance for finance receivable losses as a percentage of outstanding receivables was 2.55 percent at March 31, 2008 compared to 1.99 percent at March 31, 2007.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products. These services and products are offered to individuals, pension funds and institutions (including AIG subsidiaries) globally through AIG's Spread-Based Investment business, Institutional Asset Management, and Brokerage Services and Mutual Funds business. Also included in Asset Management operations are the results of certain SunAmerica sponsored partnership investments.

The revenues and operating income (loss) for this segment are affected by the general conditions in the equity and credit markets. In addition, net realized gains and performance fees are contingent upon various fund closings, maturity levels and market conditions.

Spread-Based Investment Business

AIG's Spread-Based Investment business includes the results of AIG's proprietary Spread-Based Investment operations, the Matched Investment Program (MIP), which was launched in September of 2005 to replace the Guaranteed Investment Contract (GIC) program, which is in runoff. The MIP is an investment strategy that involves investing in various asset classes with financing provided through third parties. This business uses various risk mitigating strategies designed to hedge interest rate and currency risk associated with underlying investments and related liabilities.

Institutional Asset Management

AIG's Institutional Asset Management business, conducted through AIG Investments, provides an array of investment products and services globally to institutional investors, pension funds, AIG subsidiaries and high net worth investors. These products include traditional equity and fixed income investments, and a wide range of alternative asset classes. These services include investment advisory and subadvisory services, investment monitoring and investment transaction structuring. Within the fixed income and equity asset classes, AIG Investments offers various forms of structured investments aimed at achieving superior returns or capital preservation. Within the alternative asset class, AIG Investments offers hedge and private equity fund-of-funds, direct investments and distressed debt investments.

AIG Global Real Estate provides a wide range of real estate investment and management services for AIG subsidiaries, as well as for third-party institutional investors, high net worth investors and pension funds. Through a strategic network of local real estate ventures, AIG Global Real Estate actively invests in and develops office, industrial, multi-family residential, retail, hotel and resort properties globally.

AIG Private Bank offers banking, trading and investment management services to private clients and institutions globally.

From time to time, AIG Investments acquires alternative investments, primarily consisting of direct controlling equity interests in private enterprises, with the intention of "warehousing" such investments until the investment or economic benefit thereof is transferred to a fund or other AIG-managed investment product. During the warehousing period, AIG bears the cost and risks associated with carrying these investments and consolidates them on its balance sheet and records the operating results until the investments are

Asset Management Results

* Includes the effect of consolidating the revenues and operating losses of warehoused investments totaling \$233 million and \$92 million, respectively, in the first three months of 2008 and \$30 million and \$12 million, respectively, in the first three months of 2007, a portion of which is offset in minority interest expense.

transferred, sold or otherwise divested. Changes in market conditions may negatively affect the fair value of these warehoused investments. Market conditions may impede AIG from launching new investment products for which these warehoused assets are being held, which could result in AIG not recovering its investment upon transfer or divestment. In the event that AIG is unable to transfer or otherwise divest its interest in the warehoused investment to third parties, AIG could be required to hold these investments indefinitely. In certain instances, the consolidated warehoused investments are not wholly owned by AIG. In such cases, AIG shares the risk associated with warehousing the asset with the minority interest investors.

Brokerage Services and Mutual Funds

AIG's Brokerage Services and Mutual Funds business, conducted through AIG Advisor Group, Inc. and AIG SunAmerica Asset Management Corp., provides broker-dealer related services and mutual funds to retail investors, group trusts and corporate accounts through an independent network of financial advisors. AIG Advisor Group, Inc., a subsidiary of AIG Retirement Services, Inc., is comprised of several broker-dealer entities that provide these services to clients primarily in the U.S. marketplace. AIG SunAmerica Asset Management Corp. manages, advises and/or administers retail mutual funds, as well as the underlying assets of variable annuities sold by AIG SunAmerica and VALIC to individuals and groups throughout the United States.

Other Asset Management

Included in Other Asset Management is income or loss from certain AIG SunAmerica sponsored partnerships and partnership investments. Partnership assets consist of investments in a diversified portfolio of private equity funds, affordable housing partnerships and hedge fund investments.

Asset Management recognized an operating loss in the first three months of 2008 compared to operating income in the same period in 2007 primarily due to other-than-temporary impairment charges on fixed income investments, significantly lower partnership income, increased foreign exchange, interest rate and credit-related net mark to market losses, lower carried interest revenues and the effect of consolidating several warehoused investments. AIG consolidates the operating results of warehoused investments until such time as they are sold or otherwise divested. The other-than-temporary impairment charges were due primarily to changes in market liquidity and spreads.

Spread-Based Investment Business Results

The Spread-Based Investment business reported an operating loss in the first three months of 2008 compared to operating income in the same period in 2007 due to significantly higher net realized capital losses and lower partnership income. Included in the operating loss were net realized capital losses of \$1.3 billion for the first three months of 2008, compared to \$20 million in the 2007 period. Net realized capital losses for the first three months of 2008 primarily consist of \$1.0 billion in other-than-temporary impairment charges on fixed income securities for both the GIC and MIP, \$366 million in foreign exchange related losses on foreign denominated GIC reserves and mark to market losses of \$131 million on credit default swap investments held by the MIP. Partially offsetting these losses were net mark to market gains of \$160 million on interest rate and foreign exchange hedges not qualifying for hedge accounting treatment for both the GIC and MIP. Net realized capital losses of \$20 million for the first three months of 2007 primarily reflect \$29 million of other-than-temporary impairment charges, \$69 million of foreign exchange related losses on foreign denominated GIC reserves, partially offset by realized gains of \$54 million on the sale of fixed income and equity securities and \$23 million in net mark to market gains on interest rate and foreign exchange hedges.

The other-than-temporary impairment charges on fixed income investments held in the GIC and MIP portfolios were \$539 million for the GIC and \$494 million for the MIP for the first three months of 2008 and resulted from widening credit spreads and decreased market liquidity. See Invested Assets — Portfolio Review — Other-than-temporary impairments. In addition to the other-than-temporary impairments, unrealized losses on fixed maturity investments were recorded in accumulated other comprehensive income (loss) and were driven by widening credit spreads and decreased market liquidity, partially offset by gains resulting from falling interest rates.

In the GIC program, income from partnership investments was \$45 million for the first three months of 2008, a decline of \$417 million from the same period of 2007 due to significantly higher performance in the first three

months of 2007. Also contributing to the decline was the one-time distribution from a single partnership of \$164 million in the first three months of 2007. Foreign exchange losses on foreign-denominated GIC reserves increased by \$297 million in the first three months of 2008 as a result of the continued weakening of the U.S. dollar. As noted below, a significant portion of these GIC reserves will mature in 2008. Partially offsetting the decline in partnership income and increased foreign exchange losses was an increase in mark to market gains on derivative positions of \$479 million. These gains included mark to market gains on interest rate and foreign exchange derivatives used to economically hedge the effect of interest rate and foreign exchange rate movements on GIC reserves. Although these economic hedges are partially effective in hedging the interest rate and foreign exchange risk, they did not qualify for hedge accounting treatment.

The MIP experienced mark to market losses of \$324 million due primarily to interest rate and foreign exchange derivative positions that, while partially effective in hedging interest rate and foreign exchange risk, did not qualify for hedge accounting treatment and an additional \$131 million in mark to market losses were recognized due to credit default swap investments. The MIP credit default swaps are comprised predominantly of single-name high-grade corporate exposures. The mark to market losses for the first three months of 2008 were driven primarily by a decline in short-term interest rates, the decline in value of the U.S. dollar and widening credit spreads. AIG enters into hedging arrangements to mitigate the effect of changes in currency and interest rates associated with the fixed and floating rate and foreign currency denominated obligations issued under these programs. Some of these hedging relationships qualify for hedge accounting treatment, while others do not. Income or loss from these hedges not qualifying for hedge accounting treatment are classified as net realized capital gains (losses) in AIG's Consolidated Statement of Income (Loss).

AIG did not issue any additional debt to fund the MIP in the first three months of 2008. Through March 31, 2008, the MIP had cumulative debt issuances of \$13.4 billion.

The anticipated runoff of the domestic GIC portfolio at March 31, 2008 was as follows:

<i>(in billions)</i>	Less Than One Year	1-3 Years	3+5 Years	Over Five Years	Total
Domestic GICs	\$10.2	\$4.8	\$2.9	\$5.7	\$23.6

Institutional Asset Management Results

Institutional Asset Management recognized an operating loss in the first three months of 2008 compared to operating income in the same period in 2007 reflecting lower carried interest revenues and increased depreciation and amortization expense due to additional real estate investments acquired in late 2007. AIG recognizes carried

interest revenues on an unrealized basis by reflecting the amount owed to AIG as of the balance sheet date based on the related funds' performance. Also contributing to this decrease were the operating losses of certain consolidated warehoused private equity investments. The reduction in these revenues is due to significantly higher fund performance in the first three months of 2007. The consolidated warehoused private equity investments are not wholly owned by AIG and thus, a significant portion of the effect of consolidating these operating losses is offset in minority interest, which is not a component of operating income. Slightly offsetting these decreases were higher base management fees driven by an increase of approximately \$15 billion in unaffiliated client assets under management.

AIG's unaffiliated client assets under management, including retail mutual funds and institutional accounts, were \$91.4 billion at March 31, 2008, a decline of 3 percent compared to December 31, 2007 and an increase of 19 percent compared to \$76.5 billion at March 31, 2007. The decline from December 31, 2007 primarily reflected market valuation declines in the equity and fixed income markets. The increase from March 31, 2007 was driven by new business.

Other Asset Management Results

Revenues and operating income related to the Other Asset Management activities decreased in the first three months of 2008 compared to the same period in 2007 due to lower income from partnership investments. Similar to the investments held in the Spread-Based Investment business, these investments experienced significantly higher performance in the first three months of 2007.

Other Operations

The operating loss of AIG's Other category was as follows:

<i>(in millions)</i>	Three Months Ended March 31,	
	2008	2007
Operating income (loss):		
Equity earnings in partially owned companies	\$ 8	\$ 41
Interest expense	(368)	(252)
Unallocated corporate expenses*	(93)	(172)
Net realized capital gains (losses)	(265)	(49)
Other miscellaneous, net	(50)	(38)
Total Other	\$(768)	\$(470)

* Includes expenses of corporate staff not attributable to specific operating segments, expenses related to efforts to improve internal controls, corporate initiatives and certain compensation plan expenses.

The operating loss of AIG's Other category increased in the first three months of 2008 compared to the same period in 2007 reflecting higher interest expense that resulted from increased borrowings, and higher net realized capital losses, partially offset by lower unallocated corporate expenses. The increase in net realized capital losses reflected higher foreign exchange losses on foreign-denominated debt, a portion of which was economically hedged but did not qualify for hedge accounting treatment under FAS 133, and losses on non-hedged derivatives in the first three months of 2008. Other miscellaneous, net included a \$45 million write-off of goodwill related to Mortgage Guaranty in the first three months of 2008.

Capital Resources and Liquidity

At March 31, 2008, AIG had total consolidated shareholders' equity of \$79.7 billion and total consolidated borrowings of \$172.2 billion. At that date, \$68.3 billion of such borrowings were subsidiary borrowings not guaranteed by AIG.

A total of 34,093,783 shares were purchased during the first three months of 2008. Subsequent to March 31, 2008, an additional 3,832,276 shares were repurchased, satisfying the balance of the commitments existing at December 31, 2007 that had not been satisfied at March 31, 2008. AIG does not expect to purchase additional shares under its share repurchase program for the foreseeable future.

(a) In 2008, AIGFP borrowings are carried at fair value.

(b) Includes the cumulative effect of the adoption of FAS 159.

AIG (Parent Company)

AIG intends to continue its customary practice of issuing debt securities from time to time to meet its financing needs and those of certain of its subsidiaries for general corporate purposes, as well as for the MIP. As of March 31, 2008, AIG had up to \$17.3 billion of debt securities, preferred stock and other securities, and up to \$16.5 billion of common stock, registered and available for issuance under its universal shelf registration statement.

AIG maintains a medium-term note program under its shelf registration statement. As of March 31, 2008,

approximately \$7.6 billion principal amount of senior notes were outstanding under the medium-term note program, of which \$3.2 billion was used for AIG's general corporate purposes, \$1.1 billion was used by AIGFP (referred to as "Series AIGFP" in the preceding tables) and \$3.3 billion was used to fund the MIP. The maturity dates of these notes range from 2008 to 2052. To the extent considered appropriate, AIG may enter into swap transactions to manage its effective borrowing rates with respect to these notes.

AIG also maintains a Euro medium-term note program under which an aggregate nominal amount of up to \$20.0 billion of senior notes may be outstanding at any one

time. As of March 31, 2008, the equivalent of \$13.5 billion of notes were outstanding under the program, of which \$10.4 billion were used to fund the MIP and the remainder was used for AIG's general corporate purposes. The aggregate amount outstanding includes \$1.9 billion loss resulting from foreign exchange translation into U.S. dollars, of which \$472 million loss relates to notes issued by AIG for general corporate purposes and \$1.4 billion loss relates to notes issued to fund the MIP. AIG has economically hedged the currency exposure arising from its foreign currency denominated notes.

AIG maintains a shelf registration statement in Japan, providing for the issuance of up to Japanese Yen 300 billion principal amount of senior notes, of which the equivalent of \$506 million was outstanding as of March 31, 2008 and was used for AIG's general corporate purposes. AIG also maintains an Australian dollar debt program under which senior notes with an aggregate principal amount of up to 5 billion Australian dollars may be outstanding at any one time. Although as of March 31, 2008 there were no outstanding notes under the Australian program, AIG intends to use the program opportunistically to fund the MIP or for AIG's general corporate purposes.

In October 2007, AIG borrowed a total of \$500 million on an unsecured basis pursuant to a loan agreement with a third-party bank. The entire amount of the loan remained outstanding at March 31, 2008 and matures in October 2008.

AIGFP

AIGFP uses the proceeds from the issuance of notes and bonds and GIA borrowings, as well as the issuance of Series AIGFP notes by AIG, to invest in a diversified portfolio of securities and derivative transactions. The borrowings may also be temporarily invested in securities purchased under agreements to resell. AIGFP's notes and bonds include structured debt instruments whose payment terms are linked to one or more financial or other indices (such as an equity index or commodity index or another measure that is not considered to be clearly and closely related to the debt instrument). These notes contain embedded derivatives that otherwise would be required to be accounted for separately under FAS 133. Upon AIG's adoption of FAS 155 in 2006, AIGFP elected the fair value option for these notes. The notes that are accounted for using the fair value option are reported separately under hybrid financial instrument liabilities. AIG guarantees the obligations of AIGFP under AIGFP's notes and bonds and GIA borrowings. See Liquidity herein.

AIGFP has a Euro medium-term note program under which an aggregate nominal amount of up to \$20.0 billion of notes may be outstanding at any one time. As of March 31, 2008, \$5.1 billion of notes were outstanding under the program. The notes issued under this program are guaranteed

by AIG and are included in AIGFP's notes and bonds payable in the table of total borrowings.

AIG Funding

AIG Funding, Inc. (AIG Funding) issues commercial paper that is guaranteed by AIG in order to help fulfill the short-term cash requirements of AIG and its subsidiaries. The level of issuances of AIG Funding's commercial paper, including the guarantee by AIG, is subject to the approval of AIG's Board of Directors or the Finance Committee of the Board if it exceeds certain pre-approved limits.

As backup for the commercial paper program and for other general corporate purposes, AIG and AIG Funding maintain revolving credit facilities, which, as of March 31, 2008, had an aggregate of \$9.5 billion available to be drawn and which are summarized below under Revolving Credit Facilities.

ILFC

ILFC fulfills its short-term cash requirements through operating cash flows and the issuance of commercial paper. The issuance of commercial paper is subject to the approval of ILFC's Board of Directors and is not guaranteed by AIG. ILFC maintains syndicated revolving credit facilities which, as of March 31, 2008, totaled \$6.5 billion and which are summarized below under Revolving Credit Facilities. These facilities are used as back up for ILFC's maturing debt and other obligations.

As a well-known seasoned issuer, ILFC has filed an automatic shelf registration statement with the Securities and Exchange Commission (SEC) allowing ILFC immediate access to the U.S. public debt markets. At March 31, 2008, \$6.0 billion of debt securities had been issued under this registration statement and \$6.0 billion had been issued under a prior registration statement. In addition, ILFC has a Euro medium-term note program for \$7.0 billion, under which \$3.8 billion in notes were outstanding at March 31, 2008. Notes issued under the Euro medium-term note program are included in ILFC notes and bonds payable in the preceding table of borrowings. The cumulative foreign exchange adjustment loss for the foreign currency denominated debt was \$1.3 billion at March 31, 2008 and \$969 million at December 31, 2007. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging the note exposure.

ILFC had a \$4.3 billion Export Credit Facility for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At March 31, 2008, ILFC had \$603 million

outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured Export Credit Facility for up to a maximum of \$2.6 billion for Airbus aircraft to be delivered through May 31, 2005. The facility was subsequently increased to \$3.6 billion and extended to include aircraft to be delivered through May 31, 2008. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a six-month forward-looking calendar, and the interest rate is determined through a bid process. At March 31, 2008, ILFC had \$1.9 billion outstanding under this facility. The debt is collateralized by a pledge of shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility. Borrowings with respect to these facilities are included in ILFC's notes and bonds payable in the preceding table of borrowings.

From time to time, ILFC enters into funded financing agreements. As of March 31, 2008, ILFC had a total of \$1.1 billion outstanding, which has varying maturities through February 2012. The interest rates are LIBOR-based, with spreads ranging from 0.30 percent to 1.625 percent.

The proceeds of ILFC's debt financing are primarily used to purchase flight equipment, including progress payments during the construction phase. The primary sources for the repayment of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. AIG does not guarantee the debt obligations of ILFC. See also Liquidity herein.

AGF

AGF fulfills most of its short-term cash borrowing requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of AGF's Board of Directors and is not guaranteed by AIG. AGF maintains committed syndicated revolving credit facilities which, as of March 31, 2008, totaled \$4.8 billion and which are summarized below under Revolving Credit Facilities. The facilities can be used for general corporate purposes and to provide backup for AGF's commercial paper programs.

As of March 31, 2008, notes and bonds aggregating \$21.9 billion were outstanding with maturity dates ranging from 2008 to 2031 at interest rates ranging from 1.94 percent

to 8.45 percent. To the extent considered appropriate, AGF may enter into swap transactions to manage its effective borrowing rates with respect to these notes and bonds. As a well-known seasoned issuer, AGF filed an automatic shelf registration statement with the SEC allowing AGF immediate access to the U.S. public debt markets. At March 31, 2008, AGF had remaining corporate authorization to issue up to \$8.0 billion of debt securities under its shelf registration statement.

AGF's funding sources include an SEC-registered medium-term note program, private placement debt, retail note issuances, bank financing and securitizations of finance receivables that AGF accounts for as on-balance-sheet secured financings. In addition, AGF has become a recognized issuer of long-term debt in the international capital markets and has recently established a Euro medium-term note program.

In addition to debt refinancing activities, proceeds from the collection of finance receivables are used to fund cash needs including the payment of principal and interest on AGF's debt. AIG does not guarantee any of the debt obligations of AGF. See also Liquidity herein.

AIGCFG

AIGCFG has a variety of funding mechanisms for its various markets, including retail and wholesale deposits, short- and long-term bank loans, securitizations and intercompany subordinated debt. AIG Credit Card Company (Taiwan), a consumer finance business in Taiwan, and AIG Retail Bank PLC, a full service consumer bank in Thailand, have issued commercial paper for the funding of their respective operations. AIG does not guarantee any borrowings for AIGCFG businesses, including this commercial paper.

Revolving Credit Facilities

AIG, ILFC and AGF maintain committed, unsecured revolving credit facilities listed on the following table in order to support their respective commercial paper programs and for general corporate purposes. AIG, ILFC and AGF expect to replace or extend these credit facilities on or prior to their expiration. Some of the facilities, as noted below, contain a "term-out option" allowing for the conversion by the borrower of any outstanding loans at expiration into one-year term loans.

As of March 31, 2008 (in millions)

Facility	Size	Borrower(s)	Available Amount	Expiration	One-Year Term-Out Option
AIG:					
364-Day Syndicated Facility	\$ 2,125	AIG/AIG Funding ^(a) AIG Capital Corporation ^(a)	\$2,125	July 2008	Yes

5-Year Syndicated Facility	2,000	ILFC	2,000	October 2010	No
5-Year Syndicated Facility	2,000	ILFC	2,000	October 2009	No
Total ILFC	\$ 6,500		\$6,500		
AGF:					
364-Day Syndicated Facility	\$ 2,625	American General Finance Corporation American General Finance, Inc. ^(d)	\$2,625	July 2008	Yes
5-Year Syndicated Facility	2,125	American General Finance Corporation	2,125	July 2010	No
Total AGF	\$ 4,750		\$4,750		

(a) Guaranteed by AIG.

(b) This facility can be drawn in the form of loans or letters of credit. All drawn amounts shown above are in the form of letters of credit.

(c) Subsidiaries of AIG are the lenders on this facility.

(d) American General Finance, Inc. is an eligible borrower for up to \$400 million only.

Credit Ratings

The cost and availability of unsecured financing for AIG and its subsidiaries are generally dependent on their short- and long-term debt ratings. The following table presents the credit ratings of AIG and certain of its subsidiaries as of April 30, 2008. In parentheses, following the initial

occurrence in the table of each rating, is an indication of that rating's relative rank within the agency's rating categories. That ranking refers only to the generic or major rating category and not to the modifiers appended to the rating by the rating agencies to denote relative position within such generic or major category.

	Short-term Debt			Senior Long-term Debt		
	Moody's	S&P	Fitch	Moody's ^(a)	S&P ^(b)	Fitch ^(c)
AIG	P-1 (1st of 3)	A-1+ (1st of 6)	F1+ (1st of 5)	Aa2 ^(e) (2nd of 9)	AA (2nd of 8) ^(f)	AA (2nd of 9) ^(h)
AIG Financial Products Corp. ^(d)	P-1	A-1+	–	Aa2 ^(e)	AA ^(f)	–
AIG Funding, Inc. ^(d)	P-1	A-1+	F1+	–	–	–
ILFC	P-1	A-1+	F1 (1st of 5)	A1 (3rd of 9)	AA- (2nd of 8) ^(g)	A+ (3rd of 9) ^(h)
American General Finance Corporation	P-1	A-1 (1st of 6)	F1	A1	A+ (3rd of 8)	A+ ^(h)
American General Finance, Inc.	P-1	A-1	F1	–	–	A+ ^(h)

(a) Moody's appends numerical modifiers 1, 2 and 3 to the generic rating categories to show relative position within rating categories.

(b) S&P ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(c) Fitch Ratings (Fitch) ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(d) AIG guarantees all obligations of AIG Financial Products Corp. and AIG Funding, Inc.

(e) Negative rating outlook on Senior Unsecured Debt Ratings. A negative outlook by Moody's indicates that a rating may be lowered but is not necessarily a precursor of a ratings change.

(f) Negative rating outlook on Counterparty Credit Ratings. A negative outlook by S&P indicates that a rating may be lowered but is not necessarily a precursor of a ratings change.

(g) Negative rating outlook on Corporate Credit Rating. A negative outlook by S&P indicates that a rating may be lowered but is not necessarily a precursor of a ratings change.

(h) Issuer Default and Senior Unsecured Debt Ratings on Rating Watch Negative. Rating Watch Negative indicates that a rating has been placed on active rating watch status.

These credit ratings are current opinions of the rating agencies. As such, they may be changed, suspended or withdrawn at any time by the rating agencies as a result of changes in, or unavailability of, information or based on

other circumstances. Ratings may also be withdrawn at AIG management's request. This discussion of ratings is not a complete list of ratings of AIG and its subsidiaries.

“Ratings triggers” have been defined by one independent rating agency to include clauses or agreements the outcome of which depends upon the level of ratings maintained by one or more rating agencies. “Ratings triggers” generally relate to events that (i) could result in the termination or limitation of credit availability, or require accelerated repayment, (ii) could result in the termination of business contracts or (iii) could require a company to post collateral for the benefit of counterparties.

AIG believes that any of its own or its subsidiaries’ contractual obligations that are subject to “ratings triggers” or financial covenants relating to “ratings triggers” would not have a material adverse effect on its financial condition or liquidity. Ratings downgrades could also trigger the application of termination provisions in certain of AIG’s contracts, principally agreements entered into by AIGFP and assumed reinsurance contracts entered into by Transatlantic.

It is estimated that, as of the close of business on April 30, 2008, based on AIGFP’s outstanding municipal GIAs and financial derivatives transactions at that date, a downgrade of AIG’s long-term senior debt ratings to ‘Aa3’ by Moody’s or ‘AA-’ by S&P would permit counterparties to call for approximately \$1.8 billion of collateral, while a downgrade to ‘A1’ by Moody’s or A+ by S&P would permit counterparties to call for approximately \$9.8 billion of additional collateral. Further downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIGFP manages its liquidity. The actual amount of additional collateral that AIGFP would be required to post to counterparties in the event of such downgrades depends on market conditions, the fair value of the outstanding affected transactions and other factors prevailing at the time of the downgrade. Additional obligations to post collateral would increase the demands on AIGFP’s liquidity.

Contractual Obligations

Contractual obligations in total, and by remaining maturity at March 31, 2008 were as follows:

<i>(in millions)</i>	Total Payments	Payments due by Period			
		Less Than One Year	1-3 Years	3 ⁺ -5 Years	Over Five Years
Borrowings ^(a)	\$ 151,580	\$ 41,629	\$ 34,248	\$ 25,133	\$ 50,570
Interest payments on borrowings	56,344	5,463	9,436	7,725	33,720
Loss reserves ^(b)	86,860	23,886	26,492	12,595	23,887
Insurance and investment contract liabilities ^(c)	689,494	32,232	43,761	41,932	571,569
GIC liabilities ^(d)	27,285	10,437	5,374	3,600	7,874
Aircraft purchase commitments	18,794	2,779	3,901	2,112	10,002
Other long-term obligations	144	53	80	11	—
Total^{(e)(f)}	\$1,030,501	\$116,479	\$123,292	\$ 93,108	\$697,622

(a) Excludes commercial paper and borrowings incurred by consolidated investments and includes hybrid financial instrument liabilities recorded at fair value.

(b) Represents future loss and loss adjustment expense payments estimated based on historical loss development payment patterns. Due to the significance of the assumptions used, the periodic amounts presented could be materially different from actual required payments.

(c) Insurance and investment contract liabilities include various investment-type products with contractually scheduled maturities, including periodic payments of a term certain nature. Insurance and investment contract liabilities also include benefit and claim liabilities, of which a significant portion represents policies and contracts that do not have stated contractual maturity dates and may not result in any future payment obligations. For these policies and contracts (i) AIG is currently not making payments until the occurrence of an insurable event, such as death or disability, (ii) payments are conditional on survivorship, or (iii) payment may occur due to a surrender or other non-scheduled event out of AIG’s control. AIG has made significant assumptions to determine the estimated undiscounted cash flows of these contractual policy benefits, which assumptions include mortality, morbidity, future lapse rates, expenses, investment returns and interest crediting rates, offset by expected future deposits and premiums on in force policies. Due to the significance of the assumptions used, the periodic amounts presented could be materially different from actual required payments. The amounts presented in this table are undiscounted and therefore exceed the future policy benefits and policyholders’ contract deposits included in the balance sheet.

(d) Represents guaranteed maturities under GICs.

(e) Does not reflect unrecognized tax benefits of \$2.5 billion, the timing of which is uncertain.

(f) The majority of AIG’s credit default swaps require AIG to provide credit protection on a designated portfolio of loans or debt securities. AIG provides such credit protection on a “second loss” basis, under which AIG’s payment obligations arise only after credit losses in the designated portfolio exceed a specified threshold amount or level of “first losses.” Through May 7, 2008, AIG has made no payments under these contracts and because of the high degree of uncertainty regarding the amount and the long-term timing of any potential future cash flows under these contracts, AIG is unable to make reasonable estimates of any cash settlements at this time.

Off Balance Sheet Arrangements and Commercial Commitments

Off balance sheet arrangements and commercial commitments in total, and by remaining maturity at March 31, 2008 were as follows:

<i>(in millions)</i>	Total Amounts Committed	Amount of Commitment Expiration			
		Less Than One Year	1-3 Years	3+5 Years	Over Five Years
Guarantees:					
Liquidity facilities ^(a)	\$ 2,540	\$ 8	\$ 8	\$2,204	\$ 320
Standby letters of credit	1,708	1,483	44	34	147
Construction guarantees ^(b)	681	—	—	—	681
Guarantees of indebtedness	1,243	147	144	500	452
All other guarantees	662	97	25	41	499
Commitments:					
Investment commitments ^(c)	8,452	2,956	3,796	1,490	210
Commitments to extend credit	777	135	502	124	16
Letters of credit	1,174	895	—	119	160
Investment protection agreements ^(d)	7,870	2,463	1,413	677	3,317
Maturity shortening puts ^(e)	2,602	1,186	1,114	238	64
Other commercial commitments ^(f)	1,183	92	57	79	955
Total^(f)	\$28,892	\$9,462	\$7,103	\$5,506	\$6,821

(a) Primarily liquidity facilities provided in connection with certain municipal swap transactions and collateralized bond obligations.

(b) Primarily AIG SunAmerica construction guarantees connected to affordable housing investments.

(c) Includes commitments to invest in limited partnerships, private equity, hedge funds and mutual funds and commitments to purchase and develop real estate in the United States and abroad.

(d) Written generally with respect to investments in hedge funds and funds of hedge funds.

(e) Represents obligations under 2a-7 Puts to purchase certain multi-sector CDOs at pre-determined contractual prices.

(f) Includes options to acquire aircraft. Excludes commitments with respect to pension plans. The annual pension contribution for 2008 is expected to be approximately \$118 million for U.S. and non-U.S. plans.

Arrangements with Variable Interest Entities and Structured Investment Vehicles

As of March 31, 2008 there have been no significant changes in arrangements with variable interest entities or structured investment vehicles from those reported in the 2007 Annual Report on Form 10-K.

Shareholders' Equity**The changes in AIG's consolidated shareholders' equity were as follows:**

<i>(in millions)</i>	Three Months Ended March 31, 2008	
Beginning of year	\$	95,801
Net loss		(7,805)
Unrealized depreciation of investments, net of tax		(6,824)

Payments advanced to purchase shares, net		733
Share purchases		(1,733)
Cumulative effect of accounting changes, net of tax		(1,108)
Other*		32
End of period	\$	79,703

* Reflects the effects of employee stock transactions.

AIG has in the past reinvested most of its unrestricted earnings in its operations and believes such continued reinvestment in the future will be adequate to meet any foreseeable capital needs. However, AIG may choose from time to time to raise additional funds through the issuance of additional securities.

In February 2007, AIG's Board of Directors adopted a new dividend policy, which took effect with the dividend declared in the second quarter of 2007, providing that under ordinary circumstances, AIG's plan will be to increase its common stock dividend by approximately 20 percent annually. The payment of any dividend, however, is at the discretion of AIG's Board of Directors, and the future payment of dividends will depend on various factors, including the performance of AIG's businesses, AIG's consolidated financial condition, results of operations and liquidity and the existence of investment opportunities. With due consideration of the foregoing policy, in light of current market conditions, on May 7, 2008, AIG's Board of Directors declared a quarterly cash dividend on the common stock of \$0.22 per share, payable on September 19, 2008 to shareholders of record on September 5, 2008, representing a 10 percent increase.

Share Repurchases

From time to time, AIG may buy shares of its common stock for general corporate purposes, including to satisfy its obligations under various employee benefit plans. In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the purchase of shares with an aggregate purchase price of \$8 billion. In November 2007, AIG's Board of Directors authorized the purchase of an additional \$8 billion in common stock. In 2007, AIG entered into structured share repurchase arrangements providing for the purchase of shares over time with an aggregate purchase price of \$7 billion.

A total of 34,093,783 shares were purchased during the first three months of 2008 to meet commitments that existed

at December 31, 2007. The portion of the payments advanced by AIG under the structured share purchase arrangements that had not yet been utilized to purchase shares at March 31, 2008, amounting to \$179 million, has been recorded as a component of shareholders' equity under the caption, Payments advanced to purchase shares. Subsequent to March 31, 2008, an additional 3,832,276 shares were purchased, satisfying the balance of the commitments existing at December 31, 2007 that had not been satisfied at March 31, 2008. All shares purchased are recorded as treasury stock at cost.

At May 7, 2008, \$9 billion was available for purchases under the aggregate authorization. AIG does not expect to purchase additional shares under its share repurchase program for the foreseeable future.

Share-based Employee Compensation Plans

During the first quarter of 2008, AIG reviewed the vesting schedules of its share-based employee compensation plans, and on March 11, 2008, AIG's management and the Compensation Committee of AIG's Board of Directors determined that, to fulfill the objective of attracting and retaining high quality personnel, the vesting schedules of certain awards outstanding under these plans and all awards made in the future under these plans should be shortened. As a result, the unamortized share-based employee compensation cost related to the affected awards will be amortized over shorter periods. AIG estimates the modifications will accelerate the amortization of this cost by \$116 million and \$90 million in 2008 and 2009, respectively, with a corresponding reduction in amortization expense related to these awards of \$206 million in 2010 through 2013.

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At March 31, 2008, AIG's consolidated invested assets included \$63.6 billion in cash and short-term investments. Consolidated net cash provided from operating activities in the first three months of 2008 amounted to \$8.3 billion. At both the subsidiary and parent company level, liquidity management activities are intended to preserve and enhance funding stability, flexibility, and diversity through a wide range of potential operating environments and market conditions. AIG's primary sources of cash flow are dividends and other payments from its regulated and unregulated subsidiaries, as well as issuances of debt securities. Primary uses of cash flow are for debt service, subsidiary funding, shareholder dividend payments and common stock repurchases. Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements, including the funding of increased dividends under AIG's current dividend policy.

AIG (Parent Company)

The liquidity of the parent company is principally derived from its subsidiaries. The primary sources of cash flow are dividends and other payments from its regulated and unregulated subsidiaries, as well as issuance of debt securities. Primary uses of cash flow are for debt service, subsidiary funding, shareholder dividend payments and common stock repurchases. In the first three months of 2008, AIG parent collected \$769 million in dividends and other payments from subsidiaries (primarily from insurance company subsidiaries). Excluding MIP and Series AIGFP debt, AIG parent made interest payments totaling

\$194 million, made \$536 million in capital contributions to subsidiaries, and paid \$512 million in dividends to shareholders in the first three months of 2008.

AIG parent funds its short-term working capital needs through commercial paper issued by AIG Funding. As of March 31, 2008, AIG Funding had \$5.0 billion of commercial paper outstanding with an average maturity of 21 days. As additional liquidity, AIG parent and AIG Funding maintain committed revolving credit facilities that, as of March 31, 2008, had an aggregate of \$9.5 billion available to be drawn, and which are summarized above under Revolving Credit Facilities.

Invested Assets

The following tables summarize the composition of AIG's invested assets by segment:

<i>(in millions)</i>	General Insurance	Life Insurance & Retirement Services	Financial Services	Asset Management	Other	Total

* At December 31, 2007, approximately 65 percent and 35 percent of invested assets were held in domestic and foreign investments, respectively.

Investment Strategy

AIG's investment strategies are tailored to the specific business needs of each operating unit. The investment objectives are driven by the business model for each of the businesses: General Insurance, Life Insurance, Retirement Services and Asset Management's Spread-Based Investment business. The primary objectives are in terms of preservation of capital, growth of surplus and generation of investment income to support the insurance products. At the local

operating unit level, the strategies are based on considerations that include the local market, liability duration and cash flow characteristics, rating agency and regulatory capital considerations, legal investment limitations, tax optimization and diversification. In addition to local risk management considerations, AIG's corporate risk management guidelines impose limitations on concentrations to promote diversification by industry, asset class and geographic sector.

The amortized cost or cost and fair value of AIG's available for sale and held to maturity securities were as follows:

(in millions)	March 31, 2008				December 31, 2007

(a) At December 31, 2007, included AIGFP available for sale securities with a fair value of \$39.3 billion, for which AIGFP elected the fair value option effective January 1, 2008, consisting primarily of corporate debt, mortgage-backed, asset-backed and collateralized securities. At March 31, 2008 and December 31, 2007, fixed maturities held by AIG that were below investment grade or not rated totaled \$20.7 billion and \$27.0 billion, respectively.

(b) Represents obligations of states, municipalities and political subdivisions.

AIG's held to maturity and available for sale fixed maturity investments totaled \$473.8 billion at March 31, 2008, compared to \$523.5 billion at December 31, 2007. At March 31, 2008, approximately 57 percent of the fixed maturities investments were in domestic portfolios. Approximately 45 percent of such domestic securities were rated AAA by one or more of the principal rating agencies. Approximately four percent were below investment grade or not rated. AIG's investment decision process relies primarily on internally generated fundamental analysis and internal risk ratings. Third-party rating services' ratings and opinions provide one source of independent perspectives for consideration in the internal analysis.

A significant portion of the foreign fixed income portfolio is rated by Moody's, S&P or similar foreign rating services. Rating services are not available in all overseas locations. AIG's Credit Risk Committee (CRC) closely reviews the credit quality of the foreign portfolio's non-rated fixed income investments. At March 31, 2008, approximately 21 percent of the foreign fixed income investments were either rated AAA or, on the basis of AIG's internal analysis, were equivalent from a credit standpoint to securities so rated. Approximately four percent were below investment grade or not rated at that date. A large portion (approximately one third) of the foreign fixed income portfolio is sovereign fixed maturity securities supporting the policy liabilities in the country of issuance.

The credit ratings of AIG's fixed maturity investments, other than those of AIGFP, were as follows:

Rating	March 31, 2008	December 31, 2007
AAA	35%	38%
AA	31	28
A	18	18
BBB	11	11
Below investment grade	4	4
Non-rated	1	1
Total	100%	100%

The industry categories of AIG's available for sale corporate debt securities were as follows:

Industry Category	March 31, 2008	December 31, 2007
Financial institutions	45%	42%
Utilities	11	11
Communications	8	8
Consumer noncyclical	7	7
Capital goods	6	6
Consumer cyclical	5	5
Energy	5	4
Other	13	17
Total*	100%	100%

* At both March 31, 2008 and December 31, 2007, approximately 95 percent of these investments were rated investment grade.

Investments in RMBS, CMBS, CDOs and ABS

As part of its strategy to diversify its investments, AIG invests in various types of securities, including RMBS, commercial mortgage-backed securities (CMBS), CDOs and ABS.

The amortized cost, gross unrealized gains (losses) and fair value of AIG's investments in RMBS, CMBS, CDOs and ABS were as follows:

(in millions)	March 31, 2008				December 31, 2007			
	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value

(a) Includes foreign and jumbo RMBS-related securities.

(b) Primarily wrapped second-lien.

AIG's operations, other than AIGFP, held investments in RMBS with an estimated fair value of \$71.6 billion at March 31, 2008, or approximately 8 percent of AIG's total invested assets. In addition, AIG's insurance operations held investments with a fair value totaling \$3.2 billion in CDOs, of which \$45 million included some level of subprime exposure. AIG's RMBS investments are predominantly in highly-rated tranches that contain substantial protection features through collateral subordination. At March 31, 2008, approximately 90 percent of these investments were rated AAA, and approximately 6 percent were rated AA by

one or more of the principal rating agencies. AIG's investments rated BBB or below totaled \$1.7 billion, or less than 0.2 percent of AIG's total invested assets at March 31, 2008. As of April 30, 2008, \$7.5 billion of AIG's RMBS backed primarily by subprime collateral had been downgraded as a result of rating agency actions since January 1, 2008, and \$12 million of such investments had been upgraded. Of the downgrades, \$6.6 billion were AAA rated securities. In addition to the downgrades, as of April 30, 2008, the rating agencies had \$9.6 billion of RMBS on watch for downgrade.

The amortized cost of AIG's RMBS investments, other than those of AIGFP, at March 31, 2008 by year of vintage and credit rating were as follows:

<i>(in billions)</i>	Year of Vintage						Total

AIG's underwriting practices for investing in RMBS, other ABS and CDOs take into consideration the quality of the originator, the manager, the servicer, security credit ratings, underlying characteristics of the mortgages, borrower characteristics, and

the level of credit enhancement in the transaction. AIG's strategy is typically to invest in securities rated AA or better and create diversification across multiple underlying asset classes.

Investments in CMBS

The amortized cost of AIG's CMBS investments, other than those of AIGFP, at March 31, 2008 was as follows:

<i>(in millions)</i>	Amortized Cost	Percent of Total
CMBS (traditional)	\$20,358	89%
ReRemic/CRE CDO	1,940	8
Agency	256	1
Other	480	2
Total	\$23,034	100%

The percentage of AIG's CMBS investments, other than those of AIGFP, at March 31, 2008 by credit rating was as follows:

	Percentage
Rating:	
AAA	78%
AA	13
A	8
BBB and below	1
Total	100%

The percentage of AIG's CMBS investments, other than those of AIGFP, by year of vintage at March 31, 2008 was as follows:

	Percentage
Year:	
2007	23%
2006	14
2005	19
2004	16
2003 and prior	28

The percentage of AIG's CMBS investments, other than those of AIGFP, by geographic region at March 31, 2008 was as follows:

	Percentage
Geographic region:	
New York	17%
California	15
Texas	7
Florida	6
Virginia	4
Illinois	4
New Jersey	3
Pennsylvania	3
Georgia	3
Massachusetts	3
All Other	35
Total	100%

At March 31, 2008, AIG held \$23.0 billion in cost basis of CMBS. Approximately 78 percent of such holdings were rated AAA, approximately 21 percent were rated AA or A, and approximately 1 percent were rated BBB or below. At March 31, 2008, all such securities were current in the payment of principal and interest and none had default rates on underlying collateral at levels viewed by AIG as likely to result in the loss of principal or interest.

There have been disruptions in the commercial mortgage markets in general, and the CMBS market in particular, with credit default swaps indices and quoted prices of securities at levels consistent with a severe correction in lease rates, occupancy and fair value of properties. In addition, spreads in the primary mortgage market have widened significantly.

While this capital market stress has not to date been reflected in the performance of commercial mortgage securitization in the form of increased defaults in underlying mortgage pools, pricing of CMBS has been adversely affected by market perceptions that underlying mortgage defaults will increase. As a result, AIG recognized \$556 million of other-than-temporary impairment charges in the first three months of 2008 on CMBS trading at a severe discount to cost, despite

the absence of any deterioration in performance of the underlying credits, because AIG concluded that it could not reasonably assert that the recovery period was temporary. At this time, AIG anticipates substantial recovery of principal and interest on the securities to which such other-than-temporary impairment charges were recorded.

Investments in CDOs

The amortized cost of AIG's CDO investments, other than those of AIGFP, by collateral type at March 31, 2008 was as follows:

<i>(in millions)</i>	Amortized Cost	Percent of Total
Collateral Type:		
Bank loans (CLO)	\$2,080	49%

<i>(in millions)</i>	Amortized Cost	Percent of Total
Rating:		
AAA	\$ 763	18%
AA	902	21
A	2,127	51
BBB	316	8
Below investment grade and equity	103	2
Total	\$4,211	100%

Securities Lending Activities

AIG's securities lending program is a centrally managed program facilitated by AIG Investments primarily for the benefit of certain of AIG's insurance companies. Securities are loaned to various financial institutions, primarily major banks and brokerage firms. Cash collateral generally equal to 102 percent of the fair value of the loaned securities is received. The cash collateral is invested in highly-rated fixed income securities to earn a net spread.

AIG's liability to the borrower for collateral received was \$77.8 billion and the fair value of the collateral reinvested was \$64.3 billion as of March 31, 2008. In addition to the invested collateral, the securities on loan as well as all of the assets of the participating companies are generally available to satisfy the liability for collateral received.

The composition of the securities lending invested collateral by credit rating at March 31, 2008 was as follows:

<i>(in millions)</i>	AAA	AA	A	BBB/Not Rated	Short- Term	Total
Corporate debt	\$ 3,569	\$4,179	\$4,199	\$2,534	\$ —	\$14,481
Mortgage-backed, asset-backed and collateralized	37,052	1,605	936	1,339	—	40,932
Cash and short-term investments	—	—	—	—	8,848	8,848
Total	\$40,621	\$5,784	\$5,135	\$3,873	\$8,848	\$64,261

Participation in the securities lending program by reporting unit at March 31, 2008 was as follows:

	Percent Participation
Domestic Life Insurance and Domestic Retirement Services	68%
Foreign Life Insurance	10
AIG Property Casualty Group	4
Foreign General Insurance	5
Asset Management	13
Total	100%

On March 31, 2008, \$9.8 billion (or 14 percent) of the liabilities were one-day tenor. These one-day tenor loans do not have a contractual end date but are terminable by either party on demand. The balance of the liabilities contractually mature over the next sixty days; however, the maturing loans are frequently renewed and rolled over to extended dates. Collateral held for this program at March 31, 2008 included interest bearing cash equivalents with overnight maturities of \$8.8 billion and other short-term investments of \$1.8 billion.

Liquidity in the securities pool is managed based upon historical experience regarding volatility of daily, weekly and biweekly loan balances. Despite the current environment, the program has not experienced a significant decrease in loan balances.

In addition, the invested securities are carried at fair value with unrealized gains and losses recorded in accumulated other comprehensive income (loss) while net realized gains and losses are recorded in earnings. The net unrealized loss on the investments was \$9.4 billion as of March 31, 2008. During the first three months of 2008, AIG recorded net realized losses of \$2.9 billion on this portfolio, predominantly related to other-than-temporary impairments.

Portfolio Review*Other-Than-Temporary Impairments*

AIG assesses its ability to hold any fixed maturity security in an unrealized loss position to its recovery, including fixed maturity securities classified as available for sale, at each balance sheet date. The decision to sell any such fixed maturity security classified as available for sale reflects the judgment of AIG's management that the security sold is unlikely to provide, on a relative value basis, as attractive a

return in the future as alternative securities entailing comparable risks. With respect to distressed securities, the sale decision reflects management's judgment that the risk-discounted anticipated ultimate recovery is less than the value achievable on sale.

AIG evaluates its investments for impairments in valuation. The determination that a security has incurred an other-than-temporary decline in value requires the judgment of management and consideration of the fundamental condition of the issuer, its near-term prospects and all the relevant facts and circumstances. See Critical Accounting Estimates – Other-than-temporary impairments herein for further information on AIG's policy.

Once a security has been identified as other-than-temporarily impaired, the amount of such impairment is determined by reference to that security's contemporaneous fair value and recorded as a charge to earnings.

In light of the recent significant disruption in the U.S. residential mortgage and credit markets, AIG has recognized an other-than-temporary impairment charge (severity loss) of \$4.1 billion in the first three months of 2008, primarily with respect to certain RMBS and other structured securities. Even while retaining their investment grade ratings, such securities were priced at a significant discount to cost. Notwithstanding AIG's intent and ability to hold such securities indefinitely, and despite structures that indicate that a substantial amount of the securities should continue to perform in accordance with original terms, AIG concluded that it could not reasonably assert that the recovery period would be temporary.

As a result of AIG's periodic evaluation of its securities for other-than-temporary impairments in value, AIG recorded other-than-temporary impairment charges of \$5.6 billion and \$467 million in the first three months of 2008 and 2007, respectively.

In addition to the above severity losses, AIG recorded other-than-temporary impairment charges in the first three months of 2008 and 2007 related to:

- securities that AIG does not intend to hold until recovery;
- declines due to foreign exchange;
- issuer-specific credit events;

- certain structured securities impaired under Emerging Issues Task Force Issue No. 99-20, “Recognition of Interest Income and Impairment on Purchased Beneficial Interests and Beneficial Interests that Continue to be Held by a Transferor in Securitized Financial Assets”; and
- other impairments, including equity securities and partnership investments.

Net realized capital gains (losses) were as follows:

<i>(in millions)</i>	Three Months Ended March 31,	
	2008	2007
Sales of fixed maturities	\$ 19	\$ 41

Total	\$ 46	\$ 392	\$ —	\$ 29	\$ —	\$ 467

Other-than-temporary severity-related impairment charges for the three-month period ended March 31, 2008 by type of security and credit rating were as follows:

<i>Rating:</i> <i>(millions)</i>	RMBS	CDO	CMBS	Other Securities	Total
Fixed Maturities:					
AAA	\$1,496	\$ 21	\$117	\$ 12	\$1,646
AA	853	40	39	1	933
A	306	49	298	4	657
BBB and below	493	—	63	20	576
Nonrated	—	—	—	17	17
Equities	—	—	—	276	276
Total	\$3,148	\$110	\$517	\$330	\$4,105

No other-than-temporary impairment charge with respect to any one single counterparty was significant to AIG’s consolidated financial condition or results of operations, and no individual other-than-temporary impairment charge exceeded two percent of the consolidated net loss in the first three months of 2008.

In periods subsequent to the recognition of an other-than-temporary impairment charge for fixed maturity securities that is not credit or foreign exchange related, AIG generally accretes into income the discount or amortizes the reduced premium resulting from the reduction in cost basis over the remaining life of the security. The amount of

accretion recognized in earnings for the three months ended March 31, 2008 was \$12 million.

Commercial Mortgage Loan Exposure

At March 31, 2008, AIG had direct commercial mortgage loan exposure of \$19.5 billion, with \$16.3 billion representing U.S. loan exposure. At that date, none of the

U.S. loans were in default or delinquent by 90 days or more. The remaining commercial mortgage loans are secured predominantly by properties in Japan. In addition, at March 31, 2008, AIG had approximately \$2.1 billion in residential mortgage loans in jurisdictions outside the United States, primarily backed by properties in Taiwan and Thailand.

An aging of the pre-tax unrealized losses of fixed maturity and equity securities, distributed as a percentage of cost relative to unrealized loss (the extent by which the fair value is less than amortized cost or cost), including the number of respective items, at March 31, 2008 was as follows:

(a) Represents the number of consecutive months that fair value has been less than cost by any amount.

(b) Represents the percentage by which fair value is less than cost at the balance sheet date.

(c) For bonds, represents amortized cost.

(d) The effect on net income of unrealized losses after taxes will be mitigated upon realization because certain realized losses will be charged to participating policyholder accounts, or realization will result in current decreases in the amortization of certain DAC.

(e) Includes securities lending invested collateral.

Unrealized gains and losses

At March 31, 2008, the carrying value of AIG's fixed maturity and equity securities aggregated \$523.2 billion. At March 31, 2008, aggregate pre-tax unrealized gains for fixed maturity and equity securities were \$16.9 billion (\$11.0 billion after tax).

At March 31, 2008, the aggregate pre-tax gross unrealized losses on fixed maturity and equity securities were \$23.4 billion (\$15.2 billion after tax). Additional information about these securities is as follows:

- These securities were valued, in the aggregate, at approximately 90 percent of their current amortized cost.

- Approximately 16 percent of these securities were valued at less than 20 percent of their current cost, or amortized cost.
- Less than four percent of the fixed income securities had issuer credit ratings that were below investment grade.

AIG did not consider these securities in an unrealized loss position to be other-than-temporarily impaired at March 31, 2008, because management has the intent and ability to hold these investments until they recover their cost basis. AIG believes the securities will generally continue to perform in accordance with the original terms, notwithstanding the present price declines.

For the three months ended March 31, 2008, unrealized losses related to investment grade bonds increased \$9.5 billion (\$6.2 billion after tax), reflecting the widening of credit spreads, partially offset by the effects of a decline in risk-free interest rates.

The amortized cost and fair value of fixed maturity securities available for sale in an unrealized loss position at March 31, 2008, by contractual maturity, were as follows:

<i>(in millions)</i>	Amortized Cost	Fair Value
Due in one year or less	\$ 4,833	\$ 4,749
Due after one year through five years	31,486	30,367
Due after five years through ten years	41,225	39,037
Due after ten years	61,830	57,819
Mortgage-backed, asset-backed and collateralized	96,075	80,675
Total	\$235,449	\$212,647

For the three months ended March 31, 2008, the pre-tax realized losses incurred with respect to the sale of fixed maturities and equity securities were \$0.4 billion. The aggregate fair value of securities sold was \$5.0 billion, which was approximately 92 percent of amortized cost. The average period of time that securities sold at a loss during the three months ended March 31, 2008 were trading continuously at a price below book value was approximately five months. See Risk Management — Credit Risk Management in the 2007 Annual Report on Form 10-K for an additional discussion of investment risks associated with AIG's investment portfolio.

Risk Management

For a complete discussion of AIG's risk management program, see Management's Discussion and Analysis of Financial Condition and Results of Operations in the 2007 Annual Report on Form 10-K.

AIG has continued to invest in human resources, systems and processes in the enterprise risk management functions, both at the corporate and business unit levels. These efforts include implementing systems and processes to ensure the aggregation of the various categories of risk across business units and as a whole, and incorporating forward-looking analyses and stress tests. These initiatives are ongoing and will take time to implement, including the hiring of additional qualified personnel.

Credit Risk Management

AIG defines its aggregate credit exposures to a counterparty as the sum of its fixed maturities, loans, finance leases, derivatives (mark to market), deposits (in the case of financial institutions) and the specified credit equivalent exposure to certain insurance products which embody credit risk.

The following table presents AIG's largest credit exposures at March 31, 2008 as a percentage of total consolidated shareholders' equity:

Category	Risk Rating ^(a)	Credit Exposure as a Percentage of Total Consolidated Shareholders' Equity
Investment Grade:		
10 largest combined	A+ (weighted average) ^(b)	108.0%
Single largest non-sovereign (financial institution)	AA-	10.4
Single largest corporate	AAA	7.2
Single largest sovereign	AA-	21.5
Non-Investment Grade:		
Single largest sovereign	BB-	2.4
Single largest non-sovereign	BB	0.5

(a) Risk rating is based on external ratings, or equivalent, based on AIG's internal risk rating process.

(b) Five of the ten largest credit exposures are to highly-rated financial institutions and four are to investment-grade rated sovereigns; none is rated lower than BBB+ or its equivalent.

AIG closely controls its aggregate cross-border exposures to avoid excessive concentrations in any one country or regional group of countries. AIG defines its cross-border exposure to include both cross-border credit exposures and its large cross-border investments in its own international subsidiaries. Thirteen countries had cross-border exposures in excess of 10 percent of total consolidated shareholders' equity at March 31, 2008. At that date eight were AAA-rated, four were AA-rated and one was A-rated.

In addition, AIG closely monitors its industry concentrations, the risks of which are often mitigated by the breadth and scope of AIG's international operations. Excluding the U.S. residential and commercial mortgage sectors, AIG's single largest industry credit exposure is to the highly-rated global financial institutions sector, accounting for 109 percent of total consolidated shareholders' equity at March 31, 2008. AIG's other industry credit concentrations in excess of 10 percent of total consolidated shareholders' equity are in the following industries (in descending order by approximate size):

- Oil and gas;
- Electric and water utilities;
- Global life insurance carriers;
- European regional financial institutions;
- Global telecommunications companies;

- U.S.-based regional financial institutions;
- Global securities firms and exchanges;
- Global reinsurance firms;
- Healthcare companies; and
- Retail companies.

Other than as described above, there were no significant changes to AIG's credit exposures as set forth in Risk Management – Corporate Risk Management – Credit Risk Management in the 2007 Annual Report on Form 10-K.

Market Risk Management

Insurance, Asset Management and Non-Trading Financial Services Value at Risk (VaR)

AIG performs one comprehensive VaR analysis across all of its non-trading businesses, and a separate VaR analysis for its trading business at AIGFP. The comprehensive VaR is categorized by AIG business segment (General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management) and also by market risk factor (interest rate, currency and equity). AIG's market risk VaR calculations include exposures to benchmark Treasury or swap interest rates, but do not include exposures to credit-based factors such as credit spreads. AIG's credit exposures within its invested assets and credit derivative portfolios are

discussed in Segment Risk Management — Financial Services in the 2007 Annual Report on Form 10-K.

For the insurance segments, assets included are invested assets (excluding direct holdings of real estate) and liabilities included are reserve for losses and loss expenses, reserve for unearned premiums, future policy benefits for life and accident and health insurance contracts and other policyholders' funds. For financial services companies, loans and leases represent the majority of assets represented in the VaR calculation, while bonds and notes issued represent the majority of liabilities.

AIG calculated the VaR with respect to net fair values as of March 31, 2008 and December 31, 2007. The VaR number represents the maximum potential loss as of those dates that could be incurred with a 95 percent confidence (i.e., only five percent of historical scenarios show losses greater than the VaR figure) within a one-month holding period. AIG uses the historical simulation methodology that entails repricing all assets and liabilities under explicit changes in market rates within a specific historical time period. AIG uses the most recent three years of historical market information for interest rates, foreign exchange rates, and equity index prices. For each scenario, each transaction was repriced. Segment and AIG-wide scenario values are then calculated by netting the values of all the underlying assets and liabilities.

The following table presents the period-end, average, high and low VaRs on a diversified basis and of each component of market risk for AIG's non-trading businesses. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

(in millions)	2008				2007

AIG's total non-trading market risk VaR increased from \$5.6 billion at the end of 2007 to \$6.9 billion as of March 31, 2008. The biggest drivers were market valuation effects (lower interest rates), increased volatilities in equity markets and "tail" effects (increased riskiness of the worst 5 percent of simulated portfolio outcomes that determine VaR). These factors more than offset the effect of reduced correlations (i.e., increased diversification) between U.S. equities and Asian interest rates.

Capital Markets Trading VaR

AIGFP attempts to minimize risk in benchmark interest rates, equities, commodities and foreign exchange. Market exposures in option implied volatilities, correlations and basis risks are also minimized over time.

AIGFP's minimal reliance on market risk driven revenue is reflected in its VaR. AIGFP's VaR calculation is based on the interest rate, equity, commodity and foreign exchange risk arising from its portfolio. Credit-related factors, such as credit spreads or credit default, are not included in AIGFP's VaR calculation. Because the market risk with respect to securities available for sale, at market, is substantially

hedged, segregation of the financial instruments into trading and other than trading was not considered necessary. AIGFP operates under established market risk limits based upon this VaR calculation. In addition, AIGFP backtests its VaR.

In the calculation of VaR for AIGFP, AIG uses the historical simulation methodology based on estimated changes to the value of all transactions under explicit changes in market rates and prices within a specific historical time period. AIGFP attempts to secure reliable and independent current market prices, such as published exchange prices, external subscription services such as Bloomberg or Reuters, or third-party or broker quotes. When such prices are not available, AIGFP uses an internal methodology that includes extrapolation from observable and verifiable prices nearest to the dates of the transactions. Historically, actual results have not deviated from these models in any material respect.

AIGFP reports its VaR level using a 95 percent confidence level and a one-day holding period, facilitating risk comparison with AIGFP's trading peers and reflecting the fact that market risks can be actively assumed and offset in AIGFP's trading portfolio.

The following table presents the year-end, average, high, and low VaRs on a diversified basis and of each component of market risk for Capital Markets operations. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

Equity	2	3	4	2	3	3	5	2
Commodity	5	4	6	3	3	3	7	2

Credit Derivatives

AIGFP enters into credit derivative transactions in the ordinary course of its business. The majority of AIGFP's credit derivatives require AIGFP to provide credit protection on a designated portfolio of loans or debt securities. AIGFP provides such credit protection on a "second loss" basis, under which AIGFP's payment obligations arise only after credit losses in the designated portfolio exceed a specified threshold amount or level of "first losses." The threshold amount of credit losses that must be realized before AIGFP has any payment obligation is negotiated by AIGFP for each transaction to provide that the likelihood of any payment obligation by AIGFP under each transaction is remote, even in severe recessionary market scenarios. The underwriting process for these derivatives included assumptions of severely stressed recessionary market scenarios to minimize the likelihood of realized losses under these obligations.

In certain cases, the credit risk associated with a designated portfolio is tranching into different layers of risk, which are then analyzed and rated by the credit rating agencies. Typically, there will be an equity layer covering the first credit losses in respect of the portfolio up to a specified percentage of the total portfolio, and then successive layers ranging from generally a BBB-rated layer to one or more AAA-rated layers. In transactions that are rated with respect to the risk layer or tranche that is immediately junior to the threshold level above which AIGFP's payment obligation would generally arise, a significant majority are rated AAA by the rating agencies. In transactions that are not rated, AIGFP applies the same risk criteria for setting the threshold level for its payment obligations. Therefore, the risk layer assumed by AIGFP with respect to the designated portfolio in these transactions is often called the "super senior" risk layer, defined as the layer of credit risk senior to a risk layer that has been rated AAA by the credit rating agencies, or if the transaction is not rated, equivalent thereto.

Approximately \$335 billion (consisting of corporate loans and prime residential mortgages) of the \$469 billion in notional exposure of AIGFP's super senior credit default

swap portfolio as of March 31, 2008 represented derivatives written for financial institutions, principally in Europe, for the purpose of providing regulatory capital relief rather than risk mitigation. In exchange for a minimum guaranteed fee, the counterparties receive credit protection with respect to diversified loan portfolios they own, thus improving their regulatory capital position. These derivatives are generally expected to terminate at no additional cost to the counterparty upon the counterparty's adoption of models compliant with the Basel II Accord. AIG expects that the majority of these transactions will be terminated within the next 12 to 24 months by AIGFP's counterparties as they implement those models. As of April 30, 2008, \$55 billion in notional exposures have either been terminated or are in the process of being terminated. In its 2007 Annual Report on Form 10-K, AIG had previously reported that as of February 26, 2008, \$54 billion in notional exposures have either been terminated or are in the process of being terminated. AIG has recently refined its approach to estimating its net notional exposures on certain of these transactions that have unique features. The notional exposures on transactions terminated or that were in the process of being terminated as of February 26, 2008 is \$46 billion under the refined method. AIGFP was not required to make any payments as part of these terminations and in certain cases was paid a fee upon termination.

In light of this experience to date and after other comprehensive analyses, AIG determined that there was no unrealized market valuation adjustment for this regulatory capital relief portfolio for the three months ended March 31, 2008. AIG will continue to assess the valuation of this portfolio and monitor developments in the marketplace. Given the significant deterioration in the credit markets and the risk that AIGFP's expectations with respect to the termination of these transactions by its counterparties may not materialize, there can be no assurance that AIG will not recognize unrealized market valuation losses from this portfolio in future periods, and recognition of even a small percentage decline in the fair value of this portfolio could be material to an individual reporting period.

Approximately \$57 billion of the \$469 billion in notional exposure on AIGFP's super senior credit default swaps as of March 31, 2008 was written on investment grade corporate debt and CLOs. There is no uniform methodology to estimate the fair value of corporate super senior credit default swaps. AIG estimates the fair value of its corporate credit default swap portfolio by reference to benchmark indices, including the CDX and iTraxx, and third-party prices and collateral calls. AIG believes that its methodology to value the corporate credit default swap portfolio is reasonable, but other market participants use other methodologies and these methodologies may generate materially different fair value estimates. No assurance can be given that the fair value of AIG's corporate credit default swap portfolio would not change materially if other market indices or pricing sources were used to estimate the fair value of the portfolio.

In addition to writing credit protection on the super senior risk layer on designated portfolios of loans or debt securities, AIGFP also wrote protection on tranches below the super senior risk layer. At March 31, 2008 the notional amount of the credit default swaps in the regulatory capital relief portfolio written on tranches below the super senior risk layer was \$5.7 billion, with an estimated fair value loss of \$174 million.

AIGFP has also written credit protection on the super senior risk layer of diversified portfolios of investment grade corporate debt, CLOs and multi-sector CDOs. AIGFP is at risk only on the super senior portion related to a diversified portfolio referenced to loans or debt securities. The super senior risk portion is the last tranche to suffer losses after significant subordination. Credit losses would have to erode all tranches junior to the super senior tranche before AIGFP would suffer any realized losses. The subordination level required for each transaction is determined based on internal modeling and analysis of the pool of underlying assets and is not dependent on ratings determined by the rating agencies. While the credit default swaps written on corporate debt obligations are cash settled, the majority of the credit default swaps written on CDOs and CLOs require physical settlement. Under a physical settlement arrangement, AIGFP would be required to purchase the referenced super senior security at par in the event of a non-payment on that security. Certain of the AIGFP credit default swaps with an aggregate notional amount totaling \$8.7 billion protect CDOs that include over-collateralization provisions that adjust the value of the collateral based, in part, on the ratings of the collateral for the CDOs. If the over collateralization provisions are not satisfied, an event of default would occur creating a right to accelerate. In certain of these circumstances, AIGFP may be required to purchase the referenced super senior security at par upon the acceleration of the security. AIGFP cannot currently quantify its obligations which might occur in the future under these provisions, or determine the timing of any

purchases that might be required. Therefore, there can be no assurance that satisfaction of these obligations by AIGFP will not have a material effect on the manner in which AIG manages its liquidity.

AIGFP has written 2a-7 Puts in connection with certain multi-sector CDOs that allow the holders of the securities to treat the securities as eligible short-term 2a-7 investments under the Investment Company Act of 1940. Holders of securities are permitted, in certain circumstances, to tender their securities to the issuers at par. If an issuer's remarketing agent is unable to resell the securities so tendered, AIGFP must purchase the securities at par as long as the security has not experienced a default. During the first three months of 2008, AIGFP repurchased securities with a principal amount of approximately \$235 million in connection with these obligations. In certain transactions, AIGFP has contracted with third parties to provide liquidity for the securities if they are put to AIGFP for up to a three-year period. Such liquidity facilities totaled \$2.6 billion at March 31, 2008. As of April 30, 2008, AIGFP has utilized less than \$200 million of these liquidity facilities. At April 30, 2008, AIGFP had \$5.7 billion of notional exposure on 2a-7 Puts, included as part of the multi-sector CDO portfolio discussed herein.

As of April 30, 2008, a significant majority of AIGFP's super senior exposures continued to have tranches below AIGFP's attachment point that have been explicitly rated AAA or, in AIGFP's judgment, would have been rated AAA had they been rated. AIGFP's portfolio of credit default swaps undergoes regular monitoring, modeling and analysis and contains protection through collateral subordination.

Certain of these credit derivatives are subject to collateral posting provisions. These provisions differ among counterparties and asset classes. In the case of most of the multi-sector CDO transactions, the amount of collateral required is determined based on the change in value of the underlying cash security that represents the super senior risk layer subject to credit protection, and not the change in value of the super senior credit derivative.

As of April 30, 2008, AIGFP had received collateral calls from counterparties in respect of certain super senior credit default swaps (including those entered into by counterparties for regulatory capital relief purposes and those in respect of corporate debt/CLOs). At times, valuation estimates made by certain of the counterparties with respect to certain super senior credit default swaps or the underlying reference CDO securities, for purposes of determining the amount of collateral required to be posted by AIGFP in connection with such instruments, have differed significantly from AIGFP's estimates. In almost all cases, AIGFP has been able to successfully resolve the differences or otherwise reach an accommodation such that collateral posting levels are not currently the subject of ongoing negotiations, including in certain cases entering into compromise collateral arrange-

ments, some of which are for specified periods of time. AIGFP is currently in active discussions with a small number of other counterparties to resolve such valuation differences. As of April 30, 2008, AIGFP had posted collateral (or had received collateral, where offsetting exposures on other transactions resulted in the counterparty posting to AIGFP) based on exposures, calculated in respect of super senior credit default swaps, in an aggregate net amount of \$9.7 billion. Valuation estimates made by counterparties for collateral purposes were considered in the determination of the fair value estimates of AIGFP's super senior credit default swap portfolio.

AIG has conducted risk analyses of the super senior multi-sector CDO credit default swap portfolio of AIGFP. AIG's analyses have been conducted to assess the risk of incurring net realized losses over the remaining life of the portfolio. In addition to analyses of each individual risk in the portfolio, AIG conducted certain ratings-based stress tests, which centered around scenarios of further stress on the portfolio resulting from downgrades by the rating agencies from current levels on the underlying collateral in the CDO structures supported by AIGFP's credit default swaps. These rating actions would be prompted by factors such as the worsening beyond current estimates of delinquency and residential housing price deterioration in the underlying assets in the collateral securities of the CDO structures. The results of these stress tests indicated possible realized losses on a static basis, because the assumptions of losses in these stress tests assumed immediate realization of loss. Actual realized losses

would only be experienced over time given the timing of losses incurred in the underlying portfolios and the timing of breaches of the subordination afforded to AIGFP through the structures of the CDO. No benefit was taken in these stress tests for cash flow diversion features, recoveries upon default or other risk mitigant benefits.

During the first quarter of 2008, AIG developed an additional methodology to estimate its potential realized credit impairment losses from AIGFP's super senior multi-sector CDO credit default swap portfolio. The methodology combines a roll rate estimate of the losses emanating from the subprime and Alt-A RMBS collateral securities in the multi-sector CDOs, plus an estimate of losses arising from the CDOs inside the collateral pools (inner CDOs).

In the roll rate analysis, default rates on mortgages in various stages of delinquency (30 days past due, 60 days past due, 90 days past due, bankruptcy or foreclosure, real estate owned) are projected out at various rates (called roll rates) to estimate total potential defaults. Loss severities are then applied to the defaults to estimate realized credit impairment losses. In addition, loss timing curves to the performing mortgages are also applied to estimate how much of the non-delinquent portfolio is likely to default given mortgage seasoning ("age" of the mortgage). Finally, AIG applies loss estimates to the inner CDOs, using inner CDO loss estimates that depend on the vintage, type (high grade and mezzanine) and rating of the CDO.

ITEM 3. Quantitative and Qualitative Disclosures About Market Risk

Included in Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations.

ITEM 4. Controls and Procedures

In connection with the preparation of this Quarterly Report on Form 10-Q, an evaluation was carried out by AIG's management, with the participation of AIG's Chief Executive Officer and Chief Financial Officer, of the effectiveness of AIG's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (Exchange Act)). Disclosure controls and procedures are designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms and that such information is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial Officer, to allow timely decisions regarding required disclosures. Solely as a result of the previously identified material weakness in internal control over the fair value valuation of the AIGFP super senior credit default swap portfolio and oversight thereof as described in the 2007 Annual Report on Form 10-K, AIG's Chief Executive Officer and

Chief Financial Officer have concluded that, as of March 31, 2008, AIG's disclosure controls and procedures were ineffective. Notwithstanding the existence of this material weakness, AIG believes that the consolidated financial statements in this Quarterly Report on Form 10-Q fairly present, in all material respects, AIG's consolidated financial condition as of March 31, 2008 and December 31, 2007 and consolidated results of operations and cash flows for the three-month periods ended March 31, 2008 and 2007, in conformity with GAAP. In addition, there has been no change in AIG's internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) that occurred during the quarter ended March 31, 2008 that has materially affected, or is reasonably likely to materially affect, AIG's internal control over financial reporting.

Throughout 2008 and 2007, AIG recorded out of period adjustments, many of which were detected as part of continuing remediation efforts. It is AIG's policy to record all error

corrections, without regard to materiality, and AIG has an established, formal process for the identification, evaluation and recording of all out of period adjustments. This process includes a heightened sensitivity for potential errors related to the internal control matters discussed in Item 9A. of the 2007 Annual Report on Form 10-K. AIG distinguishes error corrections from changes in estimates by evaluating the facts and

circumstances of such items, including considering whether information was capable of being known at the time of original recording. AIG has evaluated the adjustments recorded in 2008 and 2007 from a qualitative and quantitative perspective and concluded that such adjustments are immaterial individually and in the aggregate to the current and prior periods.

Part II – OTHER INFORMATION

ITEM 2. Unregistered Sales of Equity Securities and Use of Proceeds

Information with respect to purchases of AIG Common stock during the three months ended March 31, 2008 was as follows:

Period	Total Number of Shares Purchased ^(a)	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares that May Yet Be Purchased Under the Plans or Programs at End of Month ^(b)
January 1 - 31	7,367,032	\$54.55	7,367,032	
February 1 - 29	12,639,601	50.98	12,639,601	
March 1 - 31	14,087,150	48.73	14,087,150	
Total	34,093,783	\$50.82	34,093,783	

(a) Reflects date of delivery. Does not include 1,066 shares delivered or attested to in satisfaction of the exercise price by holders of AIG employee stock options exercised during the three months ended March 31, 2008.

(b) In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. In November 2007, AIG's Board of Directors authorized the repurchase of an additional \$8 billion in common stock. A balance of \$9.18 billion remained for purchases under the program as of March 31, 2008, although \$179 million of that amount has been advanced by AIG to purchase shares under the program.

Subsequent to March 31, 2008, an additional 3,832,276 shares were purchased, satisfying the balance of the commitments existing at December 31, 2007 that had not been satisfied at March 31, 2008. AIG does not expect to purchase additional shares under its share repurchase program for the foreseeable future.

Secondary Ratio		
Interest credited to GIC and GIA policy and contract holders	\$ (926)	\$(1,579)
Total fixed charges excluding interest credited to GIC and GIA policy and contract holders	\$ 1,266	\$ 1,093
Secondary ratio of earnings to fixed charges	^(b)	6.60

(a) The proportion considered representative of the interest factor.

(b) Earnings were inadequate to cover total fixed charges by \$11,282 million for the three-month period ended March 31, 2008. The coverage deficiency for total fixed charges excluding interest credited to GIC and GIA policy and contract holders was \$10,356 million for the three-month period ended March 31, 2008.

The secondary ratio is disclosed for the convenience of fixed income investors and the rating agencies that serve them and is more comparable to the ratios disclosed by all issuers of fixed income securities. The secondary ratio removes interest credited to guaranteed investment contract (GIC) policyholders and guaranteed investment agreement (GIA) contract holders. Such interest expenses are also removed from income (loss) before income taxes and minority interest used in this calculation. GICs and GIAs are entered

into by AIG's insurance subsidiaries, principally Sun America Life Insurance Company and AIG Financial Products Corp. and its subsidiaries, respectively. The proceeds from GICs and GIAs are invested in a diversified portfolio of securities, primarily investment grade bonds. The assets acquired yield rates greater than the rates on the related policyholders obligation or agreement, with the intent of earning operating income from the spread.

CERTIFICATIONS

I, Martin J. Sullivan, certify that:

1. I have reviewed this Quarterly Report on Form 10-Q of American International Group, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited)*

1. Summary of Significant Accounting Policies

Basis of Presentation

These unaudited condensed consolidated financial statements do not include all disclosures required by accounting principles generally accepted in the United States (GAAP) for complete financial statements and should be read in conjunction with the audited consolidated financial statements and the related notes included in the Annual Report on Form 10-K of American International Group, Inc. (AIG) for the year ended December 31, 2007 (2007 Annual Report on Form 10-K).

In the opinion of management, these consolidated financial statements contain the normal recurring adjustments necessary for a fair statement of the results presented herein. All material intercompany accounts and transactions have been eliminated.

Changes in Presentation

In the second quarter of 2008, AIG determined that certain accident and health contracts in its Foreign General Insurance reporting unit, which were previously accounted for as short duration contracts, should be treated as long duration insurance products. Accordingly, the December 31, 2007 consolidated balance sheet has been revised to reflect the reclassification of \$763 million of deferred direct response advertising costs, previously reported in other assets, to deferred policy acquisition costs. Additionally, \$320 million has been reclassified on the consolidated balance sheet as of December 31, 2007 from unearned premiums to future policy benefits for life and accident and health insurance contracts. These revisions did not have a material effect on AIG's consolidated income before income taxes, net income, or shareholders' equity for any period presented.

In addition, see Recent Accounting Standards — Accounting Changes, below for a discussion of AIG's adoption of FASB Staff Position (FSP) No. FIN 39-1, "Amendment of FASB Interpretation No. 39" (FSP FIN 39-1).

Additionally, certain other reclassifications and format changes have been made to prior period amounts to conform to the current period presentation.

Recent Accounting Standards

Accounting Changes

FAS 157

In September 2006, the Financial Accounting Standards Board (FASB) issued Statement of Financial Accounting Standards (FAS) No. 157, "Fair Value Measurements" (FAS 157). FAS 157 defines fair value, establishes a framework for measuring fair value and expands disclosure requirements regarding fair value measurements but does not change existing guidance about whether an asset or liability is carried at fair

value. FAS 157 nullifies the guidance in Emerging Issues Task Force (EITF) Issue No. 02-3, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities," (EITF 02-3) that precluded the recognition of a trading profit at the inception of a derivative contract unless the fair value of such contract was obtained from a quoted market price or other valuation technique incorporating observable market data. FAS 157 also clarifies that an issuer's credit standing should be considered when measuring liabilities at fair value. The fair value measurement and related disclosure guidance in FAS 157 do not apply to fair value measurements associated with AIG's share-based employee compensation awards accounted for in accordance with FAS 123(R), "Share-Based Payment."

AIG adopted FAS 157 on January 1, 2008, its required effective date. FAS 157 must be applied prospectively, except for certain stand-alone derivatives and hybrid instruments initially measured using the guidance in EITF 02-3, which must be applied as a cumulative effect accounting change to retained earnings at January 1, 2008. The cumulative effect, net of taxes, of adopting FAS 157 on AIG's consolidated balance sheet was an increase in retained earnings of \$4 million.

The most significant effect of adopting FAS 157 on AIG's consolidated results of operations for the three- and six-month periods ended June 30, 2008 related to changes in fair value methodologies with respect to both liabilities already carried at fair value, primarily hybrid notes and derivatives, and newly elected liabilities measured at fair value (see FAS 159 discussion below). Specifically, the incorporation of AIG's own credit spreads and the incorporation of explicit risk margins (embedded policy derivatives at transition only) resulted in a decrease in pre-tax income of \$149 million (\$97 million after tax) and an increase in pre-tax income of \$2.6 billion (\$1.7 billion after tax) for the three- and six-month periods ended June 30, 2008, respectively. The effect of the changes in AIG's own credit spreads was a decrease in pre-tax income of \$112 million and an increase of \$2.5 billion for the three- and six-month periods ended June 30, 2008, respectively. The effect of the changes in counterparty credit spreads for assets measured at fair value at AIG Financial Products Corp. and AIG Trading Group Inc. and their respective subsidiaries (AIGFP) was decreases of \$362 million and \$3.0 billion for the three- and six-month periods ended June 30, 2008, respectively.

See Note 3 to the Consolidated Financial Statements for additional FAS 157 disclosures.

FAS 159

In February 2007, the FASB issued FAS 159, "The Fair Value Option for Financial Assets and Financial Liabilities" (FAS 159). FAS 159 permits entities to choose to measure at

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**1. Summary of Significant Accounting Policies** (continued)

fair value many financial instruments and certain other items that are not required to be measured at fair value. Subsequent changes in fair value for designated items are required to be reported in income. FAS 159 also establishes presentation and disclosure requirements for similar types of assets and liabilities measured at fair value. FAS 159 permits the fair value option election on an instrument-by-instrument basis for eligible items existing at the adoption date and at initial recognition of an asset or liability, or upon most events that give rise to a new basis of accounting for that instrument.

AIG adopted FAS 159 on January 1, 2008, its required effective date. The adoption of FAS 159 with respect to elections made in the Life Insurance & Retirement Services segment resulted in an after-tax decrease to 2008 opening retained earnings of \$559 million. The adoption of FAS 159 with respect to elections made by AIGFP resulted in an after-tax decrease to 2008 opening retained earnings of \$448 million. Included in this amount are net unrealized gains of \$105 million that were reclassified to retained earnings from accumulated other comprehensive income (loss) related to available for sale securities recorded on the consolidated balance sheet at January 1, 2008 for which the fair value option was elected.

See Note 3 to the Consolidated Financial Statements for additional FAS 159 disclosures.

FAS 157 and FAS 159

The following table summarizes the after-tax increase (decrease) from adopting FAS 157 and FAS 159 on the opening shareholders' equity accounts at January 1, 2008:

(in millions)	At January 1, 2008		
	Accumulated Other Comprehensive Income/(Loss)	Retained Earnings	Cumulative Effect of Accounting Changes
FAS 157	\$ —	\$ 4	\$ 4
FAS 159	(105)	(1,007)	(1,112)
Cumulative effect of accounting changes	\$(105)	\$(1,003)	\$(1,108)

FSP FIN 39-1

In April 2007, the FASB directed the FASB Staff to issue FSP FIN 39-1. FSP FIN 39-1 modifies FIN No. 39, "Offsetting of Amounts Related to Certain Contracts," and permits companies to offset cash collateral receivables or payables against derivative instruments under certain circumstances. AIG adopted the provisions of FSP FIN 39-1 effective January 1, 2008, which requires retrospective application to all prior periods presented. At June 30, 2008, the amounts of cash collateral received and paid that were offset against net derivative positions totaled \$7.3 billion and \$12.3 billion, respec-

tively. The cash collateral received and paid related to AIGFP derivative instruments were previously recorded in trade payables and trade receivables. Cash collateral received related to non-AIGFP derivative instruments was previously recorded in other liabilities. Accordingly, the derivative assets and liabilities at December 31, 2007 have been reduced by \$6.3 billion and \$5.8 billion, respectively, related to the netting of cash collateral.

Future Application of Accounting Standards**FAS 141(R)**

In December 2007, the FASB issued FAS 141 (revised 2007), "Business Combinations" (FAS 141(R)). FAS 141(R) changes the accounting for business combinations in a number of ways, including broadening the transactions or events that are considered business combinations; requiring an acquirer to recognize 100 percent of the fair value of assets acquired, liabilities assumed, and noncontrolling (i.e., minority) interests; recognizing contingent consideration arrangements at their acquisition-date fair values with subsequent changes in fair value generally reflected in income; and recognizing preacquisition loss and gain contingencies at their acquisition-date fair values, among other changes.

AIG is required to adopt FAS 141(R) for business combinations for which the acquisition date is on or after January 1, 2009. Early adoption is prohibited.

FAS 160

In December 2007, the FASB issued FAS 160, "Noncontrolling Interests in Consolidated Financial Statements, an amendment of ARB No. 51" (FAS 160). FAS 160 requires noncontrolling (i.e., minority) interests in partially owned consolidated subsidiaries to be classified in the consolidated balance sheet as a separate component of consolidated shareholders' equity. FAS 160 also establishes accounting rules for subsequent acquisitions and sales of noncontrolling interests and provides for how noncontrolling interests should be presented in the consolidated statement of income. The noncontrolling interests' share of subsidiary income should be reported as a part of consolidated net income with disclosure of the attribution of consolidated net income to the controlling and noncontrolling interests on the face of the consolidated statement of income.

AIG is required to adopt FAS 160 on January 1, 2009 and early application is prohibited. FAS 160 must be adopted prospectively, except that noncontrolling interests should be reclassified from liabilities to a separate component of shareholders' equity and consolidated net income should be recast to include net income attributable to both the controlling and noncontrolling interests retrospectively. AIG is currently assessing the effect that adopting FAS 160 will have on its consolidated financial statements.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***1. Summary of Significant Accounting Policies** *(continued)***FAS 161**

In March 2008, the FASB issued FAS 161, “Disclosures about Derivative Instruments and Hedging Activities – an amendment of FASB Statement No. 133” (FAS 161). FAS 161 requires enhanced disclosures about (a) how and why AIG uses derivative instruments, (b) how derivative instruments and related hedged items are accounted for under FAS No. 133, “Accounting for Derivative Instruments and Hedging Activities” (FAS 133), and its related interpretations, and (c) how derivative instruments and related hedged items affect AIG’s consolidated financial condition, results of operations, and cash flows. FAS 161 is effective for AIG beginning with financial statements issued in the first quarter of 2009. Because FAS 161 only requires additional disclosures about derivatives, it will have no effect on AIG’s consolidated financial condition, results of operations or cash flows.

FAS 162

In May 2008, the FASB issued FAS 162, “The Hierarchy of Generally Accepted Accounting Principles” (FAS 162). FAS 162 identifies the sources of accounting principles and the

framework for selecting the principles to be used in the preparation of financial statements presented in conformity with GAAP but does not change current practices. FAS 162 will become effective on the 60th day following Securities and Exchange Commission (SEC) approval of the Public Company Accounting Oversight Board amendments to remove GAAP hierarchy from the auditing standards. FAS 162 will have no effect on AIG’s consolidated financial condition, results of operations or cash flows.

FSP FAS 140-3

In February 2008, the FASB issued FSP FAS No. 140-3, “Accounting for Transfers of Financial Assets and Repurchase Financing Transactions” (FSP FAS 140-3). FSP FAS 140-3 requires an initial transfer of a financial asset and a repurchase financing that was entered into contemporaneously with or in contemplation of the initial transfer to be evaluated as a linked transaction unless certain criteria are met. FSP FAS 140-3 is effective for AIG beginning January 1, 2009 and will be applied to new transactions entered into from that date forward. Early adoption is prohibited. AIG is currently assessing the effect that adopting FSP FAS 140-3 will have on its consolidated financial statements but does not believe the effect will be material.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information**

AIG identifies its reportable segments by product line consistent with its management structure. These segments are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management.

AIG's operations by major operating segment were as follows:

Operating Segments (in millions)	Three Months Ended June 30,		Six Months Ended June 30,	
	2008	2007	2008	2007
Total revenues ^(a) :				
General Insurance	\$ 12,757	\$12,928	\$ 25,046	\$25,831
Life Insurance & Retirement Services ^(b)	10,161	14,023	18,913	27,705
Financial Services ^{(c)(d)}	(3,605)	2,123	(10,165)	4,324
Asset Management ^(e)	797	1,781	648	3,450
Other	208	263	80	394
Consolidation and eliminations	(385)	32	(558)	91
Total	\$ 19,933	\$31,150	\$ 33,964	\$61,795
Operating income (loss) ^(a) :				
General Insurance	\$ 827	\$ 2,976	\$ 2,164	\$ 6,072
Life Insurance & Retirement Services ^(b)	(2,401)	2,620	(4,232)	4,901
Financial Services ^{(c)(d)}	(5,905)	47	(14,677)	339
Asset Management ^(e)	(314)	927	(1,565)	1,685

Consolidation and eliminations	(248)	218	(227)	433
Total	\$ (8,756)	\$ 6,328	\$ (20,020)	\$12,500

(a) Includes other-than-temporary impairment charges of \$6.8 billion and \$417 million for the three-month periods ended June 30, 2008 and 2007, respectively, and \$12.4 billion and \$884 million for the six-month periods ended June 30, 2008 and 2007, respectively. Also includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2008 and 2007, the effect was \$272 million and \$(430) million, respectively. For the six-month periods ended June 30, 2008 and 2007, the effect was \$(476) million and \$(882) million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings.

(b) Includes other-than-temporary impairment charges of \$5.2 billion and \$324 million for the three-month periods ended June 30, 2008 and 2007, respectively, and \$9.6 billion and \$716 million for the six-month periods ended June 30, 2008 and 2007, respectively.

(c) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2008 and 2007, the effect was \$5 million and \$(443) million, respectively. For the six-month periods ended June 30, 2008 and 2007, the effect was \$(199) million and \$(603) million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings.

(d) For the three- and six-month periods ended June 30, 2008, includes unrealized market valuation losses of \$5.6 billion and \$14.7 billion, respectively, on AIGFP's super senior credit default swap portfolio.

(e) Includes net realized capital losses of \$464 million and \$1.9 billion for the three- and six-month periods ended June 30, 2008, respectively, including other-than-temporary impairment charges of \$882 million and \$1.9 billion, respectively.

(f) Includes AIG parent and other operations that are not required to be reported separately. The following table presents the operating loss for AIG's Other category:

Other (in millions)	Three Months Ended June 30,		Six Months Ended June 30,	
	2008	2007	2008	2007
Operating income (loss):				
Equity earnings in partially owned companies	\$ 8	\$ 50	\$ 16	\$ 91
Interest expense	(452)	(302)	(820)	(554)
Unallocated corporate expenses ^(a)	(282)	(210)	(375)	(382)
Net realized capital gains (losses) ^(b)	30	22	(235)	(27)
Other miscellaneous, net	(19)	(20)	(69)	(58)
Total Other	\$ (715)	\$ (460)	\$ (1,483)	\$ (930)

(a) Includes expenses of corporate staff not attributable to specific operating segments, expenses related to efforts to improve internal controls, corporate initiatives and certain compensation plan expenses. For the three- and six-month periods ended June 30, 2008, includes a charge of \$101 million as a result of the settlement of a dispute in connection with the July 2008 purchase of the balance of Ascot Underwriting Holdings Ltd., partially offset by a decrease in certain compensation plan expenses.

(b) The increase in net realized capital losses in the six-month period ended June 30, 2008 reflected higher foreign exchange losses on foreign-denominated debt, a portion of which was economically hedged but did not qualify for hedge accounting treatment under FAS 133, and losses on non-hedged derivatives.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information** (continued)**AIG's General Insurance operations by major internal reporting unit were as follows:**

Total	\$ (5,905)	\$ 47	\$ (14,677)	\$ 339

(a) Revenues are shown net of interest expense of \$1.2 billion and \$805 million in the three-month periods ended June 30, 2008 and 2007, respectively, and \$1.7 billion and \$1.9 billion for the six-month periods ended June 30, 2008 and 2007, respectively. In the three- and six-month periods ended June 30, 2008, both revenues and operating income (loss) includes unrealized market valuation losses of \$5.6 billion and \$14.7 billion, respectively, on AIGFP's super senior credit default swap portfolio.

(b) The three- and six-month periods ended June 30, 2007 included pre-tax charges of \$50 million and \$178 million, respectively, in connection with domestic Consumer Finance's mortgage banking activities. Based on a current evaluation of the estimated cost of implementing the Supervisory Agreement entered into with the Office of Thrift Supervision (OTS), partial reversals of these prior year charges of \$25 million and \$43 million, respectively, are included in the three- and six-month periods ended June 30, 2008.

AIG's Asset Management operations consist of a single internal reporting unit.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements**

Effective January 1, 2008 AIG adopted FAS 157 and FAS 159, which specify measurement and disclosure standards related to assets and liabilities measured at fair value. See Note 1 to the Consolidated Financial Statements for additional information.

The most significant effect of adopting FAS 157 on AIG's results of operations for the three- and six-month periods ended June 30, 2008 related to changes in fair value

methodologies with respect to both liabilities already carried at fair value, primarily hybrid notes and derivatives, and newly elected liabilities measured at fair value (see FAS 159 discussion below). Specifically, the incorporation of AIG's own credit spreads and the incorporation of explicit risk margins (embedded policy derivatives at transition only) resulted in a decrease of \$149 million to pre-tax income (\$97 million after tax) and an increase of \$2.6 billion to pre-tax income (\$1.7 billion after tax) for the three- and six-month periods ended June 30, 2008, respectively, as follows:

(in millions)	Net Pre-Tax Increase (Decrease)		Liabilities Carried at Fair Value	Business Segment Affected
	Three Months Ended June 30, 2008	Six Months Ended June 30, 2008		
Income statement caption:				
Net realized capital gains (losses)	\$ (37)	\$ 251	Freestanding derivatives	All segments - excluding AIGFP
	—	(155)	Embedded policy derivatives	Life Insurance & Retirement Services
Unrealized market valuation losses on AIGFP super senior credit default swap portfolio	44*	109*	Super senior credit default swap portfolio	AIGFP
Other income	(156)*	2,427*	Notes, GIAs, derivatives, other liabilities	AIGFP
Net pre-tax increase	\$ (149)	\$2,632		
Liabilities already carried at fair value	\$ 20	\$1,354		
Newly elected liabilities measured at fair value (FAS 159 elected)	(169)	1,278		
Net pre-tax increase	\$ (149)	\$2,632		

* The effect of changes in AIG's own credit spreads on pre-tax income for AIGFP was a decrease of \$112 million and an increase of \$2.5 billion for the three- and six-month periods ended June 30, 2008, respectively. The effect of the changes in counterparty credit spreads for assets measured at fair value at AIGFP was decreases in pre-tax income of \$362 million and \$3.0 billion for the three- and six-month periods ended June 30, 2008, respectively.

Fair Value Measurements on a Recurring Basis

AIG measures at fair value on a recurring basis financial instruments in its trading and available for sale securities portfolios, certain mortgage and other loans receivable, certain spot commodities, derivative assets and liabilities, securities purchased (sold) under agreements to resell (repurchase), securities lending invested collateral, non-traded equity investments and certain private limited partnership and certain hedge funds included in other invested assets, certain short-term investments, separate and variable account assets, certain policyholders' contract deposits, securities and spot commodities sold but not yet purchased, certain trust deposits and deposits due to banks and other depositors, certain long-term borrowings, and certain hybrid financial instruments included in other liabilities. The fair value of a financial instrument is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The degree of judgment used in measuring the fair value of financial instruments generally correlates with the level of pricing observability. Financial instruments with quoted prices in active markets generally have more pricing observability and less judgment is used in measuring fair value. Conversely, financial instruments traded in other-than-active markets or that do not have quoted prices have less observability and are measured at fair value using valuation models or other pricing techniques that require more judgment. Pricing observability is affected by a number of factors,

including the type of financial instrument, whether the financial instrument is new to the market and not yet established, the characteristics specific to the transaction and general market conditions.

Fixed Maturity Securities — Trading and Available for Sale

AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. Whenever available, AIG obtains quoted prices in active markets for identical assets at the balance sheet date to measure at fair value fixed maturity securities in its trading and available for sale portfolios. Market price data generally is obtained from exchange or dealer markets.

AIG estimates the fair value of fixed maturity securities not traded in active markets, including securities purchased (sold) under agreements to resell (repurchase), and mortgage and other loans receivable for which AIG elected the fair value option, by referring to traded securities with similar attributes, using dealer quotations, a matrix pricing methodology, discounted cash flow analyses or internal valuation models. This methodology considers such factors as the issuer's industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, yield curves, credit curves, prepayment rates and other relevant factors. For fixed maturity instruments that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability, and such adjustments generally are based on avail-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***3. Fair Value Measurements** *(continued)*

able market evidence. In the absence of such evidence, management's best estimate is used.

Equity Securities Traded in Active Markets — Trading and Available for Sale

AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. Whenever available, AIG obtains quoted prices in active markets for identical assets at the balance sheet date to measure at fair value marketable equity securities in its trading and available for sale portfolios. Market price data generally is obtained from exchange or dealer markets.

Non-Traded Equity Investments — Other Invested Assets

AIG initially estimates the fair value of equity instruments not traded in active markets by reference to the transaction price. This valuation is adjusted only when changes to inputs and assumptions are corroborated by evidence such as transactions in similar instruments, completed or pending third-party transactions in the underlying investment or comparable entities, subsequent rounds of financing, recapitalizations and other transactions across the capital structure, offerings in the equity capital markets, and changes in financial ratios or cash flows. For equity securities that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability and such adjustments generally are based on available market evidence. In the absence of such evidence, management's best estimate is used.

Private Limited Partnership and Hedge Fund Investments — Other Invested Assets

AIG initially estimates the fair value of investments in certain private limited partnerships and certain hedge funds by reference to the transaction price. Subsequently, AIG obtains the fair value of these investments generally from net asset value information provided by the general partner or manager of the investments, the financial statements of which generally are audited annually.

Separate and Variable Account Assets

Separate and variable account assets are composed primarily of registered and unregistered open-end mutual funds that generally trade daily and are measured at fair value in the manner discussed above for equity securities traded in active markets.

Freestanding Derivatives

Derivative assets and liabilities can be exchange-traded or traded over the counter (OTC). AIG generally values exchange-traded derivatives using quoted prices in active markets for identical derivatives at the balance sheet date.

OTC derivatives are valued using market transactions and other market evidence whenever possible, including market-based inputs to models, model calibration to market clearing transactions, broker or dealer quotations or alternative pricing sources with reasonable levels of price transparency. When models are used, the selection of a particular model to value an OTC derivative depends on the contractual terms of, and specific risks inherent in, the instrument as well as the availability of pricing information in the market. AIG generally uses similar models to value similar instruments. Valuation models require a variety of inputs, including contractual terms, market prices and rates, yield curves, credit curves, measures of volatility, prepayment rates and correlations of such inputs. For OTC derivatives that trade in liquid markets, such as generic forwards, swaps and options, model inputs can generally be corroborated by observable market data by correlation or other means, and model selection does not involve significant management judgment.

Certain OTC derivatives trade in less liquid markets with limited pricing information, and the determination of fair value for these derivatives is inherently more difficult. When AIG does not have corroborating market evidence to support significant model inputs and cannot verify the model to market transactions, the transaction price is initially used as the best estimate of fair value. Accordingly, when a pricing model is used to value such an instrument, the model is adjusted so the model value at inception equals the transaction price. Subsequent to initial recognition, AIG updates valuation inputs when corroborated by evidence such as similar market transactions, third-party pricing services and/or broker or dealer quotations, or other empirical market data. When appropriate, valuations are adjusted for various factors such as liquidity, bid/offer spreads and credit considerations. Such adjustments are generally based on available market evidence. In the absence of such evidence, management's best estimate is used.

With the adoption of FAS 157 on January 1, 2008, AIG's own credit risk has been considered and is incorporated into the fair value measurement of all freestanding derivative liabilities.

Embedded Policy Derivatives

The fair value of embedded policy derivatives contained in certain variable annuity and equity-indexed annuity and life contracts is measured based on actuarial and capital market assumptions related to projected cash flows over the expected lives of the contracts. These cash flow estimates primarily include benefits and related fees assessed, when applicable, and incorporate expectations about policyholder behavior. Estimates of future policyholder behavior are subjective and based primarily on AIG's historical experience. With respect to embedded policy derivatives in AIG's variable annuity contracts, because of the dynamic and complex nature of the

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***3. Fair Value Measurements** *(continued)*

expected cash flows, risk neutral valuations are used. Estimating the underlying cash flows for these products involves many estimates and judgments, including those regarding expected market rates of return, market volatility, correlations of market index returns to funds, fund performance, discount rates and policyholder behavior. With respect to embedded policy derivatives in AIG's equity-indexed annuity and life contracts, option pricing models are used to estimate fair value, taking into account assumptions for future equity index growth rates, volatility of the equity index, future interest rates, and determinations on adjusting the participation rate and the cap on equity indexed credited rates in light of market conditions and policyholder behavior assumptions. With the adoption of FAS 157, these methodologies were not changed, with the exception of incorporating an explicit risk margin to take into consideration market participant estimates of projected cash flows and policyholder behavior.

AIGFP's Super Senior Credit Default Swap Portfolio

AIGFP values its credit default swaps written on the most senior risk layers (super senior) of designated pools of debt securities or loans using internal valuation models, third-party prices and market indices. The specific valuation methodologies vary based on the nature of the referenced obligations and availability of market prices. AIGFP uses a modified version of the Binomial Expansion Technique (BET) model to value its credit default swap portfolio written on super senior tranches of collateralized debt obligations (CDOs) of asset-backed securities (ABS), including maturity-shortening puts that allow the holders of the securities issued by certain CDOs to treat the securities as short-term eligible 2a-7 investments under the Investment Company Act of 1940 (2a-7 Puts). The BET model uses default probabilities derived from credit spreads implied from prices for the individual securities included in the underlying collateral pools securing the CDOs, as well as diversity scores, weighted average lives, recovery rates and discount rates. Prices for the individual securities held by a CDO are obtained in most cases from the CDO collateral managers, to the extent available. The CDO collateral managers obtain these prices from various sources, which include dealer quotations, third party pricing services and in-house valuation models. To the extent there is a lag in the prices provided by the collateral managers, AIGFP rolls forward these prices to the end of the quarter using data provided by a third-party pricing service. Where a price for an individual security is not provided by the CDO collateral manager, AIGFP derives the price from a matrix that averages the prices of the various securities at the level of ABS category, vintage and the rating of the reference security. The determination of some of these inputs requires the use of judgment and estimates, particularly in the absence of market observable data. AIGFP also employs a Monte Carlo simula-

tion to assist in quantifying the effect on the valuation of the CDOs of the unique aspects of the CDOs' structures such as triggers that divert cash flows to the most senior part of the capital structure. In the determination of fair value, AIGFP also considers prices from collateral calls by counterparties to these transactions and the price estimates for the super senior CDO securities provided by third parties.

In the case of credit default swaps written on investment-grade corporate debt and collateralized loan obligations (CLOs), AIGFP estimates the value of its obligations by reference to the relevant market indices or third-party quotes on the underlying super senior tranches when available.

In the case of credit default swaps written to facilitate regulatory capital relief for AIGFP's European financial institution counterparties, AIGFP estimates the fair value of these derivatives by considering observable market transactions, including the early termination of these transactions by counterparties, and other market data, to the extent relevant.

Policyholders' Contract Deposits

Policyholders' contract deposits accounted for at fair value beginning January 1, 2008 are measured using an income approach by taking into consideration the following factors:

- Current policyholder account values and related surrender charges,
- The present value of estimated future cash inflows (policy fees) and outflows (benefits and maintenance expenses) associated with the product using risk neutral valuations, incorporating expectations about policyholder behavior, market returns and other factors, and
- A risk margin that market participants would require for a market return and the uncertainty inherent in the model inputs.

The change in fair value of these policyholders' contract deposits is recorded as incurred policy losses and benefits in the consolidated statement of income (loss).

Fair Value Measurements on a Non-Recurring Basis

AIG also measures the fair value of certain assets on a non-recurring basis, generally quarterly, annually, or when events or changes in circumstances indicate that the carrying amount of the asset may not be recoverable. These assets include held to maturity securities, cost and equity-method investments, life settlement contracts, flight equipment, collateral securing foreclosed loans and real estate and other fixed assets, goodwill, and other intangible assets. AIG uses a variety of techniques to measure the fair value of these assets when appropriate, as described below:

- *Held to Maturity Securities, Cost and Equity-Method Investments:* When AIG determines the carrying value of these assets may not be recoverable, AIG records the assets

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)

at fair value with the loss recognized in income. In such cases, AIG measures the fair value of these assets using the techniques discussed above for fixed maturities and equity securities.

- **Life Settlement Contracts:** AIG measures the fair value of individual life settlement contracts (which are included in other invested assets) whenever the carrying value plus the undiscounted future costs that are expected to be incurred to keep the life settlement contract in force exceed the expected proceeds from the contract. In those situations, the fair value is determined on a discounted cash flows basis, incorporating current life expectancy assumptions. The discount rate incorporates current information about market interest rates, the credit exposure to the insurance company that issued the life settlement contract and AIG's estimate of the risk margin an investor in the contracts would require.
- **Flight Equipment Primarily Under Operating Leases:** When AIG determines the carrying value of its commercial aircraft may not be recoverable, AIG records the aircraft at fair value with the loss recognized in income. AIG measures the fair value of its commercial aircraft using an income approach based on the present value of all cash flows from existing and projected lease payments (based on historical experience and current expectations of market participants) including net contingent rentals for the period extending to the end of the aircraft's economic life in its highest and best use configuration, plus its disposition value.
- **Collateral Securing Foreclosed Loans and Real Estate and Other Fixed Assets:** When AIG takes collateral in connection with foreclosed loans, AIG generally bases its estimate of fair value on the price that would be received in a current transaction to sell the asset by itself.
- **Goodwill:** AIG tests goodwill for impairment whenever events or changes in circumstances indicate the carrying amount of goodwill may not be recoverable, but at least annually. When AIG determines goodwill may be impaired, AIG uses techniques that consider market-based earnings multiples of the unit's peer companies or discounted cash flow techniques based on the price that could be received in a current transaction to sell the asset assuming the asset would be used with other assets as a group (in-use premise).
- **Intangible Assets:** AIG tests its intangible assets for impairment whenever events or changes in circumstances indicate the carrying amount of an intangible asset may not be recoverable. AIG measures the fair value of intangible assets based on an in-use premise that considers the same

factors used to estimate the fair value of its real estate and other fixed assets under an in-use premise discussed above.

See Notes 1(c), (d), (e), (t), and (v) to Consolidated Financial Statements included in the 2007 Annual Report on Form 10-K for additional information about how AIG tests various asset classes for impairment.

Fair Value Hierarchy

Beginning January 1, 2008, assets and liabilities recorded at fair value in the consolidated balance sheet are measured and classified in a hierarchy for disclosure purposes consisting of three "levels" based on the observability of inputs available in the marketplace used to measure the fair values as discussed below:

- **Level 1:** Fair value measurements that are quoted prices (unadjusted) in active markets that AIG has the ability to access for identical assets or liabilities. Market price data generally is obtained from exchange or dealer markets. AIG does not adjust the quoted price for such instruments. Assets and liabilities measured at fair value on a recurring basis and classified as Level 1 include certain government and agency securities, actively traded listed common stocks and derivative contracts, most separate account assets and most mutual funds.
- **Level 2:** Fair value measurements based on inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly or indirectly. Level 2 inputs include quoted prices for similar assets and liabilities in active markets, and inputs other than quoted prices that are observable for the asset or liability, such as interest rates and yield curves that are observable at commonly quoted intervals. Assets and liabilities measured at fair value on a recurring basis and classified as Level 2 generally include certain government securities, most investment-grade and high-yield corporate bonds, certain asset-backed securities, certain listed equities, state, municipal and provincial obligations, hybrid securities, mutual fund and hedge fund investments, derivative contracts, guaranteed investment agreements at AIGFP and physical commodities.
- **Level 3:** Fair value measurements based on valuation techniques that use significant inputs that are unobservable. These measurements include circumstances in which there is little, if any, market activity for the asset or liability. In certain cases, the inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, the level in the fair value hierarchy within which the fair value measurement in its entirety falls is determined based on the lowest level input that is significant to the fair value measurement in its entirety. AIG's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment. In

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)

making the assessment, AIG considers factors specific to the asset or liability. Assets and liabilities measured at fair value on a recurring basis and classified as Level 3 include certain distressed ABS, structured credit products, certain derivative contracts (including AIGFP's super senior credit

default swap portfolio), policyholders' contract deposits carried at fair value, private equity and real estate fund investments, and direct private equity investments. AIG's non-financial-instrument assets that are measured at fair value on a non-recurring basis generally are classified as Level 3.

Assets and Liabilities Measured at Fair Value on a Recurring Basis

The following table presents information about assets and liabilities measured at fair value on a recurring basis at June 30, 2008, and indicates the level of the fair value measurement based on the levels of the inputs used:

<i>(in millions)</i>	Level 1	Level 2	Level 3	Counterparty Netting	Total June 30, 2008
Assets:					
Bonds available for sale	\$ 3,986	\$370,850	\$18,480	\$ -	\$393,316
Bond trading securities	1	8,605	195	-	8,801
Common stocks available for sale	16,812	267	227	-	17,306
Common and preferred stocks trading	21,510	999	5	-	22,514
Preferred stocks available for sale	-	2,238	258	-	2,496
Mortgage and other loans receivable	-	741	4	-	745
Financial Services assets:					
Securities available for sale	2	831	372	-	1,205
Trading securities	1,276	30,214	3,680	-	35,170
Spot commodities	-	90	-	-	90
Unrealized gain on swaps, options and forward transactions	-	59,493	3,625	(51,570)	11,548
Securities purchased under agreements to resell	-	16,597	-	-	16,597
Securities lending invested collateral ^(a)	-	40,595	8,489	-	49,084
Other invested assets ^(b)	2,643	7,588	11,868	-	22,099
Short-term investments ^(c)	39	24,128	-	-	24,167
Separate and variable accounts	69,162	3,061	1,178	-	73,401
Other assets	94	4,611	353	(2,606)	2,452
Total	\$115,525	\$570,908	\$48,734	\$(54,176)	\$680,991
Liabilities:					
Policyholders' contract deposits	\$ -	\$ -	\$ 4,179	\$ -	\$ 4,179
Other policyholders' funds	2	-	-	-	2
Financial Services liabilities:					
Securities sold under agreements to repurchase	-	8,298	40	-	8,338
Securities and spot commodities sold but not yet purchased	94	3,095	-	-	3,189
Unrealized loss on swaps, options and forward transactions ^(d)	-	52,897	30,299	(58,964)	24,232
Trust deposits and deposits due to banks and other depositors	-	240	-	-	240
Long-term borrowings	-	51,150	2,689	-	53,839
Other liabilities	6	7,005	44	(194)	6,861
Total	\$ 102	\$122,685	\$37,251	\$(59,158)	\$100,880

(a) Amounts exclude short-term investments that are carried at cost, which approximates fair value of \$10.4 billion.

(b) Approximately 13 percent of the fair value of the assets recorded as Level 3 relates to various private equity, real estate, hedge fund and fund-of-funds investments. AIG's ownership in these funds represented 22 percent, or \$1.4 billion of the Level 3 amount.

(c) Level 2 includes short-term investments that are carried at cost, which approximates fair value of \$23.1 billion.

(d) Included in Level 3 are unrealized market valuation losses of \$26.1 billion on AIGFP super senior credit default swap portfolio.

At June 30, 2008, Level 3 assets totaled \$48.7 billion, representing 4.7 percent of total assets, and Level 3 liabilities totaled \$37.3 billion, representing 3.8 percent of total liabilities.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)

The following tables present changes during the three- and six-month periods ended June 30, 2008 in Level 3 assets and liabilities measured at fair value on a recurring basis, and the realized and unrealized gains (losses) recorded in income during the three- and six-month periods ended June 30, 2008 related to the Level 3 assets and liabilities that remained on the consolidated balance sheet at June 30, 2008:

<i>(in millions)</i>	Balance Beginning of Period ^(a)	Net Realized and Unrealized Gains (Losses) Included in Income ^(b)	Accumulated Other Comprehensive Income (Loss)	Purchases, Sales, Issuances and Settlements-net	Transfers In (Out)	Balance at June 30, 2008	Changes in Unrealized Gains (Losses) on Instruments Held at June 30, 2008

(a) Certain recharacterizations of amounts previously reported in Level 3 were identified in the second quarter of 2008, and have been adjusted. The effect of these reclassifications and recharacterizations on Level 3 net assets were net decreases of \$1.8 billion and \$1.0 billion at January 1, 2008 and March 31, 2008, respectively. The Consolidated Statement of Income, the Consolidated Balance Sheet, and the Consolidated Statement of Cash Flows presented in the 2008

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)

first quarter Form 10-Q were not affected by these changes. Total Level 3 derivative exposures have been netted on these tables for presentation purposes only.

(b) Net realized and unrealized gains and losses shown above are reported on the consolidated statement of income (loss) primarily as follows:

Major category of Assets /Liabilities	Consolidated Statement of Income (Loss) Line Items
Financial Services assets and liabilities	<ul style="list-style-type: none"> • Other income • Unrealized market valuation losses on AIGFP super senior credit default swap portfolio
Other invested assets	<ul style="list-style-type: none"> • Net realized capital gains (losses)
Policyholders' contract deposits	<ul style="list-style-type: none"> • Incurred policy losses and benefits • Net realized capital gains (losses)

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***3. Fair Value Measurements** *(continued)*

Both observable and unobservable inputs may be used to determine the fair values of positions classified in Level 3 in the tables above. As a result, the unrealized gains (losses) on instruments held at June 30, 2008 may include changes in fair value that were attributable to both observable (e.g., changes in market interest rates) and unobservable inputs (e.g., changes in unobservable long-dated volatilities).

AIG uses various hedging techniques to manage risks associated with certain positions, including those classified within Level 3. Such techniques may include the purchase or sale of financial instruments that are classified within Level 1 and/or Level 2. As a result, the realized and unrealized gains (losses) for assets and liabilities classified within Level 3 presented in the table above do not reflect the related realized or unrealized gains (losses) on hedging instruments that are classified within Level 1 and/or Level 2.

Changes in the fair value of separate and variable account assets are completely offset in the consolidated statement of income (loss) by changes in separate and variable account liabilities, which are not carried at fair value and therefore not included in the foregoing tables.

Fair Value Measured on a Non-Recurring Basis

At June 30, 2008, AIG had assets measured at fair value on a non-recurring basis on which it recorded impairment charges totaling \$107 million during the six-month period ended June 30, 2008. These charges included a \$45 million write-off of goodwill related to the Mortgage Guaranty reporting unit; a \$49 million impairment charge on real estate owned, real estate loans held for sale and other intangible assets for American General Finance, Inc.; and impairment charges on other assets of \$13 million.

Fair Value Option

FAS 159 permits a company to choose to measure at fair value many financial instruments and certain other assets and liabilities that are not required to be measured at fair value. Subsequent changes in fair value for designated items are required to be reported in income. Unrealized gains and losses on financial instruments in AIG's insurance businesses and in AIGFP for which the fair value option was elected under FAS 159 are classified in incurred policy losses and benefits and in other income, respectively, in the consolidated statement of income (loss).

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)

The following table presents the gains or losses recorded during the three- and six-month periods ended June 30, 2008 related to the eligible instruments for which AIG elected the fair value option and the related transition adjustment recorded as a decrease to opening shareholders' equity at January 1, 2008^(a):

<i>(in millions)</i>	January 1, 2008 prior to Adoption	Transition Adjustment upon Adoption	January 1, 2008 after Adoption	Gain (Loss) Three Months Ended June 30, 2008	Gain (Loss) Six Months Ended June 30, 2008
Mortgage and other loans receivable	\$ 1,109	\$ —	\$ 1,109	\$ 11	\$ 79
Financial Services assets ^(b) :					
Trading securities (formerly available for sale)	39,278	5	39,283	(718)	(1,151)
Securities purchased under agreements to resell	20,950	1	20,951	307	575
Other invested assets	321	(1)	320	2	12
Short-term investments	6,969	—	6,969	43	67
Deferred policy acquisition costs	1,147	(1,147)	—	—	—
Other assets	435	(435)	—	—	—
Future policy benefits for life, accident and health insurance contracts	299	299	—	—	—
Policyholders' contract deposits ^(c)	3,739	360	3,379	3	118
Financial Services liabilities ^(b) :					
Securities sold under agreements to repurchase	6,750	(10)	6,760	(120)	(416)
Securities and spot commodities sold but not yet purchased	3,797	(10)	3,807	(34)	(13)
Trust deposits and deposits due to banks and other depositors	216	(25)	241	4	(11)
Long-term borrowings	57,968	(675)	58,643	582	(391)
Other liabilities	1,792	—	1,792	(286)	(319)
Total gain (loss) for the three- and six-month periods ended June 30, 2008				\$(206)	\$(1,450)
Pre-tax cumulative effect of adopting the fair value option		(1,638)			
Decrease in deferred tax liabilities		526			
Cumulative effect of adopting the fair value option		\$(1,112)			

(a) Certain of AIG's financial instruments are required to be accounted for at fair value, with changes in fair value included in earnings, under FAS 115, "Accounting for Certain Investments in Debt and Equity Securities," or FAS 133 and are not included in the table above.

(b) AIGFP elected to apply the fair value option to all eligible assets and liabilities (other than equity method investments, trade receivables and trade payables) because electing the fair value option will allow AIGFP to more closely align its earnings with the economics of its transactions by recognizing concurrently through earnings the change in fair value of its derivatives and the offsetting change in fair value of the assets and liabilities being hedged as well as the manner in which the business is evaluated by management. Substantially all of the gain (loss) amounts shown above are reported in other income on the consolidated statement of income (loss).

(c) AIG elected to apply the fair value option to certain single premium variable life products in Japan and an investment-linked life insurance product sold principally in Asia, both classified within policyholders' contract deposits in the consolidated balance sheet. AIG elected the fair value option for these liabilities to more closely align its accounting with the economics of its transactions. For the investment-linked product sold principally in Asia, the election will more effectively align changes in the fair value of assets with a commensurate change in the fair value of policyholders' liabilities. For the single premium life products in Japan, the fair value option election will allow AIG to economically hedge the inherent market risks associated with this business in an efficient and effective manner through the use of derivative instruments. The hedging program, which was initiated in the second quarter of 2008, results in an accounting presentation for this business that more closely reflects the underlying economics and the way the business is managed, with the change in the fair value of derivatives and underlying assets largely offsetting the change in fair value of the policy liabilities. AIG did not elect the fair value option for other liabilities classified in policyholders' contract deposits because other contracts do not share the same contract features that created the disparity between the accounting presentation and the economic performance.

Interest income and expense and dividend income on assets and liabilities elected under the fair value option are recognized and classified in the consolidated statement of income (loss) depending on the nature of the instrument and related market conventions. At AIGFP, interest and dividends and interest expense are included in other income. Otherwise, interest and dividends are included in net investment income in the consolidated statement of income (loss). See Note 1(a) to the Consolidated Financial Statements included in the 2007 Annual Report on Form 10-K for additional informa-

tion about AIG's policies for recognition, measurement, and disclosure of interest and dividend income and interest expense.

During the three- and six-month periods ended June 30, 2008, AIG recognized a loss of \$169 million and a gain of \$1.3 billion, respectively, attributable to the observable effect of changes in credit spreads on AIG's own liabilities for which the fair value option was elected. AIG calculates the effect of these credit spread changes using discounted cash flow techniques that incorporate current market interest rates, AIG's ob-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)

servable credit spreads on these liabilities and other factors that mitigate the risk of nonperformance such as collateral posted.

The following table presents the difference between fair values and the aggregate contractual principal amounts of mortgage and other loans receivable and long-term borrowings, for which the fair value option was elected:

<i>(in millions)</i>	Fair Value at June 30, 2008	Principal Amount Due Upon Maturity	Difference
Assets:			
Mortgage and other loans receivable	\$ 745	\$ 716	\$ 29
Liabilities:			
Long-term borrowings	\$48,176	\$47,168	\$1,008

At June 30, 2008, there were no mortgage and other loans receivable for which the fair value option was elected, that were 90 days or more past due and in non-accrual status.

**4. Shareholders' Equity and Earnings
(Loss) Per Share****Shareholders' Equity**

From time to time, AIG may buy shares of its common stock for general corporate purposes, including to satisfy its obligations under various share-based employee compensation plans. In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the purchase of shares with an aggregate purchase price of \$8 billion. In November 2007, AIG's Board of Directors authorized the purchase of an additional \$8 billion in common stock. In 2007, AIG entered into structured share repurchase arrangements providing for the purchase of shares over time with an aggregate purchase price of \$7 billion.

A total of 37,926,059 shares were purchased during the first six months of 2008 to meet commitments that existed at December 31, 2007. At August 5, 2008, \$9 billion was available for purchases under the aggregate authorization. AIG does not expect to purchase additional shares under its share repurchase program for the foreseeable future.

The quarterly dividend per common share declared in May 2008 and payable on September 19, 2008 is \$0.22.

In May 2008, AIG sold 196,710,525 shares of common stock at a price per share of \$38 for gross proceeds of \$7.47 billion and 78,400,000 equity units at a price per unit of \$75 for gross proceeds of \$5.88 billion. The equity units, the key terms of which are summarized below, are recorded as long-term borrowings on the consolidated balance sheet.

Equity Units

Each equity unit has an initial stated amount of \$75 and consists of a stock purchase contract issued by AIG and, initially, a 1/40th or 2.5 percent undivided beneficial ownership interest in three series of junior subordinated debentures (Series B-1, B-2 and B-3), each with a principal amount of \$1,000.

Each stock purchase contract requires its holder to purchase, and requires AIG to sell, a variable number of shares of AIG common stock for \$25 in cash on each of the following dates: February 15, 2011, May 1, 2011 and August 1, 2011. The number of shares that AIG is obligated to deliver on each stock purchase date is set forth in the chart below (where the "applicable market value" is an average of the trading prices of AIG's common stock over the 20-trading-day period ending on the third business day prior to the relevant stock purchase date).

If the applicable market value is:	then AIG is obligated to issue:
• Greater than or equal to \$45.60	• 0.54823 shares per stock purchase contract
• Between \$45.60 and \$38.00	• Shares equal to \$25 divided by the applicable market value
• Less than or equal to \$38.00	• 0.6579 shares per stock purchase contract

Basic earnings (loss) per share (EPS) will not be affected by outstanding stock purchase contracts. Diluted EPS will be determined considering the potential dilution from outstanding stock purchase contracts using the treasury stock method, and therefore diluted EPS will not be affected by outstanding stock purchase contracts until the applicable market value exceeds \$45.60.

AIG is obligated to pay quarterly contract adjustment payments to the holders of the stock purchase contracts, at an initial annual rate of 2.7067 percent applied to the stated amount. The present value of the contract adjustment payments, \$431 million, was recognized at inception as a liability (a component of other liabilities), and was recorded as a reduction to additional paid-in capital.

In addition to the stock purchase contracts, as part of the equity units, AIG issued \$1.96 billion of each of the Series B-1, B-2 and B-3 junior subordinated debentures, which initially pay interest at rates of 5.67 percent, 5.82 percent and 5.89 percent, respectively. For accounting purposes, AIG allocated the proceeds of the equity units between the stock purchase contracts and the junior subordinated debentures on a relative fair value basis. AIG determined that the fair value of the stock purchase contract at issuance was zero, and therefore all of the proceeds were allocated to the junior subordinated debentures.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**4. Shareholders' Equity and Earnings (Loss) Per Share** (continued)**Share-based Employee Compensation Plans**

During the first quarter of 2008, AIG reviewed the vesting schedules of its share-based employee compensation plans, and on March 11, 2008, AIG's management and the Compensation and Management Resources Committee of AIG's Board of Directors determined that, to fulfill the objective of attracting and retaining high quality personnel, the vesting schedules of certain awards outstanding under these plans and all awards made in the future under these plans should be shortened.

For accounting purposes, a modification of the terms or conditions of an equity award is treated as an exchange of the original award for a new award. As a result of this modification, the incremental compensation cost related to the affected awards totaled \$24 million and will, together with the unamortized originally-measured compensation cost, be

amortized over shorter periods. AIG estimates the modifications will increase the amortization of this cost by \$106 million and \$46 million in 2008 and 2009, respectively, with a related reduction in amortization expense of \$128 million in 2010 through 2013.

In the second quarter of 2008, reversals of previously accrued costs related to certain performance-based compensation plans were made, as performance to date is below the performance thresholds set forth in those plans.

Earnings (Loss) Per Share (EPS)

Basic EPS is based on the weighted average number of common shares outstanding, adjusted to reflect all stock dividends and stock splits. Diluted EPS is based on those shares used in basic EPS plus shares that would have been outstanding assuming issuance of common shares for all dilutive potential common shares outstanding, adjusted to reflect all stock dividends and stock splits.

The computation of basic and diluted EPS was as follows:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2008	2007	2008	2007
<i>(in millions, except per share data)</i>				
Numerator for EPS:				
Net income (loss)	\$ (5,357)	\$4,277	\$ (13,162)	\$8,407
Denominator for EPS:				
Weighted average shares outstanding used in the computation of EPS:				
Common stock issued	2,850	2,751	2,808	2,751
Common stock in treasury	(258)	(161)	(247)	(156)
Deferred shares	13	12	14	12
Weighted average shares outstanding – basic	2,605	2,602	2,575	2,607
Incremental shares arising from awards outstanding under share-based employee compensation plans*	—	11	—	14
Weighted average shares outstanding – diluted*	2,605	2,613	2,575	2,621
EPS:				
Basic	\$ (2.06)	\$ 1.64	\$ (5.11)	\$ 3.22
Diluted	\$ (2.06)	\$ 1.64	\$ (5.11)	\$ 3.21

* Calculated using the treasury stock method. Certain potential common shares arising from share-based employee compensation plans were not included in the computation of diluted EPS because the effect would have been antidilutive. The number of potential shares excluded was 7 million for the six-month period ended 2007.

5. Ownership

According to the Schedule 13D filed on March 20, 2007 by C.V. Starr & Co., Inc. (Starr), Starr International Company, Inc. (SICO), Edward E. Matthews, Maurice R. Greenberg, the Maurice R. and Corinne P. Greenberg Family Foundation, Inc., the Universal Foundation, Inc., the Maurice R. and Corinne P. Greenberg Joint Tenancy Company, LLC and the C.V. Starr & Co., Inc. Trust, these reporting persons could be considered to beneficially own 354,987,261 shares of AIG's common stock at that date. Based on the shares of AIG's common stock outstanding at July 31, 2008, this ownership would represent approximately 13 percent of the voting stock of AIG. Although these reporting persons have made filings under Section 16 of the Exchange Act, reporting sales of shares of common stock, no amendment to the Schedule 13D

has been filed to report a change in ownership subsequent to March 20, 2007.

6. Commitments, Contingencies and Guarantees*(a) Litigation and Investigations*

AIG and its subsidiaries, in common with the insurance and financial services industries in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. At the current time, AIG cannot predict the outcome of the matters described below, or estimate any potential additional costs related to these matters, unless otherwise indicated. In AIG's insurance operations, litigation arising from claims settlement activities is generally considered in the establishment of AIG's reserve for losses

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

and loss expenses. However, the potential for increasing jury awards and settlements makes it difficult to assess the ultimate outcome of such litigation.

Various federal, state and foreign regulatory and governmental agencies are reviewing certain public disclosures, transactions and practices of AIG and its subsidiaries in connection with industry wide and other inquiries. These reviews include the inquiries by the SEC and U.S. Department of Justice (DOJ), previously confirmed by AIG, with respect to AIG's valuation of and disclosures relating to the AIGFP super senior credit default swap portfolio. AIG has cooperated, and will continue to cooperate, in producing documents and other information in response to subpoenas and other requests. In connection with some of the SEC investigations, AIG understands that some of its employees have received Wells notices and it is possible that additional current and former employees could receive similar notices in the future. Under SEC procedures, a Wells notice is an indication that the SEC staff has made a preliminary decision to recommend enforcement action that provides recipients with an opportunity to respond to the SEC staff before a formal recommendation is finalized.

In the opinion of AIG management, AIG's ultimate liability for the unresolved litigation and investigation matters referred to below is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

Litigation Relating to AIGFP's Super Senior Credit Default Swap Portfolio

Securities Actions – Southern District of New York. On May 21, 2008, a purported securities fraud class action complaint was filed against AIG and certain of its current and former officers and directors in the United States District Court for the Southern District of New York (the Southern District of New York). The complaint alleges that defendants made statements during the period May 11, 2007 through May 9, 2008 in press releases, the Company's quarterly and year-end filings and during conference calls with analysts which were materially false and misleading and which artificially inflated the price of the Company's stock. The alleged false and misleading statements relate to, among other things, unrealized market valuation losses on AIGFP's super senior credit default swap portfolio as a result of severe credit market disruption. The complaint alleges claims under Sections 10(b) and 20(a) of the Exchange Act. Three additional purported securities class action complaints were subsequently filed in the Southern District of New York, all containing similar allegations. One of the additional complaints filed on June 19, 2008, alleges a purported class period of

November 10, 2006 through June 6, 2008. The Court has not yet appointed a lead plaintiff in these actions.

ERISA Actions – Southern District of New York. On June 25, 2008, the Company, certain of its executive officers and directors, and unnamed members of the Company's Retirement Board and Investment Committee were named as defendants in two nearly identical separate actions filed in the Southern District of New York. The actions purport to be brought as class actions on behalf of all participants in or beneficiaries of certain pension plans sponsored by AIG or its subsidiaries (the Plans) during the period May 11, 2007 to June 25, 2008 and whose participant accounts included investments in the Company's common stock. Plaintiffs allege, among other things, that the defendants breached their fiduciary responsibilities to Plan participants and their beneficiaries under the Employee Retirement Income Security Act of 1974, as amended (ERISA), by: (i) failing to prudently and loyally manage the Plans and the Plans' assets; (ii) failing to provide complete and accurate information to participants and beneficiaries about the Company and the value of the Company's stock; (iii) failing to monitor appointed Plan fiduciaries and to provide them with complete and accurate information; and (iv) breach of the duty to avoid conflicts of interest. The alleged ERISA violations relate to, among other things, the defendants' purported failure to monitor and/or disclose unrealized market valuation losses on AIGFP's super senior credit default swap portfolio as a result of severe credit market disruption. Three additional purported ERISA class action complaints were subsequently filed in the Southern District of New York, both containing similar allegations. It is anticipated that these actions will all be consolidated and that the Court will then appoint a lead plaintiff in the consolidated action.

Derivative Actions – Southern District of New York. On November 20, 2007, two purported shareholder derivative actions were filed in the Southern District of New York naming as defendants the then current directors of AIG and certain senior officers of AIG and its subsidiaries. Plaintiffs assert claims for breach of fiduciary duty, waste of corporate assets and unjust enrichment, as well as violations of Section 10(b) of the Exchange Act and Rule 10b-5 promulgated thereunder, and Section 20(a) of the Exchange Act, among other things, in connection with AIG's public disclosures regarding its exposure to what the lawsuits describe as the subprime market crisis. The actions were consolidated as In re American International Group, Inc. 2007 Derivative Litigation (the 2007 Derivative Litigation). On February 15, 2008, plaintiffs filed a consolidated amended complaint alleging the same causes of action. On April 15, 2008, motions to dismiss the action were filed on behalf of all defendants.

On June 9, 2008, a purported shareholder derivative action was filed in the Southern District of New York assert-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***6. Commitments, Contingencies and Guarantees** *(continued)*

ing claims on behalf of AIG based generally on the same allegations as in the consolidated amended complaint in the 2007 Derivative Litigation. On June 10, 2008, the clerk of the court was informed that the action should be consolidated with the 2007 Derivative Litigation.

Derivative Action – Supreme Court of New York. On February 29, 2008, a purported shareholder derivative complaint was filed in the Supreme Court of Nassau County, asserting the same state law claims against the same defendants as in the consolidated amended complaint in the 2007 Derivative Litigation. On May 19, 2008, defendants filed a motion to dismiss or to stay the proceedings in light of the pending 2007 Derivative Litigation.

Action by the Starr Foundation – Supreme Court of New York. On May 7, 2008, the Starr Foundation filed a complaint in New York State Supreme Court against AIG, AIG's former Chief Executive Officer, Martin Sullivan, and AIG's Chief Financial Officer, Steven Bensinger, asserting a claim for common law fraud. The complaint alleges that the defendants made materially misleading statements and omissions concerning alleged multi-billion dollar losses in AIG's portfolio of credit default swaps. The complaint asserts that if the Starr Foundation had known the truth about the alleged losses, it would have sold its remaining shares of AIG stock. The complaint alleges that the Starr Foundation has suffered damages of at least \$300 million. On May 30, 2008, a motion to dismiss the complaint was filed on behalf of defendants.

2006 Regulatory Settlements and Related Matters

2006 Regulatory Settlements. In February 2006, AIG reached a resolution of claims and matters under investigation with the United States Department of Justice (DOJ), the SEC, the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). AIG recorded an after-tax charge of \$1.15 billion relating to these settlements in the fourth quarter of 2005. The settlements resolved investigations conducted by the SEC, NYAG and DOI in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. These settlements did not, however, resolve investigations by regulators from other states into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Nor did the settlements resolve any obligations that AIG may have to state guarantee funds in connection with any of these matters.

As a result of these settlements, AIG made payments or placed amounts in escrow in 2006 totaling approximately \$1.64 billion, \$225 million of which represented fines and penalties. Amounts held in escrow totaling \$334 million, including interest thereon, are included in other assets at June 30, 2008. At that date, all of the funds were escrowed for settlement of claims resulting from the underpayment by AIG of its residual market assessments for workers compensation.

In addition to the escrowed funds, \$800 million was deposited into a fund under the supervision of the SEC as part of the settlements to be available to resolve claims asserted against AIG by investors, including the securities class action shareholder lawsuits described below.

Also, as part of the settlements, AIG agreed to retain, for a period of three years, an independent consultant to conduct a review that will include, among other things, the adequacy of AIG's internal control over financial reporting, the policies, procedures and effectiveness of AIG's regulatory, compliance and legal functions and the remediation plan that AIG has implemented as a result of its own internal review.

Other Regulatory Settlements. AIG's 2006 regulatory settlements with the SEC, DOJ, NYAG and DOI did not resolve investigations by regulators from other states into insurance brokerage practices. AIG entered into agreements effective January 29, 2008 with the Attorneys General of the States of Florida, Hawaii, Maryland, Michigan, Oregon, Texas and West Virginia; the Commonwealths of Massachusetts and Pennsylvania; and the District of Columbia; as well as the Florida Department of Financial Services and the Florida Office of Insurance Regulation, relating to their respective industry wide investigations into producer compensation and insurance placement practices. The settlements call for total payments of \$12.5 million to be allocated among the ten jurisdictions representing restitution to state agencies and reimbursement of the costs of the investigation. During the term of the settlement agreements, AIG will continue to maintain certain producer compensation disclosure and ongoing compliance initiatives. AIG will also continue to cooperate with the industry wide investigations. The agreement with the Texas Attorney General also settles allegations of anticompetitive conduct relating to AIG's relationship with Allied World Assurance Company and includes an additional settlement payment of \$500,000 related thereto.

AIG entered into an agreement effective March 13, 2008 with the Pennsylvania Insurance Department relating to the Department's investigation into the affairs of AIG and certain of its Pennsylvania-domiciled insurance company subsidiaries. The settlement calls for total payments of approximately \$13.5 million, of which approximately \$4.4 million was paid under previous settlement agreements. During the term of the settlement agreement, AIG will provide annual reinsurance

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

reports, as well as maintain certain producer compensation disclosure and ongoing compliance initiatives.

NAIC Examination of Workers Compensation Premium Reporting. During 2006, the Settlement Review Working Group of the National Association of Insurance Commissioners (NAIC), under the direction of the states of Indiana, Minnesota and Rhode Island, began an investigation into the underreporting of workers' compensation premiums. In late 2007, the Settlement Review Working Group recommended that a multi-state targeted market conduct examination focusing on workers' compensation insurance be commenced under the direction of the NAIC's Market Analysis Working Group. AIG was informed of the multi-state targeted market conduct examination in January 2008. AIG has been advised that the lead states in the multi-state examination are Delaware, Florida, Indiana, Massachusetts, Minnesota, New York, Pennsylvania, and Rhode Island and that all other states (and the District of Columbia) have agreed to participate. AIG has also been advised that the examination will focus on both legacy issues and AIG's current compliance with legal requirements applicable to AIG's writing and reporting of workers' compensation insurance, but as of July 31, 2008 no determinations had been made with respect to these issues.

Securities Action – Southern District of New York. Beginning in October 2004, a number of putative securities fraud class action suits were filed in the Southern District of New York against AIG and consolidated as *In re American International Group, Inc. Securities Litigation*. Subsequently, a separate, though similar, securities fraud action was also brought against AIG by certain Florida pension funds. The lead plaintiff in the class action is a group of public retirement systems and pension funds benefiting Ohio state employees, suing on behalf of themselves and all purchasers of AIG's publicly traded securities between October 28, 1999 and April 1, 2005. The named defendants are AIG and a number of present and former AIG officers and directors, as well as Starr, SICO, General Reinsurance Corporation (General Re), and PricewaterhouseCoopers LLP (PwC), among others. The lead plaintiff alleges, among other things, that AIG: (1) concealed that it engaged in anti-competitive conduct through alleged payment of contingent commissions to brokers and participation in illegal bid-rigging; (2) concealed that it used "income smoothing" products and other techniques to inflate its earnings; (3) concealed that it marketed and sold "income smoothing" insurance products to other companies; and (4) misled investors about the scope of government investigations. In addition, the lead plaintiff alleges that AIG's former Chief Executive Officer, Maurice R. Greenberg, manipulated AIG's stock price. The lead plaintiff asserts claims for viola-

tions of Sections 11 and 15 of the Securities Act of 1933, Section 10(b) of the Exchange Act and Rule 10b-5 promulgated thereunder, Section 20(a) of the Exchange Act, and Section 20A of the Exchange Act. In April 2006, the court denied the defendants' motions to dismiss the second amended class action complaint and the Florida complaint. In December 2006, a third amended class action complaint was filed, which does not differ substantially from the prior complaint. Fact and class discovery is currently ongoing. On February 20, 2008, the lead plaintiff filed a motion for class certification. On June 9, 2008, the lead plaintiff filed a motion for leave to amend its complaint to include allegations related to unrealized market valuation losses on AIGFP's super senior credit default swap portfolio. On July 17, 2008, the Court denied lead plaintiffs' motion for leave to amend.

ERISA Action – Southern District of New York. Between November 30, 2004 and July 1, 2005, several ERISA actions were filed in the Southern District of New York on behalf of purported class participants and beneficiaries of three pension plans sponsored by AIG or its subsidiaries. A consolidated complaint filed on September 26, 2005 alleges a class period between September 30, 2000 and May 31, 2005 and names as defendants AIG, the members of AIG's Retirement Board and the Administrative Boards of the plans at issue, and present or former members of AIG's Board of Directors. The factual allegations in the complaint are essentially identical to those in the securities actions described above. The parties have reached an agreement to settle this matter for an amount within AIG's insurance coverage limits. On July 3, 2008, the Court granted preliminary approval of the settlement. The Court has scheduled a hearing on final settlement approval for October 7, 2008.

Derivative Action – Southern District of New York. Between October 25, 2004 and July 14, 2005, seven separate derivative actions were filed in the Southern District of New York, five of which were consolidated into a single action (the New York 2004/2005 Derivative Litigation). The complaint in this action contains nearly the same types of allegations made in the securities fraud action described above. The named defendants include current and former officers and directors of AIG, as well as Marsh & McLennan Companies, Inc. (Marsh), SICO, Starr, ACE Limited and subsidiaries (ACE), General Re, PwC, and certain employees or officers of these entity defendants. Plaintiffs assert claims for breach of fiduciary duty, gross mismanagement, waste of corporate assets, unjust enrichment, insider selling, auditor breach of contract, auditor professional negligence and disgorgement from AIG's former Chief Executive Officer, Maurice R. Greenberg, and former Chief Financial Officer, Howard I. Smith, of incentive-based compensation and AIG share proceeds under Section 304 of the Sarbanes-Oxley Act, among others. Plaintiffs seek, among other things, compensatory damages, corporate governance reforms, and a voiding of the election of

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

certain AIG directors. AIG's Board of Directors has appointed a special committee of independent directors (special committee) to review the matters asserted in the operative consolidated derivative complaint. The court has entered an order staying this action pending resolution of the Delaware 2004/2005 Derivative Litigation discussed below. The court also has entered an order that termination of certain named defendants from the Delaware action applies to this action without further order of the court. On October 17, 2007, plaintiffs and those AIG officer and director defendants against whom the shareholder plaintiffs in the Delaware action are no longer pursuing claims filed a stipulation providing for all claims in this action against such defendants to be dismissed with prejudice. Former directors and officers Maurice R. Greenberg and Howard I. Smith have asked the court to refrain from so ordering this stipulation.

Derivative Actions – Delaware Chancery Court. From October 2004 to April 2005, AIG shareholders filed five derivative complaints in the Delaware Chancery Court. All of these derivative lawsuits were consolidated into a single action as *In re American International Group, Inc. Consolidated Derivative Litigation* (the Delaware 2004/2005 Derivative Litigation). The amended consolidated complaint named 43 defendants (not including nominal defendant AIG) who, as in the New York 2004/2005 Derivative Litigation, were current and former officers and directors of AIG, as well as other entities and certain of their current and former employees and directors. The factual allegations, legal claims and relief sought in this action are similar to those alleged in the New York 2004/2005 Derivative Litigation, except that the claims are only under state law. Earlier in 2007, the court approved an agreement that AIG be realigned as plaintiff, and, on June 13, 2007, acting on the direction of the special committee, AIG filed an amended complaint against former directors and officers Maurice R. Greenberg and Howard I. Smith, alleging breach of fiduciary duty and indemnification. Also on June 13, 2007, the special committee filed a motion to terminate the litigation as to certain defendants, while taking no action as to others. Defendants Greenberg and Smith filed answers to AIG's complaint and brought third-party complaints against certain current and former AIG directors and officers, PwC and Regulatory Insurance Services, Inc. On September 28, 2007, AIG and the shareholder plaintiffs filed a combined amended complaint in which AIG continued to assert claims against defendants Greenberg and Smith and took no position as to the claims asserted by the shareholder plaintiffs in the remainder of the combined amended complaint. In that pleading, the shareholder plaintiffs are no longer pursuing claims against certain AIG officers and directors. On February 12, 2008, the court granted

AIG's motion to stay discovery pending the resolution of claims against AIG in the New York consolidated securities action. The court also directed the parties to coordinate a briefing schedule for the motions to dismiss. On April 11, 2008, the shareholder plaintiffs filed the First Amended Combined Complaint, which added claims against former AIG directors and officers Maurice Greenberg, Edward Matthews, and Thomas Tizzio for breach of fiduciary duty based on alleged bid-rigging in the municipal derivatives market. On April 15, 2008, shareholder plaintiffs submitted a stipulation dismissing former AIG director and officer, Evan Greenberg, without prejudice. On June 13, 2008, certain defendants filed motions to dismiss the shareholder plaintiffs' portions of the complaint.

AIG is also named as a defendant in a derivative action in the Delaware Chancery Court brought by shareholders of Marsh. On July 10, 2008, shareholder plaintiffs filed a second consolidated amended complaint, which contains claims against AIG for aiding and abetting a breach of fiduciary duty and contribution and indemnification in connection with alleged bid-rigging and steering practices in the commercial insurance market.

Policyholder Antitrust and RICO Actions. Commencing in 2004, policyholders brought multiple federal antitrust and Racketeer Influenced and Corrupt Organizations Act (RICO) class actions in jurisdictions across the nation against insurers and brokers, including AIG and a number of its subsidiaries, alleging that the insurers and brokers engaged in a broad conspiracy to allocate customers, steer business, and rig bids. These actions, including 24 complaints filed in different federal courts naming AIG or an AIG subsidiary as a defendant, were consolidated by the judicial panel on multi-district litigation and transferred to the United States District Court for the District of New Jersey for coordinated pretrial proceedings. The consolidated actions have proceeded in that court in two parallel actions, *In re Insurance Brokerage Antitrust Litigation* (the Commercial Complaint) and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the Employee Benefits Complaint, and, together with the Commercial Complaint, the multi-district litigation).

The plaintiffs in the Commercial Complaint are a group of corporations, individuals and public entities that contracted with the broker defendants for the provision of insurance brokerage services for a variety of insurance needs. The broker defendants are alleged to have placed insurance coverage on the plaintiffs' behalf with a number of insurance companies named as defendants, including AIG subsidiaries. The Commercial Complaint also named various brokers and other insurers as defendants (three of which have since settled). The Commercial Complaint alleges, among other things, that defendants engaged in a widespread conspiracy to allocate customers through bid-rigging and steering prac-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

tices. Plaintiffs assert that the defendants violated the Sherman Antitrust Act, RICO, and the antitrust laws of 48 states and the District of Columbia, and are liable under common law breach of fiduciary duty and unjust enrichment theories. Plaintiffs seek treble damages plus interest and attorneys' fees as a result of the alleged RICO and Sherman Antitrust Act violations.

The plaintiffs in the Employee Benefits Complaint are a group of individual employees and corporate and municipal employers alleging claims on behalf of two separate nationwide purported classes: an employee class and an employer class that acquired insurance products from the defendants from August 26, 1994 to the date of any class certification. The Employee Benefits Complaint names AIG, as well as various other brokers and insurers, as defendants. The activities alleged in the Employee Benefits Complaint, with certain exceptions, track the allegations made in the Commercial Complaint.

The Court in connection with the Commercial Complaint granted (without leave to amend) defendants' motions to dismiss the federal antitrust and RICO claims on August 31, 2007 and September 28, 2007, respectively. The court declined to exercise supplemental jurisdiction over the state law claims in the Commercial Complaint and therefore dismissed it in its entirety. On January 14, 2008, the court granted defendants' motion for summary judgment on the ERISA claims in the Employee Benefits Complaint and subsequently dismissed the remaining state law claims without prejudice, thereby dismissing the Employee Benefits Complaint in its entirety. On February 12, 2008, plaintiffs filed a notice of appeal to the United States Court of Appeals for the Third Circuit with respect to the dismissal of the Employee Benefits Complaint. Plaintiffs previously appealed the dismissal of the Commercial Complaint to the United States Court of Appeals for the Third Circuit on October 10, 2007. On July 2, 2008, the Third Circuit stayed all proceedings in both appeals pending resolution in the district court of joint motions for approval of class plaintiffs' settlement with the Marsh defendants. On July 10, 2008, appellants filed a motion to vacate the stay, which was granted on July 30, 2008. On July 31, 2008, the Third Circuit informed the parties that oral argument in both appeals had been tentatively scheduled for April 20, 2009.

A number of complaints making allegations similar to those in the multi-district litigation have been filed against AIG and other defendants in state and federal courts around the country. The defendants have thus far been successful in having the federal actions transferred to the District of New Jersey and consolidated into the multi-district litigation. These additional consolidated actions are still pending in the

District Court, but are currently stayed pending a decision by the court on whether they will proceed during the appeal of the dismissal of the multi-district litigation. The AIG defendants have also sought to have state court actions making similar allegations stayed pending resolution of the multi-district litigation proceeding. These efforts have generally been successful, although plaintiffs in one case pending in Texas state court have moved to re-open discovery; a hearing on that motion was held on April 9, 2008 at which the court deferred ruling on the motion until defendants file their Special Exceptions. AIG has recently settled several of the various federal and state actions alleging claims similar to those in the multi-district litigation, including a state court action pending in Florida in which discovery had been allowed to proceed.

Ohio Attorney General Action – Ohio Court of Common Pleas. On August 24, 2007, the Ohio Attorney General filed a complaint in the Ohio Court of Common Pleas against AIG and a number of its subsidiaries, as well as several other broker and insurer defendants, asserting violation of Ohio's antitrust laws. The complaint, which is similar to the Commercial Complaint, alleges that AIG and the other broker and insurer defendants conspired to allocate customers, divide markets, and restrain competition in commercial lines of casualty insurance sold through the broker defendant. The complaint seeks treble damages on behalf of Ohio public purchasers of commercial casualty insurance, disgorgement on behalf of both public and private purchasers of commercial casualty insurance, as well as a \$500 per day penalty for each day of conspiratorial conduct. AIG, along with other co-defendants, moved to dismiss the complaint on November 16, 2007. On June 30, 2008, the Court denied defendants' motion to dismiss.

Action Relating to Workers Compensation Premium Reporting – Northern District of Illinois. On May 24, 2007, the National Workers Compensation Reinsurance Pool (the NWCRP), on behalf of its participant members, filed a lawsuit in the United States District Court for the Northern District of Illinois against AIG with respect to the underpayment by AIG of its residual market assessments for workers compensation. The complaint alleges claims for violations of RICO, breach of contract, fraud and related state law claims arising out of AIG's alleged underpayment of these assessments between 1970 and the present and seeks damages purportedly in excess of \$1 billion. On August 6, 2007, the court denied AIG's motion seeking to dismiss or stay the complaint or, in the alternative, to transfer to the Southern District of New York. On December 26, 2007, the court denied AIG's motion to dismiss the complaint. On March 17, 2008, AIG filed an amended answer, counterclaims and third-party claims against NCCI (in its capacity as attorney-in-fact for the NWCRP), the NWCRP, its board members, and certain of the other insurance companies that are members of the

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

NWCRP alleging violations of RICO, as well as claims for conspiracy, fraud, and other state law claims. The counterclaim- and third-party defendants filed motions to dismiss on June 9, 2008. The motions are scheduled for decision on November 20, 2008. Discovery is currently ongoing while the motions are pending.

Action Relating to Workers Compensation Premium Reporting – Minnesota. On February 16, 2006, the Attorney General of the State of Minnesota filed a complaint against AIG with respect to claims by the Minnesota Department of Revenue and the Minnesota Special Compensation Fund, alleging that AIG made false statements and reports to Minnesota agencies and regulators, unlawfully reducing AIG's contributions and payments to Minnesota and certain state funds relating to its workers' compensation premiums. While AIG settled that litigation in December 2007, a similar lawsuit was filed by the Minnesota Workers Compensation Reinsurance Association and the Minnesota Workers Compensation Insurers Association in the United States District Court for the District of Minnesota. On March 28, 2008, the court granted AIG's motion to dismiss the case in its entirety. On April 25, 2008, plaintiffs appealed to the United States Court of Appeals for the Eighth Circuit and also filed a new complaint making similar allegations in Minnesota state court. On April 30, 2008, substantially identical claims were also filed in Minnesota state court by the Minnesota Insurance Guaranty Association and Minnesota Assigned Risk Plan.

Action Relating to Workers Compensation Premium Reporting – District of South Carolina. A purported class action was also filed in the United States District Court for the District of South Carolina on January 25, 2008 against AIG and certain of its subsidiaries, on behalf of a class of employers that obtained workers' compensation insurance from AIG companies and allegedly paid inflated premiums as a result of AIG's alleged underreporting of workers' compensation premiums. An amended complaint in the South Carolina action was filed on March 24, 2008, and AIG filed a motion to dismiss the amended complaint on April 21, 2008. On July 8, 2008, the South Carolina court granted AIG's motion to dismiss all claims without prejudice and granted plaintiff leave to refile subject to certain conditions.

Litigation Relating to SICO and Starr

SICO Action. In July, 2005 SICO filed a complaint against AIG in the Southern District of New York, claiming that AIG had refused to provide SICO access to certain artwork, and asking the court to order AIG immediately to release the property to SICO. AIG filed an answer denying SICO's allegations and setting forth defenses to SICO's

claims. In addition, AIG filed counterclaims asserting breach of contract, unjust enrichment, conversion, breach of fiduciary duty, a constructive trust and declaratory judgment, relating to SICO's breach of its commitment to use its AIG shares only for the benefit of AIG and AIG employees. On June 23, 2008, the Court denied in part and granted in part SICO's motion for summary judgment, and on July 31, 2008 the parties submitted a joint pre-trial order.

Derivative Action Relating to Starr and SICO. On December 31, 2002, a derivative lawsuit was filed in the Delaware Chancery Court against twenty directors and executives of AIG as well as against AIG as a nominal defendant that alleges, among other things, that the directors of AIG breached the fiduciary duties of loyalty and care by approving the payment of commissions to insurance managing general agencies owned by Starr and of rental and service fees to SICO and the executives breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and their fiduciary duties by usurping AIG's corporate opportunities. The complaint further alleges that the Starr agencies did not provide any services that AIG was not capable of providing itself, and that the diversion of commissions to these entities was solely for the benefit of Starr's owners. The complaint also alleges that the service fees and rental payments made to SICO and its subsidiaries were improper. Under the terms of a stipulation approved by the court on February 16, 2006, the claims against the outside independent directors were dismissed with prejudice, while the claims against the other directors were dismissed without prejudice. In an opinion dated June 21, 2006, the Court denied defendants' motion to dismiss, except with respect to plaintiff's challenge to payments made to Starr before January 1, 2000. On July 21, 2006, plaintiff filed its second amended complaint, which alleges that, between January 1, 2000 and May 31, 2005, individual defendants breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and breached their fiduciary duties by usurping AIG's corporate opportunity. Starr is charged with aiding and abetting breaches of fiduciary duty and unjust enrichment for its acceptance of the fees. SICO is no longer named as a defendant. On June 27, 2007, Starr filed a cross-claim against AIG, alleging one count that includes contribution, unjust enrichment and setoff. On November 15, 2007, the court granted AIG's motion to dismiss the cross-claim by Starr to the extent that it sought affirmative relief from AIG. On February 14, 2008, the court granted a motion to add former AIG officer Thomas Tizzio as a defendant. As a result, the remaining defendants in the case are AIG (the nominal defendant), Starr and former directors and officers Maurice Greenberg, Howard Smith, Edward Matthews and Thomas Tizzio. Trial is currently scheduled to begin in September 2008.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)**Litigation Matters Relating to AIG's General Insurance Operations**

Caremark. AIG and certain of its subsidiaries have been named defendants in two putative class actions in state court in Alabama that arise out of the 1999 settlement of class and derivative litigation involving Caremark Rx, Inc. (Caremark). The plaintiffs in the second-filed action have intervened in the first-filed action, and the second-filed action has been dismissed. An excess policy issued by a subsidiary of AIG with respect to the 1999 litigation was expressly stated to be without limit of liability. In the current actions, plaintiffs allege that the judge approving the 1999 settlement was misled as to the extent of available insurance coverage and would not have approved the settlement had he known of the existence and/or unlimited nature of the excess policy. They further allege that AIG, its subsidiaries, and Caremark are liable for fraud and suppression for misrepresenting and/or concealing the nature and extent of coverage. In addition, the intervenor-plaintiffs allege that various lawyers and law firms who represented parties in the underlying class and derivative litigation (the Lawyer Defendants) are also liable for fraud and suppression, misrepresentation, and breach of fiduciary duty. The complaints filed by the plaintiffs and the intervenor-plaintiffs request compensatory damages for the 1999 class in the amount of \$3.2 billion, plus punitive damages. AIG and its subsidiaries deny the allegations of fraud and suppression and have asserted that information concerning the excess policy was publicly disclosed months prior to the approval of the settlement. AIG and its subsidiaries further assert that the current claims are barred by the statute of limitations and that plaintiffs' assertions that the statute was tolled cannot stand against the public disclosure of the excess coverage. The plaintiffs and intervenor-plaintiffs, in turn, have asserted that the disclosure was insufficient to inform them of the nature of the coverage and did not start the running of the statute of limitations. On November 26, 2007, the trial court issued an order that dismissed the intervenors' complaint against the Lawyer Defendants and entered a final judgment in favor of the Lawyer Defendants. The intervenors are appealing the dismissal of the Lawyer Defendants and on January 2, 2008, requested a stay of all trial court proceedings pending the appeal. On March 4, 2008, the trial court granted the motion for a stay. No further proceedings at the trial court level will occur until the appeal of the dismissal of the Lawyer Defendants is resolved. AIG cannot reasonably estimate either the likelihood of its prevailing in these actions or the potential damages in the event liability is determined.

Gunderson. A subsidiary of AIG has been named as a defendant in a putative class action lawsuit in the 14th Judicial District Court for the State of Louisiana. The complaint

alleges failure to comply with certain provisions of the Louisiana Any Willing Provider Act relating to discounts taken by defendants on bills submitted by Louisiana medical providers and hospitals that provided treatment or services to workers compensation claimants and seeks monetary penalties and injunctive relief. On January 25, 2008, plaintiffs and the AIG subsidiary agreed to resolve the lawsuit on a class-wide basis for approximately \$29 million. On May 29, 2008, the court entered a Final Order and Judgment, approving the settlement and fully and finally resolving the litigation.

*(b) Commitments***Flight Equipment**

At June 30, 2008, International Lease Finance Corporation (ILFC) had committed to purchase 179 new aircraft deliverable from 2008 through 2019 at an estimated aggregate purchase price of \$17.6 billion. ILFC will be required to find customers for any aircraft acquired, and it must arrange financing for portions of the purchase price of such equipment.

ILFC ordered 74 Boeing 787 aircraft with the first aircraft now scheduled to be delivered in late 2011. Boeing has made several announcements concerning the delays in the deliveries of the 787s. Boeing has informed ILFC that its 787 deliveries will be delayed 19-30 months with an average delay in excess of 27 months per aircraft and span across ILFC's entire order, with the original contracted deliveries running from 2010 through 2017.

Other Commitments

In the normal course of business, AIG enters into commitments to invest in limited partnerships, private equities, hedge funds and mutual funds and to purchase and develop real estate in the U.S. and abroad. These commitments totaled \$8.7 billion at June 30, 2008.

On June 27, 2005, AIG entered into an agreement pursuant to which AIG agreed, subject to certain conditions, to make any payment that is not promptly paid with respect to the benefits accrued by certain employees of AIG and its subsidiaries under the SICO Plans (as discussed below under "Benefits Provided by Starr International Company, Inc. and C.V. Starr & Co., Inc.>").

(c) Contingencies

Loss Reserves. Although AIG regularly reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, directors and officers liability (D&O), professional liability, medical malpractice, workers' compensation, general liability, products liability and related classes, as well as for asbes-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

tos and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss cost trends or loss development factors could be attributable to changes in inflation, in labor and material costs or in the judicial environment, or in other social or economic phenomena affecting claims.

Benefits Provided by Starr International Company, Inc. and C.V. Starr & Co., Inc. SICO has provided a series of two-year Deferred Compensation Profit Participation Plans (SICO Plans) to certain AIG employees. The SICO Plans were created in 1975 when the voting shareholders and Board of Directors of SICO, a private holding company whose principal asset is AIG common stock, decided that a portion of the capital value of SICO should be used to provide an incentive plan for the current and succeeding managements of all American International companies, including AIG.

None of the costs of the various benefits provided under the SICO Plans has been paid by AIG, although AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts considered to be contributed by SICO. The SICO Plans provide that shares currently owned by SICO are set aside by SICO for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled

to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's voluntary termination of employment with AIG prior to normal retirement age. Under the SICO Plans, SICO's Board of Directors may elect to pay a participant cash in lieu of shares of AIG common stock. Following notification from SICO to participants in the SICO Plans that it will settle specific future awards under the SICO Plans with shares rather than cash, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. AIG gave effect to this change in settlement method beginning on December 9, 2005, the date of SICO's notice to participants in the SICO Plans.

(d) Guarantees

AIG and certain of its subsidiaries become parties to derivative financial instruments with market risk resulting from both dealer and end-user activities to reduce currency, interest rate, equity and commodity exposures. These instruments are carried at their fair value in the consolidated balance sheet. The majority of AIG's derivative activity is transacted by AIGFP. See Note 8 to the 2007 Annual Report on Form 10-K.

AIG has issued unconditional guarantees with respect to the prompt payment, when due, of all present and future payment obligations and liabilities of AIGFP arising from transactions entered into by AIGFP.

SAI Deferred Compensation Holdings, Inc., a wholly owned subsidiary of AIG, has established a deferred compensation plan for registered representatives of certain AIG subsidiaries, pursuant to which participants have the opportunity to invest deferred commissions and fees on a notional basis. The value of the deferred compensation fluctuates with the value of the deferred investment alternatives chosen. AIG has provided a full and unconditional guarantee of the obligations of SAI Deferred Compensation Holdings, Inc. to pay the deferred compensation under the plan.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**7. Employee Benefits**

The components of the net periodic benefit cost with respect to pensions and other postretirement benefits were as follows:

(in millions)	Pensions			Postretirement

8. Federal Income Taxes**Interim Period Tax Assumptions and Effective Tax Rates**

AIG's interim period tax expense or benefit is measured using an estimated annual effective tax rate. To the extent that a portion of AIG's annual pretax income or loss cannot be reliably estimated, the actual tax expense or benefit applicable to that income or loss is reported in the interim period in which the related income or loss is reported. AIG is unable to reliably estimate other-than-temporary impairments and the

operating results of AIGFP. Therefore, the related tax effect of other-than-temporary impairments, which is calculated at the applicable local statutory rate (predominantly 35 percent), and the operating results of AIGFP, which are tax effected at the U.S. statutory tax rate of 35 percent, are reported as discrete adjustments to the estimated annual effective tax rate that AIG applies to all other pretax income.

The effective tax rate on the pre-tax loss for the three-month period ended June 30, 2008 was 38.4 percent. The effective tax rate was higher than the statutory rate of 35

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***8. Federal Income Taxes** *(continued)*

percent due primarily to tax benefits from foreign operations and tax exempt interest. The effective tax rate on the pre-tax loss for the six-month period ended June 30, 2008 was 34.4 percent. The effective tax rate was adversely affected by \$703 million of tax charges from the first three months of 2008, comprised of increases in the reserves for uncertain tax positions and other discrete period items. The effective tax rate on the pre-tax income for the three- and six-month periods ended June 30, 2007 was 26.5 percent and 27.2 percent, respectively. The effective tax rates were low, due primarily to benefits from remediation adjustments and the recognition of tax benefits associated with the SICO Plan for which the compensation expense was recognized in prior years.

Tax Filings and Examinations

On April 3, 2008, AIG filed a refund claim for tax years 1997 through 2004. The refund claim relates to the tax effect of the restatement of AIG's 2004 and prior financial statements.

There has been no material change to the status of the assertion of additional tax made by the Internal Revenue Service (IRS) in their Statutory Notice of Deficiency as described in AIG's Quarterly Report on Form 10-Q for the quarter ended March 31, 2008. AIG continues to believe that it has adequate reserves for any liability that could result from the IRS actions.

In the second quarter of 2008, three separate court decisions were rendered relating to certain leasing transactions, which were adverse to the affected taxpayers. In accordance with FIN 48 and FSP 13-2, AIG evaluated the effect of these decisions on leasing transactions of AIG subsidiaries and ad-

justed the timing of cash flows relating to income taxes generated by the transactions. AIG recorded a \$100 million after-tax charge in the quarter ended June 30, 2008 as a result of this evaluation.

FIN 48

As of June 30, 2008 and December 31, 2007, AIG's unrecognized tax benefits, excluding interest and penalties, were \$2.5 billion and \$1.3 billion, respectively. As of June 30, 2008 and December 31, 2007, AIG's unrecognized tax benefits included \$965 million and \$299 million, respectively, related to tax positions the disallowance of which would not affect the effective tax rate. Accordingly, as of June 30, 2008 and December 31, 2007, the amount of unrecognized tax benefits that, if recognized, would favorably affect the effective tax rate was \$1.5 billion and \$1.0 billion, respectively. Substantially all of the increase as of June 30, 2008 was attributable to the quarter ended March 31, 2008.

At June 30, 2008, AIG had accrued \$429 million for the payment of interest (net of the federal benefit) and penalties.

AIG continually evaluates proposed adjustments by taxing authorities. At June 30, 2008, such proposed adjustments would not result in a material change to AIG's consolidated financial condition, although it is possible that the effect could be material to AIG's consolidated results of operations for an individual reporting period. Although it is reasonably possible that a significant change in the balance of unrecognized tax benefits may occur within the next twelve months, at this time it is not possible to estimate the range of the change due to the uncertainty of the potential outcomes.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**9. Information Provided in Connection with Outstanding Debt**

The following condensed consolidating financial statements reflect the following:

- **AIG Life Holdings (US), Inc. (AIGLH), formerly known as American General Corporation, is a holding company and a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all outstanding debt of AIGLH.**
- **AIG Liquidity Corp. is a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all obligations of AIG Liquidity Corp.**
- **AIG Program Funding, Inc. is a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all obligations of AIG Program Funding, Inc.**

During the second quarter of 2008, AIG made certain revisions to the American International Group, Inc. (as Guarantor) Condensed Statement of Cash Flows, primarily relating to the effect of reclassifying certain intercompany and securities lending balances. Accordingly, AIG revised the previous period presented to conform to the revised presentation. There was no effect on the Consolidated Statement of Cash Flows or ending cash balances.

The revisions and their effect on the American International Group, Inc. (as Guarantor) Condensed Statement of Cash Flows for the six months ended June 30, 2007 were as follows:

<i>(in millions)</i>	Originally Reported June 30, 2007	Revisions	As Revised
Cash flows provided by (used in) operating activities	\$ 743	\$(1,819)	\$ (1,076)

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***10. Cash Flows**

During 2007, AIG made certain revisions to the Consolidated Statement of Cash Flows, primarily relating to the effect of reclassifying certain policyholders' account balances, the elimination of certain intercompany balances and revisions related to separate account assets. Accordingly, AIG revised the previous periods presented to conform to the revised presentation. There was no effect on ending cash balances.

In addition, the table below reflects the effects of the adoption of FSP FIN 39-1 as discussed in Note 1, Summary of Significant Accounting Policies.

The revisions and their effect on the Consolidated Statement of Cash Flows for the six months ended June 30, 2007 were as follows:

<i>(in millions)</i>	Originally Reported June 30, 2007	Revisions	As Revised
Cash flows provided by (used in) from operating activities	\$ 15,071	\$ 2,360	\$ 17,431

Cautionary Statement Regarding Projections and Other Information About Future Events

This Quarterly Report on Form 10-Q and other publicly available documents may include, and AIG's officers and representatives may from time to time make, projections concerning financial information and statements concerning future economic performance and events, plans and objectives relating to management, operations, products and services, and assumptions underlying these projections and statements. These projections and statements are not historical facts but instead represent only AIG's belief regarding future events, many of which, by their nature, are inherently uncertain and outside AIG's control. These projections and statements may address, among other things, the status and potential future outcome of the current regulatory and civil proceedings against AIG and their potential effect on AIG's businesses, financial condition, results of operations, cash flows and liquidity, AIG's exposures to subprime mortgages, monoline insurers and the residential and commercial real estate markets and AIG's strategy for growth, product development, market position, financial results and reserves. It is possible that AIG's actual results and financial condition may differ, possibly materially, from the anticipated results and financial condition indicated in these projections and statements. Factors that could cause AIG's actual results to differ, possibly materially, from those in the specific projections and statements are discussed in Outlook and throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations and in Item 1A. Risk Factors of AIG's Annual Report on Form 10-K for the year ended December 31, 2007 (2007 Annual Report on Form 10-K). AIG is not under any obligation (and expressly disclaims any such obligations) to update or alter any projection or other statement, whether written or oral, that may be made from time to time, whether as a result of new information, future events or otherwise.

In addition to reviewing AIG's results for the three and six months ended June 30, 2008, this Management's Discussion and Analysis of Financial Condition and Results of Operations supplements and updates the information and discussion included in the 2007 Annual Report on Form 10-K. Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG presents its operations in the way it believes will be most meaningful. Statutory loss ratios and combined ratios are presented in accordance with accounting principles prescribed by insurance regulatory authorities because these are standard measures of performance filed with insurance regulatory authorities and used for analysis in the insurance industry and thus allow more meaningful comparisons with AIG's insurance competitors. AIG also uses cross-references to additional information included in this Quarterly Report on Form 10-Q and in the 2007 Annual Report on Form 10-K to assist readers seeking related information on a particular subject.

Overview of Operations and Business Results

AIG identifies its reportable segments by product line, consistent with its management structure. These segments are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management. Through these operating segments, AIG provides insurance, financial and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. This geographic, product and service diversification is one of AIG's major strengths and sets it apart from its competitors. AIG's Other category consists of items not allocated to AIG's operating segments.

AIG's subsidiaries serve commercial, institutional and individual customers through an extensive property-casualty and life insurance and retirement services network. In the United States, AIG companies are the largest underwriters of commercial and industrial insurance and are among the largest life insurance and retirement services operations as well. AIG's Financial Services businesses include commercial aircraft and equipment leasing, capital markets operations and consumer finance, both in the United States and abroad. AIG also provides asset management services to institutions and individuals. As part of its Spread-Based Investment activities, and to finance its operations, AIG issues various debt instruments in the public and private markets.

Outlook

The following paragraphs supplement and update the information and discussion included in Management's Discussion and Analysis of Financial Condition and Results of Operations — Outlook in the 2007 Annual Report on Form 10-K to reflect developments in or affecting AIG's business to date during 2008. These paragraphs also

supplement and update Item 1A. Risk Factors in the 2007 Annual Report on Form 10-K.

General Trends

In mid-2007, the U.S. residential mortgage market began to experience serious disruption due to credit quality deterioration in a significant portion of loans originated, particularly to non-prime and subprime borrowers; evolving changes in the regulatory environment; a residential housing market characterized by a slowing pace of transactions and declining prices; increased cost and reduced availability of borrowings for mortgage participants; a rising unemployment rate; increased delinquencies in non-mortgage consumer credit; and illiquid credit markets. The conditions continued and worsened throughout 2007 and to date in 2008, expanding into the broader U.S. credit markets and resulting in greater volatility, less liquidity, widening of credit spreads, a lack of price transparency and increased credit losses in certain markets.

AIG participates in the U.S. residential mortgage market in several ways: American General Finance, Inc. (AGF) originates principally first-lien mortgage loans and to a lesser extent second-lien mortgage loans to buyers and owners of residential housing; United Guaranty Corporation (UGC) provides first loss mortgage guaranty insurance for high loan-to-value first- and second-lien residential mortgages; AIG insurance and financial services subsidiaries invest in mortgage-backed securities and collateralized debt obligations (CDOs), in which the underlying collateral is composed in whole or in part of residential mortgage loans; and AIG Financial Products Corp. and AIG Trading Group Inc. and their respective subsidiaries (collectively, AIGFP) provides credit protection through credit default swaps on certain super senior tranches of CDOs.

Continuing disruption in the U.S. residential mortgage and other credit markets may also increase claim activity in the financial institution segment of AIG's directors and officers liability (D&O) and professional liability classes of business. However, based on its review of information currently available, AIG believes overall loss activity for the broader D&O and professional liability classes is likely to remain within or near the levels observed during the last several years, which include losses related to stock options backdating as well as to the U.S. residential mortgage market.

The operating results of AIG's consumer finance and mortgage guaranty operations in the United States have been and are likely to continue to be adversely affected by the factors referred to above. The downward cycle in the U.S. housing market is not expected to improve until residential inventories return to a more normal level and the mortgage credit market stabilizes. The duration and severity of the downward cycle could be further negatively affected in the event of an economic recession. AIG expects that this

downward cycle will continue to adversely affect UGC's operating results for the foreseeable future and will result in a significant operating loss for UGC through at least the first half of 2009. AIG also incurred substantial unrealized market valuation losses on AIGFP's super senior credit default swap portfolio and substantial other-than-temporary impairment charges on AIG's available for sale securities in the first six months of 2008 and fourth quarter of 2007. The results from AIG's operations with exposure to the U.S. residential mortgage market will be highly dependent on future market conditions. Continuing market deterioration will cause AIG to report additional unrealized market valuation losses and impairment charges. Given the current difficult market conditions, AIG is not able to predict the extent of any future market valuation losses or impairment charges. Moreover, AIG is unable to assess the effect, if any, that recent transactions involving sales of large portfolios of CDOs will have on the pricing of its credit default swaps, referenced CDOs or available for sale securities or on collateral posting requirements. There can be no assurance that increased claims activity, operating losses, unrealized market valuation losses and impairment charges will not be material to AIG's consolidated financial condition or AIG's consolidated results of operations for an individual reporting period.

The ongoing effect of the downward cycle in the U.S. housing market on AIG's consolidated financial condition could be material if the market disruption continues to expand beyond the residential mortgage markets, notwithstanding AIG's efforts to mitigate the risks to its business by disciplined underwriting and active risk management. AIG is also exploring measures to further protect its capital, reduce risks where appropriate and enhance its overall liquidity.

A significant portion of AIGFP's guaranteed investment agreements (GIAs) and financial derivative transactions include provisions that require AIGFP, upon a downgrade of AIG's long-term debt ratings, to post collateral or, with the consent of the counterparties, assign or repay its positions or arrange a substitute guarantee of its obligations by an obligor with higher debt ratings.

It is estimated that, as of the close of business on July 31, 2008, based on AIGFP's outstanding municipal GIAs and financial derivative transactions at that date, a downgrade of AIG's long-term senior debt ratings to 'A1' by Moody's Investors Service (Moody's) and 'A+' by Standard & Poor's, a division of The McGraw-Hill Companies, Inc. (S&P), would permit counterparties to make additional calls for up to approximately \$13.3 billion of collateral, while a downgrade to 'A2' by Moody's and 'A' by S&P would permit counterparties to call for approximately \$1.2 billion of additional collateral. If either of Moody's or S&P downgraded AIG's ratings to 'A1' or 'A+', respectively, the estimated collateral call would be for up to approximately

\$10.5 billion, while a downgrade to 'A2' or 'A', respectively, by either of the two rating agencies would permit counterparties to call for up to approximately \$1.1 billion of additional collateral.

Furthermore, a downgrade of AIG's long-term senior debt ratings to 'A1' by Moody's or to the same levels by both rating agencies would permit either AIG or the counterparties to elect early termination of contracts resulting in payments of up to approximately \$4.6 billion, while a downgrade to 'A2' by Moody's and 'A' by S&P would permit either AIG or the counterparties to elect early termination of additional contracts resulting in additional payments of up to approximately \$800 million. AIGFP believes that it is unlikely that certain of these counterparties would exercise their rights to elect termination of their contracts given the substantial economic benefit that such counterparties would forfeit upon termination.

The actual amount of collateral that AIGFP would be required to post to counterparties in the event of such downgrades, or the aggregate amount of payments that AIG could be required to make, depends on market conditions, the fair value of outstanding affected transactions and other factors prevailing at the time of the downgrade. Additional obligations to post collateral or the costs of assignment, repayment or alternative credit support would increase the demands on AIG's liquidity. Further downgrades could result in requirements for substantial additional collateral, which could have a material adverse effect on AIG's liquidity. For a further discussion of AIG's credit ratings and the potential effect of posting collateral on AIG's liquidity, see — Capital Resources and Liquidity — Credit Ratings and — Liquidity herein.

Globally, heightened regulatory scrutiny of financial services companies in many jurisdictions has the potential to affect future financial results through higher compliance costs. This is particularly true in the United States, where federal and state authorities have commenced various investigations of the financial services industry, and in Japan and Southeast Asia, where financial institutions have received remediation orders affecting consumer and policyholder rights.

As a result of the disruption of the U.S. residential housing market, AIG recognized other-than-temporary impairment charges over the last three quarters. Accordingly, any accretion to the expected recovery amount will be recognized in earnings in future periods over the expected recovery periods.

AIG tested goodwill for impairment as of June 30, 2008 and no impairment was identified. However, as a result of structural trends in the consumer finance market and the current competitive environment in the personal lines market,

the excess of the fair value over the carrying value of AIG's Consumer Finance and Personal Lines reporting units has narrowed. As of June 30, 2008, goodwill related to each of these reporting units amounted to approximately \$700 million. A continuation of these trends could result in impairment in goodwill for these reporting units in the future.

General Insurance

The commercial property and casualty insurance industry has historically experienced cycles of price erosion followed by rate strengthening as a result of catastrophes or other significant losses that affect the overall capacity of the industry to provide coverage. As premium rates decline, AIG will generally experience higher current accident year loss ratios, as the written premiums are earned, and higher expense ratios if written premiums decline more quickly than expenses. Despite industry price erosion in commercial lines, AIG expects to continue to identify profitable opportunities and build attractive new general insurance businesses as a result of AIG's broad product line and extensive distribution networks in the United States and abroad.

Workers compensation remains under considerable pricing pressure, as statutory rates continue to decline. Rates for most casualty lines of insurance continue to decline due to competitive pressures, particularly for aviation, excess casualty and D&O exposures. Rates for commercial property lines are also declining following another year of relatively low catastrophe losses in 2007, a decline that is continuing despite increased natural catastrophe losses in 2008. Further price erosion is expected during the remainder of 2008 for the commercial lines. AIG seeks to mitigate the decline by constantly seeking out profitable opportunities across its diverse product lines and distribution networks while maintaining a commitment to underwriting discipline. There can be no assurance that price erosion will not become more widespread or that AIG's profitability will not deteriorate from current levels in major commercial lines.

The personal lines automobile insurance industry is currently experiencing a soft market. Industry underwriting results are expected to deteriorate due to a generally weakening economy and increasing loss trends. AIG's personal auto business has been affected by these trends, but AIG has filed rate increases, tightened underwriting guidelines and made pricing enhancements to seek to improve the underwriting results.

AIG has capital maintenance agreements with the companies included in the Commercial Insurance and Mortgage Guaranty reporting units that set forth procedures through which AIG will provide ongoing capital support. AIG expects that additional capital contributions may be required during the remainder of 2008 pursuant to these agreements.

Life Insurance & Retirement Services

Disruption in the U.S. residential mortgage and credit markets had a significant adverse effect on Life Insurance & Retirement Services operating results, specifically its net investment income and net realized capital losses in 2007 and the first six months of 2008, and AIG expects that this disruption will continue to be a key factor in the remainder of 2008 and beyond, especially in its U.S.-based operations. The volatility in operating results will be further magnified by the continuing market shift to variable products with living benefits.

In response to the market disruption, AIG, including Domestic Life and Domestic Retirement Services, has been increasing its liquidity position and investing in shorter duration investments. While prudent in the current environment, such actions will reduce overall investment yields for the foreseeable future.

Recent capital markets volatility has put pressure on credit lenders resulting in increased costs for premium financing, which could affect future sales of products where such financing is used, primarily in large universal life policies in Domestic Life Insurance.

The U.S. dollar has significantly weakened against many currencies, resulting in a favorable effect on operating results due to the translation of foreign currencies to the U.S. dollar. However, the weakened dollar has an unfavorable effect on other-than-temporary impairments in Foreign Life Insurance & Retirement Services and will continue to affect operating results throughout 2008.

During the second quarter of 2008, AIG made capital contributions aggregating \$1.1 billion to the surplus of certain of its Domestic Life Insurance and Domestic Retirement Services subsidiaries to replace a portion of the capital lost as a result of net realized capital losses, including other-than-temporary impairments. In Taiwan, \$361 million was contributed to meet the needs of this growing business and increased risk-based capital requirements. AIG expects that it will make additional capital contributions to these operations during the remainder of 2008, in large measure due to the continued effect of net realized capital losses resulting from severity-related other-than-temporary impairment charges.

Financial Services

During 2008, AIGFP's revenues from certain products have declined, in part, as a consequence of the continued disruption in the credit markets, the general decline in liquidity in the marketplace, and AIGFP's efforts to manage its liquidity. Furthermore, AIGFP has not been able to replace revenues previously generated from certain structured tax and credit derivative transactions that were terminated or matured at the end of 2007 and early 2008. AIG expects that

AIGFP's operating results will continue to be adversely affected for the foreseeable future.

AIG exercises significant judgment in the valuation of its various credit default swap portfolios. AIG uses pricing models and other methodologies to value these portfolios that take into account, where applicable, and to the extent possible, third-party prices, pricing matrices, the movement of indices (such as the CDX and iTraxx), collateral calls and other observable market data. AIG believes that the assumptions and judgments it makes are reasonable and lead to an overall methodology that is reasonable, but other market participants may use other methodologies, including, among other things, models, indices and selection of third-party pricing sources, that are based upon different assumptions and judgments, and these methodologies may generate materially different values.

For additional information regarding AIG's methodology, models and assumptions with respect to the valuation and credit-based analyses of the AIGFP super senior credit default swap portfolio, see Critical Accounting Estimates — Fair Value Measurements of Certain Financial Assets and Liabilities — AIGFP's Super Senior Credit Default Swap Portfolio, and — Valuation of Level 3 Assets and Liabilities — Super senior credit default swap portfolio. See Risk Management — Credit Derivatives.

The ongoing disruption in the U.S. residential mortgage and credit markets and the downgrades of residential mortgage-backed securities and CDO securities by rating agencies continue to adversely affect the fair value of the super senior credit default swap portfolio written by AIGFP. AIG expects that continuing limitations on the availability of market observable data will affect AIG's determinations of the fair value of these derivatives. The fair value of these derivatives is expected to continue to fluctuate, perhaps materially, in response to changing market conditions, and AIG's estimates of the value of AIGFP's super senior credit default swap portfolio at future dates could therefore be materially different from current estimates. Further declines in the fair values of these derivatives may also require AIGFP to post additional collateral which may be material to AIGFP's financial condition.

At June 30, 2008, the fair value of AIGFP's super senior credit default swap portfolio, a net loss of \$26.1 billion, represents AIG's best estimate of the amount it would need to pay a willing, able and knowledgeable third party to assume the obligations under AIGFP's super senior credit default swap portfolio at that date.

At June 30, 2008, AIG used a roll rate analysis to stress the AIGFP super senior multi-sector CDO credit default swap portfolio for potential pre-tax realized credit losses. Two scenarios illustrated in this process resulted in potential realized credit losses of approximately \$5.0 billion (Scenario A) and approximately \$8.5 billion (Scenario B).

Actual ultimate realized credit losses are likely to vary, perhaps materially, from these scenarios, and there can be no assurance that the ultimate realized credit losses related to the AIGFP super senior multi-sector CDO credit default swap portfolio will be consistent with either scenario or that such realized credit losses will not exceed the potential realized credit losses illustrated by Scenario B. For a further discussion of AIG's stress testing using the roll rate analyses, see Risk Management — Stress Testing/Sensitivity Analysis.

Approximately \$307 billion of the \$441 billion in notional exposure on AIGFP's super senior credit default swap portfolio as of June 30, 2008 was written to facilitate regulatory capital relief for financial institutions primarily in Europe. AIG expects that the majority of these transactions will be terminated within the next 9 to 21 months by AIGFP's counterparties when they no longer provide the regulatory capital benefit.

In light of early termination experience to date and after other comprehensive analyses, AIG determined that there was no unrealized market valuation adjustment to be recognized for this regulatory capital relief portfolio for the six months ended June 30, 2008 other than for transactions where AIGFP believes the counterparties are no longer using the transactions to obtain regulatory capital relief. AIG will continue to assess the valuation of this portfolio and monitor developments in the marketplace. Given the significant deterioration in the global credit markets and the risk that AIGFP's expectations with respect to the termination of these transactions by its counterparties may not materialize, there can be no assurance that AIG will not recognize unrealized market valuation losses from this portfolio in future periods, and recognition of even a small percentage decline in the fair value of this portfolio could be material to an individual reporting period. These transactions contributed approximately \$156 million to AIGFP's revenues in the six-month period ended June 30, 2008. If AIGFP is not successful in replacing the revenues generated by these transactions, AIGFP's operating results could be materially adversely affected.

The airline industry is experiencing financial stress primarily due to record-high fuel costs, tightening of the credit markets and generally worsening economic conditions. This financial stress is causing a slow-down in the airline industry, and will likely have a negative effect on future lease rates and could begin to influence ILFC's results of operations as some airlines may approach ILFC to renegotiate transactions.

Asset Management

In the Institutional Asset Management business, management fees are earned based on the value of assets under management or committed capital. Declines in the equity and credit markets negatively affect the value of these investments

which may result in lower base management fees. Additionally, real estate investments are made through AIG Global Real Estate Investment Corp. (AIG Global Real Estate), typically for the purpose of development or repositioning and subsequent sale. Softening of the real estate and/or credit markets may delay the timing of development, repositioning and subsequent sale of these investments.

From time to time, AIG Global Asset Management Holdings Corp. and its subsidiaries and affiliated companies (collectively, AIG Investments) acquires alternative investments, primarily consisting of direct controlling equity interests in private enterprises, with the intention of

transferring such investments to a to-be-established AIG sponsored fund or acquiring such investments to be held temporarily until distribution to a third party or AIG affiliate is completed (warehoused assets). Market conditions may impede AIG from launching new investment products for which these warehoused assets are being held. Market conditions may also prevent AIG from recovering its investment upon transfer or divestment.

For a description of important factors that may affect the operations and initiatives described above, see Item 1A. Risk Factors in the 2007 Annual Report on Form 10-K.

Consolidated Results

AIG's consolidated revenues, income (loss) before income taxes, minority interest and net income (loss) were as follows:

<i>(in millions)</i>	Three Months Ended June 30,		Percentage Increase/ (Decrease)	Six Months Ended June 30,		Percentage Increase/ (Decrease)
	2008	2007		2008	2007	
Total revenues	\$ 19,933	\$31,150	(36)%	\$ 33,964	\$61,795	(45)%
Income (loss) before income taxes and minority interest	(8,756)	6,328	—	(20,020)	12,500	—
Net income (loss)	\$ (5,357)	\$ 4,277	—%	\$ (13,162)	\$ 8,407	—%

AIG's consolidated revenues decreased in the three and six-month periods ended June 30, 2008 compared to the same periods in 2007 due to unrealized market valuation losses of \$5.6 billion and \$14.7 billion, respectively, on AIGFP's super senior credit default swap portfolio recorded in other income, higher net realized capital losses and a decline in net investment income, which more than offset growth in premiums and other considerations in the Life Insurance & Retirement Services segment. Net realized capital losses of \$6.1 billion and \$12.2 billion in the three and six-month periods ended June 30, 2008, respectively, included other-than-temporary impairment charges of \$6.8 billion and \$12.4 billion, primarily related to the significant disruption in the residential mortgage and credit markets and investment-related losses of \$241 million and \$1.0 billion where AIG lacks the intent to hold the investments to recovery. Total other-than-temporary impairment charges in the three- and six-month periods ended June 30, 2007 were \$417 million and \$884 million, respectively. See Invested Assets — Portfolio Review — Other-Than-Temporary Impairments herein. The decline in net investment income reflects higher trading account losses in the U.K., lower returns from yield enhancement income, partnerships, hedge funds and mutual funds as well as lower policyholder trading gains in Life Insurance & Retirement

Services. Policyholder trading gains are offset by a charge to incurred policy losses and benefits expense.

Income (loss) before income taxes and minority interest declined in the three- and six-month periods ended June 30, 2008 due primarily to the losses described above.

Income Taxes

The effective tax rate on the pre-tax loss for the three-month period ended June 30, 2008 was 38.4 percent. The effective tax rate was higher than the statutory rate of 35 percent due primarily to tax benefits from foreign operations and tax exempt interest. The effective tax rate on the pre-tax loss for the six-month period ended June 30, 2008 was 34.4 percent. The effective tax rate was adversely affected by \$703 million of tax charges from the first three months of 2008, comprised of increases in the reserves for uncertain tax positions and other discrete period items. The effective tax rate on the pre-tax income for the three- and six-month periods ended June 30, 2007 was 26.5 percent and 27.2 percent, respectively. The effective tax rates were low due primarily to benefits from remediation adjustments and the recognition of tax benefits associated with the SICO Plan for which the compensation expense was recognized in prior years. See also Note 8 to Consolidated Financial Statements.

Segment Results

The following table summarizes the operations of each principal segment: (See also Note 2 to Consolidated Financial Statements.)

Operating Segments (in millions)	Three Months Ended June 30,		Percentage Increase/ (Decrease)	Six Months Ended June 30,		Percentage Increase/ (Decrease)
	2008	2007		2008	2007	
Total revenues ^(a) :						
General Insurance	\$ 12,757	\$12,928	(1)%	\$ 25,046	\$25,831	(3)%
Life Insurance & Retirement Services ^(b)	10,161	14,023	(28)	18,913	27,705	(32)
Financial Services ^{(c)(d)}	(3,605)	2,123	—	(10,165)	4,324	—
Asset Management ^(e)	797	1,781	(55)	648	3,450	(81)
Other	208	263	(21)	80	394	(80)
Consolidation and eliminations	(385)	32	—	(558)	91	—
Total	\$ 19,933	\$31,150	(36)%	\$ 33,964	\$61,795	(45)%
Operating income (loss) ^(a) :						
General Insurance	\$ 827	\$ 2,976	(72)%	\$ 2,164	\$ 6,072	(64)%
Life Insurance & Retirement Services ^(b)	(2,401)	2,620	—	(4,232)	4,901	—
Financial Services ^{(c)(d)}	(5,905)	47	—	(14,677)	339	—
Asset Management ^(e)	(314)	927	—	(1,565)	1,685	—
Other	(715)	(460)	—	(1,483)	(930)	—
Consolidation and eliminations	(248)	218	—	(227)	433	—
Total	\$ (8,756)	\$ 6,328	—	\$(20,020)	\$12,500	—%

- (a) Includes other-than-temporary impairment charges of \$6.8 billion and \$417 million for the three-month periods ended June 30, 2008 and 2007, respectively, and \$12.4 billion and \$884 million for the six-month periods ended June 30, 2008 and 2007, respectively. Also includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS No. 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133), including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2008 and 2007, the effect was \$272 million and \$(430) million, respectively, in both revenues and operating income (loss). For the six-month periods ended June 30, 2008 and 2007, the effect was \$(476) million and \$(882) million, respectively, in both revenues and operating income (loss). These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings.
- (b) Includes other-than-temporary impairment charges of \$5.2 billion and \$324 million for the three-month periods ended June 30, 2008 and 2007, respectively, and \$9.6 billion and \$716 million for the six-month periods ended June 30, 2008 and 2007, respectively.
- (c) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2008 and 2007, the effect was \$5 million and \$(443) million, respectively, in both revenues and operating income (loss). For the six-month periods ended June 30, 2008 and 2007, the effect was \$(199) million and \$(603) million, respectively, in both revenues and operating income (loss). These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings.
- (d) For the three- and six-month periods ended June 30, 2008, both revenues and operating income (loss) include unrealized market valuation losses of \$5.6 billion and \$14.7 billion, respectively, on AIGFP's super senior credit default swap portfolio.
- (e) Includes net realized capital losses of \$464 million and \$1.9 billion for the three- and six-month periods ended June 30, 2008, respectively, including other-than-temporary impairment charges of \$882 million and \$1.9 billion, respectively.

General Insurance

AIG's General Insurance operations provide property and casualty products and services throughout the world. Revenues in the General Insurance segment represent net premiums earned, net investment income and net realized capital gains (losses). The decrease in General Insurance revenues in the three-month period ended June 30, 2008 compared to the same period in 2007 was due to higher net realized capital losses in the three-month period ended June 30, 2008 compared to the same period in 2007 and lower net investment income as returns on partnership investments declined. The decrease in General Insurance revenues in the six-month period ended June 30, 2008 compared to the same period in 2007 was due to net realized capital losses in the six-month period ended June 30, 2008 compared to net realized capital gains in the same period of 2007 and lower net investment income as returns on partnership investments declined. The decrease in General Insurance operating income in the three- and six-month periods ended June 30, 2008 compared to the same period in 2007 was principally due to lower underwriting profit and net investment income from AIG Commercial Insurance (Commercial Insurance) as well as net realized capital losses

incurred by Commercial Insurance in 2008. Operating losses from the Mortgage Guaranty business and a decline in Foreign General Insurance net investment income in 2008 also contributed to the decrease in General Insurance operating income.

Life Insurance & Retirement Services

AIG's Life Insurance & Retirement Services operations provide insurance, financial and investment-oriented products throughout the world. Revenues in the Life Insurance & Retirement Services operations represent premiums and other considerations, net investment income and net realized capital gains (losses). Foreign operations contributed approximately 80 percent of AIG's Life Insurance & Retirement Services premiums and other considerations for both the three- and six-month periods ended June 30, 2008 and 2007.

Life Insurance & Retirement Services reported operating losses in the three- and six-month periods of 2008 compared to operating income in the same period in 2007, primarily due to lower net investment income and higher net realized capital losses in 2008, which were partially offset by the favorable effect of foreign exchange rates, lower deferred

policy acquisition costs (DAC) and sales inducement asset (SIA) amortization related to realized capital losses, growth in the underlying reserves which reflects increased assets under management and increased business in force.

Financial Services

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance. Revenues in the Financial Services segment include interest, realized and unrealized gains and losses, including the unrealized market valuation losses on AIGFP's super senior credit default swap portfolio, and lease and finance charges.

Financial Services reported operating losses in the three- and six-month periods ended June 30, 2008 compared to operating income in the same periods in 2007, primarily due to unrealized market valuation losses of \$5.6 billion and \$14.7 billion in the three- and six-month periods ended June 30, 2008, respectively, on AIGFP's super senior credit default swap portfolio, the remaining operating loss resulting from the change in credit spreads on AIGFP's other assets and liabilities and a decline in operating income for AGF. Capital Markets net operating loss for the three- and six-month periods ended June 30, 2008 was \$6.3 billion and \$15.2 billion, respectively, reflecting the pre-tax unrealized market valuation loss on the super senior credit default swap portfolio. Included in the unrealized market valuation loss were gains of \$44 million and \$109 million as a result of the effects of AIG's own credit spreads on the valuation of these derivatives for the three- and six-month periods ended June 30, 2008, respectively. The effect of the changes in AIG's own credit spreads, including the aforementioned amounts reflected in the unrealized market valuation loss, was a decrease in pre-tax income of \$112 million and an increase of \$2.5 billion for the three- and six-month periods ended June 30, 2008, respectively. The effect of the changes in counterparty credit spreads for assets measured at fair value at AIGFP was a decrease of \$362 million and \$3.0 billion for the three- and six-month periods ended June 30, 2008, respectively. On January 1, 2008, AIGFP elected the fair value option for almost all of its eligible financial assets and liabilities. Included in the first quarter 2008 net operating loss was the transition amount of \$291 million related to the adoption of FAS 157 and FAS 159.

AGF's operating income declined in the three- and six-month periods ended June 30, 2008 compared to the same periods in 2007, primarily due to increases in the provision for finance receivable losses and unfavorable variances related to derivatives which economically hedge AGF debt. AGF's operating income for the three- and six-month periods ended June 30, 2008 also reflected a pre-tax charge of \$27 million resulting from AGF's decision to cease its

wholesale originations (originations through mortgage brokers).

In the second quarter and first six months of 2007, the domestic consumer finance operations recorded pre-tax charges of \$50 million and \$178 million, respectively, representing the estimated cost of implementing the Supervisory Agreement entered into with the Office of Thrift Supervision (OTS), which are discussed in the Consumer Finance results of operations section. Based on the current estimated cost of implementing the Supervisory Agreement, partial reversals of these prior year charges of \$25 million and \$43 million were recorded for the three- and six-month periods ended June 30, 2008, respectively.

Operating income for ILFC increased in the three and six-month periods ended June 30, 2008 compared to the same periods in 2007 driven to a large extent by a larger aircraft fleet, higher lease rates and higher utilization and lower composite borrowing rates.

Asset Management

AIG's Asset Management operations include institutional asset management, broker-dealer related services and mutual funds and the Spread-Based Investment business. Revenues in the Asset Management segment represent investment income with respect to spread-based products, and management and advisory fees, carried interest revenues on the performance of the underlying funds, and realized gains on real estate investments in institutional products.

Asset Management reported operating losses in the three- and six-month periods ended June 30, 2008 compared to operating income in the same periods in 2007, due to other-than-temporary impairment charges on fixed maturity securities, lower partnership income and a decline in carried interest revenues. 2007 results included a gain of \$398 million related to the sale of a portion of AIG's investment in The Blackstone Group L.P. in connection with its initial public offering.

Capital Resources

At June 30, 2008, AIG had total consolidated shareholders' equity of \$78.1 billion and total consolidated borrowings of \$178.6 billion. At that date, \$68.6 billion of such borrowings were subsidiary borrowings not guaranteed by AIG.

In May 2008, AIG raised a total of approximately \$20 billion through the sale of: (i) 196,710,525 shares of AIG common stock at a price per share of \$38, for an aggregate amount of \$7.47 billion; (ii) 78.4 million equity units at a price per unit of \$75, for an aggregate amount of \$5.88 billion; and (iii) \$6.9 billion of junior subordinated debentures in three series. The equity units and junior subordinated debentures receive hybrid equity treatment from the major rating agencies under their current policies.

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At June 30, 2008, AIG's consolidated invested assets, primarily held by its subsidiaries, included \$82.2 billion in cash and short-term investments. Consolidated net cash provided from operating activities in the first six months of 2008 amounted to \$16.6 billion. At both the subsidiary and parent company level, liquidity management activities are intended to preserve and enhance funding stability, flexibility, and diversity through a wide range of potential operating environments and market conditions. AIG's primary sources of cash flow are dividends and other payments from its regulated and unregulated subsidiaries, as well as issuances of debt and equity securities. Primary uses of cash flow are for debt service, subsidiary funding, shareholder dividend payments and common stock repurchases. Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements.

For additional information, see Capital Resources and Liquidity.

Critical Accounting Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America (GAAP) requires the application of accounting policies that often involve a significant degree of judgment. AIG considers that its accounting policies that are most dependent on the application of estimates and assumptions, and therefore viewed as critical accounting estimates, to be those relating to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts, recoverability of DAC, estimated gross profits for investment-oriented products, fair value measurements of certain financial assets and liabilities, other-than-temporary impairments, the allowance for finance receivable losses and flight equipment recoverability. These accounting estimates require the use of assumptions about matters, some of which are highly uncertain at the time of estimation. To the extent actual experience differs from the assumptions used, AIG's results of operations would be directly affected.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG's critical accounting estimates are discussed in detail. The major categories for which assumptions are developed and used to establish each critical accounting estimate are highlighted below.

Reserves for Losses and Loss Expenses (General Insurance):

- *Loss trend factors:* used to establish expected loss ratios for subsequent accident years based on premium

rate adequacy and the projected loss ratio with respect to prior accident years.

- *Expected loss ratios for the latest accident year:* in this case, accident year 2008 for the year-end 2008 loss reserve analysis. For low-frequency, high-severity classes such as excess casualty, expected loss ratios generally are utilized for at least the three most recent accident years.
- *Loss development factors:* used to project the reported losses for each accident year to an ultimate amount.
- *Reinsurance recoverable on unpaid losses:* the expected recoveries from reinsurers on losses that have not yet been reported and/or settled.

Future Policy Benefits for Life and Accident and Health Contracts (Life Insurance & Retirement Services):

- *Interest rates:* which vary by geographical region, year of issuance and products.
- *Mortality, morbidity and surrender rates:* based upon actual experience by geographical region modified to allow for variation in policy form, risk classification and distribution channel.

Deferred Policy Acquisition Costs (Life Insurance & Retirement Services):

- *Recoverability:* based on current and future expected profitability, which is affected by interest rates, foreign exchange rates, mortality/morbidity experience, expenses, investment returns and policy persistency.

Deferred Policy Acquisition Costs (General Insurance):

- *Recoverability:* based upon the current terms and profitability of the underlying insurance contracts.

Estimated Gross Profits for Investment-Oriented Products (Life Insurance & Retirement Services):

- *Estimated gross profits:* to be realized over the estimated duration of the contracts (investment-oriented products) affect the carrying value of DAC, unearned revenue liability, SIAs and associated amortization patterns. Estimated gross profits include investment income and gains and losses on investments less required interest, actual mortality and other expenses.

Allowance for Finance Receivable Losses (Financial Services):

- *Historical defaults and delinquency experience:* utilizing factors, such as delinquency ratio, allowance ratio, charge-off ratio and charge-off coverage.
- *Portfolio characteristics:* portfolio composition and consideration of the recent changes to underwriting criteria and portfolio seasoning.
- *External factors:* consideration of current economic conditions, including levels of unemployment and personal bankruptcies.

- *Migration analysis*: empirical technique measuring historical movement of similar finance receivables through various levels of repayment, delinquency, and loss categories to existing finance receivable pools.

Flight Equipment Recoverability (Financial Services):

- *Expected undiscounted future net cash flows*: based upon current lease rates, projected future lease rates and estimated terminal values of each aircraft based on expectations of market participants.

Other-Than-Temporary Impairments:

AIG evaluates its investments for impairment such that a security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par, amortized cost (if lower) or cost for an extended period of time (nine consecutive months or longer);
- The occurrence of a discrete credit event resulting in (i) the issuer defaulting on a material outstanding obligation; (ii) the issuer seeking protection from creditors under the bankruptcy laws or any similar laws intended for court supervised reorganization of insolvent enterprises; or (iii) the issuer proposing a voluntary reorganization pursuant to which creditors are asked to exchange their claims for cash or securities having a fair value substantially lower than par value of their claims; or
- AIG may not realize a full recovery on its investment, regardless of the occurrence of one of the foregoing events.

The determination that a security has incurred an other-than-temporary decline in value requires the judgment of management and consideration of the fundamental condition of the issuer, its near-term prospects and all the relevant facts and circumstances. The above criteria also consider circumstances of a rapid and severe market valuation decline, such as that experienced in current credit markets, in which AIG could not reasonably assert that the recovery period would be temporary (severity losses). For further discussion, see *Invested Assets — Portfolio Review — Other-Than-Temporary Impairments*.

At each balance sheet date, AIG evaluates its securities holdings with unrealized losses. When AIG does not intend to hold such securities until they have recovered their cost basis, AIG records the unrealized loss in income. If a loss is recognized from a sale subsequent to a balance sheet date pursuant to changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer existed.

In periods subsequent to the recognition of an other-than-temporary impairment charge for fixed maturity securities, which is not credit or foreign exchange related,

AIG generally accretes into income the discount or amortizes the reduced premium resulting from the reduction in cost basis over the remaining life of the security.

Fair Value Measurements of Certain Financial Assets and Liabilities:

AIG measures at fair value on a recurring basis financial instruments in its trading and available for sale securities portfolios, certain mortgage and other loans receivable, certain spot commodities, derivative assets and liabilities, securities purchased (sold) under agreements to resell (repurchase), securities lending invested collateral, non-marketable equity investments, included in other invested assets, certain policyholders' contract deposits, securities and spot commodities sold but not yet purchased, certain trust deposits and deposits due to banks and other depositors, certain long-term borrowings, and certain hybrid financial instruments included in other liabilities. The fair value of a financial instrument is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The degree of judgment used in measuring the fair value of financial instruments generally correlates with the level of pricing observability. Financial instruments with quoted prices in active markets generally have more pricing observability and less judgment is used in measuring fair value. Conversely, financial instruments traded in other-than-active markets or that do not have quoted prices have less observability and are measured at fair value using valuation models or other pricing techniques that require more judgment. Pricing observability is affected by a number of factors, including the type of financial instrument, whether the financial instrument is new to the market and not yet established, the characteristics specific to the transaction and general market conditions.

Fixed Maturity Securities — Trading and Available for Sale

AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. Whenever available, AIG obtains quoted prices in active markets for identical assets at the balance sheet date to measure at fair value fixed maturity securities in its trading and available for sale portfolios. Market price data generally is obtained from exchange or dealer markets.

AIG estimates the fair value of fixed maturity securities not traded in active markets, including securities purchased (sold) under agreements to resell (repurchase) and mortgage and other loans receivable, for which AIG elected the fair value option by referring to traded securities with similar attributes, using dealer quotations and matrix pricing methodologies, or discounted cash flow analyses. This

methodology considers such factors as the issuer's industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, yield curves, credit curves, prepayment rates and other relevant factors. For fixed maturity securities that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability, and such adjustments generally are based on available market evidence. In the absence of such evidence, management's best estimate is used.

Equity Securities Traded in Active Markets — Trading and Available for Sale

AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. Whenever available, AIG obtains quoted prices in active markets for identical assets at the balance sheet date to measure at fair value marketable equity securities in its trading and available for sale portfolios. Market price data generally is obtained from exchange or dealer markets.

Direct Private Equity Securities Not Traded in Active Markets — Other Invested Assets

AIG initially estimates the fair value of equity securities not traded in active markets by reference to the transaction price. This valuation is adjusted only when changes to inputs and assumptions are corroborated by evidence such as transactions in similar instruments, completed or pending third-party transactions in the underlying investment or comparable entities, subsequent rounds of financing, recapitalizations and other transactions across the capital structure, offerings in the equity capital markets, and changes in financial ratios or cash flows. For equity securities that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability and such adjustments generally are based on available market evidence. In the absence of such evidence, management's best estimate is used. AIG initially estimates the fair value of investments in private limited partnerships and hedge funds by reference to the transaction price. Subsequently, AIG obtains the fair value of these investments generally from net asset value information provided by the general partner or manager of the investments, the financial statements of which generally are audited annually.

Separate and Variable Account Assets

Separate and variable account assets are composed primarily of registered and unregistered open-end mutual funds that generally trade daily and are measured at fair value in the manner discussed above for equity securities traded in active markets.

Freestanding Derivatives

Derivative assets and liabilities can be exchange-traded or traded over the counter (OTC). AIG generally values exchange-traded derivatives within portfolios using models that calibrate to market clearing levels and eliminate timing differences between the closing price of the exchange-traded derivatives and their underlying instruments.

OTC derivatives are valued using market transactions and other market evidence whenever possible, including market-based inputs to models, model calibration to market clearing transactions, broker or dealer quotations or alternative pricing sources with reasonable levels of price transparency. When models are used, the selection of a particular model to value an OTC derivative depends on the contractual terms of, and specific risks inherent in, the instrument as well as the availability of pricing information in the market. AIG generally uses similar models to value similar instruments. Valuation models require a variety of inputs, including contractual terms, market prices and rates, yield curves, credit curves, measures of volatility, prepayment rates and correlations of such inputs. For OTC derivatives that trade in liquid markets, such as generic forwards, swaps and options, model inputs can generally be corroborated by observable market data by correlation or other means and model selection does not involve significant management judgment.

Certain OTC derivatives trade in less liquid markets with limited pricing information and the determination of fair value for these derivatives is inherently more difficult. When AIG does not have corroborating market evidence to support significant model inputs and cannot verify the model to market transactions, the transaction price is initially used as the best estimate of fair value. Accordingly, when a pricing model is used to value such an instrument, the model is adjusted so the model value at inception equals the transaction price. Subsequent to initial recognition, AIG updates valuation inputs when corroborated by evidence such as similar market transactions, third-party pricing services and/or broker or dealer quotations, or other empirical market data. When appropriate, valuations are adjusted for various factors such as liquidity, bid/offer spreads and credit considerations. Such adjustments are generally based on available market evidence. In the absence of such evidence, management's best estimate is used.

With the adoption of FAS 157 on January 1, 2008, AIG's own credit risk has been considered and is incorporated into the fair value measurement of all freestanding derivative liabilities.

Embedded Policy Derivatives

The fair value of embedded policy derivatives contained in certain variable annuity and equity-indexed annuity and life contracts is measured based on actuarial and capital market

assumptions related to projected cash flows over the expected lives of the contracts. These cash flow estimates primarily include benefits and related fees assessed, when applicable, and incorporate expectations about policyholder behavior. Estimates of future policyholder behavior are subjective and based primarily on AIG's historical experience. With respect to embedded policy derivatives in AIG's variable annuity contracts, because of the dynamic and complex nature of the expected cash flows, risk neutral valuations are used. Estimating the underlying cash flows for these products involves many estimates and judgments, including those regarding expected market rates of return, market volatility, correlations of market index returns to funds, fund performance, discount rates and policyholder behavior. With respect to embedded policy derivatives in AIG's equity-indexed annuity and life contracts, option pricing models are used to estimate fair value, taking into account assumptions for future equity indexed growth rates, volatility of the equity index, future interest rates, and determination on adjusting the participation rate and the cap on equity indexed credited rates in light of market conditions and policyholder behavior assumptions. With the adoption of FAS 157, these methodologies were not changed, with the exception of incorporating an explicit risk margin to take into consideration market participant estimates of projected cash flows and policyholder behavior.

AIGFP's Super Senior Credit Default Swap Portfolio

AIGFP values its credit default swaps written on the most senior risk layers (super senior) of designated pools of debt securities or loans using internal valuation models, third-party prices and market indices. The specific valuation methodologies vary based on the nature of the referenced obligations and availability of market prices. AIGFP uses a modified version of the Binomial Expansion Technique (BET) model to value its credit default swap portfolio written on super senior tranches of CDOs of asset-backed securities (ABS), including maturity-shortening puts that allow the holders of the securities issued by certain CDOs to treat the securities as short-term eligible 2a-7 investments under the Investment Company Act of 1940 (2a-7 Puts). The BET model uses default probabilities derived from credit spreads implied from market prices for the individual securities included in the underlying collateral pools securing the CDOs, as well as diversity scores, weighted average lives, recovery rates and discount rates. Prices for the individual securities held by a CDO are obtained in most cases from the CDO collateral managers, to the extent available. The CDO collateral managers obtain these prices from various sources, which include dealer quotations, third-party pricing services and in-house valuation models. To the extent there is a lag in the prices provided by the collateral managers, AIGFP rolls forward these prices to the end of the quarter using data provided by a third-party pricing service. Where a price for an individual security is not provided by the CDO collateral

manager, AIGFP derives the price from a matrix that averages the prices of the various securities at the level of ABS category, vintage and the rating of the referenced security. The determination of some of these inputs requires the use of judgment and estimates, particularly in the absence of market observable data. AIGFP also employs a Monte Carlo simulation to assist in quantifying the effect on the valuation of the CDOs of the unique aspects of the CDOs' structure such as triggers that divert cash flows to the most senior part of the capital structure. In the determination of fair value, AIGFP also considers collateral calls and the price estimates for the super senior CDO securities provided by third parties, including counterparties to these transactions. See Note 3 to Consolidated Financial Statements for additional information about fair value measurements.

In the case of credit default swaps written on investment-grade corporate debt and CLOs, AIGFP estimates the value of its obligations by reference to the relevant market indices or third-party quotes on the underlying super senior tranches where available.

In the case of credit default swaps written to facilitate regulatory capital relief for AIGFP's European financial institution counterparties, AIGFP estimates the fair value of these derivatives by considering observable market transactions, including the early termination of these transactions by counterparties, and other market data, to the extent relevant.

Policyholders' Contract Deposits

Policyholders' contract deposits accounted for at fair value beginning January 1, 2008 are measured using an income approach by taking into consideration the following factors:

- Current policyholder account values and related surrender charges,
- The present value of estimated future cash inflows (policy fees) and outflows (benefits and maintenance expenses) associated with the product using risk neutral valuations, incorporating expectations about policyholder behavior, market returns and other factors, and
- A risk margin that market participants would require for a market return and the uncertainty inherent in the model inputs.

The change in fair value of these policyholders' contract deposits is recorded as incurred policy losses and benefits in the consolidated statement of income (loss).

Level 3 Assets and Liabilities

Under FAS 157, assets and liabilities recorded at fair value in the consolidated balance sheet are classified in a hierarchy for disclosure purposes consisting of three "levels" based on the

observability of inputs available in the marketplace used to measure the fair value. See Note 3 to the Consolidated Financial Statements for additional information about fair value measurements.

At June 30, 2008, AIG classified \$48.7 billion and \$37.3 billion of assets and liabilities, respectively, measured at fair value on a recurring basis as Level 3. This represented 4.7 percent and 3.8 percent of the total assets and liabilities, respectively, measured at fair value on a recurring basis. Level 3 fair value measurements are based on valuation techniques that use at least one significant input that is unobservable. These measurements are made under circumstances in which there is little, if any, market activity for the asset or liability. AIG's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment.

In making the assessment, AIG considers factors specific to the asset or liability. In certain cases, the inputs used to measure fair value of an asset or a liability may fall into different levels of the fair value hierarchy. In such cases, the level in the fair value hierarchy within which the fair value measurement in its entirety is classified is determined based on the lowest level input that is significant to the fair value measurement in its entirety.

Valuation of Level 3 Assets and Liabilities

AIG values its assets and liabilities classified as Level 3 using judgment and valuation models or other pricing techniques that require a variety of inputs including contractual terms, market prices and rates, yield curves, credit curves, measures of volatility, prepayment rates and correlations of such inputs, some of which may be unobservable. The following paragraphs describe the methods AIG uses to measure on a recurring basis the fair value of the major classes of assets and liabilities classified in Level 3.

Private equity and real estate fund investments: These assets initially are valued at the transaction price, i.e., the price paid to acquire the asset. Subsequently, they are measured based on net asset value using information provided by the general partner or manager of these investments, the accounts of which generally are audited on an annual basis.

Corporate bonds and private placement debt: These assets initially are valued at the transaction price. Subsequently, they are valued using market data for similar instruments (e.g., recent transactions, bond spreads or credit default swap spreads), comparisons to benchmark derivative indices or movements in underlying credit spreads. When observable price quotations are not available, fair value is determined based on cash flow models with yield curves, bond or single-name credit default swap spreads and estimated recovery rates.

Certain Residential Mortgage-Backed Securities (RMBS): These assets initially are valued at the transaction price. Subsequently, they may be valued by comparison to transactions in instruments with similar collateral and risk profiles, remittances received and updated cumulative loss data on underlying obligations, discounted cash flow techniques, and/or option adjusted spread analyses.

Certain Asset-Backed Securities — non-mortgage: These assets initially are valued at the transaction price. Subsequently, they may be valued based on external price/spread data. When position-specific external price data are not observable, the valuation is based on prices of comparable securities.

CDOs: These assets initially are valued at the transaction price. Subsequently, they are valued based on external price/spread data from independent third parties, dealer quotations, matrix pricing, or using the BET model.

Super senior credit default swap portfolio: AIGFP wrote credit protection on the super senior risk layer of diversified portfolios of investment-grade corporate debt, CLOs and multi-sector CDOs. In these transactions, AIGFP is at risk only on the super senior portion related to a diversified portfolio referenced to loans or debt securities, which is the last tranche to suffer losses after significant subordination. AIGFP also wrote protection on tranches below the super senior layer.

At June 30, 2008, the notional amount, fair value and unrealized market valuation loss of the AIGFP super senior credit default swap portfolio, including certain regulatory capital relief transactions, by asset class were as follows:

(in millions)	Notional Amount	Fair Value Loss at June 30, 2008	Unrealized Market Valuation Loss (Gain)	
			Three Months Ended June 30, 2008 ^(a)	Six Months Ended June 30, 2008 ^(a)
Regulatory Capital: ^(b)				
Corporate loans	\$172,717	\$ —	\$ —	\$ —
Prime residential mortgages	132,612	—	—	—
Other ^{(c)(d)}	1,619	125	125	125
Total	306,948	125	125	125
Arbitrage:				
Multi-sector CDOs ^(e)	80,301	24,785	5,569	13,606
Corporate debt/CLOs	53,767	996	(126)	770
Total	134,068	25,781	5,443	14,376
Mezzanine tranches ^(f)	5,824	171	(3)	171
Total	\$446,840	\$26,077 ^(g)	\$5,565	\$14,672

(a) Includes credit valuation adjustment gains of \$44 million and \$109 million, respectively, for the three- and six-month periods ended June 30, 2008.

(b) Represents predominantly transactions written to facilitate regulatory capital relief.

(c) Represents transactions where AIGFP believes the counterparties are no longer using the transactions to obtain regulatory capital relief.

(d) During the second quarter of 2008, a European RMBS regulatory capital relief transaction with a notional amount of \$1.6 billion was not

terminated as expected when it no longer provided regulatory capital relief to the counterparty.

- (e) Approximately \$57.8 billion in net notional amount includes some exposure to U.S. sub-prime mortgages and approximately \$9.6 billion in net notional amount includes CDOs of CMBS.*
- (f) Represents credit default swaps written by AIGFP on tranches below super senior on certain regulatory capital relief trades.*
- (g) Fair value amounts are shown before the effects of counterparty netting adjustments.*

The valuation of the super senior credit derivatives continues to be challenging given the limitation on the availability of market observable information due to the lack of trading and price transparency in the structured finance market, particularly during and since the fourth quarter of 2007. These market conditions have increased the reliance on management estimates and judgments in arriving at an estimate of fair value for financial reporting purposes. Further, disparities in the valuation methodologies employed by market participants and the varying judgments reached by such participants when assessing volatile markets has increased the likelihood that the various parties to these instruments may arrive at significantly different estimates as to their fair values.

AIGFP's valuation methodologies for the super senior credit default swap portfolio have evolved in response to the deteriorating market conditions and the lack of sufficient market observable information. AIG has sought to calibrate the model to market information and to review the assumptions of the model on a regular basis.

During the second quarter of 2008, AIGFP implemented further refinements to the cash flow waterfall used by the BET model and the assumptions used therein. These refinements reflected the ability of a CDO to use principal proceeds to cover interest payment obligations on lower-rated tranches, the ability of a CDO to use principal proceeds to cure a breach of an overcollateralization test, the ability of a CDO to amortize certain senior CDO tranches on a pro-rata or sequential basis and the preferential payment of management fees. To the extent there is a lag in the prices provided by the collateral managers, AIG refines those prices by rolling them forward to the end of the quarter using prices provided by a third-party pricing service. The net effect of these refinements was an increase in the unrealized market valuation loss of \$342 million. Refinements made during the first quarter of 2008 had only a de minimus effect on the unrealized market valuation loss.

AIGFP employs a modified version of the BET model to value its credit default swap portfolio written on the super senior securities issued by CDOs, including the embedded 2a-7 Puts. The BET model uses default probabilities derived from credit spreads implied from market prices for the individual securities included in the underlying collateral pools securing the CDOs. AIGFP obtained prices on these securities primarily from the CDO collateral managers.

The BET model also uses diversity scores, weighted average lives, recovery rates and discount rates. The determination of some of these inputs requires the use of judgment and estimates, particularly in the absence of market observable data. AIGFP also employs a Monte Carlo simulation to assist in quantifying the effect on valuation of the CDO of the unique features of the CDOs' structure such as triggers that divert cash flows to the most senior level of the capital structure.

AIG selected the BET model for the following reasons:

- it is known and utilized by other institutions;
- it has been studied extensively, documented and enhanced over many years;
- it is transparent and relatively simple to apply;
- the parameters required to run the BET model are generally observable; and
- it can easily be modified to use probabilities of default and expected losses derived from the underlying collateral securities market prices instead of using rating-based historical probabilities of default.

AIG's implementation of the BET model uses a Monte Carlo simulation of the cash flows of each underlying CDO for various scenarios of defaults by the underlying collateral securities. The Monte Carlo simulation allows the model to take into account the cash flow waterfall and to capture the benefits due to cash flow diversion within each CDO.

The BET model has certain limitations. A well known limitation of the BET model is that it can understate the expected losses for super senior tranches when default correlations are high. The model uses correlations implied from diversity scores which do not capture the tendency for correlations to increase as defaults increase. Recognizing this concern, AIG tested the sensitivity of the valuations to the diversity scores. The results of the testing demonstrated that the valuations are not very sensitive to the diversity scores because the expected losses generated from the prices of the collateral pool securities are currently high, breaching the attachment point in most transactions. Once the attachment point is breached by a sufficient amount, the diversity scores, and their implied correlations, are no longer a significant driver of the valuation of a super senior tranche.

The credit default swaps written by AIGFP generally cover the failure of payment on the super senior CDO security, which in certain cases may also cover the acceleration of the super senior CDO security upon an event of default of the CDO. AIGFP does not own the securities in the CDO collateral pool. The credit spreads implied from the market prices of the securities in the CDO collateral pool incorporate the risk of default (credit risk), the market's price for liquidity risk and in distressed markets, the risk aversion

costs. Spreads on credit derivatives tend to be narrower than the credit spreads implied from the market prices of the securities in the CDO collateral pool because, unlike investing in a bond, there is no need to fund the position (except when an actual credit event occurs). In times of illiquidity, the difference between spreads on cash securities and derivative instruments (the negative basis) may be even wider for high quality assets. AIGFP was unable to reliably verify this negative basis with market observable inputs due to the accelerating severe dislocation, illiquidity and lack of trading in the ABS market during the fourth quarter of 2007 and the first six months of 2008. The valuations produced by the BET model therefore represent the valuations of the underlying super senior CDO cash securities based on AIG's assumptions about those securities, albeit with no recognition of any potential effect of the basis differential on that valuation. AIGFP also considered the valuation of the super senior CDO securities provided by third parties, including counterparties to these transactions, and made adjustments as necessary.

Valuation Sensitivity

Set forth in the paragraphs below are sensitivity analyses that estimate the effects of using alternative pricing and other key inputs on AIG's calculation of the unrealized market valuation loss related to the AIGFP super senior credit default swap portfolio. While AIG believes that the ranges used in these analyses are reasonable, given the current difficult market conditions, AIG is unable to predict which of the scenarios is most likely to occur. AIG is also unable to assess the effect, if any, that recent transactions involving sales of large portfolios of CDOs will have on the pricing of the AIGFP super senior credit default swap portfolio. Actual results in any period are likely to vary, perhaps materially, from the modeled scenarios, and there can be no assurance that the unrealized market valuation loss related to the AIGFP super senior credit default swap portfolio will be consistent with any of the sensitivity analyses.

The most significant assumption used in developing the estimate is the pricing of the securities within the CDO collateral pools. These prices are used to derive default probabilities and expected losses that are used in the BET model. If the actual pricing of the securities within the collateral pools differs from the pricing used in estimating the fair value of the super senior credit default swap portfolio, there is potential for material variation in the fair value estimate. A decrease by five points (for example, from 87 cents per dollar to 82 cents per dollar) in the aggregate price

of the underlying collateral securities would cause an additional unrealized market valuation loss of approximately \$4.0 billion, while an increase in the aggregate price of the underlying collateral securities by five points (for example, from 90 cents per dollar to 95 cents per dollar) would reduce the unrealized market valuation loss by approximately \$3.9 billion. Any further declines in the value of the underlying collateral securities held by a CDO will similarly affect the value of the super senior CDO securities given their significantly depressed valuations. Given the current difficult market conditions, AIG cannot predict reasonably likely changes in the prices of the underlying collateral securities held within a CDO at this time.

The following table presents other key inputs used in the valuation of the credit default swap portfolio written on the super senior securities issued by multi-sector CDOs, and the potential increase (decrease) to the unrealized market valuation loss at June 30, 2008 calculated using the BET model for changes in these key inputs:

<i>(in millions)</i>	Increase (Decrease) To Unrealized Market Valuation Loss
Weighted average lives	
Effect of an increase of 1 year	\$ 519
Effect of a decrease of 1 year	(905)
Recovery rates	
Effect of an increase of 10%	(18)
Effect of a decrease of 10%	254
Diversity scores	
Effect of an increase of 5	(84)
Effect of a decrease of 5	261
Discount curve	
Effect of an increase of 100 basis points	181

These results are calculated by stressing a particular assumption independently of changes in any other assumption. No assurance can be given that the actual levels of the key inputs will not exceed, perhaps significantly, the ranges assumed by AIG for purposes of the above analysis. No assumption should be made that results calculated from the use of other changes in these key inputs can be interpolated or extrapolated from the results set forth above.

In the case of credit default swaps written on investment grade corporate debt and CLOs, AIGFP estimates the value of its obligations by reference to the relevant market indices or third-party quotes on the underlying super senior tranches where available.

The following table represents the relevant market credit indices and index CDS maturity used in the valuation of the credit default swap portfolio written on investment-grade corporate debt and the increase (decrease) to the unrealized market valuation loss at June 30, 2008 corresponding to changes in these market credit indices and maturity:

<i>(in millions)</i>	Increase (Decrease) To Unrealized Market Valuation Loss		
CDS maturity (in years)	5	7	10
CDX Index			
Effect of an increase of 10 basis points	\$(23)	\$ (48)	\$(10)
Effect of a decrease of 10 basis points	23	49	10
iTraxx Index			
Effect of an increase of 10 basis points	(11)	(37)	(8)
Effect of a decrease of 10 basis points	11	37	8

These results are calculated by stressing a particular assumption independently of changes in any other assumption. No assurance can be given that the actual levels of the indices and maturity will not exceed, perhaps significantly, the ranges assumed by AIG for purposes of the above analysis. No assumption should be made that results calculated from the use of other changes in these indices and maturity can be interpolated or extrapolated from the results set forth above.

For additional information about AIGFP's super senior credit default swap portfolio, see Risk Management — Credit Derivatives.

Other derivatives. Valuation models that incorporate unobservable inputs initially are calibrated to the transaction price. Subsequent valuations are based on observable inputs to the valuation model (e.g., interest rates, credit spreads, volatilities, etc.). Model inputs are changed only when corroborated by market data.

Transfers into Level 3

During the three-months ended June 30, 2008, AIG transferred from Level 2 to Level 3 approximately \$2.3 billion of assets, primarily representing fixed maturity securities for which the significant inputs used to measure the fair value of the securities became unobservable primarily as a result of the significant disruption in the credit markets. See Note 3 to the Consolidated Financial Statements for additional information about transfers into Level 3.

Valuation Controls

AIG is actively developing and implementing a remediation plan to address the material weakness in internal control relating to the fair value valuation of the AIGFP super senior credit default swap portfolio, and oversight thereof as described in Item 9A. of the 2007 Annual Report on

Form 10-K. AIG is developing new systems and processes to reduce reliance on certain manual controls that have been established as compensating controls over valuation of this portfolio and in other areas, and is strengthening the resources required to remediate this weakness. Notwithstanding this need to continue strengthening these controls, AIG has an oversight structure that includes appropriate segregation of duties with respect to the valuation of its financial instruments. Senior management, independent of the trading and investing functions, is responsible for the oversight of control and valuation policies and for reporting the results of these controls and policies to AIG's Audit Committee. AIG employs procedures for the approval of new transaction types and markets, price verification, periodic review of profit and loss, and review of valuation models by personnel with appropriate technical knowledge of relevant products and markets. These procedures are performed by personnel independent of the trading and investing functions. For valuations that require inputs with little or no market observability, AIG compares the results of its valuation models to actual subsequent transactions.

Operating Review

General Insurance Operations

AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of property and casualty insurance and various personal lines both domestically and abroad and constitute the AIG Property Casualty Group (formerly known as Domestic General Insurance) and the Foreign General Insurance Group.

AIG Property Casualty Group is comprised of Commercial Insurance, Transatlantic, Personal Lines and Mortgage Guaranty businesses.

Commercial Insurance writes substantially all classes of business insurance, accepting such business mainly from insurance brokers. This provides Commercial Insurance the opportunity to select specialized markets and retain underwriting control. Any licensed broker is able to submit business to Commercial Insurance without the traditional agent-company contractual relationship, but such broker usually has no authority to commit Commercial Insurance to accept a risk.

Transatlantic Holdings, Inc. (Transatlantic) subsidiaries offer reinsurance capacity on both a treaty and facultative basis both in the U.S. and abroad. Transatlantic structures programs for a full range of property and casualty products with an emphasis on specialty risk.

AIG's Personal Lines operations provide automobile insurance through aigdirect.com, its direct marketing distribution channel, and the Agency Auto Division, its independent agent/broker distribution channel. It also

provides a broad range of coverages for high net worth individuals through the AIG Private Client Group (Private Client Group). Coverages for the Personal Lines operations are written predominantly in the United States.

The main business of the subsidiaries of UGC is the issuance of residential mortgage guaranty insurance, both domestically and internationally, that covers the first loss for credit defaults on high loan-to-value conventional first-lien mortgages for the purchase or refinance of one to four family

residences. UGC subsidiaries also write second-lien and private student loan guaranty insurance.

AIG's Foreign General Insurance Group writes both commercial and consumer lines of insurance which is primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance Group also includes business written by AIG's foreign-based insurance subsidiaries.

General Insurance Results

General Insurance operating income is comprised of statutory underwriting profit (loss), changes in DAC, net investment income and net realized capital gains and losses. Operating income, as well as net premiums written, net premiums earned, net investment income and net realized capital gains (losses) and statutory ratios were as follows:

<i>(in millions, except ratios)</i>	Three Months Ended June 30,		Percentage Increase/ (Decrease)	Six Months Ended June 30,		Percentage Increase/ (Decrease)
	2008	2007		2008	2007	
Net premiums written:

AIG transacts business in most major foreign currencies. The effects of changes in foreign currency exchange rates on the growth of General Insurance net premiums written were as follows:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2008	2007	2008	2007
Growth in original currency*	(2.2)%	3.3%	(2.8)%	4.7%
Foreign exchange effect	2.9	1.0	3.0	1.2
Growth as reported in U.S. dollars	0.7%	4.3%	0.2%	5.9%

* Computed using a constant exchange rate throughout each period.

Quarterly General Insurance Results

General Insurance operating income decreased in the three-month period ended June 30, 2008 compared to the same period in 2007 due to declines in both underwriting profit and net investment income as well as increased net realized capital losses in the three month-period ended June 30, 2008. The combined ratio for the three-month period ended June 30, 2008 increased to 97.7, an increase of 10.6 points compared to the same period in 2007, primarily due to an increase in the loss ratio of 8.4 points. The loss ratio for accident year 2008 recorded in the three-month period ended June 30, 2008 was 6.2 points higher than the loss ratio recorded in the three-month period ended June 30, 2007 for accident year 2007. Increases in Mortgage Guaranty losses accounted for 3.6 points of the increase in the 2008 accident year loss ratio. The downward cycle in the U.S. housing market is not expected to improve until residential inventories return to a more normal level, and AIG expects that this downward cycle will continue to adversely affect

Mortgage Guaranty's loss ratios for the foreseeable future. The loss ratio also increased for other property and casualty lines due to premium rate decreases and changes in loss trends. Unfavorable prior year development increased incurred losses by \$93 million in the three-month period ended June 30, 2008 while favorable prior year development decreased incurred losses by \$87 million in the three-month period ended June 30, 2007, accounting for 1.5 points of the increase in the loss ratio.

General Insurance net premiums written increased in the three-month period ended June 30, 2008 compared to the same period in 2007, as a decline in Commercial Insurance resulting from declining rates was offset by growth in Foreign General Insurance from both established and new distribution channels, and the positive effect of changes in foreign currency exchange rates.

General Insurance net investment income declined in the three-month period ended June 30, 2008 by \$461 million compared to the same period in 2007. Interest and dividend income increased \$60 million in the three-month period ended June 30, 2008 compared to the same period in 2007 as investments in fixed maturities and equity securities increased by \$9.0 billion and the average yield was substantially unchanged for both periods. Income from partnership and mutual fund investments declined \$413 million in the three-month period ended June 30, 2008 compared to the same period in 2007, primarily due to weaker equity market performance in 2008.

Net realized capital losses in the three-month period ended June 30, 2008 include other-than-temporary

impairment charges of \$685 million principally on fixed maturity securities, compared to \$84 million in the same period of 2007. See also Capital Resources and Liquidity and Invested Assets herein.

Year-to-Date General Insurance Results

General Insurance operating income decreased in the six-month period ended June 30, 2008 compared to the same period in 2007 due to declines in both underwriting profit and net investment income as well as net realized capital losses in the six-month period ended June 30, 2008 compared to net realized capital gains in the same period in 2007. The combined ratio for the six-month period ended June 30, 2008 increased to 97.3, an increase of 10.0 points compared to the same period in 2007, primarily due to an increase in the loss ratio of 7.4 points. The loss ratio for accident year 2008 recorded in the six-month period ended June 30, 2008 was 5.2 points higher than the loss ratio recorded in the six-month period ended June 30, 2007 for accident year 2007. Increases in Mortgage Guaranty losses accounted for 3.3 points of the increase in the 2008 accident year loss ratio. The loss ratio also increased for other property and casualty lines due to premium rate decreases and changes in loss trends. Favorable development from prior years and increases in the loss reserve discount reduced incurred losses by \$84 million and \$342 million in the six-month periods ended June 30, 2008 and 2007, respectively. The favorable development in the six-month period ended June 30, 2008 includes \$339 million of favorable development recognized in the first three months of 2008, related to policies whose premiums vary with the level of losses incurred (loss sensitive policies). Loss sensitive policies did not have a significant effect in 2007. The favorable development on loss sensitive policies had no effect on underwriting profit as it was entirely offset by a reduction in earned premiums. The reduction in incurred losses and earned premiums resulting from loss sensitive policies reduced the loss ratio by 0.4 points compared to the same period in 2007. Other unfavorable loss development, partially offset by increases in the loss reserve discount for the six-month period ended June 30, 2008, increased incurred losses by \$255 million, accounting for 2.6 points of the increase in the loss ratio compared to the same period of 2007. Favorable loss development in the six-month periods ended June 30, 2008 and 2007, of \$37 million and \$50 million, respectively (recognized in consolidation and related to certain asbestos settlements), reduced overall incurred losses.

General Insurance net premiums written were essentially unchanged in the six-month period ended June 30, 2008 compared to the same period in 2007, as a decline in Commercial Insurance rates was offset by growth in Foreign General Insurance from both established and new distribution channels; the positive effect of changes in foreign currency exchange rates; and, to a lesser extent, growth in the

Private Client Group of Personal Lines and in Mortgage Guaranty.

General Insurance net investment income declined in the six-month period ended June 30, 2008 by \$819 million compared to the same period in 2007. Interest and dividend income increased \$169 million in the six-month period ended June 30, 2008 compared to the same period in 2007 as investment in fixed maturities and equity securities increased by \$9.0 billion and the average yield was substantially unchanged for both periods. Income from partnership and mutual fund investments declined \$937 million in the six-month period ended June 30, 2008 compared to the same period in 2007, primarily due to poor performance in the equity markets in 2008. Investment expenses declined \$55 million the six-month period ended June 30, 2008 compared to the same period in 2007, primarily due to decreased interest expense on deposit liabilities.

Net realized capital losses in the six-month period ended June 30, 2008 include other-than-temporary impairment charges of \$840 million compared to \$130 million in the same period of 2007. See also Capital Resources and Liquidity and Invested Assets herein.

Quarterly Commercial Insurance Results

Commercial Insurance's operating income decreased in the three-month period ended June 30, 2008 compared to the same period in 2007 primarily due to declines in both underwriting profit and net investment income as well as increased net realized capital losses in the three-month period ended June 30, 2008. The decline is also reflected in the combined ratio, which increased 10.8 points in the three-month period ended June 30, 2008 compared to the same period in 2007. The loss ratio for accident year 2008, recorded in the three-month period ended June 30, 2008 was 5.1 points higher than the loss ratio recorded in the three-month period ended June 30, 2007 for accident year 2007. The increase in the 2008 accident year loss ratio includes 1.4 points for losses related to the Midwest floods with the remaining increase due to higher casualty losses and the effect of premium rate declines and several large fire losses. Unfavorable prior year development increased incurred losses by \$75 million in the three-month period ended June 30, 2008 while favorable prior year development decreased incurred losses by \$65 million in the three-month period ended June 30, 2007, accounting for 2.3 points of the increase in the loss ratio. Increases in the loss reserve discount reduced incurred losses by \$50 million and \$125 million in the three-month periods ended June 30, 2008 and 2007, respectively, accounting for 1.2 points of the increase in the loss ratio. Commercial Insurance's net premiums written declined in the three-month period ended June 30, 2008 compared to the same period in 2007 primarily due to declines in workers' compensation premiums and other casualty lines of business.

Commercial Insurance's expense ratio increased to 19.6 in the three-month period ended June 30, 2008 compared to 17.5 in the same period of 2007. The increase in the expense ratio was due to changes in property reinsurance programs, increases in the provision for uncollectible premiums and changes in the mix of business. The 2008 property reinsurance programs include more excess of loss treaties, which have little or no ceding commissions, and less pro rata treaties, which have ceding commissions, compared to the 2007 property reinsurance programs. Provision for uncollectible premiums increased by \$39 million in the three-month period ended June 30, 2008 compared to the same period in 2007, primarily due to increased provisions for uncollectible workers' compensation premium receivables. In general, net premiums written increased in lines of business with higher expense ratios and lower loss ratios compared to other Commercial Insurance lines of business, contributing to the increase in the expense ratio for the three-month period ended June 30, 2008 compared to the same period in 2007. In addition, Commercial Insurance continued to invest in systems and process improvements to enhance operating efficiency and controls over the long term.

Commercial Insurance's net investment income declined in the three-month period ended June 30, 2008 compared to the same period in 2007, primarily due to a decline in income from partnership and mutual fund investments which decreased \$290 million in the three-month period ended June 30, 2008 compared to the same period in 2007.

Commercial Insurance recorded net realized capital losses in the three-month period ended June 30, 2008 compared to net realized capital gains in the same period of 2007, primarily due to other-than-temporary impairment charges of \$632 million in the three-month period ended June 30, 2008, principally related to fixed maturity securities, compared to \$77 million in the same period in 2007.

Year-to-Date Commercial Insurance Results

Commercial Insurance's operating income decreased in the six-month period ended June 30, 2008 compared to the same period in 2007, primarily due to declines in both underwriting profit and net investment income, as well as net realized capital losses in the six-month period ended June 30, 2008. The decline is also reflected in the combined ratio, which increased 10.6 points in the six-month period ended June 30, 2008 compared to the same period in 2007. The loss ratio for accident year 2008 recorded in the six-month period ended June 30, 2008 included a 1.4 point effect related to the Atlanta tornado and Midwest flood catastrophe losses, and was 4.4 points higher than the loss ratio recorded in the six-month period ended June 30, 2007 for accident year 2007. Prior year development and increases in the loss reserve discount reduced incurred losses by \$192 million and \$276 million in the six-month periods ended June 30, 2008 and 2007, respectively. The favorable development for 2008

includes \$339 million of favorable development related to loss sensitive policies. The favorable development on loss sensitive policies had no effect on underwriting profit as the reduction in incurred losses was entirely offset by a reduction in earned premiums. However, the reductions in both earned premiums and incurred losses accounted for a reduction in the loss ratio of 0.8 points compared to the same period of 2007 related to loss sensitive policies. Other unfavorable loss development less the increase in the loss reserve discount resulted in a net increase in incurred losses of \$147 million, accounting for 3.6 points of the increase in the loss ratio compared to the same period in 2007.

Commercial Insurance's net premiums written declined in the six-month period ended June 30, 2008 compared to the same period in 2007 primarily due to declines in workers' compensation premiums and the effect of the loss sensitive policies described above and other casualty lines of business.

Commercial Insurance's expense ratio increased to 21.6 in the six-month period ended June 30, 2008 compared to 18.3 in the same period of 2007. Return premiums on loss sensitive policies reduced net premiums written, without a corresponding reduction in expenses, increasing the expense ratio by 0.6 points for the six-month period ended June 30, 2008 compared to the same period in 2007. The remaining increase in the expense ratio primarily resulted from changes in property reinsurance programs, increases in the provision for uncollectible premiums and changes in the mix of business as discussed above.

Commercial Insurance's net investment income declined in the six-month period ended June 30, 2008 compared to the same period in 2007, primarily due to a decline in income from partnership and mutual fund investments which decreased \$699 million in the six-month period ended June 30, 2008 compared to the same period in 2007.

Commercial Insurance recorded net realized capital losses in the six-month period ended June 30, 2008 compared to net realized capital gains in the same period in 2007, primarily due to other-than-temporary impairment charges of \$776 million in the six-month period ended June 30, 2008, related to both fixed maturity and equity securities, compared to \$113 million in the same period in 2007.

Quarterly Transatlantic Results

Transatlantic's operating income decreased in the three-month period ended June 30, 2008 compared to the same period in 2007, primarily due to an increase in net realized capital losses, partially offset by an increase in statutory underwriting profit. The increase in net realized capital losses is due principally to other-than-temporary impairment charges primarily related to domestic residential asset-backed fixed maturity securities and, to a much lesser extent, equity securities. The increase in statutory underwriting profit in the three-month period ended June 30, 2008 compared to the

same period in 2007 reflects improved underwriting results in domestic operations.

Year-to-Date Transatlantic Results

Transatlantic's operating income decreased in the six-month period ended June 30, 2008 compared to the same period in 2007 primarily due to an increase in net realized capital losses, partially offset by an increase in statutory underwriting profit. The increase in net realized capital losses is due principally to other-than-temporary impairment charges primarily related to domestic residential asset-backed fixed maturity securities and, to a much lesser extent, equity securities. The increase in statutory underwriting profit in the six-month period ended June 30, 2008 compared to the same period in 2007 reflects improved underwriting results in domestic and international operations. The 2007 international underwriting results were adversely affected by European windstorm related losses.

Quarterly Personal Lines Results

Personal Lines operating income decreased in the three-month period ended June 30, 2008 compared to the same period in 2007 due to a deterioration in underwriting performance as reflected by the combined ratio, which increased to 103.0 in the three-month period ended June 30, 2008 compared to 94.5 in the same period in 2007. The loss ratio increased 6.5 points, including an increase in the 2008 accident year loss ratio of 1.4 points, due primarily to an increase in the accident year loss ratio for automobile policies, partially offset by a decline in the accident year loss ratio for the Private Client Group. The 2008 accident year loss ratio for automobile policies increased 3.6 points compared to the loss ratio recorded in the three-month period ended June 30, 2007 for the 2007 accident year, due to declining premium rates and increased frequency and severity of losses. Prior year loss development increased incurred losses by \$29 million in the three-month period ended June 30, 2008 compared to a reduction of \$32 million in the same period in 2007, accounting for 5.1 points of the increase in the loss ratio. The current period adverse loss development on prior years is primarily related to greater than expected bodily injury severity and property damage frequency.

The expense ratio increased 2.0 points in the three-month period ended June 30, 2008 compared to the same period in 2007, primarily due to a change in business mix as the Private Client Group, which carries a higher expense ratio, represented an increased percentage of the Personal Lines division's net premiums written. Additionally, a decrease to ceding commissions as a result of a restructured reinsurance program, integration costs relating to 21st Century Insurance Group (21st Century) and a litigation charge contributed to the overall increase in the expense ratio.

Net premiums written increased in the three-month period ended June 30, 2008 compared to the same period in 2007, primarily due to continued growth in the Private Client Group, partially offset by reductions in both the aigdirect.com and Agency Auto businesses. The growth in the Private Client Group reflects the execution of a plan to expand its distribution network. Since June 2007, the Private Client Group has expanded its agency network by 23 percent. Additionally, the Private Client Group's net premiums written increased as a result of a restructured reinsurance program which decreased premiums ceded to reinsurers. The decrease in the aigdirect.com and Agency Auto business reflects the effects of planned reductions in these lines as the underlying loss experience has deteriorated.

Year-to-Date Personal Lines Results

Personal Lines operating income decreased in the six-month period ended June 30, 2008 compared to the same period in 2007 due to a deterioration in underwriting performance as reflected by the combined ratio, which increased to 103.2 in the six-month period ended June 30, 2008 compared to 95.0 in the same period in 2007. The loss ratio increased 7.5 points, including an increase in the 2008 accident year loss ratio of 2.2 points due to an increase in the accident year loss ratio for automobile policies. The 2008 accident year loss ratio for automobile policies increased 3.7 points compared to the loss ratio recorded in the six-month period ended June 30, 2007 for the 2007 accident year, due to declining premium rates and increased frequency and severity of losses. Prior year development increased incurred losses by \$65 million in the six-month period ended June 30, 2008 compared to a reduction of \$61 million in the same period in 2007, accounting for 5.3 points of the increase in the loss ratio. The current period adverse loss development on prior years is primarily related to greater than expected bodily injury severity and property damage frequency.

The expense ratio increased 0.7 points in the six-month period ended June 30, 2008 compared to the same period in 2007, primarily due to a change in business mix as the Private Client Group, which carries a higher expense ratio, represented an increased percentage of the Personal Lines division's net premiums written. Also, a decrease to ceding commissions as a result of a restructured reinsurance program, integration costs relating to 21st Century and a litigation charge contributed to the increase in the expense ratio.

Net premiums written increased in the six-month period ended June 30, 2008 compared to the same period in 2007, primarily due to continued growth in the Private Client Group, partially offset by reductions in both the aigdirect.com and Agency Auto businesses. The growth in the Private Client Group reflects the execution of a plan to expand the distribution network. Additionally, the Private Client Group's net premiums written increased as a result of a

restructured reinsurance program which decreased premiums ceded to reinsurers. The decrease in the aigdirect.com and Agency Auto business reflect the effects of planned reductions in these lines as the underlying loss experience has deteriorated.

Quarterly Mortgage Guaranty Results

Mortgage Guaranty's operating loss in the three-month period ended June 30, 2008 increased compared to the same period in 2007 as the deteriorating U.S. residential housing market adversely affected losses incurred for both the domestic first- and second-lien businesses. Historically, a large percentage of reported defaults were "cured" resulting in no loss to UGC. A cure can occur when a borrower brings the mortgage current, refinances the existing mortgage, sells the home and pays off the current balance or enters into a payment plan with the lender to bring the mortgage current. In the current market, loans are less likely to cure, increasing the probability that a defaulted loan will result in a claim payment. UGC has reflected that lower cure probability in its current estimate of unpaid losses resulting in higher loss reserves and an increase in incurred losses. Domestic first- and second-lien losses incurred increased 264 percent and 107 percent respectively, compared to the same period in 2007, resulting in loss ratios of 253.9 and 556.0, respectively, in the three-month period ended June 30, 2008. Increases in domestic losses incurred resulted in an overall loss ratio of 292.0 in the three-month period ended June 30, 2008 compared to 129.9 in the same period in 2007.

Net premiums written increased in the three-month period ended June 30, 2008 compared to the same period in 2007, primarily due to growth in domestic first-lien premiums as a result of the increased use of mortgage insurance for credit enhancement as well as a higher persistency rate. UGC has taken steps to strengthen its underwriting guidelines and increase rates. It also discontinued new production for certain programs in the second-lien business beginning in the fourth quarter of 2006. However, UGC will continue to receive renewal premiums on that portfolio for the life of the loans, estimated to be three to five years, and will continue to be exposed to losses from future defaults.

The expense ratio in the three-month period ended June 30, 2008 was 16.5, down from 22.4 in the same period of 2007 as expenses declined 22 percent. UGC has tightened its monitoring and control over expenses in response to the adverse conditions in the U.S. residential housing market, resulting in the decline in operating expenses and the related expense ratio.

UGC domestic mortgage risk in force totaled \$31.8 billion as of June 30, 2008 and the 60-day delinquency ratio was 4.9 percent (based on number of policies, consistent with mortgage industry practice) compared to domestic

mortgage risk in force of \$26.5 billion and a delinquency ratio of 2.5 percent at June 30, 2007. Approximately 83 percent of the domestic mortgage risk is secured by first-lien, owner-occupied properties.

Year-to-Date Mortgage Guaranty Results

Mortgage Guaranty's operating loss in the six-month period ended June 30, 2008 increased compared to the same period in 2007 as the deteriorating U.S. residential housing market adversely affected losses incurred for both the domestic first- and second-lien businesses. Domestic first- and second-lien losses incurred increased 302 percent and 113 percent respectively, compared to the six-month period ended June 30, 2007, resulting in loss ratios of 229.0 and 500.7, respectively, in the six-month period ended June 30, 2008. Increases in domestic losses incurred resulted in an overall loss ratio of 264.5 in the six-month period ended June 30, 2008 compared to 111.5 in the six-month period ended June 30, 2007.

Net premiums written increased in the six-month period ended June 30, 2008 compared to the same period in 2007, primarily due to growth in domestic first-lien premiums due to the increased use of mortgage insurance for credit enhancement as well as a higher persistency rate.

The expense ratio in the six-month period ended June 30, 2008 was 18.2 percent, down from 22.1 percent in the same period in 2007 as premium growth combined with a 9 percent reduction in expenses resulted in the decline in the expense ratio.

Quarterly Foreign General Insurance Results

Foreign General Insurance operating income decreased in the three-month period ended June 30, 2008 compared to the same period in 2007, primarily due to a decrease in both underwriting profit and net investment income.

Net premiums written increased 15 percent (5 percent in original currency) in the three-month period ended June 30, 2008 compared to the same period in 2007, reflecting growth in commercial and consumer lines driven by new business from both established and new distribution channels, including the late 2007 acquisition of Württembergische und Badische Versicherungs — AG (WüBa) in Germany. Net premiums written for commercial lines increased due to new business, mainly in European markets, and decreases in the use of reinsurance, partially offset by declines in premium rates. Aviation production increased due to improved account retention and increased production in the space aviation business. Net premiums written for the Lloyd's syndicate continued to decline due to rate decreases and increased market competition.

The loss ratio in the three-month period ended June 30, 2008 increased 1.5 points compared to the same period in

2007, primarily due to an increase in severe but non-catastrophe losses and higher loss frequency in the current accident year. Partially offsetting these increases was a 2.1 point loss ratio improvement due to \$67 million of catastrophe losses in the prior year period with no significant catastrophe losses in the current period.

The expense ratio in the three-month period ended June 30, 2008 increased 1.3 points compared to the same period in 2007. This increase reflects the cost of realigning certain legal entities through which Foreign General Insurance operates, and the increased significance of consumer lines of business, which have higher acquisition costs. AIG expects the expense ratio to continue to increase in 2008 due to the cost of realigning certain legal entities through which Foreign General Insurance operates.

Net investment income decreased in the three-month period ended June 30, 2008 compared to the same period in 2007. Mutual fund income was \$67 million lower than the three-month period ended June 30, 2007 reflecting weaker performance in the equity markets in 2008, partially offset by higher interest and dividend income of \$41 million.

Year-to-Date Foreign General Insurance Results

Foreign General Insurance operating income decreased in the six-month period ended June 30, 2008 compared to the same period in 2007, primarily due to decreases in net investment income and net realized capital losses.

Net premiums written increased 18 percent (8 percent in original currency) in the six-month period ended June 30, 2008 compared to the same period in 2007, reflecting strong growth in commercial and consumer lines driven by new business from both established and new distribution channels, including the WüBa acquisition. Net premiums written for commercial lines increased due to new business in the U.K. and Europe and decreases in the use of reinsurance, partially offset by declines in premium rates. Growth in personal accident business in Latin America, Asia and Europe also contributed to the increase. Net premiums written for the Lloyd's syndicate Ascot continued to decline due to rate decreases and increased market competition.

The loss ratio in the six-month period ended June 30, 2008 increased 1.4 points compared to the same period in 2007. Prior accident year development reduced incurred losses by \$16 million and \$68 million in the first six months of 2008 and 2007, respectively, accounting for 0.9 points of the increase. The current accident year loss ratio excluding catastrophe losses increased by 1.6 points primarily due to higher severe but non-catastrophe losses and higher loss frequency. Partially offsetting this increase in loss ratio is \$67 million of catastrophe losses in the prior year period with no significant catastrophe losses in the current period, resulting in a loss ratio decrease of 1.1 points.

The expense ratio in the six-month period ended June 30, 2008 increased 1.4 points compared to the same period in 2007 reflecting the continued cost of realigning certain legal entities through which Foreign General Insurance operates, and the increased significance of consumer lines of business, which have higher acquisition costs.

Net investment income decreased in the six-month period ended June 30, 2008 compared to the same period in 2007. Mutual fund income was \$172 million lower than the six-month period ended June 30, 2007, reflecting weaker performance in the equity markets in 2008, partially offset by higher interest and dividend income of \$70 million.

Reserve for Losses and Loss Expenses

The following table presents the components of the General Insurance gross reserve for losses and loss expenses (loss reserves) by major lines of business on a statutory Annual Statement basis*:

<i>(in millions)</i>	June 30, 2008	December 31, 2007
Other liability occurrence	\$ 21,233	\$ 20,580
Workers compensation	15,234	15,568

* Presented by lines of business pursuant to statutory reporting requirements as prescribed by the National Association of Insurance Commissioners.

AIG's gross reserve for losses and loss expenses represents the accumulation of estimates of ultimate losses, including estimates for incurred but not yet reported reserves (IBNR) and loss expenses. The methods used to determine loss reserve estimates and to establish the resulting reserves are continually reviewed and updated. Any adjustments resulting therefrom are currently reflected in operating income. Because loss reserve estimates are subject to the outcome of future events, changes in estimates are unavoidable given that loss trends vary and time is often required for changes in trends to be recognized and confirmed. Reserve changes that increase previous estimates of ultimate cost are referred to as unfavorable or adverse development or reserve strengthening. Reserve changes that decrease previous estimates of ultimate cost are referred to as favorable development.

Estimates for mortgage guaranty insurance losses and loss adjustment expense reserves are based on notices of mortgage loan delinquencies and estimates of delinquencies that have been incurred but have not been reported by loan servicers, based upon historical reporting trends. Mortgage Guaranty establishes reserves using a percentage of the contractual liability (for each delinquent loan reported) that is based upon past experience regarding certain loan factors such as age of the delinquency, cure rates, dollar amount of the loan and type of mortgage loan. Because mortgage delinquencies and claims payments are affected primarily by macroeconomic events, such as changes in home price appreciation or depreciation, interest rates and unemployment, the determination of the ultimate loss cost requires a high degree of judgment. AIG believes it has provided appropriate reserves for currently delinquent loans. Consistent with industry practice, AIG does not establish a reserve for insured loans that are not currently delinquent, but that may become delinquent in future periods.

At June 30, 2008, General Insurance net loss reserves increased \$3.04 billion from the prior year-end to \$72.33 billion. The net loss reserves represent loss reserves reduced by reinsurance recoverable, net of an allowance for unrecoverable reinsurance and applicable discount for future investment income.

The following table classifies the components of the General Insurance net loss reserve by business unit:

<i>(in millions)</i>	June 30, 2008	December 31, 2007
Commercial Insurance ^(a)	\$48,443	\$47,392
Transatlantic	7,317	6,900
Personal Lines ^(b)	2,448	2,417
Mortgage Guaranty	2,057	1,339
Foreign General Insurance ^(c)	12,066	11,240
Total Net Loss Reserve	\$72,331	\$69,288

(a) At June 30, 2008 and December 31, 2007, Commercial Insurance loss reserves include approximately \$2.89 billion and \$3.13 billion, respectively, (\$3.08 billion and \$3.34 billion, respectively, before discount), related to business written by Commercial Insurance but ceded to American International Reinsurance Company Limited (AIRCO) and reported in AIRCO's statutory filings. Commercial Insurance loss reserves also include approximately \$648 million and \$590 million related to business included in AIUO's statutory filings at June 30, 2008 and December 31, 2007, respectively.

(b) At June 30, 2008 and December 31, 2007, Personal Lines loss reserves include \$1.03 billion and \$894 million, respectively, related to business ceded to Commercial Insurance and reported in Commercial Insurance's statutory filings.

(c) At June 30, 2008 and December 31, 2007, Foreign General Insurance loss reserves include approximately \$2.04 billion and \$3.02 billion, respectively, related to business reported in Commercial Insurance's statutory filings.

The Commercial Insurance net loss reserve is comprised principally of the business of AIG subsidiaries participating in the American Home Assurance Company (American Home)/National Union Fire Insurance Company of Pittsburgh, Pa. (National Union) pool (10 companies) and the surplus lines

pool (Lexington Insurance Company, AIG Excess Liability Insurance Company and Landmark Insurance Company).

Commercial Insurance cedes a quota share percentage of its other liability occurrence and products liability occurrence business to AIRCO. The quota share percentage ceded was 10 percent in the six-month period ended 2008 and 15 percent in 2007 and covered all business written in these years for these lines by participants in the American Home/National Union pool. AIRCO's loss reserves relating to these quota share cessions from Commercial Insurance are recorded on a discounted basis. As of June 30, 2008, AIRCO carried a discount of approximately \$190 million applicable to the \$3.08 billion in undiscounted reserves it assumed from the American Home/National Union pool via this quota share cession. AIRCO also carries approximately \$532 million in net loss reserves relating to Foreign General Insurance business. These reserves are carried on an undiscounted basis.

The companies participating in the American Home/National Union pool have maintained a participation in the business written by AIUO for decades. As of June 30, 2008, these AIUO reserves carried by participants in the American Home/National Union pool totaled approximately \$2.04 billion. The remaining Foreign General Insurance reserves are carried by American International Underwriter Overseas, Ltd. (AIUO), AIRCO, AIG U.K., and other smaller AIG subsidiaries domiciled outside the United States. Statutory filings in the United States by AIG companies reflect all the business written by U.S. domiciled entities only, and therefore exclude business written by AIUO, AIRCO, and all other internationally domiciled subsidiaries. The total reserves carried at June 30, 2008 by AIUO and AIRCO were approximately \$3.63 billion and \$3.42 billion, respectively. AIRCO's \$3.42 billion in total general insurance reserves consist of approximately \$2.89 billion from business assumed from the American Home/National Union pool and an additional \$532 million relating to Foreign General Insurance business.

Discounting of Reserves

At June 30, 2008, AIG's overall General Insurance net loss reserves reflect a loss reserve discount of \$2.48 billion, including tabular and non-tabular calculations. The tabular workers compensation discount is calculated using a 3.5 percent interest rate and the 1979-81 Decennial Mortality Table. The non-tabular workers compensation discount is calculated separately for companies domiciled in New York and Pennsylvania, and follows the statutory regulations for each state. For New York companies, the discount is based on a five percent interest rate and the companies' own payout patterns. For Pennsylvania companies, the statute has specified discount factors for accident years 2001 and prior, which are based on a six percent interest rate and an industry payout pattern. For accident years 2002 and subsequent, the

discount is based on the yield of U.S. Treasury securities ranging from one to twenty years and the companies' own payout patterns, with the future expected payment for each year using the interest rate associated with the corresponding Treasury security yield for that time period. The discount is comprised of the following: \$794 million — tabular discount for workers' compensation in Commercial Insurance; \$1.49 billion — non-tabular discount for workers' compensation in Commercial Insurance; and \$190 million — non-tabular discount for other liability occurrence and products liability occurrence in AIRCO. The total undiscounted workers' compensation loss reserve carried by Commercial Insurance is approximately \$13.5 billion as of June 30, 2008. The other liability occurrence and products liability occurrence business in AIRCO that is assumed from Commercial Insurance is discounted based on the yield of U.S. Treasury securities ranging from one to twenty years and the Commercial Insurance payout pattern for this business. The undiscounted reserves assumed by AIRCO from Commercial Insurance totaled approximately \$3.08 billion at June 30, 2008.

Quarterly Reserving Process

AIG believes that the General Insurance net loss reserves are adequate to cover General Insurance net losses and loss expenses as of June 30, 2008. While AIG regularly reviews the adequacy of established loss reserves, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's loss reserves as of June 30, 2008. In the opinion of management, such adverse development and resulting increase in reserves is not likely to have a material adverse effect on AIG's consolidated financial condition, although it could have a material adverse effect on AIG's consolidated results of operations for an individual reporting period.

The reconciliation of net loss reserves was as follows:

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2008	2007	2008	2007
Net reserve for losses and loss expenses at beginning of period	\$70,507	\$64,034	\$69,288	\$62,630
Foreign exchange effect	193	252	263	214
Losses and loss expenses incurred:				
Current year	8,620	7,334	16,641	14,549
Prior years, other than accretion of discount	93	(120)	(71)	(268)
Prior years, accretion of discount	72	12	176	128
Losses and loss expenses incurred	8,785	7,226	16,746	14,409
Losses and loss expenses paid	7,154	6,315	13,966	12,056
Net reserve for losses and loss expenses at end of period	\$72,331	\$65,197	\$72,331	\$65,197

The following tables summarize development, (favorable) or unfavorable, of incurred losses and loss expenses for prior years (other than accretion of discount):

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2008	2007	2008	2007

2002	18	112
2001 and prior	736	360
Prior years, other than accretion of discount	\$ (71)	\$ (268)

In determining the quarterly loss development from prior accident years, AIG conducts analyses to determine the change in estimated ultimate loss for each accident year for each profit center. For example, if loss emergence for a profit center is different than expected for certain accident years, the actuaries examine the indicated effect such emergence would have on the reserves of that profit center. In some cases, the higher or lower than expected emergence may result in no clear change in the ultimate loss estimate for the accident years in question, and no adjustment would be made to the profit center's reserves for prior accident years. In other cases, the higher or lower than expected emergence may result in a larger change, either favorable or unfavorable, than the difference between the actual and expected loss emergence. Such additional analyses were conducted for each profit center, as appropriate, in the three-month period ended June 30, 2008 to determine the loss development from prior accident years for the three-month period ended June 30, 2008. As part of its quarterly reserving process, AIG also considers notices of claims received with respect to emerging issues, such as those related to the U.S. mortgage and housing market.

2008 Net Loss Development

In the three-month period ended June 30, 2008, net loss development from prior accident years was adverse by approximately \$93 million, excluding approximately \$72 million from accretion of loss reserve discount. The overall adverse development of \$93 million consisted of approximately \$292 million of favorable development from accident years 2004 through 2007 offset by approximately \$385 million of adverse loss development from accident years 2003 and prior. The adverse development from accident years 2003 and prior was primarily related to excess casualty business within Commercial Insurance. The favorable development from accident years 2004 through 2007 included approximately \$80 million of favorable development from business written by Lexington Insurance Company, including Healthcare and Casualty and Program businesses. AIG Executive Liability business contributed approximately \$65 million to the favorable development from accident years 2004 and 2005, relating primarily to D&O. Within Commercial Insurance, the overall adverse development of \$75 million consisted of approximately \$160 million of adverse development relating to excess casualty business and \$50 million of adverse development relating to property business, partially offset by favorable development from D&O, healthcare and other classes. A significant portion of the adverse development relating to excess casualty was related to a variety of latent exposures, including construction defect exposures, product aggregate exposure and pharmaceutical related exposures, as well as a significant number of other large losses primarily from accident years 1998 through 2002. In addition, the loss development assumptions applicable to excess casualty

reserves were modified in the second quarter of 2008 to reflect the adverse experience being observed, and this caused approximately \$90 million of the overall adverse development from accident years 2003 and prior. Excess casualty results for the more recent accident years, i.e. 2004 and subsequent years, has continued to be favorable. AIG's exposure to these latent exposures was reduced after 2002 due to significant changes in policy terms and conditions as well as underwriting guidelines.

In the six-month period ended June 30, 2008, net loss development from prior accident years was favorable by approximately \$71 million, including approximately \$339 million of favorable development relating to loss sensitive business in the first three months of 2008 (which was offset by an equal amount of negative earned premium development), and excluding approximately \$176 million from accretion of loss reserve discount. Excluding both the favorable development relating to loss sensitive business and accretion of loss reserve discount, net loss development from prior accident years in the six-month period ended June 30, 2008, was adverse by approximately \$268 million. The overall favorable development of \$71 million consisted of approximately \$841 million of favorable development from accident years 2004 through 2007 partially offset by approximately \$770 million of adverse loss development from accident years 2003 and prior. Excluding the favorable development from loss sensitive business, the overall adverse development of \$268 million consisted of approximately \$561 million of favorable development from accident years 2004 through 2007 offset by approximately \$829 million of adverse development from accident years 2003 and prior. The adverse development from accident years 2003 and prior was primarily related to excess casualty business within Commercial Insurance. The favorable development from accident years 2004 through 2007 included approximately \$280 million in favorable development from loss sensitive business written by AIG Risk Management, and approximately \$220 million in favorable development from business written by Lexington Insurance Company, including Healthcare, AIG CAT Excess, Casualty and Program businesses. AIG Executive Liability business contributed approximately \$110 million to the favorable development from accident years 2004 and 2005, relating primarily to D&O. The adverse development from accident years 2003 and prior included approximately \$200 million related to claims involving MTBE, a gasoline additive, primarily on excess casualty business within Commercial Insurance from accident years 2000 and prior. In addition, as described above for the three months ended June 30, 2008, the excess casualty adverse developments reflect a variety of other latent claims and large losses, as well as a \$90 million increase resulting from the modification of loss development factors to reflect adverse experience in excess casualty.

2007 Net Loss Development

In the three-month period ended June 30, 2007, net loss development from prior accident years was favorable by approximately \$120 million, including approximately \$18 million of adverse development from the general reinsurance operations of Transatlantic; and excluding approximately \$12 million from accretion of loss reserve discount. Excluding Transatlantic, as well as accretion of discount, net loss development in the three-month period ended June 30, 2007 from prior accident years was favorable by approximately \$138 million. The overall favorable development of \$120 million consisted of approximately \$475 million of favorable development from accident years 2003 through 2006, partially offset by approximately \$355 million of adverse development from accident years 2002 and prior. For the three-month period ended June 30, 2007, most classes of AIG's business continued to experience favorable development for accident years 2003 through 2006. The majority of the adverse development from accident years 2002 and prior was related to developments from excess casualty business within Commercial Insurance and from Transatlantic.

In the six-month period ended June 30, 2007, net loss development from prior accident years was favorable by approximately \$268 million, including approximately \$36 million of adverse development from the general reinsurance operations of Transatlantic; and excluding approximately \$128 million from accretion of loss reserve discount. Excluding Transatlantic, as well as accretion of discount, net loss development in the six-month period ended June 30, 2007 from prior accident years was favorable by approximately \$304 million. The overall favorable development of \$268 million consisted of approximately \$740 million of favorable development from accident years 2003 through 2006, partially offset by approximately \$472 million of adverse development from accident years

2002 and prior. For the six-month period ended June 30, 2007, most classes of AIG's business continued to experience favorable development for accident years 2003 through 2006. The majority of the adverse development from accident years 2002 and prior was related to development from excess casualty business within Commercial Insurance and from Transatlantic.

Asbestos and Environmental Reserves

The estimation of loss reserves relating to asbestos and environmental claims on insurance policies written many years ago is subject to greater uncertainty than other types of claims due to inconsistent court decisions as well as judicial interpretations and legislative actions that in some cases have tended to broaden coverage beyond the original intent of such policies and in others have expanded theories of liability.

As described more fully in the 2007 Annual Report on Form 10-K, AIG's reserves relating to asbestos and environmental claims reflect a comprehensive ground-up analysis. In the six-month period ended June 30, 2008, AIG maintained the ultimate loss estimates for asbestos and environmental claims resulting from the recently completed reserve analyses. A minor amount of adverse incurred loss development pertaining to asbestos was reflected in the six-month period ended June 30, 2008, as presented in the table that follows. This development was primarily attributable to several large defendants, the effect of which was largely offset by one large favorable settlement. A moderate amount of favorable gross incurred loss development pertaining to environmental was reflected in the six-month period ended June 30, 2008, as presented in the table that follows. This development was primarily attributable to recent favorable experience which was fully reinsured, resulting in no favorable net development on environmental net reserves.

A summary of reserve activity, including estimates for applicable IBNR, relating to asbestos and environmental claims separately and combined appears in the following table. The vast majority of such claims arise from policies written in 1984 and prior years. The current environmental policies that AIG underwrites on a claims-made basis have been excluded from the following table:

<i>(in millions)</i>	Six Months Ended June 30,			
	2008		2007	
	Gross	Net	Gross ^(a)	Net
Asbestos:				
Reserve for losses and loss expenses at beginning of year	\$3,864	\$1,454	\$4,523	\$1,889
Losses and loss expenses incurred ^(b)	60	4	10	(25)
Losses and loss expenses paid ^(b)	(383)	(170)	(454)	(268)
Reserve for losses and loss expenses at end of period	\$3,541	\$1,288	\$4,079	\$1,596
Environmental:				
Reserve for losses and loss expenses at beginning of year	\$ 515	\$ 237	\$ 629	\$ 290
Losses and loss expenses incurred ^(b)	(40)	1	—	(1)
Losses and loss expenses paid ^(b)	(25)	(17)	(54)	(31)
Reserve for losses and loss expenses at end of period	\$ 450	\$ 221	\$ 575	\$ 258
Combined:				
Reserve for losses and loss expenses at beginning of year	\$4,379	\$1,691	\$5,152	\$2,179
Losses and loss expenses incurred ^(b)	20	5	10	(26)
Losses and loss expenses paid ^(b)	(408)	(187)	(508)	(299)
Reserve for losses and loss expenses at end of period	\$3,991	\$1,509	\$4,654	\$1,854

(a) Gross amounts were revised from the presentation in prior periods to reflect the inclusion of certain reserves not previously identified as asbestos and environmental related. This revision had no effect on net reserves.

(b) All amounts pertain to policies underwritten in prior years, primarily to policies issued in 1984 and prior.

The gross and net IBNR included in the reserve for losses and loss expenses, relating to asbestos and environmental claims separately and combined, were estimated as follows:

<i>(in millions)</i>	Six Months Ended June 30,			
	2008		2007	
	Gross	Net	Gross*	Net
Asbestos	\$2,256	\$ 997	\$3,068	\$1,279
Environmental	264	117	355	148
Combined	\$2,520	\$1,114	\$3,423	\$1,427

* Gross amounts were revised from the presentation in prior periods to reflect the inclusion of certain reserves not previously identified as asbestos and environmental related. This revision had no effect on net reserves.

A summary of asbestos and environmental claims count activity was as follows:

	Six Months Ended June 30,					
	2008			2007		
	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined
Claims at beginning of year	6,563	7,652	14,215	6,878	9,442	16,320
Claims during year:						
Opened	392	674	1,066	300	695	995
Settled	(97)	(65)	(162)	(66)	(59)	(125)
Dismissed or otherwise resolved	(551)	(1,172)	(1,723)	(544)	(899)	(1,443)
Claims at end of period	6,307	7,089	13,396	6,568	9,179	15,747

Survival Ratios — Asbestos and Environmental

The following table presents AIG's survival ratios for asbestos and environmental claims at June 30, 2008 and 2007. The survival ratio is derived by dividing the current carried loss reserve by the average payments for the three most recent calendar years for these claims. Therefore, the survival ratio is a simplistic measure estimating the number of years it would be before the current ending loss reserves for these claims would be paid off using recent year average payments. The June 30, 2008 survival ratio is lower than the

ratio at June 30, 2007 because the more recent periods included in the rolling average reflect higher claims payments. In addition, AIG's survival ratio for asbestos claims was negatively affected by the favorable settlement described above, as well as several similar settlements during 2007. These settlements reduced gross and net asbestos survival ratios at June 30, 2008 by approximately 1.4 years and 3.0 years, respectively, and reduced gross and net asbestos survival ratios at June 30, 2007 by approximately 1.7 years and 4.1 years, respectively. Many factors, such as aggressive settlement procedures, mix of business and level of coverage

provided, have a significant effect on the amount of asbestos and environmental reserves and payments and the resultant survival ratio. Moreover, as discussed above, the primary basis for AIG's determination of its reserves is not survival ratios, but instead the ground-up and top-down analysis. Thus, caution should be exercised in attempting to determine reserve adequacy for these claims based simply on this survival ratio.

AIG's survival ratios for asbestos and environmental claims, separately and combined were based upon a three-year average payment. These ratios at June 30, 2008 and 2007 were as follows:

	Gross	Net
2008		
Survival ratios:		
Asbestos	5.7	4.3
Environmental	4.5	3.7
Combined	5.5	4.2
2007		
Survival ratios:		
Asbestos	8.6	7.4
Environmental	5.2	4.0
Combined	8.0	6.6

* Gross amounts for 2007 were revised from the presentation in prior periods to reflect the inclusion of certain reserves not previously identified as asbestos and environmental related. This revision had no effect on net reserves.

Operating Review

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services operations offer a wide range of insurance and retirement savings products both domestically and abroad.

AIG's Foreign Life Insurance & Retirement Services operations include insurance and investment-oriented products such as whole and term life, investment linked, universal life and endowments, personal accident and health products; group products including pension, life and health; and fixed and variable annuities. The Foreign Life Insurance & Retirement Services products are sold through independent producers, career agents, financial institutions and direct marketing channels.

AIG's Domestic Life Insurance operations offer a broad range of protection products, such as individual life insurance and group life and health products (including disability income products and payout annuities), which include single premium immediate annuities, structured settlements and terminal funding annuities. The Domestic Life Insurance products are sold through independent producers, career agents and financial institutions and direct marketing channels. Home service operations include an array of life insurance, accident and health and annuity products sold primarily through career agents.

AIG's Domestic Retirement Services operations include group retirement products, individual fixed and variable annuities sold through banks, broker-dealers and exclusive sales representatives, and annuity runoff operations, which include previously acquired "closed blocks" and other fixed and variable annuities largely sold through distribution relationships that have been discontinued.

AIG's Life Insurance & Retirement Services reports its operations through the following major internal reporting units and legal entities:

Foreign Life Insurance & Retirement Services

Japan and Other

- American Life Insurance Company (ALICO)
- AIG Star Life Insurance Co., Ltd. (AIG Star Life)
- AIG Edison Life Insurance Company (AIG Edison Life)

Asia

- American International Assurance Company, Limited, together with American International Assurance Company (Bermuda) Limited (AIA)
- Nan Shan Life Insurance Company, Ltd. (Nan Shan)
- American International Reinsurance Company Limited (AIRCO)
- The Philippine American Life and General Insurance Company (Philamlife)

Domestic Life Insurance

- American General Life Insurance Company (AIG American General)
- The United States Life Insurance Company in the City of New York (USLIFE)
- American General Life and Accident Insurance Company (AGLA)

Domestic Retirement Services

- The Variable Annuity Life Insurance Company (VALIC)
- AIG Annuity Insurance Company (AIG Annuity)
- AIG SunAmerica Life Assurance Company (AIG SunAmerica)

Domestic Retirement Services	(1)	(18)	—	—	—
Total	14%	(19)%	—%	(32)%	—%

The gross insurance in force for Life Insurance & Retirement Services was as follows:

<i>(in millions)</i>	June 30, 2008	December 31, 2007
Foreign*	\$1,438,309	\$ 1,327,251
Domestic	1,014,785	984,794
Total	\$2,453,094	\$ 2,312,045

* Includes an increase of \$45.2 billion related to changes in foreign exchange rates at June 30, 2008.

Disruption in the U.S. residential mortgage and credit markets was the key driver of operating results in the three- and six-month periods ended June 30, 2008 primarily due to significant net realized capital losses resulting from other-than-temporary impairment charges of \$5.2 billion and \$9.6 billion in the three- and six-month periods ended June 30, 2008, respectively, compared to \$324 million and \$716 million in the same periods of 2007. In addition, net investment income and certain products continued to be affected by the volatile markets.

Life Insurance & Retirement Services total revenues in the three- and six-month periods ended June 30, 2008 reflect growth in premiums and other considerations compared to the same periods in 2007, primarily due to strong production

in the Foreign Life Insurance & Retirement Services operations and sales of payout annuities in Domestic Life Insurance. Overall growth in premiums and other considerations was dampened by a continuing shift to investment-oriented products and the suspension in the second quarter of 2007 of new sales on certain products in Japan pending completion of an industry wide review by the tax authorities. This review was finalized in March 2008 and resulted in lower tax deductibility of these products for the policyholder. Although sales of these products have restarted in Japan, it is expected that sales will be at lower than historical levels.

Net investment income decreased in the three- and six-month periods ended June 30, 2008 compared to the same period in 2007 due to significantly lower partnership, yield enhancement and mutual fund income, trading account losses of \$133 million and \$221 million, respectively, in the U.K. associated with certain investment-linked products and increased levels of short-term investments. Policyholder investment income and trading gains and losses (together, policyholder trading gains (losses)) were \$617 million and \$(168) million in the three- and six-month periods ended June 30, 2008, respectively, compared to gains of \$1.1 billion and \$1.9 billion in the same periods in 2007, reflecting equity

market declines. Policyholder trading gains (losses) are offset by a charge to incurred policy losses and benefits expense. Policyholder trading gains (losses) generally reflect the trends in equity markets, principally in Japan and Asia.

The higher net realized capital losses in the three- and six-month periods ended June 30, 2008 compared to the same periods in 2007 were primarily related to severity impairments due to the credit market disruption and foreign exchange losses as a result of the weakening of the dollar against foreign currencies.

In addition to the higher net realized capital losses and lower net investment income noted above, the operating loss for the three- and six-month periods ended June 30, 2008 was unfavorably affected by an increased negative investment spread in Taiwan and changes in actuarial estimates totaling \$31 million in connection with Domestic Retirement Services' variable annuity products. These decreases were partially offset by the favorable effect of foreign exchange rates. Operating loss in the three-month period ended June 30, 2008 included a DAC and SIA benefit of \$212 million related to net realized capital losses compared to a benefit of \$103 million in the same period in 2007. Operating loss in the six-month period ended June 30, 2008 included a DAC and SIA benefit of \$479 million related to net realized capital losses compared to \$114 million in the same period in 2007.

In 2007, operating income included charges of \$25 million and \$62 million for the three- and six-month periods ended June 30, 2007, respectively, related to a regulatory claims review in Japan.

AIG adopted FAS 157 on January 1, 2008 and the most significant effect on the Life Insurance & Retirement Services results was the change in measurement of fair value for embedded policy derivatives. The pre-tax effect of adoption related to embedded policy derivatives was an increase in net realized capital losses of \$155 million as of January 1, 2008, partially offset by a \$47 million DAC benefit related to these losses. The effect of initial adoption was primarily due to an increase in the embedded policy derivative liability valuations resulting from the inclusion of explicit risk margins.

AIG adopted FAS 159 on January 1, 2008 and elected to apply the fair value option to a closed block of single premium variable life business in Japan and for an investment-linked product sold principally in Asia. The adoption of FAS 159 with respect to these fair value elections resulted in a decrease to 2008 opening retained earnings of \$559 million, net of tax. The fair value of the liabilities for these policies totaled \$3.6 billion at June 30, 2008 and is reported in policyholders' contract deposits.

*Foreign Life Insurance & Retirement Services Results***Foreign Life Insurance & Retirement Services results on a sub-product basis were as follows:**

AIG transacts business in most major foreign currencies and therefore premiums and other considerations reported in U.S. dollars vary by volume and from changes in foreign currency translation rates.

The following table summarizes the effect of changes in foreign currency exchange rates on the growth of the Foreign Life Insurance & Retirement Services premiums and other considerations.

	Three Months Ended June 30,		Six Months Ended June 30,	
	2008	2007	2008	2007
Growth in original currency*	7.5%	7.8%	7.1%	6.5%
Foreign exchange effect	10.8	0.9	8.3	1.9
Growth as reported in U.S. dollars	18.3%	8.7%	15.4%	8.4%

* Computed using a constant exchange rate each period.

*Quarterly Japan and Other Results***First year premium, single premium and annuity deposits for Japan and Other were as follows:**

<i>(in millions)</i>	Three Months Ended June 30,		Percentage Increase/ (Decrease)	
	2008	2007	U.S.\$	Original Currency
First year premium	\$ 734	\$ 673	9%	(4)%
Single premium	2,178	2,121	3%	(1)%
Annuity deposits	6,018	4,141	45%	43%

First year premium sales in the three-month period ended June 30, 2008 grew moderately in U.S. dollar terms, but declined on an original currency basis compared to the same period in 2007. First year premium life insurance sales in Japan declined reflecting the continued effect of the suspension of the increasing term products in April 2007 which more than offset strong growth of the more profitable U.S. dollar products in Japan. Personal accident first year premium sales were flat compared to the same period in 2007. Group products sales increased primarily due to pension sales in Brazil and credit life business in the Middle East.

Single premium interest sensitive life insurance sales remained strong in Japan in the three-month period ended June 30, 2008, while guaranteed income bond sales in the U.K. decreased in that period due to sales efforts being focused on the launch of a new variable annuity product. In Japan, a new single premium personal accident and health product was successfully launched during the first quarter of 2008 with the majority of sales coming through banks which were recently deregulated and are now able to sell accident and health products. Group products single premium sales increased substantially with higher production in Brazil, the U.K. and Poland due to the launch of new products and the addition of large group accounts.

Annuity deposits increased in the three-month period ended June 30, 2008 compared to the same period in 2007 as both fixed and variable products performed well. In Japan, fixed annuity deposits increased significantly due to an improved exchange rate environment and volatile equity markets. Net flows for Japan fixed annuities increased from \$165 million in the three-month period ended June 30, 2007 to \$1.2 billion in the three-month period ended June 30, 2008. In the U.K., variable annuity deposits continued to reflect strong growth due to the launch of a new product.

Japan and Other results on a sub-product basis were as follows:

<i>(in millions)</i>	Premiums and Other Considerations	Net Investment Income	Net Realized Capital Gains (Losses)	Total Revenues	Operating Income (Loss)
Three Months Ended June 30, 2008

Individual variable annuities	18	(13)	—	(8)	—
Total	24%	4%	—%	10%	(29)%

Total revenues for Japan and Other in the three-month period ended June 30, 2008 increased compared to the same period in 2007 primarily due to growth in premiums and other considerations, partially offset by higher net realized capital losses. Realized capital losses increased primarily due to higher other-than-temporary impairments of ABS and Japan real estate investment trusts. Net investment income grew modestly in the period as higher interest and dividends more than offset lower partnership and mutual fund income of \$13 million and higher mark to market trading losses of \$119 million related to

certain investment-linked products in the U.K. compared to the same period in 2007.

Operating income declined in the three-month period ended June 30, 2008 compared to the same period in 2007 due to significantly increased realized capital losses and the higher trading losses, partially offset by \$25 million of lower benefit costs in Japan related to the regulatory claims review which negatively affected prior year results, lower benefit costs of \$37 million, net of hedge gains and losses, resulting from an increase in the Japanese equity market and interest rates which

had the effect of reducing policy liabilities carried at fair value under FAS 159 and the positive effect of foreign exchange. During the latter part of the second quarter of 2008, management implemented a previously announced hedging program that is expected to reduce future volatility of the policy liabilities carried at fair value under FAS 159.

Year-to-Date Japan and Other Results

First year premium, single premium and annuity deposits for Japan and Other were as follows:

(in millions)	Six Months Ended June 30,		Percentage Increase/(Decrease)	
	2008	2007	U.S.\$	Original Currency
First year premium	\$1,376	\$1,293	6%	(4)%
Single premium	5,134	4,118	25%	21%
Annuity deposits	11,525	8,212	40%	38%

First year premium sales in the six-month period ended June 30, 2008 grew modestly in U.S. dollar terms, but declined on an original currency basis compared to the same period in 2007. The lower first year premium sales primarily reflect the effect of suspending sales of increasing term products in Japan during the second quarter of last year. Due to the large premium size for the increasing term products, the sales suspension masks the positive underlying growth of

more profitable U.S. dollar products in Japan and other life insurance products in Europe and the Middle East. Personal accident first year premium sales were flat compared to the same period in 2007.

Single premium interest sensitive life insurance sales remained strong in Japan and guaranteed income bond sales in the U.K. were higher than the same period last year, although sales are shifting to a new variable annuity product and that trend is expected to continue for the remainder of the year. A new single premium personal accident and health product launched in Japan during the first quarter of 2008 continues to perform well and sales which started through banks are being expanded to the agency channels.

Annuity deposits increased in the six-month period ended June 30, 2008 compared to the same period in 2007 as both fixed and variable products performed well. In Japan, fixed annuity products improved due to the launch of new products and a favorable exchange rate environment for non-yen denominated products. Net flows for Japan individual fixed annuities increased from \$56 million in the six-month period ended June 30, 2007 to \$1.8 billion in the six-month period ended June 30, 2008. Variable annuity deposit growth in the U.K. was favorably affected by the launch of a new product.

Japan and Other results on a sub-product basis were as follows:

(in millions)	Premiums and Other Considerations	Net Investment Income	Net Realized Capital Gains (Losses)	Total Revenues	Operating Income (Loss)

Total	20%	(27)%	—%	(4)%	(38)%

Total revenues for Japan and Other in the six-month period ended June 30, 2008 decreased compared to the same period in 2007 primarily due to higher net realized capital losses and lower net investment income. Net investment income declined due to lower policyholder trading gains, partnership and mutual fund income as well as mark to market trading losses related to investment-linked products in the U.K. Policyholder trading gains declined to \$176 million for the

six-month period ended June 30, 2008 from \$1.4 billion for the same period in 2007. Policyholder trading gains (losses) are offset by a charge to incurred policy losses and benefits expense. Partnership and mutual fund income for the six-month period ended June 30, 2008 was \$59 million lower than the same period in 2007. Trading account losses in the U.K. on certain investment-linked products were \$221 million for the six-month period ended June 30, 2008

compared to a loss of \$14 million in the same period in 2007. Net realized capital losses grew significantly in the period primarily due to other-than-temporary impairments.

Despite the continued strong growth in the underlying business and the positive effect of foreign exchange, the decline in total revenues resulted in lower operating income for the six-month period ended June 30, 2008 compared to the same period in 2007. Operating income for the six-month period ended June 30, 2008 was favorably affected by lower benefit costs of \$62 million related to the regulatory claims review in Japan, which negatively affected last year's results. Operating income was negatively affected by higher benefit costs of \$43 million, net of hedge gains and losses, resulting from volatility in the Japanese equity market and interest rates which impact variable life fair value liabilities under FAS 159 and lower DAC benefit related to realized capital losses of \$57 million compared to a benefit of \$41 million in the same period in 2007.

Total revenues for Asia in the three-month period ended June 30, 2008 decreased compared to the same period in 2007, primarily due to the negative effect of policyholder trading gains (losses) on net investment income and higher net realized

First year premium sales in the three-month period ended June 30, 2008 grew modestly on a U.S. dollar basis but were flat on an original currency basis compared to the same period in 2007 as the sales focus shifted more to single premium products. In Hong Kong and Singapore, life insurance first year premium sales increased due to promotional campaigns and increased bancassurance sales. However, Taiwan first year life insurance sales declined as the focus has shifted to a newly launched variable annuity product. First year personal accident premiums declined due to increased competition in the direct marketing channel in Korea, which offset positive growth in other parts of Asia. The group products business performed well, particularly in Australia.

Single premium sales in the three-month period ended June 30, 2008 decreased as sales in Taiwan shifted to the new variable annuity product. This decrease was partially offset by strong investment-oriented life insurance sales, particularly in Singapore and Korea and single premium credit life sales in Thailand and Taiwan.

Annuity deposits in the three-month period ended June 30, 2008 rose significantly compared to the same period in 2007 due to the launch of the new variable annuity product in Taiwan.

capital losses, which more than offset the growth in premiums and other considerations. Premiums and other considerations increased in the three-month period ended June 30, 2008 compared to the same period in 2007, despite a continued

trend toward investment-oriented products where only a portion of policy charges are reported as premiums. Personal accident premiums grew despite flat first year premium growth due to a successful retention initiative. Group products premiums grew, reflecting increased first year premiums. Net investment income declined due to policyholder trading losses of \$7 million in 2008 compared to gains of \$415 million in the same period in 2007 and a reduction in partnership and mutual fund income, which was \$44 million lower than the same period in 2007. Net realized capital losses in the three-month period ended June 30, 2008 included higher other-than-temporary impairment charges and higher losses on the fair value of derivatives that do not qualify for hedge accounting treatment under FAS 133 compared to the same period in 2007.

Operating income in the three-month period ended June 30, 2008 decreased compared to the same period in 2007 principally due to higher net realized capital losses and lower net investment income relative to growth in the business. Operating income was also affected by the favorable effect of foreign exchange rates and the unfavorable effect of the increased negative investment spread in Taiwan resulting from lower investment returns.

Year-to-Date Asia Results

First year premium, single premium and annuity deposits for Asia were as follows:

Asia results, presented on a sub-product basis were as follows:

<i>(in millions)</i>	Premiums and Other Considerations	Net Investment Income	Net Realized Capital Gains (Losses)	Total Revenues	Operating Income (Loss)

Total revenues in Asia in the six-month period ended June 30, 2008 decreased compared to the same period in 2007 primarily due to lower net investment income and higher net realized capital losses, which more than offset the growth in premiums and other considerations. Net investment income declined due to policyholder trading losses of \$332 million in

	Six Months Ended June 30,		Percentage Increase/ (Decrease)	
	2008	2007	U.S.\$	Original Currency
<i>(in millions)</i>				
First year premium	\$1,480	\$1,414	5%	2%
Single premium	1,850	1,570	18%	12%
Annuity deposits	666	371	80%	76%

First year premium sales in the six-month period ended June 30, 2008 grew moderately compared to the same period in 2007 as the sales focus shifted more to single premium and annuity products. In Taiwan, life insurance first year premium sales declined as sales shifted to a newly launched variable annuity product. The group products business performed well in Australia, Singapore and Hong Kong.

Single premium sales in the six-month period ended June 30, 2008 grew significantly compared to the same period in 2007 primarily due to investment-oriented life insurance sales, particularly in Singapore, Hong Kong, and Korea, as well as strong credit life sales in Thailand.

Annuity deposits in the six-month period ended June 30, 2008 more than doubled the level reported for the same period in 2007 due to the launch of the new variable annuity product in Taiwan. Deposits in Korea were down in the six-month period ended June 30, 2008 compared to the same period last year due to a recent market shift toward variable products.

2008 compared to gains of \$494 million in 2007 and lower partnership and mutual fund income. Partnership and mutual fund income for the six-month period ended June 30, 2008 was \$184 million lower than the same period in 2007. The higher realized capital losses were primarily due to other-than-temporary impairment of dollar denominated securities

held in Singapore and Taiwan which declined in value due to a weakening U.S. dollar.

Operating income for the six-month period ended June 30, 2008 declined compared to the same period in 2007

Quarterly Domestic Life Insurance Results

* Includes structured settlements, single premium immediate annuities and terminal funding annuities.

Total Domestic Life Insurance revenues decreased in the three-month period ended June 30, 2008 compared to the same period in 2007 due to significantly higher net realized capital losses, partially offset by higher premiums and other considerations. The increase in net realized capital losses was primarily driven by other-than-temporary impairments of ABS related to AIG's securities lending program. See Invested Assets – Securities Lending Activities for further information. Domestic Life Insurance premiums and other considerations increased in the three-month period ended June 30, 2008 compared to the same period in 2007 primarily due to strong payout annuity deposits and growth in life insurance business in force. The growth in payout annuity deposits was driven by structured settlements and terminal funding annuities in both the U.S. and Canada. Net investment income for the three-month period ended June 30, 2008 was consistent with the same period in 2007 despite growth in the underlying business. Net investment income for the three-month period ended June 30, 2008 was affected by lower partnership and other yield enhancement income of \$66 million and reduced overall investment yield from increased levels of short-term investments. Offsetting these items was higher net investment

primarily as a result of lower revenues. Results for the year were also affected by lower operating income in Taiwan due to the increased negative investment spread resulting from lower investment returns.

income due to the phase out of losses related to synthetic fuel production investments (Synfuel) of \$38 million.

Operating income for the three-month period ended June 30, 2008 compared to the same period in 2007 decreased due principally to higher net realized capital losses as described above, partially offset by the growth in the in force block of life insurance and payout annuities and favorable mortality experience in the life insurance business during the quarter. Home service operating income decreased due to higher net realized capital losses partially offset by improved margins on the in-force business. Group life/health operating income increased due to favorable development on the financial institutions credit life run-off block, improved underwriting results on certain product lines and lower DAC amortization costs compared to the same period in 2007. In addition, 2007 operating income was positively affected by a \$15 million litigation accrual release. Operating income during the three-month period ended June 30, 2008 includes a DAC benefit related to realized capital losses of \$17 million compared to a benefit of \$4 million in the same period in 2007.

* Includes structured settlements, single premium immediate annuities and terminal funding annuities.

Total Domestic Life Insurance revenues decreased in the six-month period ended June 30, 2008 compared to the same period in 2007 due to higher net realized capital losses and lower net investment income partially offset by higher premiums and other considerations. The increase in net realized capital losses was primarily driven by other-than-temporary impairments of ABS related to AIG's securities lending program. See Invested Assets – Investments in RMBS, CMBS, CDOs and ABS – Investments in ABS and – Securities Lending Activities for further information. Domestic Life Insurance premiums and other considerations increased in the six-month period ended June 30, 2008 compared to the same period in 2007 primarily due to strong payout annuity deposits and growth in life insurance business in force. The growth in payout annuity deposits was driven by sales of structured settlements and terminal funding annuities in both the U.S. and Canada. Net investment income declined in the six-month period ended June 30, 2008 compared to the same period in 2007 despite growth in the underlying business. Net investment income for the six-month period ended June 30, 2008 was affected by lower partnership and other yield enhancement income of \$102 million and reduced overall investment yield from increased levels of short-term investments. Offsetting these

items was higher net investment income due to the phase out of losses related to Synfuel investments of \$67 million.

Operating income for the six-month period ended June 30, 2008 compared to the same period in 2007 decreased due principally to higher net realized capital losses and the lower net investment income as described above. Partially offsetting these items was the growth in the in force block of life insurance and payout annuities and favorable mortality experience in the life insurance and payout annuities businesses. Home service operating income decreased due to higher net realized capital losses partially offset by improved margins on the in-force business. Group life/health operating income increased due to favorable development on the financial institutions credit life run-off block, improved underwriting results on certain product lines and lower DAC amortization costs compared to the same period in 2007. In addition, 2007 operating income was positively affected by a \$16 million litigation accrual release. Operating income during the six-month period ended June 30, 2008 includes a DAC benefit related to realized capital losses of \$37 million compared to a benefit of \$4 million in the same period in 2007.

* Life insurance sales include periodic premium from new business expected to be collected over a one-year period and unscheduled and single premiums from new and existing policyholders. Sales of group accident and health insurance represent annualized first year premium from new policies. Annuity sales represent deposits from new and existing policyholders.

Domestic Life Insurance periodic premium sales increased 5 percent and 6 percent in the three- and six-month periods ended June 30, 2008, respectively, compared to the same period in 2007 primarily as a result of strong private placement variable universal life sales. The U.S. life insurance market remains highly competitive and Domestic Life's emphasis on maintaining new business margins has negatively affected sales of term and universal life products, although recent enhancements to term products have resulted in an increase in term sales. Group life/health growth was

driven by increased sales of supplemental health and voluntary products. Payout annuities have experienced strong growth from terminal funding and structured settlement sales in both the U.S. and Canada. Home service growth was primarily from increased fixed annuity deposits. Individual fixed and runoff annuities sales and deposits have increased as a result of the current interest rate environment as credited rates offered during the quarter were more competitive with the rates offered by banks on certificates of deposit.

Total revenues and operating income for Domestic Retirement Services declined in the three-month period ended June 30, 2008 compared to the same period in 2007, primarily due to significantly increased net realized capital

losses, lower partnership income of \$170 million and lower yield enhancement income of \$78 million. Net realized capital losses for Domestic Retirement Services increased primarily due to higher other-than-temporary impairment charges of \$2.7 billion in the three-month period ended June 30, 2008 compared to \$144 million in the same period in 2007, primarily driven by severity losses on ABS related to AIG's securities lending program.

Operating income for group retirement products and individual fixed annuities decreased in the three-month period ended June 30, 2008 compared to the same period in 2007, primarily as a result of increased net realized capital losses due to higher other-than-temporary impairment charges, lower

partnership income, lower yield enhancement income and reduced overall investment yield from increased levels of short-term investments. These decreases were partially offset by decreases in DAC amortization and sales inducement costs of \$164 million related to the net realized capital losses compared to \$58 million in the same period in 2007.

Individual variable annuities operating income decreased in the three-month period ended June 30, 2008 compared to the same period in 2007, primarily due to a \$31 million increase in benefit reserves and related DAC amortization adjustment reflecting changes in actuarial estimates and to increased net realized capital losses largely due to higher other-than-temporary impairment charges.

* Primarily represents runoff annuity business sold through discontinued distribution relationships.

Total revenues and operating income for Domestic Retirement Services declined significantly in the six-month period ended June 30, 2008 compared to the same period in 2007 primarily due to significantly increased net realized capital losses and lower partnership and yield enhancement income. Net realized capital losses for Domestic Retirement Services increased primarily due to higher other-than-temporary impairment charges of \$4.8 billion in the six-month period ended June 30, 2008 compared to \$186 million in the same period in 2007.

Both group retirement products and individual fixed annuities operating income in the six-month period ended June 30, 2008 decreased compared to the same period in 2007 primarily as a result of increased net realized capital losses due to higher other-than-temporary impairment charges, lower net investment income due to lower partnership income of

\$289 million, lower yield enhancement income of \$152 million and reduced overall investment yield from increased levels of short term investments. These decreases were partially offset by decreases in DAC amortization and sales inducement costs of \$329 million related to the net realized capital losses compared to \$55 million in the same period in 2007.

Individual variable annuities operating income decreased in the six-month period ended June 30, 2008 compared to the same period in 2007 primarily as a result of increased net realized capital losses principally due to other-than-temporary impairment charges. In addition, benefit reserves and DAC amortization and sales inducement costs increased by a combined \$31 million due to changes in actuarial estimates, offset by decreases in DAC amortization and sales inducement costs of \$56 million related to the net realized capital losses compared to \$6 million in the same period in 2007.

Separate account reserve			54,629	60,554
Total general and separate account reserves			146,096	151,283
Group retirement mutual funds			8,313	7,602
Total reserves and mutual funds			\$154,409	\$158,885

The improvement in individual fixed annuity deposits was due to a steepened yield curve, providing the opportunity to offer higher interest crediting rates than certificates of deposits (CDs) and mutual fund money market rates available at the time. However, beginning in the three-month period ended June 30, 2008, CDs offering more competitive crediting rates than those currently available on fixed annuities have started to slow fixed annuity sales.

Domestic Retirement Services surrenders and other withdrawals decreased in all product lines in the three and six-month periods ended June 30, 2008 compared to the same periods in 2007. In general, surrenders and other withdrawals decreased as a result of the relative lack of attractive alternative investment products. Group retirement surrenders and withdrawals decreased as a result of a few large group mutual fund surrenders in the first quarter of 2007 and a general reduction in second quarter 2008 surrenders.

Domestic Retirement Services reserves by surrender charge category and surrender rates were as follows:

(in millions)	Group Retirement Products*	Individual Fixed Annuities	Individual Variable Annuities
June 30, 2008			
No surrender charge	\$48,399	\$11,465	\$12,288
0% - 2%	2,659	3,519	4,545
Greater than 2% – 4%	3,309	7,325	4,002
Greater than 4%	2,621	26,441	9,524
Non-surrenderable	888	3,327	308
Total reserves	\$57,876	\$52,077	\$30,667
Surrender rates	8.4%	11.8%	12.0%
June 30, 2007			
No surrender charge	\$45,361	\$10,813	\$12,591
0% - 2%	6,734	4,068	5,424
Greater than 2% – 4%	3,872	6,665	5,589
Greater than 4%	3,241	27,182	9,355
Non-surrenderable	877	3,442	92
Total reserves	\$60,085	\$52,170	\$33,051
Surrender rates	10.4%	13.4%	12.8%

* Excludes mutual funds of \$8.3 billion and \$7.6 billion at June 30, 2008 and 2007, respectively.

Surrender rates decreased for all three product lines in the three- and six-month periods ended June 30, 2008 compared to the same periods in 2007. The surrender rate for individual fixed annuities continues to be driven by the yield curve and the general aging of the in-force block. However, less than 23 percent of the individual fixed annuity reserves as of June 30, 2008 were available for surrender without charge.

An increase in the level of surrenders in any of these businesses could accelerate the amortization of DAC and negatively affect fee income earned on assets under management.

Life Insurance & Retirement Services Net Investment Income and Net Realized Capital Gains (Losses)

(a) Includes real estate income, income on non-partnership invested assets, securities lending and Foreign Life Insurance & Retirement Services' equal share of the results of AIG Credit Card Company (Taiwan).

(b) Relates principally to assets held in various trading securities accounts that do not qualify for separate account treatment under AICPA SOP 03-1, "Accounting and Reporting by Insurance Enterprises for Certain Nontraditional Long-Duration Contracts and for Separate Accounts" (SOP 03-1). These amounts are principally offset by an equal change included in incurred policy losses and benefits.

Net investment income decreased \$546 million and \$2.3 billion in the three- and six-month periods ended June 30, 2008 compared to the same periods in 2007, respectively, reflective of the recent market volatility. For the three- and six-month periods ended June 30, 2008, policyholder trading gains (losses) were \$617 million and \$(168) million, respectively, compared to gains of \$1.1 billion and \$1.9 billion in the same period of 2007 reflecting equity market declines in Japan and Asia. In addition, net investment income was negatively affected by

lower yield enhancement income from equity investments, and higher trading account losses of \$119 million and \$207 million for the three- and six-month periods ended June 30, 2008 compared to the same periods in 2007. Domestic Retirement Services held higher balances in cash and short-term investments which negatively affected

investment income on fixed maturity securities. Historically, AIG generated income tax credits as a result of investing in Synfuels related to the partnership income (loss) shown in the table above. Synfuel production ceased effective December 31, 2007.

The components of net realized capital gains (losses) for Life Insurance & Retirement Services were as follows:

(a) See *Invested Assets — Portfolio Review — Other-Than-Temporary Impairments* for additional information.

(b) Includes losses of \$167 million and gains of \$66 million allocated to participating policyholders for the three-month periods ended June 30, 2008 and 2007, respectively, and losses of \$178 million and \$5 million for the six-month periods ended June 30, 2008 and 2007, respectively.

(c) Includes losses of \$12 million and \$143 million for the six-month period ended June 30, 2008 for Domestic Life Insurance and Domestic Retirement Services, respectively, related to the adoption of FAS 157 related to embedded policy derivatives.

Included in net realized capital gains (losses) are gains (losses) on sales of investments, derivative gains (losses) for transactions that did not qualify for hedge accounting treatment under FAS 133, foreign exchange gains and losses, other-than-temporary impairments and the effects of the adoption of FAS 157 further described below.

Foreign Life Insurance & Retirement Services net realized capital losses were significantly higher in the first six months of 2008 compared to the same period in 2007. The increased Foreign Life Insurance & Retirement Services other-than-temporary impairments were primarily driven by

severity losses and foreign currency declines. See *Invested Assets — Portfolio Review* herein for further information. Foreign currency losses of \$170 million and \$193 million in the three and six-month periods ended June 30, 2008, respectively, related primarily to the decline in value of U.S. dollar bonds supporting liabilities denominated in Taiwan dollars, Singapore dollars, Japanese yen and British pounds sterling. Derivatives in the Foreign Life Insurance & Retirement Services operations are primarily used to economically hedge cash flows related to U.S. dollar bonds back to the respective currency of the country, principally in Taiwan, Thailand and Singapore. These derivatives do not

qualify for hedge accounting treatment under FAS 133 and are recorded in net realized capital gains (losses). The corresponding foreign exchange gain or loss with respect to the economically hedged bond is deferred in accumulated other comprehensive income (loss) until the bond is sold, matures or deemed to be other-than-temporarily impaired.

In the three- and six-month periods ended June 30, 2008, the Domestic Life Insurance and Domestic Retirement Services operations incurred higher net realized capital losses primarily due to other-than-temporary impairment charges related to severity. Derivatives in the Domestic Life Insurance operations include affiliated interest rate swaps used to economically hedge cash flows on bonds and option contracts used to economically hedge cash flows on indexed annuity and universal life products. These derivatives do not qualify for hedge accounting treatment under FAS 133 and are recorded in net realized capital gains (losses). The corresponding gain or loss with respect to the economically hedged bond is deferred in accumulated other comprehensive income (loss) until the bond is sold, matures or is deemed to be other-than-temporarily impaired.

The most significant effect of AIG's adoption of FAS 157 was the change in measurement of fair value for embedded policy derivatives. The pre-tax effect of adoption related to embedded policy derivatives was an increase in net realized capital losses of \$155 million as of January 1, 2008. The effect of initial adoption was primarily due to an increase in the embedded policy derivative liability valuations resulting from the inclusion of explicit risk margins.

Deferred Policy Acquisition Costs and Sales Inducement Assets

DAC for Life Insurance & Retirement Services products arises from the deferral of costs that vary with, and are directly related to, the acquisition of new or renewal business. Policy acquisition costs for life insurance products are generally deferred and amortized over the premium paying period in accordance with FAS 60, "Accounting and

Reporting by Insurance Enterprises" (FAS 60). Policy acquisition costs that relate to universal life and investment-type products are generally deferred and amortized, with interest in relation to the incidence of estimated gross profits to be realized over the estimated lives of the contracts in accordance with FAS 97. Value of Business Acquired (VOBA) is determined at the time of acquisition and is reported on the consolidated balance sheet with DAC and amortized over the life of the business, similar to DAC. AIG offers sales inducements to contract holders (bonus interest) on certain annuity and investment contracts. Sales inducements are recognized as part of the liability for policyholders' contract deposits on the consolidated balance sheet and are amortized over the life of the contract similar to DAC. The deferral of acquisition and sales inducement costs increased \$280 million in the six-month period ended June 30, 2008 compared to the same period in 2007 primarily due to higher production in the Foreign Life Insurance operations and Domestic Retirement Services. Total amortization expense increased by \$81 million in the six-month period ended June 30, 2008 compared to the same period in 2007. The current year amortization includes a \$479 million increase to operating income related to net realized capital losses in the first six months of 2008 compared to \$114 million in the same period of 2007 reflecting significantly higher other-than-temporary impairment charges. Annualized amortization expense levels in the first six months of 2008 and 2007 were approximately 11 percent and 12 percent, respectively, of the opening DAC balance.

AIG adopted FAS 159 on January 1, 2008 and elected to apply fair value accounting for an investment-linked product sold principally in Asia. Upon fair value election, all DAC and SIA are written off and there is no further deferral or amortization of DAC and SIA for that product. The amounts of DAC and SIA written off as of January 1, 2008 were \$1.1 billion and \$299 million, respectively.

The major components of the changes in DAC/VOBA and SIA were as follows:

(in millions)	Six Months Ended June 30,					
	2008			2007		
	DAC/VOBA	SIA	Total	DAC/VOBA	SIA	Total

* In 2008, primarily represents the cumulative effect of adoption of FAS 159. In 2007, primarily represents the cumulative effect of adoption of SOP 05-1.

As AIG operates in various global markets, the estimated gross profits used to amortize DAC, VOBA and SIA are subject to differing market returns and interest rate environments in any single period. The combination of market returns and interest rates may lead to acceleration of amortization in some products and regions and simultaneous deceleration of amortization in other products and regions.

DAC, VOBA and SIA for insurance-oriented, investment-oriented and retirement services products are reviewed for recoverability, which involves estimating the future profitability of current business. This review involves significant management judgment. If actual future profitability is substantially lower than estimated, AIG's DAC, VOBA and SIA may be subject to an impairment

charge and AIG's results of operations could be significantly affected in future periods.

Future Policy Benefit Reserves

Periodically, the net benefit reserves (policy benefit reserves less DAC) established for Life Insurance & Retirement Services companies are tested to ensure that, including consideration of future expected premium payments, they are adequate to provide for future policyholder benefit obligations. The assumptions used to perform the tests are current best-estimate assumptions as to policyholder mortality, morbidity, terminations, company maintenance expenses and invested asset returns. For long duration traditional business, a "lock-in" principle applies, whereby the assumptions used to calculate the benefit reserves and DAC are set when a policy is issued and do not change with changes in actual experience. These assumptions include margins for adverse deviation in the event that actual experience might deviate from these assumptions. For business in force outside of North America, 46 percent of total policyholder benefit liabilities at June 30, 2008 represent traditional business where the lock-in principle applies. In most foreign locations, various guarantees are embedded in policies in force that may remain applicable for many decades into the future.

As experience changes over time, the best-estimate assumptions are updated to reflect observed changes. Because of the long-term nature of many of AIG's liabilities subject to the lock-in principle, small changes in certain of the assumptions may cause large changes in the degree of reserve adequacy. In particular, changes in estimates of future invested asset return assumptions have a large effect on the degree of reserve adequacy.

Taiwan

Beginning in 2000, the yield available on Taiwanese 10-year government bonds dropped from approximately 6 percent to

2.7 percent at June 30, 2008. Yields on most other invested assets have correspondingly dropped over the same period. Current sales are focused on products such as:

- variable separate account products which do not contain interest rate guarantees,
- participating products which contain very low implied interest rate guarantees, and
- accident and health policies and riders.

In developing the reserve adequacy analysis for Nan Shan, several key best-estimate assumptions have been made:

- Observed historical mortality improvement trends have been projected to 2014;
- Morbidity, expense and termination rates have been updated to reflect recent experience;
- Taiwan government bond rates are expected to remain at current levels for 10 years and gradually increase to best-estimate assumptions of a market consensus view of long-term interest rate expectations;
- Foreign assets are assumed to comprise 35 percent of invested assets, resulting in a composite long-term investment assumption of approximately 4.8 percent; and
- The current practice permitted in Taiwan of offsetting positive mortality experience with negative interest margins, thus eliminating the need for mortality dividends, will continue.

Future results of the reserve adequacy tests will involve significant management judgment as to mortality, morbidity, expense and termination rates and investment yields. Adverse changes in these assumptions could accelerate DAC amortization and necessitate reserve strengthening.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance.

Financial Services Results

Financial Services results were as follows:

(in millions)	Three Months Ended June 30,		Percentage Increase/ (Decrease)	Six Months Ended June 30,		Percentage Increase/ (Decrease)
	2008	2007		2008	2007

(a) Revenues are shown net of interest expense of \$1.2 billion and \$805 million in the three-month periods ended June 30, 2008 and 2007, respectively, and \$1.7 billion and \$1.9 billion for the six-month periods ended June 30, 2008 and 2007, respectively. In the three- and six-month periods ended June 30, 2008, both revenues and operating income (loss) include unrealized market valuation losses of \$5.6 billion and \$14.7 billion, respectively, on AIGFP's super senior credit default swap portfolio.

(b) The three-month and six-month periods ended June 30, 2007 included pre-tax charges of \$50 million and \$178 million, respectively, in connection with domestic Consumer Finance's mortgage banking activities. Based on a current evaluation of the estimated cost of implementing the Supervisory Agreement entered into with the OTS, partial reversals of these prior year charges included in the three- and six-month periods ended June 30, 2008 were \$25 million and \$43 million, respectively.

Financial Services reported operating losses in the three- and six-month periods ended June 30, 2008 compared to operating income in the same periods in 2007, primarily due to unrealized market valuation losses of \$5.6 billion and \$14.7 billion in the three- and six-month periods ended June 30, 2008, respectively, on AIGFP's super senior credit default swap portfolio, the remaining operating loss resulting from the change in credit spreads on AIGFP's other assets and liabilities and a decline in operating income for AGF. AGF's operating income declined in the three- and six-month periods ended June 30, 2008 compared to the same periods in 2007 primarily due to increases in the provision for finance receivable losses and unfavorable variances related to derivatives that economically hedge AGF debt. In addition, in the three months ended June 30, 2008, AGF recorded a pre-tax charge of \$27 million resulting from AGF's decision to cease its wholesale originations.

ILFC generated strong operating income growth in the three- and six-month periods ended June 30, 2008 compared to the same periods in 2007, driven to a large extent by a larger aircraft fleet, higher lease rates and higher utilization and lower composite borrowing rates.

Aircraft Leasing

Aircraft Leasing operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to foreign and domestic airlines.

Revenues also result from the remarketing of commercial aircraft for ILFC's own account, and remarketing and fleet management services for airlines and financial institutions. ILFC finances its aircraft purchases primarily through the issuance of debt instruments. ILFC economically hedges part of its floating rate and substantially all of its foreign currency denominated debt using interest rate and foreign currency derivatives. Starting in the second quarter of 2007, ILFC began applying hedge accounting to most of its derivatives. The composite borrowing rates, which include the effect of derivatives, at June 30, 2008 and 2007 were 4.74 percent and 5.25 percent, respectively.

ILFC typically contracts to re-lease aircraft before the end of the existing lease term. For aircraft returned before the end of the lease term, ILFC has generally been able to re-lease such aircraft within two to six months of their return. As a lessor, ILFC considers an aircraft "idle" or "off lease" when the aircraft is not subject to a signed lease agreement or signed letter of intent. During the three-month period ended June 30, 2008, 16 planes were returned to ILFC by bankrupt lessees. As of July 31, 2008, ILFC has leased all of the 16 aircraft.

Quarterly Aircraft Leasing Results

ILFC's operating income increased in the three-month period ended June 30, 2008 compared to the same period in 2007. Rental revenues increased by \$130 million or 11 percent,

driven by a larger aircraft fleet, higher lease rates and higher utilization. As of June 30, 2008, 947 aircraft in ILFC's fleet were subject to operating leases compared to 894 aircraft as of June 30, 2007. ILFC had no aircraft off lease at July 31, 2008. Flight equipment marketing revenues increased by \$26 million in the three-month period ended June 30, 2008 compared to the same period in 2007 due to an increase in aircraft sales. Interest expense decreased by \$41 million in the three-month period ended June 30, 2008 compared to the same period in 2007 as a result of lower short-term interest rates. The increases in revenues were partially offset by an increase in depreciation and a credit value adjustment on derivatives. Depreciation expense increased by \$30 million, or 7 percent, in line with the increase in the size of the aircraft fleet. In the three-month period ended June 30, 2008 and 2007, the gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses, were \$(15) million and \$24 million, respectively, in both revenues and operating income. The net derivative loss for the three-month period ended June 30, 2008 includes the effect of changes in AIG's credit spreads of \$11 million.

Year-to-Date Aircraft Leasing Results

ILFC's operating income increased in the six-month period ended June 30, 2008 compared to the same period in 2007. Rental revenues increased by \$251 million or 11 percent, driven by a larger aircraft fleet, higher lease rates and higher utilization. As of June 30, 2008, 947 aircraft in ILFC's fleet were subject to operating leases compared to 894 aircraft as of June 30, 2007. ILFC had no aircraft off lease at July 31, 2008, and all of the new aircraft scheduled for delivery through 2009 have been leased. Flight equipment marketing revenues increased by \$34 million in the six-month period ended June 30, 2008 compared to the same period in 2007 due to an increase in aircraft sales. Interest expense decreased by \$30 million in the six-month period ended June 30, 2008, compared to the same period in 2007, as a result of lower short-term interest rates. The increases in revenues were partially offset by an increase in depreciation and a credit value adjustment on derivatives as a result of the adoption of FAS 157. Depreciation expense increased by \$75 million, or 9 percent, in line with the increase in the size of the aircraft fleet. In the six-month period ended June 30, 2008 and 2007, the gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses, were \$(63) million and \$(13) million, respectively, in both revenues and operating income. The net derivative loss for the six-month period ended June 30, 2008 includes the effect of changes in AIG's credit spreads of \$51 million, of which \$12 million represents the transition amount from the adoption of FAS 157.

Capital Markets

Capital Markets represents the operations of AIGFP, which engages as principal in a wide variety of financial transactions, including standard and customized financial products involving commodities, credit, currencies, energy, equities and rates. The credit products include credit protection written through credit default swaps on super senior risk tranches of diversified pools of loans and debt securities. AIGFP also invests in a diversified portfolio of securities and principal investments and engages in borrowing activities involving the issuance of standard and structured notes and other securities, and entering into GIAs.

As Capital Markets is a transaction-oriented operation, current and past revenues and operating results may not provide a basis for predicting future performance. Through 2007, AIG's Capital Markets operations derived a significant portion of their revenues from hedged financial positions entered into in connection with counterparty transactions. AIGFP also participates as a dealer in a wide variety of financial derivatives transactions. Revenues and operating income of the Capital Markets operations and the percentage change in these amounts for any given period are significantly affected by changes in the fair value of AIGFP's assets and liabilities and by the number, size and profitability of transactions entered into during that period relative to those entered into during the prior period. Generally, the realization of transaction revenues as measured by the receipt of funds is not a significant reporting event as the gain or loss on AIGFP's trading transactions is currently reflected in operating income as the fair values change from period to period.

AIGFP's products generally require sophisticated models and significant management assumptions to determine fair values and, particularly during times of market disruption, the absence of observable market data can result in fair values at any given balance sheet date that are not indicative of the ultimate settlement values of the products.

Quarterly Capital Markets Results

Capital Markets reported an operating loss in the three-month period ended June 30, 2008 compared to operating income in the same period of 2007, primarily due to unrealized market valuation losses related to AIGFP's super senior credit default swap portfolio principally written on multi-sector CDOs. Financial market conditions during the second quarter of 2008 were characterized by widening credit spreads.

In addition to writing credit protection on the super senior risk layer on designated portfolios of loans or debt securities, AIGFP also wrote protection on tranches below the super senior risk layer. At June 30, 2008, the net notional amount of the credit default swaps in the regulatory capital relief portfolio written on tranches below the super senior

risk layer was \$5.8 billion, with an estimated fair value loss of \$171 million.

At June 30, 2008, the notional amount, fair value and unrealized market valuation loss of the AIGFP super senior credit default swap portfolio, including certain regulatory capital relief transactions, by asset class were as follows:

(in millions)	Notional Amount	Fair Value Loss at June 30, 2008	Unrealized Market Valuation Loss (Gain)	
			Three Months Ended June 30, 2008 ^(a)	Six Months Ended June 30, 2008 ^(a)
Regulatory Capital: ^(b)				
Corporate loans	\$172,717	\$ —	\$ —	\$ —
Prime residential mortgages	132,612	—	—	—
Other ^{(c)(d)}	1,619	125	125	125
Total	306,948	125	125	125
Arbitrage:				
Multi-sector CDOs ^(e)	80,301	24,785	5,569	13,606
Corporate debt/CLOs	53,767	996	(126)	770
Total	134,068	25,781	5,443	14,376
Mezzanine tranches ^(f)	5,824	171	(3)	171
Total	\$446,840	\$ 26,077 ^(g)	\$5,565	\$14,672

(a) Includes credit valuation adjustment gains of \$44 million and \$109 million, respectively, for the three- and six-month periods ended June 30, 2008.

(b) Represents predominantly transactions written to facilitate regulatory capital relief.

(c) Represents transactions where AIGFP believes the counterparties are no longer using the transactions to obtain regulatory capital relief.

(d) During the second quarter of 2008, a European RMBS regulatory capital relief transaction with a notional amount of \$1.6 billion was not terminated as expected when it no longer provided regulatory capital relief to the counterparty.

(e) Approximately \$57.8 billion in net notional amount includes some exposure to U.S. sub-prime mortgages and approximately \$9.6 billion in net notional amount includes CDOs of CMBS.

(f) Represents credit default swaps written by AIGFP on tranches below super senior on certain regulatory capital relief trades.

(g) Fair value amounts are shown before the effects of counterparty netting adjustments.

During the second quarter of 2008, AIGFP implemented further refinements to the cash flow waterfall used by the BET model and the assumptions used therein. These refinements reflected the ability of a CDO to use principal proceeds to cover interest payment obligations on lower-rated tranches, the ability of a CDO to use principal proceeds to cure a breach of an overcollateralization test, the ability of a CDO to amortize certain senior CDO tranches on a pro-rata or sequential basis and the preferential payment of management fees. To the extent there is a lag in the prices provided by the collateral managers, AIG refines those prices by rolling them forward to the end of the quarter using prices provided by a third party pricing service. The net effect of these refinements was an incremental unrealized market valuation loss of \$342 million. Refinements made during the first quarter of 2008 had only a de minimus effect on the unrealized market valuation loss.

During the three months ended June 30, 2008, AIGFP issued new 2a-7 Puts on the super senior security issued by a CDO of AAA-rated commercial mortgage-backed securities (CMBS) pursuant to a facility that was entered into in 2005. The terms of the facility required AIGFP to issue such options up to a notional amount of \$7.5 billion. Approximately \$2.1 billion were issued in November 2007 with the remainder issued in June 2008. Under the terms of the put options, AIGFP is required to purchase the referenced super senior obligations in the event of a failed remarketing of those securities. Upon the exercise of the put options, the counterparty will provide funding to AIGFP to purchase and hold the referenced super senior obligations for a period ranging from three to six years. At this time, AIGFP is not party to any commitments to enter into any new 2a-7 Puts. Included in the unrealized market valuation loss of the super senior credit default swap portfolio for the second quarter of 2008 was a loss of \$810 million resulting from the change in fair value of these newly issued 2a-7 Puts.

In May 2008, AIGFP extinguished its obligations with respect to a credit default swap by purchasing the protected CDO security for \$103 million, its principal amount outstanding related to this obligation. Additionally, AIGFP purchased \$682 million of other super senior CDO securities in connection with 2a-7 Puts. Upon purchase, these securities were included in AIGFP's trading portfolio at their fair value. Approximately \$67 million of the cumulative unrealized market valuation loss previously recognized on these derivatives as of March 31, 2008 was realized as a result of these purchases.

The change in fair value of AIGFP's credit default swaps was caused by the significant widening in spreads and the downgrades of RMBS and CDO securities by rating agencies in the six-month period ended June 30, 2008 driven by the credit concerns resulting from U.S. residential mortgages, the severe liquidity crisis affecting the markets and the effects of rating agency downgrades on structured securities.

Capital markets net operating loss for the three-month period ended June 30, 2008 includes a net loss of \$474 million representing the effect of changes in credit spreads on the valuation of AIGFP's assets and liabilities, including \$44 million of gains reflected in the unrealized market valuation loss on super senior credit default swaps. Losses of \$362 million on the assets were primarily due to continued significant widening of credit spreads on CDOs and ABS products, which represent a significant portion of AIGFP's investment portfolio. While historically AIG's credit spreads and those on its assets moved in a similar fashion, that relationship did not exist in the second quarter of 2008. Credit spreads on the ABS and CDO investments widened significantly more than the widening in AIG's credit spreads. Furthermore, while AIG's credit spreads increased during the second quarter of 2008, the credit valuation adjustment on its

liabilities decreased due to a decline in AIGFP's outstanding debt obligations and the shortened maturity of its liabilities.

The following table presents AIGFP's credit spread gains (losses) for the three-month period ended June 30, 2008 (excluding intercompany transactions):

(in millions)

Counterparty Credit Spread Sensitivity on Assets		AIG Inc.'s Own Credit Spread Sensitivity on Liabilities	
Trading securities	\$ (503)	Term notes	\$ (79)
Loans and other assets	(4)	Hybrid term notes	(47)
Derivative assets	145	GIA's	(84)
		Other liabilities	(2)
		Derivative liabilities*	100
Decrease in assets	\$ (362)	Increase in liabilities	\$ (112)
Net pre-tax decrease to other income	\$ (474)		

* Includes super senior CDS portfolio

During 2008, AIGFP's revenues from certain products have declined, in part, as a consequence of the continued disruption in the credit markets, the general decline in liquidity in the marketplace, and AIGFP's efforts to manage its liquidity. Furthermore, AIGFP has not been able to replace revenues previously generated from certain structured tax transactions that were terminated or matured at the end of 2007 and early 2008.

The most significant component of Capital Markets operating expenses is compensation, which was \$155 million and \$153 million in the three-month periods ended June 30, 2008 and 2007, respectively. The amount of compensation was not affected by gains and losses arising from derivatives not qualifying for hedge accounting treatment under FAS 133. In the first quarter of 2008, AIGFP established an employee retention plan, which guarantees a broad group of AIGFP's employees and consultants a minimum level of compensation for each of the 2008 and 2009 compensation years, subject to mandatory partial deferral which, in certain circumstances, will be indexed to the price of AIG stock. The deferred amounts may be reduced in the event of losses prior to payment. The expense related to the plan is being recognized over the vesting period, beginning in the first quarter of 2008.

AIGFP recognized a gain of \$196 million in the three-month period ended June 30, 2007 on hybrid financial instruments for which it applied the fair value option under FAS 155, "Accounting for Certain Hybrid Financial Instruments — an amendment of FASB Statements No. 133 and 140" (FAS 155). These amounts were largely offset by

gains and losses on economic hedge positions also reflected in AIGFP's operating income or loss.

Year-to-Date Capital Markets Results

Capital Markets reported an increased operating loss in the six-month period ended June 30, 2008 compared to the operating loss in the same period of 2007, primarily due to unrealized market valuation losses related to AIGFP's super senior credit default swap portfolio principally written on multi-sector CDOs. Financial market conditions in the six-month period ended June 30, 2008 were characterized by widening credit spreads and declining interest rates.

The net loss recognized for the six-month period ended June 30, 2007 included a \$166 million reduction in fair value of certain derivatives that are an integral part of, and economically hedge, the structured transactions potentially affected by the proposed guidance by the U.S. Treasury Department affecting the ability to claim foreign tax credits.

Effective January 1, 2008, AIGFP adopted FAS 157. The most significant effect of adopting FAS 157 was a change in the valuation methodologies for hybrid financial instruments and derivative liabilities (both freestanding and embedded) historically carried at fair value. The changes were primarily to incorporate AIGFP's own credit risk, when appropriate, in the fair value measurements.

Effective January 1, 2008, AIGFP also elected to apply the fair value option under FAS 159 to all eligible assets and liabilities, other than equity method investments and trade receivables and trade payables. Electing the fair value option allows AIGFP to more closely align its earnings with the economics of its transactions by recognizing the change in fair value of its derivatives and the offsetting change in fair value of the assets and liabilities being hedged concurrently through earnings.

Capital Markets net operating loss for the six-month period ended June 30, 2008 includes an increase to pre-tax earnings of \$2.5 billion attributable to changes in AIG's credit spreads, including \$109 million of gains reflected in the unrealized market valuation loss on super senior credit default swaps, which were offset by the effect of changes in counterparty credit spreads on assets measured at fair value of \$3.0 billion. Included in the six-month period ended June 30, 2008 net operating loss is the transition amount of \$291 million related to the adoption of FAS 157 and FAS 159, as well as a credit valuation adjustment gain of \$193 million for derivatives AIGFP entered into with other AIG entities, which is eliminated in consolidation.

The following table presents AIGFP's credit spread gains (losses) for the six-month period ended June 30, 2008 (excluding intercompany transactions):

(in millions)

Counterparty Credit Spread Sensitivity on Assets		AIG Inc.'s Own Credit Spread Sensitivity on Liabilities	
Trading securities	\$ (2,651)	Term notes	\$ 182
Loans and other assets	(28)	Hybrid term notes	615
Derivative assets	(303)	GIA's	1,072
		Other liabilities	28
		Derivative liabilities*	639
Decrease in assets	\$ (2,982)	Decrease in liabilities	\$ 2,536
Net pre-tax decrease to other income	\$ (446)		

* Includes super senior CDS portfolio

AIGFP recognized a gain of \$30 million in the six-month period ended June 30, 2007 on hybrid financial instruments for which it applied the fair value option under FAS 155. These amounts were largely offset by gains and losses on economic hedge positions also reflected in AIGFP's operating income or loss.

Capital Markets compensation expense was \$298 million and \$276 million in the six-month periods ended June 30, 2008 and 2007, respectively. The amount of compensation was not affected by gains and losses arising from derivatives not qualifying for hedge accounting treatment under FAS 133.

Consumer Finance

AIG's Consumer Finance operations in North America are principally conducted through AGF. AGF derives most of its revenues from finance charges assessed on outstanding real estate loans, secured and unsecured non-real estate loans and retail sales finance receivables and credit-related insurance.

Effective February 29, 2008, AGF purchased a portion of Equity One, Inc.'s consumer branch finance receivable portfolio consisting of \$1.0 billion of real estate loans, \$290 million of non-real estate loans, and \$156 million of retail sales finance receivables.

AIG's foreign consumer finance operations are principally conducted through AIG Consumer Finance Group, Inc. (AIGCFG). AIGCFG operates primarily in emerging and developing markets. AIGCFG has operations in Argentina, China, Hong Kong, Mexico, Philippines, Poland, Taiwan, Thailand, India and Colombia. In April 2008, AIGCFG decided to sell or liquidate its existing operations in Taiwan.

Certain of the AIGCFG operations are partly or wholly owned by life insurance subsidiaries of AIG. Accordingly, the financial results of those companies are allocated between Financial Services and Life Insurance & Retirement Services according to their ownership percentages. While products

vary by market, the businesses generally provide credit cards, unsecured and secured non-real estate loans, term deposits, savings accounts, retail sales finance and real estate loans. AIGCFG originates finance receivables through its branches and direct solicitation. AIGCFG also originates finance receivables indirectly through relationships with retailers, auto dealers, and independent agents.

Quarterly Consumer Finance Results

Consumer Finance operating income decreased in the three-month period ended June 30, 2008 compared to the same period in 2007. Operating income from the domestic consumer finance operations, which include the operations of AGF and AIG Federal Savings Bank, decreased by \$115 million in the three-month period ended June 30, 2008 compared to the same period in 2007. In the three-month period ended June 30, 2007, domestic results were adversely affected by the weakening housing market, which resulted in lower originations of real estate loans as well as the additional \$50 million charge relating to the estimated cost of implementing the Supervisory Agreement entered into with the OTS.

AGF's revenues increased \$29 million or 4 percent during the three-month period ended June 30, 2008 compared to the same period in 2007. Revenues from AGF's finance receivables benefited from the \$1.5 billion finance receivable purchase in first quarter 2008, but were partially offset by reduced residential mortgage originations reflecting the slower U.S. housing market. Revenues from AGF's mortgage banking activities increased \$55 million during the three-month period ended June 30, 2008 compared to the same period in 2007 (which included the second quarter 2007 charge of \$50 million related to the Supervisory Agreement). Based on a current evaluation of the estimated cost of implementing the Supervisory Agreement entered into with the OTS, a partial reversal of \$25 million of these prior year charges was recorded in the second quarter of 2008.

During 2007 and the six months ended June 30, 2008, the U.S. residential real estate and credit markets experienced significant turmoil as housing prices softened, unemployment increased, consumer delinquencies increased, and credit availability contracted and became more expensive for consumers and financial institutions. These market developments are reflected in AGF's decline in operating income in 2007 and 2008. AGF's operating income declined in the three-month period ended June 30, 2008 compared to the same period in 2007 primarily due to increases in the provision for finance receivable loss of \$153 million and unfavorable variances related to derivatives that economically hedge AGF debt. During the three-month period ended June 30, 2008, AGF recorded a net gain of \$5 million on its derivatives that did not qualify for hedge accounting under FAS 133, compared to a net gain of \$17 million in the same period in 2007. The net derivative

gain for the three-month period ended June 30, 2008 reflected the effect of changes in AIG's credit spreads. AGF's operating income also reflected a pre-tax charge of \$27 million resulting from AGF's decision to cease its wholesale originations.

AGF's net finance receivables totaled \$26.5 billion at June 30, 2008, an increase of approximately \$1.6 billion compared to the prior year period, including the purchase of \$1.5 billion of finance receivables from Equity One, Inc. on February 29, 2008. The increase in the net finance receivables resulted in a similar increase in revenues generated from these assets.

Revenues from the foreign consumer finance operations increased by 50 percent in the three-month period ended June 30, 2008 compared to the same period in 2007. Loan growth, particularly in Poland, Mexico and Latin America, was the primary driver of the increased revenues. In addition, revenues from recently acquired businesses in India and Thailand contributed to the increase. The increase in revenues was more than offset by higher expenses associated with branch expansions, acquisition activities and product promotion campaigns.

Year-to-Date Consumer Finance Results

Consumer Finance operating income decreased in the six-month period ended June 30, 2008 compared to the same period in 2007. Operating income from the domestic consumer finance operations, which include the operations of AGF and AIG Federal Savings Bank, decreased by \$190 million in the six-month period ended June 30, 2008 compared to the same period in 2007. In the six-month period ended June 30, 2007, domestic results were adversely affected by the weakening housing market, which resulted in lower originations of real estate loans as well as the \$178 million charge relating to the estimated cost of implementing the Supervisory Agreement entered into with the OTS.

AGF's revenues increased \$52 million or 4 percent during the six-month period ended June 30, 2008 compared to the same period in 2007. Revenues from AGF's finance receivables benefited from the \$1.5 billion finance receivable purchase in first quarter 2008, but were partially offset by reduced residential mortgage originations reflecting the slower U.S. housing market. Revenues from AGF's mortgage banking activities increased \$165 million during the six-month period ended June 30, 2008 compared to the same period in 2007 (which included a charge of \$178 million related to the Supervisory Agreement in the six-month period ended June 30, 2007). Prior year charges of \$43 million were reversed in the six months ended June 30, 2008, related to the Supervisory Agreement. The six-month period ended June 30, 2007 included a recovery of \$65 million from a favorable out of court settlement.

AGF's operating income declined in the six-month period ended June 30, 2008 compared to the same period in 2007 primarily due to increases in the provision for finance receivable loss of \$273 million and unfavorable variances related to derivatives that economically hedge AGF debt. During the six-month period ended June 30, 2008, AGF recorded a net loss of \$38 million on its derivatives that did not qualify for hedge accounting under FAS 133, including the related foreign exchange losses, compared to a net loss of \$19 million in the same period in 2007. The net derivative loss for the six-month period ended June 30, 2008 includes the effect of changes in AIG's credit spreads amounting to \$34 million, of which \$13 million represents the transition amount from the adoption of FAS 157. AGF's operating income also reflected a pre-tax charge of \$27 million resulting from AGF's decision to cease its wholesale originations.

Revenues from the foreign consumer finance operations increased by 45 percent in the six-month period ended June 30, 2008 compared to the same period in 2007. Loan growth, particularly in Poland, Mexico and Latin America, was the primary driver of the increased revenues. In addition, revenues from recently acquired businesses in India and Thailand contributed to the increase. The increase in revenues was more than offset by higher expenses associated with branch expansions, acquisition activities and product promotion campaigns.

Credit Quality of Finance Receivables

The overall credit quality of AGF's finance receivables portfolio deteriorated during the six-month period ended June 30, 2008 due to negative economic fundamentals, the aging of the real estate loan portfolio and a higher proportion of non-real estate loans and retail sales finance receivables.

At June 30, 2008, the 60-day delinquency rate for the entire portfolio increased by 138 basis points to 3.56 percent compared to the same period in 2007, while the 60-day delinquency rate for the real estate loans increased by 155 basis points to 3.50 percent. For the three-month period ended June 30, 2008, AGF's net charge-off rate increased to 1.73 percent compared to 1.02 percent for the same period in 2007 and for the six-month period ended June 30, 2008 increased to 1.64 percent compared to 1.00 percent for the same period in 2007.

AGF's allowance for finance receivable losses as a percentage of outstanding receivables was 3.02 percent at June 30, 2008 compared to 2.04 percent at June 30, 2007.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products. These services and products are offered to individuals, pension funds and institutions (including AIG subsidiaries)

globally through AIG's Spread-Based Investment business, Institutional Asset Management, and Brokerage Services and Mutual Funds business. Also included in Asset Management operations are the results of certain SunAmerica sponsored partnership investments.

Revenues and operating income (loss) for Asset Management are affected by the general conditions in the equity and credit markets. In addition, net realized gains and carried interest revenues are contingent upon various fund closings, maturity levels, investment management performance and market conditions.

Spread-Based Investment Business

AIG's Spread-Based Investment business includes the results of AIG's proprietary Spread-Based Investment operations, the Matched Investment Program (MIP), which was launched in September of 2005 to replace the Guaranteed Investment Contract (GIC) program, which is in runoff whereby no new GIC contracts are being written. The MIP is an investment strategy that involves investing in various asset classes with financing provided through third parties. This business uses various risk mitigating strategies designed to hedge interest rate and currency risk associated with underlying investments and related liabilities.

Institutional Asset Management

AIG's Institutional Asset Management business, conducted through AIG Investments, provides an array of investment products and services globally to institutional investors, pension funds, AIG subsidiaries and high net worth investors. These products include traditional equity and fixed maturity securities, and a wide range of alternative asset classes. These services include investment advisory and subadvisory services, investment monitoring, securities lending and transaction structuring. Within the fixed maturity and equity asset classes, AIG Investments offers various forms of structured investments aimed at achieving superior returns or capital preservation. Within the alternative asset class, AIG Investments offers hedge and private equity funds and fund-of-funds, direct investments and distressed debt investments.

AIG Global Real Estate provides a wide range of real estate investment and management services for AIG subsidiaries, as well as for third-party institutional investors, high net worth investors and pension funds. Through a strategic network of local real estate ventures, AIG Global Real Estate actively invests in and develops office, industrial, multi-family residential, retail, mixed-use hotel and resort properties located around the world.

AIG Private Bank offers banking, trading and investment management services to private clients and institutions

globally. To further focus on its wealth management expansion efforts, AIG Private Bank Ltd. entered into a joint venture agreement with Bank Sarasin & Co. Ltd. Under this agreement, a new Swiss bank was established, into which both AIG Private Bank Ltd. and Bank Sarasin & Co. Ltd. contributed their retail banking businesses. The new bank commenced operations on July 1, 2008 with assets under management of approximately \$8 billion.

From time to time, AIG Investments acquires warehoused assets. During the warehousing period, AIG bears the cost and risks associated with carrying these investments and consolidates them on its balance sheet and records the operating results until the investments are transferred, sold or otherwise divested. Changes in market conditions may negatively affect the fair value of these warehoused investments. Market conditions may impede AIG from launching new investment products for which these warehoused assets are being held. Market conditions may also prevent AIG from recovering its investment upon transfer or divestment. In the event that AIG is unable to transfer or otherwise divest its interest in the warehoused investment to third parties, AIG could be required to hold these investments indefinitely. In certain instances, the consolidated warehoused investments are not wholly owned by AIG. In such cases, AIG shares the risk associated with warehousing the asset with the minority interest investors.

Brokerage Services and Mutual Funds

AIG's Brokerage Services and Mutual Funds business, conducted through AIG Advisor Group, Inc. and AIG SunAmerica Asset Management Corp., provides broker-dealer related services and mutual funds to retail investors, group trusts and corporate accounts through an independent network of financial advisors. AIG Advisor Group, Inc., a subsidiary of AIG Retirement Services, Inc., is comprised of several broker-dealer entities that provide these services to clients primarily in the U.S. marketplace. AIG SunAmerica Asset Management Corp. manages, advises and/or administers retail mutual funds, as well as the underlying assets of variable annuities sold by AIG SunAmerica and VALIC to individuals and groups throughout the United States.

Other Asset Management

Included in Other Asset Management is income or loss from certain AIG SunAmerica sponsored partnerships and partnership investments. Partnership assets consist of investments in a diversified portfolio of private equity funds, affordable housing partnerships and hedge fund investments.

Asset Management Results**Asset Management results were as follows:**

Asset Management recognized operating losses in the three- and six-month periods ended June 30, 2008 compared to operating income in the same periods in 2007, primarily due to other-than-temporary impairment charges on fixed income investments, significantly lower partnership income, and lower carried interest revenues. Included in the second quarter 2007 operating income was a gain on the sale of a portion of AIG's investment in The Blackstone Group L.P. in connection with its initial public offering.

Quarterly Spread-Based Investment Business Results

The Spread-Based Investment business reported an operating loss in the three-month period ended June 30, 2008 compared to operating income in the same period in 2007 due to significantly higher net realized capital losses and lower partnership income. Included in the operating loss were net realized capital losses of \$549 million for the three-month period ended June 30, 2008, compared to \$67 million in the 2007 period. Net realized capital losses for the three-month period ended June 30, 2008 primarily consist of \$880 million in other-than-temporary impairment charges on fixed maturity securities for both the GIC and MIP portfolios, partially offset by net mark to market gains of \$255 million on interest rate and foreign exchange hedges not qualifying for hedge accounting treatment for both the GIC and MIP and net foreign exchange gains on foreign currency denominated GIC and MIP liabilities. Net realized capital losses of \$67 million for the three-month period ended June 30, 2007 primarily reflect \$86 million of net mark to market losses on interest rate and foreign exchange hedges, partially offset by net foreign exchange related gains on the MIP and GIC.

The other-than-temporary impairment charges on fixed maturity securities held in the GIC and MIP portfolios were \$522 million for the GIC and \$358 million for the MIP for the three-month period ended June 30, 2008. These impairments primarily resulted from severity losses. See

Invested Assets — Portfolio Review — Other-Than-Temporary Impairments. In addition to the other-than-temporary impairments, unrealized losses on fixed maturity securities were recorded in accumulated other comprehensive income (loss) and were primarily driven by price declines resulting from decreased market liquidity, partially offset by unrealized gains resulting from falling interest rates.

In the GIC program, income from partnership investments declined \$237 million for the three-month period ended June 30, 2008, compared to the same period of 2007, reflecting significantly higher returns in the 2007 period and weaker market conditions in 2008. Partially offsetting this decline were foreign exchange gains on foreign currency denominated GIC reserves, which increased by \$76 million in the three-month period ended June 30, 2008 compared to the same period in 2007 as a result of the weakening of the U.S. dollar. As noted below, a significant portion of these GIC reserves mature in 2008.

The MIP experienced net mark to market gains of \$253 million in the second quarter of 2008 due primarily to interest rate and foreign exchange derivative positions that, while partially effective in hedging interest rate and foreign exchange risk, did not qualify for hedge accounting treatment and an additional \$22 million in mark to market gains due to credit default swap investments. The MIP invests in credit default swaps comprised predominantly of single-name high-grade corporate exposures. The mark to market gains for the three-month period ended June 30, 2008 were driven primarily by an increase in interest rates and the tightening of corporate credit spreads. AIG enters into hedging arrangements to mitigate the effect of changes in currency and interest rates associated with the fixed and floating rate and foreign currency denominated obligations issued under these programs. Some of these hedging relationships qualify for hedge accounting treatment, while others do not. Income or loss from these hedges not qualifying for hedge accounting

treatment are classified as net realized capital gains (losses) in AIG's Consolidated Statement of Income (Loss).

Year-to-Date Spread-Based Investment Business Results

The Spread-Based Investment business reported an operating loss in the six-month period ended June 30, 2008 compared to operating income in the same period in 2007 due to significantly higher net realized capital losses and lower partnership income. Included in the operating loss were net realized capital losses of \$1.9 billion for the six-month period ended June 30, 2008, compared to \$87 million in the same period in 2007. Net realized capital losses for the six-month period ended June 30, 2008 primarily consist of \$1.9 billion in other-than-temporary impairment charges on fixed maturity securities for both the GIC and MIP, \$325 million in foreign exchange related losses on foreign denominated GIC reserves and mark to market losses of \$109 million on credit default swap investments held by the MIP. Partially offsetting these losses were net mark to market gains of \$414 million on interest rate and foreign exchange hedges not qualifying for hedge accounting treatment for both the GIC and MIP. Net realized capital losses of \$87 million for the six-month period ended June 30, 2007 primarily reflect \$30 million of other-than-temporary impairment charges, \$89 million of net foreign exchange related losses on foreign denominated, liabilities in both the GIC and MIP and \$29 million in net mark to market losses on interest rate and foreign exchange hedges, partially offset by realized gains of \$43 million on the sale of fixed maturity and equity securities in the GIC.

The other-than-temporary impairment charges on fixed maturity securities held in the GIC and MIP portfolios were \$1.1 billion for the GIC and \$852 million for the MIP for the six-month period ended June 30, 2008, primarily resulting from severity losses. See Invested Assets — Portfolio Review — Other-Than-Temporary Impairments. In addition to the other-than-temporary impairments, unrealized losses on fixed maturity securities were recorded in accumulated other comprehensive income (loss) and were primarily driven by price declines resulting from decreased market liquidity, partially offset by unrealized gains resulting from falling interest rates.

In the GIC program, income from partnership investments was \$44 million for the six-month period ended June 30, 2008, a decline of \$654 million from the same period of 2007 due to significantly higher returns in the 2007 period and weaker market conditions in 2008. Also contributing to the decline was the one-time distribution from a single partnership of \$164 million in the six-month period ended June 30, 2007. Foreign exchange losses on foreign-denominated GIC reserves increased by \$221 million in the six-month period ended June 30, 2008 as a result of the weakening of the U.S. dollar. As noted below, a significant portion of these GIC reserves mature in the next twelve

months. Partially offsetting the decline in partnership income and increased foreign exchange losses was an increase in net mark to market gains on derivative positions of \$464 million. These gains included net mark to market gains on interest rate and foreign exchange derivatives used to economically hedge the effect of interest rate and foreign exchange rate movements on GIC reserves. Although these economic hedges are partially effective in hedging the interest rate and foreign exchange risk, they did not qualify for hedge accounting treatment.

The MIP experienced net mark to market losses of \$79 million for the six-month period ended June 30, 2008, due primarily to interest rate and foreign exchange derivative positions that, while partially effective in hedging interest rate and foreign exchange risk, did not qualify for hedge accounting treatment and an additional \$109 million in net mark to market losses were recognized due to credit default swap investments. These net mark to market losses were driven primarily by a decline in interest rates, a decline in value of the U.S. dollar and the widening of corporate credit spreads.

AIG did not issue any additional debt to fund the MIP in the six-month period ended June 30, 2008. Through June 30, 2008, the MIP had cumulative debt issuances of \$13.4 billion.

The GIC is in runoff with no new GICs issued subsequent to 2006. The anticipated runoff of the domestic GIC portfolio at June 30, 2008 was as follows:

<i>(in billions)</i>	Less Than One Year	1-3 Years	3 ⁽⁺⁾ -5 Years	Over Five Years	Total
Domestic GICs	\$11.2	\$4.2	\$2.0	\$5.6	\$23.0

It is expected that available cash, cash flows from investments and sales of investments on an opportunistic basis in anticipation of cash needs throughout the year will be sufficient to repay GIC liabilities as they mature.

Quarterly Institutional Asset Management Results

Institutional Asset Management operating income decreased in the three-month period ended June 30, 2008 compared to the same period in 2007. Included in the second quarter of 2007, operating income was a gain of \$398 million related to the sale of a portion of AIG's investment in The Blackstone Group L.P. (Blackstone) in connection with its initial public offering. The decline also reflects lower partnership income in the second quarter of 2008, along with lower carried interest revenues and lower real estate related gains. AIG recognizes carried interest revenues on an unrealized basis by reflecting the amount owed to AIG as of the balance sheet date based on the related funds' performance. The reduction in carried interest revenues was driven by lower unrealized carry due to significantly higher fund performance in the three-month period ended June 30, 2007. The decline in real estate related gains was a function of market conditions and the timing of

proprietary real estate investment sales. Offsetting these decreases were higher base management fees, driven by a net increase of approximately \$4.3 billion in unaffiliated client assets under management.

Total operating income (loss) from various consolidated warehoused investments for the three-month periods ended June 30, 2008 and 2007 was \$14 million and \$(27) million, respectively. A portion of these amounts is offset in minority interest expense, which is not a component of operating income (loss).

Year-to-Date Institutional Asset Management Results

Institutional Asset Management recognized an operating loss in the six-month period ended June 30, 2008 compared to operating income in the same period in 2007 reflecting lower carried interest revenues and lower partnership income in the 2008 period, along with the effect from the sale in 2007 of a portion of AIG's investment in Blackstone. Also contributing to the decline in operating income were lower real estate related gains and increased depreciation and amortization expense due to additional real estate investments acquired in late 2007. The reduction in carried interest revenues was driven by lower unrealized carry due to significantly higher fund performance in the six-month period ended June 20, 2007. Slightly offsetting these decreases were higher base management fees driven by a net increase of approximately \$2.6 billion in unaffiliated client assets under management.

Total operating losses from various consolidated warehoused investments for the six-month periods ended June 30, 2008 and 2007 were \$77 million and \$39 million, respectively. A portion of these amounts is offset in minority interest expense, which is not a component of operating income (loss).

AIG's unaffiliated client assets under management, including retail mutual funds and institutional accounts, were \$96.4 billion at June 30, 2008, a decline of 5 percent compared to December 31, 2007 and an increase of 5 percent compared to \$92.1 billion at June 30, 2007. The decline from December 31, 2007 primarily reflected market valuation declines in the equity and fixed income markets. The increase from June 30, 2007 was driven by new business.

Brokerage Services and Mutual Funds

Revenues and operating income related to Brokerage Services and Mutual Fund activities decreased due to lower fee income as a result of a lower asset base.

Other Asset Management Results

Revenues and operating income related to the Other Asset Management activities decreased in the three- and six-month periods ended June 30, 2008 compared to the same periods in

2007 due to lower income from partnership investments. Similar to the investments held in the Spread-Based Investment business, these investments experienced significantly higher returns in the three- and six-month periods ended June 30, 2007 and weaker market conditions in 2008.

Other Operations

The operating loss of AIG's Other category was as follows:

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2008	2007	2008	2007
Operating income (loss):				
Equity earnings in partially owned companies	\$ 8	\$ 50	\$ 16	\$ 91
Interest expense	(452)	(302)	(820)	(554)
Unallocated corporate expenses*	(282)	(210)	(375)	(382)
Net realized capital gains (losses)	30	22	(235)	(27)
Other miscellaneous, net	(19)	(20)	(69)	(58)
Total Other	\$(715)	\$(460)	\$(1,483)	\$(930)

* Includes a charge for settlement of a dispute, expenses of corporate staff not attributable to specific operating segments, expenses related to efforts to improve internal controls, corporate initiatives and certain compensation plan expenses.

The operating loss of AIG's Other category increased in the three-month period ended June 30, 2008 compared to the same period in 2007 reflecting higher interest expense that resulted from increased borrowings, including interest on the debt and equity units from the dates of issuance in May 2008, higher unallocated corporate expenses primarily from a charge of \$101 million as a result of settlement of a dispute in connection with the July 2008 purchase of the balance of Ascot Underwriting Holdings, Ltd., additional charitable contribution commitments and severance compensation for Martin Sullivan, AIG's former Chief Executive Officer, partially offset by reversals of previously accrued costs related to certain long-term performance-based compensation plans, as performance to date is below the performance thresholds set forth in those plans.

The operating loss in the six-month period ended June 30, 2008 increased compared to the same period in 2007 reflecting higher interest expense that resulted from increased borrowings, including interest on the debt and equity units from the dates of issuance in May 2008, and higher net realized capital losses and lower equity earnings in partially owned companies. The increase in net realized capital losses in the six-month period ended June 30, 2008 reflected higher foreign exchange losses on foreign-denominated debt, a portion of which was economically hedged but did not qualify for hedge accounting treatment under FAS 133, and losses on non-hedged derivatives. Other miscellaneous, net included a \$45 million write-off of goodwill related to Mortgage Guaranty in the six-month period ended June 30, 2008.

Capital Resources and Liquidity

At June 30, 2008, AIG had total consolidated shareholders' equity of \$78.1 billion and total consolidated borrowings of \$178.6 billion. At that date, \$68.6 billion of such borrowings were subsidiary borrowings not guaranteed by AIG.

In May 2008, AIG raised a total of approximately \$20 billion through the sale of:

- 196,710,525 shares of AIG common stock in a public offering at a price per share of \$38, for an aggregate amount of \$7.47 billion;
- 78.4 million equity units in a public offering at a price per unit of \$75, for an aggregate amount of \$5.88 billion. The equity units consist of an ownership interest in AIG junior subordinated debentures and a stock purchase contract obligating the holder of an equity unit to purchase, and obligating AIG to sell, a variable number of shares of AIG common stock on three dates in 2011 (a minimum of 128,944,480 shares and a maximum of 154,738,080 shares, subject to anti-dilution adjustments); and

- \$6.9 billion in unregistered offerings of junior subordinated debentures in three series: \$4.0 billion 8.175 percent Series A-6 junior subordinated debentures, EUR 750 million 8.0 percent Series A-7 junior subordinated debentures, and GBP 900 million 8.625 percent Series A-8 junior subordinated debentures.

The equity units and junior subordinated debentures receive hybrid equity treatment from the major rating agencies under their current policies but are recorded as long-term borrowings on the consolidated balance sheet.

Borrowings**AIG's total borrowings were as follows:**

<i>(in millions)</i>	June 30, 2008	December 31, 2007
Borrowings issued by AIG:

(a) In 2008, AIGFP borrowings are carried at fair value.

(b) Includes the cumulative effect of the adoption of FAS 159.

AIG (Parent Company)

AIG intends to continue its customary practice of issuing debt securities from time to time to meet its financing needs and those of certain of its subsidiaries for general corporate purposes, as well as to opportunistically fund the MIP. As of June 30, 2008, approximately \$7.4 billion principal amount of senior notes were outstanding under AIG's medium-term note program, of which \$3.2 billion was used for AIG's general corporate purposes, \$1.0 billion was used by AIGFP (referred to as "Series AIGFP" in the preceding tables) and \$3.2 billion was used to fund the MIP. The maturity dates of these notes range from 2008 to 2052. To the extent considered appropriate, AIG may enter into swap transactions to manage its effective borrowing rates with respect to these notes.

AIG also maintains a Euro medium-term note program under which an aggregate nominal amount of up to \$20.0 billion of senior notes may be outstanding at any one time. As of June 30, 2008, the equivalent of \$13.1 billion of notes were outstanding under the program, of which \$10.0 billion were used to fund the MIP and the remainder was used for AIG's general corporate purposes. The aggregate amount outstanding includes a \$1.7 billion loss resulting from foreign exchange translation into U.S. dollars, of which \$451 million loss relates to notes issued by AIG for general corporate purposes and \$1.2 billion loss relates to

notes issued to fund the MIP. AIG has economically hedged the currency exposure arising from its foreign currency denominated notes.

AIG maintains a shelf registration statement in Japan, providing for the issuance of up to Japanese yen 300 billion principal amount of senior notes, of which the equivalent of \$470 million was outstanding as of June 30, 2008 and was used for AIG's general corporate purposes. AIG also maintains an Australian dollar debt program under which senior notes with an aggregate principal amount of up to 5 billion Australian dollars may be outstanding at any one time. Although as of June 30, 2008 there were no outstanding notes under the Australian program, AIG intends to use the program opportunistically to fund the MIP or for AIG's general corporate purposes.

In May 2008, AIG issued \$5.88 billion of junior subordinated debentures which form part of the equity units sold by AIG in a public offering. In addition, AIG sold a total of \$6.9 billion of junior subordinated debentures in Rule 144A/Regulation S offerings in three series: \$4.0 billion 8.175 percent Series A-6 junior subordinated debentures; EUR 750 million 8.0 percent Series A-7 junior subordinated debentures; and GBP 900 million 8.625 percent Series A-8 junior subordinated debentures. AIG may redeem the A-6 debentures without penalty on or after May 15, 2038 and may redeem the A-7 and A-8 debentures on or after May 22,

2018 without penalty. After these dates, the debentures will bear interest at floating rates. AIG agreed pursuant to a replacement capital covenant that it will not repay, redeem, or purchase the Series A-6, A-7 or A-8 junior subordinated debentures on or before a specified date, unless AIG has received qualifying proceeds from the sale of replacement capital securities. The equity units and the Series A-6, A-7 and A-8 junior subordinated debentures receive hybrid equity treatment from the major rating agencies under their current policies but are recorded as long-term borrowings on the consolidated balance sheet.

In October 2007, AIG borrowed a total of \$500 million on an unsecured basis pursuant to a loan agreement with a third-party bank. The entire amount of the loan remained outstanding at June 30, 2008 and will mature in October 2008.

AIGFP

AIGFP uses the proceeds from the issuance of notes and bonds and GIA borrowings, as well as the issuance of Series AIGFP notes by AIG, to invest in a diversified portfolio of securities and derivative transactions. The borrowings may also be temporarily invested in securities purchased under agreements to resell. AIGFP's notes and bonds include structured debt instruments whose payment terms are linked to one or more financial or other indices (such as an equity index or commodity index or another measure that is not considered to be clearly and closely related to the debt instrument). These notes contain embedded derivatives that otherwise would be required to be accounted for separately under FAS 133. Upon AIG's adoption of FAS 155 in 2006, AIGFP elected the fair value option for these notes. The notes that are accounted for using the fair value option are reported separately under hybrid financial instrument liabilities. AIG guarantees the obligations of AIGFP under AIGFP's notes and bonds and GIA borrowings. See Liquidity herein.

AIGFP has a Euro medium-term note program under which an aggregate nominal amount of up to \$20.0 billion of notes may be outstanding at any one time. As of June 30, 2008, \$4.3 billion of notes were outstanding under the program. The notes issued under this program are guaranteed by AIG and are included in AIGFP's notes and bonds payable in the table of total borrowings.

AIG Funding

AIG Funding, Inc. (AIG Funding) issues commercial paper that is guaranteed by AIG to help fulfill the short-term cash requirements of AIG and its subsidiaries. The level of issuances of AIG Funding's commercial paper, including the guarantee by AIG, is subject to the approval of AIG's Board of Directors or the Finance Committee of the Board if it exceeds certain pre-approved limits.

As backup for the commercial paper program and for other general corporate purposes, AIG and AIG Funding maintain revolving credit facilities, which, as of June 30, 2008, had an aggregate of \$9.2 billion available to be drawn and which are summarized below under Revolving Credit Facilities. In July 2008, AIG and AIG Funding renewed their 364-day syndicated revolving credit facility.

ILFC

ILFC fulfills its short-term cash requirements through operating cash flows and the issuance of commercial paper. The issuance of commercial paper is subject to the approval of ILFC's Board of Directors and is not guaranteed by AIG. ILFC maintains syndicated revolving credit facilities which, as of June 30, 2008, totaled \$6.5 billion and which are summarized below under Revolving Credit Facilities. These facilities are used as back up for ILFC's maturing debt and other obligations.

As a well-known seasoned issuer, ILFC has filed an automatic shelf registration statement with the SEC allowing ILFC immediate access to the U.S. public debt markets. At June 30, 2008, \$6.8 billion of debt securities had been issued under this registration statement and \$6.1 billion had been issued under a prior registration statement. In addition, ILFC has a Euro medium-term note program for \$7.0 billion, under which \$3.8 billion in notes were outstanding at June 30, 2008. Notes issued under the Euro medium-term note program are included in ILFC notes and bonds payable in the preceding table of borrowings. The cumulative foreign exchange adjustment loss for the foreign currency denominated debt was \$1.3 billion at June 30, 2008 and \$969 million at December 31, 2007. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging the note exposure.

ILFC had a \$4.3 billion Export Credit Facility for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At June 30, 2008, ILFC had \$504 million outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured Export Credit Facility for up to a maximum of \$2.6 billion for Airbus aircraft to be delivered through May 31, 2005. The facility was subsequently increased to \$3.6 billion and extended to include aircraft to be delivered through May 31, 2009. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a six-month forward-looking calendar, and the interest rate is determined through a bid process. The interest rates are either LIBOR based with spreads ranging from

0.01 percent to 0.28 percent or at fixed rates ranging from 4.2 percent to 4.7 percent. At June 30, 2008, ILFC had \$2.1 billion outstanding under this facility. The debt is collateralized by a pledge of shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility. Borrowings with respect to these facilities are included in ILFC's notes and bonds payable in the preceding table of borrowings.

From time to time, ILFC enters into funded financing agreements. As of June 30, 2008, ILFC had a total of \$1.1 billion outstanding, which has varying maturities through February 2012. The interest rates are LIBOR-based, with spreads ranging from 0.30 percent to 1.625 percent.

The proceeds of ILFC's debt financing are primarily used to purchase flight equipment, including progress payments during the construction phase. The primary sources for the repayment of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. AIG does not guarantee the debt obligations of ILFC. See also Liquidity herein.

AGF

AGF fulfills most of its short-term cash borrowing requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of AGF's Board of Directors and is not guaranteed by AIG. AGF maintains committed syndicated revolving credit facilities which, as of June 30, 2008, totaled \$4.8 billion and which are summarized below under Revolving Credit Facilities. The facilities can be used for general corporate purposes and to provide backup for AGF's commercial paper programs. In July 2008, AGF renewed its expiring \$2.625 billion 364-day revolving credit facility and decreased the amount to \$2.45 billion.

As of June 30, 2008, notes and bonds aggregating \$21.2 billion were outstanding with maturity dates ranging from 2008 to 2031 at interest rates ranging from 2.13 percent to 8.45 percent. To the extent considered appropriate, AGF may enter into swap transactions to manage its effective borrowing rates with respect to these notes and bonds. As a

well-known seasoned issuer, AGF has an automatic shelf registration statement on file with the SEC that permits AGF immediate access to the U.S. public debt markets.

AGF's funding sources include an SEC-registered medium-term note program, private placement debt, retail note issuances, bank financing and securitizations of finance receivables that AGF accounts for as on-balance-sheet secured financings. In addition, AGF has become a recognized issuer of long-term debt in the international capital markets and has established a \$5.0 billion Euro medium-term note program. There are currently no outstanding notes under AGF's Euro program.

In addition to debt refinancing activities, proceeds from the collection of finance receivables are used to fund cash needs including the payment of principal and interest on AGF's debt. AIG does not guarantee any of the debt obligations of AGF. See also Liquidity herein.

AIGCFG

AIGCFG has a variety of funding mechanisms for its various markets, including retail and wholesale deposits, short- and long-term bank loans, securitizations and intercompany subordinated debt. AIG Credit Card Company (Taiwan), a consumer finance business in Taiwan, and AIG Retail Bank PLC, a full service consumer bank in Thailand, have issued commercial paper for the funding of their respective operations. AIG does not guarantee any borrowings for AIGCFG businesses, including this commercial paper.

Revolving Credit Facilities

AIG, ILFC and AGF maintain committed, unsecured revolving credit facilities listed on the following table in order to support their respective commercial paper programs and for general corporate purposes. AIG, ILFC and AGF expect to replace or extend these credit facilities on or prior to their expiration. Some of the facilities, as noted below, contain a "term-out option" allowing for the conversion by the borrower of any outstanding loans at expiration into one-year term loans.

As of June 30, 2008 (in millions)

Facility	Size	Borrower(s)	Available Amount	Expiration	One-Year Term-Out Option
AIG:					
364-Day Syndicated Facility	\$ 2,125	AIG/AIG Funding ^(a) AIG Capital Corporation ^(a)	\$2,125	July 2008 ^(b)	Yes

(a) Guaranteed by AIG.

(b) In July 2008, this facility was resyndicated at the same aggregate amount and the expiration was extended to July 2009.

(c) This facility can be drawn in the form of loans or letters of credit. All drawn amounts shown above are in the form of letters of credit.

(d) Subsidiaries of AIG are the lenders on this facility.

(e) American General Finance, Inc. is an eligible borrower for up to \$400 million only.

(f) In July 2008, this facility was resyndicated at an aggregate amount of \$2.45 billion and the expiration was extended to July 2009.

Credit Ratings

The cost and availability of unsecured financing for AIG and its subsidiaries are generally dependent on their short- and long-term debt ratings. The following table presents the credit ratings of AIG and certain of its subsidiaries as of July 31, 2008. In parentheses, following the initial occurrence

in the table of each rating, is an indication of that rating's relative rank within the agency's rating categories. That ranking refers only to the generic or major rating category and not to the modifiers appended to the rating by the rating agencies to denote relative position within such generic or major category.

	Short-term Debt			Senior Long-term Debt		
	Moody's	S&P	Fitch	Moody's ^(a)	S&P ^(b)	Fitch ^(c)
AIG	P-1 (1st of 3)	A-1+ (1st of 6)	F1+ (1st of 5)	Aa3 (2nd of 9) ^(e)	AA- (2nd of 8) ^(f)	AA- (2nd of 9) ^(g)
AIG Financial Products Corp. ^(d)	P-1	A-1+	–	Aa3 ^(e)	AA- ^(f)	–
AIG Funding, Inc. ^(d)	P-1	A-1+	F1+	–	–	–
ILFC	P-1	A-1 (1st of 6)	F1 (1st of 5)	A1 (3rd of 9) ^(e)	A+ (3rd of 8) ^(f)	A (3rd of 9)
American General Finance Corporation	P-1	A-1	F1	A1 ^(e)	A+ ^(f)	A
American General Finance, Inc.	P-1	A-1	F1	–	–	A

(a) Moody's appends numerical modifiers 1, 2 and 3 to the generic rating categories to show relative position within rating categories.

(b) S&P ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(c) Fitch Ratings (Fitch) ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(d) AIG guarantees all obligations of AIG Financial Products Corp. and AIG Funding, Inc.

(e) Negative outlook. A negative outlook by Moody's indicates that a rating may be lowered but is not necessarily a precursor of a ratings change.

(f) Negative outlook on Counterparty Credit Ratings or Corporate Credit Ratings. A negative outlook by S&P indicates that a rating may be lowered but is not necessarily a precursor of a ratings change.

(g) Negative outlook on Issuer Default and Senior Unsecured Debt Ratings. A negative outlook by Fitch indicates that a rating may be lowered but is not necessarily a precursor of a ratings change.

These credit ratings are current opinions of the rating agencies. As such, they may be changed, suspended or withdrawn at any time by the rating agencies as a result of changes in, or unavailability of, information or based on other circumstances. Ratings may also be withdrawn at AIG

management's request. This discussion of ratings is not a complete list of ratings of AIG and its subsidiaries.

"Ratings triggers" have been defined by one independent rating agency to include clauses or agreements the outcome of which depends upon the level of ratings maintained by one or

more rating agencies. “Ratings triggers” generally relate to events that (i) could result in the termination or limitation of credit availability, or require accelerated repayment, (ii) could result in the termination of business contracts or (iii) could require a company to post collateral for the benefit of counterparties.

A significant portion of AIGFP’s GIAs and financial derivative transactions include provisions that require AIGFP, upon a downgrade of AIG’s long-term debt ratings, to post collateral or, with the consent of the counterparties, assign or repay its positions or arrange a substitute guarantee of its obligations by an obligor with higher debt ratings.

It is estimated that, as of the close of business on July 31, 2008, based on AIGFP’s outstanding municipal GIAs and financial derivative transactions at that date, a downgrade of AIG’s long-term senior debt ratings to ‘A1’ by Moody’s and ‘A+’ by S&P would permit counterparties to make additional calls for up to approximately \$13.3 billion of collateral, while a downgrade to ‘A2’ by Moody’s and ‘A’ by S&P would permit counterparties to call for approximately \$1.2 billion of additional collateral. If either of Moody’s or S&P downgraded AIG’s ratings to ‘A1’ or ‘A+’, respectively, the estimated collateral call would be for up to approximately \$10.5 billion, while a downgrade to ‘A2’ or ‘A’, respectively, by either of the two rating agencies would permit counterparties to call for up to approximately \$1.1 billion of additional collateral.

Contractual Obligations

Contractual obligations in total, and by remaining maturity at June 30, 2008 were as follows:

<i>(in millions)</i>	Total Payments	Payments due by Period			
		Less Than One Year	1-3 Years	3 ⁺ -5 Years	Over Five Years
Borrowings ^(a)	\$ 156,605	\$ 34,019	\$ 33,408	\$25,983	\$ 63,195
Interest payments on borrowings	78,502	5,930	11,136	9,477	51,959
Loss reserves ^(b)	88,747	24,405	27,068	12,869	24,405
Insurance and investment contract liabilities ^(c)	706,108	31,947	43,609	41,707	588,845
GIC liabilities ^(d)	25,458	11,011	4,766	2,421	7,260
Aircraft purchase commitments	17,566	1,018	3,206	3,295	10,047
Other long-term obligations	609	221	361	27	—
Total^{(e)(f)}	\$1,073,595	\$108,551	\$123,554	\$95,779	\$745,711

(a) Excludes commercial paper and borrowings incurred by consolidated investments and includes hybrid financial instrument liabilities recorded at fair value.

(b) Represents future loss and loss adjustment expense payments estimated based on historical loss development payment patterns. Due to the significance of the assumptions used, the periodic amounts presented could be materially different from actual required payments.

(c) Insurance and investment contract liabilities include various investment-type products with contractually scheduled maturities, including periodic payments of a term certain nature. Insurance and investment contract liabilities also include benefit and claim liabilities, of which a significant portion represents policies and contracts that do not have stated contractual maturity dates and may not result in any future payment obligations. For these policies and contracts (i) AIG is currently not making payments until the occurrence of an insurable event, such as death or disability, (ii) payments are conditional on survivorship, or (iii) payment may occur due to a surrender or other non-scheduled event out of AIG’s control. AIG has made significant assumptions to determine the estimated undiscounted cash flows of these contractual policy benefits, which assumptions include mortality, morbidity, future lapse rates, expenses, investment returns and interest crediting rates, offset by expected future deposits and premiums on in force policies. Due to the significance of the assumptions used, the periodic amounts presented could be materially different from actual required payments. The amounts presented in this table are undiscounted and therefore exceed the future policy benefits and policyholders’ contract deposits included in the balance sheet.

(d) Represents guaranteed maturities under GICs.

(e) Does not reflect unrecognized tax benefits of \$2.5 billion, the timing of which is uncertain.

(f) The majority of AIGFP's credit default swaps require AIGFP to provide credit protection on a designated portfolio of loans or debt securities. At June 30, 2008, AIG had recorded \$26.1 billion of cumulative unrealized market valuation losses in its financial statements relating to AIGFP's super senior credit default swap portfolio, net of amounts realized in extinguishing derivative obligations. However, AIG's credit-based stress testing scenarios illustrate potential pre-tax realized credit losses from these contracts at approximately \$5.0 billion and approximately \$8.5 billion at that date. Due to the long-term maturities of these credit default swaps, AIG is unable to make reasonable estimates of the periods during which any payments would be made.

Off Balance Sheet Arrangements and Commercial Commitments

Off balance sheet arrangements and commercial commitments in total, and by remaining maturity at June 30, 2008 were as follows:

(in millions)	Total Amounts Committed	Amount of Commitment Expiration			
		Less Than One Year	1-3 Years	3+5 Years	Over Five Years
Guarantees:					
Liquidity facilities ^(a)	\$ 2,552	\$ 72	\$ 884	\$ 1,325	\$ 271
Standby letters of credit	1,702	1,481	45	32	144
Construction guarantees ^(b)	490	—	—	—	490
Guarantees of indebtedness	1,284	147	144	500	493
All other guarantees	1,104	159	165	27	753
Commitments:					
Investment commitments ^(c)	8,711	3,304	3,619	1,605	183
Commitments to extend credit	1,828	1,352	366	110	—
Letters of credit	1,115	835	120	—	160
Maturity shortening puts ^(d)	7,995	2,071	2,595	1,648	1,681
Other commercial commitments ^(e)	1,193	83	23	79	1,008
Total^(f)	\$ 27,974	\$ 9,504	\$ 7,961	\$ 5,326	\$ 5,183

(a) Primarily liquidity facilities provided in connection with certain municipal swap transactions and collateralized bond obligations.

(b) Primarily AIG SunAmerica construction guarantees connected to affordable housing investments.

(c) Includes commitments to invest in limited partnerships, private equity, hedge funds and mutual funds and commitments to purchase and develop real estate in the United States and abroad.

(d) Represents obligations under 2a-7 Puts to purchase certain multi-sector CDOs at pre-determined contractual prices.

(e) Includes options to acquire aircraft. Excludes commitments with respect to pension plans. The annual pension contribution for 2008 is expected to be approximately \$118 million for U.S. and non-U.S. plans.

Arrangements with Variable Interest Entities and Structured Investment Vehicles

AIG enters into various off-balance-sheet (unconsolidated) arrangements with variable interest entities (VIEs) in the normal course of business. AIG's involvement with VIEs ranges from being a passive investor to designing and structuring, warehousing and managing the collateral of VIEs. AIG engages in transactions with VIEs as part of its investment activities to obtain funding and to facilitate client needs. AIG purchases debt securities (rated and unrated) and equity interests issued by VIEs, makes loans and provides other credit support to VIEs, enters into insurance, reinsurance and derivative transactions and leasing arrangements with VIEs, and acts as the warehouse agent and collateral manager for VIEs. Interest holders in the VIEs generally have recourse only to the assets and cash flows of the VIEs and do not have recourse to AIG, except when AIG has provided a guarantee to the VIE's interest holders.

Under FIN 46(R), AIG consolidates a VIE when it is the primary beneficiary of the entity. The primary beneficiary is the party that either (i) absorbs a majority of the VIE's expected losses; (ii) receives a majority of the VIE's expected

residual returns; or (iii) both. For a further discussion of AIG's involvement with VIEs, see Note 7 of Notes to Consolidated Financial Statements in the 2007 Annual Report on Form 10-K.

A significant portion of AIG's overall exposure to VIEs results from AIG Investment's real estate and investment funds.

In certain instances, AIG Investments acts as the collateral manager or general partner of an investment fund, private equity fund or hedge fund. Such entities are typically registered investment companies or qualify for the specialized investment company accounting in accordance with the AICPA Investment Company Audit and Accounting Guide. For investment partnerships, hedge funds and private equity funds, AIG acts as the general partner or manager of the fund and is responsible for carrying out the investment mandate of the VIE. Often, AIG's insurance operations participate in these AIG managed structures as a passive investor in the

debt or equity issued by the VIE. Typically, AIG does not provide any guarantees to the investors in the VIE.

During 2008, AIG reduced its maximum exposure to loss from its involvement with unconsolidated VIEs by approximately \$6.6 billion, primarily as a result of the termination of certain of AIGFP's transactions. Substantially all of AIG's exposure to these unconsolidated VIEs is represented by its equity investment in them, and such investment is reflected on the consolidated balance sheet.

Shareholders' Equity

The changes in AIG's consolidated shareholders' equity were as follows:

<i>(in millions)</i>	Six Months Ended June 30, 2008
Beginning of year	\$95,801
Net income (loss)	(13,162)
Unrealized (depreciation) appreciation of investments, net of tax	(9,441)
Cumulative translation adjustment, net of tax	984
Dividends to shareholders	(1,121)
Payments advanced to purchase shares, net	912
New share issuance	7,343
Share purchases	(1,912)
Cumulative effect of accounting changes, net of tax	(1,108)
Other*	(208)
End of period	\$78,088

* Reflects the effects of employee stock transactions and the present value of future contract adjustment payments related to the issuance of equity units.

New Share Issuance

In May 2008, AIG sold in a public offering 196,710,525 shares of its common stock at a price per share of \$38. Concurrent with the common stock offering, AIG sold 78.4 million equity units at a price per unit of \$75. The equity units consist of an ownership interest in AIG junior subordinated debentures and a stock purchase contract obligating the holder of an equity unit to purchase, and obligating AIG to sell, on each of February 15, 2011, May 1, 2011 and August 1, 2011, for a price of \$25, a variable number of shares of AIG common stock, that is not less than 0.54823 shares and not more than 0.6579 shares, subject to anti-dilution adjustments. Accordingly, a maximum number of 154,738,080 shares and a minimum number of 128,944,480 shares of AIG common stock will be issued in the year 2011 under the stock purchase contracts, subject to anti-dilution adjustments.

In February 2007, AIG's Board of Directors adopted a new dividend policy, which took effect with the dividend declared in the second quarter of 2007, providing that under ordinary circumstances, AIG's plan will be to increase its common stock dividend by approximately 20 percent

annually. The payment of any dividend, however, is at the discretion of AIG's Board of Directors, and the future payment of dividends will depend on various factors, including the performance of AIG's businesses, AIG's consolidated financial condition, results of operations and liquidity and the existence of investment opportunities. With due consideration of the foregoing policy, in light of then current market conditions, on May 7, 2008, AIG's Board of Directors declared a quarterly cash dividend on the common stock of \$0.22 per share, payable on September 19, 2008 to shareholders of record on September 5, 2008, representing a 10 percent increase. No assurance can be given under current market conditions that the Board of Directors will further increase AIG's dividend or maintain the dividend at current levels.

Share Repurchases

From time to time, AIG may buy shares of its common stock for general corporate purposes, including to satisfy its obligations under various employee benefit plans. In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the purchase of shares with an aggregate purchase price of \$8 billion. In November 2007, AIG's Board of Directors authorized the purchase of an additional \$8 billion in common stock. In 2007, AIG entered into structured share repurchase arrangements providing for the purchase of shares over time with an aggregate purchase price of \$7 billion.

A total of 37,926,059 shares were purchased during the six-month period ended June 30, 2008 to meet commitments that existed at December 31, 2007. All shares purchased are recorded as treasury stock at cost.

At August 5, 2008, \$9 billion was available for purchases under the aggregate authorization. AIG does not expect to purchase additional shares under its share repurchase program for the foreseeable future.

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At June 30, 2008, AIG's consolidated invested assets included \$82.2 billion in cash and short-term investments (including \$10.4 billion of securities lending cash and short-term investments). Consolidated net cash provided from operating activities in the six-month period ended June 30, 2008 amounted to \$16.6 billion. At both the subsidiary and parent company level, liquidity management activities are intended to preserve and enhance funding stability, flexibility, and diversity through a wide range of potential operating environments and market conditions. AIG's primary sources of cash flow are dividends and other payments from its regulated and unregulated subsidiaries, as well as issuances of debt and equity securities. Primary uses of cash flow are for debt service, subsidiary funding,

shareholder dividend payments and common stock repurchases. Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements.

AIG (Parent Company)

The liquidity of the parent company is principally derived from its subsidiaries. The primary sources of cash flow are dividends and other payments from its regulated and unregulated subsidiaries, as well as issuance of debt securities. Primary uses of cash flow are for debt service, subsidiary funding, shareholder dividend payments and common stock repurchases. In the six-month period ended June 30, 2008, AIG parent collected \$1.4 billion in dividends and other payments from subsidiaries (primarily from insurance company subsidiaries). Excluding MIP and

Series AIGFP debt, AIG parent made interest payments totaling \$522 million, made \$2.4 billion in net capital contributions to subsidiaries, and paid \$1.1 billion in dividends to shareholders in the six-month period ended June 30, 2008.

AIG parent funds its short-term working capital needs through commercial paper issued by AIG Funding. As of June 30, 2008, AIG Funding had \$5.8 billion of commercial paper outstanding with an average maturity of 33 days. As additional liquidity, AIG parent and AIG Funding maintain committed revolving credit facilities that, as of June 30, 2008, had an aggregate of \$9.2 billion available to be drawn, and which are summarized above under Revolving Credit Facilities.

Invested Assets

The following tables summarize the composition of AIG's invested assets by segment:

<i>(in millions)</i>	General Insurance	Life Insurance & Retirement Services	Financial Services	Asset Management	Other	Total
June 30, 2008

* At December 31, 2007, approximately 65 percent and 35 percent of invested assets were held in domestic and foreign investments, respectively.

Investment Strategy

AIG's investment strategies are tailored to the specific business needs of each operating unit. The investment objectives are driven by the business model for each of the businesses: General Insurance, Life Insurance, Retirement Services and Asset Management's Spread-Based Investment business. The primary objectives are liquidity, preservation of capital, growth of surplus and generation of investment income to support the insurance products. At the local operating unit level, the strategies are based on considerations that include the local market, liability duration and cash flow characteristics, rating agency and regulatory capital considerations, legal investment limitations, tax optimization and diversification. In addition to local risk management considerations, AIG's corporate risk management guidelines impose limitations on concentrations to promote diversification by industry, asset class and geographic sector.

The majority of assets backing insurance liabilities at AIG consist of intermediate and long duration fixed maturity

securities. In the case of Life Insurance & Retirement Services companies, as well as in the GIC and MIP portfolios of the Asset Management segment, the fundamental investment strategy is, as near as is practicable, to match the duration characteristics of the liabilities with comparable duration assets. Fixed maturity securities held by the insurance companies included in the AIG Property Casualty Group consist primarily of laddered holdings of tax-exempt municipal bonds, which provide attractive after-tax return, limited credit risk and generally good liquidity. Fixed maturity securities held by Foreign General Insurance companies consist primarily of intermediate duration high grade securities.

The market price of fixed maturity securities reflects numerous components, including interest rate environment, credit spread, embedded optionality (such as call features), liquidity, structural complexity, foreign exchange risk, and other credit and non-credit factors. However, in most circumstances, pricing is most sensitive to interest rates, such that the market price declines as interest rates rise, and

increases as interest rates fall. This effect is more pronounced for longer duration securities.

AIG marks to market the vast majority of the invested assets held by its insurance companies pursuant to FAS 115, "Accounting for Certain Investments in Debt and Equity Securities," and related accounting pronouncements. However, with limited exceptions (primarily with respect to separate account products consolidated on AIG's balance sheet pursuant to SOP 03-01), AIG does not mark to market its insurance liabilities for changes in interest rates, even though rising interest rates have the effect of reducing the fair value of such liabilities, and falling interest rates have the opposite effect. This results in the recording of changes in unrealized gains (losses) on securities in Accumulated other comprehensive income resulting from changes in interest rates without any correlative, inverse changes in gains (losses)

on AIG's liabilities. Because AIG's asset duration in certain low-yield currencies, particularly Japan and Taiwan, is shorter than its liability duration, AIG views increasing interest rates in these countries as economically advantageous, notwithstanding the effect that higher rates have on the market value of its fixed maturity portfolio.

The majority of AIG's non-floating rate fixed maturity portfolio is held to support intermediate and long duration liabilities. Assuming no other changes in factors affecting the valuation of fixed maturity securities, each 10 basis point (1/10 of 1 percent) increase in interest rates results in a decline of approximately \$2.4 billion in the pre-tax fair value of the fixed maturity portfolio. In most jurisdictions in which AIG operates, including the United States, such interest rate related changes in portfolio value are ignored for purposes of measuring regulatory capital adequacy.

The amortized cost or cost and fair value of AIG's available for sale and held to maturity securities were as follows:

(in millions)	June 30, 2008				December 31, 2007

(a) At December 31, 2007, included AIGFP available for sale securities with a fair value of \$39.3 billion, for which AIGFP elected the fair value option effective January 1, 2008, consisting primarily of corporate debt, mortgage-backed, asset-backed and collateralized securities. At June 30, 2008 and December 31, 2007, fixed maturities held by AIG that were below investment grade or not rated totaled \$23.0 billion and \$27.0 billion, respectively.

(b) Represents obligations of states, municipalities and political subdivisions.

AIG's held to maturity and available for sale fixed maturity investments totaled \$465.4 billion at June 30, 2008, compared to \$523.5 billion at December 31, 2007. At June 30, 2008, approximately 56 percent of the fixed maturity securities were held by domestic entities. Approximately 38 percent of such domestic securities were rated AAA by one or more of the principal rating agencies. Approximately five percent were below investment grade or not rated. AIG's investment decision process relies primarily on internally generated fundamental analysis and internal risk ratings. Third-party rating services' ratings and opinions provide one source of independent perspectives for consideration in the internal analysis.

A significant portion of the foreign fixed maturity portfolio is rated by Moody's, S&P or similar foreign rating services. Rating services are not available in all overseas locations. AIG's Credit Risk Committee (CRC) closely reviews the credit quality of the foreign portfolio's non-rated fixed maturity securities. At June 30, 2008, approximately 20 percent of the foreign fixed maturity securities were either rated AAA or, on the basis of AIG's internal analysis, were equivalent from a credit standpoint to securities so rated. Approximately four percent were below investment grade or not rated at that date. Approximately one third of the foreign fixed maturity portfolio is sovereign fixed maturity securities supporting the policy liabilities in the country of issuance.

The credit ratings of AIG's fixed maturity securities, other than those of AIGFP, were as follows:

<i>Rating</i>	June 30, 2008	December 31, 2007
AAA	30%	38%
AA	30	28
A	22	18
BBB	13	11

(a) Includes foreign and jumbo RMBS-related securities.

(b) Primarily wrapped second-lien.

AIG's operations, other than AIGFP, held investments in RMBS with an estimated fair value of \$67.9 billion at June 30, 2008, or approximately 8 percent of AIG's total invested assets. In addition, AIG's insurance operations held investments with a fair value totaling \$3.1 billion in CDOs, of which \$39 million included some level of subprime exposure. AIG's RMBS investments are predominantly in highly-rated tranches that contain substantial protection features through collateral subordination. At June 30, 2008, approximately 87 percent of these investments were rated AAA, and approximately 8 percent were rated AA by one or

more of the principal rating agencies. AIG's investments rated BBB or below totaled \$2.7 billion, or less than 0.3 percent of AIG's total invested assets at June 30, 2008. As of July 30, 2008, \$10.9 billion of AIG's RMBS backed primarily by subprime collateral had been downgraded as a result of rating agency actions since January 1, 2008, and \$212 million of such investments had been upgraded. Of the downgrades, \$10.0 billion were AAA rated securities. In addition to the downgrades, as of July 30, 2008, the rating agencies had \$6.1 billion of RMBS on watch for downgrade.

The amortized cost of AIG's RMBS investments, other than those of AIGFP, at June 30, 2008 by year of vintage and credit rating were as follows:

<i>(in billions)</i>	Year of Vintage						Total

AIG's underwriting practices for investing in RMBS, other ABS and CDOs take into consideration the quality of the originator, the manager, the servicer, security credit ratings, underlying characteristics of the mortgages, borrower characteristics, and

the level of credit enhancement in the transaction. AIG's strategy is typically to invest in securities rated AA or better and create diversification across multiple underlying asset classes.

Investments in CMBS

The amortized cost of AIG's CMBS investments, other than those of AIGFP, at June 30, 2008 was as follows:

<i>(in millions)</i>	Amortized Cost	Percent of Total
CMBS (traditional)	\$20,819	91%
ReRemic/CRE CDO	1,465	6

The percentage of AIG's CMBS investments, other than those of AIGFP, by geographic region at June 30, 2008 was as follows:

	Percentage
Geographic region:	
New York	17%
California	15
Texas	7
Florida	6
Virginia	4
Illinois	4
New Jersey	3
Pennsylvania	3
Georgia	3
Massachusetts	3
All Other	35
Total	100%

At June 30, 2008, AIG held \$23 billion in cost basis of CMBS. Approximately 79 percent of such holdings were rated AAA, approximately 19 percent were rated AA or A, and approximately 2 percent were rated BBB or below. At June 30, 2008, all such securities were current in the payment of principal and interest.

There have been disruptions in the commercial mortgage markets in general, and the CMBS market in particular, with credit default swaps indices and quoted prices of securities at levels consistent with a severe correction in lease rates, occupancy and fair value of properties. In addition, spreads in the primary mortgage market have widened significantly.

While this capital market stress has not to date been reflected in the performance of commercial mortgage securitization in the form of increased defaults in underlying mortgage pools, pricing of CMBS has been adversely affected by market perceptions that underlying mortgage defaults will increase. As a result, AIG recognized \$387 million of other-than-temporary impairment charges in the three-month period ended June 30, 2008 on CMBS trading at a severe discount to cost, despite the absence of any deterioration in performance of the underlying credits, because AIG concluded that it could not reasonably assert that the recovery period was temporary. At this time, AIG anticipates substantial recovery of principal and interest on the securities to which such other-than-temporary impairment charges were recorded.

The composition of the securities lending invested collateral by credit rating at June 30, 2008 was as follows:

<i>(in millions)</i>	AAA	AA	A	BBB/Not Rated	Short-Term	Total
Corporate debt	\$ 696	\$ 7,407	\$3,557	\$1,245	\$ —	\$12,905

Total	\$4,120	100%

Securities Lending Activities

AIG's securities lending program is a centrally managed program by AIG Investments for the benefit of certain of AIG's insurance companies and the Asset Management segment. Securities are loaned to various financial institutions, primarily major banks and brokerage firms. Cash collateral generally ranging from 100 to 102 percent of the fair value of the loaned securities is received and is invested in fixed maturity securities to earn a net spread. To the extent that the collateral received is less than 102 percent, AIG has agreed with its insurance companies to deposit funds to the collateral pool for the benefit of the insurance company participants.

AIG's liability to the borrower for collateral received was \$75.1 billion and the fair value of the collateral reinvested was \$59.5 billion as of June 30, 2008. In addition to the invested collateral, the securities on loan as well as all of the assets of the lending companies are generally available to satisfy the liability for collateral received.

Participation in the securities lending program by reporting unit at June 30, 2008 was as follows:

	Percent Participation
Domestic Life Insurance and Domestic Retirement Services	71%
Foreign Life Insurance	11
AIG Property Casualty Group	4
Foreign General Insurance	5
Asset Management	9
Total	100%

On June 30, 2008, \$7.3 billion (or 10 percent) of the liabilities were one-day tenor. These one-day tenor loans do not have a contractual end date but are terminable by either party on demand. Substantially all of the balance of the liabilities contractually mature over the next thirty days. However, the maturing loans are frequently renewed and rolled over to extended dates. Collateral held for this program at June 30, 2008 included interest bearing cash equivalents with overnight maturities of \$10.4 billion and other short-term investments of \$1.4 billion.

Liquidity in the securities pool is managed based upon historical experience regarding volatility of daily, weekly and biweekly loan balances. The decline in the level of securities lent, and thus the liability for collateral due back to the borrowers, is the result of AIG's overall strategy to reduce the size of this program over time.

In addition, the invested securities are carried at fair value with unrealized gains and losses recorded in accumulated other comprehensive income (loss) while net realized gains and losses are recorded in earnings. The net unrealized loss on the investments was \$8.2 billion as of June 30, 2008. During the three- and six-month periods ended June 30, 2008, AIG recorded net realized losses of \$3.8 billion and \$6.7 billion, respectively, on this portfolio, predominantly related to other-than-temporary impairments.

AIG has agreed to deposit into the securities pool an amount equal to the investment losses realized by the pool in connection with sales of impaired securities, up to \$5 billion.

Portfolio Review

Other-Than-Temporary Impairments

AIG assesses its ability to hold any fixed maturity security in an unrealized loss position to its recovery, including fixed maturity securities classified as available for sale, at each balance sheet date. The decision to sell any such fixed maturity security classified as available for sale reflects the judgment of AIG's management that the security sold is unlikely to provide, on a relative value basis, as attractive a return in the future as alternative securities entailing comparable risks. With respect to distressed securities, the sale decision reflects management's judgment that the risk-discounted anticipated ultimate recovery is less than the value achievable on sale.

AIG evaluates its investments for impairments in valuation as well as credit. The determination that a security has incurred an other-than-temporary decline in value requires the judgment of management and consideration of the fundamental condition of the issuer, its near-term prospects and all the relevant facts and circumstances. See Critical Accounting Estimates — Other-Than-Temporary Impairments herein for further information on AIG's policy.

Once a security has been identified as other-than-temporarily impaired, the amount of such impairment is determined by reference to that security's contemporaneous fair value and recorded as a charge to earnings.

In light of the recent significant disruption in the U.S. residential mortgage and credit markets, AIG has recognized an other-than-temporary impairment charge (severity loss) of \$4.8 billion and \$8.9 billion in the three- and six-month periods ended June 30, 2008, primarily related to certain RMBS and other structured securities. Even while retaining their investment grade ratings and timely continuation of interest and principal payments, such securities were priced at a significant discount to cost (generally below 60 cents on the dollar). Notwithstanding AIG's intent and ability to hold such securities indefinitely, and despite structures that indicate that a substantial amount of the securities should continue to perform in accordance with original terms, AIG concluded that it could not reasonably assert that the recovery period would be temporary.

As a result of AIG's periodic evaluation of its securities for other-than-temporary impairments in value, AIG recorded other-than-temporary impairment charges of \$6.8 billion and \$417 million in the three-month periods ended June 30, 2008 and 2007, respectively, and \$12.4 billion and \$884 million in the six-month periods ended June 30, 2008 and 2007, respectively.

In addition to the above severity losses, AIG recorded other-than-temporary impairment charges in the three- and six-month periods ended June 30, 2008 and 2007 related to:

- securities that AIG does not intend to hold until recovery;
- declines due to foreign exchange rates;
- issuer-specific credit events;
- certain structured securities impaired under Emerging Issues Task Force Issue No. 99-20, "Recognition of Interest Income and Impairment on Purchased Beneficial Interests and Beneficial Interests that Continue to be Held by a Transferor in Securitized Financial Assets"; and
- other impairments, including equity securities and partnership investments.

The composition of net realized capital gains (losses), which include other-than-temporary impairments, were as follows:

*Ratings are as of the date of the impairment charge.

No other-than-temporary impairment charge with respect to any one single counterparty was significant to AIG's consolidated financial condition or results of operations, and no individual other-than-temporary impairment charge exceeded two percent of the consolidated net loss in the six-month period ended June 30, 2008.

In periods subsequent to the recognition of an other-than-temporary impairment charge for fixed maturity securities that is not credit or foreign exchange related, AIG generally accretes into income the discount or amortizes the reduced premium resulting from the reduction in cost basis over the remaining life of the security. The amount of accretion recognized in earnings for the three- and six-month

periods ended June 30, 2008 was \$75 million and \$87 million, respectively.

Commercial Mortgage Loan Exposure

At June 30, 2008, AIG had direct commercial mortgage loan exposure of \$17.1 billion, with \$15.8 billion representing U.S. loan exposure. At that date, substantially all of the U.S. loans were current. The remaining commercial mortgage loans are secured predominantly by properties in Japan. In addition, at June 30, 2008, AIG had approximately \$2.3 billion in residential mortgage loans in jurisdictions outside the United States, primarily backed by properties in Taiwan and Thailand.

An aging of the pre-tax unrealized losses of fixed maturity and equity securities, distributed as a percentage of cost relative to unrealized loss (the extent by which the fair value is less than amortized cost or cost), including the number of respective items, at June 30, 2008 was as follows:

Aging ^(a) (dollars in millions)	Less than or equal to 20% of Cost ^(b)			Greater than 20% to 50% of Cost ^(b)			Greater than 50% of Cost ^(b)			Total		
	Cost ^(c)	Unrealized		Cost ^(c)	Unrealized		Cost ^(c)	Unrealized		Cost ^(c)	Unrealized	
		Loss	Items		Loss	Items		Loss	Items		Loss ^(d)	Items

(a) Represents the number of consecutive months that fair value has been less than cost by any amount.

(b) Represents the percentage by which fair value is less than cost at the balance sheet date.

(c) For bonds, represents amortized cost.

(d) The effect on net income of unrealized losses after taxes will be mitigated upon realization because certain realized losses will be charged to participating policyholder accounts, or realization will result in current decreases in the amortization of certain DAC.

(e) Includes securities lending invested collateral.

(f) Of this \$9.7 billion, \$6.7 billion relates to RMBS, CMBS, CDOs and ABS with unrealized losses between 25 percent and 50 percent; and \$1.9 billion relates to RMBS, CMBS, CDOs and ABS with unrealized losses between 20 percent and 25 percent. The balance represents all other classes of fixed maturity securities.

The aging of the unrealized losses of RMBS, CMBS, CDOs and ABS with fair values between 20 percent and 50 percent less than their cost at June 30, 2008 (in footnote (f) to the table above) is shown in the table below, which provides the period in which those securities in unrealized loss positions would become candidates for impairment solely because they have been trading at a discount for nine consecutive months (AIG's other-than-temporary aging guideline) without regard to the level of discount (AIG's other-than-temporary trading level guideline), assuming prices remained unchanged.

(in millions)	Third Quarter 2008	Fourth Quarter 2008	First Quarter 2009	Total
Unrealized loss percent				
25 to 50 percent	\$69	\$3,574	\$3,104	\$6,747
20 to less than 25 percent	\$ 6	\$ 35	\$1,856	\$1,897

Given the current difficult market conditions, AIG is not able to predict reasonably likely changes in the prices of these

securities. Moreover, AIG is unable to assess the effect, if any, that recent transactions involving sales of large portfolios of CDOs will have on the pricing of its available for sale securities.

Unrealized gains and losses

At June 30, 2008, the carrying value of AIG's fixed maturity and equity securities aggregated \$516.4 billion. At June 30, 2008, aggregate pre-tax unrealized gains for fixed maturity and equity securities were \$13.1 billion (\$8.5 billion after tax).

At June 30, 2008, the aggregate pre-tax gross unrealized losses on fixed maturity and equity securities were

\$24.4 billion (\$15.9 billion after tax). Additional information about these securities is as follows:

- These securities were valued, in the aggregate, at approximately 92 percent of their current amortized cost.
- Approximately 12 percent of these securities were valued at less than 20 percent of their current cost, or amortized cost.
- Approximately three percent of the fixed maturity securities had issuer credit ratings that were below investment grade.

AIG did not consider these securities in an unrealized loss position to be other-than-temporarily impaired at June 30, 2008, because management has the intent and ability to hold these investments until they recover their cost basis. AIG believes the securities will generally continue to perform in accordance with the original terms, notwithstanding the present price declines.

For the three- and six-month periods ended June 30, 2008, unrealized losses related to investment grade bonds increased \$1.0 billion (\$0.7 billion after tax) and \$10.5 billion (\$6.8 billion after tax), respectively, reflecting the widening of credit spreads, partially offset by the effects of a decline in risk-free interest rates.

The amortized cost and fair value of fixed maturity securities available for sale in an unrealized loss position at June 30, 2008, by contractual maturity, were as follows:

<i>(in millions)</i>	Amortized Cost	Fair Value
Due in one year or less	\$ 8,067	\$ 7,945
Due after one year through five years	43,226	41,595
Due after five years through ten years	68,941	65,592
Due after ten years	77,824	72,700
Mortgage-backed, asset-backed and collateralized	92,212	78,671
Total	\$290,270	\$266,503

For the six-month period ended June 30, 2008, the pre-tax realized losses incurred with respect to the sale of fixed maturities and equity securities were \$0.8 billion. The aggregate fair value of securities sold was \$8.9 billion, which was approximately 92 percent of amortized cost. The average period of time that securities sold at a loss during the six-month period ended June 30, 2008 were trading continuously at a price below book value was approximately five months. See Risk Management — Corporate Risk Management — Credit Risk Management in the 2007 Annual Report on Form 10-K for an additional discussion of investment risks associated with AIG's investment portfolio.

Risk Management

For a complete discussion of AIG's risk management program, see Risk Management in the 2007 Annual Report on Form 10-K.

AIG has continued to invest in human resources, systems and processes in the enterprise risk management functions, both at the corporate and business unit levels. These efforts include implementing systems and processes to ensure the aggregation of the various categories of risk across business units and as a whole, and incorporating forward-looking analyses and stress tests. These initiatives are ongoing and will take time to implement, including the hiring of additional qualified personnel.

Credit Risk Management

AIG defines its aggregate credit exposures to a counterparty as the sum of its fixed maturities, loans, finance leases, derivatives (mark to market), deposits (in the case of financial institutions) and the specified credit equivalent exposure to certain insurance products which embody credit risk.

The following table presents AIG's largest credit exposures at June 30, 2008 as a percentage of total consolidated shareholders' equity:

Category	Risk Rating ^(a)	Credit Exposure as a Percentage of Total Consolidated Shareholders' Equity
Investment Grade:		
10 largest combined	A+ (weighted average ^(b))	113.9%
Single largest non- sovereign (financial institution)	A+	13.3
Single largest corporate	AAA	9.0
Single largest sovereign	A	22.2
Non-Investment Grade:		
Single largest sovereign	BB+	1.0
Single largest non- sovereign	BB+	0.6

(a) Risk rating is based on external ratings, or equivalent based on AIG's internal risk rating process.

(b) Five of the ten largest credit exposures are to highly-rated financial institutions and four are to investment-grade rated sovereigns; none is rated lower than BBB+ or its equivalent.

AIG closely controls its aggregate cross-border exposures to avoid excessive concentrations in any one country or regional group of countries. AIG defines its cross-border exposure to include both cross-border credit exposures and its large cross-border investments in its own international subsidiaries. Thirteen countries had cross-border exposures in excess of 10 percent of total consolidated shareholders' equity at June 30, 2008. At that date eight were AAA-rated, four were AA-rated and one was A-rated.

In addition, AIG closely monitors its industry concentrations, the risks of which are often mitigated by the breadth and scope of AIG's international operations. Excluding the U.S. residential and commercial mortgage sectors, AIG's single largest industry credit exposure is to the highly-rated global financial institutions sector, accounting for 128 percent of total consolidated shareholders' equity at June 30, 2008 (compared to 87 percent at December 31, 2007, as a portion of the proceeds of the May 2008 capital raising was deposited with banks). AIG's other industry credit

concentrations in excess of 10 percent of total consolidated shareholders' equity are in the following industries (in descending order by approximate size):

- Oil and gas;
- Electric and water utilities;
- European regional financial institutions;
- Global life insurance carriers;
- Global telecommunications companies;
- U.S.-based regional financial institutions;
- Global securities firms and exchanges;
- Global reinsurance firms;
- Government sponsored entities;
- Healthcare companies; and
- Retail companies.

Other than as described above, there were no significant changes to AIG's credit exposures as set forth in Risk Management — Corporate Risk Management — Credit Risk Management in the 2007 Annual Report on Form 10-K.

Market Risk Management

Insurance, Asset Management and

Non-Trading Financial Services Value at Risk (VaR)

AIG performs one comprehensive VaR analysis across all of its non-trading businesses, and a separate VaR analysis for its trading business at AIGFP. The comprehensive VaR is categorized by AIG business segment (General Insurance, Life Insurance & Retirement Services, Financial Services and

Asset Management) and also by market risk factor (interest rate, currency and equity). AIG's market risk VaR calculations include exposures to benchmark Treasury or swap interest rates, but do not include exposures to credit-based factors such as credit spreads. AIG's credit exposures within its invested assets and credit derivative portfolios are discussed in Risk Management — Segment Risk Management — Financial Services in the 2007 Annual Report on Form 10-K.

For the insurance segments, assets included are invested assets (excluding direct holdings of real estate) and liabilities included are reserve for losses and loss expenses, reserve for unearned premiums, future policy benefits for life and accident and health insurance contracts and other policyholders' funds. For financial services companies, loans and leases represent the majority of assets represented in the VaR calculation, while bonds and notes issued represent the majority of liabilities.

AIG calculated the VaR with respect to net fair values as of June 30, 2008 and December 31, 2007. The VaR number represents the maximum potential loss as of those dates that could be incurred with a 95 percent confidence (i.e., only five percent of historical scenarios show losses greater than the VaR figure) within a one-month holding period. AIG uses the historical simulation methodology that entails repricing all assets and liabilities under explicit changes in market rates within a specific historical time period. AIG uses the most recent three years of historical market information for interest rates, foreign exchange rates, and equity index prices. For each scenario, each transaction was repriced. Segment and AIG-wide scenario values are then calculated by netting the values of all the underlying assets and liabilities.

The following table presents the period-end, average, high and low VaRs on a diversified basis and of each component of market risk for AIG's non-trading businesses. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

(in millions)	2008				2007

Equity	11	12	13	11	13	11	13	8

AIG's total non-trading market risk VaR increased from \$5.6 billion at year-end 2007 to \$6.6 billion at June 30, 2008. The biggest drivers of this increase were updated liability cash flow projections, increased volatilities in equity markets and "tail" effects (increased riskiness of the worst 5 percent of simulated portfolio outcomes that determine VaR).

Capital Markets Trading VaR

AIGFP attempts to minimize risk in benchmark interest rates, equities, commodities and foreign exchange. Market exposures in option implied volatilities, correlations and basis risks are also minimized over time.

AIGFP's minimal reliance on market risk driven revenue is reflected in its VaR. AIGFP's VaR calculation is based on the interest rate, equity, commodity and foreign exchange risk arising from its portfolio. Credit-related factors, such as credit spreads or credit default, are not included in AIGFP's VaR calculation. Because the market risk with respect to securities available for sale, at market, is substantially hedged, segregation of the financial instruments into trading and other than trading was not considered necessary. AIGFP

operates under established market risk limits based upon this VaR calculation. In addition, AIGFP backtests its VaR.

In the calculation of VaR for AIGFP, AIG uses the historical simulation methodology based on estimated changes to the value of all transactions under explicit changes in market rates and prices within a specific historical time period. AIGFP attempts to secure reliable and independent current market prices, such as published exchange prices, external subscription services such as Bloomberg or Reuters, or third-party or broker quotes. When such prices are not available, AIGFP uses an internal methodology that includes extrapolation from observable and verifiable prices nearest to the dates of the transactions. Historically, actual results have not deviated from these models in any material respect.

AIGFP reports its VaR level using a 95 percent confidence level and a one-day holding period, facilitating risk comparison with AIGFP's trading peers and reflecting the fact that market risks can be actively assumed and offset in AIGFP's trading portfolio.

The following table presents the year-end, average, high, and low VaRs on a diversified basis and of each component of market risk for Capital Markets operations. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

(in millions)	As of June 30	Six Months Ended June 30, 2008			As of December 31	Year Ended December 31, 2007		
		Average	High	Low		Average	High	Low

Equity	2	2	4	2	3	3	5	2
Commodity	5	5	7	3	3	3	7	2

Credit Derivatives

AIGFP enters into credit derivative transactions in the ordinary course of its business. The majority of AIGFP's credit derivatives require AIGFP to provide credit protection on a designated portfolio of loans or debt securities. AIGFP provides such credit protection on a "second loss" basis, under which AIGFP's payment obligations arise only after credit losses in the designated portfolio exceed a specified threshold amount or level of "first losses."

In certain cases, the credit risk associated with a designated portfolio is tranching into different layers of risk, which are then analyzed and rated by the credit rating agencies. Typically, there will be an equity layer covering the first credit losses in respect of the portfolio up to a specified percentage of the total portfolio, and then successive layers ranging from generally a BBB-rated layer to one or more AAA-rated layers. In transactions that are rated with respect to the risk layer or tranche that is immediately junior to the threshold level above which AIGFP's payment obligation would generally arise, a significant majority were rated AAA at origination by the rating agencies. In transactions that are not rated, AIGFP applies the same risk criteria for setting the threshold level for its payment obligations. Therefore, the risk layer assumed by AIGFP with respect to the designated portfolio in these transactions is often called the "super senior" risk layer, defined as the layer of credit risk senior to a risk layer that has been rated AAA by the credit rating agencies, or if the transaction is not rated, equivalent thereto.

Approximately \$307 billion (consisting of corporate loans and prime residential mortgages) of the \$441 billion in notional exposure of AIGFP's super senior credit default swap portfolio as of June 30, 2008 represented derivatives written for financial institutions, principally in Europe, for the purpose of providing regulatory capital relief rather than risk mitigation. In exchange for a minimum guaranteed fee, the counterparties receive credit protection with respect to diversified loan portfolios they own, thus improving their regulatory capital position. These derivatives are generally expected to terminate at no additional cost to the counterparty when they no longer provide the regulatory

capital benefit. AIG expects that the majority of these transactions will be terminated within the next 9 to 21 months by AIGFP's counterparties. As of July 31, 2008, \$80.7 billion in notional exposures have either been terminated or are in the process of being terminated. AIGFP was not required to make any payments as part of these terminations and in certain cases was paid a fee upon termination.

In light of early termination experience to date and after other comprehensive analyses, AIG determined that there was no unrealized market valuation adjustment for this regulatory capital relief portfolio for the six-month period ended June 30, 2008 other than for transactions where AIGFP believes the counterparties are no longer using the transactions to obtain regulatory capital relief. AIG will continue to assess the valuation of this portfolio and monitor developments in the marketplace. Given the significant deterioration in the credit markets and the risk that AIGFP's expectations with respect to the termination of these transactions by its counterparties may not materialize, there can be no assurance that AIG will not recognize unrealized market valuation losses from this portfolio in future periods, and recognition of even a small percentage decline in the fair value of this portfolio could be material to an individual reporting period.

During the second quarter of 2008, a regulatory capital relief transaction with a notional amount of \$1.6 billion and a fair value loss of \$125 million was not terminated as expected when it no longer provided regulatory capital benefit to the counterparty. This transaction provided protection on an RMBS unlike the other regulatory transactions which provide protection on loan portfolios held by the counterparties. The documentation for this transaction contains provisions not included in AIGFP's other regulatory capital relief transactions, which enable the counterparty to arbitrage a specific credit exposure.

Approximately \$54 billion of the \$441 billion in notional exposure on AIGFP's super senior credit default swaps as of June 30, 2008 was written on designated pools of investment grade corporate debt and CLOs. AIG estimates

the fair value of this corporate credit default swap portfolio by reference to benchmark indices, including the CDX and iTraxx, and third-party prices and collateral calls. No assurance can be given that the fair value of AIG's corporate credit default swap portfolio would not change materially if other market indices or pricing sources were used to estimate the fair value of the portfolio.

In addition to writing credit protection on the super senior risk layer on designated portfolios of loans or debt securities, AIGFP also wrote protection on tranches below the super senior risk layer. At June 30, 2008 the notional amount of the credit default swaps in the regulatory capital relief portfolio written on tranches below the super senior risk layer was \$5.8 billion, with an estimated fair value loss of \$171 million.

While the credit default swaps written on corporate debt obligations are cash settled, the majority of the credit default swaps written on CDOs and CLOs require physical settlement. Under a physical settlement arrangement, AIGFP would be required to purchase the referenced super senior security at par in the event of a non-payment on that security. Certain of the AIGFP credit default swaps with an aggregate notional amount totaling \$8.2 billion protect CDOs that include over-collateralization provisions that adjust the value of the collateral based, in part, on the ratings of the collateral underlying the CDOs. If the over-collateralization provisions are not satisfied, an event of default would occur creating a right to accelerate. In certain of these circumstances, AIGFP may be required to purchase the referenced super senior security at par upon the acceleration of the security. As of July 31, 2008, six CDOs for which AIGFP had written credit protection on the super senior CDO securities had experienced events of default. One of these CDOs has been accelerated and AIGFP extinguished a portion of its swap obligations by purchasing the protected CDO security for \$103 million, principal amount outstanding related to this obligation. AIGFP's remaining notional exposure with respect to these CDOs was \$1.5 billion at July 31, 2008. AIGFP cannot currently quantify its obligations which might occur in the future under the foregoing provisions, or determine the timing of any additional purchases that might be required. Therefore, there can be no assurance that the extinguishment of these obligations by AIGFP will not have a material effect on AIG's liquidity.

AIGFP has written 2a-7 Puts in connection with certain multi-sector CDOs that allow the holders of the securities to treat the securities as eligible short-term 2a-7 investments under the Investment Company Act of 1940. Holders of securities are permitted, in certain circumstances, to tender their securities to the issuers at par. If an issuer's remarketing agent is unable to resell the securities so tendered, AIGFP must purchase the securities at par as long as the security has not experienced a default. During the six-month period ended

June 30, 2008, AIGFP repurchased securities with a principal amount of approximately \$917 million in connection with these obligations. In certain transactions, AIGFP has contracted with third parties to provide liquidity for the securities if they are put to AIGFP for up to a three-year period. Such liquidity facilities totaled \$8.5 billion at June 30, 2008. As of August 5, 2008, AIGFP has utilized \$3.2 billion of these liquidity facilities. At June 30, 2008, AIGFP had \$11.3 billion of notional exposure on 2a-7 Puts, included as part of the multi-sector CDO portfolio discussed herein.

Certain of these credit derivatives are subject to collateral posting provisions. These provisions differ among counterparties and asset classes. In the case of most of the multi-sector CDO transactions, the amount of collateral required is determined based on the change in value of the underlying cash security that represents the super senior risk layer subject to credit protection, and not on the change in value of the super senior credit derivative.

As of July 31, 2008, AIGFP had received collateral calls from counterparties in respect of certain super senior credit default swaps (including those entered into by counterparties for regulatory capital relief purposes and those in respect of corporate debt/CLOs). At times, valuation estimates made by certain of the counterparties with respect to certain super senior credit default swaps or the underlying reference CDO securities, for purposes of determining the amount of collateral required to be posted by AIGFP in connection with such instruments, have differed significantly from AIGFP's estimates. AIG is unable to assess the effect, if any, that recent transactions involving sales of large portfolios of CDOs will have on collateral posting requirements. In almost all cases, AIGFP has been able to successfully resolve the differences or otherwise reach an accommodation with respect to collateral posting levels, including in certain cases by entering into compromise collateral arrangements, some of which are for specified periods of time. Due to the ongoing nature of these collateral calls, AIGFP may engage in discussions with one or more counterparties in respect of these differences at any time. As of July 31, 2008, AIGFP had posted collateral (or had received collateral, where offsetting exposures on other transactions resulted in the counterparty posting to AIGFP) based on exposures, calculated in respect of super senior credit default swaps, in an aggregate net amount of \$16.5 billion. Valuation estimates made by counterparties for collateral purposes were considered in the determination of the fair value estimates of AIGFP's super senior credit default swap portfolio.

The unrealized market valuation losses of \$26.1 billion recorded on AIGFP's super senior multi-sector CDO credit default swap portfolio represents the cumulative change in fair value of these derivatives, which represents AIG's best estimate of the amount it would need to pay to a willing, able and knowledgeable third party to assume the obligations under

AIGFP's super senior multi-sector credit default swap portfolio as of June 30, 2008.

Stress Testing/Sensitivity Analysis

At June 30, 2008, AIG used a roll rate analysis to stress the AIGFP super senior multi-sector CDO credit default swap portfolio for potential pre-tax realized credit losses that it may incur if the multi-sector CDO super senior credit default swap portfolio and the referenced obligations acquired by AIGFP in extinguishing its obligations under the swaps are held to maturity. Credit losses represent an estimate of the potential shortfall of principal and/or interest cash flows on the referenced obligations and credits underlying the portfolio that will not be recovered assuming the portfolio and referenced obligations are held to maturity. Two scenarios illustrated in this process resulted in potential pre-tax realized credit losses of approximately \$5.0 billion (Scenario A) and approximately \$8.5 billion (Scenario B). Actual ultimate realized credit losses are likely to vary, perhaps materially, from these scenarios, and there can be no assurance that the ultimate realized credit losses related to the AIGFP super senior multi-sector CDO credit default swap portfolio will be consistent with either scenario or that such realized credit losses will not exceed the potential realized credit losses illustrated by Scenario B.

In prior quarters, AIG conducted risk analyses of the AIGFP super senior multi-sector CDO credit default swap portfolio using certain ratings-based static stress tests, which centered around scenarios of further stress on the portfolio resulting from downgrades by the rating agencies from current levels on the underlying collateral in the CDO structures supported by AIGFP's credit default swaps. During the first quarter of 2008, AIG developed an additional methodology to conduct stress tests for potential realized credit losses from AIGFP's super senior multi-sector CDO credit default swap portfolio that combined a roll rate estimate of the losses emanating from the subprime and Alt-A RMBS collateral securities in the multi-sector CDOs, plus an estimate of losses arising from CDO securities (inner CDOs) and other ABS, such as CMBS, credit card and auto loan ABS, held by the CDOs. In conducting its risk analyses as of June 30, 2008, AIG discontinued use of the rating-based static stress test and used only the roll rate stress test because it believes that the roll rate stress test provides a more reasonable analysis methodology to illustrate potential realized credit losses than the rating-based static stress test used previously.

In the second quarter of 2008, AIG stressed the AIGFP super senior multi-sector CDO credit default swap portfolio using a roll rate analysis as applied to all RMBS collateral including subprime, Alt-A and prime residential mortgages that comprise the subprime, Alt-A and prime RMBS. This analysis assumed that certain percentages of actual delinquent mortgages will roll into default and foreclosure. It also assumed that certain percentages of non-delinquent mortgages will become delinquent and default over time, with those

delinquency percentages depending on the age of the mortgage pool. To those assumed defaults AIG applied loss severities (one minus recovery) to derive estimated ultimate losses for each mortgage pool comprising a subprime, Alt-A and prime RMBS. Because subprime, Alt-A and prime RMBS have differing characteristics, the roll rates and loss severities differed. AIG then estimated tranche losses from these roll rate losses by applying the pool losses up through the capital structure of the RMBS. In this estimate of tranche losses, AIG introduced in the quarter an enhancement to the roll rate analysis to take into account the cash flow waterfall and to capture the potential effects, both positive and negative, of cash flow diversion within each CDO. To these estimated subprime, Alt-A and prime RMBS losses AIG added estimated credit losses on the inner CDOs and other ABS, such as CMBS, credit card and auto loan ABS, calculated by using rating-based static percentages, in the case of inner CDOs varying by vintage and type of CDO, and, in the case of other ABS, by rating. In addition to the foregoing, the analysis incorporates the effects of certain other factors such as mortgage prepayment rates, excess spread and delinquency triggers. The total of the roll rate losses and the losses on the inner CDOs and other ABS using two different scenarios of assumptions yielded estimated potential pre-tax realized credit losses of approximately \$5.0 billion and approximately \$8.5 billion.

At March 31, 2008, AIG's credit-based analyses estimated potential pre-tax realized credit losses at approximately \$1.2 billion to \$2.4 billion. The estimate of \$2.4 billion was derived using the roll rate stress test described above. The increase in the estimated potential realized credit loss illustrated by Scenarios A and B was the result of both enhancements to the model and changes in the assumptions used. The model was enhanced by inclusion of prime RMBS into the portfolio of securities subjected to the roll rate analysis and the introduction of analytics to capture the potential effects of the cash flow waterfall. Changes in assumptions included revisions to the roll rate percentages and loss severities on subprime and Alt-A mortgages in view of deteriorating real estate market conditions, as well as a higher stress to other ABS collateral and the use of current inner CDO ratings in the rating-based static percentage. The potential realized credit loss illustrated by Scenario B is the result of applying different, more highly stressed assumptions to the roll rate analysis model than those used in Scenario A.

Due to the dislocation in the market for CDO and RMBS collateral, AIG does not use the market values of the underlying CDO collateral in estimating its potential realized credit losses. The use of factors derived from market-observable prices in models used to determine the estimates for future realized credit losses could result in materially higher estimates of potential realized credit losses.

Under the terms of most of these credit derivatives, credit losses to AIG would generally result from the credit

impairment of the referenced obligations that AIG would acquire in extinguishing its swap obligations. Based upon its most current analyses, AIG believes that any credit losses which may emerge over time at AIGFP will not be material to AIG's consolidated financial condition, but could be material to AIG's liquidity. Other types of analyses or models could result in materially different estimates. AIG is aware that other market participants have used different assumptions and methodologies to estimate the potential realized credit losses on AIGFP's super senior multi-sector CDO credit default swap portfolio, resulting in significantly higher estimates than those resulting from AIG's roll rate stress testing scenarios. Actual ultimate realized credit losses are likely to vary, perhaps materially, from AIG's roll rate stress testing scenarios, and there can be no assurance that the ultimate realized credit losses related to the AIGFP super senior multi-sector CDO credit default swap portfolio will be consistent with either scenario or that such realized credit losses will not exceed the potential realized credit losses illustrated by Scenario B.

The potential realized credit losses illustrated in Scenarios A and B are lower than the fair value of AIGFP's super senior multi-sector CDO credit default swap portfolio,

ITEM 3. Quantitative and Qualitative Disclosures About Market Risk

Included in Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations.

ITEM 4. Controls and Procedures

In connection with the preparation of this Quarterly Report on Form 10-Q, an evaluation was carried out by AIG's management, with the participation of AIG's Chief Executive Officer and Chief Financial Officer, of the effectiveness of AIG's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (Exchange Act)). Disclosure controls and procedures are designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms and that such information is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial Officer, to allow timely decisions regarding required disclosures. Solely as a result of the previously identified material weakness in internal control over the fair value valuation of the AIGFP super senior credit default swap portfolio and oversight thereof as described in the 2007 Annual Report on Form 10-K, AIG's Chief Executive Officer and Chief Financial Officer have concluded that, as of June 30, 2008, AIG's disclosure controls and procedures were ineffective. Notwithstanding the existence of this material weakness, AIG believes that the consolidated financial statements in this Quarterly Report on Form 10-Q fairly present, in all material respects, AIG's consolidated financial condition as of June 30, 2008 and December 31, 2007 and consolidated

a net loss of \$26.1 billion at June 30, 2008. The net loss represents AIG's best estimate of the amount it would need to pay to a willing third party to assume the obligations under AIGFP's super senior multi-sector CDO credit default swap portfolio. The fair value of AIGFP's super senior multi-sector CDO credit default swap portfolio is based upon fair value accounting principles, which rely on third-party prices for both the underlying collateral securities and the CDOs that AIGFP's super senior credit default swaps wrap. These prices currently incorporate liquidity premiums, risk aversion elements and credit risk modeling, which in some instances may use more conservative assumptions than those used by AIG in its roll rate stress testing. Due to the ongoing disruption in the U.S. residential mortgage market and credit markets and the downgrades of RMBS and CDOs by the rating agencies, the market continues to lack transparency around the pricing of these securities. These prices are not necessarily reflective of the ultimate potential realized credit losses AIGFP could incur in the future related to the AIGFP super senior multi-sector CDO credit default swap portfolio, and AIG believes they incorporate a significant amount of market-driven risk aversion.

results of operations for the three- and six-month periods ended June 30, 2008 and 2007 and consolidated cash flows for the six-month periods ended June 30, 2008 and 2007, in conformity with GAAP. In addition, there has been no change in AIG's internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) that occurred during the quarter ended June 30, 2008 that has materially affected, or is reasonably likely to materially affect, AIG's internal control over financial reporting.

Throughout 2008 and 2007, AIG recorded out of period adjustments, many of which were detected as part of continuing remediation efforts. It is AIG's policy to record all error corrections, without regard to materiality, and AIG has an established, formal process for the identification, evaluation and recording of all out of period adjustments. This process includes a heightened sensitivity for potential errors related to the internal control matters discussed in Item 9A. of the 2007 Annual Report on Form 10-K. AIG distinguishes error corrections from changes in estimates by evaluating the facts and circumstances of such items, including considering whether information was capable of being known at the time of original recording. AIG has evaluated the adjustments recorded in 2008 and 2007 from a qualitative and quantitative perspective and concluded that such adjustments are immaterial individually and in the aggregate to the current and prior periods.

Part II – OTHER INFORMATION

ITEM 2. *Unregistered Sales of Equity Securities and Use of Proceeds*

Information with respect to purchases of AIG Common stock during the three months ended June 30, 2008 was as follows:

Period	Total Number of Shares Purchased ^(a)	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares that May Yet Be Purchased Under the Plans or Programs at End of Month ^(b)
April 1 - 30	3,832,276	\$46.78	3,832,276	
May 1 - 31	—		—	
June 1 - 30	—		—	
Total	3,832,276	\$46.78	3,832,276	

(a) Reflects date of delivery. Does not include 4,245 shares delivered or attested to in satisfaction of the exercise price by holders of AIG employee stock options exercised during the three months ended June 30, 2008.

(b) In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. In November 2007, AIG's Board of Directors authorized the repurchase of an additional \$8 billion in common stock. A balance of \$9 billion remained for purchases under the program as of June 30, 2008. AIG does not expect to purchase additional shares under its share repurchase program for the foreseeable future.

ITEM 4. *Submission of Matters to a Vote of Security Holders*

At the Annual Meeting of Shareholders held on May 14, 2008, the Shareholders:

(a) Elected thirteen directors as follows:

Nominee	Shares For	Shares Withheld	Abstained
Stephen F. Bollenbach	1,685,779,934	501,561,929	63,124,235
Martin S. Feldstein	1,691,691,682	506,469,958	52,304,458
Ellen V. Futter	1,652,157,470	542,842,042	55,466,586
Richard C. Holbrooke	1,518,501,128	675,477,016	56,487,954
Fred H. Langhammer	1,675,419,092	541,328,771	33,718,235
George L. Miles, Jr.	1,496,407,272	717,640,163	36,418,663
Morris W. Offit	1,532,712,325	682,550,113	35,203,660
James F. Orr III	1,603,644,400	609,750,276	37,071,422
Virginia M. Rometty	1,653,815,644	542,266,335	54,384,119
Martin J. Sullivan	1,691,337,900	520,729,226	38,398,972
Michael H. Sutton	1,499,773,544	715,209,935	35,482,619
Edmund S.W. Tse	1,690,069,518	521,903,489	38,493,091
Robert B. Willumstad	1,658,750,176	556,048,522	35,667,400

There were no broker non-votes with respect to this item.

(b) Approved by a vote of 1,599,775,289 shares for and 616,864,546 shares against, with 33,826,263 shares abstaining, a proposal to ratify the selection of PricewaterhouseCoopers LLP as the independent registered public accounting firm for 2008. There were no broker non-votes with respect to this item.

(c) Rejected by a vote of 313,891,912 shares for and 1,363,468,866 shares against, with 391,665,309 shares abstaining and 181,440,011 broker non-votes, a shareholder proposal relating to the human right to water.

(d) Rejected by a vote of 347,720,077 shares for and 1,357,015,652 shares against, with 364,290,358 shares abstaining and 181,440,011 broker non-votes, a shareholder proposal relating to the reporting of political contributions.

ITEM 6. *Exhibits*

See accompanying Exhibit Index.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.

<u>Exhibit Number</u>	<u>Description</u>	<u>Location</u>
11	Statement re computation of per share earnings	Included in Note 4 of Notes to Consolidated Financial Statements.
12	Computation of ratios of earnings to fixed charges	Filed herewith.
31	Rule 13a-14(a)/15d-14(a) Certifications	Filed herewith.
32	Section 1350 Certifications	Filed herewith.

American International Group, Inc.
Computation of Ratios of Earnings to Fixed Charges

<i>(in millions, except ratios)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2008	2007	2008	2007
Income (loss) before income taxes and minority interest	\$ (8,756)	\$ 6,328	\$ (20,020)	\$ 12,500
Less – Equity income of less than 50% owned persons	8	49	17	91
Add – Dividends from less than 50% owned persons	21	25	21	25
	(8,743)	6,304	(20,016)	12,434
Add – Fixed charges	2,901	2,442	5,093	5,114
Less – Capitalized interest	6	9	15	20
Income (loss) before income taxes, minority interest and fixed charges	\$ (5,848)	\$ 8,737	\$ (14,938)	\$ 17,528
Fixed charges:				
Interest costs	\$ 2,826	\$ 2,381	\$ 4,943	\$ 4,993
Rental expense ^(a)	75	61	150	121
Total fixed charges	\$ 2,901	\$ 2,442	\$ 5,093	\$ 5,114
Ratio of earnings to fixed charges	^(b)	3.58	^(b)	3.43
Secondary Ratio				
Interest credited to GIC and GIA policy and contract holders	\$ (1,594)	\$(1,268)	\$ (2,520)	\$(2,847)
Total fixed charges excluding interest credited to GIC and GIA policy and contract holders	\$ 1,307	\$ 1,174	\$ 2,573	\$ 2,267
Secondary ratio of earnings to fixed charges	^(b)	6.36	^(b)	6.48

(a) The proportion considered representative of the interest factor.

(b) Earnings were inadequate to cover total fixed charges by \$8,749 million and \$20,031 million for the three- and six-month periods ended June 30, 2008. The coverage deficiency for total fixed charges excluding interest credited to GIC and GIA policy and contract holders was \$7,155 million and \$17,511 million for the three- and six-month periods ended June 30, 2008.

The secondary ratio is disclosed for the convenience of fixed income investors and the rating agencies that serve them and is more comparable to the ratios disclosed by all issuers of fixed maturity securities. The secondary ratio removes interest credited to guaranteed investment contract (GIC) policyholders and guaranteed investment agreement (GIA) contract holders. Such interest expenses are also removed from income (loss) before income taxes and minority interest used in this calculation. GICs and GIAs are entered into by AIG's insur-

ance subsidiaries, principally SunAmerica Life Insurance Company and AIG Financial Products Corp. and its subsidiaries, respectively. The proceeds from GICs and GIAs are invested in a diversified portfolio of securities, primarily investment grade bonds. The assets acquired yield rates greater than the rates on the related policyholders obligation or agreement, with the intent of earning operating income from the spread.

CERTIFICATIONS

I, Robert B. Willumstad, certify that:

1. I have reviewed this Quarterly Report on Form 10-Q of American International Group, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited)***1. Summary of Significant Accounting Policies****Basis of Presentation**

These unaudited condensed consolidated financial statements do not include all disclosures required by accounting principles generally accepted in the United States (GAAP) for complete financial statements and should be read in conjunction with the audited consolidated financial statements and the related notes included in the Annual Report on Form 10-K of American International Group, Inc. (AIG) for the year ended December 31, 2007 (2007 Annual Report on Form 10-K).

In the opinion of management, these consolidated financial statements contain the normal recurring adjustments necessary for a fair statement of the results presented herein. All material intercompany accounts and transactions have been eliminated.

Going Concern Considerations

During the third quarter of 2008, requirements to post collateral in connection with AIGFP's credit default swap (CDS) portfolio and other AIGFP transactions and to fund returns of securities lending collateral placed stress on AIG's liquidity. AIG's stock price declined from \$22.76 on September 8, 2008 to \$4.76 on September 15, 2008. On that date, AIG's long-term debt ratings were downgraded by Standard & Poor's, a division of The McGraw-Hill Companies, Inc. (S&P), Moody's Investors Service (Moody's) and Fitch Ratings (Fitch), which triggered additional requirements for liquidity. These and other events severely limited AIG's access to debt and equity markets.

On September 22, 2008, AIG entered into an \$85 billion revolving credit agreement (the Fed Credit Agreement) with the Federal Reserve Bank of New York (the NY Fed) and, pursuant to the Fed Credit Agreement, AIG agreed to issue 100,000 shares of Series C Perpetual, Convertible, Participating Preferred Stock (the Series C Preferred Stock) to a trust for the benefit of the United States Treasury (the Trust) (see Notes 4 and 5 to the Consolidated Financial Statements). At September 30, 2008, amounts owed under the facility created pursuant to the Fed Credit Agreement (the Fed Facility) totaled \$63 billion, including accrued fees and interest.

Since September 30, 2008, AIG has borrowed additional amounts under the Fed Facility and has announced plans to sell assets and businesses to repay amounts owed in connection with the Fed Credit Agreement. In addition, subsequent to September 30, 2008, certain of AIG's domestic life insurance subsidiaries entered into an agreement with the NY Fed pursuant to which the NY Fed has borrowed, in return for cash collateral, investment grade fixed maturity securities from the insurance subsidiaries. As described in Note 11 to

the Consolidated Financial Statements, AIG announced on November 10, 2008 that it had entered into an agreement in principle as part of the Troubled Asset Relief Program (TARP) pursuant to which the United States Treasury will purchase from AIG \$40 billion liquidation preference of newly issued perpetual preferred stock and a 10-year warrant exercisable for shares of AIG common stock equal to 2% of the outstanding shares of common stock, and that the NY Fed and AIG had agreed to amend the Fed Credit Agreement to reduce the interest rate on outstanding borrowings and undrawn amounts, extend the term from two years to five years, reduce the number of shares of common stock of AIG to be issued upon conversion of the Series C Preferred Stock held by the Trust so that the government's overall interest will not exceed 79.9 percent and revise the total amount available under the Fed Facility. In addition, four AIG affiliates are participating in the NY Fed's Commercial Paper Funding Facility (CPFF). AIG also has announced its intention to enter into other agreements with the NY Fed to limit AIG's future liquidity exposures to the multi-sector credit default swap portfolio and securities lending programs.

In assessing AIG's current financial position and developing operating plans for the future, management has made significant judgments and estimates with respect to the potential financial and liquidity effects of AIG's risks and uncertainties, including but not limited to:

- the potential adverse effects on AIG's businesses that could result if there are further downgrades by rating agencies, including in particular, the uncertainty in estimating, for the super senior credit default swaps, both the number of counterparties who may elect to terminate under contractual termination provisions and the amount that would be required to be paid in the event of a downgrade;
- the potential for continued declines in bond and equity markets; and
- the potential effect on AIG if the capital levels of its regulated and unregulated subsidiaries prove inadequate to support current business plans; and
- the effect on AIG's businesses of continued compliance with the covenants of the Fed Credit Agreement.

Based on the agreement in principle, management's plans to stabilize AIG's businesses and dispose of its non-core assets, and after consideration of the risks and uncertainties to such plans, management believes that it will have adequate liquidity to finance and operate AIG's businesses, execute its disposition plan and repay its obligations for at least the next twelve months.

It is possible that the actual outcome of one or more of management's plans could be materially different, or that one

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***1. Summary of Significant Accounting Policies** *(continued)*

or more of management's significant judgments or estimates about the potential effects of the risks and uncertainties could prove to be materially incorrect or that the agreements in principle disclosed in Note 11 to the Consolidated Financial Statements (and as discussed below) do not result in completed transactions. If one or more of these possible outcomes were realized, AIG may not have sufficient cash to meet its obligations. If AIG needs funds in excess of amounts available from the sources described below, AIG would need to find additional financing and, if such additional financing were to be unavailable, there could exist substantial doubt about AIG's ability to continue as a going concern.

AIG's consolidated financial statements have been prepared on a going concern basis, which contemplates the realization of assets and the satisfaction of liabilities in the normal course of business. These consolidated financial statements do not include any adjustments relating to the recoverability and classification of recorded assets nor relating to the amounts and classification of liabilities that may be necessary should we be unable to continue as a going concern.

Investment Pricing

Certain of AIG's foreign subsidiaries included in the consolidated financial statements report on a fiscal period ended August 31. The effect on AIG's consolidated financial condition and results of operations of all material events occurring between August 31 and September 30 for all periods presented has been recorded. AIG determined the significant and rapid world-wide market decline in September 2008 to be an intervening event that had a material effect on its consolidated financial position and results of operations. AIG reflected this recent market decline throughout its investment portfolio. Accordingly, AIG recorded \$1.3 billion (\$845 million after tax) of hedge and mutual fund investment losses in net investment income, \$1.1 billion (\$910 million after tax) of other than temporary impairment charges, and \$5.4 billion (\$3.2 billion after tax) of unrealized depreciation on investments.

Revisions and Reclassifications

During the third quarter of 2008, AIG began reporting interest expense and other expenses separately on the consolidated statement of income (loss). Interest expense represents interest expense on short-term and long-term borrowings. Other expenses represent all other expenses not separately disclosed on the consolidated statement of income (loss). Prior period amounts were revised to conform to the current period presentation.

In the second quarter of 2008, AIG determined that certain accident and health contracts in its Foreign General Insurance reporting unit, which were previously accounted for as short duration contracts, should be treated as long duration insurance products. Accordingly, the December 31, 2007 consolidated balance sheet has been revised to reflect the reclassification of \$763 million of deferred direct response advertising costs, previously reported in other assets, to deferred policy acquisition costs (DAC). Additionally, \$320 million has been reclassified in the consolidated balance sheet as of December 31, 2007 from unearned premiums to future policy benefits for life and accident and health insurance contracts. These revisions did not have a material effect on AIG's consolidated income before income taxes, net income, or shareholders' equity for any period presented.

See Recent Accounting Standards — Accounting Changes below for a discussion of AIG's adoption of the Financial Accounting Standards Board (FASB) Staff Position (FSP) FASB Interpretation No. (FIN) 39-1, "Amendment of FASB Interpretation No. 39" (FSP FIN 39-1).

Certain other reclassifications and format changes have been made to prior period amounts to conform to the current period presentation.

Fixed Maturity Securities, Held to Maturity — Change in Intent

During the third quarter of 2008, AIG transferred all securities previously classified as held to maturity to available for sale. As a result of the continuing disruption in the credit markets during the third quarter of 2008, AIG changed its intent to hold to maturity certain tax-exempt municipal securities held by its insurance subsidiaries, which comprised substantially all of AIG's held to maturity securities. This change in intent resulted from a change in certain subsidiaries' investment strategies to increase their allocations to taxable securities, reflecting AIG's net operating loss position. As of September 30, 2008, the securities had a carrying value of \$20.8 billion and a net unrealized loss of \$752 million. No securities previously classified as held to maturity were sold during the third quarter.

Recent Accounting Standards*Accounting Changes***FAS 157**

In September 2006, the FASB issued Statement of Financial Accounting Standards (FAS) No. 157, "Fair Value Measurements" (FAS 157). FAS 157 defines fair value, establishes a framework for measuring fair value and expands disclosure requirements regarding fair value measurements but does not change existing guidance about whether an asset or liability is

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***1. Summary of Significant Accounting Policies** *(continued)*

carried at fair value. FAS 157 nullifies the guidance in Emerging Issues Task Force (EITF) Issue No. 02-3, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities," (EITF 02-3) that precluded the recognition of a trading profit at the inception of a derivative contract unless the fair value of such contract was obtained from a quoted market price or other valuation technique incorporating observable market data. FAS 157 also clarifies that an issuer's credit standing should be considered when measuring liabilities at fair value. The fair value measurement and related disclosure guidance in FAS 157 do not apply to fair value measurements associated with AIG's share-based employee compensation awards accounted for in accordance with FAS 123(R), "Share-Based Payment."

AIG adopted FAS 157 on January 1, 2008, its required effective date. FAS 157 must be applied prospectively, except for certain stand-alone derivatives and hybrid instruments initially measured using the guidance in EITF 02-3, which must be applied as a cumulative effect accounting change to retained earnings at January 1, 2008. The cumulative effect, net of taxes, of adopting FAS 157 on AIG's consolidated balance sheet was an increase in retained earnings of \$4 million.

The most significant effect of adopting FAS 157 on AIG's consolidated results of operations for the three- and nine-month periods ended September 30, 2008 related to changes in fair value methodologies with respect to both liabilities already carried at fair value, primarily hybrid notes and derivatives, and newly elected liabilities measured at fair value (see FAS 159 discussion below). Specifically, the incorporation of AIG's own credit spreads and the incorporation of explicit risk margins (embedded policy derivatives at transition only) resulted in a increase in pre-tax income of \$2.4 billion (\$1.5 billion after tax) and an increase in pre-tax income of \$5.0 billion (\$3.2 billion after tax) for the three- and nine-month periods ended September 30, 2008, respectively. The effects of the changes in AIG's own credit spreads on pre-tax income for AIG Financial Products Corp. and AIG Trading Group Inc. and their respective subsidiaries (AIGFP) were increases of \$1.3 billion and \$3.8 billion for the three- and nine-month periods ended September 30, 2008, respectively. The effect of the changes in counterparty credit spreads for assets measured at fair value at AIGFP were decreases in pre-tax income of \$2.3 billion and \$5.3 billion for the three- and nine-month periods ended September 30, 2008, respectively.

See Note 3 to the Consolidated Financial Statements for additional FAS 157 disclosures.

FAS 159

In February 2007, the FASB issued FAS 159, "The Fair Value Option for Financial Assets and Financial Liabilities" (FAS 159). FAS 159 permits entities to choose to measure at fair value many financial instruments and certain other items that are not required to be measured at fair value. Subsequent changes in fair value for designated items are required to be reported in income. FAS 159 also establishes presentation and disclosure requirements for similar types of assets and liabilities measured at fair value. FAS 159 permits the fair value option election on an instrument-by-instrument basis for eligible items existing at the adoption date and at initial recognition of an asset or liability, or upon most events that give rise to a new basis of accounting for that instrument.

AIG adopted FAS 159 on January 1, 2008, its required effective date. The adoption of FAS 159 with respect to elections made in the Life Insurance & Retirement Services segment resulted in an after-tax decrease to 2008 opening retained earnings of \$559 million. The adoption of FAS 159 with respect to elections made by AIGFP resulted in an after-tax decrease to 2008 opening retained earnings of \$448 million. Included in this amount are net unrealized gains of \$105 million that were reclassified to retained earnings from accumulated other comprehensive income (loss) related to available for sale securities recorded in the consolidated balance sheet at January 1, 2008 for which the fair value option was elected.

See Note 3 to the Consolidated Financial Statements for additional FAS 159 disclosures.

FAS 157 and FAS 159

The following table summarizes the after-tax increase (decrease) from adopting FAS 157 and FAS 159 on the opening shareholders' equity accounts at January 1, 2008:

	At January 1, 2008		
	Accumulated Other Comprehensive Income/(Loss)	Retained Earnings	Cumulative Effect of Accounting Changes
<i>(in millions)</i>			
FAS 157	\$ -	\$ 4	\$ 4
FAS 159	(105)	(1,007)	(1,112)
Cumulative effect of accounting changes	\$(105)	\$(1,003)	\$(1,108)

FSP FIN 39-1

In April 2007, the FASB issued FSP FIN 39-1, which modifies FASB Interpretation (FIN) No. 39, "Offsetting of Amounts Related to Certain Contracts," and permits companies to offset cash collateral receivables or payables against derivative instruments under certain circumstances. AIG adopted the provisions of FSP FIN 39-1 effective January 1, 2008, which

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***1. Summary of Significant Accounting Policies** *(continued)*

requires retrospective application to all prior periods presented. At September 30, 2008, the amounts of cash collateral received and posted that were offset against net derivative positions totaled \$6.5 billion and \$33.1 billion, respectively. The cash collateral received and paid related to AIGFP derivative instruments was previously recorded in both trade payables and trade receivables. Cash collateral received related to non-AIGFP derivative instruments was previously recorded in other liabilities. Accordingly, the derivative assets and liabilities at December 31, 2007 have been reduced by \$6.3 billion and \$5.8 billion, respectively, related to the netting of cash collateral.

FSP FAS 157-3

In October 2008, the FASB issued FSP FAS 157-3, “Determining the Fair Value of a Financial Asset When the Market for That Asset Is Not Active” (FSP FAS 157-3). FSP FAS 157-3 provides guidance clarifying certain aspects of FAS 157 with respect to the fair value measurements of a security when the market for that security is inactive. AIG adopted this guidance in the third quarter of 2008. The effects of adopting FSP FAS 157-3 on AIG’s consolidated financial condition and results of operations were not material.

Future Application of Accounting Standards**FAS 141(R)**

In December 2007, the FASB issued FAS 141 (revised 2007), “Business Combinations” (FAS 141(R)). FAS 141(R) changes the accounting for business combinations in a number of ways, including broadening the transactions or events that are considered business combinations; requiring an acquirer to recognize 100 percent of the fair value of assets acquired, liabilities assumed, and noncontrolling (i.e., minority) interests; recognizing contingent consideration arrangements at their acquisition-date fair values with subsequent changes in fair value generally reflected in income; and recognizing preacquisition loss and gain contingencies at their acquisition-date fair values, among other changes.

AIG is required to adopt FAS 141(R) for business combinations for which the acquisition date is on or after January 1, 2009. Early adoption is prohibited.

FAS 160

In December 2007, the FASB issued FAS 160, “Noncontrolling Interests in Consolidated Financial Statements, an amendment of ARB No. 51” (FAS 160). FAS 160 requires noncontrolling (i.e., minority) interests in partially owned consolidated subsidiaries to be classified in the consolidated balance sheet as a separate component of consolidated

shareholders’ equity. FAS 160 also establishes accounting rules for subsequent acquisitions and sales of noncontrolling interests and provides for how noncontrolling interests should be presented in the consolidated statement of income. The noncontrolling interests’ share of subsidiary income should be reported as a part of consolidated net income with disclosure of the attribution of consolidated net income to the controlling and noncontrolling interests on the face of the consolidated statement of income.

AIG is required to adopt FAS 160 on January 1, 2009 and early application is prohibited. FAS 160 must be adopted prospectively, except that noncontrolling interests should be reclassified from liabilities to a separate component of shareholders’ equity and consolidated net income should be recast to include net income attributable to both the controlling and noncontrolling interests retrospectively. AIG is currently assessing the effect that adopting FAS 160 will have on its consolidated financial statements.

FAS 161

In March 2008, the FASB issued FAS 161, “Disclosures about Derivative Instruments and Hedging Activities — an amendment of FASB Statement No. 133” (FAS 161). FAS 161 requires enhanced disclosures about (a) how and why AIG uses derivative instruments, (b) how derivative instruments and related hedged items are accounted for under FAS No. 133, “Accounting for Derivative Instruments and Hedging Activities” (FAS 133), and its related interpretations, and (c) how derivative instruments and related hedged items affect AIG’s consolidated financial condition, results of operations, and cash flows. FAS 161 is effective for AIG beginning with financial statements issued in the first quarter of 2009. Because FAS 161 only requires additional disclosures about derivatives, it will have no effect on AIG’s consolidated financial condition, results of operations or cash flows.

FAS 162

In May 2008, the FASB issued FAS 162, “The Hierarchy of Generally Accepted Accounting Principles” (FAS 162). FAS 162 identifies the sources of accounting principles and the framework for selecting the principles to be used in the preparation of financial statements presented in conformity with GAAP but does not change current practices. FAS 162 will become effective on the 60th day following Securities and Exchange Commission (SEC) approval of the Public Company Accounting Oversight Board amendments to remove GAAP hierarchy from the auditing standards. FAS 162 will have no effect on AIG’s consolidated financial condition, results of operations or cash flows.

FSP FAS 140-3

In February 2008, the FASB issued FSP No. FAS 140-3, “Accounting for Transfers of Financial Assets and Repurchase

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***1. Summary of Significant Accounting Policies** *(continued)*

Financing Transactions” (FSP FAS 140-3). FSP FAS 140-3 requires an initial transfer of a financial asset and a repurchase financing that was entered into contemporaneously with or in contemplation of the initial transfer to be evaluated as a linked transaction unless certain criteria are met. FSP FAS 140-3 is effective for AIG beginning January 1, 2009 and will be applied to new transactions entered into from that date forward. Early adoption is prohibited. AIG is currently assessing the effect that adopting FSP FAS 140-3 will have on its consolidated financial statements but does not believe the effect will be material.

FSP FAS 133-1 and FIN 45-4

In September 2008, the FASB issued FASB Staff Position No. FAS 133-1 and FIN 45-4, “Disclosures about Credit

Derivatives and Certain Guarantees: An amendment of FASB Statement No. 133 and FASB Interpretation No. 45” (FSP). The FSP amends FAS 133 to require additional disclosures by sellers of credit derivatives, including derivatives embedded in a hybrid instrument. The FSP also amends FIN No. 45, “Guarantor’s Accounting and Disclosure Requirement for Guarantees, Including Indirect Guarantees of Indebtedness of Others”, to require an additional disclosure about the current status of the payment/performance risk of a guarantee. The FSP is effective for AIG beginning with the year-end 2008 financial statements. Because the FSP only requires additional disclosures about credit derivatives and guarantees, it will have no effect on AIG’s consolidated financial condition, results of operations or cash flows.

2. Segment Information

AIG identifies its operating segments by product line consistent with its management structure. These segments are General Insurance, Life Insurance & Retirement Services, Financial Services, and Asset Management.

AIG’s operations by operating segment were as follows:

Operating Segments <i>(in millions)</i>	Three Months Ended September 30,		Nine Months Ended September 30,	
	2008	2007	2008	2007
Total revenues ^(a) :				
General Insurance	\$ 10,808	\$12,758	\$ 35,854	\$38,589
Life Insurance & Retirement Services	(4,642)	12,632	14,271	40,337
Financial Services	(5,851)	2,785	(16,016)	7,109
Asset Management	10	1,519	658	4,969
Other	451	13	531	407
Consolidation and eliminations	122	129	(436)	220
Total	\$ 898	\$29,836	\$ 34,862	\$91,631
Operating income (loss) ^(a) :				
General Insurance	\$ (2,557)	\$ 2,439	\$ (393)	\$ 8,511
Life Insurance & Retirement Services	(15,329)	1,999	(19,561)	6,900
Financial Services	(8,203)	669	(22,880)	1,008
Asset Management	(1,144)	121	(2,709)	1,806
Other ^(b)	(1,416)	(627)	(2,899)	(1,557)
Consolidation and eliminations	464	278	237	711
Total	\$(28,185)	\$ 4,879	\$(48,205)	\$17,379

(a) To better align financial reporting with the manner in which AIG’s chief operating decision maker manages the business, beginning in the third quarter of 2008, AIG’s own credit risk valuation adjustments on intercompany transactions are excluded from segment revenues and operating income.

(b) Includes AIG parent and other operations that are not required to be reported separately. The following table presents the operating loss for AIG’s Other category:

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information** (continued)

Other (in millions)	Three Months Ended September 30,		Nine Months Ended September 30,	
	2008	2007	2008	2007

Total	\$(8,203)	\$ 669	\$(22,880)	\$1,008

AIG's Asset Management operations consist of a single internal reporting unit.

3. Fair Value Measurements

Effective January 1, 2008 AIG adopted FAS 157 and FAS 159, which specify measurement and disclosure standards related to assets and liabilities measured at fair value. See Note 1 to the Consolidated Financial Statements for additional information.

The most significant effect of adopting FAS 157 on AIG's results of operations for the three- and nine-month periods ended September 30, 2008 related to changes in fair value

methodologies with respect to both liabilities already carried at fair value, primarily hybrid notes and derivatives, and newly elected liabilities measured at fair value (see FAS 159 discussion below). Specifically, the incorporation of AIG's own credit spreads and the incorporation of explicit risk margins (embedded policy derivatives at transition only) resulted in an increase of \$2.4 billion to pre-tax income (\$1.5 billion after tax) and an increase of \$5.0 billion to pre-tax income (\$3.2 billion after tax) for the three- and nine-month periods ended September 30, 2008, respectively, as follows:

(in millions)	Net Pre-Tax Increase (Decrease)		Liabilities Carried at Fair Value	Business Segment Affected
	Three Months Ended September 30, 2008	Nine Months Ended September 30, 2008		
Income statement caption:				
Net realized capital losses	\$1,074	\$1,325	Freestanding derivatives	All segments - excluding AIGFP
	-	(155)	Embedded policy derivatives	Life Insurance & Retirement Services
Unrealized market valuation losses on AIGFP super senior credit default swap portfolio	98	207	Super senior credit default swap portfolio	AIGFP
Other income	\$1,194*	\$3,621*	Notes, GIAs, derivatives, other liabilities	AIGFP
Net pre-tax increase	\$2,366	\$4,998		
Liabilities already carried at fair value	\$2,550	\$3,904		
Newly elected liabilities measured at fair value (FAS 159 elected)	(184)	1,094		
Net pre-tax increase	\$2,366	\$4,998		

*The effect of changes in AIG's own credit spreads on pre-tax income for AIGFP was an increase of \$1.3 billion and \$3.8 billion for the three- and nine-month periods ended September 30, 2008, respectively. The effect of the changes in counterparty credit spreads for assets measured at fair value at AIGFP was a decrease in pre-tax income of \$2.3 billion and \$5.3 billion for the three- and nine-month periods ended September 30, 2008, respectively.

Fair Value Measurements on a Recurring Basis

AIG measures at fair value on a recurring basis financial instruments in its trading and available for sale securities portfolios, certain mortgage and other loans receivable, certain spot commodities, derivative assets and liabilities, securities purchased (sold) under agreements to resell (repurchase), securities lending invested collateral, non-traded equity investments and certain private limited partnerships

and certain hedge funds included in other invested assets, certain short-term investments, separate and variable account assets, certain policyholders' contract deposits, securities and spot commodities sold but not yet purchased, certain trust deposits and deposits due to banks and other depositors, certain long-term borrowings, and certain hybrid financial instruments included in other liabilities. The fair value of a financial instrument is the amount that would be received on sale of an asset or paid to transfer a liability in an orderly

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***3. Fair Value Measurements** *(continued)*

transaction between market participants at the measurement date.

The degree of judgment used in measuring the fair value of financial instruments generally correlates with the level of pricing observability. Financial instruments with quoted prices in active markets generally have more pricing observability and less judgment is used in measuring fair value. Conversely, financial instruments traded in other-than-active markets or that do not have quoted prices have less observability and are measured at fair value using valuation models or other pricing techniques that require more judgment. An active market is one in which transactions for the asset or liability being valued occur with sufficient frequency and volume to provide pricing information on an ongoing basis. An other-than-active market is one in which there are few transactions, the prices are not current, price quotations vary substantially either over time or among market makers, or in which little information is released publicly for the asset or liability being valued. Pricing observability is affected by a number of factors, including the type of financial instrument, whether the financial instrument is new to the market and not yet established, the characteristics specific to the transaction and general market conditions.

Incorporation of Credit Risk in Fair Value Measurements

- **AIG's Own Credit Risk.** Fair value measurements for AIGFP's debt, guaranteed investment agreements (GIAs), and structured note liabilities incorporate AIG's own credit risk by discounting cash flows at rates that incorporate AIG's currently observable credit default swap spreads and take into consideration collateral posted by AIG with counterparties at the balance sheet date.

Fair value measurements for freestanding derivatives incorporate AIG's own credit risk by determining the explicit cost for each counterparty to protect against its net credit exposure to AIG at the balance sheet date by reference to observable AIG credit default swap spreads. A counterparty's net credit exposure to AIG is determined based on master netting agreements, which take into consideration all derivative positions with AIG, as well as collateral posted by AIG with the counterparty at the balance sheet date.

Fair value measurements for embedded policy derivatives and policyholders' contract deposits take into consideration that policyholder liabilities are senior in priority to general creditors of AIG and therefore are much less sensitive to changes in AIG credit default swap or cash issuance spreads.

- **Counterparty Credit Risk.** Fair value measurements for freestanding derivatives incorporate counterparty credit by

determining the explicit cost for AIG to protect against its net credit exposure to each counterparty at the balance sheet date by reference to observable counterparty credit default swap spreads. AIG's net credit exposure to a counterparty is determined based on master netting agreements, which take into consideration all derivative positions with the counterparty, as well as collateral posted by the counterparty at the balance sheet date.

Fair values for fixed maturity securities based on observable market prices for identical or similar instruments implicitly include the incorporation of counterparty credit risk. Fair values for fixed maturity securities based on internal models incorporate counterparty credit risk by using discount rates that take into consideration cash issuance spreads for similar instruments or other observable information.

Fixed Maturity Securities — Trading and Available for Sale

AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. Whenever available, AIG obtains quoted prices in active markets for identical assets at the balance sheet date to measure at fair value fixed maturity securities in its trading and available for sale portfolios. Market price data generally is obtained from exchange or dealer markets.

AIG estimates the fair value of fixed maturity securities not traded in active markets, including securities purchased (sold) under agreements to resell (repurchase), and mortgage and other loans receivable for which AIG elected the fair value option, by referring to traded securities with similar attributes, using dealer quotations, a matrix pricing methodology, discounted cash flow analyses or internal valuation models. This methodology considers such factors as the issuer's industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, yield curves, credit curves, prepayment rates and other relevant factors. For fixed maturity instruments that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability, and such adjustments generally are based on available market evidence. In the absence of such evidence, management's best estimate is used.

Equity Securities Traded in Active Markets — Trading and Available for Sale

AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. Whenever available, AIG obtains quoted prices in active markets for identical assets at the balance sheet date to measure at fair value marketable equity securities in its trading and available for sale portfolios. Market price data generally is obtained from exchange or dealer markets.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***3. Fair Value Measurements** *(continued)**Non-Traded Equity Investments — Other Invested Assets*

AIG initially estimates the fair value of equity instruments not traded in active markets by reference to the transaction price. This valuation is adjusted only when changes to inputs and assumptions are corroborated by evidence such as transactions in similar instruments, completed or pending third-party transactions in the underlying investment or comparable entities, subsequent rounds of financing, recapitalizations and other transactions across the capital structure, offerings in the equity capital markets, and changes in financial ratios or cash flows. For equity securities that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability and such adjustments generally are based on available market evidence. In the absence of such evidence, management's best estimate is used.

Private Limited Partnership and Hedge Fund Investments — Other Invested Assets

AIG initially estimates the fair value of investments in certain private limited partnerships and certain hedge funds by reference to the transaction price. Subsequently, AIG obtains the fair value of these investments generally from net asset value information provided by the general partner or manager of the investments, the financial statements of which generally are audited annually.

Separate and Variable Account Assets

Separate and variable account assets are composed primarily of registered and unregistered open-end mutual funds that generally trade daily and are measured at fair value in the manner discussed above for equity securities traded in active markets.

Freestanding Derivatives

Derivative assets and liabilities can be exchange-traded or traded over the counter (OTC). AIG generally values exchange-traded derivatives using quoted prices in active markets for identical derivatives at the balance sheet date.

OTC derivatives are valued using market transactions and other market evidence whenever possible, including market-based inputs to models, model calibration to market clearing transactions, broker or dealer quotations or alternative pricing sources with reasonable levels of price transparency. When models are used, the selection of a particular model to value an OTC derivative depends on the contractual terms of, and specific risks inherent in, the instrument as well as the availability of pricing information in the market. AIG generally uses similar models to value similar instruments.

Valuation models require a variety of inputs, including contractual terms, market prices and rates, yield curves, credit curves, measures of volatility, prepayment rates and correlations of such inputs. For OTC derivatives that trade in liquid markets, such as generic forwards, swaps and options, model inputs can generally be corroborated by observable market data by correlation or other means, and model selection does not involve significant management judgment.

Certain OTC derivatives trade in less liquid markets with limited pricing information, and the determination of fair value for these derivatives is inherently more difficult. When AIG does not have corroborating market evidence to support significant model inputs and cannot verify the model to market transactions, the transaction price is initially used as the best estimate of fair value. Accordingly, when a pricing model is used to value such an instrument, the model is adjusted so the model value at inception equals the transaction price. Subsequent to initial recognition, AIG updates valuation inputs when corroborated by evidence such as similar market transactions, third-party pricing services and/or broker or dealer quotations, or other empirical market data. When appropriate, valuations are adjusted for various factors such as liquidity, bid/offer spreads and credit considerations. Such adjustments are generally based on available market evidence. In the absence of such evidence, management's best estimate is used.

With the adoption of FAS 157 on January 1, 2008, AIG's own credit risk has been considered and is incorporated into the fair value measurement of its freestanding derivative liabilities.

Embedded Policy Derivatives

The fair value of embedded policy derivatives contained in certain variable annuity and equity-indexed annuity and life contracts is measured based on actuarial and capital market assumptions related to projected cash flows over the expected lives of the contracts. These cash flow estimates primarily include benefits and related fees assessed, when applicable, and incorporate expectations about policyholder behavior. Estimates of future policyholder behavior are subjective and based primarily on AIG's historical experience. With respect to embedded policy derivatives in AIG's variable annuity contracts, because of the dynamic and complex nature of the expected cash flows, risk neutral valuations are used. Estimating the underlying cash flows for these products involves many estimates and judgments, including those regarding expected market rates of return, market volatility, correlations of market index returns to funds, fund performance, discount rates and policyholder behavior. With respect to embedded policy derivatives in AIG's equity-indexed annuity and life contracts, option pricing models are used to estimate fair value, taking into account assumptions for future

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***3. Fair Value Measurements** *(continued)*

equity index growth rates, volatility of the equity index, future interest rates, and determinations on adjusting the participation rate and the cap on equity indexed credited rates in light of market conditions and policyholder behavior assumptions. With the adoption of FAS 157, these methodologies were not changed, with the exception of incorporating an explicit risk margin to take into consideration market participant estimates of projected cash flows and policyholder behavior.

AIGFP's Super Senior Credit Default Swap Portfolio

AIGFP values its credit default swaps written on the most senior (super senior) risk layers of designated pools of debt securities or loans using internal valuation models, third-party prices and market indices. The principal market was determined to be the market in which super senior credit default swaps of this type and size would be transacted, or have been transacted, with the greatest volume or level of activity. AIG has determined that the principal market participants, therefore, would consist of other large financial institutions who participate in sophisticated over-the-counter derivatives markets. The specific valuation methodologies vary based on the nature of the referenced obligations and availability of market prices.

The valuation of the super senior credit derivatives continues to be challenging given the limitation on the availability of market observable information due to the limited trading and lack of price transparency in the structured finance market, particularly during and since the fourth quarter of 2007. These market conditions have increased the reliance on management estimates and judgments in arriving at an estimate of fair value for financial reporting purposes. Further, disparities in the valuation methodologies employed by market participants when assessing illiquid markets have increased the likelihood that the various parties to these instruments may arrive at significantly different estimates as to their fair values.

AIGFP's valuation methodologies for the super senior credit default swap portfolio have evolved in response to the deteriorating market conditions and the lack of sufficient market observable information. AIG has sought to calibrate the model to available market information and to review the assumptions of the model on a regular basis.

In the case of credit default swaps written to facilitate regulatory capital relief, AIGFP estimates the fair value of these derivatives by considering observable market transactions. The transactions with the most observability are the early terminations of these transactions by counterparties. AIG expects that the majority of these transactions will be terminated within the next 6 to 18 months by AIGFP's

counterparties. AIGFP also considers other market data, to the extent available.

AIGFP uses a modified version of the Binomial Expansion Technique (BET) model to value its credit default swap portfolio written on super senior tranches of multi-sector collateralized debt obligations (CDOs) of asset-backed securities (ABS), including maturity-shortening puts that allow the holders of the securities issued by certain CDOs to treat the securities as short-term eligible 2a-7 investments under the Investment Company Act of 1940 (2a-7 Puts).

The BET model uses the prices for the securities comprising the portfolio of a CDO as an input and converts those prices to credit spreads over current LIBOR-based interest rates. These credit spreads are used to determine implied probabilities of default and expected losses on the underlying securities. This data is then aggregated and used to estimate the expected cash flows of the super senior tranche of the CDO. The most significant assumption used in the BET model is the pricing of the individual securities within the CDO collateral pools. The BET model also uses diversity scores, weighted average lives, recovery rates and discount rates.

Prices for the individual securities held by a CDO are obtained in most cases from the CDO collateral managers, to the extent available. For the quarter ended September 30, 2008, CDO collateral managers provided market prices for approximately 70 percent of the underlying securities. When a price for an individual security is not provided by a CDO collateral manager, AIGFP derives the price through a pricing matrix using prices from CDO collateral managers for similar securities. Matrix pricing is a mathematical technique used principally to value debt securities without relying exclusively on quoted prices for the specific securities, but rather by relying on the relationship of the security to other benchmark quoted securities. Substantially all of the CDO collateral managers who provided prices used dealer prices for all or part of the underlying securities, in some cases supplemented by third party pricing services.

AIGFP also employs a Monte Carlo simulation to assist in quantifying the effect on the valuation of the CDOs of the unique aspects of the CDOs' structure such as triggers that divert cash flows to the most senior part of the capital structure. The Monte Carlo simulation is used to determine whether an underlying security defaults in a given simulation scenario and, if it does, the security's implied random default time and expected loss. This information is used to project cash flow streams and to determine the expected losses of the portfolio.

In addition to calculating an estimate of the fair value of the super senior CDO security referenced in the credit default swaps using its internal model, AIGFP also considers the price estimates for the super senior CDO securities provided by

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)

third parties, including counterparties to these transactions, to validate the results of the model and to determine the best available estimate of fair value. In determining the fair value of the super senior CDO security referenced in the credit default swaps, AIGFP uses a consistent process which considers all available pricing data points and eliminates the use of outlying data points. When pricing data points are within a reasonable range an averaging technique is applied.

In the case of credit default swaps written on portfolios of investment-grade corporate debt, AIGFP estimates the fair value of its obligations by comparing the contractual premium of each contract to the current market levels of the senior tranches of comparable credit indices, the iTraxx index for European corporate issuances and the CDX index for U.S. corporate issuances. These indices are considered to be reasonable proxies for the referenced portfolios. In addition, AIGFP compares these valuations to third party prices and makes adjustments as necessary to arrive at the best available estimate of fair value.

AIGFP estimates the fair value of its obligations resulting from credit default swaps written on collateralized loan obligations to be equivalent to the par value less the current market value of the referenced obligation. Accordingly, the value is determined by obtaining third-party quotes on the underlying super senior tranches referenced under the credit default swap contract.

Policyholders' Contract Deposits

Policyholders' contract deposits accounted for at fair value beginning January 1, 2008 are measured using an income approach by taking into consideration the following factors:

- Current policyholder account values and related surrender charges;
- The present value of estimated future cash inflows (policy fees) and outflows (benefits and maintenance expenses) associated with the product using risk neutral valuations, incorporating expectations about policyholder behavior, market returns and other factors; and
- A risk margin that market participants would require for a market return and the uncertainty inherent in the model inputs.

The change in fair value of these policyholders' contract deposits is recorded as incurred policy losses and benefits in the consolidated statement of income (loss).

Fair Value Measurements on a Non-Recurring Basis

AIG also measures the fair value of certain assets on a non-recurring basis, generally quarterly, annually, or when events or changes in circumstances indicate that the carrying amount of the assets may not be recoverable. These assets include held to maturity securities (in periods prior to the third quarter of 2008), cost and equity-method investments, life settlement contracts, flight equipment, collateral securing foreclosed loans and real estate and other fixed assets, goodwill, and other intangible assets. AIG uses a variety of techniques to measure the fair value of these assets when appropriate, as described below:

- *Held to Maturity Securities, Cost and Equity-Method Investments:* When AIG determines that the carrying value of these assets may not be recoverable, AIG records the assets at fair value with the loss recognized in income. In such cases, AIG measures the fair value of these assets using the techniques discussed above for fixed maturities and equity securities. During the third quarter of 2008, AIG transferred all securities previously classified as held to maturity to the available for sale category (see Note 1 for further discussion).
- *Life Settlement Contracts:* AIG measures the fair value of individual life settlement contracts (which are included in other invested assets) whenever the carrying value plus the undiscounted future costs that are expected to be incurred to keep the life settlement contract in force exceed the expected proceeds from the contract. In those situations, the fair value is determined on a discounted cash flow basis, incorporating current life expectancy assumptions. The discount rate incorporates current information about market interest rates, the credit exposure to the insurance company that issued the life settlement contract and AIG's estimate of the risk margin an investor in the contracts would require.
- *Flight Equipment Primarily Under Operating Leases:* When AIG determines the carrying value of its commercial aircraft may not be recoverable, AIG records the aircraft at fair value with the loss recognized in income. AIG measures the fair value of its commercial aircraft using an income approach based on the present value of all cash flows from existing and projected lease payments (based on historical experience and current expectations regarding market participants) including net contingent rentals for the period extending to the end of the aircraft's economic life in its highest and best use configuration, plus its disposition value.
- *Collateral Securing Foreclosed Loans and Real Estate and Other Fixed Assets:* When AIG takes collateral in connection with foreclosed loans, AIG generally bases its estimate

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***3. Fair Value Measurements** *(continued)*

of fair value on the price that would be received in a current transaction to sell the asset by itself.

- *Goodwill:* AIG tests goodwill for impairment whenever events or changes in circumstances indicate the carrying amount of goodwill may not be recoverable, but at least annually. When AIG determines goodwill may be impaired, AIG uses techniques that consider market-based earnings multiples of the unit's peer companies or discounted cash flow techniques based on the price that could be received in a current transaction to sell the asset assuming the asset would be used with other assets as a group (in-use premise). See Fair Value Measured on a Non-Recurring Basis below for additional information.
- *Intangible Assets:* AIG tests its intangible assets for impairment whenever events or changes in circumstances indicate the carrying amount of an intangible asset may not be recoverable. AIG measures the fair value of intangible assets based on an in-use premise that considers the same factors used to estimate the fair value of its real estate and other fixed assets under an in-use premise discussed above.

See Notes 1(c), (d), (e), (t), and (v) to Consolidated Financial Statements included in the 2007 Annual Report on Form 10-K for additional information about how AIG tests various asset classes for impairment.

Fair Value Hierarchy

Beginning January 1, 2008, assets and liabilities recorded at fair value in the consolidated balance sheet are measured and classified in a hierarchy for disclosure purposes consisting of three "levels" based on the observability of inputs available in the marketplace used to measure the fair values as discussed below:

- *Level 1:* Fair value measurements that are quoted prices (unadjusted) in active markets that AIG has the ability to access for identical assets or liabilities. Market price data generally is obtained from exchange or dealer markets. AIG does not adjust the quoted price for such instruments. Assets and liabilities measured at fair value on a recurring

basis and classified as Level 1 include certain government and agency securities, actively traded listed common stocks and derivative contracts, most separate account assets and most mutual funds.

- *Level 2:* Fair value measurements based on inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly or indirectly. Level 2 inputs include quoted prices for similar assets and liabilities in active markets, and inputs other than quoted prices that are observable for the asset or liability, such as interest rates and yield curves that are observable at commonly quoted intervals. Assets and liabilities measured at fair value on a recurring basis and classified as Level 2 generally include certain government securities, most investment-grade and high-yield corporate bonds, certain ABS, certain listed equities, state, municipal and provincial obligations, hybrid securities, mutual fund and hedge fund investments, derivative contracts, GIAs at AIGFP and physical commodities.
- *Level 3:* Fair value measurements based on valuation techniques that use significant inputs that are unobservable. These measurements include circumstances in which there is little, if any, market activity for the asset or liability. In certain cases, the inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, the level in the fair value hierarchy within which the fair value measurement in its entirety falls is determined based on the lowest level input that is significant to the fair value measurement in its entirety. AIG's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment. In making the assessment, AIG considers factors specific to the asset or liability. Assets and liabilities measured at fair value on a recurring basis and classified as Level 3 include certain distressed ABS, structured credit products, certain derivative contracts (including AIGFP's super senior credit default swap portfolio), policyholders' contract deposits carried at fair value, private equity and real estate fund investments, and direct private equity investments. AIG's non-financial-instrument assets that are measured at fair value on a non-recurring basis generally are classified as Level 3.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)**Assets and Liabilities Measured at Fair Value on a Recurring Basis**

The following table presents information about assets and liabilities measured at fair value on a recurring basis at September 30, 2008, and indicates the level of the fair value measurement based on the levels of the inputs used:

(in millions)	Level 1	Level 2	Level 3	Counterparty Netting ^(a)	Total September 30, 2008
Assets:					
Bonds available for sale	\$ 891	\$375,021	\$18,582	\$ –	\$394,494
Bond trading securities	–	7,355	197	–	7,552

Other liabilities	7	3,501	60	(179)	3,389
Total	\$ 722	\$ 98,123	\$40,143	\$(75,869)	\$ 63,119

(a) Represents netting of derivative exposures covered by a qualifying master netting agreement in accordance with FIN 39 of \$42.8 billion, offset by cash collateral posted and received by AIG of \$33.1 billion and \$6.5 billion, respectively.

(b) Amounts exclude short-term investments that are carried at cost, which approximates fair value of \$5.7 billion.

(c) Approximately 11 percent of the fair value of the assets recorded as Level 3 relates to various private equity, real estate, hedge fund and fund-of-funds investments. AIG's ownership in these funds represented 27 percent, or \$1.7 billion of the Level 3 amount.

(d) Included in Level 3 is the fair value derivative liability of \$32.3 billion on AIGFP super senior credit default swap portfolio.

At September 30, 2008, Level 3 assets were 5.4 percent of total assets, and Level 3 liabilities were 4.2 percent of total liabilities.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***3. Fair Value Measurements** *(continued)*

The following tables present changes during the three- and nine-month periods ended September 30, 2008 in Level 3 assets and liabilities measured at fair value on a recurring basis, and the realized and unrealized gains (losses) recorded in income during the three- and nine-month periods ended September 30, 2008 related to the Level 3 assets and liabilities that remained in the consolidated balance sheet at September 30, 2008:

<i>(in millions)</i>	Balance Beginning of Period ^(a)	Net Realized and Unrealized Gains (Losses) Included in Income ^(b)	Accumulated Other Comprehensive Income (Loss)	Purchases, Sales, Issuances and Settlements-net	Transfers In (Out)	Balance at September 30, 2008	Changes in Unrealized Gains (Losses) on Instruments Held at September 30, 2008

(a) Total Level 3 derivative exposures have been netted on these tables for presentation purposes only.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Fair Value Measurements** (continued)

(b) Net realized and unrealized gains and losses shown above are reported in the consolidated statement of income (loss) primarily as follows:

Major category of Assets/Liabilities	Consolidated Statement of Income (Loss) Line Items
Financial Services assets and liabilities	<ul style="list-style-type: none"> • Other income • Unrealized market valuation losses on AIGFP super senior credit default swap portfolio
Securities lending invested collateral	<ul style="list-style-type: none"> • Net realized capital gains (losses)
Other invested assets	<ul style="list-style-type: none"> • Net realized capital gains (losses)
Policyholders' contract deposits	<ul style="list-style-type: none"> • Incurred policy losses and benefits • Net realized capital gains (losses)

Both observable and unobservable inputs may be used to determine the fair values of positions classified in Level 3 in the tables above. As a result, the unrealized gains (losses) on instruments held at September 30, 2008 may include changes in fair value that were attributable to both observable (e.g., changes in market interest rates) and unobservable inputs (e.g., changes in unobservable long-dated volatilities).

AIG uses various hedging techniques to manage risks associated with certain positions, including those classified within Level 3. Such techniques may include the purchase or sale of financial instruments that are classified within Level 1 and/or Level 2. As a result, the realized and unrealized gains (losses) for assets and liabilities classified within Level 3 presented in the table above do not reflect the related realized or unrealized gains (losses) on hedging instruments that are classified within Level 1 and/or Level 2.

Changes in the fair value of separate and variable account assets are completely offset in the consolidated statement of income (loss) by changes in separate and variable account liabilities, which are not carried at fair value and therefore not included in the tables above.

Fair Value Measured on a Non-Recurring Basis

AIG measures the fair value of certain assets on a non-recurring basis, generally quarterly, or when events or changes in circumstances indicate that the carrying amount of the asset may not be recoverable. These assets include goodwill, real estate owned, real estate loans held for sale, and other intangible assets.

Assets measured at fair value on a non-recurring basis on which impairment charges were recorded were as follows:

(in millions)	Level 1	Level 2	Level 3	Total	Three Months Ended September 30, 2008	Nine Months Ended September 30, 2008
Goodwill	\$-	\$-	\$ -	\$ -	\$432	\$477
Real estate owned	-	-	1,358	1,358	100	102
Other investments	-	-	3,883	3,883	75	85
Other assets	-	7	190	197	2	53
Total	\$-	\$7	\$5,431	\$5,438	\$609	\$717

AIG recognized goodwill impairment charges of \$432 million and \$477 million for the three and nine months ended September 30, 2008, which were primarily related to the domestic Consumer Finance and the Capital Markets businesses.

AIG recognized an impairment charge on certain investment real estate and other real estate owned of \$100 million and \$102 million for the three and nine months ended September 30, 2008, respectively, which was included in other income. As required by FAS 157, the fair value disclosed in the table above is unadjusted for transaction costs. The amounts recorded on the consolidated balance sheet are net of transaction costs.

Fair Value Option

FAS 159 permits a company to choose to measure at fair value many financial instruments and certain other assets and liabilities that are not required to be measured at fair value. Subsequent changes in fair value for designated items are required to be reported in income. Unrealized gains and losses on financial instruments in AIG's insurance businesses and in AIGFP for which the fair value option was elected under FAS 159 are classified in incurred policy losses and benefits and in other income, respectively, in the consolidated statement of income (loss).

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)*

The following table presents the gains or losses recorded during the three- and nine-month periods ended September 30, 2008 related to the eligible instruments for which AIG elected the fair value option and the related transition adjustment recorded as a decrease to opening shareholders' equity at January 1, 2008:

<i>(in millions)</i>	January 1, 2008 prior to Adoption	Transition Adjustment upon Adoption	January 1, 2008 after Adoption	Gain (Loss) Three Months Ended September 30, 2008	Gain (Loss) Nine Months Ended September 30, 2008
Mortgage and other loans receivable	\$ 1,109	\$ -	\$ 1,109	\$ (74)	\$ 5
Financial Services assets ^(a) :					
Trading securities (formerly available for sale)	39,278	5	39,283	(3,886)	(5,037)

Financial Services liabilities ^(a) :					
Securities sold under agreements to repurchase	6,750	(10)	6,760	339	(77)
Securities and spot commodities sold but not yet purchased	3,797	(10)	3,807	157	144
Trust deposits and deposits due to banks and other depositors	216	(25)	241	24	13
Long-term borrowings	57,968	(675)	58,643	294	(97)
Other liabilities	1,792	-	1,792	1,266	947
Total gain (loss) for the three- and nine-month periods ended September 30, 2008 ^(c)				\$(1,670)	\$(3,120)
Pre-tax cumulative effect of adopting the fair value option		(1,638)			
Decrease in deferred tax liabilities		526			
Cumulative effect of adopting the fair value option		\$(1,112)			

(a) Effective January 1, 2008, AIGFP elected to apply the fair value option under FAS 159 to all eligible assets and liabilities (other than equity method investments, trade receivables and trade payables) because electing the fair value option allows AIGFP to more closely align its earnings with the economics of its transactions by recognizing concurrently through earnings the change in fair value of its derivatives and the offsetting change in fair value of the assets and liabilities being hedged as well as the manner in which the business is evaluated by management. Substantially all of the gain (loss) amounts shown above are reported in other income on the consolidated statement of income (loss). In August 2008, AIGFP modified prospectively this election as management believes it is appropriate to exclude from the automatic election securities purchased in connection with existing structured credit transactions and their related funding obligations. AIGFP will evaluate whether to elect the fair value option on a case-by-case basis for securities purchased in connection with existing structured credit transactions and their related funding obligations.

(b) AIG elected to apply the fair value option to certain single premium variable life products in Japan and an investment-linked life insurance product sold principally in Asia, both classified within policyholders' contract deposits in the consolidated balance sheet. AIG elected the fair value option for these liabilities to more closely align its accounting with the economics of its transactions. For the investment-linked product sold principally in Asia, the election more effectively aligns changes in the fair value of assets with a commensurate change in the fair value of policyholders' liabilities. For the single premium life products in Japan, the fair value option election allows AIG to economically hedge the inherent market risks associated with this business in an efficient and effective manner through the use of derivative instruments. The hedging program, which was completed in the third quarter of 2008, results in an accounting presentation for this business that more closely reflects the underlying economics and the way the business is managed, with the change in the fair value of derivatives and underlying assets largely offsetting the change in fair value of the policy liabilities. AIG did not elect the fair value option for other liabilities classified in policyholders' contract deposits because other contracts do not share the same contract features that created the disparity between the accounting presentation and the economic performance.

(c) Not included in the table above were losses of \$9.6 billion and \$23.2 billion for the three- and nine-month periods ended September 30, 2008, respectively, that were primarily due to changes in the fair value of derivatives, trading securities and certain other invested assets for which the fair value option under FAS 159 was not elected. Included in these amounts were unrealized market valuation losses of \$7.1 billion and \$21.7 billion for the three- and nine-months periods ended September 30, 2008, respectively, related to AIGFP's super senior credit default swap portfolio.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***3. Fair Value Measurements** *(continued)*

Interest income and expense and dividend income on assets and liabilities elected under the fair value option are recognized and classified in the consolidated statement of income (loss) depending on the nature of the instrument and related market conventions. For AIGFP related activity, interest, dividend income, and interest expense are included in other income. Otherwise, interest and dividend income are included in net investment income in the consolidated statement of income (loss). See Note 1(a) to the Consolidated Financial Statements included in the 2007 Annual Report on Form 10-K for additional information about AIG's policies for recognition, measurement, and disclosure of interest and dividend income and interest expense.

During the three- and nine-month periods ended September 30, 2008, AIG recognized a loss of \$184 million and a gain of \$1.1 billion, respectively, attributable to the observable effect of changes in credit spreads on AIG's own liabilities for which the fair value option was elected. AIG calculates the effect of these credit spread changes using discounted cash flow techniques that incorporate current market interest rates, AIG's observable credit spreads on these liabilities and other factors that mitigate the risk of nonperformance such as collateral posted.

The following table presents the difference between fair values and the aggregate contractual principal amounts of mortgage and other loans receivable and long-term borrowings, for which the fair value option was elected:

<i>(in millions)</i>	Fair Value at September 30, 2008	Principal Amount Due Upon Maturity	Difference
Assets:			
Mortgage and other loans receivable	\$ 328	\$ 378	\$ (50)
Liabilities:			
Long-term borrowings	\$36,464	\$36,065	\$399

At September 30, 2008, there were no mortgage and other loans receivable for which the fair value option was elected, that were 90 days or more past due and in non-accrual status.

4. Revolving Credit Agreement and Guarantee and Pledge Agreement between AIG and the Federal Reserve Bank of New York

On September 22, 2008, AIG entered into the \$85 billion Fed Credit Agreement and a Guarantee and Pledge Agreement (the Pledge Agreement) with the NY Fed.

The Fed Facility has a two-year term. Outstanding borrowings bear interest at 3-month LIBOR (not less than 3.5 percent per annum) plus 8.5 percent per annum. AIG incurred, in the form of an increase in the outstanding loan balance under the Fed Credit Agreement, a gross commitment fee of \$1.7 billion, which was paid in kind and was recognized as a prepaid commitment asset. Pursuant to the Fed Credit Agreement, in consideration for the NY Fed's extension of credit under the Fed Facility and the payment of \$500,000, AIG agreed to issue 100,000 shares, liquidation preference \$5.00 per share, of the Series C Preferred Stock to the Trust. The Series C Preferred Stock was not yet issued as of September 30, 2008. Accordingly, additional paid-in capital has been increased to reflect a prepaid commitment fee which represents AIG's obligation to issue the Series C Preferred Stock in the fourth quarter of 2008. The value of the Series C Preferred Stock was also recognized as part of the prepaid commitment asset. The total prepaid commitment fee asset of \$24.7 billion is being amortized as interest expense through the term of the facility. AIG also incurs a commitment fee on undrawn amounts at the rate of 8.5 percent per annum, which is recognized as interest expense when incurred.

Interest and the commitment fees are payable in kind and generally recognized through an increase in the outstanding balance under the Fed Facility.

AIG is required to repay the Fed Facility primarily from proceeds on sales of assets, including businesses. These mandatory repayments permanently reduce the maximum amount available to be borrowed under the Fed Facility. Additionally, AIG is permitted to repay any portion of the amounts borrowed at any time prior to the maturity of the Fed Facility, without penalty. Voluntary repayments do not reduce the maximum amount available to be borrowed.

The Fed Credit Agreement contains customary affirmative and negative covenants, including a requirement to maintain a minimum amount of liquidity and a requirement to use reasonable efforts to cause the composition of the Board of Directors of AIG to be satisfactory to the Trust within 10 days after the establishment of the Trust. Borrowings under the Fed Facility are conditioned, among other things, on the NY Fed being satisfied with AIG's corporate governance and the value of the collateral.

The Fed Facility is secured by a pledge of the capital stock and assets of certain of AIG's subsidiaries, subject to exclusions of certain property not permitted to be pledged under AIG debt agreements and its Restated Certificate of Incorporation, as well as exclusions of assets of regulated subsidiaries, assets of foreign subsidiaries and assets of special purpose vehicles. The exclusion of these assets from the pledge assures that AIG has not pledged all or substantially all of its assets to the NY Fed.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***4. Revolving Credit Agreement and Guarantee and Pledge Agreement between AIG and the Federal Reserve Bank of New York** *(continued)*

At September 30, 2008, the amount owed under the Fed Facility totaled \$63 billion, which included accrued fees and interest of \$2 billion added to the principal of cash borrowings. The amount available to be borrowed under the Fed Facility is not generally reduced for the amount of fees and interest added to cash borrowings.

See Note 11 to the Consolidated Financial Statements, regarding borrowings under the Fed Facility and amendments to the Fed Credit Agreement subsequent to September 30, 2008.

5. Shareholders' Equity and Earnings (Loss) Per Share**Shareholders' Equity****Series C Perpetual, Convertible, Participating Preferred Stock**

Pursuant to the Fed Credit Agreement, AIG agreed to issue 100,000 shares of Series C Preferred Stock to the Trust in the fourth quarter of 2008.

Under the terms of the Fed Credit Agreement prior to its amendment on November 9, 2008, the terms of the Series C Preferred Stock were as follows: The Series C Preferred Stock will have voting rights commensurate with an approximately 79.9 percent holding of all outstanding shares of common stock. Holders of the Series C Preferred Stock will be entitled to participate in dividends paid on the common stock, receiving up to 79.9 percent of the aggregate amount of dividends paid on the shares of common stock then outstanding. After the Series C Preferred Stock is issued, AIG will be required to hold a special shareholders' meeting to amend its restated certificate of incorporation to increase the number of authorized shares of common stock to 19 billion and to reduce the par value per share. The holders of the common stock will be entitled to vote as a class separate from the holders of the Series C Preferred Stock on these changes to AIG's Restated Certificate of Incorporation. If the increase in the number of authorized shares and change in par value is approved, the Series C Preferred Stock will become convertible into common stock. The number of shares into which the Series C Preferred Stock will be convertible is that which will result in a 79.9 percent holding, after conversion, based upon the number of common shares outstanding on the issue date of the Series C Preferred Stock, plus the number of common shares that are subsequently issued in settlement of Equity Units. Subject to certain exceptions, while the United States Treasury

beneficially owns at least 50 percent of the Series C Preferred Stock (or the shares into which the Series C Preferred Stock is convertible), AIG will be prohibited from issuing any capital stock, or any securities or instruments convertible or exchangeable into, or exercisable for, capital stock, without the Trust's consent. In addition, AIG is required to enter into a registration rights agreement that will provide demand registration rights for the Series C Preferred Stock and will require AIG to apply for the listing on the NYSE of the common stock underlying the Series C Preferred Stock. As described in Note 11 to the Consolidated Financial Statements, the November 9, 2008 agreement in principle provides that AIG will issue 10-year warrants to the United States Treasury, and the number of shares into which the Series C Preferred Stock will be convertible will be reduced so as not to exceed 77.9 percent of the outstanding shares of common stock.

AIG received the consideration in the form of the Fed Facility for the Series C Preferred Stock in the third quarter of 2008 and recorded the fair value of the Series C Preferred Stock, \$23 billion, as an increase to additional paid-in capital. The value, net of the \$500,000 cash portion of the consideration, was recognized as an addition to the prepaid commitment fee asset associated with the Fed Facility.

The valuation of the consideration received for the Series C Preferred Stock that AIG agreed to issue was determined by AIG and was primarily based on the implied value of 79.9 percent of AIG indicated by AIG's common stock price after the terms of the Fed Credit Agreement were publicly announced. Other valuation techniques were employed to corroborate this value, taking into consideration both market observable inputs, such as AIG credit spreads, and other inputs. The following key assumptions were utilized in the valuation:

- The valuation date for the Series C Preferred Stock was the date at which consideration was received for the obligation to issue the Series C Preferred Stock, that is, the date borrowings were made available to AIG pursuant to the NY Fed's agreement to enter into the Fed Credit Agreement.
- The Series C Preferred Stock will be economically equivalent to the common stock, will have voting rights commensurate with the common stock, and will be convertible into shares of common stock.
- The price of AIG common stock the day after the announcement of the terms of the NY Fed's agreement to enter into the Fed Credit Agreement provided the most observable market evidence of the valuation of AIG.

Basic and diluted EPS will be affected in any period in which AIG has net income. The effect on basic EPS will be

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)*

computed using the two-class method, pursuant to which the earnings of the period will be allocated between the preferred shareholders and the common shareholders, determined on the same basis as if all the earnings were distributed. Prior to any partial conversion of the Series C Preferred Stock, this will result in 79.9 percent of the earnings for the period being allocated to the Series C Preferred Stock, directly reducing the net income available for common shareholders. Diluted EPS will be computed on the more dilutive of the if-converted method and the two-class method. Under the if-converted method, conversion of the Series C Preferred Stock is assumed to have occurred as of the beginning of the period, and the number of common shares that would be issued on conversion is assumed to be the number of additional shares outstanding for the period. Because AIG had losses for the three- and nine-month periods ended September 30, 2008, the Series C Preferred Stock was anti-dilutive to basic and diluted EPS.

Dividends

The quarterly dividend per common share declared in May 2008 and paid on September 19, 2008 was \$0.22. Effective September 23, 2008, AIG's Board of Directors suspended the declaration of dividends on AIG's common stock. Pursuant to the Fed Credit Agreement, AIG is restricted from paying dividends on its common stock.

Share Issuance and Repurchase

In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the purchase of shares with an aggregate purchase price of \$8 billion. In November 2007, AIG's Board of Directors authorized the purchase of an additional \$8 billion in common stock. In 2007, AIG entered into structured share repurchase arrangements providing for the purchase of shares over time with an aggregate purchase price of \$7 billion.

A total of 37,926,059 shares were purchased during the first six months of 2008 to meet commitments that existed at December 31, 2007. There were no repurchases during the third quarter of 2008. At October 31, 2008, \$9 billion was available for purchases under the aggregate authorizations.

Pursuant to the Fed Credit Agreement, AIG is restricted from repurchasing shares of its common stock.

In May 2008, AIG sold 196,710,525 shares of common stock at a price per share of \$38 for gross proceeds of \$7.47 billion and 78,400,000 equity units (the Equity Units) at a price per unit of \$75 for gross proceeds of \$5.88 billion. The Equity Units, the key terms of which are summarized below, are recorded as long-term borrowings in the consolidated balance sheet.

Equity Units

Each Equity Unit has an initial stated amount of \$75 and consists of a stock purchase contract issued by AIG and, initially, a 1/40th or 2.5 percent undivided beneficial ownership interest in three series of junior subordinated debentures (Series B-1, B-2 and B-3), each with a principal amount of \$1,000.

Each stock purchase contract requires its holder to purchase, and requires AIG to sell, a variable number of shares of AIG common stock for \$25 in cash on each of the following dates: February 15, 2011, May 1, 2011 and August 1, 2011. The number of shares that AIG is obligated to deliver on each stock purchase date is set forth in the chart below (where the "applicable market value" is an average of the trading prices of AIG's common stock over the 20-trading-day period ending on the third business day prior to the relevant stock purchase date).

If the applicable market value is:	then AIG is obligated to issue:
• Greater than or equal to \$45.60	• 0.54823 shares per stock purchase contract
• Between \$45.60 and \$38.00	• Shares equal to \$25 divided by the applicable market value
• Less than or equal to \$38.00	• 0.6579 shares per stock purchase contract

Basic earnings (loss) per share (EPS) will not be affected by outstanding stock purchase contracts. Diluted EPS will be determined considering the potential dilution from outstanding stock purchase contracts using the treasury stock method, and therefore diluted EPS will not be affected by outstanding stock purchase contracts until the applicable market value exceeds \$45.60.

AIG is obligated to pay quarterly contract adjustment payments to the holders of the stock purchase contracts, at an initial annual rate of 2.7067 percent applied to the stated amount. The present value of the contract adjustment payments, \$431 million, was recognized at inception as a liability (a component of other liabilities), and was recorded as a reduction to additional paid-in capital.

In addition to the stock purchase contracts, as part of the Equity Units, AIG issued \$1.96 billion of each of the Series B-1, B-2 and B-3 junior subordinated debentures, which initially pay interest at rates of 5.67 percent, 5.82 percent and 5.89 percent, respectively. For accounting purposes, AIG allocated the proceeds of the Equity Units between the stock purchase contracts and the junior subordinated debentures on a relative fair value basis. AIG determined that the fair value of the stock purchase contract at issuance was zero, and therefore all of the proceeds were allocated to the junior subordinated debentures.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**Share-based Employee Compensation Plans**

During the first quarter of 2008, AIG reviewed the vesting schedules of its share-based employee compensation plans, and on March 11, 2008, AIG's management and the Compensation and Management Resources Committee of AIG's Board of Directors determined that, to fulfill the objective of attracting and retaining high quality personnel, the vesting schedules of certain awards outstanding under these plans and all awards made in the future under these plans should be shortened.

For accounting purposes, a modification of the terms or conditions of an equity award is treated as an exchange of the original award for a new award. As a result of this modification, the incremental compensation cost related to the affected awards totaled \$24 million and will, together with the unamortized originally-measured compensation cost, be

amortized over shorter periods. AIG estimates the modifications will increase the amortization of this cost by \$106 million and \$46 million in 2008 and 2009, respectively, with a related reduction in amortization expense of \$128 million in 2010 through 2013.

In the second quarter of 2008, reversals of previously accrued costs related to certain performance-based compensation plans were made, as performance to date was below the performance thresholds set forth in those plans.

Earnings (Loss) Per Share (EPS)

Basic EPS is based on the weighted average number of common shares outstanding. Diluted EPS is based on those shares used in basic EPS plus shares that would have been outstanding assuming issuance of common shares for all dilutive potential common shares outstanding.

The computation of basic and diluted EPS was as follows:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2008	2007	2008	2007
<i>(in millions, except per share data)</i>				
Numerator for EPS:				
Net income (loss)	\$(24,468)	\$3,085	\$(37,630)	\$11,492
Denominator for EPS:				
Weighted average shares outstanding used in the computation of EPS:				
Common stock issued	2,948	2,751	2,850	2,751
Common stock in treasury	(259)	(189)	(251)	(168)
Deferred shares	14	14	14	13
Weighted average shares outstanding – basic*	2,703	2,576	2,613	2,596
Incremental shares arising from awards outstanding under share-based employee compensation plans*	–	13	–	13
Weighted average shares outstanding – diluted*	2,703	2,589	2,613	2,609
EPS:				
Basic	\$ (9.05)	\$ 1.20	\$ (14.40)	\$ 4.43
Diluted	\$ (9.05)	\$ 1.19	\$ (14.40)	\$ 4.40

* Calculated using the treasury stock method. Certain potential common shares arising from share-based employee compensation plans were not included in the computation of diluted EPS because the effect would have been anti-dilutive. The number of potential shares excluded was 7 million for the nine-month period ended September 30, 2007. Additionally, the Preferred Stock to be issued was not included in the computation of basic or diluted EPS because the effect would have been anti-dilutive.

6. Ownership

According to the Schedule 13D/A filed on October 30, 2008, by C.V. Starr & Co., Inc. (Starr), Starr International Company, Inc. (SICO), Edward E. Matthews, Maurice R. Greenberg, the Maurice R. and Corinne P. Greenberg Family Foundation, Inc., the Universal Foundation, Inc., the Maurice R. and Corinne P. Greenberg Joint Tenancy Company, LLC and the C.V. Starr & Co., Inc. Trust, these reporting persons could be considered to beneficially own 278,430,935 shares or approximately 10 percent of AIG's common stock at that date. Although these reporting persons may have made filings under Section 16 of the Exchange Act, reporting sales of shares of common stock, no amendment to the Schedule 13D has

been filed to report a change in ownership subsequent to October 30, 2008.

7. Commitments, Contingencies and Guarantees*(a) Litigation and Investigations*

AIG and its subsidiaries, in common with the insurance and financial services industries in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. At the current time, AIG cannot predict the outcome of the matters described below, or estimate any potential additional costs related to these matters, unless otherwise indicated. In AIG's insurance operations,

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**7. Commitments, Contingencies and Guarantees** (continued)

litigation arising from claims settlement activities is generally considered in the establishment of AIG's reserve for losses and loss expenses. However, the potential for increasing jury awards and settlements makes it difficult to assess the ultimate outcome of such litigation.

Various federal, state and foreign regulatory and governmental agencies are reviewing certain public disclosures, transactions and practices of AIG and its subsidiaries in connection with industry wide and other inquiries. These reviews include the inquiries by the SEC and U.S. Department of Justice (DOJ), previously confirmed by AIG, with respect to AIG's valuation of and disclosures relating to the AIGFP super senior credit default swap portfolio. AIG has cooperated, and will continue to cooperate, in producing documents and other information in response to subpoenas and other requests.

In connection with some of the SEC investigations, AIG understands that some of its employees have received Wells notices and it is possible that additional current and former employees could receive similar notices in the future. Under SEC procedures, a Wells notice is an indication that the SEC staff has made a preliminary decision to recommend enforcement action that provides recipients with an opportunity to respond to the SEC staff before a formal recommendation is finalized.

Although AIG cannot currently quantify its ultimate liability for the unresolved litigation and investigation matters referred to below, it is possible that such liability could have a material adverse effect on AIG's consolidated financial condition, or consolidated results of operations for an individual reporting period.

Litigation Relating to AIGFP's Super Senior Credit Default Swap Portfolio

Securities Actions – Southern District of New York. On May 21, 2008, a purported securities fraud class action complaint was filed against AIG and certain of its current and former officers and directors in the United States District Court for the Southern District of New York (the Southern District of New York). The complaint alleges that defendants made statements during the period May 11, 2007 through May 9, 2008 in press releases, AIG's quarterly and year-end filings and during conference calls with analysts which were materially false and misleading and which artificially inflated the price of AIG's stock. The alleged false and misleading statements relate to, among other things, unrealized market valuation losses on AIGFP's super senior credit default swap portfolio as a result of severe credit market disruption. The complaint alleges claims under Sections 10(b) and 20(a) of the

Exchange Act. Three additional purported securities class action complaints were subsequently filed in the Southern District of New York, all containing similar allegations. One of the additional complaints filed on June 19, 2008, alleges a purported class period of November 10, 2006 through June 6, 2008. The Court has not yet appointed a lead plaintiff in these actions.

On October 9, 2008, a purported securities class action complaint was filed in the Southern District of New York on behalf of purchasers of 7.70 percent Series A-5 Junior Subordinated Debentures in connection with AIG's public offering on December 11, 2007 against AIG, certain of its current and former officers and directors, and the offering underwriters. The complaint alleges that defendants made statements in AIG's registration statement, prospectus and quarterly and year-end filings which were materially false and misleading, in violation of Sections 11, 12(a) and 15 of the Securities Act of 1933. The claims are based generally on the same allegations as the securities fraud class actions described above. One additional purported securities class action complaint was filed in the Southern District of New York on October 24, 2008, containing identical allegations.

ERISA Actions – Southern District of New York. On June 25, 2008, the Company, certain of its executive officers and directors, and unnamed members of the Company's Retirement Board and Investment Committee were named as defendants in two separate, though nearly identical, actions filed in the Southern District of New York. The actions purport to be brought as class actions on behalf of all participants in or beneficiaries of certain pension plans sponsored by AIG or its subsidiaries (the Plans) during the period May 11, 2007 through the present and whose participant accounts included investments in the Company's common stock. Plaintiffs allege, among other things, that the defendants breached their fiduciary responsibilities to Plan participants and their beneficiaries under the Employee Retirement Income Security Act of 1974, as amended (ERISA), by: (i) failing to prudently and loyally manage the Plans and the Plans' assets; (ii) failing to provide complete and accurate information to participants and beneficiaries about the Company and the value of the Company's stock; (iii) failing to monitor appointed Plan fiduciaries and to provide them with complete and accurate information; and (iv) breaching their duty to avoid conflicts of interest. The alleged ERISA violations relate to, among other things, the defendants' purported failure to monitor and/or disclose unrealized market valuation losses on AIGFP's super senior credit default swap portfolio as a result of severe credit market disruption. Six additional purported ERISA class action complaints were subsequently filed in the Southern District of New York, each containing similar allegations. It is anticipated that these actions will all be consolidated and that

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***7. Commitments, Contingencies and Guarantees** *(continued)*

the Court will then appoint a lead plaintiff in the consolidated action.

Derivative Actions – Southern District of New York. On November 20, 2007, two purported shareholder derivative actions were filed in the Southern District of New York naming as defendants the then current directors of AIG and certain senior officers of AIG and its subsidiaries. Plaintiffs assert claims for breach of fiduciary duty, waste of corporate assets and unjust enrichment, as well as violations of Section 10(b) of the Exchange Act and Rule 10b-5 promulgated thereunder, and Section 20(a) of the Exchange Act, among other things, in connection with AIG's public disclosures regarding its exposure to what the lawsuits describe as the subprime market crisis. The actions were consolidated as *In re American International Group, Inc. 2007 Derivative Litigation* (the Consolidated 2007 Derivative Litigation). On February 15, 2008, plaintiffs filed a consolidated amended complaint alleging the same causes of action. On April 15, 2008, motions to dismiss the action were filed on behalf of all defendants. The motions to dismiss are pending.

On August 8, 2008, a purported shareholder derivative action was filed in the Southern District of New York asserting claims on behalf of AIG based generally on the same allegations as in the consolidated amended complaint in the Consolidated 2007 Derivative Litigation.

Derivative Action – Supreme Court of New York. On February 29, 2008, a purported shareholder derivative complaint was filed in the Supreme Court of Nassau County, asserting the same state law claims against the same defendants as in the consolidated amended complaint in the Consolidated 2007 Derivative Litigation. On May 19, 2008, defendants filed a motion to dismiss or to stay the proceedings in light of the pending Consolidated 2007 Derivative Litigation. The motion is pending.

Derivative Action – Delaware Court of Chancery. On September 17, 2008, a purported shareholder derivative complaint was filed in the Court of Chancery of Delaware naming as defendants certain directors and senior officers of AIG and its subsidiaries and asserting claims on behalf of AIG based generally on the same allegations as in the consolidated amended complaint in the Consolidated 2007 Derivative Litigation.

Action by the Starr Foundation – Supreme Court of New York. On May 7, 2008, the Starr Foundation filed a complaint in New York State Supreme Court against AIG, AIG's former Chief Executive Officer, Martin Sullivan, and AIG's then Chief Financial Officer, Steven Bensinger, asserting a claim for common law fraud. The complaint alleges that

the defendants made materially misleading statements and omissions concerning alleged multi-billion dollar losses in AIG's portfolio of credit default swaps. The complaint asserts that if the Starr Foundation had known the truth about the alleged losses, it would have sold its remaining shares of AIG stock. The complaint alleges that the Starr Foundation has suffered damages of at least \$300 million. On May 30, 2008, a motion to dismiss the complaint was filed on behalf of defendants. The motion to dismiss, which has been converted by the court into a motion for summary judgment, is still pending.

Litigation Relating to the Credit Agreement with the NY Fed

On November 4, 2008, a purported class action was filed in the Delaware Court of Chancery naming as defendants AIG, Chairman and Chief Executive Officer, Edward M. Liddy, and current and past AIG directors. Plaintiff alleges violations of Delaware General Corporation Law Section 242(b)(2) and breaches of fiduciary duty in connection with the Series C Preferred Stock to be issued to the Trust created for the benefit of the United States Treasury pursuant to the Fed Credit Agreement. Plaintiff seeks an order declaring that the Series C Preferred Stock is not convertible into common stock absent a class vote by the holders of the common stock to amend the Restated Certificate of Incorporation to increase the number of authorized common shares and decrease the par value of the common shares, an order declaring that AIG's directors are breaching their fiduciary duties in not seeking alternative or supplemental financing in advance of a stockholder vote on such an amendment to the Restated Certificate of Incorporation, and damages. During a conference with the Court on November 7, 2008, AIG's counsel stated that any amendment to the Restated Certificate of Incorporation to increase the number of authorized common shares or to decrease the par value of the common shares would be the subject of a class vote by the holders of the common stock, and plaintiff's counsel agreed that the plaintiff's request for an order granting this relief is moot.

2006 Regulatory Settlements and Related Matters

2006 Regulatory Settlements. In February 2006, AIG reached a resolution of claims and matters under investigation with the DOJ, the SEC, the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). AIG recorded an after-tax charge of \$1.15 billion relating to these settlements in the fourth quarter of 2005. The settlements resolved investigations conducted by the SEC, NYAG and DOI in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. These settlements did not, however, resolve

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***7. Commitments, Contingencies and Guarantees** *(continued)*

investigations by regulators from other states into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Nor did the settlements resolve any obligations that AIG may have to state guarantee funds in connection with any of these matters.

As a result of these settlements, AIG made payments or placed amounts in escrow in 2006 totaling approximately \$1.64 billion, \$225 million of which represented fines and penalties. Amounts held in escrow totaling approximately \$337 million, including interest thereon, are included in other assets at September 30, 2008. At that date, all of the funds were escrowed for settlement of claims resulting from the underpayment by AIG of its residual market assessments for workers' compensation.

In addition to the escrowed funds, \$800 million was deposited into a fund under the supervision of the SEC as part of the settlements to be available to resolve claims asserted against AIG by investors, including the securities class action shareholder lawsuits described below.

Also, as part of the settlements, AIG agreed to retain, for a period of three years, an independent consultant to conduct a review that will include, among other things, the adequacy of AIG's internal control over financial reporting, the policies, procedures and effectiveness of AIG's regulatory, compliance and legal functions and the remediation plan that AIG has implemented as a result of its own internal review.

Other Regulatory Settlements. AIG's 2006 regulatory settlements with the SEC, DOJ, NYAG and DOI did not resolve investigations by regulators from other states into insurance brokerage practices. AIG entered into agreements effective January 29, 2008 with the Attorneys General of the States of Florida, Hawaii, Maryland, Michigan, Oregon, Texas and West Virginia; the Commonwealths of Massachusetts and Pennsylvania; and the District of Columbia; as well as the Florida Department of Financial Services and the Florida Office of Insurance Regulation, relating to their respective industry wide investigations into producer compensation and insurance placement practices. The settlements call for total payments of \$12.5 million to be allocated among the ten jurisdictions representing restitution to state agencies and reimbursement of the costs of the investigation. During the term of the settlement agreements, AIG will continue to maintain certain producer compensation disclosure and ongoing compliance initiatives. AIG will also continue to cooperate with the industry wide investigations. The agreement with the Texas Attorney General also settles allegations of anticompetitive conduct relating to AIG's relationship with Allied World

Assurance Company and includes an additional settlement payment of \$500,000 related thereto.

AIG entered into an agreement effective March 13, 2008 with the Pennsylvania Insurance Department relating to the Department's investigation into the affairs of AIG and certain of its Pennsylvania-domiciled insurance company subsidiaries. The settlement calls for total payments of approximately \$13.5 million, of which approximately \$4.4 million was paid under previous settlement agreements. During the term of the settlement agreement, AIG will provide annual reinsurance reports, as well as maintain certain producer compensation disclosure and ongoing compliance initiatives.

NAIC Examination of Workers Compensation Premium Reporting. During 2006, the Settlement Review Working Group of the National Association of Insurance Commissioners (NAIC), under the direction of the states of Indiana, Minnesota and Rhode Island, began an investigation into AIG's reporting of workers' compensation premiums. In late 2007, the Settlement Review Working Group recommended that a multi-state targeted market conduct examination focusing on workers' compensation insurance be commenced under the direction of the NAIC's Market Analysis Working Group. AIG was informed of the multi-state targeted market conduct examination in January 2008. AIG has been advised that the lead states in the multi-state examination are Delaware, Florida, Indiana, Massachusetts, Minnesota, New York, Pennsylvania, and Rhode Island and that all other states (and the District of Columbia) have agreed to participate. AIG has also been advised that the examination will focus on both legacy issues and AIG's current compliance with legal requirements applicable to AIG's writing and reporting of workers' compensation insurance, but as of October 31, 2008 no determinations had been made with respect to these issues.

Securities Action – Southern District of New York. Beginning in October 2004, a number of putative securities fraud class action suits were filed in the Southern District of New York against AIG and consolidated as *In re American International Group, Inc. Securities Litigation*. Subsequently, a separate, though similar, securities fraud action was also brought against AIG by certain Florida pension funds. The lead plaintiff in the class action is a group of public retirement systems and pension funds benefiting Ohio state employees, suing on behalf of themselves and all purchasers of AIG's publicly traded securities between October 28, 1999 and April 1, 2005. The named defendants are AIG and a number of present and former AIG officers and directors, as well as Starr, SICO, General Reinsurance Corporation (General Re), and PricewaterhouseCoopers LLP (PwC), among others. The lead plaintiff alleges, among other things, that AIG: (1) concealed that it engaged in anti-competitive conduct through alleged payment of contingent commissions to brokers and participation in illegal bid-rigging; (2) concealed that it used

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**7. Commitments, Contingencies and Guarantees** (continued)

“income smoothing” products and other techniques to inflate its earnings; (3) concealed that it marketed and sold “income smoothing” insurance products to other companies; and (4) misled investors about the scope of government investigations. In addition, the lead plaintiff alleges that AIG’s former Chief Executive Officer, Maurice R. Greenberg, manipulated AIG’s stock price. The lead plaintiff asserts claims for violations of Sections 11 and 15 of the Securities Act of 1933, Section 10(b) of the Exchange Act and Rule 10b-5 promulgated thereunder, Section 20(a) of the Exchange Act, and Section 20A of the Exchange Act. In April 2006, the court denied the defendants’ motions to dismiss the second amended class action complaint and the Florida complaint. In December 2006, a third amended class action complaint was filed, which does not differ substantially from the prior complaint. Fact and class discovery is currently ongoing. On February 20, 2008, the lead plaintiff filed a motion for class certification. The class certification motion is pending.

ERISA Action – Southern District of New York.

Between November 30, 2004 and July 1, 2005, several ERISA actions were filed in the Southern District of New York on behalf of purported class participants and beneficiaries of three pension plans sponsored by AIG or its subsidiaries. A consolidated complaint filed on September 26, 2005 alleges a class period between September 30, 2000 and May 31, 2005 and names as defendants AIG, the members of AIG’s Retirement Board and the Administrative Boards of the plans at issue, and present or former members of AIG’s Board of Directors. The factual allegations in the complaint are essentially identical to those in the securities actions described above. The parties have reached an agreement to settle this matter for an amount within AIG’s insurance coverage limits. On July 3, 2008, the Court granted preliminary approval of the settlement, and at a hearing on October 7, 2008 the Court issued an order finally approving the settlement, dismissing the action with prejudice. The deadline for filing an appeal from the approval order is November 7, 2008.

Derivative Action – Southern District of New York.

Between October 25, 2004 and July 14, 2005, seven separate derivative actions were filed in the Southern District of New York, five of which were consolidated into a single action (the New York 2004/2005 Derivative Litigation). The complaint in this action contains nearly the same types of allegations made in the securities fraud action described above. The named defendants include current and former officers and directors of AIG, as well as Marsh & McLennan Companies, Inc. (Marsh), SICO, Starr, ACE Limited and subsidiaries (ACE), General Re, PwC, and certain employees or officers of these entity defendants. Plaintiffs assert claims for breach of

fiduciary duty, gross mismanagement, waste of corporate assets, unjust enrichment, insider selling, auditor breach of contract, auditor professional negligence and disgorgement from AIG’s former Chief Executive Officer, Maurice R. Greenberg, and former Chief Financial Officer, Howard I. Smith, of incentive-based compensation and AIG share proceeds under Section 304 of the Sarbanes-Oxley Act, among others. Plaintiffs seek, among other things, compensatory damages, corporate governance reforms, and a voiding of the election of certain AIG directors. AIG’s Board of Directors has appointed a special committee of independent directors (Special Committee) to review the matters asserted in the operative consolidated derivative complaint. The court has entered an order staying this action pending resolution of the Delaware 2004/2005 Derivative Litigation discussed below. The court also has entered an order that termination of certain named defendants from the Delaware action applies to this action without further order of the court. On October 17, 2007, plaintiffs and those AIG officer and director defendants against whom the shareholder plaintiffs in the Delaware action are no longer pursuing claims filed a stipulation providing for all claims in this action against such defendants to be dismissed with prejudice. Former directors and officers Maurice R. Greenberg and Howard I. Smith have asked the court to refrain from so ordering this stipulation.

Derivative Actions – Delaware Chancery Court. From October 2004 to April 2005, AIG shareholders filed five derivative complaints in the Delaware Chancery Court. All of these derivative lawsuits were consolidated into a single action as *In re American International Group, Inc. Consolidated Derivative Litigation* (the Delaware 2004/2005 Derivative Litigation). The amended consolidated complaint named 43 defendants (not including nominal defendant AIG) who, as in the New York 2004/2005 Derivative Litigation, were current and former officers and directors of AIG, as well as other entities and certain of their current and former employees and directors. The factual allegations, legal claims and relief sought in this action are similar to those alleged in the New York 2004/2005 Derivative Litigation, except that the claims are only under state law. In early 2007, the court approved an agreement that AIG be realigned as plaintiff, and, on June 13, 2007, acting on the direction of the Special Committee, AIG filed an amended complaint against former directors and officers Maurice R. Greenberg and Howard I. Smith, alleging breach of fiduciary duty and indemnification. Also on June 13, 2007, the Special Committee filed a motion to terminate the litigation as to certain defendants, while taking no action as to others. Defendants Greenberg and Smith filed answers to AIG’s complaint and brought third-party complaints against certain current and former AIG directors and officers, PwC and Regulatory Insurance Services, Inc. On September 28, 2007, AIG and the shareholder plaintiffs filed a combined amended complaint in which AIG continued to assert claims

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***7. Commitments, Contingencies and Guarantees** *(continued)*

against defendants Greenberg and Smith and took no position as to the claims asserted by the shareholder plaintiffs in the remainder of the combined amended complaint. In that pleading, the shareholder plaintiffs are no longer pursuing claims against certain AIG officers and directors. On February 12, 2008, the court granted AIG's motion to stay discovery pending the resolution of claims against AIG in the New York consolidated securities action. The court also directed the parties to coordinate a briefing schedule for the motions to dismiss. On April 11, 2008, the shareholder plaintiffs filed the First Amended Combined Complaint, which added claims against former AIG directors and officers Maurice Greenberg, Edward Matthews, and Thomas Tizzio for breach of fiduciary duty based on alleged bid-rigging in the municipal derivatives market. On June 13, 2008, certain defendants filed motions to dismiss the shareholder plaintiffs' portions of the complaint. The motions to dismiss are pending.

AIG is also named as a defendant in a derivative action in the Delaware Chancery Court brought by shareholders of Marsh. On July 10, 2008, shareholder plaintiffs filed a second consolidated amended complaint, which contains claims against AIG for aiding and abetting a breach of fiduciary duty and contribution and indemnification in connection with alleged bid-rigging and steering practices in the commercial insurance market that are the subject of the Policyholder Antitrust and RICO Actions described below.

Policyholder Antitrust and RICO Actions. Commencing in 2004, policyholders brought multiple federal antitrust and Racketeer Influenced and Corrupt Organizations Act (RICO) class actions in jurisdictions across the nation against insurers and brokers, including AIG and a number of its subsidiaries, alleging that the insurers and brokers engaged in a broad conspiracy to allocate customers, steer business, and rig bids. These actions, including 24 complaints filed in different federal courts naming AIG or an AIG subsidiary as a defendant, were consolidated by the judicial panel on multi-district litigation and transferred to the United States District Court for the District of New Jersey (District of New Jersey) for coordinated pretrial proceedings. The consolidated actions have proceeded in that court in two parallel actions, *In re Insurance Brokerage Antitrust Litigation* (the Commercial Complaint) and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the Employee Benefits Complaint, and, together with the Commercial Complaint, the Multi-district Litigation).

The plaintiffs in the Commercial Complaint are a group of corporations, individuals and public entities that contracted with the broker defendants for the provision of insurance brokerage services for a variety of insurance needs. The

broker defendants are alleged to have placed insurance coverage on the plaintiffs' behalf with a number of insurance companies named as defendants, including AIG subsidiaries. The Commercial Complaint also named various brokers and other insurers as defendants (three of which have since settled). The Commercial Complaint alleges, among other things, that defendants engaged in a widespread conspiracy to allocate customers through bid-rigging and steering practices. Plaintiffs assert that the defendants violated the Sherman Antitrust Act, RICO, and the antitrust laws of 48 states and the District of Columbia, and are liable under common law breach of fiduciary duty and unjust enrichment theories. Plaintiffs seek treble damages plus interest and attorneys' fees as a result of the alleged RICO and Sherman Antitrust Act violations.

The plaintiffs in the Employee Benefits Complaint are a group of individual employees and corporate and municipal employers alleging claims on behalf of two separate nationwide purported classes: an employee class and an employer class that acquired insurance products from the defendants from August 26, 1994 to the date of any class certification. The Employee Benefits Complaint names AIG, as well as various other brokers and insurers, as defendants. The activities alleged in the Employee Benefits Complaint, with certain exceptions, track the allegations made in the Commercial Complaint.

The Court in connection with the Commercial Complaint granted (without leave to amend) defendants' motions to dismiss the federal antitrust and RICO claims on August 31, 2007 and September 28, 2007, respectively. The court declined to exercise supplemental jurisdiction over the state law claims in the Commercial Complaint and therefore dismissed it in its entirety. On January 14, 2008, the court granted defendants' motion for summary judgment on the ERISA claims in the Employee Benefits Complaint and subsequently dismissed the remaining state law claims without prejudice, thereby dismissing the Employee Benefits Complaint in its entirety. On February 12, 2008, plaintiffs filed a notice of appeal to the United States Court of Appeals for the Third Circuit with respect to the dismissal of the Employee Benefits Complaint. Plaintiffs previously appealed the dismissal of the Commercial Complaint to the United States Court of Appeals for the Third Circuit on October 10, 2007. Both appeals are pending.

A number of complaints making allegations similar to those in the Multi-district Litigation have been filed against AIG and other defendants in state and federal courts around the country. The defendants have thus far been successful in having the federal actions transferred to the District of New Jersey and consolidated into the Multi-district Litigation. These additional consolidated actions are still pending in the District of New Jersey, but are currently stayed pending

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**7. Commitments, Contingencies and Guarantees** (continued)

a decision by the court on whether they will proceed during the appeal of the dismissal of the Multi-district Litigation. On August 20, 2008, the District Court, however, granted plaintiff's motion to lift the stay in one tag-along matter and suggested that the case be remanded to the transferor court, and on September 17, 2008, the Judicial Panel on Multidistrict Litigation filed a Conditional Transfer Order with respect to this matter. The AIG defendants have also sought to have state court actions making similar allegations stayed pending resolution of the Multi-district Litigation proceeding. These efforts have generally been successful, although plaintiffs in one case pending in Texas state court have moved to re-open discovery; a hearing on that motion was held on April 9, 2008. The court subsequently issued an order deferring a ruling on the motion until the Court holds a hearing on defendants' Special Exceptions. A hearing date has not yet been set. AIG has recently settled several of the various federal and state actions alleging claims similar to those in the Multi-district Litigation, including a state court action pending in Florida in which discovery had been allowed to proceed.

Ohio Attorney General Action – Ohio Court of Common Pleas. On August 24, 2007, the Ohio Attorney General filed a complaint in the Ohio Court of Common Pleas against AIG and a number of its subsidiaries, as well as several other broker and insurer defendants, asserting violation of Ohio's antitrust laws. The complaint, which is similar to the Commercial Complaint, alleges that AIG and the other broker and insurer defendants conspired to allocate customers, divide markets, and restrain competition in commercial lines of casualty insurance sold through the broker defendant. The complaint seeks treble damages on behalf of Ohio public purchasers of commercial casualty insurance, disgorgement on behalf of both public and private purchasers of commercial casualty insurance, as well as a \$500 per day penalty for each day of conspiratorial conduct. AIG, along with other co-defendants, moved to dismiss the complaint on November 16, 2007. On June 30, 2008, the Court denied defendants' motion to dismiss. On August 18, 2008, defendants filed their answers to the complaint. Discovery is ongoing.

Action Relating to Workers Compensation Premium Reporting – Northern District of Illinois. On May 24, 2007, the National Workers Compensation Reinsurance Pool (the NWCRP), on behalf of its participant members, filed a lawsuit in the United States District Court for the Northern District of Illinois against AIG with respect to the underpayment by AIG of its residual market assessments for workers compensation. The complaint alleges claims for violations of RICO, breach of contract, fraud and related state law claims arising out of AIG's alleged underpayment of these

assessments between 1970 and the present and seeks damages purportedly in excess of \$1 billion. On August 6, 2007, the court denied AIG's motion seeking to dismiss or stay the complaint or, in the alternative, to transfer to the Southern District of New York. On December 26, 2007, the court denied AIG's motion to dismiss the complaint. On March 17, 2008, AIG filed an amended answer, counterclaims and third-party claims against the National Council on Compensation Insurance (in its capacity as attorney-in-fact for the NWCRP), the NWCRP, its board members, and certain of the other insurance companies that are members of the NWCRP alleging violations of RICO, as well as claims for conspiracy, fraud, and other state law claims. The counterclaim-and third-party defendants filed motions to dismiss on June 9, 2008. The motions are scheduled for decision on November 20, 2008. Discovery is currently ongoing while the motions are pending.

Action Relating to Workers Compensation Premium Reporting – Minnesota. On February 16, 2006, the Attorney General of the State of Minnesota filed a complaint against AIG with respect to claims by the Minnesota Department of Revenue and the Minnesota Special Compensation Fund, alleging that AIG made false statements and reports to Minnesota agencies and regulators, unlawfully reducing AIG's contributions and payments to Minnesota and certain state funds relating to its workers' compensation premiums. While AIG settled that litigation in December 2007, a similar lawsuit was filed by the Minnesota Workers Compensation Reinsurance Association and the Minnesota Workers Compensation Insurers Association in the United States District Court for the District of Minnesota. On March 28, 2008, the court granted AIG's motion to dismiss the case in its entirety. On April 25, 2008, plaintiffs appealed to the United States Court of Appeals for the Eighth Circuit and also filed a new complaint making similar allegations in Minnesota state court. On April 30, 2008, substantially identical claims were also filed in Minnesota state court by the Minnesota Insurance Guaranty Association and Minnesota Assigned Risk Plan. On September 11, 2008, the parties to both actions entered into a settlement, resulting in the dismissal of all claims against AIG. In exchange for the dismissal and a broad release of claims, the financial terms of the settlement provided for AIG's payment of \$21.5 million to plaintiffs and waiver of its right to collect \$3.5 million in payments due from the plaintiffs.

Action Relating to Workers Compensation Premium Reporting – District of South Carolina. A purported class action was also filed in the United States District Court for the District of South Carolina on January 25, 2008 against AIG and certain of its subsidiaries, on behalf of a class of employers that obtained workers' compensation insurance from AIG companies and allegedly paid inflated premiums as a result of AIG's alleged underreporting of workers'

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***7. Commitments, Contingencies and Guarantees** *(continued)*

compensation premiums. An amended complaint was filed on March 24, 2008, and AIG filed a motion to dismiss the amended complaint on April 21, 2008. On July 8, 2008, the court granted AIG's motion to dismiss all claims without prejudice and granted plaintiff leave to refile subject to certain conditions. Plaintiffs filed their second amended complaint on July 22, 2008. AIG moved to dismiss the second amended complaint on August 22, 2008. Discovery is stayed pending resolution of the motion to dismiss.

Litigation Relating to SICO and Starr

SICO Action. In July, 2005 SICO filed a complaint against AIG in the Southern District of New York, claiming that AIG had refused to provide SICO access to certain artwork, and asking the court to order AIG immediately to release the property to SICO. AIG filed an answer denying SICO's allegations and setting forth defenses to SICO's claims. In addition, AIG filed counterclaims asserting breach of contract, unjust enrichment, conversion, breach of fiduciary duty, a constructive trust and declaratory judgment, relating to SICO's breach of its commitment to use its AIG shares only for the benefit of AIG and AIG employees. On June 23, 2008, the Court denied in part and granted in part SICO's motion for summary judgment, and on July 31, 2008 the parties submitted a joint pre-trial order. Trial is scheduled to commence on March 2, 2009.

Derivative Action Relating to Starr and SICO. On December 31, 2002, a derivative lawsuit was filed in the Delaware Chancery Court against twenty directors and executives of AIG as well as against AIG as a nominal defendant that alleges, among other things, that the directors of AIG breached the fiduciary duties of loyalty and care by approving the payment of commissions to insurance managing general agencies owned by Starr and of rental and service fees to SICO and the executives breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and their fiduciary duties by usurping AIG's corporate opportunities. The complaint further alleges that the Starr agencies did not provide any services that AIG was not capable of providing itself, and that the diversion of commissions to these entities was solely for the benefit of Starr's owners. The complaint also alleges that the service fees and rental payments made to SICO and its subsidiaries were improper. Under the terms of a stipulation approved by the Court on February 16, 2006, the claims against the outside independent directors were dismissed with prejudice, while the claims against the other directors were dismissed without prejudice. In an opinion dated June 21, 2006, the Court denied defendants' motion to dismiss, except with respect to plaintiff's challenge to payments made to Starr before January 1, 2000. On July 21,

2006, plaintiff filed its second amended complaint, which alleges that, between January 1, 2000 and May 31, 2005, individual defendants breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and breached their fiduciary duties by usurping AIG's corporate opportunity. Starr is charged with aiding and abetting breaches of fiduciary duty and unjust enrichment for its acceptance of the fees. SICO is no longer named as a defendant. On June 27, 2007, Starr filed a cross-claim against AIG, alleging one count that includes contribution, unjust enrichment and setoff. On November 15, 2007, the Court granted AIG's motion to dismiss the cross-claim by Starr to the extent that it sought affirmative relief from AIG. On February 14, 2008, the Court granted a motion to add former AIG officer Thomas Tizzio as a defendant. As a result, the remaining defendants in the case are AIG (the nominal defendant), Starr and former directors and officers Maurice Greenberg, Howard Smith, Edward Matthews and Thomas Tizzio. On September 30, 2008, the parties filed a stipulation of settlement, and the court scheduled a settlement hearing for December 17, 2008. Pursuant to the settlement, defendants have agreed to payment of \$115 million to AIG, net of attorneys' fees and costs, in exchange for receipt of a broad release of claims relating to the allegations in the complaint.

Litigation Matters Relating to AIG's General Insurance Operations

Caremark. AIG and certain of its subsidiaries have been named defendants in two putative class actions in state court in Alabama that arise out of the 1999 settlement of class and derivative litigation involving Caremark Rx, Inc. (Caremark). The plaintiffs in the second-filed action have intervened in the first-filed action, and the second-filed action has been dismissed. An excess policy issued by a subsidiary of AIG with respect to the 1999 litigation was expressly stated to be without limit of liability. In the current actions, plaintiffs allege that the judge approving the 1999 settlement was misled as to the extent of available insurance coverage and would not have approved the settlement had he known of the existence and/or unlimited nature of the excess policy. They further allege that AIG, its subsidiaries, and Caremark are liable for fraud and suppression for misrepresenting and/or concealing the nature and extent of coverage. In addition, the intervenor-plaintiffs allege that various lawyers and law firms who represented parties in the underlying class and derivative litigation (the Lawyer Defendants) are also liable for fraud and suppression, misrepresentation, and breach of fiduciary duty. The complaints filed by the plaintiffs and the intervenor-plaintiffs request compensatory damages for the 1999 class in the amount of \$3.2 billion, plus punitive damages. AIG and its subsidiaries deny the allegations of fraud and suppression and have asserted that information concerning the excess policy was publicly disclosed months prior to the approval

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***7. Commitments, Contingencies and Guarantees** *(continued)*

of the settlement. AIG and its subsidiaries further assert that the current claims are barred by the statute of limitations and that plaintiffs' assertions that the statute was tolled cannot stand against the public disclosure of the excess coverage. The plaintiffs and intervenor-plaintiffs, in turn, have asserted that the disclosure was insufficient to inform them of the nature of the coverage and did not start the running of the statute of limitations. On November 26, 2007, the trial court issued an order that dismissed the intervenors' complaint against the Lawyer Defendants and entered a final judgment in favor of the Lawyer Defendants. The matter was stayed pending appeal to the Alabama Supreme Court. In September 2008 the Alabama Supreme Court affirmed the trial court's dismissal of the Lawyer Defendants. It is anticipated that the next steps will be class discovery and a hearing on class certification. AIG cannot reasonably estimate either the likelihood of its prevailing in these actions or the potential damages in the event liability is determined.

*(b) Commitments****Flight Equipment***

At September 30, 2008, International Lease Finance Corporation (ILFC) had committed to purchase 174 new aircraft deliverable from 2008 through 2019 at an estimated aggregate purchase price of \$16.9 billion. ILFC will be required to find customers for any aircraft acquired, and it must arrange financing for portions of the purchase price of such equipment.

ILFC has ordered 74 Boeing 787 aircraft with the first aircraft now scheduled to be delivered in late 2011. Boeing has made several announcements concerning the delays in the deliveries of the 787s. Boeing has informed ILFC that its 787 deliveries will be delayed, on average, an excess of 27 months per aircraft. Such delays will span across ILFC's entire order, with the original contracted deliveries running from 2010 through 2017. ILFC expects further delays on its future Boeing aircraft deliveries resulting from the recent labor strike.

Other Commitments

In the normal course of business, AIG enters into commitments to invest in limited partnerships, private equities, hedge funds and mutual funds and to purchase and develop real estate in the U.S. and abroad. These commitments totaled \$8.4 billion at September 30, 2008.

On June 27, 2005, AIG entered into an agreement pursuant to which AIG agreed, subject to certain conditions, to make any payment that is not promptly paid with respect to

the benefits accrued by certain employees of AIG and its subsidiaries under the SICO Plans (as discussed below under "Benefits Provided by Starr International Company, Inc. and C.V. Starr & Co., Inc.>").

*(c) Contingencies****Loss Reserves***

Although AIG regularly reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, directors and officers liability, professional liability, medical malpractice, workers' compensation, general liability, products liability and related classes, as well as for asbestos and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss cost trends or loss development factors could be attributable to changes in inflation, in labor and material costs or in the judicial environment, or in other social or economic phenomena affecting claims.

Deferred Tax Assets

AIG's determination of the realizability of deferred tax assets requires estimates of future taxable income. Such estimates could change in the near term, perhaps materially, which may require AIG to adjust its valuation allowance. Such adjustment, either positive or negative, could be material to AIG's consolidated financial condition or its results of operations. See Note 9 to the Consolidated Financial Statements.

Benefits Provided by Starr International Company, Inc. and C.V. Starr & Co., Inc.

SICO has provided a series of two-year Deferred Compensation Profit Participation Plans (SICO Plans) to certain AIG employees. The SICO Plans were created in 1975 when the voting shareholders and Board of Directors of SICO, a private holding company whose principal asset is AIG common stock, decided that a portion of the capital value of SICO should be used to provide an incentive plan for the current and

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***7. Commitments, Contingencies and Guarantees** *(continued)*

succeeding managements of all American International companies, including AIG.

None of the costs of the various benefits provided under the SICO Plans has been paid by AIG, although AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts considered to be contributed by SICO. The SICO Plans provide that shares currently owned by SICO are set aside by SICO for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's voluntary termination of employment with AIG prior to normal retirement age. Under the SICO Plans, SICO's Board of Directors may elect to pay a participant cash in lieu of shares of AIG common stock. Following notification from SICO to participants in the SICO Plans that it will settle specific future awards under the SICO Plans with shares rather than cash, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. AIG gave effect to this change in settlement method beginning on December 9, 2005, the date of SICO's notice to participants in the SICO Plans.

(d) Guarantees

AIG and certain of its subsidiaries are parties to derivative financial instruments with market risk resulting from both dealer and end-user activities to reduce currency, interest rate, equity and commodity exposures. These instruments are carried at their fair value in the consolidated balance sheet. The majority of AIG's derivative activity is transacted by AIGFP. See Note 8 to the Consolidated Financial Statements included in the 2007 Annual Report on Form 10-K.

AIG has issued unconditional guarantees with respect to the prompt payment, when due, of all present and future payment obligations and liabilities of AIGFP arising from transactions entered into by AIGFP.

SAI Deferred Compensation Holdings, Inc., a wholly owned subsidiary of AIG, has established a deferred compensation plan for registered representatives of certain AIG subsidiaries, pursuant to which participants have the opportunity to invest deferred commissions and fees on a notional basis. The value of the deferred compensation fluctuates with the value of the deferred investment alternatives chosen. AIG has provided a full and unconditional guarantee of the obligations of SAI Deferred Compensation Holdings, Inc. to pay the deferred compensation under the plan.

See also Note 11 to the Consolidated Financial Statements for information on the termination of selected AIG voluntary non-qualified deferred compensation plans.

Expected Cash Flows

As disclosed in its 2007 Annual Report on Form 10-K, AIG expected to contribute \$118 million to its U.S. and non-U.S.

pension plans in 2008. For the nine months ended September 30, 2008, AIG had contributed \$122 million to its U.S. and non-U.S. pension plans. Based upon the current funded status of the plans, the current interest rate environment, and the

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)*

projected performance of pension plan assets, additional expected contributions for the U.S. and non-U.S. pension plans in the 2008 fourth quarter range from approximately \$168 million to \$532 million. Actual contributions will depend on asset performance, foreign exchange rates, and the interest rate environment as of December 31, 2008. Actual contributions may also vary as a result of anticipated business dispositions.

9. Federal Income Taxes

Interim Period Tax Assumptions and Effective Tax Rates

AIG's interim period tax expense or benefit is measured using an estimated annual effective tax rate. To the extent that a portion of AIG's annual pretax income or loss cannot be reliably estimated, the actual tax expense or benefit applicable to that income or loss is reported in the interim period in which the related income or loss is reported. AIG is unable to reliably estimate impairments of goodwill, other-than-temporary impairments, realized capital gains and losses, and the operating results of AIGFP. Therefore, the tax effects of these items, to the extent deductible, are calculated at the applicable local statutory rate (predominantly 35 percent) and are reported as discrete adjustments to the estimated annual effective tax rate that AIG applies to all other pretax income.

The effective tax rate on the pre-tax loss for the three-month period ended September 30, 2008 was 12.3 percent. The effective tax rate was lower than the statutory rate of 35 percent due primarily to \$6.9 billion of deferred tax expense recorded during the third quarter, comprising \$3.6 billion of deferred tax expense attributable to the potential sale of foreign businesses, and a \$3.3 billion valuation allowance to reduce tax benefits on capital losses to the amount that AIG believes is more likely than not to be realized.

The effective tax rate on the pre-tax loss for the nine-month period ended September 30, 2008 was 21.5 percent and was also lower than the statutory rate primarily due to the \$6.9 billion of deferred tax expense, which is discussed above, as well as other tax charges previously recorded.

The effective tax rates on pre-tax income for the three- and nine-month periods ended September 30, 2007 were 30.0 percent and 28.0 percent, respectively. These effective tax rates were lower than the statutory rate due primarily to benefits from remediation adjustments and the recognition of tax benefits associated with the SICO Plan for which the compensation expense was recognized in prior years.

Valuation Allowances

In general, realization of deferred tax assets depends on a company's ability to generate sufficient taxable income of the

appropriate character within the carryforward periods of the jurisdictions in which the net operating losses and deductible temporary differences were incurred. AIG assessed its ability to realize the deferred tax asset of \$19.1 billion and concluded a \$3.3 billion valuation allowance was required to reduce the deferred tax asset to an amount AIG believes is more likely than not to be realized.

When making its assessment, AIG considered all available evidence, including future reversals of existing taxable temporary differences, estimated future GAAP taxable income, and tax-planning strategies AIG would implement, if necessary, to realize the net deferred tax asset.

In assessing future GAAP taxable income, AIG considered its strong earnings history exclusive of the recent losses on the super senior credit default swap portfolio and from the securities lending program, because AIG expects to enter into transactions with the NY Fed to limit exposure to future losses. AIG also considered taxable income from the sales of businesses under its asset disposition plan, the continuing earnings strength of the insurance businesses it intends to retain and its recently announced debt and preferred stock transactions with the NY Fed and United States Treasury, respectively, together with other actions AIG is taking, when assessing the ability to generate sufficient future taxable income during the relevant carryforward periods to realize the deferred tax asset. See Note 11 to the Consolidated Financial Statements.

In evaluating the realizability of the loss carryforwards, AIG considered the relief provided by IRS Notice 2008-84 which provides that the limitation on loss carryforwards that can arise as a result of one or more acquisitions of stock of a loss company will not apply to such stock acquisitions for any period during which the United States becomes a direct or indirect owner of a more than 50 percent interest in the loss company.

At September 30, 2008, AIG has recorded deferred tax assets related to stock compensation of \$200 million. Due to the significant decline in AIG's stock price, these deferred tax assets may not be realizable in the future. FAS 123(R) precludes AIG from recognizing an impairment charge on these assets until the related stock awards are either exercised, vested or expired. Any charge associated with the deferred tax asset would be reflected in additional paid-in capital rather than income tax expense.

Undistributed Earnings

During the three months ended September 30, 2008, AIG recorded \$3.6 billion of deferred tax expense attributable to foreign businesses. This deferred tax, primarily related to GAAP and tax differences such as DAC, has not been previously recorded because the earnings from certain

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***9. Federal Income Taxes** *(continued)*

non-U.S. subsidiaries had been reinvested abroad indefinitely. At September 30, 2008, AIG continues to maintain permanent reinvestment assertions with respect to foreign general insurance and related companies. Approximately \$7 billion of GAAP earnings related to such foreign general insurance and related companies has not been subject to U.S. tax under Accounting Principles Board Opinion No. 23, "Accounting for Income Taxes — Special Areas".

Tax Filings and Examinations

On March 20, 2008, AIG received a Statutory Notice of Deficiency from the IRS for years 1997 to 1999. The Notice asserted that AIG owes additional taxes for these years primarily due to the disallowance of foreign tax credits. AIG has paid the assessed tax plus interest and penalties for 1997 and has filed a claim for refund. AIG has also paid the additional taxes, interest, and penalties assessed for 1998 and 1999. AIG will vigorously defend its position, and continues to believe that it has adequate reserves for any liability that could result from the IRS actions.

During the third quarter, the IRS announced a settlement initiative with respect to certain taxpayers that participated in targeted leasing transactions. On October 6, 2008, AIG notified the IRS of its decision to participate in the settlement offer. In accordance with FIN 48 and FSP 13-2, AIG anticipates recording an after-tax charge of approximately \$34 million to \$100 million for this matter in the fourth quarter of 2008.

FIN 48

As of September 30, 2008 and December 31, 2007, AIG's unrecognized tax benefits, excluding interest and penalties, were \$2.4 billion and \$1.3 billion, respectively. As of September 30, 2008 and December 31, 2007, AIG's unrecognized tax benefits included \$689 million and \$299 million, respectively, related to tax positions the disallowance of which would not affect the effective tax rate. Accordingly, as of September 30, 2008 and December 31, 2007, the amounts of unrecognized tax benefits that, if recognized, would favorably affect the effective tax rate were \$1.7 billion and \$1.0 billion, respectively. Substantially all of the increase as of September 30, 2008 was attributable to the quarter ended March 31, 2008.

At September 30, 2008, AIG had accrued \$420 million for the payment of interest (net of the federal benefit) and penalties.

AIG continually evaluates proposed adjustments by taxing authorities. At September 30, 2008, such proposed adjustments would not result in a material change to AIG's consolidated financial condition, although it is possible that the effect could be material to AIG's consolidated results of operations for an individual reporting period. Although it is reasonably possible that a significant change in the balance of unrecognized tax benefits may occur within the next twelve months, at this time it is not possible to estimate the range of the change due to the uncertainty of the potential outcomes.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***10. Information Provided in Connection with Outstanding Debt**

The following condensed consolidating financial statements reflect the results of **AIG Life Holdings (US), Inc. (AIGLH)**, formerly known as American General Corporation, a holding company and a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all outstanding debt of AIGLH.

In addition, **AIG Liquidity Corp. and AIG Program Funding, Inc.** are both wholly owned subsidiaries of AIG. AIG provides a full and unconditional guarantee of all obligations of AIG Liquidity Corp. and AIG Program Funding, Inc. There are no reportable amounts for these entities.

(a) Includes securities lending activities.

(b) Includes repayments due to funds received from the Fed Securities Lending Agreement and the CPFF.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***11. Subsequent Events** *(continued)****Preferred Equity Investment by the United States Treasury Pursuant to TARP***

On November 9, 2008, AIG and the United States Treasury agreed in principle to a transaction pursuant to which the United States Treasury will purchase from AIG \$40 billion liquidation preference of newly issued perpetual preferred stock (Series D Preferred Shares) under the United States Treasury's Troubled Asset Relief Program (TARP). The Series D Preferred Shares will be in addition to the Series C Preferred Stock related to the Fed Credit Agreement. AIG is required to use the net proceeds from the sale of the Series D Preferred Shares to repay a portion of the outstanding balance under the Fed Facility.

The Series D Preferred Shares will rank *pari passu* with the Series C Preferred Stock and senior to AIG's common stock. The Series D Preferred Shares will have limited class voting rights and will accumulate cumulative compounding dividends at a rate equal to 10 percent per annum. The dividends will be payable when, as and if declared by AIG's Board of Directors. AIG will not be able to declare or pay any dividends on AIG's common stock or on any AIG preferred stock ranking *pari passu* with or junior to the Series D Preferred Shares until dividends on the Series D Preferred Shares have been paid. AIG may redeem the Series D Preferred Shares at the stated liquidation preference, plus accumulated but unpaid dividends, at any time that the Trust or a successor entity beneficially owns less than 30 percent of AIG's voting securities and no holder of the Series D Preferred Shares controls or has the potential to control AIG.

Pursuant to the agreement between AIG and the United States Treasury in connection with the Series D Preferred Shares, for as long as the United States Treasury owns any of the Series D Preferred Shares, AIG will be subject to restrictions on its ability to repurchase capital stock, and will be required to adopt and maintain policies limiting corporate expenses, lobbying activities and executive compensation.

In connection with the issuance of the Series D Preferred Shares, AIG will also issue a 10-year warrant to the United States Treasury exercisable for a number of shares of common stock of AIG equal to two percent of the issued and outstanding shares of common stock on the date of the issuance (in connection with the issuance of the warrant, the voting, dividend and conversion rights of the Series C Preferred Stock will be reduced from 79.9 percent to 77.9 percent.) The warrant will be exercisable at any time and will have an exercise price equal to the par value of AIG's common stock at the time of exercise. The United States Treasury has agreed that it will not exercise any voting rights with respect to the common stock issued upon exercise of the warrant. The warrant will not be subject to contractual transfer restrictions

other than restrictions necessary to comply with U.S. federal and state securities laws. AIG will be obligated, at the request of the United States Treasury, to file a registration statement with respect to the warrant and the common stock for which the warrant can be exercised. During the 10-year term of the warrant, if the shares of common stock of AIG are no longer listed or trading on a national securities exchange, AIG may be obligated, at the direction of the United States Treasury, to exchange all or a portion of the warrant for another economic interest of AIG classified as permanent equity under U.S. GAAP with an equivalent fair value. If the Series D Preferred Shares issued in connection with the warrant are redeemed in whole or transferred to third parties, AIG may repurchase the warrant then held by the United States Treasury at any time for its fair market value so long as no holder of the warrant controls or has the potential to control AIG. As a result of the issuance of the warrant, the number of shares into which the Series C Preferred Stock will be convertible will be reduced to 77.9 percent of the outstanding shares of common stock.

Amending the Fed Credit Agreement

On November 9, 2008, AIG and the NY Fed agreed, subject to the issuance of the Series D Preferred Shares, to amend the Fed Credit Agreement to, among other things, (i) provide that the total commitment under the Fed Facility following the issuance of the Series D Preferred Shares shall be \$60 billion; (ii) reduce the interest rate payable on outstanding borrowings under the Fed Facility from three-month LIBOR (not less than 3.5 percent) plus 8.5 percent per annum to three-month LIBOR (not less than 3.5 percent) plus 3.0 percent per annum; (iii) reduce the fee payable on undrawn amounts from 8.5 percent per annum to 0.75 percent per annum; and (iv) extend the term of the Fed Facility from two years to five years.

Securities Lending Agreement with the Federal Reserve Bank of New York

On October 8, 2008, certain of AIG's life insurance and retirement services subsidiaries entered into a securities lending agreement with the NY Fed, providing that the NY Fed will borrow, on an overnight basis on commercial terms and conditions, investment grade fixed maturity securities from these AIG subsidiaries in return for cash collateral. Prior to this arrangement, draw downs under the existing Fed Facility were used, in part, to settle securities lending transactions. The NY Fed has been borrowing securities pursuant to the securities lending agreement, which has allowed AIG to replenish liquidity in the securities lending program on an as-needed basis, while providing possession and control of these third-party securities to the NY Fed.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)*

As of November 5, 2008, the total value of securities lending payables amounted to \$34.2 billion, with \$19.9 billion of this amount payable to the NY Fed under this agreement.

AIG's U.S. securities lending program is scheduled to be terminated in the fourth quarter of 2008 as further described below.

Transfer of RMBS by Certain AIG Insurance Subsidiaries

AIG and the NY Fed expect to establish a facility under which approximately \$40 billion principal amount of residential mortgage-backed securities (RMBS) related to AIG's U.S. securities lending program will be transferred by certain AIG insurance subsidiaries to a newly-formed limited liability company (the RMBS LLC) that will be financed by the NY Fed and AIG. Proceeds to the insurance company subsidiaries, together with other AIG funds, will be used to return all cash collateral posted by securities borrowers, including approximately \$19.9 billion to be returned to the NY Fed. After all collateral is returned, AIG's U.S. securities lending program will be terminated.

The aggregate proceeds to the AIG insurance company subsidiaries will be equal to the estimated fair value of the RMBS at October 31, 2008, adjusted for collections and certain other events between such date and the closing date of the purchase, which is expected to be prior to November 30, 2008. At September 30, 2008, the fair value of the RMBS being transferred was \$23.5 billion. AIG will provide \$1 billion of proceeds to the AIG entities and the NY Fed will provide the remainder of the proceeds up to \$22.5 billion.

Interest on both the NY Fed's senior loan and AIG's subordinated loan will be capitalized (converted to principal of the related loan instead of being paid in cash). Payments of interest on, and principal of, the RMBS and the net sale proceeds, if any, on the RMBS received by the RMBS LLC will be used to pay principal of the NY Fed's senior loan in full before any payments are made on AIG's subordinated loan. None of the obligations of RMBS LLC have recourse to AIG, although AIG's subordinated loan will be exposed to losses of the RMBS LLC up to \$1 billion plus the amount of capitalized interest thereon. After the loans have returned amounts equal to their principal and capitalized interest, payments with respect to the remaining RMBS received by the RMBS LLC will be allocated as contingent interest on both of the loans. There are no economic interests in the RMBS LLC other than the NY Fed's senior loan and AIG's subordinated loan.

The implementation of RMBS LLC is subject to approval of the relevant state insurance commissioners.

Terminations of Multi-Sector Credit Default Swap Transactions and Sale of Underlying CDOs

AIGFP has currently outstanding multi-sector credit default swaps with third-party counterparties related to CDOs. Such credit default swaps require that AIGFP post collateral with the counterparties to secure its obligations based on fair value deterioration, ratings downgrades of referenced obligations and downgrades of AIG's ratings. As of November 5, 2008, AIGFP had either agreed to post or posted collateral based on exposures calculated in respect of multi-sector credit default swaps in an aggregate net amount of \$37.3 billion.

AIG and the NY Fed expect to establish a facility in which a newly-formed limited liability company (the CDO LLC) will offer to purchase CDOs from the counterparties, who will concurrently with such purchase terminate the related credit default swaps. AIGFP and the NY Fed have begun negotiating the terminations; depending on the level of counterparty participation, on the closing date, the NY Fed will advance up to \$30 billion (the Tranche A Loan) and AIG will advance \$5 billion (the Tranche B Loan) to the CDO LLC to fund the purchase price of such CDOs. Separately, AIG will pay the costs associated with the unwind of the related CDSs, and so will bear the risk of declines in the market value of the CDOs through October 31, 2008. After the closing date, AIGFP will not be subject to any further collateral calls related to the terminated credit default swaps.

Interest on both the Tranche A Loan and the Tranche B Loan will be capitalized. Payments of interest on, and principal of, the CDOs received by the CDO LLC will be used to pay principal and interest of the Tranche A Loan in full before any payments may be made on the Tranche B Loan. None of the obligations of the CDO LLC have recourse to AIG, although AIG's Tranche B Loan will be exposed to losses of the CDO LLC up to its principal amount plus the amount of capitalized interest thereon. After the loans have returned amounts equal to their principal and capitalized interest, payments with respect to the remaining CDOs received by the CDO LLC will be allocated as contingent interest on both of the loans. There are no economic interests in the CDO LLC other than the Tranche A Loan and Tranche B Loan.

Because the successful implementation of the proposed establishment of CDO LLC depends on the agreement of counterparties to terminate their super senior credit default swaps, no assurance can be given that this facility will be completed or, if completed, on the level of participation.

Commercial Paper Funding Facility

On October 27, 2008, four AIG affiliates applied for participation in the NY Fed's Commercial Paper Funding Facility (CPFF). AIG Funding, Inc., ILFC, Curzon Funding LLC and Nightingale Finance LLC may issue up to approximately

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)*

\$6.9 billion, \$5.7 billion, \$7.2 billion and \$1.1 billion, respectively, of commercial paper under the CPFF. As of November 5, 2008, these entities had borrowed a total of approximately \$15.2 billion under this facility, which allowed AIG to repay borrowings under the Fed Facility.

These AIG affiliates are participating in the CPFF on the same terms and conditions as other non-AIG companies.

Proceeds from the issuance of the commercial paper will be used to refinance AIG's outstanding commercial paper as it matures, meet other working capital needs and make voluntary prepayments under the Fed Facility. The voluntary repayments of the Fed Facility will not reduce the amount available to be borrowed thereunder.

Asset Disposition Plan

AIG has recently hired a Vice Chairman and Chief Restructuring Officer to oversee the asset disposition plan to sell assets and businesses to repay the Fed Facility.

AIG intends to retain the majority of its U.S. property and casualty and foreign general insurance businesses, and to retain an ownership interest in certain of its foreign life insurance operations. AIG is exploring divestiture opportunities for its remaining businesses. Proceeds from these sales are contractually required to be applied toward the repayment of the Fed Facility. None of the businesses under consideration for sale at September 30, 2008 met the criteria in FAS 144, "Accounting for the Impairment or Disposal of Long-Lived Assets" to qualify as "held for sale." Management continues to evaluate the status of its asset sales with respect to these criteria.

In connection with AIG's asset disposition plan, subsequent to September 30, 2008, AIG entered into negotiations to sell certain operations in its General Insurance, Life Insurance and Retirement Services, Financial Services and Asset Management operating segments. These operations had total assets and liabilities with carrying values of approximately \$9 billion and \$6 billion, respectively, at September 30, 2008. AIG expects to enter into purchase agreements with respect to these assets during the fourth quarter of 2008.

Dispositions of certain businesses may be subject to regulatory approval.

Termination of Voluntary Deferred Compensation Plans

In October 2008, the Compensation and Management Resources Committee of the Board of Directors approved the termination of 14 voluntary deferred compensation plans. In accordance with the provisions of Section 409A of the Code, these plans will terminate and approximately \$503 million in deferred compensation, which had been previously accrued, will be paid out to employees, agents and registered representatives during the first quarter of 2009.

ITEM 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

Management's Discussion and Analysis of Financial Condition and Results of Operations is designed to provide the reader a narrative with respect to AIG's operations, financial condition and liquidity and certain other significant matters.

Cautionary Statement Regarding Projections and Other Information About Future Events

This Quarterly Report on Form 10-Q and other publicly available documents may include, and AIG's officers and representatives may from time to time make, projections concerning financial information and statements concerning future economic performance and events, plans and objectives relating to the establishment of special purpose vehicles with the NY Fed, asset dispositions, liquidity, collateral posting requirements, management, operations, products and services, and assumptions underlying these projections and statements. These projections and statements are not historical facts but instead represent only AIG's belief regarding future events, many of which, by their nature, are inherently uncertain and outside AIG's control. These projections and statements may address, among other things, the number, size, terms and timing of dispositions and their potential effect on AIG's businesses, financial condition, results of operations, cash flows and liquidity (and AIG at any time and from time to time may change its plans with respect to the sale of one or more businesses), the effect on AIG's liquidity of the establishment of two special purpose vehicles with the NY Fed, AIG's exposures to subprime mortgages, monoline insurers and the residential and commercial real estate markets and AIG's strategy for growth, product development, market position, financial results and reserves. It is possible that AIG's actual results and financial condition may differ, possibly materially, from the anticipated results and financial condition indicated in these projections and statements. Factors that could cause AIG's actual results to differ, possibly materially, from those in the specific projections and statements are discussed in Risk Factors, and throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A) and in Item 1A. Risk Factors of this Quarterly Report on Form 10-Q and Item 1A. Risk Factors of AIG's Annual Report on Form 10-K for the year ended December 31, 2007 (2007 Annual Report on Form 10-K). AIG is not under any obligation (and expressly disclaims any such obligations) to update or alter any projection or other statement, whether written or oral, that may be made from time to time, whether as a result of new information, future events or otherwise.

In addition to reviewing AIG's results for the three and nine months ended September 30, 2008, this MD&A supplements and updates the information and discussion included in the 2007 Annual Report on Form 10-K to reflect developments in or affecting AIG's business to date during 2008. Throughout this MD&A, AIG presents its operations in the way it believes will be most meaningful. Statutory loss ratios and combined ratios are presented in accordance with accounting principles prescribed by insurance regulatory authorities because these are standard measures of performance filed with insurance regulatory authorities and used for analysis in the insurance industry and thus allow more meaningful comparisons with AIG's insurance competitors. AIG also uses cross-references to additional information included in this Quarterly Report on Form 10-Q and in the 2007 Annual Report on Form 10-K to assist readers seeking related information on a particular subject.

Consideration of AIG's Ability to Continue as a Going Concern

In connection with the preparation of its third quarter Form 10-Q, management has assessed whether AIG has the ability to continue as a going concern. In making this assessment, AIG has considered:

- The liquidity events leading up to September 22, 2008;
- AIG's liquidity-related actions and plans to stabilize its businesses and repay the facility (Fed Facility) created pursuant to the \$85 billion credit agreement, dated September 22, 2008 (Fed Credit Agreement), between AIG and the Federal Reserve Bank of New York (NY Fed);
- The negative effects of the liquidity events on AIG's businesses and AIG's efforts to address such effects; and
- The substantial risks to which AIG is subject.

Each of these items is discussed in more detail below.

In considering these items, management has made significant judgments and estimates with respect to the potentially adverse financial and liquidity effects of AIG's risks and uncertainties. Management has also assessed other items and risks arising in AIG's businesses and made reasonable judgments and estimates with respect thereto. After consideration, management believes that it will have adequate liquidity to finance and operate AIG's businesses and continue as a going concern for at least the next twelve months.

It is possible that the actual outcome of one or more of management's plans could be materially different or that one or more of management's significant judgments or estimates about the potential effects of the risks and uncertainties could be proven to be materially incorrect or that the principal transactions disclosed in Note 11 to the Consolidated Financial Statements (and as discussed below) do not result in completed transactions. If one or more of these possible outcomes were realized, AIG may not have sufficient cash to meet its obligations. If AIG needs funds in excess of amounts available from the sources described below, AIG would need to find additional financing and, if such additional financing were to be unavailable, there could be substantial doubt about AIG's ability to continue as a going concern.

Liquidity Events Leading Up to September 22, 2008

Liquidity Entering the Third Quarter

AIG parent entered the third quarter of 2008 with \$17.6 billion of cash and cash equivalents, including the remaining proceeds from the issuance of \$20 billion of common stock, equity units, and junior subordinated debt securities in May 2008. In addition, AIG's securities lending collateral pool held

\$10.4 billion of cash and other short-term investments. On August 18, 2008, AIG raised \$3.25 billion through the issuance of 8.25% Notes Due 2018.

Strategic Review and Proposed Liquidity Measures

From mid-July and throughout August 2008, AIG's then Chief Executive Officer, Robert Willumstad, was engaged in a review of AIG's businesses. Mr. Willumstad had announced that he would hold an investor meeting on September 25, 2008 to present the results of his review.

During this same time period, AIG was engaged in a review of measures to address the liquidity concerns in AIG's securities lending portfolio discussed in previous SEC filings and to address the ongoing collateral calls with respect to AIGFP's super senior multi-sector credit default swap portfolio. To facilitate this process, AIG asked a number of investment banking firms to discuss possible solutions to these issues. In late August, AIG engaged J.P. Morgan Securities, Inc. (J.P. Morgan) to assist in developing alternatives, including a potential additional capital raise.

Continuing Liquidity Pressures

Under AIG's securities lending program, cash collateral is received from borrowers and invested by AIG primarily in fixed maturity securities to earn a spread. Historically, AIG had received cash collateral from borrowers of 100-102 percent of the value of the loaned securities. In light of more favorable terms offered by other lenders of securities, AIG accepted cash advanced by borrowers of less than the 102 percent historically required by insurance regulators. Under an agreement with its insurance company subsidiaries participating in the securities lending program, AIG parent deposited collateral in an amount sufficient to address the deficit. AIG parent also deposited amounts into the collateral pool to offset losses realized by the pool in connection with sales of impaired securities. Aggregate deposits by AIG parent to or for the benefit of the securities lending collateral pool through August 31, 2008 totaled \$3.3 billion.

In addition, from July 1, 2008 to August 31, 2008, the continuing decline in value of the super senior collateralized debt obligations (CDO) securities protected by AIGFP's super senior credit default swap portfolio, together with ratings downgrades of such CDO securities, resulted in AIGFP posting or agreeing to post collateral in an aggregate net amount of \$6.0 billion.

By the beginning of September 2008, these collateral postings and securities lending requirements were placing increasing stress on AIG parent's liquidity.

Rating Agencies

In early September 2008, AIG met with the representatives of the principal rating agencies to discuss Mr. Willumstad's

strategic review as well as the liquidity issues arising from AIG's securities lending program and AIGFP's super senior multi-sector CDO credit default swap portfolio. On Friday, September 12, 2008, S&P placed AIG on CreditWatch with negative implications and noted that upon completion of its review, the agency could affirm AIG parent's current rating of "AA-" or lower the rating by one to three notches. AIG understood that both S&P and Moody's would re-evaluate AIG's ratings early in the week of September 15, 2008. Also on Friday, September 12, 2008, AIG's subsidiaries ILFC and AGF were unable to replace all of their maturing commercial paper with new issuances of commercial paper. As a result, AIG advanced loans to these subsidiaries to meet their commercial paper obligations.

The Accelerated Capital Raise Attempt

As a result of S&P's action, AIG accelerated the process of attempting to raise additional capital and over the weekend of September 13 and 14, 2008 discussed potential capital injections and other liquidity measures with private equity firms, sovereign wealth funds and other potential investors. AIG kept the United States Treasury and the NY Fed informed of these efforts. AIG also engaged Blackstone Advisory Services LP to assist in developing alternatives, including a potential additional capital raise. Despite offering a number of different structures through this process, AIG did not receive a proposal it could act upon in a timely fashion. AIG's difficulty in this regard resulted in part from the dramatic decline in its common stock price from \$22.76 on September 8, 2008 to \$12.14 on September 12, 2008. This decrease in stock price made it unlikely that AIG would be able to raise the large amounts of capital that would be necessary if AIG's long-term debt rating were downgraded.

AIG Attempts to Enter into a Syndicated Secured Lending Facility

On Monday, September 15, 2008, AIG was again unable to access the commercial paper market for its primary commercial paper programs, AIG Funding, ILFC and AGF. Payments under the programs totaled \$2.2 billion for the day, and AIG advanced loans to ILFC and AGF to meet their funding obligations. In addition, AIG experienced returns under its securities lending programs which led to cash payments of \$5.2 billion to securities lending counterparties on that day.

On Monday morning, September 15, 2008, AIG met with representatives of Goldman, Sachs & Co., J.P. Morgan and the NY Fed to discuss the creation of a \$75 billion secured lending facility to be syndicated among a number of large financial institutions. The facility was intended to act as a bridge loan to meet AIG parent's liquidity needs until AIG could sell sufficient assets to stabilize and enhance its liquidity position. Goldman, Sachs & Co. and J.P. Morgan immediately began the syndication attempt.

The Rating Agencies Downgrade AIG's Long-Term Debt Rating

In the late afternoon of September 15, 2008, S&P downgraded AIG's long-term debt rating by three notches, Moody's downgraded AIG's long-term debt rating by two notches and Fitch downgraded AIG's long-term debt rating by two notches. As a consequence of the rating actions, AIGFP estimated that it would need in excess of \$20 billion in order to fund additional collateral demands and transaction termination payments in a short period of time. Subsequently, in a period of approximately 15 days following the rating actions, AIGFP was required to fund approximately \$32 billion, reflecting not only the effect of the rating actions but also changes in market levels and other factors.

The Private Sector Solution Fails

By Tuesday morning, September 16, 2008, it had become apparent that Goldman, Sachs & Co. and J.P. Morgan were unable to syndicate a lending facility. Moreover, the downgrades combined with a steep drop in AIG's common stock price to \$4.76 on September 15, 2008, had resulted in counterparties withholding payments from AIG and refusing to transact with AIG even on a secured short-term basis. As a result, AIG was unable to borrow in the short-term lending markets. To provide liquidity on Tuesday, September 16, 2008, both ILFC and AGF drew down on their revolving credit facilities, resulting in borrowings of approximately \$6.5 billion and \$4.6 billion, respectively.

Also, on September 16, 2008, AIG was notified by its insurance regulators that it would no longer be permitted to borrow funds from its insurance company subsidiaries under a revolving credit facility that AIG had maintained with certain of its insurance subsidiaries acting as lenders. Subsequently, the insurance regulators required AIG to repay any outstanding loans under that facility and to terminate it. The inter-company facility was terminated effective September 22, 2008.

Fed Credit Agreement

By early Tuesday afternoon on September 16, 2008, it was clear that AIG had no viable private sector solution to its liquidity crisis. At this point, AIG received the terms of a secured lending agreement that the NY Fed was prepared to provide. AIG estimated that it had an immediate need for cash in excess of its available liquid resources. That night, AIG's Board of Directors approved borrowing from the NY Fed based on a term sheet that set forth the terms of the secured credit agreement and related equity participation. Over the next six days, AIG elected Edward M. Liddy, Director, Chairman, and CEO, replacing Robert Willumstad in those positions, and negotiated a definitive credit agreement with the NY Fed and borrowed, on a secured basis, approximately

\$37 billion from the NY Fed before formally entering into the Fed Credit Agreement.

On September 22, 2008, AIG entered into the Fed Credit Agreement in the form of a two-year secured loan and a

Guarantee and Pledge Agreement (the Pledge Agreement) with the NY Fed. See Notes 5 and 11 to the Consolidated Financial Statements for more information regarding the terms of and borrowings under the Fed Credit Agreement.

Borrowings outstanding and remaining available amount that can be borrowed under the Fed Facility were as follows:

<i>(in millions)</i>	Inception Through September 30, 2008	Inception Through November 5, 2008
Borrowings:		
Loans to AIGFP for collateral postings, GIA and other maturities	\$35,340	\$43,100
Capital contributions to insurance companies ^(a)	13,341	13,687
Repayment of obligations to securities lending program	3,160	3,160
AIG Funding commercial paper maturities	2,717	3,714
Repayment of intercompany loans	1,528	1,528
Contributions to AIGCFG subsidiaries	1,094	1,591
Debt repayments	1,038	1,578
Other borrowings ^(a)	2,782	8,642
Total borrowings	61,000	77,000
Repayments:		
Repayments not reducing available amounts	–	16,000 ^(b)
Repayments reducing available amounts	–	–
Total repayments	–	16,000
Net borrowings	61,000	61,000
Total Fed Facility	85,000	85,000
Remaining available amount	24,000	24,000
Net borrowings	61,000	61,000
Paid in kind interest and fees	1,960	1,960
Total balance outstanding	\$62,960	\$62,960

(a) Includes securities lending activities.

(b) Includes repayments due to funds received from the Fed Securities Lending Agreement and the CPFF.

Liquidity Related Actions and Plans

AIG's Strategy for Stabilization and Repayment of the Fed Facility

AIG has developed certain plans (described below), some of which have already been implemented, to provide stability to its businesses and to provide for the timely repayment of the Fed Facility; other plans are still being formulated.

Preferred Equity Investment by the United States Treasury Pursuant to TARP

On November 9, 2008, AIG and the United States Treasury agreed in principle to a transaction pursuant to which the United States Treasury will purchase from AIG \$40 billion liquidation preference of newly issued perpetual preferred stock (Series D Preferred Shares) under TARP. The Series D Preferred Shares will be in addition to the Series C Preferred Stock that AIG is obligated to issue to the Trust in connection with the Fed Credit Agreement. AIG is required to use the net proceeds from the sale of the Series D Preferred Shares to repay a portion of the outstanding balance under the Fed Facility.

The Series D Preferred Shares will rank *pari passu* with the Series C Preferred Stock and senior to AIG's common stock. The Series D Preferred Shares will have limited class voting rights and will accumulate cumulative compounding dividends at a rate equal to 10 percent per annum. The dividends will be payable when, as and if declared by AIG's Board of Directors. AIG will not be able to declare or pay any dividends on AIG's common stock or on any AIG preferred stock ranking *pari passu* with or junior to the Series D Preferred Shares until dividends on the Series D Preferred Shares have been paid. AIG may redeem the Series D Preferred Shares at the stated liquidation preference, plus accumulated but unpaid dividends, at any time that the Trust or any successor entity beneficially owns less than 30 percent of AIG's voting securities and no holder of Series D Preferred Shares controls or has the potential to control AIG.

Pursuant to the agreement between AIG and the United States Treasury in connection with the Series D Preferred Shares, for as long as the United States Treasury owns any of the Series D Preferred Shares, AIG will be subject to restrictions on its ability to repurchase capital stock and will

be required to adopt and maintain policies on corporate expenses, lobbying activities and executive compensation.

In connection with the issuance of the Series D Preferred Shares, AIG will also issue a 10-year warrant to the United States Treasury exercisable for a number of shares of common stock of AIG equal to two percent of the issued and outstanding shares of common stock on the date of the investment. In connection with the issuance of the warrant, the voting, conversion rights and dividend rights of the Series C Preferred Stock will be reduced from 79.9 percent to 77.9 percent. The warrant will be exercisable at any time and have an exercise price equal to the par value of AIG's common stock at the time of exercise. The United States Treasury has agreed that it will not exercise any voting rights with respect to the common stock issued upon exercise of the warrant. The warrant will not be subject to contractual transfer restrictions other than restrictions necessary to comply with U.S. federal and state securities laws. AIG will be obligated, at the request of the United States Treasury, to file a registration statement with respect to the warrant and the common stock for which the warrant can be exercised. During the 10-year term of the warrant, if the shares of common stock of AIG are no longer listed or trading on a national securities exchange, AIG may be obligated, at the direction of the United States Treasury, to exchange all or a portion of the warrant for another economic interest of AIG classified as permanent equity under U.S. GAAP with an equivalent fair value. If the Series D Preferred Shares issued in connection with the warrant are redeemed in whole, AIG may repurchase the warrant then held by the United States Treasury at any time for its fair value so long as no holder of a warrant controls or has the potential to control AIG. As a result of the issuance of the warrant, the number of shares into which the Series C Preferred Stock will be convertible will be reduced so as not to exceed 77.9 percent of the outstanding shares of common stock.

The Fed Securities Lending Program

On October 8, 2008, certain of AIG's domestic life insurance subsidiaries entered into the Fed Securities Lending Agreement, providing that the NY Fed will borrow, on an overnight basis, investment grade fixed maturity securities from these AIG subsidiaries in return for cash collateral. Prior to this arrangement, draw downs under the existing Fed Facility were used, in part, to settle securities lending transactions. The NY Fed has been borrowing securities under the Fed Securities Lending Agreement, which has allowed AIG to replenish liquidity in the securities lending program on an as-needed basis, while providing possession and control of these third-party securities to the NY Fed.

As of November 5, 2008, the total value of securities lending payables was \$34.2 billion, with \$19.9 billion of this amount payable to the NY Fed under this agreement. This program will be terminated on the closing of the RMBS sale as described below.

Transfer of RMBS by certain AIG Insurance Subsidiaries

AIG and the NY Fed expect to establish a facility under which approximately \$40 billion principal amount of residential mortgage-backed securities (RMBS) related to AIG's U.S. securities lending program will be transferred by certain AIG insurance subsidiaries to a newly-formed limited liability company (the RMBS LLC) that will be financed by the NY Fed and AIG. Proceeds to the insurance company subsidiaries, together with other AIG funds, will be used to return all cash collateral posted by securities borrowers, including approximately \$19.9 billion to be returned to the NY Fed. After all collateral is returned, AIG's U.S. Securities lending program will be terminated.

The aggregate proceeds to the AIG insurance subsidiaries will be equal to the estimated fair value of the RMBS at October 31, 2008, adjusted for collections and certain other events between such date and the closing date of the purchase, which is expected to be prior to November 30, 2008. At September 30, 2008, the fair value of the RMBS being transferred was \$23.5 billion. AIG will provide \$1 billion of proceeds to the AIG entities and the NY Fed will provide the remainder of the proceeds up to \$22.5 billion.

Interest on both the NY Fed's senior loan and AIG's subordinated loan will be capitalized (converted to principal of the related loan instead of being paid in cash). Payments of interest on, and principal of, the RMBS and the net sale proceeds, if any, on the RMBS received by the RMBS LLC will be used to pay principal of the NY Fed's senior loan in full before any payments are made on AIG's subordinated loan. None of the obligations of RMBS LLC have recourse to AIG, although AIG's subordinated loan will be exposed to losses of the RMBS LLC up to \$1 billion plus the amount of capitalized interest thereon. After the loans have returned amounts equal to their principal and capitalized interest, payments with respect to the remaining RMBS received by the RMBS LLC will be allocated as contingent interest on both of the loans. There are no economic interests in the RMBS LLC other than the NY Fed's senior loan and AIG's subordinated loan.

The implementation of RMBS LLC is subject to the approval of the relevant state insurance commissioners.

Terminations of Multi-Sector Credit Default Swap Transactions

AIGFP currently has outstanding multi-sector credit default swaps with third-party counterparties related to CDOs. Such credit default swaps require that AIGFP post collateral with the counterparties to secure its obligations based on fair value deterioration, ratings downgrades of referenced obligations and downgrades of AIG's ratings. As of November 5, 2008, AIGFP had either agreed to post or posted collateral based on exposures, calculated in respect of super senior credit default swaps in an aggregate net amount of \$37.3 billion.

AIG and the NY Fed expect to establish a facility in which a newly-formed limited liability company (the CDO LLC) will offer to purchase CDOs from the counterparties, who will concurrently with such purchase terminate the related credit default swaps. AIGFP and the NY Fed have begun negotiating the terminations; depending on the level of counterparty participation, on the closing date, the NY Fed will advance up to \$30 billion (the Tranche A Loan) and AIG will advance up to \$5 billion (the Tranche B Loan) to the CDO LLC to fund the purchase price of such CDOs. Separately, AIG will pay the costs associated with the unwind of the related credit default swaps, and so will bear the risk of declines in the market value of the CDOs through October 31, 2008. After the closing date, AIGFP will not be subject to any further collateral calls related to the terminated credit default swaps.

Interest on both the Tranche A Loan and the Tranche B Loan will be capitalized. Payments of interest on, and principal of, the CDOs received by the CDO LLC will be used to pay principal and interest of the Tranche A Loan in full before any payments are made on the Tranche B Loan. None of the obligations of the CDO LLC have recourse to AIG, although AIG's Tranche B Loan will be exposed to losses of the CDO LLC up to its principal amount plus the amount of capitalized interest thereon. After the loans have returned amounts equal to their principal and capitalized interest, payments with respect to the remaining CDOs received by the CDO LLC will be allocated as contingent interest on both of the loans. There are no economic interests in the CDO LLC other than the Tranche A Loan and Tranche B Loan.

Because the successful implementation of the proposed establishment of the CDO LLC depends on the agreement of the counterparties to terminate their super senior credit default swaps, no assurance can be given that this facility will be completed or, if completed, on the level of participation.

Commercial Paper Funding Facility

On October 27, 2008, four AIG affiliates applied for participation in the NY Fed's Commercial Paper Funding Facility (CPFF). AIG Funding, Inc., ILFC, Curzon Funding LLC and Nightingale Finance LLC may issue up to approximately \$6.9 billion, \$5.7 billion, \$7.2 billion and \$1.1 billion, respectively, of commercial paper under the CPFF. As of November 5, 2008, these entities had borrowed a total of approximately \$15.2 billion under this facility, which allowed AIG to repay borrowings under the Fed Facility.

These AIG affiliates are participating in the CPFF on the same terms and conditions as other non-AIG companies.

Proceeds from the issuance of the commercial paper will be used to refinance AIG's outstanding commercial paper as it matures, meet other working capital needs and make voluntary prepayments under the Fed Facility. The voluntary repayments of the Fed Facility will not reduce the amount available to be borrowed thereunder.

Asset Disposition Plan

AIG has recently hired a Vice Chairman and Chief Restructuring Officer to oversee the asset disposition plan and has developed a plan to sell assets and businesses to repay the Fed Facility.

AIG intends to retain the majority of its U.S. property and casualty and foreign general insurance businesses, and to retain an ownership interest in certain of its foreign life insurance operations. AIG is exploring divestiture opportunities for its remaining businesses. Proceeds from these sales are contractually required to be applied toward the repayment of the Fed Facility. None of the businesses under consideration for sale at September 30, 2008 met the criteria in Statement of Financial Accounting Standards (FAS) No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets" to qualify as "held for sale." AIG continues to evaluate the status of its asset sales with respect to these criteria.

In connection with AIG's asset disposition plan, subsequent to September 30, 2008, AIG entered into negotiations to sell certain operations in its General Insurance, Life Insurance and Retirement Services, Financial Services and Asset Management operating segments. These operations had total assets and liabilities with carrying values of approximately \$9 billion and \$6 billion, respectively, at September 30, 2008. AIG expects to enter into purchase agreements with respect to these assets during the fourth quarter of 2008.

Dispositions of certain businesses may be subject to regulatory approval.

Expense Reductions and Preservation of Cash and Capital

AIG has named a Vice Chairman, Transition Planning and Chief Administrative Officer to lead expense reduction initiatives and transition planning. AIG has developed a plan to review significant projects and will eliminate, delay, or curtail those that are discretionary or non-essential and to make available internal resources, reduce cash outflows to outside service providers to improve liquidity. AIG also suspended the dividend on its common stock to preserve capital.

Negative Effects of Liquidity Events

As a result of AIG's deteriorated financial condition and its announced strategies, AIG's businesses have been subjected to strained relationships with customers, brokers, agents, other business partners and employees as well as increased monitoring by regulatory agencies. Specific issues related to AIG's businesses are addressed below.

General Insurance

While the Commercial Insurance Group (CIG) has been generally successful in retaining clients, the amount of business AIG underwrites for clients has declined. Concern over AIG's

financial strength has a particularly adverse effect on CIG underwriting of directors' and officers' insurance, especially at the higher attachment points.

New business activity has been at lower levels, and AIG continues to see pricing pressure in its general insurance business.

The domestic property and casualty companies are beneficiaries of \$5.7 billion of letters of credit arranged by AIG and its subsidiaries. Letters of credit totaling \$4.2 billion will expire on December 31, 2008 and the remainder will expire on December 31, 2010. These letters of credit secure amounts recoverable from both affiliated and unaffiliated reinsurers. The inability of AIG to renew or replace these letters of credit or otherwise obtain equivalent financial support from AIG or a third-party would result in a significant reduction of the statutory surplus of these property and casualty insurance companies. AIG is pursuing alternatives to letters of credit such as trust agreements and other forms of credit support and is also pursuing opportunities to significantly reduce the need for such security after December 31, 2008.

Capital Maintenance

AIG has capital maintenance agreements with the companies included in the Commercial Insurance and Mortgage Guaranty reporting units under which AIG may be required to provide ongoing capital support.

Life Insurance & Retirement Services

Disruptions in markets throughout the world and AIG's recent liquidity issues have had, and AIG expects will continue to have, a significant adverse effect on Life Insurance & Retirement Services operating results, specifically its net investment income, deferred policy acquisition costs (DAC) and sales inducement asset (SIA) amortization and net realized capital losses in 2008. AIG expects that these events and AIG's previously announced asset disposition plan will continue to be key factors in the remainder of 2008 and into 2009. In addition, AIG parent's liquidity issues have affected certain operations through higher surrender activity, particularly in the U.S. domestic retirement service's fixed annuity business and foreign investment-oriented and retirement service's products in Japan and Asia. For Japan and Korea, surrenders are expected to continue to be higher than historic averages in the next quarter and possibly beyond due to the suspension of sales by some banks, equity market volatility and elevated levels of surrenders. While surrender levels have declined from their peaks in mid-September, they are still higher than historic levels and AIG expects them to remain at these higher than historic levels until the uncertainties relating to AIG are resolved.

These uncertainties, together with rating agency downgrades, have resulted in reduced levels of new sales activity, particularly among products and markets where ratings are

critical. Sales of investment-oriented and retirement services products in Japan and Asia have also declined. New sales activity is expected to remain at lower levels until the uncertainties relating to AIG are resolved.

Due to the high volume of surrender activity for certain investment-oriented products in the U.K., surrender payments were temporarily suspended in accordance with contract terms to provide time to develop an appropriate course of action with the respective distribution network and to protect the interests of the fund's policyholders.

During the three months ended September 30, 2008 and through October 29, 2008, AIG contributed capital totaling \$16.6 billion (\$11.8 billion of which was contributed using borrowings under the Fed Facility) to certain of its Domestic Life Insurance and Domestic Retirement Services subsidiaries to replace a portion of the capital lost as a result of net realized capital losses. Further capital contributions will be required to the extent additional net realized capital losses are incurred. In Taiwan, AIG expects to contribute approximately \$1.4 billion to Nan Shan in November 2008 as a result of the continued declines in the Taiwan equity market. AIG made capital contributions of \$1.3 billion to support foreign life operations in Hong Kong and Japan, principally due to the steep decline in AIG's common stock price. Additional capital contributions to certain operations may be necessary during the remainder of 2008, in large measure due to the continued effect of equity market volatility, declining bond prices and net realized capital losses resulting from other-than-temporary impairment charges.

Financial Services

International Lease Finance Corporation

As a result of AIG parent's liquidity issues and related credit rating downgrades, ILFC was unable to borrow in the public short-term and long-term debt markets, and therefore, ILFC borrowed \$6.5 billion under its credit facilities in September 2008. ILFC expects to use these borrowings to repay maturing commercial paper and other obligations. AIG expects that ILFC may raise additional funds through secured lending transactions in early 2009. ILFC can also issue commercial paper under the CPFF. ILFC believes that these borrowings and cash from operations, which may include aircraft sales, will permit ILFC to meet its obligations through September 2009, after which AIG would rely upon additional asset sales and funding through the Fed Facility.

Capital Markets

Given the extreme market conditions during the third quarter of 2008, downgrades of AIG's credit ratings by the rating agencies, as well as AIG's intention to refocus on its core business, AIGFP began unwinding certain of its businesses and portfolios. AIG is only entering into new derivative transactions to maintain its current portfolio, reduce risk and hedge

the currency and interest rate risks associated with its affiliated businesses. AIG is also opportunistically terminating contracts. Due to the long-term duration of AIGFP's derivative contracts and the complexity of AIGFP's portfolio, AIG expects that an orderly wind-down will take a substantial period of time.

American General Finance

As a result of AIG parent's liquidity issues and the related credit ratings downgrades, AGF suspended its efforts to borrow in the public short-term and long-term debt markets. As a result, AGF borrowed approximately \$4.6 billion under its primary credit facilities in September 2008. AGF anticipates that its primary sources of funds to support its operations and repay its obligations will be finance receivable collections from operations and secured financings, which will require it to limit its lending activities and focus on expense savings. AGF anticipates that its existing sources of funds will be sufficient to meet its debt and other obligations through the first quarter of 2009. AGF will need additional sources of funds at that time, including sales of AGF assets and funding through the Fed Facility.

AIG Consumer Finance Group

AIG's recent liquidity issues and related credit ratings downgrades have materially adversely affected AIG Consumer Finance Group, Inc. (AIGCFG). AIGCFG experienced significant deposit withdrawals in Hong Kong during September 2008. The inability of AIGCFG to access its traditional sources of funding resulted in AIG lending \$1.6 billion to subsidiaries of AIGCFG in September and October of 2008. AIG expects that these businesses will continue to be materially adversely affected until the current uncertainties concerning AIG and the potential sale of these businesses are resolved.

Asset Management

The principal cash requirements in Asset Management are to fund warehousing activities, existing capital commitments and certain direct investments.

General disruption in the global equity and credit markets and the liquidity issues at AIG have negatively affected the Institutional Asset Management segment operating results. Distressed global markets have reduced the value of assets under management, translating to lower base management fees and reduced performance fees (carried interest). Tight credit markets have put pressure on the commercial and residential real estate markets, which has caused values in certain geographic locations to fall, resulting in impairment charges on real estate held for investment purposes.

AIG parent's liquidity issues and lower asset performance as a result of challenging market conditions have contributed to the loss of institutional and retail clients as well as higher

redemptions from some of AIG's managed hedge and mutual funds. The continued uncertainty in the equity and credit markets, as well as AIG parent's liquidity issues and the proposed asset dispositions, will continue to adversely affect management and performance fees as well as AIG's ability to launch new funds and investment strategies.

Within the Spread-Based Investment business, distressed markets have resulted in significant loss of invested asset value and AIG expects such losses to continue through the remainder of 2008. In addition, given market conditions, AIG does not expect to issue any additional debt to fund the MIP for the foreseeable future.

Other Effects

As disclosed in its 2007 Annual Report on Form 10-K, AIG expected to contribute approximately \$118 million to its U.S. and non-U.S. pension plans in 2008. For the nine months ended September 30, 2008, AIG had contributed \$122 million to its U.S. and non-U.S. pension plans. Based upon the current funded status of the plans, the current interest rate environment, and the projected performance of pension plan assets, additional expected contributions for the U.S. and non-U.S. pension plans in the 2008 fourth quarter range from approximately \$168 million to \$532 million. Actual contributions, however, will depend on asset performance, foreign exchange rates, and the interest rate environment as of December 31, 2008. Actual contributions may also vary as a result of anticipated dispositions.

Regulators in various jurisdictions in which AIG entities operate have imposed additional requirements on the AIG entities. These requirements primarily require AIG to obtain prior approval from the regulator for transactions related to the dispositions of assets, transfers of cash or other transactions outside the normal course of business. In addition, certain regulators have requested additional capital or collateral to be posted. To date, these requirements have not had a significant effect on AIG's operations.

AIG conducted an annual goodwill impairment review as of June 30, 2008. In connection with the decline in the price of AIG's common stock during the third quarter of 2008, AIG conducted an updated goodwill impairment test as of September 30, 2008. As a result of the updated test AIG recognized goodwill impairment charges of \$432 million for the three-month period ended September 30, 2008, which were primarily related to the domestic Consumer Finance and the Capital Markets businesses.

In addition, the excess of the fair value over the carrying value of AIG's Personal Lines and foreign Consumer Finance businesses narrowed subsequent to the June 30, 2008 test. As of September 30, 2008, goodwill related to these businesses totaled approximately \$700 million and \$344 million, respectively. A continuation of the decline in fair value of these

businesses could result in impairment of goodwill in the future.

Risk Factors

The following supplements the significant factors that may affect AIG's business and operations described under "Risk Factors" in Item 1A. of Part I of AIG's 2007 Annual Report on Form 10-K.

Business and Credit Environment

AIG's businesses, results of operations and financial condition have been materially and adversely affected by recent market conditions.

During the third quarter of 2008 continuing through November 2008, worldwide economic conditions significantly deteriorated. The decline in economic conditions has resulted in highly volatile markets, a steep decline in equity markets, further and continuing lack of liquidity, a widening of credit spreads, a lack of price transparency and the collapse of several prominent financial institutions. Global regulators and central banks have taken a number of unprecedented steps to address these issues, but it is unclear whether these measures will be effective or, if effective, when the markets will stabilize.

AIG has been materially and adversely affected by these conditions and events in a number of ways, including:

- severe and continued declines in its investment portfolio, leading to significant other-than-temporary impairments;
- significant credit losses due to the failure of, or governmental intervention with respect to, several prominent institutions; and
- a general decline in business activity.

The consequences of these conditions have been more severe for AIG than for other insurers. AIG expects its businesses, financial condition and results of operations will continue to be materially and adversely affected by these conditions for the foreseeable future.

AIG is subject to extensive litigation that may have a material adverse effect on its consolidated financial condition or its consolidated results of operations.

As described in Note 7(a) to the Consolidated Financial Statements, AIG is subject to extensive litigation, including securities class actions. Due to the nature of this litigation, the lack of precise damage claims and the type of claims made against AIG, AIG cannot currently quantify its ultimate liability for these actions. It is possible that such liability could have a material adverse effect on AIG's consolidated financial condition or consolidated results of operations for an individual reporting period.

Credit and Financial Strength Ratings

Adverse ratings actions regarding AIG's long-term debt ratings by Moody's or S&P would require AIG to make additional substantial collateral payments under existing derivative transactions to which AIGFP is a party, which could adversely affect AIG's business and its consolidated results of operations and financial condition.

On September 15, 2008, the following credit rating actions were taken:

- Standard & Poor's, a division of The McGraw-Hill Companies, Inc. (S&P), lowered its long-term debt rating on AIG to 'A-' from 'AA-', and its short-term debt rating to 'A-2' from 'A-1+'. S&P also downgraded the long-term debt and short-term debt ratings of International Lease Finance Corp. (ILFC) to 'A-' from 'A+' and to 'A-2' from 'A-1,' respectively and the long-term and short-term debt ratings of American General Finance Corporation (AGF Corp.) to 'BBB' from 'A+' and to 'A-3' from 'A-1,' respectively. At the same time, S&P lowered its counterparty credit and financial strength ratings on most of AIG's insurance operating subsidiaries to 'A+' from 'AA+'. All of the ratings remained on CreditWatch Negative.
- Moody's Investors Service (Moody's) lowered AIG's senior unsecured debt ratings to 'A2' from 'Aa3' and placed the long-term and short-term ratings on review for possible downgrade. In addition, Moody's downgraded the ratings of several AIG subsidiaries, including the Domestic Life Insurance and Retirement Services companies (Insurer Financial Strength Rating to 'Aa3' from 'Aa2'), and ILFC and AGF Corp. (Senior Unsecured Debt Rating to 'A3' from 'A1' and short-term debt rating to 'P-2' from 'P-1.')
- Fitch Ratings (Fitch) lowered AIG's long-term issuer rating to 'A' from 'AA-' and its short-term issuer rating to 'F1' from 'F1+'. In addition, Fitch downgraded nearly all of AIG's subsidiaries' Insurer Financial Strength Ratings to 'AA-' from 'AA+'. A majority of the ratings remained on Rating Watch Negative.
- A.M. Best Company (A.M. Best) lowered AIG's issuer credit rating to 'bbb' from 'a+'. In addition, A.M. Best downgraded most of AIG's Insurer Financial Strength Ratings to 'A' from 'A+' and placed the ratings under review with negative implications.

As a consequence of the rating actions, AIGFP estimated that it would need in excess of \$20 billion in order to fund additional collateral demands and transaction termination payments in a short period of time. Subsequently, in a period of approximately 15 days following the rating actions, AIGFP was required to fund approximately \$32 billion, reflecting not only the effect of the rating actions but also changes in market levels and other factors.

Following the agreement with the NY Fed announced on September 17, 2008, the following credit rating actions were taken:

- S&P upgraded AIG's and ILFC's short-term debt ratings to 'A-1' from 'A-2' and revised the CreditWatch status on all ratings from CreditWatch Negative to CreditWatch Developing.
- Fitch revised the rating watch status on all ratings from Rating Watch Negative to Rating Watch Evolving.

Following AIG's strategic review press release on October 3, 2008, the following credit rating actions were taken:

- S&P revised the CreditWatch status on AIG's and AGF Corp.'s ratings from CreditWatch Developing to CreditWatch Negative.
- Moody's downgraded AIG's Senior Unsecured Debt rating to 'A3' from 'A2' and ILFC and AGF Corp.'s Senior Unsecured Debt ratings to 'Baa1' from 'A3.' Most ratings remain under review for possible downgrade with ILFC revised to under review with direction uncertain.

Credit ratings measure a company's ability to repay its obligations and directly affect the cost and availability to that company of unsecured financing.

In the event of a further downgrade of AIG's long-term senior debt ratings, AIG would be required to post additional collateral and AIG or its counterparties would be permitted to elect early termination of contracts.

It is estimated that as of the close of business on October 27, 2008, based on AIGFP's outstanding municipal GIAs and financial derivative transactions at that date, a downgrade of AIG's long-term senior debt ratings to Baa1 by Moody's and BBB+ by S&P would permit counterparties to make additional calls and permit either AIG or the counterparties to elect early termination of contracts, resulting in up to approximately \$5.2 billion of collateral and termination payments, while a downgrade to Baa2 by Moody's and BBB by S&P would result in approximately \$0.3 billion in additional collateral and termination payments.

For the multi-sector super senior credit default swap portfolio, it is estimated based on the October 24, 2008 notional values a downgrade of AIG's long-term senior debt ratings to Baa1 by Moody's and BBB+ by S&P, would increase the amount of collateral posted by approximately \$2.7 billion due to the adjustment of threshold and independent amount percentages. A downgrade to Baa2 by Moody's and BBB by S&P would allow the counterparties to certain 2a7 puts to elect early termination, resulting in a cash outflow of approximately \$3.7 billion. In addition, at that rating level, counterparties to transactions representing approximately \$47.8 billion in net notional amount have the right to elect early termination. In the event a counterparty elects to terminate a transaction early, such transaction will be terminated at

its replacement value, less any previously posted collateral. Due to current market conditions, it is not possible to reliably estimate the replacement cost of these transactions.

The actual amount of collateral that AIGFP would be required to post to counterparties in the event of such downgrades, or the aggregate amount of payments that AIG could be required to make, depends on market conditions, the fair value of outstanding affected transactions and other factors prevailing at the time of the downgrade. Additional obligations to post collateral or the costs of assignment, repayment or alternative credit could exceed the amounts available under the Fed Credit Agreement. See discussion of the Fed Credit Agreement below.

A downgrade in the short-term credit ratings of the commercial paper programs of certain AIG affiliates could make these issuers ineligible for participation in the NY Fed's Commercial Paper Funding Facility (CPFF).

AIG's affiliates AIG Funding, Inc., ILFC, Curzon Funding LLC and Nightingale Finance LLC currently participate in the CPFF. However, in the event of a downgrade of the short-term credit ratings applicable to the commercial paper programs of these issuers, the affiliates may no longer qualify for participation in the CPFF. The CPFF only purchases U.S. dollar-denominated commercial paper (including asset-backed commercial paper) that is rated at least A-1/P-1/F1 by a major nationally recognized statistical rating organization (NRSRO) or, if rated by multiple major NRSROs, is rated at least A-1/P-1/F1 by two or more major NRSROs. Accordingly, these AIG affiliates will lose access to the CPFF if:

- AIG Funding's short-term rating is downgraded by any two of S&P, Moody's or Fitch;
- ILFC's short-term rating is downgraded by either S&P or Fitch;
- Curzon Funding LLC's short-term rating is downgraded by either S&P or Moody's; and
- Nightingale Finance LLC's short-term rating is downgraded two notches by S&P or one notch by Moody's.

A downgrade in the Insurer Financial Strength ratings of AIG's insurance companies could prevent the companies from writing new business and retaining customers and existing business.

Financial strength ratings by the major ratings agencies are an important factor in establishing the competitive position of insurance companies. Financial strength ratings measure an insurance company's ability to meet its obligations to contract holders and policyholders, help maintain public confidence in a company's products, facilitate marketing of products and enhance a company's competitive position.

Further downgrades of the Insurer Financial Strength ratings of AIG's insurance companies may prevent these

companies from offering products and services or result in increased policy cancellations or termination of assumed reinsurance contracts. Moreover, a downgrade in AIG's credit ratings may, under credit rating agency policies concerning the relationship between a parent's and subsidiary's ratings, result in a downgrade of the Insurer Financial Strength ratings of AIG's insurance subsidiaries.

Fed Facility

The Fed Credit Agreement and the Series D Preferred Shares will require AIG to devote significant resources to debt repayment and preferred dividends for the foreseeable future, thereby reducing capital available for other purposes.

AIG is required to repay the Fed Credit Agreement primarily from the proceeds of sales of assets, including businesses. These mandatory repayments permanently reduce the amount available under the Fed Credit Agreement.

In addition, American General Finance, Inc. (AGF) and ILFC have drawn the full amounts available under their revolving credit facilities and currently do not have access to their traditional sources of long-term or short-term financing through the public debt markets.

Unanticipated collateral calls, continued high surrenders, a downgrade in AIG's credit ratings or a further deterioration in AIGFP's super senior credit default swap portfolio may cause AIG to need additional funding in excess of the borrowings available under the Fed Credit Agreement. If AIG needs funds in excess of those available under the Fed Credit Agreement, AIG will need to find additional financing. Further, an inability to effect asset sales in accordance with its asset disposition plan may result in AIG not being able to timely repay its borrowings under the Fed Credit Agreement. See also Significant Liquidity Requirements — Asset Disposition Plan for a discussion of AIG's asset disposition plan.

The Series D Preferred Shares pay a 10 percent dividend which will not be deductible for tax purposes.

AIG's substantial obligations will require it to dedicate all of its proceeds from asset sales and a considerable portion of its cash flows from operations to the repayment of the Fed Facility, thereby reducing the funds available for other purposes. In addition, because AIG's debt service and preferred dividend obligations will be very high, AIG may be more vulnerable to competitive pressures and expects to have less flexibility to plan for or respond to changing business and economic conditions.

Borrowings under the Fed Credit Agreement are subject to the NY Fed being satisfied with the collateral pledged by AIG.

A condition to borrowing under the Fed Credit Agreement is that the NY Fed be satisfied with the collateral pledged by AIG

(including its value). It is possible that the NY Fed may determine that AIG's collateral is insufficient to permit a borrowing for many reasons including:

- a decline in the value of AIG's businesses;
- poor performance in one or more of AIG's businesses; and
- low prices received by AIG in its asset disposition plan.

Such a determination could limit AIG's ability to borrow under the Fed Facility.

AIG must sell significant assets to service the debt under the Fed Credit Agreement.

AIG must make asset sales to repay the borrowings under the Fed Credit Agreement. A delay or inability to effect these sales at acceptable prices and terms could result in AIG being unable to repay the Fed Credit Agreement by its maturity date.

While AIG has adopted an asset disposition plan, as discussed under Significant Liquidity Requirements, this plan may not be successfully executed due to, among other things:

- an inability of purchasers to obtain funding due to the deterioration in the credit market;
- a general unwillingness of potential buyers to commit capital in the difficult current market environment; and
- an adverse change in interest rates and borrowing costs.

Further, due to AIG's need to dispose of assets, AIG may be unable to negotiate favorable terms.

If AIG is not able to execute its disposition plan, and cannot otherwise repay the Fed Facility in accordance with its terms, an event of default would result. If an event of default were to occur, the NY Fed could, among other things, declare outstanding borrowings under the Fed Facility immediately due and payable. In addition, an event of default or declaration of acceleration under the Fed Credit Agreement could also result in an event of default under other agreements.

The Fed Credit Agreement includes financial and other covenants that impose restrictions on AIG's financial and business operations.

The Fed Credit Agreement requires AIG to maintain a minimum aggregate liquidity level and restricts AIG's ability to make certain capital expenditures if the NY Fed objects thereto. In addition, the Fed Credit Agreement restricts AIG's and its restricted subsidiaries' ability to incur additional indebtedness, incur liens, merge, consolidate, sell assets, enter into hedging transactions outside the normal course of business, or pay dividends. These covenants could restrict AIG's business and thereby adversely affect AIG's results of operations.

Moreover, if AIG fails to comply with the covenants in the Fed Credit Agreement and is unable to obtain a waiver or amendment, an event of default would result. If an event of default were to occur, the NY Fed could, among other things, declare outstanding borrowings under the Fed Credit Agreement immediately due and payable. In addition, an event of default or declaration of acceleration under the Fed Credit Agreement could also result in an event of default under other agreements.

AIG's results of operations will be materially adversely affected by a significant increase in interest expense.

AIG expects its results of operations in the fourth quarter of 2008 and in 2009 to be significantly adversely affected by the recognition of interest expense. AIG's initial \$1.7 billion commitment fee will amortize over the term of the Fed Facility. Finally, the prepaid commitment fee asset of \$23 billion associated with the Preferred Stock to be issued will be amortized through interest expense over the term of the Fed Facility. As a result, AIG anticipates that interest expense in the fourth quarter of 2008 and in the year ended December 31, 2009 will significantly increase as a result of these items. In addition, paid in kind interest expense under the Fed Facility is accrued over the term of the Fed Facility.

Liquidity

AIG's businesses have been adversely affected by AIG's reduced liquidity.

Many of AIG's businesses depend upon the financial stability (both actual and perceived) of AIG parent. Perceptions that AIG or its subsidiaries may not be able to meet their obligations can negatively affect AIG's businesses in many ways, including:

- requests by customers to withdraw funds from AIG under annuity and certain life insurance contracts;
- a refusal by independent agents, brokers and banks to continue to offer AIG products and services;
- a refusal of customers or vendors to continue to do business with AIG; and
- requests by customers and other parties to terminate existing contractual relationships.

AIG's ability to access funds from its subsidiaries is limited.

As a holding company, AIG depends on dividends, distributions and other payments from its subsidiaries to fund payments on AIG's obligations, including its debt securities. In light of AIG's current financial situation, AIG expects that its regulated subsidiaries may be significantly restricted from making dividend payments, or advancing funds, to AIG. This restriction may hinder AIG's ability to access funds that AIG may need to make payments on its obligations, including those arising from day-to-day business activities.

Controlling Shareholder

As a result of the issuance of the Series C Preferred Stock, AIG will be controlled by a trust holding the Series C Preferred Stock for the benefit of the United States Treasury. AIG's interests and those of AIG's minority shareholders may not be the same as those of the United States Treasury.

In accordance with the Fed Credit Agreement, AIG will issue 100,000 shares of Series C Perpetual, Convertible, Participating Preferred Stock (the Series C Preferred Stock) to a trust that will hold the Series C Preferred Stock for the benefit of the United States Treasury (the Trust). Pursuant to the agreement in principle reached by AIG and the NY Fed on November 9, 2008 to amend the NY Fed Credit Agreement, the Series C Preferred Stock is entitled to:

- participate in any dividends paid on the common stock, with the payments attributable to the Series C Preferred Stock being approximately, but not in excess of, 77.9 percent of the aggregate dividends paid on AIG's common stock, treating the Series C Preferred Stock as converted; and
- to the extent permitted by law, vote with AIG's common stock on all matters submitted to AIG's shareholders and hold approximately, but not in excess of, 77.9 percent of the aggregate voting power of the common stock, treating the Series C Preferred Stock as converted.

The Series C Preferred Stock will remain outstanding even if the Fed Facility is repaid in full or otherwise terminates. In addition, upon shareholder approval to certain amendments to AIG's certificate of incorporation, the Trust can convert the Series C Preferred Stock into AIG common stock.

As a result of its ownership, the Trust will be able to elect all of AIG's directors and can control the vote on all matters, including:

- approval of mergers or other business combinations;
- a sale of all or substantially all of AIG's assets;
- issuance of any additional common stock or other equity securities;
- the selection and tenure of AIG's Chief Executive Officer and other executive officers;
- the adoption of amendments to AIG's certificate of incorporation; and
- other matters that might be favorable to the United States Treasury.

Moreover, the Trust's ability to prevent an unsolicited bid for AIG or any other change in control could also have an adverse effect on the market price of AIG's common stock.

The Trust may also transfer the Series C Preferred Stock to another person or entity and that person or entity may become AIG's controlling shareholder.

Possible future sales of Series C Preferred Stock or AIG common stock by the Trust could adversely affect the market for AIG common stock.

AIG has agreed to file a shelf registration statement that will allow the Trust to sell Series C Preferred Stock or any shares of common stock it receives upon conversion of the Preferred Stock. In addition, the Trust could sell Series C Preferred Stock or shares of AIG common stock without registration under certain circumstances, such as in a private transaction. Although AIG can make no prediction as to the effect, if any, that such sales would have on the market price of AIG common stock, sales of substantial amounts of Series C Preferred Stock or AIG common stock, or the perception that such sales could occur, could adversely affect the market price of AIG common stock. If the Trust sells or transfers shares of Series C Preferred Stock or AIG common stock as a block, another person or entity could become AIG's controlling shareholder.

Employees

The decline in AIG's common stock price and the announcement of proposed asset dispositions may prevent AIG from retaining key personnel.

AIG relies upon the knowledge and talent of its employees to successfully conduct business. The decline in AIG's common stock price has dramatically reduced the value of equity awards previously granted to its key employees. In addition, the announcement of proposed asset dispositions may result in

competitors seeking to hire AIG's key employees. AIG has implemented retention programs to seek to keep its key employees, but there can be no assurance that the programs will be effective. A loss of key personnel could reduce the value of AIG's businesses and impair its ability to effect a successful asset disposition plan.

Change of Control

The issuance of the Series C Preferred Stock may have adverse regulatory consequences for AIG and its subsidiaries and may trigger contractual obligations to third parties.

The Trust will control AIG by virtue of its ownership of the Series C Preferred Stock. AIG and its subsidiaries are subject to various regulatory requirements and are a party to various contracts, agreements, licenses, permits, authorizations and other arrangements (collectively, Arrangements) that contain provisions that, upon a change of control, provide regulators and counterparties with rights to take actions that could have a material effect on AIG's consolidated financial condition, results of operations, or cash flows from an operational, regulatory, compliance, or economic standpoint.

AIG has initiated discussions and activities with regulators and counterparties to take necessary actions to remedy, amend, or comply with the provisions of these Arrangements. AIG has not been notified by regulators or counterparties of their intent to exercise their rights under the Arrangements to a material extent. However, AIG cannot presently predict the effects, if any, the change of control or the other recent events will have on the Arrangements or on AIG's consolidated financial condition, results of operations, or cash flows.

Results of Operations

AIG identifies its operating segments by product line, consistent with its management structure. These segments are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management. Through these operating segments, AIG provides insurance, financial and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. AIG's Other category consists of items not allocated to AIG's operating segments.

AIG's subsidiaries serve commercial, institutional and individual customers through an extensive property-casualty and life insurance and retirement services network. AIG's Financial Services businesses include commercial aircraft and equipment leasing, capital markets operations and consumer finance, both in the United States and abroad. AIG also provides asset management services to institutions and individuals.

Consolidated Results

AIG's consolidated statements of income (loss) were as follows:

<i>(in millions)</i>	Three Months Ended September 30,		Percentage Increase/ (Decrease)	Nine Months Ended September 30,		Percentage Increase/ (Decrease)
	2008	2007		2008	2007	
Revenues:						
Premiums and other considerations	\$ 21,082	\$19,733	7%	\$ 63,489	\$58,908	8%
Net investment income	2,946	6,172	(52)	14,628	21,149	(31)
Net realized capital losses	(18,312)	(864)	-	(30,482)	(962)	-
Unrealized market valuation losses on AIGFP super senior credit default swap portfolio	(7,054)	(352)	-	(21,726)	(352)	-
Other income	2,236	5,147	(57)	8,953	12,888	(31)
Total revenues	898	29,836	(97)	34,862	91,631	(62)
Benefits and expenses:						
Incurred policy losses and benefits	17,189	15,595	10	51,521	47,962	7
Policy acquisition and other insurance expenses	6,919	5,357	29	18,560	15,508	20
Interest expense	2,297	1,232	86	4,902	3,425	43
Other expenses	2,678	2,773	(3)	8,084	7,357	10

Income (loss) before income taxes (benefits) and minority interest	(28,185)	4,879	-	(48,205)	17,379	-
Income taxes (benefits)	(3,480)	1,463	-	(10,374)	4,868	-
Income (loss) before minority interest	(24,705)	3,416	-	(37,831)	12,511	-
Minority interest	237	(331)	-	201	(1,019)	-
Net income (loss)	\$(24,468)	\$ 3,085	-%	\$(37,630)	\$11,492	-%

Premiums and Other Considerations

Premiums and other considerations increased in the three-month period ended September 30, 2008 compared to the same period in 2007 primarily due to increases of \$854 million, \$420 million and \$219 million in premiums from Foreign Life Insurance & Retirement Services, Foreign General Insurance, and Domestic Life Insurance, respectively, partially offset by a decrease of \$207 million in premiums from Commercial Insurance. Premiums and other considerations increased in the nine-month period ended September 30, 2008 compared to the same period in 2007 primarily due to increases of \$2.9 billion, \$1.7 billion, and \$513 million in premiums from Foreign Life Insurance & Retirement Services,

Foreign General Insurance, and Domestic Life Insurance, respectively, partially offset by a decrease of \$855 million in premiums from Commercial Insurance. Foreign Life Insurance & Retirement Services premiums increased principally as a result of increased production and favorable foreign exchange rates. Foreign General Insurance premiums increased primarily due to the positive effect of changes in foreign currency exchange rates and new business from both established and new distribution channels. Domestic Life Insurance premium increased primarily due to an increase in sales of payout annuities. Commercial Insurance premiums decreased primarily due to declines in workers' compensation premiums and other casualty lines of business.

Net Investment Income**The components of consolidated net investment income were as follows:**

<i>(in millions)</i>	Three Months Ended September 30,		Percentage Increase/ (Decrease)	Nine Months Ended September 30,		Percentage Increase/ (Decrease)
	2008	2007		2008	2007	
Fixed maturities, including short-term investments	\$ 5,773	\$5,406	7%	\$16,691	\$15,976	4%
Equity securities	277	226	23	496	443	12
Interest on mortgage and other loans	407	371	10	1,182	1,056	12
Partnerships	(813)	274	-	(641)	1,444	-
Mutual funds	(632)	(19)	-	(656)	430	-
Trading account losses	(501)	(79)	-	(722)	(93)	-
Other investments	228	107	113	768	665	15
Total investment income before policyholder income and trading gains (losses)	4,739	6,286	(25)	17,118	19,921	(14)
Policyholder investment income and trading gains (losses)	(1,561)	149	-	(1,729)	2,026	-
Total investment income	3,178	6,435	(51)	15,389	21,947	(30)
Investment expenses	232	263	(12)	761	798	(5)
Net investment income	\$ 2,946	\$6,172	(52)%	\$14,628	\$21,149	(31)%

Net investment income decreased in the three- and nine-month periods ended September 30, 2008 compared to the same periods in 2007 due to losses from partnerships, hedge funds and mutual funds as well as policyholder trading losses and higher trading account losses related to certain investment-oriented products in the U.K. for Life Insurance & Retirement Services. Policyholder trading gains (losses) are

offset by a charge or benefit to incurred policy losses and benefits expense. The policyholder trading losses for the three- and nine-month periods ended September 30, 2008 generally reflect the trends in equity markets, principally in Japan and Asia. The decline in net investment income also reflects the effects of higher cash balances for liquidity purposes.

Net Realized Capital Losses**The composition of net realized capital losses was as follows:**

<i>(in millions)</i>	Three Months Ended September 30,		Nine Months Ended September 30,	
	2008	2007	2008	2007
Sales of fixed maturity securities	\$ (768)	\$(403)	\$ (778)	\$(572)
Sales of equity securities	288	265	608	708
Sales of real estate and other assets	97	210	422	709
Other-than-temporary impairments:				
Severity	(7,327)	-	(16,275)	-
Lack of intent to hold to recovery	(8,299)	(240)	(9,320)	(614)
Trading at 25 percent or more discount for nine consecutive months	-	-	-	(6)
Foreign currency declines	(50)	(29)	(1,084)	(333)
Issuer-specific credit events	(3,453)	(124)	(3,946)	(316)
Adverse projected cash flows on structured securities	(747)	(151)	(1,621)	(159)
Foreign exchange transactions	1,996	(361)	1,258	(469)
Derivative instruments	(49)	(31)	254	90
Total	\$ (18,312)	\$(864)	\$ (30,482)	\$(962)

Net realized capital losses increased in the three- and nine-months ended September 30, 2008 compared to the same periods in 2007 primarily due to an increase in other-than-temporary impairment charges. Other-than-temporary impairment charges included the change in AIG's intent and ability to hold to recovery the securities, held as collateral in the securities

lending program; an increase in severity losses primarily related to certain RMBS, other structured securities and securities of financial institutions due to rapid and severe market valuation declines where the impairment period was not deemed temporary; and issuer specific credit events; partially offset by the favorable effect of foreign exchange transactions due to

strengthening of the U.S. dollar. See Invested Assets — Portfolio Review — Other-Than-Temporary Impairments.

Unrealized Market Valuation Losses on AIGFP Super Senior Credit Default Swap Portfolio

The unrealized market valuation losses on AIGFP's super senior credit default swap portfolio in the three- and nine-month periods ended September 30, 2008 increased compared to the same periods in 2007 due to significant widening in credit spreads and the downgrades of RMBS and CDO securities by rating agencies in the three-month period ended September 30, 2008 driven by the credit concerns resulting from U.S. residential mortgages and the severe liquidity crisis affecting the markets. (See Capital Markets Results and Critical Accounting Estimates — Valuation of Level 3 Assets and Liabilities.

Other Income

Other Income decreased in the three-month period ended September 30, 2008 compared to the same period in 2007 primarily due to a \$2.0 billion decrease in Financial Services revenues and a \$625 million decrease in Asset Management revenues. Financial Services revenues decreased principally as a result of a net \$987 million credit valuation adjustment loss on AIGFP's assets and liabilities which are measured at fair value. AIGFP's revenues were also negatively affected by the disruption in the credit markets and the general decline in liquidity in the marketplace. Asset Management revenues decreased primarily as a result of lower partnership income related to the Spread-Based Investment Business.

Other Income decreased in the nine-month period ended September 30, 2008 compared to the same period in 2007 primarily due to a \$1.7 billion decrease in Financial Services revenues and a \$1.2 billion decrease in Asset Management revenues. Financial Services revenues decreased principally as a result of a net \$1.4 billion credit valuation adjustment loss on AIGFP's assets and liabilities which are measured at fair value. Asset Management revenues decreased primarily as a result of lower guaranteed investment contract revenue due to lower partnership income.

Incurred Policy Losses and Benefits

Incurred policy losses and benefits increased in the three-month period ended September 30, 2008 compared to the same period in 2007 primarily due to a \$1.2 billion increase in Commercial Insurance as a result of \$1.1 billion of catastrophe-related losses principally from hurricanes Ike and Gustav in 2008, a \$464 million increase in Foreign General Insurance as a result of an increase in frequency of smaller claims and higher catastrophe-related losses primarily from hurricanes Ike and Gustav and a \$461 million increase in Mortgage Guaranty reflecting the deterioration of the U.S. housing market. Increases in incurred policy losses and benefits of

\$1.0 billion in Life Insurance & Retirement Services were more than offset by a reduction in losses and benefits arising from policyholder trading losses of \$1.7 billion discussed above in Net Investment Income.

Incurred policy losses and benefits increased in the nine-month period compared to the same period in 2007 primarily due to a \$1.6 billion increase in Commercial Insurance as a result of higher catastrophe-related losses principally from hurricanes Ike and Gustav in 2008, a \$1.2 billion increase in Foreign General Insurance as a result of higher catastrophe-related losses and severe but non-catastrophic losses, and a \$1.4 billion increase in Mortgage Guaranty reflecting the deterioration of the U.S. housing market. Increases in incurred policy losses and benefits of \$2.7 billion in Life Insurance & Retirement Services were more than offset by a reduction in losses and benefits arising from policyholder trading losses of \$3.8 billion discussed above in Net Investment Income.

Policy Acquisition and Other Insurance Expenses

Policy acquisition and other insurance expenses increased in the three-month period ended September 30, 2008 compared to the same period in 2007 primarily due to a \$785 million increase in General Insurance expenses and a \$777 million increase in Life Insurance & Retirement Services expenses. General Insurance expenses increased primarily due to the recognition of a premium deficiency reserve of \$453 million related to United Guaranty Corporation's (UGC) second-lien business. Life Insurance & Retirement Services expenses increased principally as a result of the effect of foreign exchange, growth in the business and the effect of FAS 159 implementation.

Policy acquisition and other insurance expenses increased in the nine-month period ended September 30, 2008 compared to the same period in 2007 primarily due to a \$1.6 billion increase in General Insurance expenses and a \$1.5 billion increase in Life Insurance & Retirement Services expenses. General Insurance expenses increased primarily due to the recognition of a premium deficiency reserve of \$453 million related to UGC's second-lien business, a \$432 million increase in compensation-related expenses, and a \$275 million change in DAC. Life Insurance & Retirement Services expenses increased primarily due to the effect of foreign exchange, growth in the business and the effect of FAS 159 implementation.

Interest Expense

Interest expense increased in the three- and nine-month periods ended September 30, 2008 compared to the same periods in 2007 reflecting higher borrowings, including interest on the debt and Equity Units from the dates of issuance in May 2008 and borrowings under the Fed facility. Interest expense also includes amortization of the prepaid commitment assets in connection with the Series C Preferred Stock.

Other Expenses

Other Expenses decreased in the three-month period ended September 30, 2008 compared to the same period in 2007 primarily due to a \$563 million reversal of accrued compensation expense under AIGFP's various deferred compensation plans and special incentive plan as a result of significant losses recognized by AIGFP in 2008. Offsetting this reversal were goodwill impairment charges of \$341 million and \$91 million related to Consumer Finance and Capital Markets, respectively, recognized in the third quarter 2008, resulting from the downturn in the housing markets, the credit crisis and the intent to unwind certain AIGFP businesses. An increase in AGF's provision for finance receivable losses of \$198 million also contributed to the decline.

Other Expenses increased in the nine-month period ended September 30, 2008 compared to the same period in 2007 primarily as a result of the goodwill impairment charges mentioned above, an increase in AIGFP's other operating expenses due to professional service fees and an increase in AGF's provision for finance receivable losses of \$471 million. Partially offsetting these increases was the reversal of AIGFP deferred compensation and special incentive plan discussed above.

Income Taxes (Benefits)

The effective tax rate on the pre-tax loss for the three-month period ended September 30, 2008 was 12.3 percent. The effective tax rate was lower than the statutory rate of 35 percent due primarily to \$6.9 billion of deferred tax expense recorded during the third quarter, comprising \$3.6 billion of deferred tax expense attributable to the potential sale of foreign businesses, and a \$3.3 billion valuation allowance to reduce tax benefits on capital losses to the amount that AIG believes is more likely than not to be realized.

The effective tax rate on the pre-tax loss for the nine-month period ended September 30, 2008 was 21.5 percent and was also lower than the statutory rate primarily due to the

\$6.9 billion of deferred tax expense, which is discussed above, as well as other tax charges recorded.

The effective tax rates on pre-tax income for the three- and nine-month periods ended September 30, 2007 were 30.0 percent and 28.0 percent, respectively. These effective tax rates were lower than the statutory rate due primarily to benefits from remediation adjustments and the recognition of tax benefits associated with the SICO Plan for which the compensation expense was recognized in prior years.

Realization of the deferred tax asset depends on AIG's ability to generate sufficient taxable income of the appropriate character within the carryforward periods of the jurisdictions in which the net operating losses and deductible temporary differences were incurred. AIG assessed its ability to realize the deferred tax asset of \$19.1 billion and concluded a \$3.3 billion valuation allowance was required to reduce the deferred tax asset to an amount AIG believes is more likely than not to be realized.

When making its assessment, AIG considered future reversals of existing taxable temporary differences, future GAAP taxable income and tax-planning strategies AIG would implement, if necessary, to realize the net deferred tax asset.

In assessing future GAAP taxable income, AIG considered its strong earnings history exclusive of the recent losses on the super senior credit default swap portfolio and from the securities lending program, with respect to which AIG is entering into transactions with the NY Fed to limit exposure to future losses. AIG also considered taxable income from the sales of businesses under its asset disposition plan, the continuing earnings strength of the insurance businesses it intends to retain and its recently announced debt and preferred stock transactions with the NY Fed, together with other actions AIG is taking, when assessing the ability to generate sufficient future taxable income during the relevant carryforward periods to realize the deferred tax asset.

Segment Results

The following table summarizes the operations of each operating segment. (See also Note 2 to the Consolidated Financial Statements.)

<i>(in millions)</i>	Three Months Ended September 30,		Percentage Increase/ (Decrease)	Nine Months Ended September 30,		Percentage Increase/ (Decrease)
	2008	2007		2008	2007

(a) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS No. 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133), including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2008 and 2007, the effect was \$1.2 billion and \$(178) million, respectively, in both revenues and operating income (loss). For the nine-month periods ended September 30, 2008 and 2007, the effect was \$705 million and \$(1.1) billion, respectively, in both revenues and operating income (loss). These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings.

(b) Includes other-than-temporary impairment charges. Refer to Invested Assets — Portfolio Review — Other-Than-Temporary Impairments for further discussion.

(c) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2008 and 2007, the effect was \$217 million and \$353 million, respectively, in both revenues and operating income (loss). For the nine-month periods ended September 30, 2008 and 2007, the effect was \$18 million and \$(250) million, respectively, in both revenues and operating income (loss). These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings.

(d) Includes unrealized market valuation losses of \$7.1 billion and \$21.7 billion for the three- and nine-month periods ended September 30, 2008, respectively, and \$352 million for the three- and nine-month periods ended September 30, 2007, on AIGFP's super senior credit default swap portfolio.

(e) To better align financial reporting with the manner in which AIG's chief operating decision maker manages the business, beginning in the third quarter of 2008, AIG's own credit risk valuation adjustments on intercompany transactions are excluded from segment revenues and operating income.

General Insurance Operations

AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of property and casualty insurance and various personal lines both domestically and abroad and constitute the AIG Property Casualty Group (formerly known as Domestic General Insurance) and the Foreign General Insurance Group.

AIG Property Casualty Group is comprised of Commercial Insurance, Transatlantic, Personal Lines and Mortgage Guaranty businesses.

Commercial Insurance writes substantially all classes of business insurance, accepting such business mainly from insurance brokers. This provides Commercial Insurance the opportunity to select specialized markets and retain underwriting control. Any licensed broker is able to submit business

to Commercial Insurance without the traditional agent-company contractual relationship, but such broker usually has no authority to commit Commercial Insurance to accept a risk.

Transatlantic Holdings, Inc. (Transatlantic) subsidiaries offer reinsurance capacity on both a treaty and facultative basis both in the U.S. and abroad. Transatlantic structures programs for a full range of property and casualty products with an emphasis on specialty risk.

AIG's Personal Lines operations provide automobile insurance through aigdirect.com, its direct marketing distribution channel, and the Agency Auto Division, its independent agent/broker distribution channel. It also provides a broad range of coverages for high net worth individuals through the AIG Private Client Group (Private Client Group). Coverages for the Personal Lines operations are written predominantly in the United States.

The main business of the subsidiaries of UGC is the issuance of residential mortgage guaranty insurance, both domestically and internationally, that covers the first loss for credit defaults on high loan-to-value conventional first-lien mortgages for the purchase or refinance of one to four family residences.

On September 15, 2008, United Guaranty Residential Insurance Company (UGRIC) and United Guaranty Mortgage Indemnity Company (UGMIC) were downgraded from AA+ to A+ by S&P. As a result of the downgrade below the AA-level, the companies were required to submit a remediation plan to Fannie Mae and Freddie Mac. All U.S. based mortgage insurers are currently subject to a Government Sponsored

Enterprise (GSE) remediation plan as a result of industry-wide rating agency downgrades. UGC's plan was timely submitted and is awaiting GSE approval. UGRIC and UGMIC continue to write new domestic first-lien mortgage insurance and remain as eligible mortgage insurers with Fannie Mae and Freddie Mac.

AIG's Foreign General Insurance Group writes both commercial and consumer lines of insurance which is primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance Group also includes business written by AIG's foreign-based insurance subsidiaries.

General Insurance Results

General Insurance operating income is comprised of statutory underwriting profit (loss), changes in DAC, net investment income and net realized capital gains and losses. Operating income (loss), as well as net premiums written, net premiums earned, net investment income and net realized capital gains (losses) and statutory ratios were as follows:

<i>(in millions, except ratios)</i>	Three Months Ended September 30,		Percentage Increase/ (Decrease)	Nine Months Ended September 30,		Percentage Increase/ (Decrease)
	2008	2007		2008	2007	
Net premiums written:

(a) Includes amortization of advertising costs.

(b) Statutory underwriting profit (loss) is a measure that U.S. domiciled insurance companies are required to report to their regulatory authorities. The following table reconciles statutory underwriting profit (loss) to operating income (loss) for General Insurance:

<i>(in millions)</i>	Commercial Insurance	Transatlantic	Personal Lines	Mortgage Guaranty	Foreign General Insurance	Reclassifications and Eliminations	Total
Three Months Ended September 30, 2008:							
Statutory underwriting profit (loss)	\$ (426)	\$ (96)	\$ 9	\$ (1,155)	\$ 74	\$ –	\$ (1,594)
Increase (decrease) in DAC	(53)	7	(10)	(9)	25	–	(40)

Growth as reported in				
U.S. dollars	(0.8)%	5.3%	(0.1)%	5.7%

* Computed using a constant exchange rate throughout each period.

Quarterly General Insurance Results

General Insurance reported an operating loss in the three-month period ended September 30, 2008 compared to operating income in the same period in 2007 due to declines in underwriting results and net investment income as well as increased net realized capital losses in the three month-period ended September 30, 2008. The combined ratio for the three-month period ended September 30, 2008 increased to 113.6, an increase of 23.4 points compared to the same period in 2007, primarily due to an increase in the loss ratio of 17.6 points. The loss ratio for accident year 2008 recorded in the three-month period ended September 30, 2008 was 15.7 points higher than the loss ratio recorded in the three-month period ended September 30, 2007 for accident year

2007. Catastrophe related losses (primarily from hurricanes Ike and Gustav in 2008) were \$1.4 billion in the three-month period ended September 30, 2008, accounting for 11.6 points of the increase in the accident year loss ratio. Increases in first-lien Mortgage Guaranty losses accounted for 2.6 points of the increase in the 2008 accident year loss ratio. AIG expects that the downward cycle in the U.S. housing market will continue to adversely affect Mortgage Guaranty's loss ratios for the foreseeable future. The loss ratio also increased for other property and casualty lines due to premium rate decreases and changes in loss trends. Favorable prior year development and increases in the loss reserve discount reduced incurred losses by \$169 million and \$377 million in the three-month periods ended September 30, 2008 and 2007, respectively, accounting for 1.9 points of the increase in the loss ratio.

General Insurance net premiums written declined 0.8 percent in the three-month period ended September 30, 2008 compared to the same period in 2007, as a decline in AIG Property Casualty Group was partially offset by growth in Foreign General Insurance from both established and new distribution channels, and the positive effect of changes in foreign currency exchange rates.

General Insurance net investment income declined in the three-month period ended September 30, 2008 by \$659 million or approximately 47 percent compared to the same period in 2007. Interest and dividend income increased \$17 million in the three-month period ended September 30, 2008 compared to the

same period in 2007 as investments in fixed maturities and equity securities increased by \$3.2 billion and the average yield was substantially unchanged for both periods. Partnership and mutual fund investment results were losses of \$512 million in the three-month period ended September 30, 2008 compared to income of \$241 million in the same period in 2007, primarily due to weaker equity market performance in 2008.

Net realized capital losses in the three-month period ended September 30, 2008 include other-than-temporary impairment charges of \$1.8 billion principally on fixed maturity securities compared to \$35 million in the same period of 2007. See also Capital Resources and Liquidity and Invested Assets herein.

Year-to-Date General Insurance Results

General Insurance reported an operating loss in the nine-month period ended September 30, 2008 compared to the same period in 2007 due to declines in underwriting results and net investment income as well as net realized capital losses in the nine month-period ended September 30, 2008 compared to net realized capital gains in the same period in 2007. The combined ratio for the nine-month period ended September 30, 2008, increased to 102.7, an increase of 14.4 points compared to the same period in 2007, primarily due to an increase in the loss ratio of 10.8 points. The loss ratio for accident year 2008 recorded in the nine-month period ended September 30, 2008 was 9.4 points higher than the loss ratio recorded in the nine-month period ended September 30, 2007 for accident year 2007. Catastrophe-related losses were \$1.5 billion and \$101 million in the nine-month periods ended September 30, 2008, and 2007, respectively, accounting for 4.1 points of the increase in the accident loss ratio. Increases in Mortgage Guaranty losses accounted for 3.0 points of the increase in the 2008 accident year loss ratio. The loss ratio also increased for other property and casualty lines due to premium rate decreases and changes in loss trends. Favorable development from prior years and increases in the loss reserve discount reduced incurred losses by \$254 million and \$720 million in the nine-month periods ended September 30, 2008 and 2007, respectively. The favorable development in the nine-month period ended September 30, 2008 includes \$339 million of favorable development recognized in the first three months of 2008, related to policies whose premiums vary with the level of losses incurred (loss sensitive policies). Loss sensitive policies did not have a significant effect in 2007. The favorable development on loss sensitive policies had no effect on underwriting profit as it was entirely offset by a reduction in earned premiums.

General Insurance net premiums written were essentially unchanged in the nine-month period ended September 30, 2008 compared to the same period in 2007, as a decline in Commercial Insurance rates was almost entirely offset by growth in Foreign General Insurance from both established and new distribution channels and the positive effect of changes in foreign currency exchange rates.

General Insurance net investment income declined in the nine-month period ended September 30, 2008 by \$1.5 billion or approximately 32 percent compared to the same period in 2007. Interest and dividend income increased \$186 million in the nine-month period ended September 30, 2008 compared to the same period in 2007 as investment in fixed maturities and equity securities increased by \$4.5 billion and the average yield was substantially unchanged for both periods. Partnership and mutual fund investment results were losses of \$496 million in the nine-month period ended September 30, 2008 compared to income of \$1.2 billion in the same period in 2007, primarily due to poor performance in the equity markets in 2008. Investment expenses declined \$64 million in the nine-month period ended September 30, 2008 compared to the same period in 2007, primarily due to decreased interest expense on deposit liabilities.

Net realized capital losses in the nine-month period ended September 30, 2008 were driven by other-than-temporary impairment charges of \$2.7 billion compared to \$165 million in the same period of 2007. See also Capital Resources and Liquidity and Invested Assets herein.

Quarterly Commercial Insurance Results

Commercial Insurance reported an operating loss of \$1.1 billion in the three-month period ended September 30, 2008 compared to operating income of \$1.8 billion in the same period in 2007, reflecting both underwriting losses and reduced net investment income as well as increased net realized capital losses in the three-month period ended September 30, 2008. The decline in underwriting results is also reflected in the combined ratio, which increased 25.2 points in the three-month period ended September 30, 2008 compared to the same period in 2007. The loss ratio for accident year 2008, recorded in the three-month period ended September 30, 2008 was 19.8 points higher than the loss ratio recorded in the three-month period ended September 30, 2007 for accident year 2007. The increase in the 2008 accident year loss ratio includes 18.8 points for losses related to the hurricanes with the remaining increase due to higher casualty losses and the effect of premium rate declines. Favorable prior year development and increases in the reserve discount decreased incurred losses by \$181 million and \$353 million in the three-month periods ended September 30, 2008 and 2007, respectively, accounting for 2.8 points of the increase in the loss ratio. Commercial Insurance's net premiums written declined in the three-month period ended September 30, 2008 compared to the same period in 2007 primarily due to declines in workers' compensation premiums and other casualty lines of business.

Commercial Insurance's expense ratio increased to 21.9 in the three-month period ended September 30, 2008 compared to 19.2 in the same period of 2007. Provision for uncollectible premiums increased by \$82 million in the three-month period ended September 30, 2008 compared to the same period in 2007. In general, net premiums written

increased in lines of business with higher expense ratios and lower loss ratios compared to other Commercial Insurance lines of business, contributing to the increase in the expense ratio for the three-month period ended September 30, 2008 compared to the same period in 2007.

Commercial Insurance's net investment income declined in the three-month period ended September 30, 2008 compared to the same period in 2007, primarily due to losses of \$230 million from partnership and mutual fund investments in the three-month period ended September 30, 2008 compared to income of \$219 million in the same period in 2007.

Commercial Insurance recorded net realized capital losses of \$1.1 billion in the three-month period ended September 30, 2008 compared to net realized capital losses of \$60 million in the same period of 2007, primarily due to other-than-temporary impairment charges of \$1.2 billion in the three-month period ended September 30, 2008 compared to charges of \$26 million in the same period in 2007, principally related to fixed maturity securities.

Year-to-Date Commercial Insurance Results

Commercial Insurance's operating income decreased 99 percent in the nine-month period ended September 30, 2008 compared to the same period in 2007, primarily due to significant declines in underwriting results and net investment income, as well as significantly greater net realized capital losses in the nine-month period ended September 30, 2008. The decline in underwriting results is also reflected in the combined ratio, which increased 15.5 points in the nine-month period ended September 30, 2008 compared to the same period in 2007. The loss ratio for accident year 2008 recorded in the nine-month period ended September 30, 2008 included a 7.2 point effect related to the catastrophe losses, and was 11.1 points higher than the loss ratio recorded in the nine-month period ended September 30, 2007 for accident year 2007. Prior year development and increases in the loss reserve discount reduced incurred losses by \$373 million and \$630 million in the nine-month periods ended September 30, 2008 and 2007, respectively.

Commercial Insurance's net premiums written declined in the nine-month period ended September 30, 2008 compared to the same period in 2007 primarily due to declines in premiums from workers' compensation and other casualty lines of business including a reduction of \$339 million related to loss sensitive policies as described above.

Commercial Insurance's expense ratio increased to 21.7 in the nine-month period ended September 30, 2008 compared to 18.6 in the same period of 2007. Return premiums on loss sensitive policies reduced net premiums written, without a corresponding reduction in expenses, increasing the expense ratio by 0.5 points for the nine-month period ended September 30, 2008 compared to the same period in 2007. The remaining increase in the expense ratio primarily resulted

from changes in property reinsurance programs, increases in the provision for uncollectible premiums and changes in the mix of business as discussed above.

Commercial Insurance's net investment income declined significantly in the nine-month period ended September 30, 2008 compared to the same period in 2007, primarily due to a loss of \$273 million from partnership and mutual fund investments in the nine-month period ended September 30, 2008 compared to a gain of \$875 million in the same period in 2007.

Commercial Insurance recorded net realized capital losses of \$1.9 billion in the nine-month period ended September 30, 2008 compared to net realized capital losses of \$59 million in the same period in 2007, primarily due to other-than-temporary impairment charges of \$2.0 billion in the nine-month period ended September 30, 2008, related to both fixed maturity and equity securities, compared to \$139 million in the same period in 2007.

Quarterly Transatlantic Results

Transatlantic reported an operating loss of \$155 million in the three-month period ended September 30, 2008 compared to income of \$189 million in the same period in 2007, primarily due to a significant increase in net realized capital losses and a statutory underwriting loss. The increase in net realized capital losses is due principally to other-than-temporary impairment charges of \$144 million. The statutory underwriting loss in the three-month period ended September 30, 2008 compared to the gain in the same period in 2007 reflects increased catastrophe losses resulting principally from hurricane Ike.

Year-to-Date Transatlantic Results

Transatlantic's operating income decreased to \$148 million in the nine-month period ended September 30, 2008 compared to \$508 million in the same period in 2007, primarily due to an increase in net realized capital losses and a decrease in statutory underwriting profit. The increase in net realized capital losses is due principally to other-than-temporary impairment charges of \$202 million. The decrease in statutory underwriting profit in the nine-month period ended September 30, 2008 compared to the same period in 2007 reflects increased catastrophe losses resulting principally from hurricane Ike.

Quarterly Personal Lines Results

Personal Lines operating income decreased in the three-month period ended September 30, 2008 compared to the same period in 2007, primarily due to a decline in net investment income and other-than-temporary impairment charges related to the ongoing turmoil in the financial markets, which more than offset an improvement in statutory underwriting results.

Net premiums written decreased in the three-month period ended September 30, 2008 compared to the same period in 2007, primarily due to continued growth in the Private Client Group, offset by reductions in both the

aigdirect.com and Agency Auto businesses. The growth in the Private Client Group reflects the execution of a plan to expand its distribution network.

Year-to-Date Personal Lines Results

Personal Lines operating income decreased in the nine-month period ended September 30, 2008 compared to the same period in 2007, primarily due to a decline in statutory underwriting profit and other-than-temporary impairment charges.

Quarterly Mortgage Guaranty Results

In response to the worsening market conditions during the last several quarters, UGC has tightened underwriting standards and increased premium rates for its first- and second-lien business. As the credit markets tightened the second-lien business has seen a significant decline in activity and, combined with UGC's tightened underwriting standards, new business written for second-liens has dropped significantly. As a result of the decline in new business and in conjunction with the increasing loss experience UGC decided to withdraw from the second-lien market, cease selling new business and place its second-lien portfolio into run-off as of September 30, 2008.

Mortgage Guaranty's operating loss increased significantly in the three-month period ended September 30, 2008 compared to the same period in 2007 due to tightening credit markets, declining housing values and the recognition of a premium deficiency reserve on second-lien business.

Net premiums written declined by 8 percent to \$280 million in the three-month period ended September 30, 2008 compared to the same period in 2007, primarily due to declines in private student loans and international mortgage businesses of 77 percent and 30 percent, respectively, primarily due to tightened underwriting standards. First-and second-lien business grew moderately due to increased persistency year over year. However, new insurance written, which is a measure of the amount of new insurance added to the portfolio, during the three-month period ended September 30, 2008 decreased 77 percent and 97 percent, respectively, when compared to the same period in 2007. This decline is primarily due to UGC's tightening of underwriting guidelines and rate increases during the period.

Losses and loss expenses incurred increased \$461 million over the same period in 2007, driven by domestic first- and second-lien business due to the continuing decline in the domestic housing market. Domestic first- and second-lien losses incurred increased 189 percent and 35 percent respectively, compared to the same period in 2007, resulting in a loss ratio for the first-lien business of 308.1 in the three-month period ended September 30, 2008. Increases in both domestic and international losses incurred resulted in an overall loss ratio for Mortgage Guaranty (excluding in 2008 the second-lien business in run-off) of 279.4 in the three-month period

ended September 30, 2008 compared to 197.0 in the same period in 2007. Limits on certain ceded reinsurance covering the domestic first lien business may result in increased net losses in future periods, if the current housing market decline continues.

Historically, Mortgage Guaranty included all mortgage insurance risks in a single premium deficiency test because the manner of acquiring, servicing and measuring the profitability of all Mortgage Guaranty contracts was consistent. With the decision to place the second-lien business in run-off, management no longer measures the profitability for the second-lien business in the same manner as that for Mortgage Guaranty's ongoing businesses, and will no longer report loss ratio or expense ratio information for the second-lien business. As a result, UGC performed a separate premium deficiency calculation for the second lien business as of September 30, 2008.

At September 30, 2008, the present value of expected second-lien future losses and expenses (net of expected future recoveries) was \$1.6 billion, offset by the present value of expected second-lien future premium of \$499 million and the already established loss reserves of \$727 million, resulting in a premium deficiency reserve of \$453 million. The second-lien risk in force at September 30, 2008 totaled \$3.1 billion with 550 thousand second-lien policies in force, expected to run-off over the next 10 to 12 years. Risk in force represents the full amount of second-lien loans insured reduced for contractual aggregate loss limits on certain pools of loans, usually 10 percent of the full amount of loans insured in each pool. Mortgage Guaranty may record net losses on this business in future periods because the timing of future delinquencies may precede recognition of future premiums, in an amount in excess of the premium deficiency reserve.

As of September 30, 2008 there was no premium deficiency related to the remainder of the Mortgage Guaranty business.

Year-to-Date Mortgage Guaranty Results

Mortgage Guaranty's operating loss in the nine-month period ended September 30, 2008 increased significantly compared to the same period in 2007 due to deteriorating housing markets throughout the United States as well as in several international markets, a tightening domestic credit market and the premium deficiency reserve discussed above. Net premiums written increased 4 percent in the nine-month period ended September 30, 2008 compared to the same period in 2007, primarily due to increases in domestic first- and second-lien premiums during the first half of 2008, partially offset by declines in net premiums written in private student loans and international mortgage insurance businesses. Net premiums written for first-and second-lien businesses increased 22 percent and 14 percent, respectively, in the nine-month period ended September 30, 2008 compared to the same period in 2007, due mainly to increased persistency

year over year. Net premiums written for international mortgage insurance business declined 20 percent, primarily due to tightened underwriting standards. During the nine-month period in 2008, net premiums written have steadily declined due to UGC's steady tightening of underwriting guidelines and rate increases during the year. New insurance written during the nine-month period ended September 30, 2008 decreased 31 percent and 78 percent for first and second-lien business, respectively, when compared to the same period in 2007.

Domestic first- and second-lien losses incurred increased 247 percent and 75 percent, respectively, compared to the nine-month period ended September 30, 2007, resulting in a first-lien loss ratio of 255.3 in the nine-month period ended September 30, 2008. Increases in domestic and international losses incurred resulted in an overall loss ratio for Mortgage Guaranty (excluding in 2008 the second-lien business in runoff) of 225.0 in the nine-month period ended September 30, 2008, compared to 140.9 in the nine-month period ended September 30, 2007.

Quarterly Foreign General Insurance Results

Foreign General Insurance incurred an operating loss of \$209 million in the three-month period ended September 30, 2008 compared to operating income of \$607 million in the same period in 2007. The loss was due to a decline of \$320 million in net investment income and an increase of \$289 million in net realized capital losses, as well as a decrease in underwriting results, mainly due to catastrophe losses.

Net premiums written increased 12 percent (4 percent in original currency) in the three-month period ended September 30, 2008 compared to the same period in 2007, reflecting growth in commercial and consumer lines driven by new business from both established and new distribution channels, including the late 2007 acquisition of Württembergische und Badische Versicherungs – AG (WüBa) in Germany. Net premiums written for commercial lines increased due to new business, mainly in the U.K. and European markets, and decreases in the use of reinsurance, partially offset by declines in premium rates. Net premiums written for the Lloyd's syndicate and Aviation declined due to rate decreases, increased market competition and an increase in the use of reinsurance.

The loss ratio in the three-month period ended September 30, 2008 increased 6.9 points compared to the same period in 2007, primarily due to higher catastrophe losses and an increase in frequency of smaller claims partially offset by a reduction in severe but non-catastrophe losses. Catastrophe losses in Ascot from Hurricanes Ike and Gustav totaled \$133 million for the three months ended September 30, 2008 and contributed 2.8 points to the increase in the loss ratio. In addition, higher claims frequency contributed 4.5 points to the loss ratio, which was partially offset by declines in severe but non-catastrophe losses.

Net investment income decreased \$320 million or 99 percent in the three-month period ended September 30, 2008 compared to the same period in 2007 as continued weakness in the equity markets led to losses from partnership and mutual fund investments which collectively increased \$296 million from the same period in 2007.

Foreign General Insurance net realized capital losses for the three-month period ended September 30, 2008 were \$313 million compared to net realized capital losses of \$24 million in the same period of 2007, primarily due to other-than-temporary impairment charges, which amounted to \$433 million for the three-month period ended September 30, 2008, compared to \$5 million in the same period in 2007.

Year-to-Date Foreign General Insurance Results

Foreign General Insurance operating income decreased in the nine-month period ended September 30, 2008 compared to the same period in 2007, due to net realized capital losses, decreases in underwriting results and net investment income.

Net premiums written increased 16 percent (7 percent in original currency) in the nine-month period ended September 30, 2008 compared to the same period in 2007, reflecting growth in commercial and consumer lines driven by new business from established and new distribution channels, including the WüBa acquisition. Net premiums written for commercial lines increased due to new business in the U.K. and Europe and decreases in the use of reinsurance, partially offset by declines in premium rates. Growth in personal accident business in Latin America, Asia and Europe also contributed to the increase. Net premiums written for the Lloyd's syndicate Ascot continued to decline due to rate decreases and increased market competition.

The loss ratio in the nine-month period ended September 30, 2008 increased 3.2 points compared to the same period in 2007 due to increases in catastrophe losses, frequency of smaller claims and severe but non-catastrophic losses. Catastrophe losses including Hurricanes Ike and Gustav totaled \$138 million for the nine months ended September 30, 2008 compared to \$91 million of U.K. flood losses in the same period in the prior year, which contributed 0.2 points to the increase in the loss ratio. Prior accident year development reduced incurred losses by \$65 million and \$108 million in the first nine months of 2008 and 2007, respectively, accounting for 0.6 points of the increase. The current accident year loss ratio excluding catastrophe losses increased by 2.4 points primarily due to increases in severe but non-catastrophic losses and the frequency of smaller claims.

Net investment income decreased \$467 million in the nine-month period ended September 30, 2008 compared to the same period in 2007 primarily due to mutual fund income which was \$361 million lower than the same period of 2007, reflecting weaker performance in the equity markets in 2008.

Foreign General Insurance net realized capital losses for the nine-month period ended September 30, 2008 were \$353 million compared to net realized capital gains of \$29 million in the same period of 2007, primarily due to other-than-

temporary impairment charges, which amounted to \$433 million for the nine-month period ended September 30, 2008, compared to \$16 million in the same period in 2007.

Reserve for Losses and Loss Expenses

The following table presents the components of the General Insurance gross reserve for losses and loss expenses (loss reserves) by major lines of business on a statutory Annual Statement basis*:

<i>(in millions)</i>	September 30, 2008	December 31, 2007
Other liability occurrence	\$21,311	\$20,580
Workers' compensation	15,242	15,568
Other liability claims made	13,802	13,878
International	8,452	7,036
Auto liability	6,211	6,068
Property	5,933	4,274
Reinsurance	3,610	3,127
Products liability	2,462	2,416
Medical malpractice	2,315	2,361
Mortgage guaranty/credit	2,779	1,426
Accident and health	1,783	1,818
Commercial multiple peril	1,796	1,900
Aircraft	1,705	1,623
Fidelity/surety	1,216	1,222
Other	2,260	2,203
Total	\$90,877	\$85,500

* Presented by lines of business pursuant to statutory reporting requirements as prescribed by the National Association of Insurance Commissioners.

AIG's gross reserve for losses and loss expenses represents the accumulation of estimates of ultimate losses, including estimates for incurred but not yet reported reserves (IBNR) and loss expenses. The methods used to determine loss reserve estimates and to establish the resulting reserves are continually reviewed and updated. Any adjustments resulting therefrom are currently reflected in operating income. Because loss reserve estimates are subject to the outcome of future events, changes in estimates are unavoidable given that loss trends vary and time is often required for changes in trends to be recognized and confirmed. Reserve changes that increase previous estimates of ultimate cost are referred to as unfavorable or adverse development or reserve strengthening. Reserve changes that decrease previous estimates of ultimate cost are referred to as favorable development.

Estimates for mortgage guaranty insurance losses and loss adjustment expense reserves are based on notices of mortgage loan delinquencies and estimates of delinquencies that have been incurred but have not been reported by loan servicers, based upon historical reporting trends. Mortgage Guaranty establishes reserves using a percentage of the contractual liability (for each delinquent loan reported) that is based upon past experience regarding certain loan factors such as age of the delinquency, cure rates, dollar amount of the loan and type of mortgage loan. Because mortgage delinquencies and claims payments are affected primarily by macroeconomic events, such as changes in home price appreciation or depreciation, interest rates and

unemployment, the determination of the ultimate loss cost requires a high degree of judgment. AIG believes it has provided appropriate reserves for currently delinquent loans. Consistent with industry practice, AIG does not establish a reserve for insured loans that are not currently delinquent, but that may become delinquent in future periods.

At September 30, 2008, General Insurance net loss reserves increased \$4.47 billion from the prior year-end to \$73.75 billion. The net loss reserves represent loss reserves reduced by reinsurance recoverable, net of an allowance for unrecoverable reinsurance and applicable discount for future investment income.

The following table classifies the components of the General Insurance net loss reserve by business unit:

<i>(in millions)</i>	September 30, 2008	December 31, 2007
Commercial Insurance ^(a)	\$49,240	\$47,392
Transatlantic	7,537	6,900
Personal Lines ^(b)	2,472	2,417
Mortgage Guaranty	2,545	1,339
Foreign General Insurance ^(c)	11,959	11,240
Total Net Loss Reserve	\$73,753	\$69,288

(a) At September 30, 2008 and December 31, 2007, Commercial Insurance loss reserves include approximately \$2.78 billion and \$3.13 billion, respectively, (\$2.96 billion and \$3.34 billion, respectively, before discount), related to business written by Commercial Insurance but ceded to American International Reinsurance Company Limited (AIRCO) and reported in AIRCO's statutory filings. Commercial Insurance loss reserves also include approximately \$601 million and \$590 million related to business

included in AIUO's statutory filings at September 30, 2008 and December 31, 2007, respectively.

- (b) At September 30, 2008 and December 31, 2007, Personal Lines loss reserves include approximately \$1.07 billion and \$894 million, respectively, related to business ceded to Commercial Insurance and reported in Commercial Insurance's statutory filings.
- (c) At September 30, 2008 and December 31, 2007, Foreign General Insurance loss reserves include approximately \$2.02 billion and \$3.02 billion, respectively, related to business reported in Commercial Insurance's statutory filings.

The Commercial Insurance net loss reserve is comprised principally of the business of AIG subsidiaries participating in American Home/National Union pool (10 companies) and the surplus lines pool (Lexington Insurance Company, AIG Excess Liability Insurance Company and Landmark Insurance Company).

Commercial Insurance cedes a quota share percentage of its other liability occurrence and products liability occurrence business to AIRCO. The quota share percentage ceded was 10 percent in the nine-month period ended 2008 and 15 percent in 2007 and covered all business written in these years for these lines by participants in the American Home/National Union pool. AIRCO's loss reserves relating to these quota share cessions from Commercial Insurance are recorded on a discounted basis. As of September 30, 2008, AIRCO carried a discount of approximately \$180 million applicable to the \$2.96 billion in undiscounted reserves it assumed from the American Home/National Union pool via this quota share cession. AIRCO also carries approximately \$499 million in net loss reserves relating to Foreign General Insurance business. These reserves are carried on an undiscounted basis.

The companies participating in the American Home/National Union pool have maintained a participation in the business written by AIU for decades. As of September 30, 2008, these AIU reserves carried by participants in the American Home/National Union pool totaled approximately \$2.02 billion. The remaining Foreign General Insurance reserves are carried by American International Underwriter Overseas, Ltd. (AIUO), AIRCO, AIG U.K., and other smaller AIG subsidiaries domiciled outside the United States. Statutory filings in the United States by AIG companies reflect the business written by U.S. domiciled entities only, and therefore exclude business written by AIUO, AIRCO, and all other internationally domiciled subsidiaries. The total reserves carried at September 30, 2008 by AIUO and AIRCO were approximately \$3.60 billion and \$3.28 billion, respectively. AIRCO's \$3.28 billion in total General Insurance reserves consist of approximately \$2.78 billion from business assumed from the American Home/National Union pool and an additional \$499 million relating to Foreign General Insurance business.

Discounting of Reserves

At September 30, 2008, AIG's overall General Insurance net loss reserves reflect a loss reserve discount of \$2.50 billion,

including tabular and non-tabular calculations. The tabular workers compensation discount is calculated using a 3.5 percent interest rate and the 1979-81 Decennial Mortality Table. The non-tabular workers compensation discount is calculated separately for companies domiciled in New York and Pennsylvania, and follows the statutory regulations for each state. For New York companies, the discount is based on a five percent interest rate and the companies' own payout patterns. For Pennsylvania companies, the statute has specified discount factors for accident years 2001 and prior, which are based on a six percent interest rate and an industry payout pattern. For accident years 2002 and subsequent, the discount is based on the yield of United States Treasury securities ranging from one to twenty years and the companies' own payout patterns, with the future expected payment for each year using the interest rate associated with the corresponding Treasury security yield for that time period. The discount is comprised of the following: \$794 million — tabular discount for workers' compensation in Commercial Insurance; \$1.53 billion — non-tabular discount for workers' compensation in Commercial Insurance; and \$180 million — non-tabular discount for other liability occurrence and products liability occurrence in AIRCO. The total undiscounted workers' compensation loss reserve carried by Commercial Insurance is approximately \$13.5 billion as of September 30, 2008. The other liability occurrence and products liability occurrence business in AIRCO that is assumed from Commercial Insurance is discounted based on the yield of United States Treasury securities ranging from one to twenty years and the Commercial Insurance payout pattern for this business. The undiscounted reserves assumed by AIRCO from Commercial Insurance totaled approximately \$2.96 billion at September 30, 2008.

Quarterly Reserving Process

AIG believes that the General Insurance net loss reserves are adequate to cover General Insurance net losses and loss expenses as of September 30, 2008. While AIG regularly reviews the adequacy of established loss reserves, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's loss reserves as of September 30, 2008. In the opinion of management, such adverse development and resulting increase in reserves is not likely to have a material adverse effect on AIG's consolidated financial condition, although it could have a material adverse effect on AIG's consolidated results of operations for an individual reporting period.

The reconciliation of net loss reserves was as follows:

(in millions)	Three Months Ended September 30,		Nine Months Ended September 30,	
	2008	2007	2008	2007
Net reserve for losses and loss expenses at beginning of period	\$72,331	\$65,197	\$69,288	\$62,630
Foreign exchange effect	(765)	224	(502)	438
Losses and loss expenses incurred:				
Current year	9,723	7,636	26,364	22,185
Prior years, other than accretion of discount	(144)	(337)	(215)	(605)
Prior years, accretion of discount	79	92	255	220
Losses and loss expenses incurred	9,658	7,391	26,404	21,800
Losses and loss expenses paid	7,471	5,875	21,437	17,931
Net reserve for losses and loss expenses at end of period	\$73,753	\$66,937	\$73,753	\$66,937

The following tables summarize development, (favorable) or unfavorable, of incurred losses and loss expenses for prior years (other than accretion of discount):

(in millions)	Three Months Ended September 30,		Nine Months Ended September 30,	
	2008	2007	2008	2007
Prior Accident Year				
Development by Reporting Unit:				
Commercial Insurance	\$ (156)	\$ (313)	\$ (298)	\$ (465)

Prior years, other than accretion of discount	\$ (144)	\$ (337)	\$ (215)	\$ (605)

(in millions)	Calendar Year	
	2008	2007
Prior Accident Year Development by Accident Year:		
2007	\$ (259)	
2006	(388)	\$ (898)
2005	(396)	(373)
2004	(269)	(248)
2003	66	143
2002	78	200
2001 and prior	953	571
Prior years, other than accretion of discount	\$ (215)	\$ (605)

In determining the quarterly loss development from prior accident years, AIG conducts analyses to determine the change in estimated ultimate loss for each accident year for each profit center. For example, if loss emergence for a profit

center is different than expected for certain accident years, the actuaries examine the indicated effect such emergence would have on the reserves of that profit center. In some cases, the higher or lower than expected emergence may result in no clear change in the ultimate loss estimate for the accident years in question, and no adjustment would be made to the profit center's reserves for prior accident years. In other cases, the higher or lower than expected emergence may result in a larger change, either favorable or unfavorable, than the difference between the actual and expected loss emergence. Such additional analyses were conducted for each profit center, as appropriate, in the three-month period ended September 30, 2008 to determine the loss development from prior accident years for the three-month period ended September 30, 2008. As part of its quarterly reserving process, AIG also considers notices of claims received with respect to emerging issues, such as those related to the U.S. mortgage and housing market.

2008 Net Loss Development

In the three-month period ended September 30, 2008, net loss development from prior accident years was favorable by approximately \$144 million, excluding approximately \$79 million from accretion of loss reserve discount. The overall favorable development of \$144 million consisted of approximately \$473 million of favorable development from accident years 2004 through 2007, partially offset by approximately \$329 million of adverse loss development from accident years 2003 and prior. In the three months ended September 30, 2008, AIG completed an update of its ground up projections of claims exposure for the directors and officers liability (D&O) and related management liability classes of business within AIG Executive Liability. AIG utilizes the ultimate loss estimates resulting from these claims projections as a benchmark in determining the appropriate loss reserves for this business. As a result of the updated claims projections, the quarterly review of reported loss experience as of September 30, 2008 and other relevant factors, AIG recognized approximately \$105 million in favorable loss development from prior accident years for the D&O and related management liability classes of business in the three months ended September 30, 2008. This consisted of approximately \$185 million of favorable development from accident years 2004 through 2006, partially offset by approximately \$80 million of adverse development from accident years 2000 through 2002. The overall favorable development of \$144 million reflects this \$105 million in favorable development from the D&O and related management liability classes of business within AIG Executive Liability. The overall favorable development of \$144 million also included approximately \$140 million of favorable development from business written within Commercial Insurance by Lexington Insurance Company, including casualty, catastrophic casualty, healthcare and program business. Partially offsetting these favorable developments within Commercial Insurance was approximately \$170 million of adverse development from business written

by AIG Excess Casualty, primarily from accident years 2003 and prior. This adverse development relating to excess casualty reflected continued emergence of latent claims such as construction defect, product aggregate, and pharmaceutical related exposures, as well as higher than expected large loss activity from these accident years. The commutation of one large account within Commercial Insurance resulted in approximately \$120 million of favorable development from accident years 2001 and prior in the three months ended September 30, 2008.

Mortgage Guaranty experienced \$69 million of adverse development in the three-month period ended September 30, 2008, reflecting the adverse claims environment (see Quarterly Mortgage Guaranty Results above), including approximately \$77 million of adverse development from accident year 2007, partially offset by a minor amount of favorable development from earlier accident years.

In the nine-month period ended September 30, 2008, net loss development from prior accident years was favorable by approximately \$215 million, including approximately \$339 million of favorable development relating to loss sensitive business in the first three months of 2008 (which was offset by an equal amount of negative earned premium development), and excluding approximately \$255 million from accretion of loss reserve discount. Excluding both the favorable development relating to loss sensitive business and accretion of loss reserve discount, net loss development from prior accident years in the nine-month period ended September 30, 2008, was adverse by approximately \$124 million. The overall favorable development of \$215 million consisted of approximately \$1.31 billion of favorable development from accident years 2004 through 2007 partially offset by approximately \$1.10 billion of adverse loss development from accident years 2003 and prior. Excluding the favorable development from loss sensitive business, the overall adverse development of \$124 million consisted of approximately \$1.03 billion of favorable development from accident years 2004 through 2007 offset by approximately \$1.15 billion of adverse development from accident years 2003 and prior. The adverse development from accident years 2003 and prior was primarily related to excess casualty business within Commercial Insurance. The favorable development from accident years 2004 through 2007 included approximately \$280 million in favorable development from loss sensitive business written by AIG Risk Management, and approximately \$350 million in favorable development from business written by Lexington Insurance Company, including healthcare, catastrophic casualty, casualty and program businesses. AIG Executive Liability business contributed approximately \$250 million to the favorable development from accident years 2004 and 2005, relating primarily to D&O. The adverse development from accident years 2003 and prior included approximately \$200 million related to claims involving MTBE, a gasoline additive, primarily on excess casualty

business within Commercial Insurance from accident years 2000 and prior. In addition, as described above for the three months ended September 30, 2008, the excess casualty adverse developments reflect a variety of other latent claims and large losses. AIG's exposure to these latent exposures was reduced after 2002 due to significant changes in policy terms and conditions as well as underwriting guidelines. Other segments throughout AIG contributed to the adverse developments from accident year 2003 and prior, including D&O and other professional liability classes within Commercial Insurance, and Transatlantic. Mortgage Guaranty contributed approximately \$126 million of overall adverse development in the nine-month period ended September 30, 2008, with \$119 million relating to accident year 2007. See Year-to-Date Mortgage Guaranty Results above.

2007 Net Loss Development

In the three months ended September 30, 2007, net loss development from prior accident years was favorable by approximately \$337 million, including approximately \$11 million of adverse development from the general reinsurance operations of Transatlantic, and excluding approximately \$92 million from accretion of loss reserve discount. Excluding Transatlantic, as well as accretion of discount, net loss development in the three months ended September 30, 2007 from prior accident years was favorable by approximately \$348 million. The overall favorable development of \$337 million consisted of approximately \$764 million of favorable development from accident years 2004 through 2006, partially offset by approximately \$299 million of adverse development from accident years 2002 and prior and \$128 million of adverse development from accident year 2003. For the three months ended September 30, 2007, most classes of AIG's business continued to experience favorable development for accident years 2004 through 2006. The majority of the adverse development from accident years 2002 and prior was related to developments from excess casualty business within Commercial Insurance and from Transatlantic. The adverse development from accident year 2003 was primarily related to developments from excess casualty business within Commercial Insurance, which represented less than a 1 percent change in the ultimate loss estimate for accident year 2003. In the three months ended September 30, 2007, as described above, AIG completed an update of its ground up projections of claims exposure for the D&O and related management liability classes of business. As a result of the updated claims projections, in addition to the quarterly review of reported loss experience as of September 30, 2007 and other relevant factors, AIG recognized approximately \$150 million in favorable loss development from prior accident years for the D&O and related management liability classes of business in the three months ended September 30, 2007. This consisted of approximately \$200 million of favorable development from accident years 2004 through 2006, partially offset by approximately

\$50 million of adverse development from accident years 2002 and prior. The overall favorable development of \$337 million reflects this \$150 million from the D&O and related management liability classes of business within Commercial Insurance.

In the first nine months of 2007, net loss development from prior accident years was favorable by approximately \$605 million, including approximately \$47 million of adverse development from the general reinsurance operations of Transatlantic, and excluding approximately \$220 million from accretion of loss reserve discount. Excluding Transatlantic, as well as accretion of discount, net loss development in the first nine months of 2007 from prior accident years was favorable by approximately \$652 million. The overall favorable development of \$605 million consisted of approximately \$1.52 billion of favorable development from accident years 2004 through 2006, partially offset by approximately \$771 million of adverse development from accident years 2002 and prior and \$143 million of adverse development from accident year 2003. For the first nine months of 2007, most classes of AIG's business continued to experience favorable development for accident years 2004 through 2006. The majority of the adverse development from accident years 2002 and prior was related to development from excess casualty business within Commercial Insurance and from Transatlantic. The adverse development from accident year 2003 was primarily related to developments from excess casualty business within Commercial Insurance. The overall favorable development of \$605 million includes approximately \$200 million pertaining to the D&O and related management liability classes of business within Commercial Insurance, consisting of approximately \$235 million of favorable

development from accident years 2004 through 2006, partially offset by approximately \$35 million of adverse development from accident years 2002 and prior.

Asbestos and Environmental Reserves

The estimation of loss reserves relating to asbestos and environmental claims on insurance policies written many years ago is subject to greater uncertainty than other types of claims due to inconsistent court decisions as well as judicial interpretations and legislative actions that in some cases have tended to broaden coverage beyond the original intent of such policies and in others have expanded theories of liability.

As described more fully in the 2007 Annual Report on Form 10-K, AIG's reserves relating to asbestos and environmental claims reflect a comprehensive ground-up analysis. In the nine-month period ended September 30, 2008, AIG maintained the ultimate loss estimates for asbestos and environmental claims resulting from the recently completed reserve analyses. A minor amount of adverse incurred loss development pertaining to asbestos was reflected in the nine-month period ended September 30, 2008, as presented in the table that follows. This development was primarily attributable to several large defendants, the effect of which was largely offset by one large favorable settlement. A moderate amount of favorable gross incurred loss development pertaining to environmental was reflected in the nine-month period ended September 30, 2008, as presented in the table that follows. This development was primarily attributable to recent favorable experience which was fully reinsured, resulting in no favorable net development on environmental net reserves.

A summary of reserve activity, including estimates for applicable IBNR, relating to asbestos and environmental claims separately and combined appears in the following table. The vast majority of such claims arise from policies written in 1984 and prior years. The current environmental policies that AIG underwrites on a claims-made basis have been excluded from the following table:

<i>(in millions)</i>	Nine Months Ended September 30,			
	2008		2007	
	Gross	Net	Gross ^(a)	Net
Asbestos:				
Reserve for losses and loss expenses at beginning of year	\$3,864	\$1,454	\$4,523	\$1,889
Losses and loss expenses incurred ^(b)	76	18	18	7
Losses and loss expenses paid ^(b)	(540)	(228)	(614)	(363)
Reserve for losses and loss expenses at end of period	\$3,400	\$1,244	\$3,927	\$1,533
Environmental:				
Reserve for losses and loss expenses at beginning of year	\$ 515	\$ 237	\$ 629	\$ 290
Losses and loss expenses incurred ^(b)	(40)	1	2	(1)
Losses and loss expenses paid ^(b)	(39)	(28)	(89)	(46)
Reserve for losses and loss expenses at end of period	\$ 436	\$ 210	\$ 542	\$ 243
Combined:				
Reserve for losses and loss expenses at beginning of year	\$4,379	\$1,691	\$5,152	\$2,179
Losses and loss expenses incurred ^(b)	36	19	20	6
Losses and loss expenses paid ^(b)	(579)	(256)	(703)	(409)
Reserve for losses and loss expenses at end of period	\$3,836	\$1,454	\$4,469	\$1,776

(a) Gross amounts were revised from the presentation in prior periods to reflect the inclusion of certain reserves not previously identified as asbestos and environmental related. This revision had no effect on net reserves.

(b) All amounts pertain to policies underwritten in prior years, primarily to policies issued in 1984 and prior years.

The gross and net IBNR included in the reserve for losses and loss expenses, relating to asbestos and environmental claims separately and combined, were estimated as follows:

<i>(in millions)</i>	Nine Months Ended September 30,			
	2008		2007	
	Gross	Net	Gross*	Net
Asbestos	\$2,211	\$ 989	\$2,801	\$1,261
Environmental	259	111	328	127
Combined	\$2,470	\$1,100	\$3,129	\$1,388

* Gross amounts were revised from the presentation in prior periods to reflect the inclusion of certain reserves not previously identified as asbestos and environmental related. This revision had no effect on net reserves.

A summary of asbestos and environmental claims count activity was as follows:

	Nine Months Ended September 30,					
	2008			2007		
	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined
Claims at beginning of year	6,563	7,652	14,215	6,878	9,442	16,320
Claims during year:						
Opened	514	864	1,378	321	850	1,171
Settled	(130)	(105)	(235)	(113)	(101)	(214)
Dismissed or otherwise resolved	(823)	(1,561)	(2,384)	(745)	(2,138)	(2,883)
Claims at end of period	6,124	6,850	12,974	6,341	8,053	14,394

Survival Ratios — Asbestos and Environmental

The following table presents AIG's survival ratios for asbestos and environmental claims at September 30, 2008 and 2007. The survival ratio is derived by dividing the current carried loss reserve by the average payments for the three most recent calendar years for these claims. Therefore, the survival ratio is a simplistic measure estimating the number of years it would be before the current ending loss reserves for these

claims would be paid off using recent year average payments. The September 30, 2008 survival ratio is lower than the ratio at September 30, 2007 because the more recent periods included in the rolling average reflect higher claims payments. In addition, AIG's survival ratio for asbestos claims was negatively affected by the favorable settlement described above, as well as several similar settlements during 2007. These settlements reduced gross and net asbestos survival ratios at

September 30, 2008 by approximately 1.2 years and 2.7 years, respectively, and reduced gross and net asbestos survival ratios at September 30, 2007 by approximately 1.4 years and 3.2 years, respectively. Many factors, such as aggressive settlement procedures, mix of business and level of coverage provided, have a significant effect on the amount of asbestos and environmental reserves and payments and the resultant survival ratio. Moreover, as discussed above, the primary basis for AIG's determination of its reserves is not survival ratios, but instead the ground-up and top-down analysis. Thus, caution should be exercised in attempting to determine reserve adequacy for these claims based simply on this survival ratio.

AIG's survival ratios for asbestos and environmental claims, separately and combined were based upon a three-year average payment. These ratios at September 30, 2008 and 2007 were as follows:

	Gross*	Net
2008		
Survival ratios:		
Asbestos	5.3	4.1
Environmental	4.6	3.7
Combined	5.2	4.0
2007		
Survival ratios:		
Asbestos	7.7	6.4
Environmental	5.1	3.8
Combined	7.2	5.8

* Gross amounts for 2007 were revised from the presentation in prior periods to reflect the inclusion of certain reserves not previously identified as asbestos and environmental related. This revision had no effect on net reserves.

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services operations offer a wide range of insurance and retirement savings products both domestically and abroad.

AIG's Foreign Life Insurance & Retirement Services operations include insurance and investment-oriented products such as whole and term life, investment-linked, universal life and endowments, personal accident and health products; group products including pension, life and health; and fixed and variable annuities. The Foreign Life Insurance & Retirement Services products are sold through independent producers, career agents, financial institutions and direct marketing channels.

AIG's Domestic Life Insurance operations offer a broad range of protection products, such as individual life insurance and group life and health products (including disability income products and payout annuities), which include single premium immediate annuities, structured settlements and terminal funding annuities. The Domestic Life Insurance products are sold through independent producers, career

agents, financial institutions and direct marketing channels. Home service operations include an array of life insurance, accident and health and annuity products sold primarily through career agents.

AIG's Domestic Retirement Services operations include group retirement products, individual fixed and variable annuities sold through banks, broker-dealers and exclusive sales representatives, and annuity runoff operations, which include previously acquired "closed blocks" and other fixed and variable annuities largely sold through distribution relationships that have been discontinued.

AIG's Life Insurance & Retirement Services reports its operations through the following major internal reporting units and legal entities:

Foreign Life Insurance & Retirement Services

Japan and Other

- American Life Insurance Company (ALICO)
- AIG Star Life Insurance Co., Ltd. (AIG Star Life)
- AIG Edison Life Insurance Company (AIG Edison Life)

Asia

- American International Assurance Company, Limited, together with American International Assurance Company (Bermuda) Limited (AIA)
- Nan Shan Life Insurance Company, Ltd. (Nan Shan)
- American International Reinsurance Company Limited (AIRCO)
- The Philippine American Life and General Insurance Company (Philamlife)

Domestic Life Insurance

- American General Life Insurance Company (AIG American General)
- The United States Life Insurance Company in the City of New York (USLIFE)
- American General Life and Accident Insurance Company (AGLA)

Domestic Retirement Services

- The Variable Annuity Life Insurance Company (VALIC)
- AIG Annuity Insurance Company (AIG Annuity)
- AIG SunAmerica Life Assurance Company (AIG SunAmerica)

The gross insurance in force for Life Insurance & Retirement Services was as follows:

<i>(In millions)</i>	September 30, 2008	December 31, 2007
Foreign*	\$1,394,683	\$1,327,251
Domestic	1,027,600	984,794
Total	\$2,422,283	\$2,312,045

* Includes an increase of \$10.5 billion related to changes in foreign exchange rates at September 30, 2008.

Premiums and other considerations in the three- and nine-month periods ended September 30, 2008 reflect growth primarily due to increased production and favorable foreign exchange rates in the Foreign Life Insurance & Retirement Services operations and sales of payout annuities in Domestic Life Insurance compared to the same periods in 2007.

Net investment income decreased in the three- and nine-month periods ended September 30, 2008 compared to the same periods in 2007 due to partnership and mutual fund losses in the 2008 periods compared to income in the 2007 periods, lower yield enhancement income, higher trading account losses in the U.K. associated with certain investment-linked products and increased levels of short-term investments. Policyholder investment income and trading losses (together, policyholder trading gains (losses)) were \$(1.6) billion and \$(1.7) billion in the three- and nine-month periods ended September 30, 2008, respectively, compared to

gains of \$150 million and \$2.0 billion in the same periods in 2007, reflecting equity market declines. Policyholder trading gains (losses) are offset by a change in incurred policy losses and benefits expense. Policyholder trading gains (losses) generally reflect the trends in equity markets, principally in Japan and Asia.

The higher net realized capital losses in the three- and nine-month periods ended September 30, 2008 compared to the same periods in 2007 were primarily driven by impairments related to severity losses, credit events primarily in the financial institutions sector and changes in intent to hold until recovery as the credit market disruption continued. Net realized capital losses resulting from other-than-temporary impairment charges were \$15.9 billion and \$25.5 billion in the three- and nine-month periods ended September 30, 2008, respectively, compared to \$349 million and \$1.1 billion in the same periods of 2007. See Invested Assets for further details.

In addition to the higher net realized capital losses and lower net investment income noted above, the operating loss for the three- and nine-month periods ended September 30, 2008 increased as a result of DAC and SIA charges and related reserve strengthening of \$728 million in the Domestic Retirement Services operations resulting from the continued weakness in the equity markets and the significantly higher surrender activity resulting from AIG parent's liquidity issues beginning in mid-September. The operating loss also included higher benefit costs in the Japan variable life level premium product resulting from a sharp decline in the Japanese equity market and a loss recognition charge in the Philippine operations. These decreases were partially offset by the favorable effect of foreign exchange rates and growth in the underlying business in force. The operating loss in the three-month period ended September 30, 2008 included a DAC and sales inducement asset (SIA) benefit of \$478 million related to net realized capital losses compared to a benefit of \$56 million in the same period in 2007. The operating loss in the nine-month period ended September 30, 2008 included a DAC and SIA benefit of \$957 million related to net realized capital losses compared to a benefit of \$170 million in the same period in 2007.

AIG adopted FAS 157 on January 1, 2008 and the most significant effect on the Life Insurance & Retirement Services results was the change in measurement of fair value for embedded policy derivatives. The pre-tax effect of adoption related to embedded policy derivatives was an increase in net realized capital losses of \$155 million as of January 1, 2008, partially offset by a \$47 million DAC benefit related to these losses. The effect of initial adoption was primarily due to an increase in the embedded policy derivative liability valuations resulting from the inclusion of explicit risk margins.

AIG adopted FAS 159 on January 1, 2008 and elected to apply the fair value option to a closed block of single premium variable life business in Japan and to an investment-linked product sold principally in Asia. The adoption of FAS 159 with respect to these fair value elections resulted in a decrease to 2008 opening retained earnings of \$559 million, net of tax. The fair value of the liabilities for these policies totaled \$3.3 billion at September 30, 2008 and is reported in policyholders' contract deposits.

AIG transacts business in most major foreign currencies and therefore premiums and other considerations reported in U.S. dollars vary by volume and changes in foreign currency translation rates.

The following table summarizes the effect of changes in foreign currency exchange rates on the growth of the Foreign Life Insurance & Retirement Services premiums and other considerations.

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2008	2007	2008	2007
Growth in original currency*	5.5%	7.5%	6.6%	6.8%
Foreign exchange effect	7.6	1.2	8.1	1.7
Growth as reported in U.S. dollars	13.1%	8.7%	14.7%	8.5%

* Computed using a constant exchange rate each period.

Quarterly Japan and Other Results

First year premium, single premium and annuity deposits for Japan and Other were as follows:

(in millions)	Three Months Ended September 30,		Percentage Increase/ (Decrease)	
	2008	2007	U.S.\$	Original Currency
First year premium	\$ 764	\$ 598	28%	15%
Single premium	2,548	3,606	(29)%	(30)%
Annuity deposits	4,284	5,308	(19)%	(19)%

First year premium sales in the three-month period ended September 30, 2008 reflected strong growth in U.S. dollar terms and on an original currency basis compared to the same

period in 2007. First year premium life insurance sales in Japan rose principally from increased sales of an interest sensitive product. Personal accident first year premium sales were down slightly due to lower direct marketing sales and a shift to single premium products in Japan. First year premium sales of group products increased primarily due to higher pension deposits in Brazil.

Single premium sales reflected a significant decline as the life insurance product lines fell 37 percent in the three-month period ended September 30, 2008 compared to the same period last year. This decline was due to lower guaranteed income bond sales in the U.K. In Japan, a new single premium personal accident and health product was successfully launched during the first quarter of 2008 with the majority of sales coming through banks which were recently deregulated and are now able to sell accident and health products. Group products single premium sales increased substantially with higher production of credit life insurance products in Europe and higher pension deposits in Brazil.

Annuity deposits decreased in the three-month period ended September 30, 2008 compared to the same period in 2007 due to the continued market volatility which negatively affected individual variable annuities sales in Japan and the U.K. This decline more than offset the increase in individual fixed annuity deposits in Japan which grew as a result of an improved exchange rate environment and benefited from the volatile equity markets. Net flows for Japan fixed annuities increased from \$163 million in the three-month period ended September 30, 2007 to \$579 million in the three-month period ended September 30, 2008.

Japan and Other results on a sub – product basis were as follows:

<i>(in millions)</i>	Premiums and Other Considerations	Net Investment Income	Net Realized Capital Gains (Losses)	Total Revenues	Operating Income (Loss)
Three Months Ended September 30, 2008					
Life insurance	\$1,358	\$ 331	\$(1,372)	\$ 317	\$(1,058)

Total	\$3,077	\$1,053	\$ 185	\$4,315	\$ 1,030
Percentage Increase/(Decrease) from Prior Year:					
Life insurance	11%	(16)%	–%	(81)%	–%
Personal accident	21	42	–	20	9
Group products	28	(29)	–	16	7
Individual fixed annuities	55	18	–	(22)	–
Individual variable annuities	(5)	–	–	–	–
Total	19%	(51)%	–%	(41)%	–%

Total revenues for Japan and Other in the three-month period ended September 30, 2008 decreased compared to the same period in 2007 primarily due to higher net realized capital losses and lower net investment income which were partially offset by growth in premiums and other considerations. Realized capital losses increased primarily due to higher other-than-temporary impairments. Net investment income declined in the period due to significantly higher trading account losses related to certain investment-linked products in the U.K., higher policyholder trading losses and losses on partnership investments.

Operating income declined in the three-month period ended September 30, 2008 compared to the same period in 2007 due to significantly higher realized capital losses and \$422 million of higher trading account losses in the U.K. related to certain investment-linked products. These decreases were partially offset by the positive effect of foreign exchange. In addition, the three-month period ended September 30, 2007 operating income benefited from \$37 million of DAC unlocking and other changes in actuarial estimates and \$16 million of higher individual fixed annuities surrender charge income, net of DAC, compared to the same period in 2008.

Year-to-Date Japan and Other Results**First year premium, single premium and annuity deposits for Japan and Other were as follows:**

<i>(in millions)</i>	Nine Months Ended September 30,		Percentage Increase/(Decrease)	
	2008	2007	U.S.\$	Original Currency
First year premium	\$ 2,140	\$ 1,891	13%	2%
Single premium	7,682	7,724	(1)%	(3)%
Annuity deposits	15,809	13,520	17%	16%

First year premium sales for the nine-month period ended September 30, 2008 reflected steady growth in U.S. dollar terms, but were up slightly on an original currency basis compared to the same period in 2007. First year premium sales were bolstered by group products sales in Brazil, Europe and the Middle East. This increase was partially offset by the decline in life insurance and personal accident sales in Japan. Life insurance sales were negatively affected by the suspension of increasing term sales in 2007 while personal accident sales have declined due to lower direct marketing sales.

Single premium sales for the nine-month period ended September 30, 2008 were essentially flat in U.S. dollar terms and down slightly on an original currency basis compared to the same period in 2007. While interest sensitive life insurance sales increased in Japan, guaranteed income bond sales in the U.K. fell as deposits shifted to the variable annuity products. A new single premium personal accident and health product launched in Japan during the first quarter of 2008 continues to perform well and sales which started through banks are being

expanded to the agency channels. Group products produced favorable results as pension deposits in Brazil and credit sales in Europe grew significantly in the nine months ended September 30, 2008 compared to the same period last year.

Annuity deposits increased in the nine-month period ended September 30, 2008 compared to the same period in 2007 as individual fixed annuities in Japan and individual variable annuities in the U.K. performed well. In Japan, fixed annuity products improved due to the launch of new products and a favorable exchange rate environment for non-yen

denominated products. Net flows for Japan individual fixed annuities increased from \$219 million in the nine-month period ended September 30, 2007 to \$2.4 billion in the nine-month period ended September 30, 2008. Variable annuity deposit growth in the U.K. was favorably affected by the launch of a new product; however, the growth rate in the U.K. has slowed as the current market volatility continued. This volatility continues to negatively affect the growth rate in Japan for the individual variable annuity sales.

Japan and Other results on a sub-product basis were as follows:

<i>(in millions)</i>	Premiums and Other Considerations	Net Investment Income	Net Realized Capital Gains (Losses)	Total Revenues	Operating Income (Loss)

Total	20%	(32)%	-%	(15)%	-%

Total revenues for Japan and Other in the nine-month period ended September 30, 2008 decreased compared to the same period in 2007 primarily due to net realized capital losses and lower net investment income. Net realized capital losses were recognized in the period primarily due to other-than-temporary impairment charges. Net investment income declined due to policyholder trading losses, lower partnership and mutual fund income and mark-to-market trading losses related to investment-linked products in the U.K. Policyholder trading losses were \$242 million for the nine-month period ended September 30, 2008 compared to gains of \$1.4 billion for the same period in 2007. Policyholder trading gains (losses) are offset by a change to incurred policy losses and benefits expense. Partnership and mutual fund income for the nine-month period ended September 30, 2008 was \$87 million lower than the same period in 2007. Trading account losses in the U.K. on certain investment-linked products were \$722 million for the nine-month period ended September 30, 2008 compared to a loss of \$93 million in the same period in 2007.

Despite the continued growth in the underlying business and the positive effect of foreign exchange, the decline in total revenues resulted in an operating loss of \$14 million for the nine-month period ended September 30, 2008 compared to income of \$2.8 billion in the same period in 2007. The results reflected higher benefit costs of \$55 million resulting from volatility in the Japanese equity market and interest rates which affect variable life fair value liabilities under FAS 159, lower DAC unlocking benefits and other changes in actuarial estimates of \$51 million and \$52 million of lower individual fixed annuities surrender charge income, net of DAC, compared to the same period in 2007. Operating income for the nine-month period ended September 30, 2007 included a \$62 million charge related to the regulatory claims review in Japan.

*Quarterly Asia Results***First year premium, single premium and annuity deposits for Asia were as follows:**

<i>(in millions)</i>	Three Months Ended September 30,		Percentage Increase/ (Decrease)	
	2008	2007	U.S.\$	Original Currency
First year premium	\$721	\$ 757	(5)%	(6)%
Single premium	383	1,138	(66)%	(67)%
Annuity deposits	215	179	20%	25%

First year premium sales in the three-month period ended September 30, 2008 declined on a U.S. dollar basis and original currency basis compared to the same period in 2007 as the sales focus in Taiwan shifted to individual variable annuity products.

Asia results, presented on a sub-product basis were as follows:

<i>(in millions)</i>	Premiums and Other Considerations	Net Investment Income	Net Realized Capital Gains (Losses)	Total Revenues	Operating Income

Total revenues for Asia in the three-month period ended September 30, 2008 decreased significantly compared to the same period in 2007, primarily due to the negative effect of policyholder trading losses on net investment income and higher net realized capital losses, which more than offset the growth in premiums and other considerations. Premiums and other considerations increased in the three-month period ended September 30, 2008 compared to the same period in 2007 due to growth in the underlying in force business. Net investment income declined due to policyholder trading losses of \$1.1 billion in 2008 compared to gains of \$158 million in the same period in 2007 and partnership and mutual fund losses of \$363 million compared to income of \$16 million in the same period in 2007. Net realized capital losses in the

This decline more than offset the increase in first year life insurance sales in Korea, Singapore and Thailand. First year personal accident premiums declined due to increased competition in the direct marketing channel in Korea, which offset positive growth in other parts of Asia. The group products business performed well, particularly in Australia.

Single premium sales in the three-month period ended September 30, 2008 decreased significantly as equity market volatility negatively affected the investment-oriented life insurance sales in Taiwan, Singapore, Hong Kong, China and Korea.

Annuity deposits in the three-month period ended September 30, 2008 increased compared to the same period in 2007 due to sales of variable annuity products in Taiwan.

three-month period ended September 30, 2008 included higher other-than-temporary impairment charges.

Asia reported an operating loss of \$1.4 billion in the three-month period ended September 30, 2008 compared to income of \$706 million in the same period in 2007. This loss was principally due to higher net realized capital losses, partnership and mutual fund losses and a \$31 million loss recognition charge in the Philippine operations, which more than offset the favorable effect of foreign exchange.

*Year-to-Date Asia Results***First year premium, single premium and annuity deposits for Asia were as follows:**

<i>(in millions)</i>	Nine Months Ended September 30,		Percentage Increase/(Decrease)	
	2008	2007	U.S.\$	Original Currency
First year premium	\$2,199	\$2,171	1%	(1)%
Single premium	2,232	2,708	(18)%	(22)%
Annuity deposits	881	550	60%	59%

First year premium sales in the nine-month period ended September 30, 2008 grew slightly compared to the same period in 2007 as the sales focus shifted more to single premium and annuity products. The increase in investment-oriented life insurance sales in Korea and Singapore was nearly offset by declines in Taiwan life insurance sales due to a shift to

Asia results, presented on a sub-product basis were as follows:

Total revenues in Asia in the nine-month period ended September 30, 2008 decreased compared to the same period in 2007 primarily due to higher net realized capital losses and lower net investment income, which more than offset the growth in premiums and other considerations. Net investment income declined due to policyholder trading losses of \$1.4 billion in 2008 compared to gains of \$652 million in 2007 and partnership and mutual fund losses of \$413 million in 2008 compared to income of \$149 million in the same period in

variable annuity products in early 2008. The group products business performed well in Australia, China and Singapore.

Single premium sales in the nine-month period ended September 30, 2008 declined compared to the same period in 2007 primarily due to the negative affect of equity market volatility on investment-oriented life insurance sales, particularly in Taiwan, Hong Kong, China and the Philippines. Group products increased due to sales of credit life insurance primarily in Thailand.

Annuity deposits in the nine-month period ended September 30, 2008 increased 60 percent compared to the same period in 2007 due to the variable annuity deposits in Taiwan. Fixed annuity deposits in Korea were down in the nine-month period ended September 30, 2008 compared to the same period last year due to a recent market shift toward variable universal life products.

2007. The higher realized capital losses were primarily due to other-than-temporary impairment charges.

Asia reported an operating loss of \$971 million for the nine-month period ended September 30, 2008 compared to operating income of \$1.9 billion in the same period in 2007. Results for the year were affected by lower total revenues, lower operating income in Taiwan and a \$31 million loss recognition charge in the Philippine operations.

* Includes structured settlements, single premium immediate annuities and terminal funding annuities.

Total Domestic Life Insurance revenues decreased in the three-month period ended September 30, 2008 compared to the same period in 2007 due to significantly higher net realized capital losses, partially offset by higher premiums and other considerations. The increase in net realized capital losses was primarily driven by other-than-temporary impairment charges related to AIG's securities lending program and of securities held in general account portfolios. See Invested Assets — Securities Lending Activities for further information. Domestic Life Insurance premiums and other considerations increased in the three-month period ended September 30, 2008 compared to the same period in 2007 primarily due to strong payout annuity premiums and growth in life insurance business in force. Life insurance premiums and other considerations were also positively affected by a \$52 million decrease in the unearned revenue liability related to certain blocks of universal life business. The growth in payout annuity deposits was driven by structured settlements and terminal funding annuities in both the U.S. and Canada. Net investment income for the three-month period ended September 30, 2008 was lower than the same period in 2007 despite growth in the underlying business due to reduced overall investment yield from increased levels of short-term investments and higher policyholder trading losses of \$82 million.

Domestic Life Insurance reported an operating loss of \$3.9 billion for the three-month period ended September 30, 2008 compared to operating income of \$61 million in the same period in 2007 due principally to higher net realized

capital losses, partially offset by growth in the in-force block and favorable mortality experience in life insurance and payout annuities. Life insurance results were also affected by higher DAC amortization of \$30 million due to the decrease in the unearned revenue liability described above, resulting in a net benefit of \$22 million. Due to a projected decline in sales as a result of AIG parent's liquidity issues, the deferral of acquisition costs was limited during the three-month period ended September 30, 2008 resulting in additional acquisition expenses of \$13 million. In addition, 2007 payout annuities operating income was adversely affected by a \$30 million adjustment to increase group annuity reserves. Home service reported an operating loss due to higher net realized capital losses partially offset by improved margins on the in-force business. Group life/health reported an operating loss during the three-month period ended September 30, 2008 compared to the same period in 2007 primarily due to higher net realized capital losses and the strengthening of long-term disability reserves of \$8 million. In addition, for the three-month period ended September 30, 2008, policyholder benefit reserves included an increase of \$11 million related to the workers compensation reinsurance program compared to a reduction in expense of \$52 million for the same period in 2007. The loss for the three-month period ended September 30, 2008 includes a DAC benefit related to realized capital losses of \$36 million compared to a DAC benefit of \$4 million in the same period in 2007.

Year-to-Date Domestic Life Insurance Results

* Includes structured settlements, single premium immediate annuities and terminal funding annuities.

Total Domestic Life Insurance revenues decreased in the nine-month period ended September 30, 2008 compared to the same period in 2007 due to higher net realized capital losses partially offset by higher premiums and other considerations. The increase in net realized capital losses was primarily driven by other-than-temporary impairment charges related to AIG's securities lending program and of securities held in general account portfolios. See Invested Assets — Securities Lending Activities. Domestic Life Insurance premiums and other considerations increased in the nine-month period ended September 30, 2008 compared to the same period in 2007 primarily due to strong payout annuity premiums and growth in life insurance business in force. Life insurance premiums and other considerations were also positively affected by a \$52 million decrease in the unearned revenue liability related to certain blocks of universal life business. The growth in payout annuity deposits was driven by sales of structured settlements and terminal funding annuities in both the U.S. and Canada. Net investment income for the nine-month period ended September 30, 2008 was down slightly due to reduced overall investment yield from increased levels of short-term investments and higher policyholder trading losses of \$94 million.

Domestic Life Insurance reported an operating loss of \$5.8 billion for the nine-month period ended September 30, 2008 compared to operating income of \$774 million in the same period in 2007 due principally to higher net realized capital losses. Partially offsetting this item was the growth in

the in-force block and favorable mortality experience in the life insurance and payout annuities businesses. Life insurance results were also affected by higher DAC amortization of \$30 million due to the decrease in the unearned revenue liability described above, resulting in a net benefit of \$22 million. Due to a projected decline in sales as a result of AIG parent's liquidity issues, the deferral of acquisition costs was limited during the nine-month period ended September 30, 2008 resulting in additional acquisition expenses of \$17 million. In addition, 2007 payout annuities operating income was adversely affected by a \$30 million adjustment to increase group annuity reserves. Home service reported an operating loss due to higher net realized capital losses partially offset by improved margins on the in-force business. Group life/health reported an operating loss during the nine-month period ended September 30, 2008 compared to the same period in 2007 primarily due to higher net realized capital losses and the strengthening of long-term disability reserves of \$8 million. In addition, for the nine-month period ended September 30, 2008, policyholder benefit reserves included an increase of \$11 million related to the workers compensation reinsurance program compared to a reduction in expense of \$52 million for the same period in 2007. The operating loss during the nine-month period ended September 30, 2008 includes a DAC benefit related to realized capital losses of \$73 million compared to a DAC benefit of \$8 million in the same period in 2007.

* Life insurance sales include periodic premium from new business expected to be collected over a one-year period and unscheduled and single premiums from new and existing policyholders. Sales of group accident and health insurance represent annualized first year premium from new policies. Annuity sales represent deposits from new and existing policyholders.

Total Domestic Life Insurance sales and deposits increased 24 percent and 23 percent for the three- and nine-month periods, respectively, over the same periods in 2007. This growth was principally driven by strong term life, fixed annuity and payout annuity sales. However, the ratings downgrades and recent negative publicity related to AIG and AIG American General are expected to have a significant adverse effect on future sales.

Domestic Life Insurance periodic premium sales decreased 12 percent in the three-month period ended September 30, 2008 compared to the same period in 2007 primarily as a result of lower variable universal life sales. Periodic premium sales were consistent with the nine month period ended September 30, 2008 compared to the same period in 2007 as lower universal life sales were offset by increased private placement variable universal life and term sales. The U.S. life insurance market remains highly competitive and

Domestic Life's emphasis on maintaining new business margins has affected sales of term and universal life products, although recent enhancements to term products have resulted in an increase in sales. Group life/health growth was driven by increased sales of supplemental health and voluntary products. Payout annuities have experienced strong growth from terminal funding and structured settlement sales in both the U.S. and Canada. Home service growth was driven by a 14 percent increase in life insurance sales and by increased fixed annuity deposits. Individual fixed and runoff annuities sales and deposits have increased as a result of the current interest rate environment as credited rates offered during the quarter were more competitive with the rates offered by banks on certificates of deposit.

Domestic Life Insurance sales for the three-month period ended September 30, 2008 were up despite AIG parent's liquidity issues.

Quarterly Domestic Retirement Services Results

Domestic Retirement Services results, presented on a sub-product basis were as follows:

<i>(in millions)</i>	Premiums and Other Considerations	Net Investment Income	Net Realized Capital Gains (Losses)	Total Revenues	Operating Income (Loss)

Domestic Retirement Services incurred a significant operating loss of \$8.9 billion in the three-month period ended September 30, 2008 compared to operating income of \$202 million in the same period in 2007, primarily due to significantly increased net realized capital losses and losses on partnership investments. Net realized capital losses for Domestic Retirement Services increased primarily due to other-than-temporary impairment charges of \$8.0 billion in the three-month period ended September 30, 2008 compared to charges of \$157 million in the same period in 2007, primarily driven by severity losses related to RMBS in AIG's securities lending program due to the change of intent and ability to hold those securities to recovery.

Group retirement products and individual fixed annuities reported a combined operating loss of \$7.7 billion in the three-month period ended September 30, 2008 compared to operating income of \$162 million in the same period in 2007, primarily as a result of increased net realized capital losses due to higher other-than-temporary impairment charges, losses on partnership investments, DAC and SIA charges and reduced overall investment yield from increased levels of short-term

investments. DAC and SIA charges for group retirement products and individual fixed annuities totaled \$31 million and \$166 million, respectively, related to projected increases in surrenders. These negative effects were partially offset by decreases in DAC amortization and SIA costs of \$337 million related to the net realized capital losses compared to \$39 million in the same period in 2007.

Individual variable annuities reported an operating loss of \$830 million in the three-month period ended September 30, 2008 compared to income of \$41 million in the same period in 2007, primarily due to a \$531 million DAC charges and related reserve strengthening as a result of continued weakness in the equity markets and, to a lesser extent, increases in anticipated surrenders in the fourth quarter 2008. In addition, net realized capital losses increased largely due to higher other-than-temporary impairment charges and \$207 million of increased embedded policy derivative liability valuations, net of related hedges. These decreases were partially offset by decreases in DAC amortization and SIA costs of \$54 million related to the net realized capital losses compared to \$15 million in the same period in 2007.

Year-to-Date Domestic Retirement Services Results

Domestic Retirement Services results, presented on a sub-product basis were as follows:

* Primarily represents runoff annuity business sold through discontinued distribution relationships.

Domestic Retirement Services incurred a significant operating loss of \$12.8 billion in the nine-month period ended September 30, 2008 compared to operating income of \$1.5 billion in the same period in 2007, primarily due to significantly increased net realized capital losses and losses on partnership investments. Net realized capital losses for Domestic Retirement Services increased primarily due to other-than-temporary impairment charges of \$12.8 billion in the nine-month period ended September 30, 2008 compared to charges of \$343 million in the same period in 2007, primarily driven by losses related to securities held in AIG's securities lending program due to the change of intent and ability to hold those securities to recovery.

Both group retirement products and individual fixed annuities reported operating losses in the nine-month period ended September 30, 2008 compared to the same period in 2007 primarily as a result of increased net realized capital losses due to higher other-than-temporary impairment charges, lower net investment income due to partnership losses, lower yield enhancement income and reduced overall investment yield from increased levels of short term investments. In addition, DAC and SIA charges for group retirement products and individual fixed annuities totaled \$197 million as discussed above. These negative effects were partially offset by decreases in DAC amortization and SIA costs of \$666 million related to the net realized capital losses compared to \$94 million in the same period in 2007.

Individual variable annuities reported an operating loss of \$1.0 billion in the nine-month period ended September 30, 2008 compared to operating income of \$146 million in the

same period in 2007 primarily as a result of significantly increased net realized capital losses, principally due to other-than-temporary impairment charges and \$361 million of increased embedded policy derivative liability valuations, net of related hedges, as well as the \$531 million DAC and related reserve strengthening charges described above. Operating losses also included DAC and SIA benefits of \$110 million related to the net realized capital losses compared to \$21 million in the same period in 2007.

The account value roll forward for Domestic Retirement Services by product was as follows:

Surrenders and other withdrawals	(4,987)	(4,772)	(12,672)	(13,750)
Death benefits	(587)	(626)	(1,784)	(1,863)
Net inflows (outflows)	(1,133)	(1,190)	319	(2,653)
Change in fair value of underlying investments, interest credited, net of fees	(5,550)	1,895	(9,794)	8,130
Other	-	(1)	-	-
Balance at end of period, excluding runoff	142,250	153,612	142,250	153,612
Individual annuities runoff	5,307	5,829	5,307	5,829
Balance at end of period	\$147,557	\$159,441	\$147,557	\$159,441
General and separate account reserves and mutual funds				
General account reserve			\$ 91,472	\$ 89,595
Separate account reserve			48,518	61,696
Total general and separate account reserves			139,990	151,291
Group retirement mutual funds			7,567	8,150
Total reserves and mutual funds			\$147,557	\$159,441

The decrease in group retirement products deposits was due to a decline in both group annuity deposits and group mutual fund deposits. The improvement in individual fixed annuity deposits was due to a steepened yield curve, providing the opportunity to offer higher interest crediting rates than certificates of deposits and mutual fund money market rates

available at the time. Although new individual variable annuity products and features were developed in 2007 and 2008, sales did not increase due to declines in the equity markets.

Domestic Retirement Services surrenders and other withdrawals decreased in the group retirement and individual fixed annuity product lines in the nine-month period ended September 30, 2008 compared to the same period in 2007. In general, surrenders and other withdrawals decreased as a result of the relative lack of attractive alternative investment products. However, Domestic Retirement Services surrenders and other withdrawals increased in September 2008 subsequent to the AIG ratings downgrades and the announcement of the Fed Credit Agreement.

Domestic Retirement Services reserves by surrender charge category and surrender rates were as follows:

(in millions)	Group Retirement Products*	Individual Fixed Annuities	Individual Variable Annuities
September 30, 2008			
No surrender charge	\$47,162	\$11,362	\$10,886
0% – 2%	2,301	3,303	3,906
Greater than 2% – 4%	2,492	7,272	3,207
Greater than 4%	2,666	26,399	8,944
Non-surrenderable	910	3,287	586
Total reserves	\$55,531	\$51,623	\$27,529
Surrender rates	8.9%	13.3%	13.6%
September 30, 2007			
No surrender charge	\$46,193	\$ 9,763	\$13,142
0% – 2%	6,519	2,835	5,597
Greater than 2% – 4%	3,771	7,904	5,598
Greater than 4%	3,191	27,205	9,348
Non-surrenderable	875	3,429	92
Total reserves	\$60,549	\$51,136	\$33,777
Surrender rates	10.2%	14.4%	12.7%

* Excludes mutual funds of \$7.6 billion and \$8.2 billion at September 30, 2008 and 2007, respectively.

Surrender rates were essentially flat for group retirement products and individual fixed annuities for the three-month period ended September 30, 2008 compared to the same period in 2007. Surrender rates decreased for group retirement products and individual fixed annuities in the nine-month period ended September 30, 2008 compared to the same period in 2007. The surrender rate for individual fixed annuities continues to be driven by the yield curve and the general aging of the in-force block. Surrender rates increased for individual variable annuities in both the three- and nine-month periods ended September 30, 2008 compared to the same periods in 2007 due to publicity concerning AIG's financial situation as well as significant declines in the equity markets. As mentioned above, surrenders have increased in all three product lines in September 2008 subsequent to the AIG ratings downgrades and the announcement of the Fed Credit Agreement.

*Life Insurance & Retirement Services Net Investment Income and Net Realized Capital Gains (Losses)***The components of net investment income for Life Insurance & Retirement Services were as follows:**

Investment expenses	113	132	375	346
Net investment income	\$ 2,345	\$4,823	\$11,734	\$16,468

(a) Includes real estate income, income on non-partnership invested assets, securities lending and Foreign Life Insurance & Retirement Services' equal share of the results of AIG Credit Card Company (Taiwan).

(b) Relates principally to assets held in various trading securities accounts that do not qualify for separate account treatment under AICPA SOP 03-1, "Accounting and Reporting by Insurance Enterprises for Certain Nontraditional Long-Duration Contracts and for Separate Accounts" (SOP 03-1). These amounts are principally offset by an equal change included in incurred policy losses and benefits.

Net investment income decreased \$2.5 billion and \$4.7 billion in the three- and nine-month periods ended September 30, 2008 compared to the same periods in 2007, respectively, reflective of the recent market volatility. For the three- and nine-month periods ended September 30, 2008, policyholder trading losses were \$1.6 billion and \$1.7 billion, respectively, compared to gains of \$150 million and \$2.0 billion in the same periods of 2007 reflecting equity market declines in Japan and Asia. In addition, net investment income was negatively

affected by lower yield enhancement income from equity investments, and higher trading account losses. Domestic Life Insurance and Retirement Services held higher balances in cash and short-term investments which negatively affected investment income on fixed maturity securities. Historically, AIG generated income tax credits as a result of investing in Synfuels related to the partnership income (loss) shown in the table above. Synfuel production ceased effective December 31, 2007.

The components of net realized capital gains (losses) for Life Insurance & Retirement Services were as follows:

(a) See *Invested Assets — Portfolio Review — Other-Than-Temporary Impairments* for additional information.

(b) Includes losses of \$104 million and \$16 million allocated to participating policyholders for the three-month periods ended September 30, 2008 and 2007, respectively, and losses of \$282 million and \$21 million for the nine-month periods ended September 30, 2008 and 2007, respectively.

(c) Includes losses of \$12 million and \$143 million for the nine-month period ended September 30, 2008 for Domestic Life Insurance and Domestic Retirement Services, respectively, related to the adoption of FAS 157 with respect to embedded policy derivatives.

Included in net realized capital gains (losses) are gains (losses) on sales of investments, derivative gains (losses) for transactions that did not qualify for hedge accounting treatment under FAS 133, foreign exchange gains and losses, other-than-temporary impairment charges and the effects of the adoption of FAS 157 further described below.

Foreign Life Insurance & Retirement Services' net realized capital losses were significantly higher in the nine months ended September 30, 2008 compared to the same period in 2007. The increased other-than-temporary impairment charges were primarily driven by severity losses, credit events and the change in AIG's intent and ability to hold until recovery. See Invested Assets — Portfolio Review herein for further information. Other-than-temporary impairment charges for credit events were primarily related to exposure to certain financial institutions. Other-than-temporary impairment charges of \$1.4 billion for the nine months ended September 30, 2008 related to the change in AIG's intent and ability to hold to recovery were primarily driven by RMBS in AIG's securities lending portfolio and the need for additional liquidity for higher surrender activity in September, particularly in the Japan and Korea fixed annuity blocks. Foreign exchange transactions of \$317 million and \$124 million in the three and nine-month periods ended September 30, 2008, respectively, related to non-functional currency transactions, primarily in Japan and Asia. Derivatives in the Foreign Life Insurance & Retirement Services operations are primarily used to economically hedge cash flows related to U.S. dollar bonds back to the respective currency of the country, principally in Taiwan, Thailand and Singapore. These derivatives do not qualify for hedge accounting treatment under FAS 133 and are recorded in net realized capital gains (losses). The corresponding foreign exchange gain or loss with respect to the economically hedged bond is deferred in accumulated other comprehensive income (loss) until the bond is sold, matures or deemed to be other-than-temporarily impaired.

In the three- and nine-month periods ended September 30, 2008, the Domestic Life Insurance and Domestic Retirement Services operations incurred higher net realized capital losses primarily due to other-than-temporary impairment charges related to severity losses, credit events and the change in AIG's intent and ability to hold until recovery. Other-than-temporary impairment charges of \$6.9 billion for the nine months ended September 30, 2008 related to the change in AIG's intent and ability to hold to recovery were primarily driven by securities held in AIG's securities lending portfolio. Derivatives in the Domestic Life Insurance operations include affiliated interest rate swaps used to economically hedge cash flows on bonds and option contracts used to economically hedge cash flows on indexed annuity and universal life products. These derivatives do not qualify for hedge accounting treatment under FAS 133 and are recorded in net realized capital gains (losses). The corresponding gain or loss with respect to the economically hedged bond is deferred in

accumulated other comprehensive income (loss) until the bond is sold, matures or is deemed to be other-than-temporarily impaired.

The most significant effect of AIG's adoption of FAS 157 was the change in measurement of fair value for embedded policy derivatives. The pre-tax effect of adoption related to embedded policy derivatives was an increase in net realized capital losses of \$155 million as of January 1, 2008. The effect of initial adoption was primarily due to an increase in the embedded policy derivative liability valuations resulting from the inclusion of explicit risk margins.

Deferred Policy Acquisition Costs and Sales Inducement Assets

DAC for Life Insurance & Retirement Services products arises from the deferral of costs that vary with, and are directly related to, the acquisition of new or renewal business. Policy acquisition costs for life insurance products are generally deferred and amortized over the premium paying period in accordance with FAS 60, "Accounting and Reporting by Insurance Enterprises" (FAS 60). Policy acquisition costs that relate to universal life and investment-type products are generally deferred and amortized, with interest in relation to the incidence of estimated gross profits to be realized over the estimated lives of the contracts in accordance with FAS 97. Value of Business Acquired (VOBA) is determined at the time of acquisition and is reported on the consolidated balance sheet with DAC and amortized over the life of the business, similar to DAC. AIG offers sales inducements to contract holders (bonus interest) on certain annuity and investment contracts. Sales inducements are recognized as an asset (SIA) with a corresponding increase to the liability for policyholders' contract deposits on the consolidated balance sheet and are amortized over the life of the contract similar to DAC. The deferral of acquisition and sales inducement costs increased \$284 million in the nine-month period ended September 30, 2008 compared to the same period in 2007 primarily due to higher production in the Foreign Life Insurance operations and Domestic Retirement Services. Total amortization expense increased by \$540 million in the nine-month period ended September 30, 2008 compared to the same period in 2007. The current year amortization includes a \$957 million increase to operating income related to net realized capital losses in the first nine months of 2008 compared to \$170 million in the same period of 2007 reflecting significantly higher other-than-temporary impairment charges. Current year amortization for Domestic Retirement Services also includes adjustments for DAC and SIA charges of \$354 million related to the continued weakness in the equity markets, DAC and SIA charges of \$71 million due to higher surrender activity in September 2008 and DAC and SIA charges of \$199 million related to expected future higher surrender activity. There was no effect from higher surrender activity in Domestic Life and the Foreign Life operations as the write-off of the DAC was

offset by related policy charges. Annualized amortization expense levels in the first nine months of both 2008 and 2007 were approximately 13 percent of the opening DAC balance.

AIG adopted FAS 159 on January 1, 2008 and elected to apply fair value accounting for an investment-linked product

sold principally in Asia. Upon fair value election, all DAC and SIA are written off and there is no further deferral or amortization of DAC and SIA for that product. The amounts of DAC and SIA written off as of January 1, 2008 were \$1.1 billion and \$299 million, respectively.

The major components of the changes in DAC/VOBA and SIA were as follows:

<i>(in millions)</i>	Nine Months Ended September 30,					
	2008			2007		
	DAC/VOBA	SIA	Total	DAC/VOBA	SIA	Total

* In 2008, primarily represents the cumulative effect of adoption of FAS 159. In 2007, primarily represents the cumulative effect of adoption of SOP 05-1.

As AIG operates in various global markets, the estimated gross profits used to amortize DAC, VOBA and SIA are subject to differing market returns and interest rate environments in any single period. The combination of market returns

and interest rates may lead to acceleration of amortization in some products and regions and simultaneous deceleration of amortization in other products and regions.

DAC, VOBA and SIA for insurance-oriented, investment-oriented and retirement services products are reviewed for recoverability, which involves estimating the future profitability of current business. This review involves significant management judgment. If actual future profitability is substantially lower than estimated, AIG's DAC, VOBA and SIA may be subject to an impairment charge and AIG's results of operations could be significantly affected in future periods.

Future Policy Benefit Reserves

Periodically, the net benefit reserves (policy benefit reserves less DAC) established for Life Insurance & Retirement Services companies are tested to ensure that, including consideration of future expected premium payments, they are adequate to provide for future policyholder benefit obligations. The assumptions used to perform the tests are current best-estimate assumptions as to policyholder mortality, morbidity, terminations, company maintenance expenses and invested asset returns. For long duration traditional business, a "lock-in" principle applies, whereby the assumptions used to calculate the benefit reserves and DAC are set when a policy is issued and do not change with changes in actual experience. These assumptions include margins for adverse deviation in the event that actual experience might deviate from these assumptions. For business in force outside of North America, 47 percent of total policyholder benefit liabilities at September 30, 2008 represent traditional business where the lock-in principle applies. In most foreign locations, various guarantees are embedded in policies in force that may remain applicable for many decades into the future.

As experience changes over time, the best-estimate assumptions are updated to reflect observed changes. Because of the long-term nature of many of AIG's liabilities subject to the lock-in principle, small changes in certain of the assumptions may cause large changes in the degree of reserve adequacy. In particular, changes in estimates of future invested asset return assumptions have a large effect on the degree of reserve adequacy.

Taiwan

Beginning in 2000, the yield available on Taiwanese 10-year government bonds dropped from approximately 6 percent to 2.5 percent at September 30, 2008. Yields on most other invested assets have correspondingly dropped over

the same period. Current sales are focused on products such as:

- variable separate account products which do not contain interest rate guarantees,
- participating products which contain very low implied interest rate guarantees, and
- accident and health policies and riders.

In developing the reserve adequacy analysis for Nan Shan, several key best-estimate assumptions have been made:

- Observed historical mortality improvement trends have been projected to 2014;
- Morbidity, expense and termination rates have been updated to reflect recent experience;
- Taiwan government bond rates are expected to remain at current levels for 10 years and gradually increase to best-estimate assumptions of a market consensus view of long-term interest rate expectations;
- Foreign assets are assumed to comprise 35 percent of invested assets, resulting in a composite long-term investment assumption of approximately 4.9 percent; and
- The current practice permitted in Taiwan of offsetting positive mortality experience with negative interest margins, thus eliminating the need for mortality dividends, will continue.

Future results of the reserve adequacy tests will involve significant management judgment as to mortality, morbidity, expense and termination rates and investment yields. Adverse changes in these assumptions could accelerate DAC amortization and necessitate reserve strengthening. The ability to maintain the current investment strategy is uncertain due to the recent significant declines in the Taiwan equity markets and the related effect on capital solvency and potential actions by the Taiwan regulators. Future results of the reserve adequacy tests will be affected by the nature, timing and duration of any potential change in investment strategy implemented for Nan Shan.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance.

Financial Services Results

Financial Services results were as follows:

(in millions)	Three Months Ended September 30,		Percentage Increase/ (Decrease)	Nine Months Ended September 30,		Percentage Increase/ (Decrease)
	2008	2007		2008	2007

(a) Both revenues and operating income (loss) include unrealized market valuation losses on AIGFP's super senior credit default swap portfolio of \$7.1 billion and \$21.7 billion for the three- and nine-month periods ended September 30, 2008, respectively, and \$352 million for the three- and nine-month periods ended September 30, 2007.

(b) The nine-month period ended September 30, 2007 included a pre-tax charge of \$178 million related to domestic Consumer Finance's mortgage banking activities. Based on a current evaluation of the estimated cost of implementing the Supervisory Agreement entered into with the OTS, partial reversals of this prior year charge included in the three- and nine-month periods ended September 30, 2008 were \$10 million and \$53 million, respectively.

(c) The three- and nine-month periods ended September 30, 2008 include goodwill impairment charges of \$341 million and \$91 million related to Consumer Finance and Capital Markets, respectively, resulting from the downturn in the housing markets, the credit crisis and the decision to exit certain AIGFP businesses.

(d) The three- and nine-month periods ended September 30, 2008 include a \$563 million reversal of accrued compensation expense under AIGFP's various deferred compensation plans and special incentive plan as a result of significant losses recognized by AIGFP in 2008.

Financial Services reported operating losses in the three- and nine-month periods ended September 30, 2008 compared to operating income in the same periods in 2007, primarily due to unrealized market valuation losses on AIGFP's super senior credit default swap portfolio of \$7.1 billion and \$21.7 billion in the three- and nine-month periods ended September 30, 2008, respectively, and \$352 million for the three- and nine-month periods ended September 30, 2007. The remaining operating loss resulted from the change in credit spreads on AIGFP's other assets and liabilities and a decline in operating income for AGF. AGF's operating income declined in the three- and nine-month periods ended September 30, 2008 compared to the same periods in 2007 primarily due to increases in the provision for finance receivable losses and goodwill impairment. In addition, AGF recorded a pre-tax charge of \$27 million in second quarter 2008 resulting from AGF's decision to cease its wholesale originations.

In the first nine months of 2007, AGF recorded a pre-tax charge of \$178 million representing the estimated cost of implementing a supervisory agreement (the Supervisory Agreement) entered into with the Office of Thrift Supervision (OTS), which is discussed in the Consumer Finance results of operations section. Based on the evaluations of the estimated cost of implementing the Supervisory Agreement, AGF recorded partial reversals of this prior year charge of \$10 million and \$53 million for the three- and nine-month periods ended September 30, 2008, respectively.

ILFC generated strong operating income growth in the three- and nine-month periods ended September 30, 2008 compared to the same periods in 2007, driven to a large extent by a larger aircraft fleet, higher lease rates and higher utilization and lower composite borrowing rates.

Aircraft Leasing

Aircraft Leasing operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to foreign and domestic airlines. Revenues also result from the remarketing of commercial aircraft for ILFC's own account, and remarketing and fleet management services for airlines and financial institutions. ILFC finances its aircraft purchases primarily through the issuance of debt instruments. ILFC economically hedges part of its floating rate and substantially all of its foreign currency denominated debt using interest rate and foreign currency derivatives. Starting in the second quarter of 2007, ILFC began applying hedge accounting to most of its derivatives. The composite borrowing rates, which include the effect of derivatives, at September 30, 2008 and 2007 were 5.01 percent and 5.28 percent, respectively.

ILFC typically contracts to re-lease aircraft before the end of the existing lease term. For aircraft returned before the end of the lease term, ILFC has generally been able to re-lease such aircraft within two to six months of their return. As a lessor, ILFC considers an aircraft "idle" or "off lease" when the

aircraft is not subject to a signed lease agreement or signed letter of intent. During the nine-month period ended September 30, 2008, 22 of ILFC's aircraft were returned by bankrupt lessees. As of October 27, 2008, ILFC has sold one and leased 18 of the 22 aircraft. As of October 31, 2008, all but three of the new aircraft scheduled for delivery through 2010 have been leased.

Quarterly Aircraft Leasing Results

ILFC's operating income increased in the three-month period ended September 30, 2008 compared to the same period in 2007. Rental revenues increased by \$75 million or 6 percent, driven by a larger aircraft fleet, higher lease rates and higher utilization. As of September 30, 2008, 950 aircraft in ILFC's fleet were subject to operating leases compared to 894 aircraft as of September 30, 2007. Interest expense decreased by \$19 million in the three-month period ended September 30, 2008 compared to the same period in 2007 as a result of lower short-term interest rates. The increases in revenues were offset by an increase in depreciation. Depreciation expense increased by \$27 million, or 6 percent, in line with the increase in the size of the aircraft fleet. In the three-month period ended September 30, 2008 and 2007, the gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses, were \$67 million and \$(19) million, respectively, in both revenues and operating income.

Year-to-Date Aircraft Leasing Results

ILFC's operating income increased in the nine-month period ended September 30, 2008 compared to the same period in 2007. Rental revenues increased by \$325 million or 10 percent, driven by a larger aircraft fleet, higher lease rates and higher utilization. As of September 30, 2008, 950 aircraft in ILFC's fleet were subject to operating leases compared to 894 aircraft as of September 30, 2007. Interest expense decreased by \$70 million in the nine-month period ended September 30, 2008, compared to the same period in 2007, as a result of lower short-term interest rates. The increases in revenues were partially offset by an increase in depreciation. Depreciation expense increased by \$102 million, or 8 percent, in line with the increase in the size of the aircraft fleet. In the nine-month period ended September 30, 2008 and 2007, the gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses, were \$4 million and \$(32) million, respectively, in both revenues and operating income.

Capital Markets

Capital Markets represents the operations of AIGFP, which has engaged as principal in a wide variety of financial transactions, including standard and customized financial products

involving commodities, credit, currencies, energy, equities and rates. The credit products include credit protection written through credit default swaps on super senior risk tranches of diversified pools of loans and debt securities. AIGFP has also invested in a diversified portfolio of securities and principal investments and engaged in borrowing activities involving the issuance of standard and structured notes and other securities, and entering into GIAs. Given the extreme market conditions experienced during the third quarter of 2008, downgrades of AIG's credit ratings by the rating agencies, as well as AIG's intent to refocus on its core businesses, AIGFP began unwinding its businesses and portfolios.

Historically, AIG's Capital Markets operations derived a significant portion of their revenues from hedged financial positions entered into in connection with counterparty transactions. AIGFP has also participated as a dealer in a wide variety of financial derivatives transactions. Revenues and operating income of the Capital Markets operations and the percentage change in these amounts for any given period are significantly affected by changes in the fair value of AIGFP's assets and liabilities and by the number, size and profitability of transactions entered into during that period relative to those entered into during the comparative period.

AIGFP's products generally require sophisticated models and significant management assumptions to determine fair values and, particularly during times of market disruption, the absence of observable market data can result in fair values at any given balance sheet date that are not indicative of the ultimate settlement values of the products.

Quarterly Capital Markets Results

Capital Markets reported an operating loss in the three-month period ended September 30, 2008 compared to operating income in the same period of 2007, primarily due to a \$7.1 billion unrealized market valuation loss related to AIGFP's super senior credit default swap portfolio principally written on multi-sector CDOs and credit valuation adjustments on AIGFP's assets and liabilities. During 2008, AIGFP instituted a number of measures to attempt to manage its liquidity in light of the deteriorating credit markets and its limited ability to access the capital markets. These measures ultimately were unsuccessful. These issues coupled with concerns regarding AIG's resulting financial condition and the subsequent downgrade of its ratings by rating agencies on September 15, 2008 have severely affected AIGFP's non-credit businesses resulting in a significant decline in revenue. AIGFP has not replaced revenues from certain structured transactions that were terminated or matured at the end of 2007 and early 2008.

The change in fair value of AIGFP's credit default swaps was caused by the significant widening in spreads and the downgrades of RMBS and CDO securities by rating agencies in the three-month period ended September 30, 2008 driven

by the credit concerns resulting from U.S. residential mortgages and the severe liquidity crisis affecting the markets. See Critical Accounting Estimates — Valuation of Level 3 Assets and Liabilities.

During the third quarter of 2008, AIGFP purchased super senior CDO securities with a net notional amount of \$5.7 billion in connection with 2a-7 Puts. Upon purchase, \$4.1 billion of these securities were included in AIGFP's trading securities portfolio and \$1.6 billion of the securities were included in the available for sale portfolio at their fair value. Effective January 1, 2008 and until August 2008, AIGFP elected to apply the fair value option to all of its investment securities. In August 2008, AIGFP revised this election and now evaluates whether to elect the fair value option on a case by case basis for securities purchased in connection with the existing structured transaction. Approximately \$840 million of the cumulative unrealized market valuation loss previously recognized on these derivatives was realized as a result of these purchases.

Capital Markets' operating loss for the three-month period ended September 30, 2008 includes a net loss of \$987 million representing the effect of changes in credit spreads on the valuation of AIGFP's assets and liabilities, including \$98 million of gains reflected in the unrealized market valuation loss on super senior credit default swaps. Historically, AIG's credit spreads and those on its assets moved in a similar fashion. This relationship began to diverge during second quarter of 2008 and the divergence continued through the third quarter. While AIG's credit spreads widened significantly more than the credit spreads on the ABS and CDO products, which represent a significant portion of AIGFP's investment portfolio, the losses on AIGFP's assets more than offset the net gain on its liabilities, which were driven by the significant widening in AIG's credit spreads. The net gain on AIGFP's liabilities was reduced by the effect of posting collateral and the early terminations of GIAs.

The following table presents AIGFP's credit valuation adjustment gains (losses) for the three-month period ended September 30, 2008 (excluding intercompany transactions):

<i>(in millions)</i>			
Counterparty Credit		AIG Inc.'s Own Credit	
Valuation Adjustment on Assets		Valuation Adjustment on Liabilities	
Trading securities	\$(2,032)	Term notes	\$ 1,003
Loans and other assets	(7)	Hybrid term notes	729
Derivative assets	(240)	GIAs	(1,272)
		Other liabilities	81
		Derivative liabilities*	751
<u>Decrease in assets</u>	<u>\$(2,279)</u>	<u>Decrease in liabilities</u>	<u>\$ 1,292</u>
Net pre-tax decrease to other income	\$ (987)		

* Includes super senior credit default swap portfolio

During the third quarter of 2008, AIGFP recognized a gain of \$450 million on a sale of its interest in a private equity investment to a consolidated affiliate of AIG, which is

eliminated in consolidation. This gain was partially offset by a \$322 million loss recorded under the equity method of accounting reflecting AIGFP's share of a goodwill impairment charge recognized by this private equity investment in the third quarter of 2008.

During 2008, AIGFP's revenues from certain products have declined, in part, as a consequence of the continued disruption in the credit markets, the general decline in liquidity in the marketplace, and AIGFP's efforts to manage its liquidity.

The most significant component of Capital Markets operating expenses is compensation. Due to the significant losses recognized by AIGFP during 2008, the entire amount of \$563 million accrued under AIGFP's various deferred compensation plans and special incentive plan was reversed in the third quarter of 2008. In the first quarter of 2008, AIGFP established an employee retention plan, which guarantees a broad group of AIGFP's employees and consultants a minimum level of compensation for each of the 2008 and 2009 compensation years, subject to mandatory partial deferral which, in certain circumstances, will be indexed to the price of AIG stock. The expense related to the retention plan is being recognized over the vesting period, beginning in the first quarter of 2008.

Year-to-Date Capital Markets Results

Capital Markets reported an increased operating loss in the nine-month period ended September 30, 2008 compared to the operating loss in the same period of 2007, primarily due to \$21.7 billion in unrealized market valuation losses related to AIGFP's super senior credit default swap portfolio principally written on multi-sector CDOs and credit valuation adjustments on AIGFP's assets and liabilities. Financial market conditions in the nine-month period ended September 30, 2008 were characterized by widening credit spreads and declining interest rates.

During the second quarter of 2008, AIGFP implemented further refinements to the cash flow waterfall used by the BET model and the assumptions used therein. These refinements reflected the ability of a CDO to use principal proceeds to cover interest payment obligations on lower-rated tranches, the ability of a CDO to use principal proceeds to cure a breach of an over collateralization test, the ability of a CDO to amortize certain senior CDO tranches on a pro-rata or sequential basis and the preferential payment of management fees. To the extent there is a lag in the prices provided by the collateral managers, AIG refines those prices by rolling them forward to the end of the quarter using prices provided by a third party pricing service. The net effect of these refinements was an incremental unrealized market valuation loss of \$342 million. Refinements made during the third quarter of 2008 had only a de minimis effect on the unrealized market valuation loss.

During the second quarter of 2008, AIGFP issued new 2a-7 Puts with a net notional amount of \$5.4 billion on the super senior security issued by a CDO of AAA-rated commercial mortgage-backed securities (CMBS) pursuant to a facility that was entered into in 2005. At this time, AIGFP is not party to any commitments to enter into any new 2a-7 Puts.

During the nine month period ended September 30, 2008, AIGFP extinguished its obligations with respect to a credit default swap by purchasing the protected CDO security for \$103 million, its principal amount outstanding related to this obligation. Additionally, AIGFP purchased other super senior CDO securities with a net notional amount of \$6.6 billion in connection with 2a-7 Puts. Upon purchase, \$5.0 billion of these securities were included in AIGFP's trading portfolio and \$1.6 billion in available for sale portfolio at their fair value. Approximately \$907 million of the cumulative unrealized market valuation loss previously recognized on these derivatives was realized as a result of these purchases.

The net loss recognized for the nine-month period ended September 30, 2007 included a \$166 million reduction in fair value of certain derivatives that are an integral part of, and economically hedge, the structured transactions potentially affected by the proposed guidance by the United States Department of the Treasury affecting the ability to claim foreign tax credits.

Effective January 1, 2008, AIGFP adopted FAS 157. The most significant effect of adopting FAS 157 was a change in the valuation methodologies for hybrid financial instruments and derivative liabilities (both freestanding and embedded) historically carried at fair value. The changes were primarily to incorporate AIGFP's own credit risk, when appropriate, in the fair value measurements.

Effective January 1, 2008, AIGFP elected to apply the fair value option under FAS 159 to all eligible assets and liabilities (other than equity method investments trade receivables and trade payables) because electing the fair value option allows AIGFP to more closely align its earnings with the economics of its transactions by recognizing concurrently through earnings the change in fair value of its derivatives and the offsetting change in fair value of the assets and liabilities being hedged as well as the manner in which the business is evaluated by management. In August 2008, AIGFP prospectively modified this election as management believes it is appropriate to exclude the automatic election of securities purchased in connection with existing structured credit transactions and their related funding obligations. AIGFP will evaluate whether or not to elect the fair value option on a case-by-case basis for securities purchased in connection with existing structured credit transactions and their related funding obligations.

Capital Markets' operating loss for the nine-month period ended September 30, 2008 includes a loss of \$1.4 billion representing the effect of changes in credit spreads on the

valuation of AIGFP's assets and liabilities, including \$207 million of gains reflected in the unrealized market valuation loss on super senior credit default swaps. Historically, AIG's credit spreads and those on its assets moved in a similar fashion. This relationship began to diverge during second quarter of 2008 and continued to diverge through the third quarter. While AIG's credit spreads widened significantly more than the credit spreads on the ABS and CDO products, which represent a significant portion of AIGFP's investment portfolio, the losses on AIGFP's assets more than offset the net gain on its liabilities, which were driven by the significant widening in AIG's credit spreads. The net gain on AIGFP's liabilities was reduced by the effect of posting collateral and the early terminations of GIAs. Included in the nine-month period ended September 30, 2008 operating loss is the transition amount of \$291 million related to the adoption of FAS 157 and FAS 159.

The following table presents AIGFP's credit valuation adjustment gains (losses) for the nine-month period ended September 30, 2008 (excluding intercompany transactions):

<i>(in millions)</i>			
Counterparty Credit		AIG Inc.'s Own Credit	
Valuation Adjustment on Assets		Valuation Adjustment on Liabilities	
Trading securities	\$(4,683)	Term notes	\$1,185
Loans and other assets	(35)	Hybrid term notes	1,344
Derivative assets	(543)	GIAs	(200)
		Other liabilities	109
		Derivative liabilities*	1,390
Decrease in assets	\$(5,261)	Decrease in liabilities	\$3,828
Net pre-tax decrease to other income	\$(1,433)		

* Includes super senior CDS portfolio

Year to date results also reflect the reversal of amounts accrued under AIGFP's various deferred compensation plans in the third quarter of 2008 as discussed above.

Consumer Finance

AIG's Consumer Finance operations in North America are principally conducted through AGF. AGF derives most of its revenues from finance charges assessed on outstanding real estate loans, secured and unsecured non-real estate loans and retail sales finance receivables and credit-related insurance.

Effective February 29, 2008, AGF purchased a portion of Equity One, Inc.'s consumer branch finance receivable portfolio consisting of \$1.0 billion of real estate loans, \$290 million of non-real estate loans, and \$156 million of retail sales finance receivables.

AIG's foreign consumer finance operations are principally conducted through AIGCFG. AIGCFG operates primarily in emerging and developing markets. AIGCFG has operations in Argentina, China, Brazil, Hong Kong, Mexico, Philippines, Poland, Taiwan, Thailand, India and Colombia. In April 2008, AIGCFG decided to sell or liquidate its existing

operations in Taiwan. In October 2008, AIGCFG decided to sell its existing operations in Europe and Asia.

Certain of the AIGCFG operations are partly or wholly owned by life insurance subsidiaries of AIG. Accordingly, the financial results of those companies are allocated between Financial Services and Life Insurance & Retirement Services according to their ownership percentages. While products vary by market, the businesses generally provide credit cards, unsecured and secured non-real estate loans, term deposits, savings accounts, retail sales finance and real estate loans. AIGCFG originates finance receivables through its branches and direct solicitation. AIGCFG also originates finance receivables indirectly through relationships with retailers, auto dealers, and independent agents.

Quarterly Consumer Finance Results

Consumer Finance reported a significant operating loss in the three-month period ended September 30, 2008 compared to operating income in the same period in 2007, primarily due to the write-down of AGF's goodwill of \$341 million during the third quarter of 2008 and increases in the provision for finance receivable losses of \$198 million.

During 2007 and the nine months ended September 30, 2008, the U.S. residential real estate and credit markets continued to experience significant turmoil as housing prices softened, unemployment increased, consumer delinquencies increased, and credit availability contracted and became more expensive for consumers and financial institutions. These market developments are reflected in AGF's decline in consumer real estate loan originations affecting both revenue and operating income in 2007 and 2008.

AGF's revenues decreased \$18 million or 2 percent during the three-month period ended September 30, 2008 compared to the same period in 2007. Revenues from AGF's loan brokerage fees decreased during the three-month period reflecting the slower United Kingdom housing market. AGF's net finance receivables totaled \$26.2 billion at September 30, 2008, an increase of approximately \$678 million compared to its net finance receivables at December 31, 2007. This increase reflects the purchase of \$1.5 billion of finance receivables from Equity One, Inc. on February 29, 2008. The increase in the net finance receivables resulted in an increase in revenues generated from these assets, partially offset by the reduced residential mortgage originations as a result of the slower U.S. housing market.

Revenues from foreign consumer finance operations increased by 73 percent in the three-month period ended September 30, 2008 compared to the same period in 2007, due primarily to loan growth, particularly in Poland and Latin America, and revenues from the recently acquired business in Colombia. The increase in revenues was partially offset by increases in the provision for finance receivable losses and

operating expenses associated with branch expansions, acquisition activities and product promotion campaigns.

Year-to-Date Consumer Finance Results

Consumer Finance reported a significant operating loss in the nine-month period ended September 30, 2008 compared to operating income in the same period in 2007, primarily due to increases in the provision for finance receivable losses of \$471 million and the write-down of AGF's goodwill of \$341 million during the nine months ended September 30, 2008. The nine-month period ended September 30, 2007 reflected a charge of \$178 million relating to the estimated cost of implementing the Supervisory Agreement.

AGF's revenues increased \$34 million or 2 percent during the nine-month period ended September 30, 2008 compared to the same period in 2007. Revenues from AGF's finance receivables increased as a result of the \$1.5 billion finance receivable purchase in the first quarter of 2008, but were partially offset by reduced residential mortgage originations due to the slower U.S. housing market. Revenues from AGF's mortgage banking activities increased \$166 million in the nine-month period ended September 30, 2008 compared to the same period in 2007 (which included a charge of \$178 million related to the Supervisory Agreement). AGF reversed \$53 million of the previously recorded charge in the nine months ended September 30, 2008. The nine-month period ended September 30, 2007 included a recovery of \$65 million from a favorable out of court settlement. Revenues from AGF's loan brokerage fees decreased during the nine-month period reflecting the slower United Kingdom housing market.

Revenues from the foreign consumer finance operations increased by 55 percent in the nine-month period ended September 30, 2008 compared to the same period in 2007, due primarily to loan growth, particularly in Poland and Latin America, and revenues from the recently acquired business in Colombia. The increase in revenues was more than offset by increases in the provision for finance receivable losses and operating expenses associated with branch expansions, acquisition activities and product promotion campaigns.

Credit Quality of Finance Receivables

The overall credit quality of AGF's finance receivables portfolio deteriorated during the nine-month period ended September 30, 2008 due to negative economic fundamentals, the aging of the real estate loan portfolio and a higher proportion of non-real estate loans and retail sales finance receivables.

At September 30, 2008, the 60-day delinquency rate for the entire portfolio increased by 171 basis points to 4.18 percent compared to September 30, 2007, while the 60-day delinquency rate for real estate loans increased by 197 basis points to 4.19 percent. For the three-month period ended September 30, 2008, AGF's net charge-off rate increased to 2.15 percent compared to 1.15 percent for the same period in

2007 and for the nine-month period ended September 30, 2008 increased to 1.81 percent compared to 1.05 percent for the same period in 2007.

AGF's allowance for finance receivable losses as a percentage of outstanding receivables was 3.66 percent at September 30, 2008 compared to 2.11 percent at September 30, 2007.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products. These services and products are offered to individuals, pension funds and institutions (including AIG subsidiaries) globally through AIG's Spread-Based Investment business, Institutional Asset Management, and Brokerage Services and Mutual Funds business. Also included in Asset Management operations are the results of certain SunAmerica sponsored partnership investments.

Revenues and operating income (loss) for Asset Management are affected by the general conditions in the equity and credit markets. In addition, net realized gains and carried interest revenues are contingent upon various fund closings, maturity levels, investment management performance and market conditions.

Spread-Based Investment Business

AIG's Spread-Based Investment business includes the results of AIG's proprietary Spread-Based Investment operations, the Matched Investment Program (MIP), which was launched in September of 2005 to replace the Guaranteed Investment Contract (GIC) program, which is in runoff whereby no new GIC contracts are being written. The MIP is an investment strategy that involves investing in various asset classes with financing provided through third parties. This business uses various risk mitigating strategies designed to hedge interest rate and currency risk associated with underlying investments and related liabilities. The MIP undertakes various other types of investment risk, namely credit, duration and maturity risk.

Institutional Asset Management

AIG's Institutional Asset Management business, conducted through AIG Investments, provides an array of investment products and services globally to institutional investors, pension funds, AIG subsidiaries and high net worth investors. These products include traditional equity and fixed maturity securities, and a wide range of alternative asset classes. These services include investment advisory and subadvisory services, investment monitoring, securities lending and transaction structuring. Within the fixed maturity and equity asset classes, AIG Investments offers various forms of structured investments aimed at achieving superior returns or capital preservation. Within the alternative asset class, AIG Investments

offers hedge and private equity funds and fund-of-funds, direct investments and distressed debt investments.

AIG Global Real Estate provides a wide range of real estate investment and management services for AIG subsidiaries, as well as for third-party institutional investors, high net worth investors and pension funds. Through a strategic network of local real estate ventures, AIG Global Real Estate actively invests in and develops office, industrial, multi-family residential, retail, mixed-use hotel and resort properties located around the world.

AIG Private Bank offers banking, trading and investment management services to private clients and institutions globally. To further focus on its wealth management expansion efforts, AIG Private Bank Ltd. entered into a joint venture agreement with Bank Sarasin & Co. Ltd. Under this agreement, a new Swiss bank was established, into which both AIG Private Bank Ltd. and Bank Sarasin & Co. Ltd. contributed their retail banking businesses. The new bank commenced operations on July 1, 2008 with assets under management of approximately \$8 billion.

From time to time, AIG Investments acquires warehoused assets. During the warehousing period, AIG bears the cost and risks associated with carrying these investments, consolidates them on its balance sheet and records the operating results until the investments are transferred, sold or otherwise divested. Changes in market conditions may negatively affect the fair value of these warehoused investments. Market conditions may impede AIG from launching new investment products for which these warehoused assets are being held and may prevent AIG from recovering its investment upon transfer or divestment. In the event that AIG is unable to transfer or otherwise divest its interest in the warehoused investment to third parties, AIG could be required to hold these investments indefinitely. In certain instances, the consolidated warehoused investments are not wholly owned by AIG. In such cases, AIG shares the risk associated with warehousing the asset with the minority interest investors.

Brokerage Services and Mutual Funds

AIG's Brokerage Services and Mutual Funds business, conducted through AIG Advisor Group, Inc. and AIG SunAmerica Asset Management Corp., provides broker-dealer related services and mutual funds to retail investors, group trusts and corporate accounts through an independent network of financial advisors. AIG Advisor Group, Inc., a subsidiary of AIG Retirement Services, Inc., is comprised of several broker-dealer entities that provide these services to clients primarily in the U.S. marketplace. AIG SunAmerica Asset Management Corp. manages, advises and/or administers retail mutual funds, as well as the underlying assets of variable annuities sold by AIG SunAmerica and VALIC to individuals and groups throughout the United States.

Other Asset Management

Included in Other Asset Management is income or loss from certain AIG SunAmerica sponsored partnerships and

partnership investments. Partnership assets consist of investments in a diversified portfolio of private equity funds, affordable housing partnerships and hedge fund investments.

Asset Management Results**Asset Management results were as follows:**

<i>(in millions)</i>	Three Months Ended September 30,		Percentage Increase/ (Decrease)	Nine Months Ended September 30,		Percentage Increase/ (Decrease)
	2008	2007		2008	2007

Asset Management recognized operating losses in the three- and nine-month periods ended September 30, 2008 compared to operating income in the same periods in 2007, primarily due to other-than-temporary impairment charges on fixed maturity securities, significantly lower partnership income, lower securities lending fees, lower net carried interest revenues and impairments on real estate investments. Partially offsetting these declines were increases in net foreign exchange gains on foreign currency denominated GIC and MIP liabilities. Included in operating income (loss) for the three-month period ended September 30, 2008, was the positive effect of excluding the credit valuation adjustment on intercompany derivatives, which had no effect on AIG's consolidated results. The effect of this change on Asset Management was an increase of \$155 million to operating income for the three- and nine-month periods ended September 30, 2008, and has been included in the net mark to market gains/losses related to interest rate and foreign exchange hedges, as well as the losses on credit default swaps, identified below. Included in the operating income during the nine-month period ended September 30, 2007 was a gain on the sale of a portion of AIG's investment in The Blackstone Group L.P. (Blackstone) in connection with its initial public offering.

Quarterly Spread-Based Investment Business Results

The Spread-Based Investment business reported an operating loss in the three-month period ended September 30, 2008 compared to marginal operating income in the same period in 2007 due to significantly higher net realized capital losses and lower partnership income. Net realized capital losses for the three-month period ended September 30, 2008, were \$1.3 billion compared to \$239 million in the same period of 2007.

The increase in net realized capital losses primarily consists of an increase of \$1.8 billion in other-than-temporary impairment charges on fixed maturity securities for both the GIC and MIP portfolios and higher mark to market losses on credit default swaps in the MIP. Partially offsetting these increases was a \$995 million increase in net foreign exchange gains on foreign currency denominated GIC and MIP liabilities and higher net mark to market gains of \$125 million on interest rate and foreign exchange hedges not qualifying for hedge accounting treatment for both the GIC and MIP. Included in the net mark-to-market gains is a credit valuation adjustment on swaps in a liability position.

The other-than-temporary impairment charges on fixed maturity securities held in the GIC and MIP portfolios were \$1.4 billion for the GIC and \$579 million for the MIP for the three-month period ended September 30, 2008. These impairments primarily resulted from severity losses and the change in AIG's intent and ability to hold securities to recovery related to the Securities Lending portfolio. See Invested Assets — Portfolio Review — Other-Than-Temporary Impairments.

In the GIC program, income from partnership investments declined \$330 million for the three-month period ended September 30, 2008, compared to the same period of 2007, reflecting higher returns in the 2007 period and weaker market conditions in 2008. Partially offsetting this decline were foreign exchange gains on foreign currency denominated GIC reserves, which increased by \$916 million in the three-month period ended September 30, 2008 compared to the same period in 2007 as a result of the strengthening of the U.S. dollar. As noted below, a significant portion of these GIC reserves mature in the next twelve months.

Operating income for the MIP increased in the three-month period ended September 30, 2008 compared to the same period in 2007, primarily due to higher net interest income resulting from the effect of lower funding costs related to interest rate swaps on debt not receiving hedge accounting treatment and interest accretion related to certain securities that were impaired in prior periods. The MIP net mark to market gains increased \$88 million in the third quarter of 2008 compared to the same period in 2007 due primarily to interest rate and foreign exchange derivative positions that, while partially effective in hedging interest rate and foreign exchange risk, did not qualify for hedge accounting treatment. Partially offsetting these increases were higher net mark to market losses of \$135 million related to credit default swap investments. The MIP invests in credit default swaps comprised predominantly of single-name high-grade corporate exposures. These losses were partially driven by the widening of corporate credit spreads. AIG enters into hedging arrangements to mitigate the effect of changes in currency and interest rates associated with the fixed and floating rate and foreign currency denominated obligations issued under these programs. Some of these hedging relationships qualify for hedge accounting treatment, while others do not. Income or loss from these hedges not qualifying for hedge accounting treatment are classified as net realized capital gains (losses) in AIG's consolidated statement of income (loss). AIG did not issue any additional debt to fund the MIP in the three-month period ended September 30, 2008 and does not intend to issue any additional debt to fund the MIP.

Year-to-Date Spread-Based Investment Business Results

The Spread-Based Investment business reported an operating loss in the nine-month period ended September 30, 2008 compared to operating income in the same period in 2007 due to significantly higher net realized capital losses and lower partnership income. Included in the operating loss were net realized capital losses of \$3.1 billion for the nine-month period ended September 30, 2008, compared to \$326 million in the same period in 2007. The increase in net realized capital losses for the nine-month period ended September 30, 2008 primarily consist of an increase of \$3.7 billion in other-than-temporary impairment charges on fixed maturity securities for both the GIC and MIP and higher net mark to market losses of \$244 million on credit default swap investments held by the MIP due to the widening of corporate credit spreads. Partially offsetting these declines were increased net mark to market gains of \$530 million on interest rate and foreign exchange hedges not qualifying for hedge accounting treatment for both the GIC and MIP and a \$757 million increase in foreign exchange related gains on foreign denominated GIC reserves and MIP liabilities. Included in the net mark-to-market gains is a credit valuation adjustment on swaps in a liability position.

The other-than-temporary impairment charges on fixed maturity securities held in the GIC and MIP portfolios were \$2.5 billion for the GIC and \$1.4 billion for the MIP for the nine-month period ended September 30, 2008, primarily resulting from severity losses and the change in AIG's intent and ability to hold securities to recovery related to the Securities Lending portfolio. See Invested Assets — Portfolio Review — Other-Than-Temporary Impairments.

In the GIC program, income from partnership investments decreased \$984 million for the nine-month period ended September 30, 2008, compared to the same period of 2007 due to significantly higher returns in the 2007 period and weaker market conditions in 2008. Also contributing to the decline was the one-time distribution from a single partnership of \$164 million in the nine-month period ended September 30, 2007. Offsetting these declines were foreign exchange gains on foreign-denominated GIC reserves which increased by \$694 million in the nine-month period ended September 30, 2008 as a result of the strengthening of the U.S. dollar compared to the 2007 period and an increase in net mark to market gains on derivative positions of \$501 million. As noted below, a significant portion of these GIC reserves mature in the next twelve months. The derivative gains included net mark to market gains on interest rate and foreign exchange derivatives used to economically hedge the effect of interest rate and foreign exchange rate movements on GIC reserves. Although these economic hedges are partially effective in hedging the interest rate and foreign exchange risk, AIG has not applied hedge accounting treatment.

The MIP recognized higher operating income in the nine-months ended September 30, 2008 compared to the same period in 2007 due to higher net interest income due to a larger average asset base, the effect of lower funding costs related to interest rate swaps on debt not receiving hedge accounting treatment and interest accretion related to certain securities that were impaired in prior periods.

AIG did not issue any additional debt to fund the MIP in the nine-month period ended September 30, 2008 and does not intend to issue any additional debt to fund the MIP. Through September 30, 2008, the MIP had cumulative debt issuances of \$13.4 billion.

The GIC is in runoff with no new GICs issued subsequent to 2005. The anticipated runoff of the domestic GIC portfolio at September 30, 2008 was as follows:

<i>(in billions)</i>	Less Than One Year	1-3 Years	3+5 Years	Over Five Years	Total
Domestic GICs	\$9.9	\$3.3	\$3.1	\$4.3	\$20.6

Quarterly Institutional Asset Management Results

Institutional Asset Management recorded higher operating income in the three-month period ended September 30, 2008 compared to the same period in 2007. The increase primarily reflects an increase in operating income of

\$174 million related to a credit valuation adjustment on credit default swaps in a liability position. Excluding this effect, Institutional Asset Management recorded an operating loss for the three-month period ended September 30, 2008, compared to operating income in the same period in 2007. This negative variance was driven by impairment losses on proprietary real estate investments of \$102 million, a decrease of \$36 million in securities lending revenues, a decrease of \$22 million in net carried interest revenues and lower trading gains on market-making activities at AIG Private Bank. Also contributing to the decline were net mark-to-market losses on economic interest rate swap hedges associated with warehouse investments, net mark-to-market losses on non-hedge derivatives and higher net foreign exchange losses.

Due to the current real estate market conditions across the globe, several of AIG Global Real Estate's investments were deemed to be impaired for the third quarter of 2008. The impaired investments were written down to their fair value (or fair value less cost to sell for those assets held for sale). AIG recognizes carried interest revenues on an unrealized basis by reflecting the amount owed to AIG as of the balance sheet date based on the related funds' performance. The reduction in carried interest revenues was driven by lower unrealized carry due to weaker fund performance in the three-month period ended September 30, 2008 compared to the same period in 2007. Partially offsetting these amounts were higher net realized capital gains on the sale of proprietary real estate investments of \$31 million.

Base management fees decreased in the three-months ended September 30, 2008 as compared to the 2007 period on a lower average asset base. AIG's unaffiliated client assets under management, including retail mutual funds and institutional accounts, were \$80.2 billion, \$97.6 billion and \$96.8 billion at September 30, 2008, December 31, 2007 and September 30, 2007, respectively. The decline from December 31, 2007 reflects lower asset values due to the significant deterioration in the credit and equity markets during 2008 as well as the loss of some third party institutional clients and redemptions in managed funds.

Total operating loss from various consolidated warehoused investments for the three-month periods ended September 30, 2008 and 2007 was \$42 million and \$33 million, respectively. A portion of these amounts is offset in minority interest expense, which is not a component of operating income (loss).

Year-to-Date Institutional Asset Management Results

Institutional Asset Management recognized an operating loss in the nine-month period ended September 30, 2008 compared to operating income in the same period in 2007 reflecting lower carried interest of \$140 million, impairments on real estate investments of \$102 million, reduced securities lending revenues of \$60 million, and lower income on fund

investments of \$112 million. Also included in the 2007 nine month results was a \$398 million gain related to the sale of a portion of AIG's investment in Blackstone. The reduction in carried interest revenues was driven by lower net unrealized carry due to significantly higher fund performance in the nine-month period ended September 30, 2007. Partially offsetting the reduction was the positive effect on operating income of \$174 million related to a credit valuation adjustment on credit default swaps in a liability position.

Average assets under management increased in the nine-month period ended September 30, 2008 compared to the same period in 2007 and resulted in higher base management fees. However, assets under management at September 30, 2008 declined compared to September 30, 2007 reflecting lower asset values due to the significant deterioration in the credit and equity markets during 2008 as well as the loss of some third party institutional clients and redemptions in managed funds.

Total operating losses from various consolidated warehoused investments for the nine-month periods ended September 30, 2008 and 2007 were \$119 million and \$72 million, respectively. A portion of these amounts is offset in minority interest expense, which is not a component of operating income (loss).

Brokerage Services and Mutual Funds

Revenues and operating income related to Brokerage Services and Mutual Fund activities decreased due to lower fee income as a result of a lower asset base and a decline in commission income resulting from negative market conditions in the three and nine-month periods ended September 30, 2008 compared to the same periods in 2007.

Other Asset Management Results

Revenues and operating income related to the Other Asset Management activities were unchanged in the three-month period ended September 30, 2008 compared to the same period in 2007. Revenues and operating income decreased by \$149 million and \$147 million, respectively, in the nine-month period ended September 30, 2008 compared to the same period in 2007 due to significantly higher returns on partnership income during 2007 and weaker market conditions in 2008.

Other Operations

The operating loss of AIG's Other category was as follows:

(in millions)	Three Months Ended		Nine Months Ended	
	September 30, 2008	September 30, 2007	September 30, 2008	September 30, 2007
Operating income (loss):				
Equity earnings in partially owned companies	\$ (13)	\$ 37	\$ 3	\$ 128
Interest expense on Fed Facility ^(a)	(802)	–	(802)	–
Other interest expense	(571)	(315)	(1,391)	(869)
Unallocated corporate expenses ^(b)	(154)	(166)	(529)	(548)
Net realized capital gains (losses)	139	(199)	(96)	(226)
Other miscellaneous, net	(15)	16	(84)	(42)
Total Other	\$(1,416)	\$(627)	\$(2,899)	\$(1,557)

(a) Includes \$515 million of amortization of prepaid commitment fee asset.

(b) Includes a charge for settlement of a dispute, expenses of corporate staff not attributable to specific operating segments, expenses related to efforts to improve internal controls, corporate initiatives and certain compensation plan expenses.

The operating loss in the three- and nine-month periods ended September 30, 2008 increased compared to the same periods in 2007 primarily due to higher interest expense that resulted from increased borrowings, including interest on the debt and Equity Units from the dates of issuance in May 2008 and borrowings under the Fed Facility. Unallocated corporate expenses included a charge of \$24 million and \$125 million for the three- and nine-month periods ended September 30, 2008, respectively, for the settlement of a dispute in connection with the July 2008 purchase of the balance of Ascot Underwriting Holdings, Ltd. The decrease in net realized capital losses in the three- and nine-month periods ended September 30, 2008 reflected lower foreign exchange losses on foreign-denominated debt, a portion of which was economically hedged but did not qualify for hedge accounting treatment under FAS 133. Other miscellaneous, net included a \$45 million write-off of goodwill related to Mortgage Guaranty in the nine-month period ended September 30, 2008.

Executive Management

On September 18, 2008, AIG's Board of Directors elected Edward M. Liddy as Chief Executive Officer and a director of AIG and appointed him as Chairman of the Board. Simultaneously, Robert B. Willumstad resigned as Chairman and as a director of AIG, and his employment as Chief Executive Officer was terminated without cause.

On October 16, 2008, David L. Herzog was named Executive Vice President and Chief Financial Officer. Steven J. Bensinger, who had served since May 2008 as Vice Chairman — Financial Services and acting Chief Financial Officer, left AIG.

AIG has recently hired a Vice Chairman and Chief Restructuring Officer to oversee the asset disposition plan to sell assets and businesses to repay the Fed Facility.

On September 22, 2008, a \$148 million retention program became effective. The program applies to approximately 130 executives and consists of cash awards payable 60 percent in December 2008 and 40 percent in December 2009.

Subsequent to September 30, 2008, AIG implemented two additional retention programs, totaling approximately \$321 million covering 2,101 employees. In addition, several business units have adopted their own retention plans; the cost of these plans is included in consolidated results and is being paid by the respective business units.

Critical Accounting Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America (GAAP) requires the application of accounting policies that often involve a significant degree of judgment. AIG considers that its accounting policies that are most dependent on the application of estimates and assumptions, and therefore viewed as critical accounting estimates, to be those relating to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts, recoverability of DAC, estimated gross profits for investment-oriented products, the allowance for finance receivable losses, flight equipment recoverability, other-than-temporary impairments, estimates with respect to income taxes and fair value measurements of certain financial assets and liabilities, including credit default swaps. These accounting estimates require the use of assumptions about matters, some of which are highly uncertain at the time of estimation. To the extent actual experience differs from the assumptions used, AIG's results of operations would be directly affected.

The major categories for which assumptions are developed and used to establish each critical accounting estimate are highlighted below.

Reserves for Losses and Loss Expenses (General Insurance):

- *Loss trend factors:* used to establish expected loss ratios for subsequent accident years based on premium rate adequacy and the projected loss ratio with respect to prior accident years.
- *Expected loss ratios for the latest accident year:* in this case, accident year 2008 for the year-end 2008 loss reserve analysis. For low-frequency, high-severity classes such as excess casualty, expected loss ratios generally are utilized for at least the three most recent accident years.
- *Loss development factors:* used to project the reported losses for each accident year to an ultimate amount.

- *Reinsurance recoverable on unpaid losses:* the expected recoveries from reinsurers on losses that have not yet been reported and/or settled.

Future Policy Benefits for Life and Accident and Health Contracts (Life Insurance & Retirement Services):

- *Interest rates:* which vary by geographical region, year of issuance and products.
- *Mortality, morbidity and surrender rates:* based upon actual experience by geographical region modified to allow for variation in policy form, risk classification and distribution channel.

Deferred Policy Acquisition Costs (Life Insurance & Retirement Services):

- *Recoverability:* based on current and future expected profitability, which is affected by interest rates, foreign exchange rates, mortality/morbidity experience, expenses, investment returns and policy persistency.

Deferred Policy Acquisition Costs (General Insurance):

- *Recoverability:* based upon the current terms and profitability of the underlying insurance contracts.

Estimated Gross Profits for Investment-Oriented Products (Life Insurance & Retirement Services):

- *Estimated gross profits:* to be realized over the estimated duration of the contracts (investment-oriented products) affect the carrying value of DAC, unearned revenue liability, SIAs and associated amortization patterns. Estimated gross profits include investment income and gains and losses on investments less required interest, actual mortality and other expenses.

Allowance for Finance Receivable Losses (Financial Services):

- *Historical defaults and delinquency experience:* utilizing factors, such as delinquency ratio, allowance ratio, charge-off ratio and charge-off coverage.
- *Portfolio characteristics:* portfolio composition and consideration of the recent changes to underwriting criteria and portfolio seasoning.
- *External factors:* consideration of current economic conditions, including levels of unemployment and personal bankruptcies.
- *Migration analysis:* empirical technique measuring historical movement of similar finance receivables through various levels of repayment, delinquency, and loss categories to existing finance receivable pools.

Flight Equipment Recoverability (Financial Services):

- *Expected undiscounted future net cash flows:* based upon current lease rates, projected future lease rates and

estimated terminal values of each aircraft based on expectations of market participants.

Other-Than-Temporary Impairments:

AIG evaluates its investments for impairment such that a security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par, amortized cost (if lower) or cost for an extended period of time (nine consecutive months or longer);
- The occurrence of a discrete credit event resulting in (i) the issuer defaulting on a material outstanding obligation; (ii) the issuer seeking protection from creditors under the bankruptcy laws or any similar laws intended for court supervised reorganization of insolvent enterprises; or (iii) the issuer proposing a voluntary reorganization pursuant to which creditors are asked to exchange their claims for cash or securities having a fair value substantially lower than par value of their claims; or
- AIG may not realize a full recovery on its investment, regardless of the occurrence of one of the foregoing events.

The determination that a security has incurred an other-than-temporary decline in value requires the judgment of management and consideration of the fundamental condition of the issuer, its near-term prospects and all the relevant facts and circumstances. The above criteria also consider circumstances of a rapid and severe market valuation decline, such as that experienced in current credit markets, in which AIG could not reasonably assert that the impairment period would be temporary (severity losses). For further discussion, see Invested Assets — Portfolio Review — Other-Than-Temporary Impairments.

At each balance sheet date, AIG evaluates its securities holdings with unrealized losses. When AIG does not intend to hold such securities until they have recovered their cost basis, AIG records the unrealized loss in income. If a loss is recognized from a sale subsequent to a balance sheet date pursuant to changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer existed.

In periods subsequent to the recognition of an other-than-temporary impairment charge for fixed maturity securities, which is not credit or foreign exchange related, AIG generally accretes into income the discount or amortizes the reduced premium resulting from the reduction in cost basis over the remaining life of the security.

Valuation Allowance on Deferred Tax Assets:

Recognition of deferred tax assets and the related valuation allowance is influenced by management's assessment of AIG's historic and estimated future profitability profile, including

the character and amount of historic and estimated future taxable income. AIG records a valuation allowance to reduce deferred tax assets to the amount AIG believes is more likely than not to be realized. At each balance sheet date, existing assessments are reviewed and, if necessary, revised to reflect changed circumstances.

Income Taxes on Earnings of Certain Foreign Subsidiaries:

In connection with AIG's asset disposition plan, AIG determined it can no longer assert that earnings of certain foreign subsidiaries will be indefinitely reinvested. Due to the complexity of the U.S. federal income tax laws involved in determining the amount of income taxes incurred on these potential dispositions, as well as AIG's reliance on reasonable assumptions and estimates in calculating this liability, AIG considers the U.S. federal income taxes accrued on the earnings of certain foreign subsidiaries to be a critical accounting estimate.

Fair Value Measurements of Certain Financial Assets and Liabilities:

Overview

AIG measures at fair value on a recurring basis financial instruments in its trading and available for sale securities portfolios, certain mortgage and other loans receivable, certain spot commodities, derivative assets and liabilities, securities purchased (sold) under agreements to resell (repurchase), securities lending invested collateral, non-marketable equity investments, included in other invested assets, certain policyholders' contract deposits, securities and spot commodities sold but not yet purchased, certain trust deposits and deposits due to banks and other depositors, certain long-term borrowings, and certain hybrid financial instruments included in other liabilities. The fair value of a financial instrument is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between willing, able and knowledgeable market participants at the measurement date.

The degree of judgment used in measuring the fair value of financial instruments generally correlates with the level of pricing observability. Financial instruments with quoted prices in active markets generally have more pricing observability and less judgment is used in measuring fair value. Conversely, financial instruments traded in other-than-active markets or that do not have quoted prices have less observability and are measured at fair value using valuation models or other pricing techniques that require more judgment. An active market is one in which transactions for the asset or liability being valued occur with sufficient frequency and volume to provide pricing information on an ongoing basis. An other-than-active market is one in which there are few transactions, the prices are not current, price quotations vary

substantially either over time or among market makers, or in which little information is released publicly for the asset or liability being valued. Pricing observability is affected by a number of factors, including the type of financial instrument, whether the financial instrument is new to the market and not yet established, the characteristics specific to the transaction and general market conditions.

AIG management is responsible for the determination of the value of the financial assets and financial liabilities carried at fair value and the supporting methodologies and assumptions. With respect to securities, AIG employs independent third-party valuation service providers to gather, analyze, and interpret market information and derive fair values based upon relevant methodologies and assumptions for individual instruments. When AIG's valuation service providers are unable to obtain sufficient market observable information upon which to estimate the fair value for a particular security, fair value is determined either by requesting brokers who are knowledgeable about these securities to provide a quote, which is generally non-binding, or by employing widely accepted internal valuation models.

Valuation service providers typically obtain data about market transactions and other key valuation model inputs from multiple sources and, through the use of widely accepted internal valuation models, provide a single fair value measurement for individual securities for which a fair value has been requested under the terms of service agreements. The inputs used by the valuation service providers include, but are not limited to, market prices from recently completed transactions and transactions of comparable securities, interest rate yield curves, credit spreads, currency rates, and other market-observable information, as applicable. The valuation models take into account, among other things, market observable information as of the measurement date as well as the specific attributes of the security being valued including its term, interest rate, credit rating, industry sector, and when applicable, collateral quality and other issue or issuer specific information. When market transactions or other market observable data is limited, the extent to which judgment is applied in determining fair value is greatly increased.

AIG employs specific control processes to determine the reasonableness of the fair values of AIG's financial assets and financial liabilities. AIG's processes are designed to ensure that the values received or internally estimated are accurately recorded and that the data inputs and the valuation techniques utilized are appropriate, consistently applied, and that the assumptions are reasonable and consistent with the objective of determining fair value. AIG assesses the reasonableness of individual security values received from valuation service providers through various analytical techniques. In addition, AIG may validate the reasonableness of fair values by comparing information obtained from AIG's valuation service providers to other third party valuation sources for selected securities. AIG also validates prices for selected securities

obtained from brokers through reviews by members of management who have relevant expertise and who are independent of those charged with executing investing transactions.

The following table quantifies the fair value of fixed income and equity securities by source of value determination as of September 30, 2008:

<i>(in billions)</i>	Fair Value	Percent of Total
Fair value based on external sources ^(a)	\$481.1	94.4%
Fair value based on internal sources	28.8	5.6
Total fixed income and equity securities ^(b)	\$509.9	100.0%

(a) Includes \$45.6 billion whose primary source is broker quotes.

(b) Includes available for sale, trading and securities lending invested collateral securities.

For more detailed information about AIG's accounting policy for the measurement of fair value of financial assets and financial liabilities and information about the financial assets and financial liabilities, see Note 3 to the Consolidated Financial Statements.

Incorporation of Credit Risk in Fair Value Measurements

- **AIG's Own Credit Risk.** Fair value measurements for debt, GIAs, and structured note liabilities at AIGFP incorporate AIG's own credit risk by discounting cash flows at rates that incorporate AIG's currently observable credit default swap spreads and takes into consideration collateral posted by AIG with counterparties at the balance sheet date.

Fair value measurements for freestanding derivatives incorporate AIG's own credit risk by determining the explicit cost for each counterparty to protect against its net credit exposure to AIG at the balance sheet date by reference to observable AIG credit default swap spreads. A counterparty's net credit exposure to AIG is determined based on master netting agreements, which take into consideration all derivative positions with AIG, as well as cash collateral posted by AIG with the counterparty at the balance sheet date.

Fair value measurements for embedded policy derivatives and policyholders' contract deposits take into consideration that policyholder liabilities are senior in priority to general creditors of AIG and therefore are much less sensitive to changes in AIG credit default swap or cash issuance spreads.

- **Counterparty Credit Risk.** Fair value measurements for freestanding derivatives incorporate the counterparty credit by determining the explicit cost for AIG to protect against its net credit exposure to each counterparty at the balance sheet date by reference to observable counterparty credit default swap spreads. AIG's net credit exposure to a counterparty is determined based on master netting agreements, which take into consideration all derivative positions with the counterparty, as well as cash collateral posted by the counterparty at the balance sheet date.

Fair values for fixed maturity securities based on observable market prices for identical or similar instruments implicitly include the incorporation of counterparty credit risk. Fair values for fixed maturity securities based on internal models incorporate counterparty credit risk by using discount rates that take into consideration cash issuance spreads for similar instruments or other observable information.

Fixed Maturity Securities — Trading and Available for Sale

AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. Whenever available, AIG obtains quoted prices in active markets for identical assets at the balance sheet date to measure at fair value fixed maturity securities in its trading and available for sale portfolios. Market price data generally is obtained from exchange or dealer markets.

AIG estimates the fair value of fixed maturity securities not traded in active markets, including securities purchased (sold) under agreements to resell (repurchase) and mortgage and other loans receivable, for which AIG elected the fair value option by referring to traded securities with similar attributes, using dealer quotations and matrix pricing methodologies, discounted cash flow analyses, or internal valuation models. This methodology considers such factors as the issuer's industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, yield curves, credit curves, prepayment rates and other relevant factors. For fixed maturity securities that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability, and such adjustments generally are based on available market evidence. In the absence of such evidence, management's best estimate is used.

Equity Securities Traded in Active Markets — Trading and Available for Sale

AIG maximizes the use of observable inputs and minimizes the use of unobservable inputs when measuring fair value. Whenever available, AIG obtains quoted prices in active markets for identical assets at the balance sheet date to measure at fair value marketable equity securities in its trading and available for sale portfolios. Market price data generally is obtained from exchange or dealer markets.

Non-Traded Equity Investments — Other Invested Assets

AIG initially estimates the fair value of equity securities not traded in active markets by reference to the transaction price. This valuation is adjusted only when changes to inputs and assumptions are corroborated by evidence such as transactions in similar instruments, completed or pending third-party transactions in the underlying investment or comparable entities, subsequent rounds of financing, recapitalizations and

other transactions across the capital structure, offerings in the equity capital markets, and changes in financial ratios or cash flows. For equity securities that are not traded in active markets or that are subject to transfer restrictions, valuations are adjusted to reflect illiquidity and/or non-transferability and such adjustments generally are based on available market evidence. In the absence of such evidence, management's best estimate is used.

Private Limited Partnership and Hedge Fund Investments — Other Invested Assets

AIG initially estimates the fair value of investments in certain private limited partnerships and certain hedge funds by reference to the transaction price. Subsequently, AIG obtains the fair value of these investments generally from net asset value information provided by the general partner or manager of the investments, the financial statements of which generally are audited annually.

Separate and Variable Account Assets

Separate and variable account assets are composed primarily of registered and unregistered open-end mutual funds that generally trade daily and are measured at fair value in the manner discussed above for equity securities traded in active markets.

Freestanding Derivatives

Derivative assets and liabilities can be exchange-traded or traded over the counter (OTC). AIG generally values exchange-traded derivatives within portfolios using models that calibrate to market clearing levels and eliminate timing differences between the closing price of the exchange-traded derivatives and their underlying instruments.

OTC derivatives are valued using market transactions and other market evidence whenever possible, including market-based inputs to models, model calibration to market clearing transactions, broker or dealer quotations or alternative pricing sources with reasonable levels of price transparency. When models are used, the selection of a particular model to value an OTC derivative depends on the contractual terms of, and specific risks inherent in, the instrument as well as the availability of pricing information in the market. AIG generally uses similar models to value similar instruments. Valuation models require a variety of inputs, including contractual terms, market prices and rates, yield curves, credit curves, measures of volatility, prepayment rates and correlations of such inputs. For OTC derivatives that trade in liquid markets, such as generic forwards, swaps and options, model inputs can generally be corroborated by observable market data by correlation or other means and model selection does not involve significant management judgment.

Certain OTC derivatives trade in less liquid markets with limited pricing information and the determination of fair value

for these derivatives is inherently more difficult. When AIG does not have corroborating market evidence to support significant model inputs and cannot verify the model to market transactions, the transaction price is initially used as the best estimate of fair value. Accordingly, when a pricing model is used to value such an instrument, the model is adjusted so the model value at inception equals the transaction price. Subsequent to initial recognition, AIG updates valuation inputs when corroborated by evidence such as similar market transactions, third-party pricing services and/or broker or dealer quotations, or other empirical market data. When appropriate, valuations are adjusted for various factors such as liquidity, bid/offer spreads and credit considerations. Such adjustments are generally based on available market evidence. In the absence of such evidence, management's best estimate is used.

With the adoption of FAS 157 on January 1, 2008, AIG's own credit risk has been considered and is incorporated into the fair value measurement of freestanding derivative liabilities.

Embedded Policy Derivatives

The fair value of embedded policy derivatives contained in certain variable annuity and equity-indexed annuity and life contracts is measured based on actuarial and capital market assumptions related to projected cash flows over the expected lives of the contracts. These cash flow estimates primarily include benefits and related fees assessed, when applicable, and incorporate expectations about policyholder behavior. Estimates of future policyholder behavior are subjective and based primarily on AIG's historical experience. With respect to embedded policy derivatives in AIG's variable annuity contracts, because of the dynamic and complex nature of the expected cash flows, risk neutral valuations are used. Estimating the underlying cash flows for these products involves many estimates and judgments, including those regarding expected market rates of return, market volatility, correlations of market index returns to funds, fund performance, discount rates and policyholder behavior. With respect to embedded policy derivatives in AIG's equity-indexed annuity and life contracts, option pricing models are used to estimate fair value, taking into account assumptions for future equity indexed growth rates, volatility of the equity index, future interest rates, and determination on adjusting the participation rate and the cap on equity indexed credited rates in light of market conditions and policyholder behavior assumptions. With the adoption of FAS 157, these methodologies were not changed, with the exception of incorporating an explicit risk margin to take into consideration market participant estimates of projected cash flows and policyholder behavior.

AIGFP's Super Senior Credit Default Swap Portfolio

See Valuation of Level 3 Assets and Liabilities below for a comprehensive discussion of AIGFP's super senior credit default swap portfolio.

Policyholders' Contract Deposits

Policyholders' contract deposits accounted for at fair value beginning January 1, 2008 are measured using an income approach by taking into consideration the following factors:

- Current policyholder account values and related surrender charges,
- The present value of estimated future cash inflows (policy fees) and outflows (benefits and maintenance expenses) associated with the product using risk neutral valuations, incorporating expectations about policyholder behavior, market returns and other factors, and
- A risk margin that market participants would require for a market return and the uncertainty inherent in the model inputs.

The change in fair value of these policyholders' contract deposits is recorded as incurred policy losses and benefits in the consolidated statement of income (loss).

Level 3 Assets and Liabilities

Under FAS 157, assets and liabilities recorded at fair value in the consolidated balance sheet are classified in a hierarchy for disclosure purposes consisting of three "levels" based on the observability of inputs available in the marketplace used to measure the fair value. See Note 3 to the Consolidated Financial Statements for additional information about fair value measurements.

At September 30, 2008, AIG classified \$55.3 billion and \$40.0 billion of assets and liabilities, respectively, measured at fair value on a recurring basis as Level 3. This represented 5.4 percent and 4.2 percent of the total assets and liabilities, respectively, measured at fair value on a recurring basis. Level 3 fair value measurements are based on valuation techniques that use at least one significant input that is unobservable. These measurements are made under circumstances in which there is little, if any, market activity for the asset or liability. AIG's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment.

In making the assessment, AIG considers factors specific to the asset or liability. In certain cases, the inputs used to measure fair value of an asset or a liability may fall into different levels of the fair value hierarchy. In such cases, the level in the fair value hierarchy within which the fair value measurement in its entirety is classified is determined based on the lowest level input that is significant to the fair value measurement in its entirety.

Valuation of Level 3 Assets and Liabilities

AIG values its assets and liabilities classified as Level 3 using judgment and valuation models or other pricing techniques that require a variety of inputs including contractual terms, market prices and rates, yield curves, credit curves, measures of volatility, prepayment rates and correlations of such inputs, some of which may be unobservable. The following paragraphs describe the methods AIG uses to measure on a recurring basis the fair value of the major classes of assets and liabilities classified in Level 3.

Private equity and real estate fund investments: These assets initially are valued at the transaction price, i.e., the price paid to acquire the asset. Subsequently, they are measured based on net asset value using information provided by the general partner or manager of these investments, the accounts of which generally are audited on an annual basis.

Corporate bonds and private placement debt: These assets initially are valued at the transaction price. Subsequently, they are valued using market data for similar instruments (e.g., recent transactions, bond spreads or credit default swap spreads), comparisons to benchmark derivative indices or movements in underlying credit spreads. When observable price quotations are not available, fair value is determined based on cash flow models with yield curves, bond or single-name credit default swap spreads and estimated recovery rates.

Certain Residential Mortgage-Backed Securities (RMBS): These assets initially are valued at the transaction price. Subsequently, they may be valued by comparison to transactions in instruments with similar collateral and risk profiles, remittances received and updated cumulative loss data on underlying obligations, discounted cash flow techniques, and/or option adjusted spread analyses.

Certain Asset-Backed Securities — non-mortgage: These assets initially are valued at the transaction price. Subsequently, they may be valued based on external price/spread data. When position-specific external price data are not observable, the valuation is based on prices of comparable securities.

CDOs: These assets initially are valued at the transaction price. Subsequently, they are valued based on external price/spread data from independent third parties, dealer quotations, matrix pricing, the BET model or a combination thereof.

AIGFP's Super Senior Credit Default Swap Portfolio: AIGFP wrote credit protection on the super senior risk layer of diversified portfolios of corporate debt, prime residential mortgages, collateralized loan obligations (CLOs) and multi-sector CDOs. In these transactions, AIGFP is at risk of credit performance on the super senior risk layer related to a diversified portfolio referenced to loans or debt securities. Further, these transactions have placed a significant demand on AIGFP's liquidity during 2008, primarily as a result of their

collateral posting provisions. See General Contractual Terms below. To a lesser extent, AIGFP also wrote protection on

tranches below the super senior risk layer, primarily in respect of regulatory capital transactions.

At September 30, 2008, the net notional amount, fair value and unrealized market valuation loss of the AIGFP super senior credit default swap portfolio, including certain regulatory capital relief transactions, by asset class were as follows:

(in millions)	Net Notional Amount			Fair Value Of Derivative Liability at September 30, 2008 ^(b)	Unrealized Market Valuation Loss (Gain)	
	June 30, 2008 ^(a)	Decrease	September 30, 2008 ^(a)		Three Months Ended September 30, 2008 ^(c)	Nine Months Ended September 30, 2008 ^(c)
Regulatory Capital:						
Corporate loans	\$172,717	\$(40,928)	\$131,789	\$ -	\$ -	\$ -
Prime residential mortgages	132,612	(16,054)	116,558	-	-	-
Other ^(d)	1,619	(19)	1,600	397	272	397
Total	306,948	(57,001)^(f)	249,947	397	272	397
Arbitrage:						
Multi-sector CDOs, including 2a-7						
Puts	80,301	(8,657)^(g)	71,644	30,207	6,262	19,868
Corporate debt/CLOs	53,767	(3,089)^(h)	50,678	1,534	538	1,308
Total	134,068	(11,746)	122,322	31,741	6,800	21,176
Mezzanine tranches ^(e)	5,824	(811)	5,013	153	(18)	153
Total	\$446,840	\$(69,558)	\$377,282	\$32,291	\$7,054	\$21,726

(a) Notional amounts presented are net of all structural subordination below the covered tranches.

(b) Fair value amounts are shown before the effects of counterparty netting adjustments and offsetting cash collateral in accordance with FIN 39.

(c) Includes credit valuation adjustment gains of \$98 million and \$207 million, respectively, for the three- and nine-month periods ended September 30, 2008.

(d) Represents transactions where AIGFP believes the counterparties are no longer using the transactions to obtain regulatory capital relief. During the second quarter of 2008, a European RMBS regulatory capital relief transaction with a net notional amount of \$1.6 billion was not terminated as expected when it no longer provided regulatory capital relief to the counterparty.

(e) Represents credit default swaps written by AIGFP on tranches below super senior on certain regulatory capital relief trades.

(f) The decline includes terminations of \$29.5 billion and the effect of foreign exchange rates of \$26.4 billion resulting from the strengthening of the U.S. dollar, primarily against the Euro and the British Pound.

(g) The decline includes purchases of \$5.7 billion of super senior CDO securities in connection with 2a-7 Puts and amortization of \$2.5 billion.

(h) Includes the effect of foreign exchange rates of \$2.0 billion resulting from the strengthening of the U.S. dollar, primarily against the Euro.

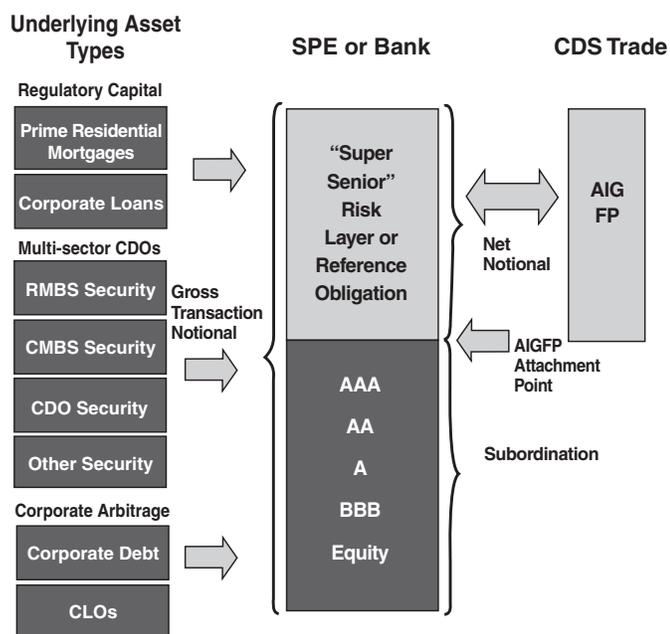

General Contractual Terms

AIGFP entered into credit default swap and other credit derivative transactions (collectively, CDS) in the ordinary course of its business. In the majority of AIGFP's credit derivatives transactions, AIGFP sold credit protection on a designated portfolio of loans or debt securities. Generally, AIGFP provides such credit protection on a "second loss" basis, meaning that AIGFP will incur credit losses only after a shortfall of principal and/or interest, or other credit events, in respect of the protected loans and debt securities, exceed a specified threshold amount or level of "first loss."

Typically, the credit risk associated with a designated portfolio of loans or securities has been tranching into different layers of risk, which are then analyzed and rated by the credit rating agencies. At origination, there is usually an equity layer covering the first credit losses in respect of the

portfolio up to a specified percentage of the total portfolio, and then successive layers ranging from generally a BBB-rated layer to one or more AAA-rated layers. A significant majority of transactions that are rated by rating agencies have risk layers or tranches that were rated AAA at origination and are immediately junior to the threshold level above which AIGFP's payment obligation would generally arise. In transactions that were not rated, AIGFP applied equivalent risk criteria for setting the threshold level for its payment obligations. Therefore, the risk layer assumed by AIGFP with respect to the designated portfolio of loans or securities in these transactions is often called the "super senior" risk layer, defined as a layer of credit risk senior to one or more risk layers that have been rated AAA by the credit rating agencies, or if the transaction is not rated, structured to the equivalent thereto.

The following graphic represents a typical structure of a transaction including the super senior risk layer:

Regulatory Capital Portfolio

Approximately \$250 billion (consisting of corporate loans and prime residential mortgages) of the \$377 billion in net notional exposure of AIGFP’s super senior credit default swap portfolio as of September 30, 2008 represented derivatives written for financial institutions, principally in Europe, for the

purpose of providing regulatory capital relief rather than risk mitigation. In exchange for a periodic fee, the counterparties receive credit protection with respect to diversified loan portfolios they own, thus improving their regulatory capital position. These transactions generally provide for cash settlement (see Triggers and Settlement Alternatives below); however, AIGFP does not expect to be required to make payments under these contracts during their estimated life as these transactions are generally expected to terminate at no additional cost to AIGFP when the transactions no longer provide such regulatory capital benefit. See Regulatory Models and Modeling — Regulatory Capital Portfolio.

Arbitrage Portfolio

Approximately \$122 billion of the \$377 billion in net notional exposure on AIGFP’s super senior credit default swaps as of September 30, 2008 are arbitrage-motivated transactions written on multi-sector CDOs or designated pools of investment grade corporate debt or CLOs. While certain credit default swaps written on corporate debt and multi-sector CDOs provide for cash settlement, the large majority of the AIGFP credit default swaps written on multi-sector CDOs and CLOs require physical settlement (see Triggers and Settlement Alternatives below).

The most significant portfolio, in terms of unrealized market valuation losses, is the super senior multi-sector CDO credit default swap portfolio.

At September 30, 2008, the gross transaction notional amount of the multi-sector CDOs on which AIGFP wrote protection on the super senior tranche, subordination below the super senior risk layer and AIGFP net notional exposure were as follows:

(in millions)	Gross Transaction Notional Amount ^(a)	Subordination Below Super Senior Risk Layer	Net Notional Amount ^(b)	Fair Value of Derivative Liability at September 30, 2008
High grade with sub-prime collateral	\$ 50,582	\$ 9,751	\$40,831	\$18,201
High grade with no sub-prime collateral	30,284	14,581	15,703	4,195
Total high grade ^(c)	80,866	24,332	56,534	22,396
Mezzanine with sub-prime	25,888	11,575	14,313	7,487
Mezzanine with no sub-prime	1,698	901	797	324
Total mezzanine ^(d)	27,586	12,476	15,110	7,811
Total	\$108,452	\$36,808	\$71,644	\$30,207

(a) Total outstanding principal amount of securities held by a CDO.

(b) Notional size on which AIGFP wrote credit protection.

(c) “High grade” refers to transactions in which the underlying collateral credit ratings on a stand-alone basis were predominantly AA or higher at origination.

(d) “Mezzanine” refers to transactions in which the underlying collateral credit ratings on a stand-alone basis were predominantly A or lower at origination.

At September 30, 2008, the gross notional amount, percentage of the total CDO collateral pools, and ratings and vintage breakdown of collateral securities in the multi-sector CDOs, by ABS category, were as follows:

(dollars in millions)

ABS Category	Gross Transaction Notional Amount	Percent of Total	RATINGS BREAKDOWN								VINTAGE				
			AAA	AA	A	BBB	BB	<BB	NR	2008	2007	2006	2005	2004+P	
RMBS PRIME	\$ 12,280	11.33%	8.13%	0.97%	0.88%	0.68%	0.17%	0.49%	0.01%	0.08%	2.39%	2.37%	3.36%	3.13%	
RMBS ALT-A	17,086	15.75%	6.99%	2.48%	1.87%	1.34%	0.78%	2.29%	0.00%	0.16%	1.40%	3.41%	7.92%	2.86%

Total	\$108,452	100.00%	35.52%	15.22%	12.31%	11.72%	5.58%	19.26%	0.39%	0.45%	12.56%	13.92%	39.26%	33.81%	

Triggers and Settlement Alternatives

CDS transactions entered into by counterparties for regulatory capital purposes, together with a number of arbitrage transactions (comprising approximately \$47 billion or 38.6 percent of the net notional amount for the arbitrage portfolio at September 30, 2008), have cash-settled structures (see Cash Settlement below) in respect of a basket of reference obligations, where AIGFP's payment obligations may be triggered by payment shortfalls, bankruptcy and certain other events such as write-downs of the value of underlying assets as further described below. By contrast, under the large majority of CDS transactions in respect of multi-sector CDOs (comprising approximately \$57 billion or 46.5 percent of the net notional amount for the arbitrage portfolio at September 30, 2008) AIGFP's payment obligations are triggered by the occurrence of a non-payment event under a single reference CDO security, and performance is limited to a single payment by AIGFP in return for physical delivery by the counterparty of the reference security. See Physical Settlement below. A number of CDS transactions in respect of CLOs have similar settlement mechanisms. In addition, the arbitrage portfolio includes transactions with a net notional amount of \$4.9 billion that allow holders to put securities to AIGFP at par in the event of a failed remarketing of the referenced security. AIGFP cannot currently determine if and when it may be required to perform its obligations in the future including the timing of any future triggering events or the amount of any additional purchases, individually or in the aggregate, that might be required.

Physical Settlement. For CDS transactions requiring physical settlement, AIGFP is required to pay unpaid principal and accrued interest for the relevant reference obligation in return for physical delivery of such reference obligation by the CDS buyer upon the occurrence of a credit event. After purchasing the reference obligation, AIGFP may sell the security and recover all or a portion of the purchase price paid under the CDS, or hold such security and be entitled to receive subsequent collections of principal and interest. There can be no assurance that the satisfaction of these obligations by AIGFP will not have a material effect on AIG's liquidity.

AIGFP generally is required to settle such a transaction only if the following conditions are satisfied:

- A "Credit Event" (as defined in the relevant CDS transaction confirmation) must have occurred. In all CDS transactions subject to physical settlement, "Failure to Pay" is specified as a Credit Event and is generally triggered if there is a failure by the issuer under the related CDO to make a payment under the reference obligation (after the expiration of any applicable grace period and, in certain transactions, subject to a nominal non-payment threshold having been met).

In addition, certain of the AIGFP CDSs, with an aggregate net notional amount totaling \$7.7 billion, provide credit protection in respect of CDOs that require minimum amounts of collateral to be maintained to support the CDO debt, where the value of such collateral is affected by among other things the ratings of the securities and other obligations comprising such collateral. In the event that the issuer of such a CDO fails to maintain the minimum levels of collateral, an event of default would occur, triggering a right by a specified controlling class of CDO note holders to accelerate the payment of principal and interest on the protected reference obligations. Under certain of the CDSs, upon acceleration of the reference obligations underlying a CDS, AIGFP may be required to purchase such reference obligations for a purchase price equal to unpaid principal and accrued interest of the CDO in settlement of the CDS. As a result of this over-collateralization feature of these CDOs, AIGFP potentially may be required to purchase such CDO securities in settlement of the related CDS sooner than it would be required to if such CDOs did not have an over-collateralization feature. As of November 5, 2008, eight CDOs for which AIGFP had written credit protection on the super senior layer had experienced over-collateralization related events of default. One of these CDOs was accelerated in the second quarter of 2008, and AIGFP extinguished a portion of its CDS obligations by purchasing the protected CDO security for \$103 million, which equaled the principal amount

outstanding related to this CDS. AIGFP extinguished the remainder of its CDS obligations related to this CDO on November 6, 2008 by purchasing the protected CDO security for \$59 million, which equaled the remaining principal amount of this CDO security subject to CDS protection. AIGFP's remaining CDS net notional exposure with respect to CDOs that have experienced over-collateralization events of default was \$2.4 billion at November 5, 2008. While AIGFP believes that these defaulted transactions are most likely to result in a payment by AIGFP, AIG cannot estimate the timing of any required payments since the timing of a Credit Event may be outside of AIGFP's control.

In addition, certain of AIGFP's CDSs provide credit protection in respect of CDOs that provide if the CDO issuer fails to pay amounts due on classes of CDO securities that rank *pari passu* with or subordinate to such referenced obligations, an event of default would occur, triggering a right by a specified controlling class of CDO noteholders to accelerate the payment of principal and interest on the protected reference obligations. As in the case of CDOs with the over-collateralization feature, the existence of such an acceleration feature potentially may result in AIGFP being required to purchase the super senior reference obligation in settlement of the related CDS sooner than would be required if such CDO did not have such acceleration feature.

- The CDS buyer must deliver the reference obligation within a specified period, generally within 30 days. There is no payment obligation if delivery is not made within this period.
- Upon completion of the physical delivery and payment by AIGFP, AIGFP would be the holder of the relevant reference obligation and have all rights associated with a holder of such securities.

Cash Settlement. Transactions requiring cash settlement (also known as “pay as you go”) are in respect of protected baskets of reference credits (which may also include single name CDSs in addition to securities and loans) rather than a single reference obligation as in the case of the physically-settled transactions described above. Under these credit default swaps:

- Each time a “triggering event” occurs a “loss amount” is calculated. A triggering event is generally a failure by the relevant obligor to pay principal of or, in some cases, interest on one of the reference credits in the underlying protected basket. Triggering events may also include bankruptcy of reference credits, write-downs or postponements with respect to interest or to the principal amount of a reference credit payable at maturity. The determination of the loss amount is specific to each triggering event. It can

represent the amount of a shortfall in ordinary course interest payments on the reference credit, a write-down in the interest on or principal of such reference credit or any amount postponed in respect thereof. It can also represent the difference between the notional or par amount of such reference credit and its market value, as determined by reference to market quotations.

- Triggering events can occur multiple times, either as a result of continuing shortfalls in interest or write-downs or postponements on a single reference credit, or as a result of triggering events in respect of different reference credits included in a protected basket. In connection with each triggering event, AIGFP is required to make a cash payment to the buyer of protection under the related CDS only if the aggregate loss amounts calculated in respect of such triggering event and all prior triggering events exceed a specified threshold amount (reflecting AIGFP's attachment point). In addition, AIGFP is typically entitled to receive amounts recovered, or deemed recovered, in respect of loss amounts resulting from triggering events caused by interest shortfalls, postponements or write-downs on reference credits.
- To the extent that there are reimbursements received (actual or deemed) by the CDS buyer in respect of prior triggering events, AIGFP will be entitled to receive equivalent amounts from the counterparty to the extent AIGFP has previously made a related payment.

2a-7 Puts. Included in the multi-sector CDO portfolio are maturity-shortening puts with a net notional amount of \$4.9 billion as of September 30, 2008 that allow the holders of the securities issued by certain CDOs to treat the securities as short-term eligible 2a-7 investments under the Investment Company Act of 1940 (2a-7 Puts). The general terms of these transactions differ from those referenced above. Holders of securities are required, in certain circumstances, to tender their securities to the issuers at par. If an issuer's remarketing agent is unable to resell the securities so tendered, AIGFP must purchase the securities at par as long as the security has not experienced a payment default or certain bankruptcy events with respect to the issuer of such security have not occurred. During the nine-month period ended September 30, 2008, AIGFP repurchased securities with a principal amount of approximately \$6.6 billion in connection with these obligations, of which \$5.4 billion were funded using existing liquidity facilities. AIGFP repurchased securities with a principal amount of approximately \$1.4 billion from September 30, 2008 to October 27, 2008, which were funded using existing liquidity facilities. AIGFP expects to repurchase within the next two years the majority of securities under the remaining 2a-7 Puts having a net notional exposure of \$3.5 billion at October 27, 2008. In certain transactions, AIGFP has contracted with third parties to provide liquidity for the purchase of such securities if they are put to AIGFP for up to a three-year period. Such unused liquidity facilities

totaled \$1.7 billion at October 27, 2008. AIG expects to use these facilities to fund future purchases of these securities.

Termination Events. A majority of the super senior credit default swaps written on multi-sector CDOs provide the counterparties with an additional termination right once AIG's rating level falls to BBB or Baa. At that level, counterparties have the right to terminate the transactions early. This aggregate net notional amount of such super senior credit default swaps written on multi-sector CDOs is approximately \$47.8 billion as of October 27, 2008. If counterparties exercise this right, the contracts provide for the counterparties to be compensated for the cost to replace the trades, or an amount reasonably determined in good faith to estimate the losses the counterparties would incur as a result of the termination of the trades.

Many of the super senior credit default swaps written for regulatory capital relief, having a net notional amount of \$130 billion, include triggers that require certain actions to be taken by AIG upon such a downgrade, which, if not taken, will give rise to a right of the counterparties to terminate the swaps. Such actions include posting collateral, transferring the swap or providing a guarantee from a more highly rated entity. Through October 27, 2008, AIGFP has elected to post collateral in such cases, and, as a result, the counterparty has not had the right to terminate the swaps.

Given the level of uncertainty in estimating both the number of counterparties who may elect to exercise their right to terminate and the payment that may be triggered in connection with any such exercise, AIG is unable to reasonably estimate the aggregate amount that it would be required to pay under the super senior credit default swaps in the event of any such downgrade.

Collateral

Most of AIGFP's credit default swaps are subject to collateral posting provisions. These provisions differ among counterparties and asset classes. Although AIGFP has collateral posting obligations associated with both regulatory capital relief transactions and arbitrage transactions, the large majority of these obligations are associated with arbitrage transactions in respect of multi-sector CDOs.

The collateral arrangements in respect of the multi-sector CDO, regulatory capital and corporate arbitrage transactions are nearly all documented under a Credit Support Annex (CSA) to an International Swaps and Derivatives Association, Inc (ISDA) Master Agreement (Master Agreement). The Master Agreement and CSA forms are standardized form agreements published by the ISDA, which market participants have adopted as the primary contractual framework for various kinds of derivatives transactions, including CDS. The Master Agreement and CSA forms are designed to be customized by counterparties to accommodate their particular requirements for the anticipated types of swap transactions to be entered

into. Elective provisions and modifications of the standard terms are negotiated in connection with the execution of these documents. The Master Agreement and CSA permit any provision contained in these documents to be further varied or overridden by the individual transaction confirmations, providing flexibility to tailor provisions to accommodate the requirements of any particular transaction. A CSA, if agreed by the parties to a Master Agreement, supplements and forms part of the Master Agreement and contains provisions (among others) for the valuation of the covered transactions, the delivery and release of collateral, the types of acceptable collateral, the grant of a security interest (in the case of a CSA governed by New York law) or the outright transfer of title (in the case in a CSA governed by English law) in the collateral that is posted, the calculation of the amount of collateral required, the valuation of the collateral provided, the timing of any collateral demand or return, dispute mechanisms, and various other rights, remedies and duties of the parties with respect to the collateral provided.

In general, each party has the right under a CSA to act as the "Valuation Agent" and initiate the calculation of the exposure of one party to the other (Exposure) in respect of transactions covered by the CSA. The valuation calculation may be performed daily, weekly or at some other interval, and the frequency is one of the terms negotiated at the time the CSA is signed. The definition of Exposure under a standard CSA is the amount that would be payable to one party by the other party upon a hypothetical termination of that transaction. This amount is determined, in most cases, by the Valuation Agent using its estimate of mid-market quotations (i.e., the average of hypothetical bid and ask quotations) of the amounts that would be paid for a replacement transaction. AIGFP determines Exposure typically by reference to the mark-to-market valuation of the relevant transaction produced by its systems and specialized models. Exposure amounts are typically determined for all transactions under a Master Agreement (unless the parties have specifically agreed to exclude certain transactions, not to apply the CSA or to set a specific transaction Exposure to zero). The aggregate Exposure less the value of collateral already held by the relevant party (and following application of certain thresholds) results in a net exposure amount (Delivery Amount). If this amount is a positive number, then the other party must deliver collateral with a value equal to the Delivery Amount. Under the standard CSA, the party not acting as Valuation Agent for any particular Exposure calculation may dispute the Valuation Agent's calculation of the Delivery Amount. If the parties are unable to resolve this dispute, the terms of the standard CSA provide that the Valuation Agent is required to recalculate Exposure using, in substitution for the disputed Exposure amounts, the average of actual quotations at mid-market from four leading dealers in the relevant market.

Regulatory Capital Transactions

As of September 30, 2008, approximately 27 percent of AIGFP's regulatory capital transactions (measured by net notional amount) were subject to a CSA. In other transactions, which represent approximately 39 percent of the total net notional amount of the outstanding regulatory capital transactions, AIGFP is obligated to put a CSA or alternative collateral arrangement in place if AIG's ratings fall below certain levels (typically, AA-/Aa3). In light of the rating actions taken in respect of AIG on September 15, 2008, AIGFP has implemented a CSA or alternative collateral arrangement in a large majority of these transactions. In some cases, AIGFP may not reach agreement with a counterparty on the terms of a collateral arrangement, and as a result, the counterparty may be entitled to terminate the transaction. In general, each regulatory capital transaction is subject to a stand-alone Master Agreement or similar agreement, which means that aggregate Exposure for the given Master Agreement or similar agreement is calculated only with reference to a single transaction.

There are diverse mechanisms for calculating Exposure in these transactions. A small minority relies on the standard CSA approach described above under "Collateral"; the large majority uses a formula to calculate Exposure. In most cases, the formula is unique to that transaction or counterparty. These unique formulas typically depend on either credit ratings (including the ratings of AIG and, in some cases, the ratings of notes that have been issued with respect to different tranches of the transaction), rating agency expected loss models, or changes in spreads on identified credit indices (but do not depend on the value of any underlying reference obligations).

Arbitrage Portfolio — Multi-Sector CDOs

In the large majority of the CDS transactions in respect of multi-sector CDOs, the standard CSA provisions for the calculation of Exposure have been modified, with the Exposure amount determined pursuant to an agreed formula that is based on the difference between the net notional amount of such transaction and the market value of the relevant underlying CDO security, rather than the replacement value of the transaction. In cases where a formula is utilized, a transaction-specific threshold is generally factored into the calculation of Exposure, which reduces the amount of collateral required to be posted. These thresholds typically vary based on the credit ratings of AIG and/or the reference obligations, with greater posting obligations arising in the context of lower ratings. For the large majority of counterparties to these transactions, the Master Agreement and CSA cover non-CDS transactions (e.g., interest rate and cross currency swap transactions) as well as CDS transactions.

Arbitrage Portfolio — Corporate Debt/CLOs

Almost all of AIGFP's corporate arbitrage transactions are subject to CSAs. Approximately 47 percent (measured by net notional amount) of these transactions contain no special collateral posting provisions, but are subject to a Master Agreement that includes a CSA. These transactions are treated the same as other trades subject to the same Master Agreement and CSA, with the calculation of collateral in accordance with the standard CSA procedures outlined above. Approximately 53 percent (measured by net notional amount) of these transactions, although subject to a Master Agreement and CSA, have specific valuation and threshold provisions. These thresholds are typically based on a combination of the credit rating of AIG and a Moody's model rating of the transaction (and not based on the value of any underlying reference obligations). Thus, as long as AIG maintains a rating above a specified threshold and the Moody's model of the underlying transaction exceeds a specified rating, the collateral provisions do not apply.

Collateral Calls

AIGFP has received collateral calls from counterparties in respect of certain super senior credit default swaps, of which a large majority relate to multi-sector CDOs. To a significantly lesser extent, AIGFP has also received collateral calls in respect of certain super senior credit default swaps entered into by counterparties for regulatory capital relief purposes and in respect of corporate debt/CLOs. Frequently, valuation estimates made by counterparties with respect to certain super senior credit default swaps or the underlying reference CDO securities, for purposes of determining the amount of collateral required to be posted by AIGFP in connection with such instruments, have differed, at times significantly, from AIGFP's estimates. In almost all cases, AIGFP has been able to successfully resolve the differences or otherwise reach an accommodation with respect to collateral posting levels, including in certain cases by entering into compromise collateral arrangements. Due to the ongoing nature of these collateral calls, AIGFP may engage in discussions with one or more counterparties in respect of these differences at any time. As of September 30, 2008, AIGFP had either agreed to post or posted collateral based on exposures, calculated in respect of super senior credit default swaps, in an aggregate net amount of \$32.8 billion. Valuation estimates made by counterparties for collateral purposes were, like any other third-party valuation, considered in the determination of the fair value estimates of AIGFP's super senior credit default swap portfolio.

Through June 30, 2007, AIGFP had not received any collateral calls related to this credit default swap portfolio. Since that date and through October 27, 2008, counterparties have made large collateral calls against AIGFP, in particular related to the multi-sector CDO portfolio. This was largely driven by deterioration in the market value of the reference obligations. As of July 31, 2008, AIGFP had either agreed to

post or posted collateral based on exposures, calculated in respect of super senior credit default swaps, in an aggregate net amount of \$16.5 billion. Since that date and up to November 5, 2008, AIG has agreed to post or posted an additional \$23.4 billion, for a total of \$39.9 billion, resulting from continued deterioration in the market valuation of the referenced obligations, rating downgrades of reference obligations and the downgrade of AIG's ratings. The amount of future collateral posting requirements is a function of AIG's credit ratings, the rating of the reference obligations and any further decline in the market value of the relevant reference obligations, with the latter being the most significant factor. Given the severe market disruption, lack of observable data and the uncertainty regarding the potential effects on market prices of the TARP and other measures recently undertaken by the federal government to address the credit market disruption, AIGFP is unable to reasonably estimate the amounts of collateral that it would be required to post. The maximum amount of collateral that AIGFP could be required to post is the net notional amount of the super senior credit default swap portfolio.

Models and Modeling

AIGFP values its credit default swaps written on the most senior (super senior) risk layers of designated pools of debt securities or loans using internal valuation models, third-party prices and market indices. The principal market was determined to be the market in which super senior credit default swaps of this type and size would be transacted, or have been transacted, with the greatest volume or level of activity. AIG has determined that the principal market participants, therefore, would consist of other large financial institutions who participate in sophisticated over-the-counter derivatives markets. The specific valuation methodologies vary based on the nature of the referenced obligations and availability of market prices.

The valuation of the super senior credit derivatives continues to be challenging given the limitation on the availability of market observable information due to the lack of trading and price transparency in the structured finance market, particularly during and since the fourth quarter of 2007. These market conditions have increased the reliance on management estimates and judgments in arriving at an estimate of fair value for financial reporting purposes. Further, disparities in the valuation methodologies employed by market participants and the varying judgments reached by such participants when assessing volatile markets have increased the likelihood that the various parties to these instruments may arrive at significantly different estimates as to their fair values.

AIGFP's valuation methodologies for the super senior credit default swap portfolio have evolved in response to the deteriorating market conditions and the lack of sufficient market observable information. AIG has sought to calibrate the model to available market information and to review the assumptions of the model on a regular basis.

Arbitrage Portfolio — Multi-Sector CDOs

The underlying assumption of the valuation methodology for AIGFP's credit default swap portfolio wrapping multi-sector CDOs is that, to be willing to assume the obligations under a credit default swap, a market participant would require payment of the full difference between the cash price of the underlying tranches of the referenced securities portfolio and the net notional amount specified in the credit default swap.

AIGFP uses a modified version of the Binomial Expansion Technique (BET) model to value its credit default swap portfolio written on super senior tranches of CDOs of ABS, including the 2a-7 Puts. The BET model was developed in 1996 by a major rating agency to generate expected loss estimates for CDO tranches and derive a credit rating for those tranches, and has been widely used ever since.

AIG selected the BET model for the following reasons:

- it is known and utilized by other institutions;
- it has been studied extensively, documented and enhanced over many years;
- it is transparent and relatively simple to apply;
- the parameters required to run the BET model are generally observable; and
- it can easily be modified to use probabilities of default and expected losses derived from the underlying collateral securities market prices instead of using rating-based historical probabilities of default.

The BET model has certain limitations. A well known limitation of the BET model is that it can understate the expected losses for super senior tranches when default correlations are high. The model uses correlations implied from diversity scores which do not capture the tendency for correlations to increase as defaults increase. Recognizing this concern, AIG tested the sensitivity of the valuations to the diversity scores. The results of the testing demonstrated that the valuations are not very sensitive to the diversity scores because the expected losses generated from the prices of the collateral pool securities are currently high, breaching the attachment point in most transactions. Once the attachment point is breached by a sufficient amount, the diversity scores, and their implied correlations, are no longer a significant driver of the valuation of a super senior tranche.

AIGFP has adapted the BET model to estimate the price of the super senior risk layer or tranche of the CDO. AIG modified the BET model to imply default probabilities from market prices for the underlying securities and not from rating agency assumptions. To generate the estimate, the model uses the prices for the securities comprising the portfolio of a CDO as an input and converts those prices to credit spreads over current LIBOR-based interest rates. These credit spreads are used to determine implied probabilities of default and

expected losses on the underlying securities. This data is then aggregated and used to estimate the expected cash flows of the super senior tranche of the CDO.

The application of the modified BET model involves the following steps for each individual super senior tranche of a CDO in the portfolio:

- 1) Calculation of the cash flow pattern that matches the weighted average life for each underlying security of the CDO;
- 2) Calculation of an implied credit spread for each security from the price and cash flow pattern determined in step 1. This is an arithmetic process which converts prices to yields (similar to the conversion of United States Treasury security prices to yields), and then subtracts LIBOR-based interest rates to determine the credit spreads;
- 3) Conversion of the credit spread into its implied probability of default. This also is an arithmetic process that determines the assumed level of default on the security that would equate the present value of the expected cash flows discounted at a risk free rate with the present value of the contractual cash flows discounted using LIBOR-based interest rates plus the credit spreads;
- 4) Generation of expected losses for each underlying security using the probability of default and recovery rate;
- 5) Aggregation of the cash flows for all securities to create a cash flow profile of the entire collateral pool within the CDO;
- 6) Division of the collateral pool into a number of hypothetical independent identical securities based on the CDO's diversity score so that the cash flow effects of the portfolio can be mathematically aggregated properly. The purpose of dividing the collateral pool into hypothetical securities is a simplifying assumption used in all BET models as part of a statistical technique that aggregates large amounts of homogeneous data;
- 7) Simulation of the default behavior of the hypothetical securities using a Monte Carlo simulation and aggregation of the results to derive the effect of the expected losses on the cash flow pattern of the super senior tranche taking into account the cash flow diversion mechanism of the CDO;
- 8) Discounting of the expected cash flows determined in step 7 using LIBOR-based interest rates to estimate the value of the super senior tranche of the CDO; and
- 9) Adjustment of the model value for the super senior multi-sector CDO credit default swap for the effect of the risk of non-performance by AIG using the credit spreads of AIG available in the marketplace and considering the effects of collateral and master netting arrangements.

AIGFP employs a Monte Carlo simulation in step 7 above to assist in quantifying the effect on the valuation of the CDO of the unique aspects of the CDO's structure such as triggers that divert cash flows to the most senior part of the capital structure. The Monte Carlo simulation is used to determine whether an underlying security defaults in a given simulation scenario and, if it does, the security's implied random default time and expected loss. This information is used to project cash flow streams and to determine the expected losses of the portfolio.

In addition to calculating an estimate of the fair value of the super senior CDO security referenced in the credit default swaps using its internal model, AIGFP also considers the price estimates for the super senior CDO securities provided by third parties, including counterparties to these transactions, to validate the results of the model and to determine the best available estimate of fair value. In determining the fair value of the super senior CDO security referenced in the credit default swaps, AIGFP uses a consistent process which considers all available pricing data points and eliminates the use of outlying data points. When pricing data points are within a reasonable range an averaging technique is applied.

The following table presents the net notional amount and fair value derivative liability of the multi-sector super senior credit default swap portfolio using AIGFP's fair value methodology at September 30, 2008:

<i>(in millions)</i>	Net Notional Amount	Fair Value Derivative Liability at September 30, 2008
BET model	\$ 9,010	\$ 3,920
Third party price	21,050	9,297
Average of BET model and third party price	36,966	15,185
Other	4,618	1,805
Total	\$71,644	\$30,207

The fair value derivative liability of \$30.2 billion recorded on AIGFP's super senior multi-sector CDO credit default swap portfolio represents the cumulative change in fair value of these derivatives, which represents AIG's best estimate of the amount it would need to pay to a willing, able and knowledgeable third party to assume the obligations under AIGFP's super senior multi-sector credit default swap portfolio as of September 30, 2008.

Arbitrage Portfolio — Corporate Debt/CLOs

The valuation of credit default swaps written on portfolios of investment-grade corporate debt and CLOs is less complex than the valuation of super senior multi-sector CDO credit default swaps and the valuation inputs are more transparent and readily available.

In the case of credit default swaps written on portfolios of investment-grade corporate debt, AIGFP estimates the fair value of its obligations by comparing the contractual premium of each contract to the current market levels of the

senior tranches of comparable credit indices, the iTraxx index for European corporate issuances and the CDX index for U.S. corporate issuances. These indices are considered reasonable proxies for the referenced portfolios. In addition, AIGFP compares these valuations to third party prices and makes adjustments as necessary to determine the best available estimate of fair value.

AIGFP estimates the fair value of its obligations resulting from credit default swaps written on CLOs to be equivalent to the par value less the current market value of the referenced obligation. Accordingly, the value is determined by obtaining third-party quotes on the underlying super senior tranches referenced under the credit default swap contract.

No assurance can be given that the fair value of AIGFP's arbitrage credit default swap portfolio would not change materially if other market indices or pricing sources were used to estimate the fair value of the portfolio.

Regulatory Capital Portfolio

In the case of credit default swaps written to facilitate regulatory capital relief, AIGFP estimates the fair value of these derivatives by considering observable market transactions. The transactions with the most observability are the early terminations of these transactions by counterparties. AIG expects that the majority of these transactions will be terminated within the next 6 to 18 months by AIGFP's counterparties. From January 1, 2008 through September 30, 2008, \$94.9 billion in net notional exposures have been terminated. Since that date and through October 27, 2008, \$4.5 billion in net notional exposures have been terminated. AIGFP has not been required to make any payments as part of these terminations and in certain cases was paid a fee upon termination. In all cases, terminations were initiated by the counterparties prior to the transactions maturing. AIGFP also considers other market data, to the extent relevant and available.

In light of early termination experience to date and after other analyses, AIG determined that there was no unrealized market valuation adjustment for this regulatory capital relief portfolio for the nine-month period ended September 30, 2008 other than for one transaction where AIGFP believes the counterparty is no longer using the transaction to obtain regulatory capital relief. During the second quarter of 2008, a regulatory capital relief transaction with a net notional amount of \$1.6 billion and a fair value loss of \$125 million was not terminated as expected when it no longer provided regulatory capital benefit to the counterparty. This transaction provided protection on an RMBS, unlike the other regulatory transactions, which provide protection on loan portfolios held by the counterparties. The documentation for this transaction contains provisions not included in AIGFP's other regulatory capital relief transactions, which enable the counterparty to arbitrage a specific credit exposure.

AIG will continue to assess the valuation of this portfolio and monitor developments in the marketplace. Given the significant deterioration in the credit markets and the risk that AIGFP's expectations with respect to the termination of these transactions by its counterparties may not materialize, there can be no assurance that AIG will not recognize unrealized market valuation losses from this portfolio in future periods, and recognition of even a small percentage decline in the fair value of this portfolio could be material to AIG's consolidated results of operations for an individual reporting period or to AIG's consolidated financial condition.

Key Assumptions Used in the BET model — Multi-Sector CDOs

The most significant assumption used in the BET model is the pricing of the individual securities within the CDO collateral pools. The following table summarizes the gross transactional notional weighted average price at June 30, 2008 and September 30, 2008, by ABS category.

ABS Category	Gross Transaction Notional Weighted Average Price September 30, 2008	Gross Transaction Notional Weighted Average Price June 30, 2008
RMBS Prime	71.54%	81.23%
RMBS Alt-A	46.12	58.06
RMBS Subprime	38.83	48.44
CMBS	81.40	87.46
CDOs	29.83	32.24
Other	78.36	85.03
Total	52.33%	60.38%

The decrease in the weighted average prices reflects continued deterioration in the markets for RMBS and CMBS and further downgrades in RMBS and CMBS credit ratings.

Prices for the individual securities held by a CDO are obtained in most cases from the CDO collateral managers, to the extent available. For the quarter ended September 30, 2008, CDO collateral managers provided market prices for approximately 70 percent of the underlying securities. When a price for an individual security is not provided by a CDO collateral manager, AIGFP derives the price through a pricing matrix using prices from CDO collateral managers for similar securities. Matrix pricing is a mathematical technique used principally to value debt securities without relying exclusively on quoted prices for the specific securities, but rather by relying on the relationship of the security to other benchmark quoted securities. Substantially all of the CDO collateral managers who provided prices used dealer prices for all or part of the underlying securities, in some cases supplemented by third party pricing services.

The BET model also uses diversity scores, weighted average lives, recovery rates and discount rates. The determination of some of these inputs requires the use of judgment

and estimates, particularly in the absence of market observable data. Diversity scores (which reflect default correlations between the underlying securities of a CDO) are obtained from CDO trustees or implied from default correlations. Weighted average lives of the underlying securities are obtained, when available, from external subscription services such as Bloomberg and Intex and, if not available, AIGFP utilizes an estimate reflecting known weighted average lives. Collateral recovery rates are obtained from the multi-sector CDO recovery data of a major rating agency. AIGFP utilizes a LIBOR-based interest rate curve to derive its discount rates.

AIGFP employs similar control processes to validate these model input as those used to value AIG's investment portfolio as described in Critical Accounting Estimates — Fair Value Measurements of Certain Financial Assets and Liabilities — Overview. The effects of the adjustments resulting from the validation process were de minimis for each period presented.

Valuation Sensitivity — Arbitrage Portfolio

Multi-Sector CDOs

AIG utilizes sensitivity analyses that estimate the effects of using alternative pricing and other key inputs on AIG's calculation of the unrealized market valuation loss related to the AIGFP super senior credit default swap portfolio. While AIG believes that the ranges used in these analyses are reasonable, given the current difficult market conditions, AIG is unable to predict which of the scenarios is most likely to occur. Actual results in any period are likely to vary, perhaps materially, from the modeled scenarios, and there can be no assurance that the unrealized market valuation loss related to the AIGFP super senior credit default swap portfolio will be consistent with any of the sensitivity analyses.

For the purposes of estimating sensitivities for the super senior multi-sector CDO credit default swap portfolio, the change in valuation derived using the BET model is used to estimate the change in the fair value of the derivative liability. As mentioned above, the most significant assumption used in the BET model is the pricing of the securities within the CDO collateral pools. If the actual pricing of the securities within the collateral pools differs from the pricing used in estimating the fair value of the super senior credit default swap portfolio, there is potential for material variation in the fair value estimate. A decrease by five points (for example, from 87 cents per dollar to 82 cents per dollar) in the aggregate price of the underlying collateral securities would increase the fair value derivative liability by approximately \$3.7 billion, while an increase in the aggregate price of the underlying collateral securities by five points (for example, from 90 cents per dollar to 95 cents per dollar) would reduce the fair value derivative liability by approximately \$3.8 billion. Any further declines in the value of the underlying collateral securities held by a CDO will similarly affect the value of the super senior CDO

securities given their significantly depressed valuations. Given the current difficult market conditions, AIG cannot predict reasonably likely changes in the prices of the underlying collateral securities held within a CDO at this time.

The following table presents other key inputs used in the BET model, and the potential increase (decrease) to the fair value of the derivative liability at September 30, 2008 corresponding to changes in these key inputs:

<i>(in millions)</i>	Increase (Decrease) To Fair Value Derivative Liability
Weighted average lives	
Effect of an increase of 1 year	\$ 426
Effect of a decrease of 1 year	(968)
Recovery rates	
Effect of an increase of 10%	(21)
Effect of a decrease of 10%	119
Diversity scores	
Effect of an increase of 5	(80)
Effect of a decrease of 5	207
Discount curve	
Effect of an increase of 100 basis points	158

These results are calculated by stressing a particular assumption independently of changes in any other assumption. No assurance can be given that the actual levels of the key inputs will not exceed, perhaps significantly, the ranges assumed by AIG for purposes of the above analysis. No assumption should be made that results calculated from the use of other changes in these key inputs can be interpolated or extrapolated from the results set forth above.

Corporate Debt

The following table represents the relevant market credit indices and index CDS maturity used to estimate the sensitivity for the credit default swap portfolio written on investment-grade corporate debt and the estimated increase (decrease) to the fair value of the derivative liability at September 30, 2008 corresponding to changes in these market credit indices and maturity:

<i>(in millions)</i>	Increase (Decrease) To Fair Value Derivative Liability		
CDS maturity (in years)	5	7	10
CDX Index			
Effect of an increase of 10 basis points	\$(19)	\$(46)	\$(9)
Effect of a decrease of 10 basis points	19	46	9
iTraxx Index			
Effect of an increase of 10 basis points	(9)	(32)	(7)
Effect of a decrease of 10 basis points	9	32	7

These results are calculated by stressing a particular assumption independently of changes in any other assumption. No assurance can be given that the actual levels of the indices and maturity will not exceed, perhaps significantly, the ranges assumed by AIGFP for purposes of the above

analysis. No assumption should be made that results calculated from the use of other changes in these indices and maturity can be interpolated or extrapolated from the results set forth above.

Stress Testing of Potential Realized Credit Losses — Multi-Sector CDOs

In addition to performing sensitivity analyses around the valuation of the AIGFP super senior credit default swap portfolio, AIG performed a roll rate analysis to stress the AIGFP super senior multi-sector CDO credit default swap portfolio for potential pre-tax realized credit losses without taking into consideration either sales of securities or early terminations of the contracts. Credit losses represent the shortfall of principal and/or interest cash flows on the referenced super senior risk layers underlying the portfolio.

Two scenarios illustrated in this process resulted in potential pre-tax realized credit losses of approximately \$7.8 billion (Scenario A) and approximately \$12.0 billion (Scenario B). Comparable amounts at June 30, 2008 were \$5.0 billion and \$8.5 billion, respectively. At September 30, 2008, AIG used the same set of roll rate and loss severity assumptions in its roll rate analysis as those used at June 30, 2008. However, the estimated potential credit losses illustrated by Scenarios A and B increased significantly over the amounts reported at June 30, 2008. The increases in the estimated potential credit losses were principally attributable to three factors:

- approximately \$1.5 billion in each scenario was attributable to the increase in the LIBOR interest rate, caused by tight money market conditions, which increased the modeled amounts of cash flow diversion to lower rated tranches within the multi-sector CDOs;
- approximately \$600 million in scenario A and \$700 million in scenario B were attributable to enhancements used in the analysis to reflect more accurately the attributes of the portfolio; and
- approximately \$600 million in scenario A and \$1.2 billion in scenario B were due to larger actual delinquencies in the performing mortgage pools and greater credit deterioration in other collateral securities.

Other factors, such as applying the pool losses determined based on the above factors up through the capital structures of the RMBS as well as the cash flow waterfall effects within the CDOs, account for the remainder of the increase.

The significant assumptions for subprime mortgages used in Scenario A are provided below. Scenario B illustrates the effect of a 20 percent relative increase (but not in excess of 100 percent) in all Scenario A roll rate default frequency

assumptions and in all Scenario A loss severity assumptions across all mortgage collateral (for example, 60 percent increased to 72 percent). Actual ultimate realized credit losses are likely to vary, perhaps materially, from these scenarios, and there can be no assurance that the ultimate realized credit losses related to the AIGFP super senior multi-sector CDO credit default swap portfolio will be consistent with either scenario or that such realized credit losses will not exceed the potential realized credit losses illustrated by Scenario B.

In the second quarter of 2008, AIG stressed the AIGFP super senior multi-sector CDO credit default swap portfolio using the roll rate analysis enhanced to apply to all RMBS collateral including subprime, Alt-A and prime residential mortgages that comprise the subprime, Alt-A and prime RMBS. This analysis assumed that certain percentages of actual delinquent mortgages will roll into default and foreclosure. It also assumed that certain percentages of non-delinquent mortgages will become delinquent and default over time, with those delinquency percentages depending on the age of the mortgage pool. To those assumed defaults AIG applied loss severities (one minus recovery) to derive estimated ultimate losses for each mortgage pool comprising a subprime, Alt-A and prime RMBS. Because subprime, Alt-A and prime RMBS have differing characteristics, the roll rates and loss severities differed. AIG then estimated tranche losses from these roll rate losses by applying the pool losses up through the capital structure of the RMBS. In this estimate of tranche losses, AIG introduced in the second quarter of 2008 an enhancement to the roll rate analysis to take into account the cash flow waterfall and to capture the potential effects, both positive and negative, of cash flow diversion within each CDO. To these estimated subprime, Alt-A and prime RMBS losses AIG added estimated credit losses on the inner CDOs and other ABS, such as CMBS, credit card and auto loan ABS held by the CDOs, calculated by using rating-based static percentages, in the case of inner CDOs varying by vintage and type of CDO, and, in the case of other ABS, by rating. In addition to the foregoing, the analysis incorporates the effects of certain other factors such as mortgage prepayment rates, excess spread and delinquency triggers.

Subprime RMBS comprise the majority of collateral securities within the multi-sector CDOs. Given adverse real estate market conditions, subprime mortgage losses comprise the largest percentage of AIG's pre-tax credit impairment losses in scenarios A and B.

The roll rate analysis, as mentioned above, consists of projecting credit losses by projecting mortgage defaults and applying loss severities to these defaults. Mortgage defaults are estimated by applying roll rate frequencies to each segment of existing delinquent mortgages and by using loss timing curves to forecast future defaults from currently performing mortgages.

The roll rate default frequency assumptions for subprime mortgages by vintage used in the scenario A roll rate analysis are as follows:

Segment	Pre-2005	2005	2006	2007
30+ days delinquent	60%	70%	80%	80%
60+ days delinquent	70%	80%	80%	80%
90+ days delinquent + borrower bankruptcies	70%	80%	90%	90%
Foreclosed/REO mortgages	100%	100%	100%	100%

The subprime mortgage loss severity assumptions by vintage used in the scenario A roll rate analysis are as follows:

Pre 2H 2004	2H 2004	1H 2005	2H 2005	2006/2007
50%	50%	55%	55%	60%

Prior to June 30, 2008, AIG conducted risk analyses of the AIGFP super senior multi-sector CDO credit default swap portfolio using certain ratings-based static stress tests, which centered around scenarios of further stress on the portfolio resulting from downgrades by the rating agencies from current levels on the underlying collateral in the CDO structures supported by AIGFP's credit default swaps. During the first quarter of 2008, AIG developed and implemented its roll rate analysis. Commencing in the second quarter of 2008, AIG discontinued use of the rating-based static stress test and used only the roll rate stress test because it believed that the roll rate stress test provided a more reasonable methodology to illustrate potential realized credit losses than the rating-based static stress test used previously.

Due to the dislocation in the market for CDO and RMBS collateral, AIG does not use the market values of the underlying CDO collateral in estimating its potential realized credit losses. The use of factors derived from market-observable prices in models used to determine the estimates for future realized credit losses could result in materially higher estimates of potential realized credit losses.

Under the terms of most of these credit derivatives, credit losses to AIG would generally result from the credit impairment of the referenced obligations that AIG would acquire in extinguishing its swap obligations. Other types of analyses or models could result in materially different estimates. AIG is aware that other market participants have used different assumptions and methodologies to estimate the potential realized credit losses on AIGFP's super senior multi-sector CDO credit default swap portfolio, resulting in significantly higher estimates than those resulting from AIG's roll rate stress testing scenarios. Actual ultimate realized credit losses are likely to vary, perhaps materially, from AIG's roll rate stress testing scenarios, and there can be no assurance that the ultimate realized credit losses related to the AIGFP super senior multi-sector CDO credit default swap portfolio will be consistent with either scenario or that such realized credit losses will not exceed the potential realized credit losses illustrated by Scenario B.

The potential realized credit losses illustrated in Scenarios A and B are lower than the \$30.2 billion fair value derivative liability of AIGFP's super senior multi-sector CDO credit default swap portfolio at September 30, 2008. The fair value of AIGFP's super senior multi-sector CDO credit default swap portfolio is based upon fair value accounting principles, which rely on third-party prices for both the underlying collateral securities and the CDOs that AIGFP's super senior credit default swaps wrap. These prices currently incorporate liquidity premiums, risk aversion elements and credit risk modeling, which in some instances may use more conservative assumptions than those used by AIG in its roll rate stress testing. Due to the ongoing disruption in the U.S. residential mortgage market and credit markets and the downgrades of RMBS and CDOs by the rating agencies, the market continues to lack transparency around the pricing of these securities. These prices are not necessarily reflective of the ultimate potential realized credit losses AIGFP could incur in the future related to the AIGFP super senior multi-sector CDO credit default swap portfolio, and AIG believes they incorporate a significant amount of market-driven risk aversion.

Other derivatives. Valuation models that incorporate unobservable inputs initially are calibrated to the transaction price. Subsequent valuations are based on observable inputs to the valuation model (e.g., interest rates, credit spreads, volatilities, etc.). Model inputs are changed only when corroborated by market data.

Transfers into Level 3

During the three-months ended September 30, 2008, AIG transferred from Level 2 to Level 3 approximately \$7.1 billion of assets, primarily representing fixed maturity securities for which the significant inputs used to measure the fair value of the securities became unobservable primarily as a result of the significant disruption in the credit markets. See Note 3 to the Consolidated Financial Statements for additional information about transfers into Level 3.

Valuation Controls

AIG is actively implementing its remediation plan to address the material weakness in internal control relating to the fair value valuation of the AIGFP super senior credit default swap portfolio, and oversight thereof as described in Item 9A. of the 2007 Annual Report on Form 10-K. AIG is developing new systems and processes to reduce reliance on certain manual controls that have been established as compensating controls over valuation of this portfolio and in other areas, and is strengthening the resources required to remediate this weakness. Notwithstanding this need to continue strengthening these controls, AIG has an oversight structure that includes appropriate segregation of duties with respect to the valuation of its financial instruments. Senior management, independent of the trading and investing functions, is responsible for the

oversight of control and valuation policies and for reporting the results of these controls and policies to AIG's Audit Committee. AIG employs procedures for the approval of new transaction types and markets, price verification, periodic review of profit and loss, and review of valuation models by personnel with appropriate technical knowledge of relevant products and markets. These procedures are performed by personnel independent of the trading and investing functions. For valuations that require inputs with little or no market observability, AIG compares the results of its valuation models to actual subsequent transactions.

Capital Resources and Liquidity

Liquidity

During the third quarter of 2008, AIG experienced liquidity issues as described under Current Events Related to Liquidity. As a result of these events, AIG, ILFC and AGF have not had access to their traditional sources of long-term or short-term financing through the public debt markets. AIG parent's sources of liquidity currently consist of borrowings under the Fed Facility, issuances of commercial paper under the CPFF and borrowings under its other revolving credit facilities and dividends, distributions and other payments from its subsidiaries.

On November 10, 2008, AIG announced several transactions that will help stabilize AIG's liquidity. Subject to the issuance of the Series D Preferred Shares described below, the Fed Credit Agreement will be amended to, among other things:

- provide that the total commitment under the Fed Facility following the issuance of the Series D Preferred Shares shall be \$60 billion;
- reduce the interest rate payable on outstanding borrowings under the Fed Facility from three-month LIBOR (not less than 3.5 percent) plus 8.5 percent per annum to three-month LIBOR (not less than 3.5 percent) plus 3.0 percent per annum;
- reduce the fee payable on undrawn amounts from 8.5 percent per annum to 0.75 percent per annum;
- reduce the number of shares of common stock of AIG to be issued upon conversion of the Series C Preferred Stock to be held by the Trust to 77.9 percent; and
- extend the term of the Fed Facility from two years to five years.

Pursuant to an agreement, AIG will issue \$40 billion liquidation preference of Series D Preferred Shares and a 10-year warrant exercisable for shares of AIG common stock equal to 2 percent of the outstanding shares of common stock to the United States Treasury, the net proceeds of which will be used to repay a portion of the outstanding balance under the Fed Facility. AIG expects during the fourth quarter to

form a limited liability company with the NY Fed that will acquire RMBS owned by certain AIG insurance company subsidiaries. These proceeds together with other AIG funds, will be used to return all cash collateral posted by securities borrowers, including approximately \$19.9 billion to be returned to the NY Fed. After all collateral is returned, AIG's U.S. securities lending program will be terminated. AIG also expects during the fourth quarter to establish a limited liability company with the NY Fed that will purchase up to approximately \$70 billion of the CDO exposures protected by AIGFP's multi-sector credit default swap portfolio. These actions are expected to:

- increase AIG's effective borrowing capacity under the Fed Facility;
- limit AIG's exposure to the RMBS securities in the securities lending pool; and
- limit AIG's exposure to the CDOs underlying its multi-sector credit default swap portfolio.

At the subsidiary level, in September 2008, both AGF and ILFC borrowed under their credit facilities (\$4.6 billion and \$6.5 billion, respectively) and certain U.S. life insurance companies entered into the Fed Securities Lending Agreement with the NY Fed.

Proceeds from announced asset sales are required to pay down the Fed Facility.

AIG Parent

At November 5, 2008, AIG parent had the following sources of liquidity:

- \$24 billion of available borrowings under the September 22, 2008 Fed Facility;
- \$5.6 billion of available commercial paper borrowings under all programs under the CPFF; and
- \$3.8 billion of available borrowings under its revolving credit facilities, as described under Revolving Credit Facilities below.

As a result, AIG believes that it has sufficient liquidity at the parent level to meet its obligations through at least the next twelve months. However, no assurance can be given that AIG's cash needs will not exceed projected amounts. Additional collateral calls at AIGFP, a failure to consummate either the establishment of the RMBS limited liability company or CDO security limited liability company, a further downgrade of AIG's credit ratings or unexpected capital or liquidity needs of AIG's subsidiaries may result in significant cash needs. For a further discussion of this risk, see Item 1A. Risk Factors.

Domestic Life Insurance Companies

AIG's Domestic Life Insurance and Retirement Services companies have three primary liquidity needs: the funding of

surrenders; returning cash collateral under the securities lending program; and obtaining capital to offset other-than-temporary impairment charges. At the current rate of surrenders, AIG believes that its Domestic Life Insurance and Retirement Services companies will have sufficient resources to meet these obligations. A substantial increase in surrender activity could, however, place stress on the liquidity of these companies and require asset sales.

AIG's securities lending payables totaled \$34.2 billion at November 5, 2008. When necessary, the NY Fed is providing liquidity to the securities lending pool through borrowings of securities from the pool. AIG anticipates repaying the Fed Securities Lending Agreement in full upon the establishment of the limited liability company to repurchase the RMBS in the securities lending pool.

AIG parent contributed \$16.6 billion to Domestic Life Insurance and Retirement Services companies during the first nine months of 2008, largely to offset the reduction in capital due to the significant other-than-temporary impairment charges. To the extent the investment portfolios of the Domestic Life Insurance and Retirement Services companies continue to be adversely affected by market conditions, AIG may need to make additional capital contributions to these companies.

Foreign Life Insurance Companies

AIG's Foreign Life Insurance companies (including ALICO) have had significant capital needs following publicity of AIG parent's liquidity issues and related credit ratings downgrades and reflecting the decline in the equity markets. AIG contributed \$1.6 billion to the Foreign Life Insurance companies in September 2008, and \$339 million in October 2008 to meet these needs. AIG expects to contribute approximately \$1.4 billion to Nan Shan in November 2008.

AIG believes that its Foreign Life Insurance subsidiaries will have adequate capital to support their business plans through the remainder of 2008; however, to the extent the investment portfolios of the Foreign Life Insurance companies continue to be adversely affected by market conditions, AIG may need to make additional capital contributions to these companies.

Commercial Insurance Group

AIG expects CIG to be able to continue to meet its obligations as they come due through cash from operations and, to the extent necessary, asset dispositions. One or more large catastrophes, however, may require AIG to provide additional support to CIG.

AIG has provided letters of credit that totaled \$5.7 billion at October 27, 2008, to allow subsidiaries of CIG to obtain admitted surplus credit for reinsurance provided by non-admitted carriers. Approximately \$4.2 billion of these

letters of credit will expire on December 31, 2008. The inability of AIG to renew or replace these letters of credit or otherwise obtain equivalent financial support would result in a significant reduction of the statutory surplus of these property and casualty companies and would require AIG to make additional capital contributions.

International Lease Finance Corporation

To assure maximum liquidity for its operations, ILFC borrowed the full amount available under its credit facilities, \$6.5 billion, in September 2008. ILFC can also borrow up to \$5.7 billion under the CPFF. At November 5, 2008, ILFC had borrowed \$1.7 billion under the CPFF. Funding under the CPFF terminates in April 30, 2009, with funds outstanding at that date maturing through July 2009. In addition, ILFC is seeking secured financings. ILFC currently has the capacity under their present facilities and indentures to enter into secured financings in excess of \$4.0 billion. AIG expects that these borrowings and cash flows from operations, which may include aircraft sales, will permit ILFC to meet its obligations through September 2009, after which AIG would rely upon additional asset sales and funding through the Fed Facility.

American General Finance

To assure maximum liquidity for its operations, AGF borrowed the full amount available under its primary credit facilities, \$4.6 billion, in September 2008. AGF anticipates that its primary sources of funds to support its operations and repay its obligations will be finance receivable collections from operations, while limiting its lending activities and focusing on expense savings. In addition, AGF is seeking secured financing. AGF anticipates that its existing sources of funds will be sufficient to meet its debt and other obligations through the first quarter of 2009. At that time, AIG will need to find other sources of liquidity for AGF, including sales of AGF assets and funding through the Fed Facility.

AIGCFG

As a result of AIG parent's liquidity issues and related credit ratings downgrades, AIGCFG experienced significant deposit withdrawals in Hong Kong during September 2008. AIGCFG subsidiaries borrowed \$1.6 billion from AIG in September and October of 2008 to meet these withdrawals and other cash needs.

AIG believes that the funding needs of AIGCFG have stabilized, but it is possible that AIGCFG's liquidity needs could increase substantially. AIG is working to sell these businesses on an expedited basis and believes that entering into sale agreements will help stabilize AIGCFG's liquidity.

Debt maturities in next twelve months

The following sets forth AIG's debt maturities by quarter for the twelve months ended September 30, 2009:

<i>(in billions)</i>	4 th Quarter 2008	1 st Quarter 2009	2 nd Quarter 2009	3 rd Quarter 2009
Debt Maturities	\$9	\$3	\$4	\$12

AIG expects to meet these obligations through borrowings from the Fed Facility, sales of commercial paper pursuant to the CPFF, and cash received from subsidiaries. See Notes 4, 5, and 11 to the Consolidated Financial Statements for additional information regarding the terms of the Fed Credit Agreement and the Pledge Agreement.

Third Quarter and Nine Month Capital Resources and Liquidity

Borrowings outstanding and remaining available amount that can be borrowed under the Fed Facility were as follows:

<i>(in millions)</i>	Inception through September 30, 2008	Inception through November 5, 2008
Borrowings:		
Loans to AIGFP for collateral postings, GIA and other maturities	\$35,340	\$43,100
Capital contributions to insurance companies ^(a)	13,341	13,687
Repayment of obligations to securities lending program	3,160	3,160
AIG Funding commercial paper maturities	2,717	3,714
Repayment of intercompany loans	1,528	1,528
Contributions to AIGCFG subsidiaries	1,094	1,591
Debt repayments	1,038	1,578
Other borrowings ^(a)	2,782	8,642
Total borrowings	61,000	77,000
Repayments:		
Repayments not reducing available amounts	-	16,000 ^(b)
Repayments reducing available amounts	-	-
Total repayments	-	16,000
Net borrowings	61,000	61,000
Total Fed Facility	85,000	85,000
Remaining available amount	24,000	24,000
Net borrowings	61,000	61,000
Paid in kind interest and fees	1,960	1,960
Total balance outstanding	\$62,960	\$62,960

(a) Includes securities lending activities.

(b) Includes repayments due to funds received from the Fed Securities Lending Agreement and the CPFF.

Borrowings**AIG's total borrowings were as follows:**

<i>(in millions)</i>	September 30, 2008	December 31, 2007
Borrowings issued by AIG:		
Fed Facility	\$ 62,960	\$ –
Notes and bonds payable	12,036	14,588

AIG (Parent Company)

AIG has not had access to its traditional sources of long-term or short-term financing through the public debt markets. Further, in light of AIG's current common stock price, AIG does not expect to be able to issue equity securities in the public markets in the foreseeable future. AIG's affiliates, AIG Funding Inc., ILFC, Curzon Funding LLC and Nightingale Finance LLC, may issue up to approximately \$6.9 billion, \$5.7 billion, \$7.2 billion and \$1.1 billion, respectively, of commercial paper under the CPFF.

AIG traditionally issued debt securities from time to time to meet its financing needs and those of certain of its subsidiaries, as well as to opportunistically fund the MIP. The maturities of the debt securities issued by AIG to fund the MIP are generally expected to be paid using the cash flows of assets held by AIG as part of the MIP portfolio.

On August 18, 2008, AIG sold \$3.25 billion principal amount of senior unsecured notes in a Rule 144A/Regulation S offering which bear interest at a per annum rate of 8.25 percent and mature in 2018. The proceeds from the sale of these notes were used by AIGFP for its general corporate purposes, and the notes are included within "AIGFP matched notes and

bond payable" in the preceding tables. AIG has agreed to use commercially reasonable efforts to consummate an exchange offer for the notes pursuant to an effective registration statement within 360 days of the date on which the notes were issued.

As of September 30, 2008, approximately \$7.4 billion principal amount of senior notes were outstanding under AIG's medium-term note program, of which \$3.2 billion was used for AIG's general corporate purposes, \$1.0 billion was used by AIGFP (included within "AIGFP matched notes and payable" in the preceding tables) and \$3.2 billion was used to fund the MIP. The maturity dates of these notes range from 2008 to 2052. To the extent considered appropriate, AIG may enter into swap transactions to manage its effective borrowing rates with respect to these notes.

AIG also maintains a Euro medium-term note program under which an aggregate nominal amount of up to \$31.5 billion of senior notes may be outstanding at any one time. As of September 30, 2008, the equivalent of \$12.0 billion of notes were outstanding under the program, of which \$9.3 billion were used to fund the MIP and the remainder was used for AIG's general corporate purposes. The aggregate amount outstanding includes a \$678 million increase resulting from

foreign exchange translation into U.S. dollars, of which \$167 million relates to notes issued by AIG for general corporate purposes and \$511 million relates to notes issued to fund the MIP. AIG has economically hedged the currency exposure arising from its foreign currency denominated notes.

AIG maintains a shelf registration statement in Japan, providing for the issuance of up to Japanese yen 300 billion principal amount of senior notes, of which the equivalent of \$476 million was outstanding as of September 30, 2008 and was used for AIG's general corporate purposes. In October 2008, \$282 million of senior notes matured and were paid.

In May 2008, AIG raised a total of approximately \$20 billion through the sale of (i) 196,710,525 shares of AIG common stock in a public offering at a price per share of \$38; (ii) 78.4 million Equity Units in a public offering at a price per unit of \$75; and (iii) \$6.9 billion in unregistered offerings of junior subordinated debentures in three series. The Equity Units and junior subordinated debentures receive hybrid equity treatment from the major rating agencies under their current policies but are recorded as long-term borrowings on the consolidated balance sheet. The Equity Units consist of an ownership interest in AIG junior subordinated debentures and a stock purchase contract obligating the holder of an equity unit to purchase, and obligating AIG to sell, a variable number of shares of AIG common stock on three dates in 2011 (a minimum of 128,944,480 shares and a maximum of 154,738,080 shares, subject to anti-dilution adjustments).

In October 2007, AIG borrowed a total of \$500 million on an unsecured basis pursuant to a loan agreement with a third-party bank. The entire amount of the loan was repaid on September 30, 2008.

AIGFP

AIGFP used the proceeds from the issuance of notes and bonds and GIA borrowings to invest in a diversified portfolio of securities and derivative transactions. The borrowings may also be temporarily invested in securities purchased under agreements to resell. AIGFP's notes and bonds include structured debt instruments whose payment terms are linked to one or more financial or other indices (such as an equity index or commodity index or another measure that is not considered to be clearly and closely related to the debt instrument). These notes contain embedded derivatives that otherwise would be required to be accounted for separately under FAS 133. Upon AIG's adoption of FAS 155 in 2006, AIGFP elected the fair value option for these notes. The notes that are accounted for using the fair value option are reported separately under hybrid financial instrument liabilities. AIG guarantees the obligations of AIGFP under AIGFP's notes and bonds and GIA borrowings.

Approximately \$8.7 billion of AIGFP's debt maturities through September 30, 2009 are fully collateralized with assets backing the corresponding liabilities.

ILFC

ILFC has not had access to its traditional sources of long-term or short-term financing through the public debt markets. ILFC can currently issue up to \$5.7 billion in commercial paper under the CPFF and has the capacity under its present facilities and indentures to enter into secured financings in excess of \$4.0 billion.

As a well-known seasoned issuer, ILFC has an automatic shelf registration statement with the SEC allowing ILFC immediate access to the U.S. public debt markets. At September 30, 2008, \$6.9 billion of debt securities had been issued under this registration statement and \$6.1 billion had been issued under a prior registration statement. In addition, ILFC has a Euro medium-term note program for \$7.0 billion, under which \$3.8 billion in notes were outstanding at September 30, 2008. Notes issued under the Euro medium-term note program are included in ILFC notes and bonds payable in the preceding table of borrowings. The cumulative foreign exchange adjustment loss for the foreign currency denominated debt was \$715 million at September 30, 2008 and \$969 million at December 31, 2007. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging the note exposure.

ILFC had a \$4.3 billion Export Credit Facility for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At September 30, 2008, ILFC had \$445 million outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured Export Credit Facility for up to a maximum of \$2.6 billion for Airbus aircraft to be delivered through May 31, 2005. The facility was subsequently increased to \$3.6 billion and extended to include aircraft to be delivered through May 31, 2009. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a forward-looking calendar, and the interest rate is determined through a bid process. The interest rates are either LIBOR based with spreads ranging from (0.04) percent to 0.02 percent or at fixed rates ranging from 4.2 percent to 4.7 percent. At September 30, 2008, ILFC had \$2.0 billion outstanding under this facility. At September 30, 2008, the interest rate of the loans outstanding ranged from 2.83 percent to 4.71 percent. The debt is collateralized by a pledge of shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility. Borrowings with respect to these facilities are included in ILFC's notes and bonds payable in the preceding table of borrowings.

Under these Export Credit Facilities, ILFC may be required to segregate deposits and maintenance reserves for particular aircraft into separate accounts in connection with certain credit rating downgrades. As a result of Moody's October 3, 2008 downgrade of ILFC's long-term debt rating to Baa1, ILFC has received notice from the security trustee of the 2004 facility to segregate into separate accounts security deposits and maintenance reserves aggregating \$148.8 million related to aircraft funded under the facility. ILFC has 90 days from the notice to comply. Further credit rating declines could impose additional restrictions under the Export Credit Facilities and make it more difficult for ILFC to borrow under the 2004 facility.

From time to time, ILFC enters into funded financing agreements. As of September 30, 2008, ILFC had a total of \$1.1 billion outstanding, which has varying maturities through February 2012. The interest rates are LIBOR-based, with spreads ranging from 0.33 percent to 1.625 percent. At September 30, 2008, the interest rates ranged from 3.113 percent to 5.375 percent. AIG does not guarantee any of the debt obligations of ILFC.

AGF

In the current environment, AGF has not had access to its traditional sources of long-term or short-term financing through the public debt markets.

As of September 30, 2008 (in millions)

Facility	Size	Borrower(s)	Available Amount	Expiration	One-Year Term-Out Option
AIG:					
364-Day Syndicated Facility	\$2,125	AIG/AIG Funding ^(a)	\$2,125	July 2009	Yes
5-Year Syndicated Facility	1,625	AIG/AIG Funding ^(a)	1,625	July 2011	No
364-Day Bilateral Facility ^(b)	3,200	AIG/AIG Funding ^(a)	70	December 2008	Yes
Total AIG	\$6,950		\$3,820		
ILFC:					
5-Year Syndicated Facility	\$2,500	ILFC	\$ –	October 2011	No
5-Year Syndicated Facility	2,000	ILFC	–	October 2010	No
5-Year Syndicated Facility	2,000	ILFC	–	October 2009	No
Total ILFC	\$6,500		\$ –		
AGF:					
364-Day Syndicated Facility	\$2,450	American General Finance Corporation American General Finance, Inc. ^(c)	\$ –	July 2009	Yes
5-Year Syndicated Facility	2,125	American General Finance Corporation	–	July 2010	No
Total AGF	\$4,575		\$ –		

(a) Guaranteed by AIG. In September 2008, AIG Capital Corporation was removed as a borrower on the syndicated facilities.

(b) This facility can be drawn in the form of loans or letters of credit. All drawn amounts shown above are in the form of letters of credit.

(c) American General Finance, Inc. was an eligible borrower for up to \$400 million only.

As of September 30, 2008, notes and bonds aggregating \$24.1 billion were outstanding with maturity dates ranging from 2008 to 2031 at interest rates ranging from 1.46 percent to 9 percent. To the extent considered appropriate, AGF has entered into swap transactions to manage its effective borrowing rates with respect to these notes and bonds. AIG does not guarantee any of the debt obligations of AGF.

Revolving Credit Facilities

AIG, ILFC and AGF have maintained committed, unsecured revolving credit facilities listed on the following table to support their respective commercial paper programs and for general corporate purposes. Some of the facilities, as noted below, contain a "term-out option" allowing for the conversion by the borrower of any outstanding loans at expiration into one-year term loans.

As previously discussed under Item 1A. Risk Factors — New Credit Facility, both ILFC and AGF have drawn the full amount available under their revolving credit facilities. AIG's syndicated facilities contain a covenant requiring AIG to maintain total shareholders' equity (calculated on a consolidated basis consistent with GAAP) of at least \$50 billion at all times. If AIG fails to maintain this level of total shareholders' equity at any time, it will lose access to those facilities.

Credit Ratings

The cost and availability of unsecured financing for AIG and its subsidiaries are generally dependent on their short-and long-term debt ratings. The following table presents the credit ratings of AIG and certain of its subsidiaries as of October 27, 2008. In parentheses, following the initial occurrence in the table of each rating, is an indication of that rating's relative rank within the agency's rating categories. That ranking refers only to the generic or major rating category and not to the modifiers appended to the rating by the rating agencies to denote relative position within such generic or major category.

	Short-term Debt			Senior Long-term Debt		
	Moody's	S&P	Fitch ^(j)	Moody's ^(a)	S&P ^(b)	Fitch ^{(c)(j)}
AIG	P-1 (1st of 3) ^(g)	A-1 (1st of 6) ^(e)	F1 (1st of 5)	A3 (3rd of 9) ^(g)	A- (3rd of 8) ^(e)	A (3rd of 9)
AIG Financial Products Corp. ^(d)	P-1 ^(g)	A-1 ^(e)	–	A3 ^(g)	A- ^(e)	–
AIG Funding, Inc. ^(d)	P-1 ^(g)	A-1 ^(e)	F1	–	–	–
ILFC	P-2 (2nd of 3) ^(h)	A-1 ^(f)	F1	Baa1 (4th of 9) ^(h)	A- ^(f)	A
American General Finance Corporation	P-2 ⁽ⁱ⁾	A-3 (3rd of 6)	F1	Baa1 ^(g)	BBB(4th of 8) ^(e)	A
American General Finance, Inc.	P-2 ^(g)	A-3	F1	–	–	A

(a) Moody's appends numerical modifiers 1, 2 and 3 to the generic rating categories to show relative position within rating categories.

(b) S&P ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(c) Fitch ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(d) AIG guarantees all obligations of AIG Financial Products Corp. and AIG Funding, Inc.

(e) Credit Watch Negative.

(f) Credit Watch Developing.

(g) Under Review for Possible Downgrade.

(h) Under Review with Direction Uncertain.

(i) Negative Outlook.

(j) Rating Watch Evolving.

These credit ratings are current opinions of the rating agencies. As such, they may be changed, suspended or withdrawn at any time by the rating agencies as a result of changes in, or unavailability of, information or based on other circumstances. Ratings may also be withdrawn at AIG management's request. This discussion of ratings is not a complete list of ratings of AIG and its subsidiaries.

"Ratings triggers" have been defined by one independent rating agency to include clauses or agreements the outcome of which depends upon the level of ratings maintained by one or more rating agencies. "Ratings triggers" generally relate to events that (i) could result in the termination or limitation of credit availability, or require accelerated repayment, (ii) could result in the termination of business contracts or (iii) could require a company to post collateral for the benefit of counterparties.

A significant portion of AIGFP's GIAs and financial derivative transactions include provisions that require AIGFP, upon a downgrade of AIG's long-term debt ratings, to post collateral or, with the consent of the counterparties, assign or repay its positions or arrange a substitute guarantee of its obligations by an obligor with higher debt ratings.

Furthermore, certain downgrades of AIG's long-term senior debt ratings would permit either AIG or the counterparties to elect early termination of contracts.

The actual amount of collateral that AIGFP would be required to post to counterparties in the event of such downgrades, or the aggregate amount of payments that AIG could be required to make, depends on market conditions, the fair value of outstanding affected transactions and other factors prevailing at the time of the downgrade. AIG's credit ratings and the potential effect of downgrades, see Item 1A. Risk Factors — Credit Ratings.

Contractual Obligations**Contractual obligations in total, and by remaining maturity at September 30, 2008 were as follows:**

(in millions)	Total Payments	Payments due by Period			
		Less Than One Year	1-3 Years	3 ⁺ -5 Years	More Than Five Years
Borrowings ^(a)	\$ 150,132	\$ 28,057	\$ 36,207	\$ 23,986	\$ 61,882
Fed Facility	62,960	–	62,960	–	–
Interest payments on borrowings	76,692	5,556	11,535	9,131	50,470
Loss reserves ^(b)	90,877	24,991	27,717	13,178	24,991
Insurance and investment contract liabilities ^(c)	698,107	31,815	47,027	44,436	574,829
GIC liabilities ^(d)	23,998	10,432	3,951	3,467	6,148
Aircraft purchase commitments	16,902	735	3,155	3,180	9,832
Other long-term obligations	683	248	393	28	14
Total^{(e)(f)}	\$1,120,351	\$101,834	\$192,945	\$97,406	\$728,166

(a) Excludes commercial paper and borrowings incurred by consolidated investments and includes hybrid financial instrument liabilities recorded at fair value.

(b) Represents future loss and loss adjustment expense payments estimated based on historical loss development patterns. Due to the significance of the assumptions used, the periodic amounts presented could be materially different from actual required payments.

(c) Insurance and investment contract liabilities include various investment-type products with contractually scheduled maturities, including periodic payments of a term certain nature. Insurance and investment contract liabilities also include benefit and claim liabilities, of which a significant portion represents policies and contracts that do not have stated contractual maturity dates and may not result in any future payment obligations. For these policies and contracts (i) AIG is currently not making payments until the occurrence of an insurable event, such as death or disability, (ii) payments are conditional on survivorship, or (iii) payment may occur due to a surrender or other non-scheduled event out of AIG's control. AIG has made significant assumptions to determine the estimated undiscounted cash flows of these contractual policy benefits, which assumptions include mortality, morbidity, future lapse rates, expenses, investment returns and interest crediting rates, offset by expected future deposits and premiums on in force policies. Due to the significance of the assumptions used, the periodic amounts presented could be materially different from actual required payments. The amounts presented in this table are undiscounted and therefore exceed the future policy benefits and policyholders' contract deposits included in the balance sheet.

(d) Represents guaranteed maturities under GICs.

(e) Does not reflect unrecognized tax benefits of \$2.5 billion, the timing of which is uncertain.

(f) The majority of AIGFP's credit default swaps require AIGFP to provide credit protection on a designated portfolio of loans or debt securities. At September 30, 2008, the fair value derivative liability was \$30.2 billion relating to AIGFP's super senior multi-sector CDO credit default swap portfolio, net of amounts realized in extinguishing derivative obligations. However, AIG's credit-based stress testing scenarios illustrate potential pre-tax realized credit losses from these contracts at approximately \$7.8 billion and approximately \$12.0 billion at that date. Due to the long-term maturities of these credit default swaps, AIG is unable to make reasonable estimates of the periods during which any payments would be made.

Off Balance Sheet Arrangements and Commercial Commitments**Off balance sheet arrangements and commercial commitments in total, and by remaining maturity at September 30, 2008 were as follows:**

(in millions)	Total Amounts Committed	Amount of Commitment Expiration			
		Less Than One Year	1-3 Years	3 ⁺ -5 Years	More Than Five Years
Guarantees:					
Liquidity facilities ^(a)	\$ 1,942	\$ 8	\$ 883	\$ 813	\$ 238
Standby letters of credit	1,698	1,483	45	28	142
Construction guarantees ^(b)	162	–	–	–	162
Guarantees of indebtedness	1,206	2	214	500	490
All other guarantees	617	52	54	13	498
Commitments:					
Investment commitments ^(c)	8,444	2,890	3,551	1,847	156
Commitments to extend credit	1,760	1,315	348	94	3
Letters of credit	1,229	959	120	–	150
Maturity shortening puts ^(d)	1,000	136	864	–	–
Other commercial commitments ^(e)	1,034	10	–	79	945
Total	\$ 19,092	\$ 6,855	\$ 6,079	\$ 3,374	\$ 2,784

(a) Primarily liquidity facilities provided in connection with certain municipal swap transactions and collateralized bond obligations.

(b) Primarily AIG SunAmerica construction guarantees connected to affordable housing investments.

(c) Includes commitments to invest in limited partnerships, private equity, hedge funds and mutual funds and commitments to purchase and develop real estate in the United States and abroad.

(d) Represents obligations under 2a-7 Puts to purchase certain multi-sector CDOs at pre-determined contractual prices.

(e) Includes options to acquire aircraft. Excludes commitments with respect to pension plans. The annual pension contribution for 2008 is expected to be approximately \$654 million for U.S. and non-U.S. plans.

Arrangements with Variable Interest Entities and Structured Investment Vehicles

AIG enters into various off-balance-sheet (unconsolidated) arrangements with variable interest entities (VIEs) in the normal course of business. AIG's involvement with VIEs ranges from being a passive investor to designing and structuring, warehousing and managing the collateral of VIEs. AIG engages in transactions with VIEs as part of its investment activities to obtain funding and to facilitate client needs. AIG purchases debt securities (rated and unrated) and equity interests issued by VIEs, makes loans and provides other credit support to VIEs, enters into insurance, reinsurance and derivative transactions and leasing arrangements with VIEs, and acts as the warehouse agent and collateral manager for VIEs. Interest holders in the VIEs generally have recourse only to the assets and cash flows of the VIEs and do not have recourse to AIG, except when AIG has provided a guarantee to the VIEs' interest holders. AIGFP has written regulatory relief super senior credit default swaps on VIEs used by lenders to fund their corporate loan and residential mortgage loan portfolios.

Under FIN 46(R), AIG consolidates a VIE when it is the primary beneficiary of the entity. The primary beneficiary is the party that either (i) absorbs a majority of the VIE's expected losses; (ii) receives a majority of the VIEs' expected residual returns; or (iii) both. For a further discussion of AIG's involvement with VIEs, see Note 7 of Notes to Consolidated Financial Statements in the 2007 Annual Report on Form 10-K.

A significant portion of AIG's overall exposure to VIEs results from AIG Investment's real estate and investment funds.

In certain instances, AIG Investments acts as the collateral manager or general partner of an investment fund, private equity fund or hedge fund. Such entities are typically registered investment companies or qualify for the specialized investment company accounting in accordance with the AICPA Investment Company Audit and Accounting Guide. For investment partnerships, hedge funds and private equity funds, AIG acts as the general partner or manager of the fund and is responsible for carrying out the investment mandate of the VIE. Often, AIG's insurance operations participate in these AIG managed structures as a passive investor in the debt or equity issued by the VIE. Typically, AIG does not provide any guarantees to the investors in the VIE.

AIG's primary exposure to unconsolidated VIEs at September 30, 2008 consists of debt and equity investments of approximately \$17 billion which are included in AIG's Total Investments and Financial Services assets on the consolidated balance sheet. AIG's total maximum exposure to loss on unconsolidated VIEs continued to decline as a result of the termination of certain of AIGFP's transactions and the effects of overall market deterioration. In addition, AIG has certain regulatory capital relief CDSs written by AIGFP with VIEs,

including CDSs with VIEs where AIG also has a debt or equity interest. These regulatory capital relief CDSs continue to have a zero fair value and AIGFP's exposure is included in the total net notional amount of AIGFP's regulatory capital CDS portfolio of \$250 billion. See Critical Accounting Estimates — AIGFP's Super Senior Credit Default Swap Portfolio — Regulatory Capital Portfolio.

Potential Amendment to FIN 46(R)

In September 2008, the FASB issued an exposure draft of an FAS that would amend FIN 46(R) to change the criteria for determining the primary beneficiary of a VIE. The primary beneficiary is the party that consolidates the VIE. The amendment would identify the party that has the ability to direct matters that most significantly affect the activities of the VIE as the primary beneficiary. The majority of AIG's involvement with VIE's results from being a passive investor. AIG is currently assessing the effect that adopting this potential amendment would have on its consolidated financial statements.

Shareholders' Equity

The changes in AIG's consolidated shareholders' equity were as follows:

<i>(in millions)</i>	Nine Months Ended September 30, 2008
Beginning of year	\$ 95,801
Net income (loss)	(37,630)
Unrealized depreciation of investments, net of tax	(13,383)
Cumulative translation adjustment, net of tax	(579)
Dividends to shareholders	(1,105)
Payments advanced to purchase shares, net	912
Common share issuance	7,343
Consideration received for preferred stock not yet issued	23,000
Share purchases	(1,912)
Cumulative effect of accounting changes, net of tax	(1,108)
Other*	(157)
End of period	\$ 71,182

* Reflects the effects of employee stock transactions and the present value of future contract adjustment payments related to the issuance of Equity Units.

New Share Issuance

In May 2008, AIG sold in a public offering 196,710,525 shares of its common stock at a price per share of \$38. Concurrent with the common stock offering, AIG sold 78.4 million Equity Units at a price per unit of \$75. The Equity Units consist of an ownership interest in AIG junior subordinated debentures and a stock purchase contract obligating the holder of an equity unit to purchase, and obligating AIG to sell, on each of February 15, 2011, May 1, 2011 and August 1, 2011, for a price of \$25, a variable number of shares of AIG common stock, that is not less than 0.54823 shares and not more than 0.6579 shares, subject to anti-dilution adjustments. Accordingly, a maximum number of 154,738,080 shares and a

minimum number of 128,944,480 shares of AIG common stock will be issued in the year 2011 under the stock purchase contracts, subject to anti-dilution adjustments.

On May 7, 2008, AIG's Board of Directors declared a quarterly cash dividend on the common stock of \$0.22 per share, that was paid on September 19, 2008 to shareholders of record on September 5, 2008. Effective September 23, 2008, AIG's Board of Directors suspended the declaration of dividends on AIG's common stock. Pursuant to the Fed Credit Agreement, AIG is restricted from paying dividends on its common stock.

See Note 5 to the Consolidated Financial Statements.

Share Repurchases

In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the purchase of

shares with an aggregate purchase price of \$8 billion. In November 2007, AIG's Board of Directors authorized the purchase of an additional \$8 billion in common stock. In 2007, AIG entered into structured share repurchase arrangements providing for the purchase of shares over time with an aggregate purchase price of \$7 billion.

A total of 37,926,059 shares were purchased during the nine-month period ended September 30, 2008 to meet commitments that existed at December 31, 2007. All shares purchased are recorded as treasury stock at cost.

At October 27, 2008, \$9 billion was available for purchases under the aggregate authorization. Pursuant to the Fed Credit Agreement, AIG is restricted from repurchasing shares of its common stock.

Invested Assets

The following tables summarize the composition of AIG's invested assets by segment:

<i>(in millions)</i>	General Insurance	Life Insurance & Retirement Services	Financial Services	Asset Management	Other	Total

*At December 31, 2007, approximately 65 percent and 35 percent of invested assets were held in domestic and foreign investments, respectively.

Investment Strategy

AIG's investment strategies are tailored to the specific business needs of each operating unit. The investment objectives are driven by the business model for each of the businesses: General Insurance, Life Insurance, Retirement Services and Asset Management's Spread-Based Investment business. The primary objectives are liquidity, preservation of capital, growth of surplus and generation of investment income to support the insurance products. Difficult market conditions in recent quarters have significantly hindered AIG's ability to achieve these objectives, and these challenges are expected to persist for the foreseeable future.

At the local operating unit level, investment strategies are based on considerations that include the local market, liability duration and cash flow characteristics, rating agency and regulatory capital considerations, legal investment limitations, tax optimization and diversification.

The majority of assets backing insurance liabilities at AIG consist of intermediate and long duration fixed maturity securities. In the case of Life Insurance & Retirement Services companies, as well as in the GIC and MIP portfolios of the Asset Management segment, the fundamental investment strategy is, as nearly as is practicable, to match the duration characteristics of the liabilities with comparable duration assets. Fixed maturity securities held by the insurance companies included in the AIG Property Casualty Group historically have consisted primarily of laddered holdings of tax-exempt municipal bonds, which provided attractive after-tax returns and limited credit risk. In light of AIG's net operating position, AIG changed its intent to hold to maturity certain tax-exempt municipal securities held by its insurance subsidiaries. Fixed maturity securities held by Foreign General Insurance companies consist primarily of intermediate duration high grade securities.

The market price of fixed maturity securities reflects numerous components, including interest rate environment, credit spread, embedded optionality (such as call features), liquidity, structural complexity, foreign exchange risk, and

other credit and non-credit factors. However, in most circumstances, pricing is most sensitive to interest rates, such that the market price declines as interest rates rise, and increases as interest rates fall. This effect is more pronounced for longer duration securities.

AIG marks to market the vast majority of the invested assets held by its insurance companies pursuant to FAS 115, "Accounting for Certain Investments in Debt and Equity Securities," and related accounting pronouncements. However, with limited exceptions (primarily with respect to separate account products consolidated on AIG's balance sheet pursuant to SOP 03-01), AIG does not mark to market its insurance liabilities for changes in interest rates, even though rising interest rates have the effect of reducing the fair value of such liabilities, and falling interest rates have the opposite effect. This results in the recording of changes in unrealized gains (losses) on securities in Accumulated other comprehensive income resulting from changes in interest rates without

any correlative, inverse changes in gains (losses) on AIG's liabilities. Because AIG's asset duration in certain low-yield currencies, particularly Japan and Taiwan, is shorter than its liability duration, AIG views increasing interest rates in these countries as economically advantageous, notwithstanding the effect that higher rates have on the market value of its fixed maturity portfolio.

The majority of AIG's non-floating rate fixed maturity portfolio is held to support intermediate and long duration liabilities. Assuming no other changes in factors affecting the valuation of fixed maturity securities, each 10 basis point (1/10 of 1 percent) increase in interest rates results in a decline of approximately \$2.2 billion in the pre-tax fair value of the fixed maturity portfolio. In most jurisdictions in which AIG operates, including the United States, such interest rate related changes in portfolio value are ignored for purposes of measuring regulatory capital adequacy.

The amortized cost or cost and fair value of AIG's available for sale and held to maturity securities were as follows:

(a) At December 31, 2007, included AIGFP available for sale securities with a fair value of \$39.3 billion, for which AIGFP elected the fair value option effective January 1, 2008, consisting primarily of corporate debt, mortgage-backed, asset-backed and collateralized securities. At September 30, 2008, the fair value of these securities were \$33.6 billion. At September 30, 2008 and December 31, 2007, fixed maturities held by AIG that were below investment grade or not rated totaled \$20.5 billion and \$27.0 billion, respectively. During the third quarter of 2008, AIG changed its intent to hold until maturity certain tax-exempt municipal securities held by its insurance subsidiaries. As a result, all securities previously classified as held to maturity are now classified in the available for sale category. See Note 1 to the Consolidated Financial Statements for additional information.

(b) Financial institutions represent approximately 54 percent of the total gross unrealized losses at September 30, 2008.

(c) Represents obligations of states, municipalities and political subdivisions.

At September 30, 2008, approximately 54 percent of the fixed maturity securities were held by domestic entities. Approximately 38 percent of such domestic securities were rated AAA by one or more of the principal rating agencies. Approximately five percent were below investment grade or not rated. AIG's investment decision process relies primarily on internally generated fundamental analysis and internal risk ratings. Third-party rating services' ratings and opinions provide one source of independent perspectives for consideration in the internal analysis. A significant portion of the foreign fixed

maturity portfolio is rated by Moody's, S&P or similar foreign rating services. Rating services are not available in all overseas locations. AIG's Credit Risk Committee closely reviews the credit quality of the foreign portfolio's non-rated fixed maturity securities. At September 30, 2008, approximately 18 percent of the foreign fixed maturity securities were either rated AAA or, on the basis of AIG's internal analysis, were equivalent from a credit standpoint to securities so rated. Approximately three percent were below investment grade or not rated at that date. Approximately one third of the foreign

fixed maturity portfolio is sovereign fixed maturity securities supporting policy liabilities in the country of issuance.

The credit ratings of AIG's fixed maturity securities, other than those of AIGFP, were as follows:

	September 30, 2008	December 31, 2007
Rating		
AAA	29%	38%
AA	29	28

(a) Includes foreign and jumbo RMBS-related securities.

(b) Primarily wrapped second-lien.

AIG's operations, other than AIGFP, held investments in RMBS with an estimated fair value of \$61.6 billion at September 30, 2008, or approximately 8 percent of AIG's total invested assets. In addition, AIG's insurance operations held investments with a fair value totaling \$8.5 billion in CDOs/ABS, of which \$27 million included some level of subprime exposure. AIG's RMBS investments are predominantly in highly-rated tranches that contain substantial protection features through collateral subordination. At September 30, 2008, approximately 82 percent of these investments were rated AAA, and approximately 9 percent were rated AA by

one or more of the principal rating agencies. AIG's investments rated BBB or below totaled \$3.3 billion, or less than 0.5 percent of AIG's total invested assets at September 30, 2008. As of October 27, 2008, \$14.8 billion of AIG's RMBS backed primarily by subprime collateral had been downgraded as a result of rating agency actions since January 1, 2008, and \$184 million of such investments had been upgraded. Of the downgrades, \$13.9 billion were AAA rated securities. In addition to the downgrades, as of October 27, 2008, the rating agencies had \$5.7 billion of RMBS on watch for downgrade.

The amortized cost of AIG's RMBS investments, other than those of AIGFP, at September 30, 2008 by year of vintage and credit rating were as follows:

(in billions)	Year of Vintage						Total

AIG's underwriting practices for investing in RMBS, other ABS and CDOs take into consideration the quality of the originator, the manager, the servicer, security credit ratings, underlying characteristics of the mortgages, borrower

characteristics, and the level of credit enhancement in the transaction. AIG's strategy is typically to invest in securities rated AA or better and create diversification across multiple underlying asset classes.

*Investments in CMBS***The amortized cost of AIG's CMBS investments, other than those of AIGFP, at September 30, 2008 was as follows:**

<i>(in millions)</i>	Amortized Cost	Percent of Total

Georgia	2
All Other	40
Total	100%

At September 30, 2008, AIG held \$20 billion in cost basis of CMBS. Approximately 79 percent of such holdings were rated AAA, approximately 19 percent were rated AA or A,

and approximately 2 percent were rated BBB or below at September 30, 2008.

There have been disruptions in the commercial mortgage markets in general, and the CMBS market in particular, with credit default swaps indices and quoted prices of securities at levels consistent with a severe correction in lease rates, occupancy and fair value of properties. In addition, spreads in the primary mortgage market have widened significantly.

Pricing of CMBS has been adversely affected by market perceptions that underlying mortgage defaults will increase. As a result, AIG recognized \$474 million of other-than-temporary impairment charges in the three-month period ended September 30, 2008 on CMBS valued at a severe discount to cost, despite the absence of any deterioration in performance of the underlying credits, because AIG concluded that it could not reasonably assert that the impairment period was temporary. At this time, AIG anticipates substantial recovery of principal and interest on the securities to which such other-than-temporary impairment charges were recorded. In addition, AIG recognized \$485 million in other-than-temporary impairment charges due to the change in intent to hold these CMBS until they recover in value.

*Investments in CDOs***The amortized cost of AIG's CDO investments, other than those of AIGFP, by collateral type at September 30, 2008 was as follows:**

<i>(in millions)</i>	Amortized Cost	Percent of Total

Commercial Mortgage Loan Exposure

At September 30, 2008, AIG had direct commercial mortgage loan exposure of \$17.2 billion, with \$15.8 billion representing

U.S. loan exposure. At that date, substantially all of the U.S. loans were current. Foreign commercial mortgage loans are secured predominantly by properties in Japan. In addition, at September 30, 2008, AIG had \$2.3 billion in residential mortgage loans in jurisdictions outside the United States, primarily backed by properties in Taiwan and Thailand.

AIGFP Trading Investments

The fair value of AIGFP's trading investments at September 30, 2008 was as follows:

<i>(In millions)</i>	Fair Value	Percent of Total
U.S. government and government sponsored entities	\$ 8,000	24%
Non-U.S. governments	472	1
Corporate debt	4,993	15

CMBS	4,703	23
CDO/ABS and collateralized	11,200	56
Total	\$20,175	100%

Securities Lending Activities

AIG's securities lending program historically operated as centrally managed by AIG Investments for the benefit of certain of AIG's insurance companies. Under this program, securities are loaned to various financial institutions, primarily major banks and brokerage firms. Cash collateral is received and is invested in fixed maturity securities to earn a net spread. Historically, AIG had received cash collateral from borrowers between 100-102 percent of the value of the loaned securities. The amount of cash advanced by borrowers has been declining, in light of the availability of alternative transactions requiring less collateral. If amounts received are insufficient to fund substantially all of the cost of purchasing identical replacements for the loaned securities, these transactions will cease to be accounted for as secured borrowings and will instead be accounted for as sales and forward purchases.

AIG's liability to the borrowers for collateral received was \$42.8 billion and the fair value of the collateral reinvested was \$41.5 billion as of September 30, 2008. In addition to the invested collateral, the securities on loan as well as all of the assets of the lending companies are generally available to satisfy the liability for collateral received.

A significant portion of the collateral received was invested in RMBS with cash flows with tenors longer than the liabilities to the counterparties. The value of those collateral securities declined over the last 12 months and trading in such securities has been extremely limited. Given these events, AIG began increasing liquidity in the collateral accounts by increasing the amount of cash and overnight investments that comprise the securities lending invested collateral in the third quarter of 2007.

The composition of the securities lending invested collateral by credit rating at September 30, 2008 was as follows:

<i>(in millions)</i>	AAA	AA	A	BBB/Not Rated	Short-Term	Total
Corporate debt	\$ 472	\$3,232	\$2,508	\$ 305	\$ –	\$ 6,517
Mortgage-backed, asset-backed and collateralized	21,660	4,036	1,140	2,410	–	29,246
Cash and short-term investments	–	–	–	–	5,748	5,748
Total	\$22,132	\$7,268	\$3,648	\$2,715	\$5,748	\$41,511

Participation in the securities lending program by reporting unit at September 30, 2008 was as follows:

	Percent Participation
Domestic Life Insurance and Domestic Retirement Services	73%
Foreign Life Insurance	13
AIG Property Casualty Group	2
Foreign General Insurance	5
Asset Management	7
Total	100%

Due to AIG-specific credit concerns and systemic issues in the financial markets in the third quarter, counterparties began curtailing their participation in the program by returning lent securities and requiring the return of cash collateral. As a result, the collateral pools did not have sufficient liquidity to satisfy these obligations. As of September 30, 2008, AIG had borrowed approximately \$11.5 billion under the Fed Facility to provide liquidity to the securities lending program. As the funding from the Fed Facility and other available cash was used to satisfy liabilities to borrowers rather than sales of securities lending invested collateral, the liabilities declined more significantly than the invested collateral.

The recognition of other-than-temporary impairment charges for the securities lending collateral investments placed significant stress on the statutory surplus of the participating insurance companies. During the third quarter of 2008, AIG recognized other-than-temporary impairment charges of \$11.7 billion related to these investments, including \$6.9 billion of charges related to AIG's change in intent to hold these securities to maturity as it winds this program down. During the three months ended September 30, 2008, AIG contributed \$14.9 billion to certain of its domestic life and retirement services subsidiaries, largely related to these charges.

On October 8, 2008, certain of AIG's domestic life insurance subsidiaries entered into the Fed Securities Lending Agreement, providing that the NY Fed will borrow, on an overnight basis on commercial terms and conditions, investment grade fixed income securities from these AIG subsidiaries in return for cash collateral. Prior to this arrangement, draw downs under the existing Fed Facility were used, in part, to settle securities lending transactions. AIG understands that the NY Fed is prepared to borrow securities to extend AIG's currently outstanding lending obligations when those obligations are not rolled over or replaced by transactions with other private market participants. These securities borrowings by the NY

Fed will allow AIG to replenish liquidity to the securities lending program on an as-needed basis, while providing the NY Fed with a perfected security interest in these third party securities.

As of November 5, 2008, the total value of securities lending payables amounted to \$34.2 billion, with \$19.9 billion of this amount payable to the NY Fed under this agreement.

AIG and the NY Fed expect to establish a limited liability company to hold RMBS securities in the domestic securities lending program and to terminate the Fed Securities Lending Agreement and AIG's U.S. securities lending program. See Note 11 to the Consolidated Financial Statements.

Portfolio Review*Other-Than-Temporary Impairments*

AIG assesses its ability to hold any fixed maturity security in an unrealized loss position to its recovery, including fixed maturity securities classified as available for sale, at each balance sheet date. The decision to sell any such fixed maturity security classified as available for sale reflects the judgment of AIG's management that the security sold is unlikely to provide, on a relative value basis, as attractive a return in the future as alternative securities entailing comparable risks. With respect to distressed securities, the sale decision reflects management's judgment that the risk-discounted anticipated ultimate recovery is less than the value achievable on sale.

AIG evaluates its investments for impairments in valuation as well as credit. The determination that a security has incurred an other-than-temporary decline in value requires the judgment of management and consideration of the fundamental condition of the issuer, its near-term prospects and all the relevant facts and circumstances. See Critical Accounting Estimates — Other-Than-Temporary Impairments herein for further information on AIG's policy.

Once a security has been identified as other-than-temporarily impaired, the amount of such impairment is determined by reference to that security's contemporaneous fair value and recorded as a charge to earnings.

As a result of AIG's periodic evaluation of its securities for other-than-temporary impairments in value, AIG recorded other-than-temporary impairment charges of \$19.9 billion and \$544 million in the three-month periods ended September 30, 2008 and 2007, respectively, and \$32.2 billion

and \$1.4 billion in the nine-month periods ended September 30, 2008 and 2007, respectively.

In light of the recent significant disruption in the U.S. residential mortgage and credit markets, AIG has recognized an other-than-temporary impairment charge (severity loss) of \$7.3 billion and \$16.3 billion in the three- and nine-month periods ended September 30, 2008, primarily related to certain RMBS, other structured securities and securities of financial institutions. Notwithstanding AIG's intent and ability to hold such securities indefinitely (except for securities lending invested collateral comprising \$3.4 billion and \$9.2 billion of the severity loss for the three- and nine-month periods ended September 30, 2008), and despite structures that indicate that a substantial amount of the securities should continue to perform in accordance with original terms, AIG concluded that it could not reasonably assert that the impairment period would be temporary.

In addition to the above severity losses, AIG recorded other-than-temporary impairment charges in the three- and nine-month periods ended September 30, 2008 and 2007 related to:

- securities that AIG does not intend to hold until recovery;
- declines due to foreign exchange rates;
- issuer-specific credit events;
- certain structured securities impaired under Emerging Issues Task Force Issue No. 99-20, "Recognition of Interest Income and Impairment on Purchased Beneficial Interests and Beneficial Interests that Continue to be Held by a Transferor in Securitized Financial Assets"; and
- other impairments, including equity securities and partnership investments.

Other-than-temporary impairment charges by reporting segment were as follows:

<i>(in millions)</i>	General Insurance	Life Insurance & Retirement Services	Financial Services	Asset Management	Other	Total

* Ratings are as of the date of the impairment charge.

No other-than-temporary impairment charge with respect to any one single counterparty was significant to AIG's consolidated financial condition or results of operations, and no individual other-than-temporary impairment charge exceeded five percent of the consolidated net loss in the nine-month period ended September 30, 2008.

In periods subsequent to the recognition of an other-than-temporary impairment charge for fixed maturity securities

that is not credit or foreign exchange related, AIG generally accretes into income the discount or amortizes the reduced premium resulting from the reduction in cost basis over the remaining life of the security. The amount of accretion recognized in earnings for the three- and nine-month periods ended September 30, 2008 was \$196 million and \$283 million, respectively.

An aging of the pre-tax unrealized losses of fixed maturity and equity securities, distributed as a percentage of cost relative to unrealized loss (the extent by which the fair value is less than amortized cost or cost), including the number of respective items, at September 30, 2008 was as follows:

Aging ^(a) (dollars in millions)	Less than or equal to 20% of Cost ^(b)			Greater than 20% to 50% of Cost ^(b)			Greater than 50% of Cost ^(b)			Total

(a) Represents the number of consecutive months that fair value has been less than cost by any amount.

(b) Represents the percentage by which fair value is less than cost at the balance sheet date.

(c) For bonds, represents amortized cost.

(d) The effect on net income of unrealized losses after taxes will be mitigated upon realization because certain realized losses will be charged to participating policyholder accounts, or realization will result in current decreases in the amortization of certain DAC.

(e) Includes securities lending invested collateral.

(f) Of this \$9.5 billion, \$3.7 billion relates to RMBS, CMBS, CDOs and ABS with unrealized losses between 25 percent and 50 percent; and \$1.1 billion relates to RMBS, CMBS, CDOs and ABS with unrealized losses between 20 percent and 25 percent. The balance represents all other classes of fixed maturity securities.

The aging of the unrealized losses of RMBS, CMBS, CDOs and ABS with fair values between 20 percent and 50 percent less than their cost at September 30, 2008 (in footnote (f) to the table above) is shown in the table below, which provides the period in which those securities in unrealized loss positions would become candidates for impairment solely because they have been trading at a discount for nine consecutive months (AIG's other-than-temporary aging guideline) without regard to the level of discount (AIG's other-than-temporary trading level guideline), assuming prices remained unchanged.

(In millions)	Fourth Quarter 2008	First Quarter 2009	Second Quarter 2009	Total
Unrealized loss percent				
25 to 50 percent	\$207	\$403	\$3,059	\$3,669
20 to less than 25 percent	\$-	\$1	\$1,134	\$1,135

Given the current difficult market conditions, AIG is not able to predict reasonably likely changes in the prices of these securities. Moreover, AIG is unable to assess the effect, if any, that potential sale of securities pursuant to TARP will have on the pricing of its available for sale securities.

Unrealized gains and losses

At September 30, 2008, the carrying value of AIG's available for sale fixed maturity and equity securities aggregated \$445.5 billion. At September 30, 2008, aggregate pre-tax unrealized gains for fixed maturity and equity securities were \$10.3 billion (\$6.7 billion after tax).

At September 30, 2008, the aggregate pre-tax gross unrealized losses on fixed maturity and equity securities were \$28.7 billion (\$18.7 billion after tax). Additional information about these securities is as follows:

- These securities were valued, in the aggregate, at approximately 91 percent of their current amortized cost.
- Approximately 10 percent of these securities were valued at less than 20 percent of their current cost, or amortized cost.
- Approximately four percent of the fixed maturity securities had issuer credit ratings that were below investment grade.

AIG did not consider these securities in an unrealized loss position to be other-than-temporarily impaired at September 30, 2008, because management has the intent and ability to hold these investments until they recover their cost basis within a recovery period deemed temporary. AIG believes the securities will generally continue to perform in accordance with the original terms, notwithstanding the present price declines.

For the three- and nine-month periods ended September 30, 2008, unrealized losses related to investment grade bonds increased \$3.0 billion (\$2.0 billion after tax) and \$13.5 billion (\$8.8 billion after tax), respectively, reflecting the widening of credit spreads, partially offset by the effects of a decline in risk-free interest rates.

The amortized cost and fair value of fixed maturity securities available for sale in an unrealized loss position at September 30, 2008, by contractual maturity, were as follows:

<i>(in millions)</i>	Amortized Cost	Fair Value
Due in one year or less	\$ 9,257	\$ 8,914
Due after one year through five years	49,370	45,950
Due after five years through ten years	67,864	62,968
Due after ten years	100,805	90,092
Mortgage-backed, asset-backed and collateralized	68,022	60,199
Total	\$295,318	\$268,123

For the nine-month period ended September 30, 2008, the pre-tax realized losses incurred with respect to the sale of fixed maturities and equity securities were \$1.7 billion. The aggregate fair value of securities sold was \$20.6 billion, which was approximately 92 percent of amortized cost. The average period of time that securities sold at a loss during the nine-month period ended September 30, 2008 were trading continuously at a price below book value was approximately five months. See Risk Management — Corporate Risk Management — Credit Risk Management in the 2007 Annual Report on Form 10-K for an additional discussion of investment risks associated with AIG's investment portfolio.

Certain of AIG's foreign subsidiaries included in the consolidated financial statements report on a fiscal period ended August 31. The effect on AIG's consolidated financial condition and results of operations of all material events occurring between August 31 and September 30 for all periods presented has been recorded. Due to the significant and rapid world-wide market decline, in September 2008, AIG determined this to be an intervening event that had a material effect on its consolidated financial position and results of operations. AIG reflected this recent market decline throughout its investment portfolio. Accordingly, AIG recorded \$1.3 billion (\$845 million after tax) of hedge and mutual fund investment losses in net investment income, \$1.1 billion (\$910 million after tax) of other than temporary impairment charges, and

\$5.4 billion (\$3.2 billion after tax) of unrealized depreciation on investments.

Risk Management

For a complete discussion of AIG's risk management program, see Risk Management in the 2007 Annual Report on Form 10-K.

The recent unprecedented market turmoil, particularly in the residential mortgage-backed securities market, led to severe declines in the prices of highly-rated asset backed securities and reduced liquidity for these securities. The unanticipated price declines and reduction of liquidity exceeded the parameters historically used by AIG for purposes of asset-liability and liquidity management processes. AIG is responding to these developments by enhancing its risk management processes and stress testing. The continuation of such market turmoil and associated price declines and limited liquidity have severely constrained AIG's alternatives for mitigating its exposure to credit, market and liquidity risks.

AIG has continued to invest in human resources, systems and processes in the enterprise risk management functions, both at the corporate and business unit levels. These efforts include implementing systems and processes to ensure the aggregation of the various categories of risk across business units and as a whole, and incorporating forward-looking analyses and stress tests. These initiatives are ongoing and will take time to implement. As AIG divests of certain operations, enterprise risk management will be focused on maintaining appropriate human resources, oversight and controls for the remaining operations.

Credit Risk Management

AIG defines its aggregate credit exposures to a counterparty as the sum of its fixed maturities, loans, finance leases, derivatives (mark to market), deposits (in the case of financial institutions) and the specified credit equivalent exposure to certain insurance products which embody credit risk.

The following table presents AIG's largest credit exposures at September 30, 2008 as a percentage of total consolidated shareholders' equity:

Category	Risk Rating ^(a)	Credit Exposure as a Percentage of Total Consolidated Shareholders' Equity
Investment Grade:		
10 largest combined	A+ (weighted average) ^(b)	128.9%
Single largest non-sovereign (financial institution)	A-	17.9
Single largest corporate	AAA	7.4
Single largest sovereign	A	23.3
Non-Investment Grade:		
Single largest sovereign	BB-	2.5
Single largest non-sovereign	BB	0.7

(a) Risk rating is based on AIG's internal risk ratings process.

(b) Five of the ten largest credit exposures are to highly-rated financial institutions and four are to investment-grade rated sovereigns; none is rated lower than BBB or its equivalent.

AIG monitors its aggregate cross-border exposures by country and regional group of countries. AIG defines its cross-border exposure to include both cross-border credit exposures and its large cross-border investments in its own international subsidiaries. Fourteen countries had cross-border exposures in excess of 10 percent of total consolidated shareholders' equity at September 30, 2008. At that date nine were AAA-rated, two were AA-rated and three were A-rated.

In addition, AIG reviews its industry concentrations. Excluding the U.S. residential and commercial mortgage sectors, AIG's single largest industry credit exposure is to the global financial institutions sector comprised of banks, securities firms, insurance companies and finance companies.

The following table presents AIG's largest credit exposures to the global financial institution sector at September 30, 2008 as a percentage of total consolidated shareholders' equity:

Industry Category	Credit Exposure as a Percentage of Consolidated Shareholders' Equity
Money Center / Global Bank Groups	121.0%
Global Life Insurance Carriers	24.8
European Regional Financial Institutions	21.6
Global Securities Firms and Exchanges	17.2
Global Reinsurance Firms	16.2
North American Based Regional Financial Institutions	15.5
Asian Regional Financial Institutions	10.7

AIG's exposure to the five largest money center/global bank group institutions was 59 percent of shareholders' equity.

AIG's other industry credit concentrations in excess of 10 percent of total consolidated shareholders' equity are in the

following industries (in descending order by approximate size):

- Oil and gas;
- Electric and water utilities;
- Global telecommunications companies;
- Conglomerates;
- Pharmaceutical and healthcare companies;
- Government sponsored entities;
- Retail companies; and
- Food and beverage companies.

Other than as described above, there were no significant changes to AIG's credit exposures as set forth in Risk Management — Corporate Risk Management — Credit Risk Management in the 2007 Annual Report on Form 10-K.

Market Risk Management

Insurance, Asset Management and Non-Trading Financial Services Value at Risk (VaR)

AIG performs a VaR analysis across all of its non-trading businesses, and a separate VaR analysis for its trading business at AIGFP. The comprehensive VaR is categorized by AIG business segment (General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management) and also by market risk factor (interest rate, currency and equity). AIG's market risk VaR calculations include exposures to benchmark Treasury or swap interest rates, but do not include exposures to credit-based factors such as credit spreads. AIG's credit exposures within its invested assets and credit derivative portfolios are discussed in Risk Management — Segment Risk Management — Financial Services in the 2007 Annual Report on Form 10-K.

For the insurance segments, assets included are invested assets (excluding direct holdings of real estate) and liabilities included are reserve for losses and loss expenses, reserve for unearned premiums, future policy benefits for life and accident and health insurance contracts and other policyholders' funds. For financial services companies, loans and leases represent the majority of assets represented in the VaR calculation, while bonds and notes issued represent the majority of liabilities. Parent company assets and liabilities (other than those pertaining to funding under the Fed Facility and consideration received for Series C Preferred Stock not yet issued) are included in the Total AIG VaR figures.

AIG calculated the VaR with respect to net fair values as of September 30, 2008 and December 31, 2007. The VaR number represents the maximum potential loss as of those dates that could be incurred with a 95 percent confidence (i.e., only five percent of historical scenarios show losses greater than the VaR figure) within a one-month holding

period. AIG uses the historical simulation methodology that entails repricing all assets and liabilities under explicit changes in market rates within a specific historical time period. AIG uses the most recent three years of historical market information for interest rates, foreign exchange rates, and equity index

prices. For each scenario, each transaction was repriced. Segment and AIG-wide scenario values are then calculated by netting the values of all the underlying assets and liabilities.

The following table presents the period-end, average, high and low VaRs on a diversified basis and of each component of market risk for AIG's non-trading businesses. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

(in millions)	2008				2007

Currency	12	4	12	2	2	3	5	2
Equity	8	11	13	8	13	11	13	8

AIG's total non-trading market risk VaR increased from \$5.6 billion at year-end 2007 to \$7.3 billion at September 30, 2008. The VaR increase was driven primarily by higher volatilities in equity markets globally and interest rates in the U.S.

Capital Markets Trading VaR

AIGFP attempts to minimize risk in benchmark interest rates, equities, commodities and foreign exchange. Market exposures in option implied volatilities, correlations and basis risks are also minimized over time.

AIGFP's minimal reliance on market risk driven revenue is reflected in its VaR. AIGFP's VaR calculation is based on the interest rate, equity, commodity and foreign exchange risk arising from its portfolio. Credit-related factors, such as credit spreads or credit default, are not included in AIGFP's VaR calculation. Because the market risk with respect to securities available for sale, at market, is substantially hedged, segregation of the financial instruments into trading and other than

trading was not considered necessary. AIGFP operates under established market risk limits based upon this VaR calculation. In addition, AIGFP backtests its VaR.

In the calculation of VaR for AIGFP, AIG uses the historical simulation methodology based on estimated changes to the value of all transactions under explicit changes in market rates and prices within a specific historical time period. AIGFP attempts to secure reliable and independent current market prices, such as published exchange prices, external subscription services such as Bloomberg or Reuters, or third-party or broker quotes. When such prices are not available, AIGFP uses an internal methodology that includes extrapolation from observable and verifiable prices nearest to the dates of the transactions. Historically, actual results have not deviated from these models in any material respect.

AIGFP reports its VaR level using a 95 percent confidence level and a one-day holding period, facilitating risk comparison

with AIGFP's trading peers and reflecting the fact that market risks can be actively assumed and offset in AIGFP's trading portfolio.

The following table presents the year-end, average, high, and low VaRs on a diversified basis and of each component of market risk for Capital Markets operations. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

<i>(in millions)</i>	As of September 30,	Nine Months Ended September 30,			As of December 31,	Year Ended December 31,

Commodity	2	4	7	2	3	3	7	2

See Valuation of Level 3 Assets and Liabilities for a comprehensive discussion of AIGFP's super senior credit default swap portfolio.

Insurance Risk Management

Catastrophe Exposures

The nature of AIG's business exposes it to various catastrophic events in which multiple losses across multiple lines of business can occur in any calendar year. To control this exposure, AIG uses a combination of techniques, including setting aggregate limits in key business units, monitoring and modeling accumulated exposures, and purchasing catastrophe reinsurance to supplement its other reinsurance protections.

Natural disasters such as hurricanes, earthquakes and other catastrophes have the potential to adversely affect AIG's operating results. Other risks, such as an outbreak of a pandemic disease, such as the Avian Influenza A Virus (H5N1), could adversely affect AIG's business and operating results to an extent that may be only partially offset by reinsurance programs.

AIG evaluates catastrophic events and assesses the probability of occurrence and magnitude of catastrophic events through the use of industry recognized models, among other techniques. AIG updates these models by periodically monitoring the exposure risks of AIG's worldwide General Insurance operations. Following is an overview of modeled losses associated with the more significant natural perils, which includes exposures for AIG Property Casualty Group and Foreign General (other than Ascot). Transatlantic and Ascot utilize a different model, and their results are presented separately below. Significant Life Insurance and accident and health exposures have been added to these results as well. The modeled results assume that all reinsurers fulfill their obligations to AIG in accordance with their terms.

It is important to recognize that there is no standard methodology to project the possible losses from total property and workers' compensation exposures. Further, there are no industry standard assumptions to be utilized in projecting these losses. The use of different methodologies and assumptions could materially change the projected losses. Therefore, these modeled losses may not be comparable to estimates made by other companies. These estimates are inherently uncertain and may not reflect AIG's maximum exposures to these events. It is highly likely that AIG's losses will vary, perhaps significantly, from these estimates.

AIG has revised the catastrophe exposure disclosures presented below from that presented in the 2007 Annual Report on Form 10-K to reflect more recent data for AIG's Property Casualty Group, as well as reinsurance programs in place as of September 1, 2008. The modeled results provided in the table below were based on the aggregate exceedence probability (AEP) losses which represent total property, workers' compensation, life, and accident and health losses that may occur in any single year from one or more natural events. The updated Property Casualty Group property exposures were modeled with exposure data as of June 2008. The values provided were based on 100-year return period losses, which have a one percent likelihood of being exceeded in any single year. Thus, the model projects that there is a one percent probability that AIG could incur in any year losses in excess of the modeled amounts for these perils. Losses include loss adjustment expenses and the net values include reinstatement premiums.

<i>(in millions)</i>	Gross	Net of 2008 Reinsurance	Net After Income Tax	% of Consolidated Shareholders' Equity at September 30, 2008
Natural Peril:				
Earthquake	\$6,627	\$4,098	\$2,664	3.7%
Tropical Cyclone*	\$6,850	\$4,094	\$2,661	3.7%

* Includes hurricanes, typhoons and European Windstorms.

Both gross earthquake and tropical cyclone modeled losses increased \$1.0 billion compared to estimates included in the 2007 Annual Report on Form 10-K while net after tax losses increased \$456 million and \$431 million, respectively. These increases are mainly attributable to growth in Lexington, Private Client Group and energy.

In addition to the return period loss, AIG evaluates potential single event earthquake and hurricane losses that may be incurred. The single events utilized are a subset of potential events identified and utilized by Lloyd's (see Lloyd's *Realistic Disaster Scenarios, Scenario Specifications, April 2006*) and referred to as Realistic Disaster Scenarios (RDSs). The purpose of this analysis is to utilize these RDSs to provide a reference frame and place into context the model results. However, it is important to note that the specific events used for this analysis do not necessarily represent the worst case loss that AIG could incur from this type of an event in these regions. The losses associated with the RDSs are included in the following table.

Single event modeled property and workers' compensation losses to AIG's worldwide portfolio of risk for key geographic areas are set forth below. Gross values represent AIG's liability after the application of policy limits and deductibles, and net values represent losses after reinsurance is applied; net losses also include reinsurance reinstatement premiums. Both gross and net losses include loss adjustment expenses.

<i>(in millions)</i>	Gross	Net of 2008 Reinsurance
Natural Peril:		
San Francisco Earthquake	\$7,294	\$4,573
Miami Hurricane	\$7,335	\$3,834
Los Angeles Earthquake	\$6,336	\$3,986
Northeast Hurricane	\$5,012	\$2,978
Gulf Coast Hurricane	\$4,376	\$2,476
Japanese Earthquake	\$1,109	\$ 406
European Windstorm	\$ 252	\$ 89
Japanese Typhoon	\$ 177	\$ 103

AIG also monitors key international property risks utilizing modeled statistical return period losses as well. Based on

these simulations, the 100-year return period loss for Japanese Earthquake is \$510 million gross, and \$170 million net, the 100-year return period loss for European Windstorm is \$448 million gross, and \$154 million net, and the 100-year return period loss for Japanese Typhoon is \$340 million gross, and \$212 million net.

The losses provided above do not include Transatlantic or Ascot. The one in 100 year AEP amounts for Ascot and AIG's share (59 percent) of Transatlantic are as follows:

<i>(in millions)</i>	Gross	Net of 2008 Reinsurance	Net After Income Tax
Natural Peril:			
Ascot Earthquake	\$380	\$ 76	\$ 49
Ascot Tropical Cyclone*	\$422	\$169	\$110
AIG's Share of Transatlantic Earthquake	\$452	\$406	\$264
AIG's Share of Transatlantic Tropical Cyclone*	\$618	\$577	\$375

* The Ascot amounts are based on data as of June 30, 2008 and the Transatlantic amounts are based on data as of July 1, 2008.

Terrorism

Exposure to loss from terrorist attack is controlled by limiting the aggregate accumulation of workers' compensation and property insurance that is underwritten within defined target locations. Modeling is used to provide projections of probable maximum loss by target location based upon the actual exposures of AIG policyholders.

Terrorism risk is monitored to manage AIG's exposure. AIG shares its exposures to terrorism risks under the Terrorism Risk Insurance Act (TRIA). During 2007, AIG's deductible under TRIA was approximately \$4.0 billion, with a 15 percent share of certified terrorism losses in excess of the deductible. As of January 1, 2008, the deductible increased to approximately \$4.2 billion, with a 15 percent share of certified terrorism losses in excess of the deductible.

ITEM 3. Quantitative and Qualitative Disclosures About Market Risk

Included in Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations.

ITEM 4. Controls and Procedures

In connection with the preparation of this Quarterly Report on Form 10-Q, an evaluation was carried out by AIG's management, with the participation of AIG's Chief Executive Officer and Chief Financial Officer, of the effectiveness of AIG's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (Exchange Act)). Disclosure controls and procedures are designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms and that such information is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial Officer, to allow timely decisions regarding required disclosures. Solely as a result of the previously identified material weakness in internal control over the fair value valuation of the AIGFP super senior credit default swap portfolio and oversight thereof as described in the 2007 Annual Report on Form 10-K, AIG's Chief Executive Officer and Chief Financial Officer have concluded that, as of September 30, 2008, AIG's disclosure controls and procedures were ineffective. Notwithstanding the existence of this material weakness, AIG believes that the consolidated financial statements in this Quarterly Report on Form 10-Q fairly present, in all material respects, AIG's consolidated financial condition as of September 30, 2008 and December 31, 2007 and consolidated results

of operations for the three- and nine-month periods ended September 30, 2008 and 2007 and consolidated cash flows for the nine-month periods ended September 30, 2008 and 2007, in conformity with GAAP. In addition, there has been no change in AIG's internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) that occurred during the quarter ended September 30, 2008 that has materially affected, or is reasonably likely to materially affect, AIG's internal control over financial reporting.

Throughout 2008 and 2007, AIG recorded out of period adjustments, many of which were detected as part of continuing remediation efforts. It is AIG's policy to record all error corrections, without regard to materiality, and AIG has an established, formal process for the identification, evaluation and recording of all out of period adjustments. This process includes a heightened sensitivity for potential errors related to the internal control matters discussed in Item 9A. of the 2007 Annual Report on Form 10-K. AIG distinguishes error corrections from changes in estimates by evaluating the facts and circumstances of such items, including considering whether information was capable of being known at the time of original recording. AIG has evaluated the adjustments recorded in 2008 and 2007 from a qualitative and quantitative perspective and concluded that such adjustments are immaterial individually and in the aggregate to the current and prior periods.

Part II – OTHER INFORMATION

ITEM 1. Legal Proceedings

Included in Note 7(a) to the Consolidated Financial Statements.

ITEM 1A. Risk Factors

Included in Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations.

ITEM 6. Exhibits

See accompanying Exhibit Index.

SIGNATURE

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.

AMERICAN INTERNATIONAL GROUP, INC.
(Registrant)

10.4	Amendment No. 2, dated as of November 9, 2008, to Credit Agreement, dated as of September 22, 2008, between American International Group, Inc. and the Federal Reserve Bank of New York	
11	Statement re computation of per share earnings	Included in Note 5 of Notes to Consolidated Financial Statements.
12	Computation of ratios of earnings to fixed charges	Filed herewith.
31	Rule 13a-14(a)/15d-14(a) Certifications	Filed herewith.
32	Section 1350 Certifications	Filed herewith.

American International Group, Inc.
Computation of Ratios of Earnings to Fixed Charges

<i>(in millions, except ratios)</i>	Three Months Ended September 30,		Nine Months Ended September 30,	
	2008	2007	2008	2007
Income (loss) before income taxes and minority interest	\$(28,185)	\$ 4,879	\$(48,205)	\$17,379
Less – Equity income of less than 50% owned persons	(2)	39	15	130
Add – Dividends from less than 50% owned persons	1	3	22	28
	(28,182)	4,843	(48,198)	17,277
Add – Fixed charges	2,048	3,153	7,141	8,267
Less – Capitalized interest	6	8	21	28
Income (loss) before income taxes, minority interest and fixed charges	\$(26,140)	\$ 7,988	\$(41,078)	\$25,516
Fixed charges:				
Interest costs	\$ 1,973	\$ 3,093	\$ 6,916	\$ 8,086
Rental expense ^(a)	75	60	225	181
Total fixed charges	\$ 2,048	\$ 3,153	\$ 7,141	\$ 8,267
Ratio of earnings to fixed charges	^(b)	2.53	^(b)	3.09
Secondary Ratio				
Interest credited to GIC and GIA policy and contract holders	\$ (551)	\$(1,949)	\$ (3,071)	\$(4,796)
Total fixed charges excluding interest credited to GIC and GIA policy and contract holders	\$ 1,497	\$ 1,204	\$ 4,070	\$ 3,471
Secondary ratio of earnings to fixed charges	^(b)	5.02	^(b)	5.97

(a) The proportion considered representative of the interest factor.

(b) Earnings were inadequate to cover total fixed charges by \$28,188 million and \$48,219 million for the three- and nine-month periods ended September 30, 2008. The coverage deficiency for total fixed charges excluding interest credited to GIC and GIA policy and contract holders was \$27,637 million and \$45,148 million for the three- and nine-month periods ended September 30, 2008.

The secondary ratio is disclosed for the convenience of fixed income investors and the rating agencies that serve them and is more comparable to the ratios disclosed by all issuers of fixed maturity securities. The secondary ratio removes interest credited to guaranteed investment contract (GIC) policyholders and guaranteed investment agreement (GIA) contract holders. Such interest expenses are also removed from income (loss) before income taxes and minority interest used in this calculation. GICs and GIAs are entered into by AIG's insurance

subsidiaries, principally SunAmerica Life Insurance Company and AIG Financial Products Corp. and its subsidiaries, respectively. The proceeds from GICs and GIAs are invested in a diversified portfolio of securities, primarily investment grade bonds. The assets acquired yield rates greater than the rates on the related policyholders obligation or agreement, with the intent of earning operating income from the spread.

CERTIFICATIONS

I, Edward M. Liddy, certify that:

1. I have reviewed this Quarterly Report on Form 10-Q of American International Group, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
