Liquidity risk represents the potential inability of AIG to meet all payment obligations when they become due. AIG's liquidity could be impaired by an inability to access the capital markets or by unforeseen significant outflows of cash. This situation may arise due to circumstances that AIG may be unable to control, such as a general market disruption or an operational problem that affects third parties or AIG. AIG depends on dividends, distributions and other payments from its subsidiaries to fund dividend payments and to fund payments on AIG's obligations, including debt obligations. Regulatory and other legal restrictions may limit AIG's ability to transfer funds freely, either to or from its subsidiaries. In particular, many of AIG's subsidiaries, including AIG's insurance subsidiaries, are subject to laws and regulations that authorize regulatory bodies to block or reduce the flow of funds to the parent holding company, or that prohibit such transfers altogether in certain circumstances. These laws and regulations may hinder AIG's ability to access funds that AIG may need to make payments on its obligations. See also Item 1. Business — Regulation.

Some of AIG's investments are relatively illiquid. AIG's investments in certain fixed income investments, certain structured securities, direct private equities, limited partnerships, hedge funds and real estate are relatively illiquid. These asset classes represented nine percent of the carrying value of AIG's total cash and invested assets as of December 31, 2006. If AIG requires significant amounts of cash on short notice in excess of normal cash requirements, AIG may have difficulty selling these investments in a timely manner or be forced to sell them for less than what AIG might otherwise have been able to, or both.

Concentration of AIG's investment portfolios in any particular segment of the economy may have adverse effects. The concentration of AIG's investment portfolios in any particular industry, group of related industries or geographic sector could have an adverse effect on the investment portfolios and consequently on AIG's results of operations and financial position. While AIG seeks to mitigate this risk by having a broadly diversified portfolio, events or developments that have a negative effect on any particular industry, group of related industries or geographic region may have a greater adverse effect on the investment portfolios to the extent that the portfolios are concentrated rather than diversified. Further, AIG's ability to sell assets relating to such particular industry, group of related industries or geographic region may be limited if other market participants are seeking to sell at the same time.

See also Management's Discussion and Analysis of Financial Condition and Results of Operations — Capital Resources and Liquidity — Liquidity.

The Relationships Between AIG and the Starr Entities

The relationships between AIG and the Starr entities may take an extended period of time to unwind and/or resolve, and the consequences of such resolution are uncertain. During 2006, AIG unwound and resolved its most significant relationships with C.V. Starr & Co, Inc. (Starr) and began unwinding and resolving various relationships with Starr International Company, Inc. (SICO). AIG cannot predict what its future relationship with Starr and SICO will be.

The agency relationships between AIG subsidiaries and Starr have been terminated and litigation with Starr has been resolved, but there can be no assurance that AIG will compete successfully for the business previously produced by the Starr agencies. In January 2006, Starr announced that it had completed its tender offers to purchase interests in Starr and that all eligible shareholders had tendered their shares. As a result of completion of the tender offers, no AIG executive currently holds any Starr interest.

AIG has entered into agreements pursuant to which AIG agrees, subject to certain conditions, to assure AIG's current employees that all payments are made under a series of two-year Deferred Compensation Profit Participation Plans provided by SICO (SICO Plans). For a further discussion of the SICO plans, see Note 16 of Notes to Consolidated Financial Statements. Nevertheless, there can be no assurance that AIG will be able to effectively address the consequences for its executives of the unwinding of their participation in the SICO plans and programs. Finally, litigation between AIG and SICO remains pending, and the timing, terms and effect on AIG of any resolution cannot currently be predicted. See also Item 3. Legal Proceedings.

Employee Error and Misconduct

Employee error and misconduct may be difficult to detect and prevent and may result in significant losses. Losses may result from, among other things, fraud, errors, failure to document transactions properly or to obtain proper internal authorization or failure to comply with regulatory requirements.

There have been a number of highly publicized cases involving fraud or other misconduct by employees in the financial services industry in recent years, and AIG runs the risk that employee misconduct could occur. It is not always possible to deter or prevent employee misconduct and the precautions AIG takes to prevent and detect this activity may not be effective in all cases.

Aircraft Suppliers

There are limited suppliers of aircraft and engines. The supply of jet transport aircraft, which ILFC purchases and leases, is dominated by two airframe manufacturers, Boeing and Airbus, and a limited number of engine manufacturers. As a result, ILFC is dependent on the manufacturers' success in remaining financially

stable, producing aircraft and related components which meet the airlines' demands, both in type and quantity, and fulfilling their contractual obligations to ILFC. Competition between the manufacturers for market share is intense and may lead to instances of deep discounting for certain aircraft types and may negatively affect ILFC's competitive pricing.

Item 1B. Unresolved Staff Comments

There are no material unresolved written comments that were received from the SEC staff 180 days or more before the end of AIG's fiscal year relating to AIG's periodic or current reports under the Exchange Act.

Item 2. Properties

AIG and its subsidiaries operate from approximately 2,300 offices in the United States, 6 offices in Canada and numerous offices in approximately 100 foreign countries. The offices in Greensboro and Winston-Salem, North Carolina; Springfield, Illinois; Amarillo, Ft. Worth and Houston, Texas; Wilmington, Delaware; San Juan, Puerto Rico; Tampa, Florida; Livingston, New Jersey; Evansville, Indiana; Nashville, Tennessee; 70 Pine Street, 72 Wall Street and 175 Water Street in New York, New York; and offices in more than 30 foreign countries and jurisdictions including Bermuda, Chile, Hong Kong, the Philippines, Japan, United Kingdom, Singapore, Malaysia, Switzerland, Taiwan and Thailand are located in buildings owned by AIG and its subsidiaries. The remainder of the office space utilized by AIG subsidiaries is leased.

Item 3. Legal Proceedings

General

AIG and its subsidiaries, in common with the insurance industry in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. See also Note 12(a) of Notes to Consolidated Financial Statements, as well as the discussion and analysis of Consolidated Net Losses and Loss Expense Reserve Development and Management's Discussion and Analysis of Financial Condition and Results of Operations herein.

2006 Regulatory Settlements

In February 2006, AIG reached a final settlement with the SEC, the United States Department of Justice (DOJ), the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). The settlements resolved investigations conducted by the SEC, NYAG and DOI in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. The 2005 financial statements included in this Annual Report on Form 10-K include a fourth quarter after-tax charge of \$1.15 billion relating to the settlements.

As part of the settlement with the SEC, the SEC filed a civil complaint, alleging that from 2000 until 2005, AIG materially falsified its financial statements through a variety of transactions and entities in order to strengthen the appearance of its financial results to analysts and investors. AIG, without admitting or denying the allegations in the SEC complaint, consented to the issuance of a final judgment on February 9, 2006:

(a) permanently restraining and enjoining AIG from violating Section 17(a) of the Securities Act of 1933 (Securities Act) and Sections 10(b), 13(a), 13(b)(2) and 13(b)(5) and Rules 10b-5, 12b-20, 13a-1, 13a-13 and 13b2-1 of the Exchange Act; (b) ordering AIG to pay disgorgement in the amount of \$700 million; and (c) ordering AIG to pay a civil penalty in the amount of \$100 million. The \$800 million was deposited into a fund under the supervision of the SEC to be available to resolve claims asserted against AIG by investors, including the shareholder lawsuits described below.

In February 2006, AIG and the DOJ entered into a letter agreement whereby AIG agreed to cooperate with the DOJ in the DOJ's ongoing criminal investigation of violations of federal criminal law in connection with misstatements in periodic financial reports that AIG filed with the SEC between 2000 and 2004 relating to certain transactions, accepted responsibility for certain of its actions and those of its employees relating to these transactions, and paid \$25 million in penalties.

In February 2006, AIG entered into agreements with the NYAG and the DOI, resolving claims under New York's Martin Act and insurance laws. Under the agreements, \$375 million was paid into a fund under the supervision of the NYAG and the DOI to be available principally to pay certain insureds who purchased AIG excess casualty policies through Marsh & McLennan Companies, Inc. or Marsh Inc. (Marsh). In addition, a fund of approximately \$343 million was created to pay obligations resulting from the underpayment by AIG of its workers compensation premium taxes and related fees and assessments. In addition, AIG paid a \$100 million fine to the State of New York.

As part of these settlements, AIG has agreed to retain, for a period of three years, an independent consultant who will conduct a review that will include, among other things, the adequacy of AIG's internal controls over financial reporting, the policies, procedures and effectiveness of AIG's regulatory, compliance and legal functions, and the remediation plan that AIG has implemented as a result of its own internal review.

PNC Settlement

In November 2004, AIG and AIGFP reached a final settlement with the SEC, the Fraud Section of the DOJ and the United States Attorney for the Southern District of Indiana with respect to issues arising from certain structured transactions entered into with Brightpoint, Inc. and The PNC Financial Services Group, Inc. (PNC), the marketing of transactions similar to the PNC transactions and related matters.

As part of the settlement, the SEC filed against AIG a civil complaint, based on the conduct of AIG primarily through AIGFP, alleging violations of certain antifraud provisions of the federal securities laws and aiding and abetting violations of reporting and

record keeping provisions of those laws. AIG, without admitting or denying the allegations in the SEC complaint, consented to the issuance of a final judgment permanently enjoining it and its employees and related persons from violating certain provisions of the Exchange Act, Exchange Act rules and the Securities Act, ordering disgorgement of fees it received in the PNC transactions and providing for AIG to establish a transaction review committee to review the appropriateness of certain future transactions and to retain an independent consultant to examine certain transactions entered into between 2000 and 2004 and review the policies and procedures of the transaction review committee. AIG expects that the review by the independent consultant of transactions entered into by AIG during the 2000 to 2004 period will be completed during 2007.

The settlement with the DOJ consists of separate agreements with AIG and AIGFP and a criminal complaint alleging violations of federal securities laws filed against, and deferred prosecution agreement with, a wholly owned subsidiary of AIGFP. Under the terms of the settlement, AIGFP paid a penalty of \$80 million. On January 17, 2006, the court approved an order dismissing the complaint with prejudice.

Regulatory Investigations

Regulators from several states have commenced investigations into insurance brokerage practices related to contingent commissions and other industry-wide practices as well as other broker-related conduct, such as alleged bid rigging.

In addition, various federal and state regulatory agencies are reviewing certain other transactions and practices of AIG and its subsidiaries in connection with industry-wide and other inquiries. AIG has cooperated, and will continue to cooperate, with all these investigations, including by producing documents and other information in response to subpoenas.

Pending Private Litigation

Securities Actions. Beginning in October 2004, a number of putative securities fraud class action suits were filed against AIG and consolidated as *In re American International Group, Inc. Securities Litigation*. Subsequently, a separate, though similar, securities fraud action was also brought against AIG by certain Florida pension funds. The lead plaintiff in the class action is a group of public retirement systems and pension funds benefiting Ohio state employees, suing on behalf of themselves and all purchasers of AIG's publicly traded securities between October 28, 1999 and April 1, 2005. The named defendants are AIG and a number of present and former AIG officers and directors, as well as Starr, SICO, General Reinsurance Corporation and PricewaterhouseCoopers LLP (PwC), among others. The lead plaintiff alleges, among other things, that AIG: (1) concealed that it engaged in anti-competitive conduct through alleged payment of contingent commissions to brokers and participation in illegal bid-rigging; (2) concealed that it used "income smoothing" products and other techniques to inflate its earnings; (3) concealed that it marketed and sold "income smoothing" insurance products to other companies; and (4) misled investors about the scope of

government investigations. In addition, the lead plaintiff alleges that AIG's former Chief Executive Officer manipulated AIG's stock price. The lead plaintiff asserts claims for violations of Sections 11 and 15 of the Securities Act, Section 10(b) of the Exchange Act, and Rule 10b-5 promulgated thereunder, Section 20(a) of the Exchange Act, and Section 20A of the Exchange Act. In April 2006, the court denied the defendants' motions to dismiss the second amended class action complaint and the Florida complaint. In December 2006, a third amended class action complaint was filed, which does not differ substantially from the prior complaint. Fact and class discovery is currently ongoing.

ERISA Action. Between November 30, 2004 and July 1, 2005, several Employee Retirement Income Security Act of 1974 (ERISA) actions were filed on behalf of a purported class of participants and beneficiaries of three pension plans sponsored by AIG or its subsidiaries. A consolidated complaint filed on September 26, 2005 alleges a class period between September 30, 2000 and May 31, 2005 and names as defendants AIG, the members of AIG's Retirement Board and the Administrative Boards of the plans at issue, and four present or former members of AIG's Board of Directors. The factual allegations in the complaint are essentially identical to those in the securities actions described above. Plaintiffs allege that defendants violated duties under ERISA by allowing the plans to offer AIG stock as a permitted investment, when defendants allegedly knew it was not a prudent investment, and by failing to provide participants with accurate information about AIG stock. AIG's motion to dismiss was denied on December 12, 2006. Discovery will be consolidated with proceedings in the securities actions.

Derivative Actions — Southern District of New York. Between October 25, 2004 and July 14, 2005, seven separate derivative actions were filed in the Southern District of New York, five of which were consolidated into a single action. The New York derivative complaint contains nearly the same types of allegations made in the securities fraud and ERISA actions described above. The named defendants include current and former officers and directors of AIG, as well as Marsh, SICO, Starr, ACE Limited and subsidiaries (ACE), General Reinsurance Corporation, PwC, and certain employees or officers of these entity defendants. Plaintiffs assert claims for breach of fiduciary duty, gross mismanagement, waste of corporate assets, unjust enrichment, insider selling, auditor breach of contract, auditor professional negligence and disgorgement from AIG's former Chief Executive Officer and Chief Financial Officer of incentive-based compensation and AIG share proceeds under Section 304 of the Sarbanes-Oxley Act, among others. Plaintiffs seek, among other things, compensatory damages, corporate governance reforms, and a voiding of the election of certain AIG directors. AIG's Board of Directors has appointed a special committee of independent directors (special committee) to review the matters asserted in the operative consolidated derivative complaint. The court has approved agreements staying the derivative case pending in the Southern District of New York while the special committee performs its work. The current stay extends until March 14, 2007.

Derivative Actions — Delaware Chancery Court. From October 2004 to April 2005, AIG shareholders filed five derivative complaints in the Delaware Chancery Court. All of these derivative lawsuits have been consolidated into a single action. The amended consolidated complaint names 43 defendants (not including nominal defendant AIG) who, like the New York consolidated derivative litigation, are current and former officers and directors of AIG, as well as other entities and certain of their current and former employees and directors. The factual allegations, legal claims and relief sought in the Delaware action are similar to those alleged in the New York derivative actions, except that plaintiffs in the Delaware derivative action assert claims only under state law. The court has approved agreements staying the derivative case pending in the Delaware Chancery Court while the special committee performs its work. The current stay extends until March 14, 2007.

An additional derivative lawsuit, filed in the Delaware Chancery Court in December 2002 against twenty directors and executives of AIG as well as against AIG as a nominal defendant, alleges, among other things, that the directors of AIG breached the fiduciary duties of loyalty and care by approving the payment of commissions to Starr and of rental and service fees to SICO and the executives breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and their fiduciary duties by usurping AIG's corporate opportunity. The complaint further alleges that the Starr agencies did not provide any services that AIG was not capable of providing itself, and that the diversion of commissions to these entities was solely for the benefit of Starr's owners. The complaint also alleged that the service fees and rental payments made to SICO and its subsidiaries were improper. Under the terms of a stipulation approved by the Court on February 16, 2006, the claims against the outside independent directors were dismissed with prejudice, while the claims against the other directors were dismissed without prejudice. On October 31, 2005, Messrs. Greenberg, Matthews and Smith, SICO and Starr filed motions to dismiss the amended complaint. In an opinion dated June 21, 2006, the Court denied defendants' motion to dismiss, except with respect to plaintiff's challenge to payments made to Starr before January 1, 2000. On July 21, 2006, plaintiff filed its second amended complaint, which alleges that, between January 1, 2000 and May 31, 2005, individual defendants breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and breached their fiduciary duties by usurping AIG's corporate opportunity. Starr is charged with aiding and abetting breaches of fiduciary duty and unjust enrichment for its acceptance of the fees. SICO is no longer named as a defendant. Discovery is currently ongoing.

Policyholder Actions. After the NYAG filed its complaint against insurance broker Marsh, policyholders brought multiple federal antitrust and the Racketeer Influenced and Corrupt Organizations Act (RICO) class actions in jurisdictions across the nation against insurers and brokers, including AIG and a number of its subsidiaries, alleging that the insurers and brokers engaged in a broad conspiracy to allocate customers, steer business, and rig bids. These actions, including 18 complaints filed in different federal courts naming AIG or an AIG subsidiary as a defendant, were

consolidated by the judicial panel on multi-district litigation and transferred to the United States District Court for the District of New Jersey for coordinated pretrial proceedings. The consolidated actions have proceeded in that court in two parallel actions, *In re Insurance Brokerage Antitrust Litigation* (the *Commercial Complaint*) and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the *Employee Benefits Complaint*, and together with the *Commercial Complaint*, the multi-district litigation).

The plaintiffs in the *Commercial Complaint* are nineteen corporations, individuals and public entities that contracted with the broker defendants for the provision of insurance brokerage services for a variety of insurance needs. The broker defendants are alleged to have placed insurance coverage on the plaintiffs' behalf with a number of insurance companies named as defendants, including AIG subsidiaries. The *Commercial Complaint* also named ten brokers and fourteen other insurers (one of which has since settled) as defendants. The *Commercial Complaint* alleges that defendants engaged in a widespread conspiracy to allocate customers through "bid-rigging" and "steering" practices. The *Commercial Complaint* also alleges that the insurer defendants permitted brokers to place business with AIG subsidiaries through wholesale intermediaries affiliated with or owned by those same brokers rather than placing the business with AIG subsidiaries directly. Finally, the *Commercial Complaint* alleges that the insurer defendants entered into agreements with broker defendants that tied insurance placements to reinsurance placements in order to provide additional compensation to each broker. Plaintiffs assert that the defendants violated the Sherman Antitrust Act, RICO, the antitrust laws of 48 states and the District of Columbia, and are liable under common law breach of fiduciary duty and unjust enrichment theories. Plaintiffs seek treble damages plus interest and attorneys' fees as a result of the alleged RICO and Sherman Act violations.

The plaintiffs in the *Employee Benefits Complaint* are nine individual employees and corporate and municipal employers alleging claims on behalf of two separate nationwide purported classes: an employee class and an employer class that acquired insurance products from the defendants from August 26, 1994 to the date of any class certification. The *Employee Benefits Complaint* names AIG, as well as eleven brokers and five other insurers, as defendants. The activities alleged in the *Employee Benefits Complaint*, with certain exceptions, track the allegations of contingent commissions, bid-rigging and tying made in the *Commercial Complaint*.

On October 3, 2006, Judge Hochberg of the District of New Jersey reserved in part and denied in part motions filed by the insurer defendants and broker defendants to dismiss the multi-district litigation. The Court also ordered the plaintiffs in both actions to file supplemental statements of particularity to elaborate on the allegations in their complaints. Plaintiffs filed their supplemental statements on October 25, 2006, and the AIG defendants, along with other insurer and broker defendants in the two consolidated actions, filed renewed motions to dismiss on November 30, 2006. Briefing has been completed on the renewed motions to dismiss, as well as plaintiffs' motion for class certification in both cases. On February 16, 2007, Chief Judge

Brown of the District of New Jersey transferred the multi-district litigation to himself. Oral argument on the renewed motions to dismiss has been scheduled before Chief Judge Brown on March 1, 2007. Fact discovery in the multi-district litigation is ongoing.

A number of complaints making allegations similar to those in the *Commercial Complaint* have been filed against AIG and other defendants in state and federal courts around the country. The defendants have thus far been successful in having the federal actions transferred to the District of New Jersey and consolidated into the multi-district litigation. The defendants have also sought to have state court actions making similar allegations stayed pending resolution of the multi-district litigation. In one state court action pending in Florida, the trial court recently decided not to grant an additional stay, but instead to allow the case to proceed.

Litigation Relating to 21st Century. Shortly after the announcement in late January 2007 of AIG's offer to acquire the outstanding shares of 21st Century not already owned by AIG and its subsidiaries, two related class actions were filed in the Superior Court of California, Los Angeles County against AIG, 21st Century and the individual members of 21st Century's Board of Directors, two of whom are current executive officers of AIG. The actions were filed purportedly on behalf of the minority shareholders of 21st Century and assert breaches of fiduciary duty in connection with the AIG proposal. The complaints allege that the proposed per share price is unfair and seek preliminary and permanent injunctive relief to enjoin the consummation of the proposed transaction.

SICO. In July, 2005, SICO filed a complaint against AIG in the Southern District of New York, claiming that AIG had refused to provide SICO access to certain artwork and asked the court to order AIG immediately to release the property to SICO. AIG filed an answer denying SICO's allegations and setting forth defenses to SICO's claims. In addition, AIG filed counterclaims asserting breach of contract, unjust enrichment, conversion, breach of fiduciary duty, a constructive trust and declaratory judgment, relating to SICO's breach of its commitment to use its AIG shares only for the benefit of AIG and AIG employees. Fact and expert discovery has been substantially concluded and briefing on SICO's motion for summary judgment is underway.

Effect on AIG

In the opinion of AIG management, AIG's ultimate liability for the unresolved matters referred to above is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

Item 4. Submission of Matters to a Vote of Security Holders

There were no matters submitted to a vote of security holders during the fourth quarter of 2006.

Part II

Item 5. Market for the Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

AIG's common stock is listed on the New York Stock Exchange, as well as on the stock exchanges in London, Paris, Switzerland and Tokyo.

The following table presents the high and low closing sales prices and the dividends paid per share of AIG's common stock on the New York Stock Exchange Composite Tape, for each quarter of 2006 and 2005.

	2006			2005		
	High	Low	Dividends Paid	High	Low	Dividends Paid
First quarter	\$70.83	\$65.35	\$0.150	\$73.46	\$54.18	\$0.125
Second quarter	66.54	58.67	0.150	58.94	49.91	0.125
Third quarter	66.48	57.76	0.165	63.73	56.00	0.150
Fourth quarter	72.81	66.30	0.165	64.40	60.43	0.150

The approximate number of holders of common stock as of January 31, 2007, based upon the number of record holders, was 58,000.

Subject to the dividend preference of any of AIG's serial preferred stock that may be outstanding, the holders of shares of common stock are entitled to receive such dividends as may be declared by AIG's Board of Directors from funds legally available therefor.

In February 2007, AIG's Board of Directors adopted a new dividend policy, to take effect with the dividend to be declared in the second quarter of 2007, providing that under ordinary circumstances, AIG's plan will be to increase its common stock dividend by approximately 20 percent annually. The payment of any dividend, however, is at the discretion of AIG's Board of Directors, and the future payment of dividends will depend on various factors, including the performance of AIG's businesses, AIG's consolidated financial position, results of operations and liquidity and the existence of investment opportunities.

For a discussion of certain restrictions on the payment of dividends to AIG by some of its insurance subsidiaries, see Note 11 of Notes to Consolidated Financial Statements.

The following table summarizes AIG's stock repurchases for the three-month period ended December 31, 2006:

Period	Total Number of Shares Purchased ^{(a)(b)}	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares that May Yet Be Purchased Under the Plans or Programs at End of Month ^(b)
October 1 - 31, 2006	—	\$ —	—	36,542,700
November 1 - 30, 2006	—	—	—	36,542,700
December 1 - 31, 2006	—	—	—	36,542,700
Total	—	\$ —	—	—

(a) Does not include 165,190 shares delivered or attested to in satisfaction of the exercise price by holders of AIG employee stock options exercised during the three months ended December 31, 2006 or 17,000 shares purchased by ILFC to satisfy obligations under employee benefit plans.

(b) On July 19, 2002, AIG announced that its Board of Directors had authorized the open market purchase of up to 10 million shares of common stock. On February 13, 2003, AIG announced that its Board of Directors had expanded the existing program through the authorization of an additional 50 million shares. The purchase program has no set expiration or termination date. In February 2007, AIG's Board of Directors increased the repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion.

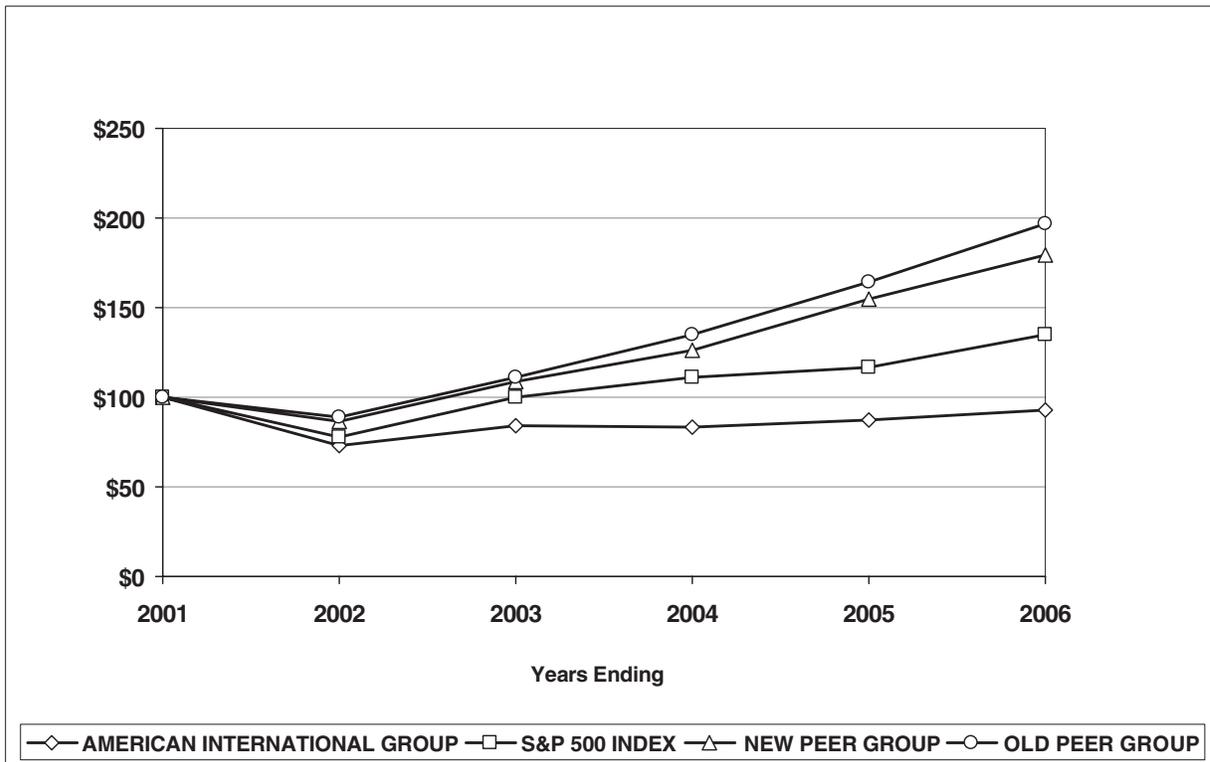

AIG's table of equity compensation plans previously approved by security holders and equity compensation plans not previously approved by security holders will be included in AIG's Definitive Proxy Statement in connection with its 2007 Annual Meeting of Shareholders, which will be filed with the SEC within 120 days of AIG's fiscal year end.

Performance Graph

The following Performance Graph compares the cumulative total shareholder return on AIG common stock for a five-year period (December 31, 2001 to December 31, 2006) with the cumulative total return of the Standard & Poor’s 500 stock index (which includes AIG) and a peer group of companies (the New Peer Group) consisting of nine insurance companies to which AIG compares its business and operations: ACE Limited, Aflac Incorporated, The Chubb Corporation, The Hartford Financial Services Group, Inc., Lincoln National Corporation, MetLife, Inc., Prudential Financial, Inc., The Travelers Companies, Inc. (formerly The St. Paul Travelers Companies, Inc.) and XL Capital Ltd. The Performance Graph also compares the cumulative total shareholder return on AIG common stock to the return of a group of

companies comprised of The Allstate Corporation, The Chubb Corporation, CNA Financial Corporation, The Hartford Financial Services Group, Inc., Lincoln National Corporation, MetLife, Inc., Prudential Financial, Inc. and The Travelers Companies, Inc. (the Old Peer Group), to which AIG compared itself in the Performance Graph included in its Definitive Proxy Statement in connection with AIG’s 2006 Annual Meeting of Shareholders. ACE Limited, Aflac Incorporated, and XL Capital Ltd have been added to the New Peer Group to reflect their status as significant competitors of AIG’s business. The Allstate Corporation and CNA Financial Corporation have been excluded because AIG no longer believes these companies to be comparable to AIG in its overall business and operations. Dividend reinvestment has been assumed and returns have been weighted to reflect relative stock market capitalization.

FIVE-YEAR CUMULATIVE TOTAL SHAREHOLDER RETURNS
 Value of \$100 Invested on December 31, 2001

	2001	2002	2003	2004	2005	2006
AIG	\$100.00	\$73.07	\$84.04	\$83.61	\$87.67	\$92.97
S&P 500	100.00	77.90	100.25	111.15	116.61	135.03
New Peer Group	100.00	86.49	109.07	126.05	155.01	179.36
Old Peer Group	100.00	88.84	111.14	134.80	164.51	196.58

Item 6. Selected Financial Data

American International Group, Inc. and Subsidiaries Selected Consolidated Financial Data

The Selected Consolidated Financial Data should be read in conjunction with Management's Discussion and Analysis of Financial Condition and Results of Operations and the consolidated financial statements and accompanying notes included elsewhere herein.

Years Ended December 31, (in millions, except per share data)	2006	2005	2004	2003	2002
Revenues ^{(a)(b)(c)} :					
Premiums and other considerations	\$ 74,083	\$ 70,209	\$ 66,625	\$ 54,802	\$ 44,289

(a) Represents the sum of General Insurance net premiums earned, Life Insurance & Retirement Services GAAP premiums and net investment income, Financial Services interest, lease and finance charges, Asset Management net investment income from spread-based products and advisory and management fees, and realized capital gains (losses).

(b) Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For 2006, 2005, 2004, 2003 and 2002, respectively, the effect was \$(1.86) billion, \$2.02 billion, \$385 million, \$(1.50) billion and \$(216) million in revenues and \$(1.86) billion, \$2.02 billion, \$671 million, \$(1.22) billion and \$(58) million in operating income. These amounts result primarily from interest rate and foreign currency derivatives that are economically hedging available for sale securities and borrowings.

(c) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts. For 2006 the effect was an increase of \$490 million in both revenues and operating income for General Insurance and an increase of \$240 million and \$169 million in revenues and operating income, respectively, for Life Insurance & Retirement Services.

(d) Includes current year catastrophe-related losses of \$3.28 billion in 2005 and \$1.16 billion in 2004. There were no significant catastrophe-related losses in 2006.

(e) Operating income was reduced by fourth quarter charges of \$1.8 billion, \$850 million and \$2.1 billion for 2005, 2004 and 2002, respectively, related to the annual review of General Insurance loss and loss adjustment reserves. In 2006, 2005 and 2004, changes in estimates for asbestos and environmental reserves were \$198 million, \$873 million and \$850 million, respectively.

(f) Including that portion of long-term debt maturing in less than one year. See also Note 9 of Notes to Consolidated Financial Statements.

Management's Discussion and Analysis of Financial Condition and Results of Operations

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG presents its operations in the way it believes will be most meaningful. Statutory underwriting profit (loss) and combined ratios are

presented in accordance with accounting principles prescribed by insurance regulatory authorities because these are standard measures of performance used in the insurance industry and thus allow more meaningful comparisons with AIG's insurance competitors. AIG has also incorporated into this discussion a number of cross-references to additional information included throughout this Annual Report on Form 10-K to assist readers seeking additional information related to a particular subject.

Management's Discussion and Analysis of Financial Condition and Results of Operations is designed to provide the reader a narrative explanation of AIG's operations, financial condition and liquidity and certain other significant matters.

Cautionary Statement Regarding Projections and Other Information About Future Events

This Annual Report on Form 10-K and other publicly available documents may include, and AIG's officers and representatives may from time to time make, projections concerning financial information and statements concerning future economic performance and events, plans and objectives relating to management, operations, products and services, and assumptions underlying these projections and statements. These projections and statements are not historical facts but instead represent only AIG's belief regarding future events, many of which, by their nature, are inherently uncertain and outside AIG's control. These projections and statements may address, among other things, the status and potential future outcome of the current regulatory and civil proceedings against AIG and their potential effect on AIG's businesses, financial position, results of operations, cash flows and liquidity, the effect of credit rating changes on AIG's businesses and competitive position, the unwinding and resolving of various relationships between AIG and SICO and AIG's strategy for growth, product development, market position, financial results and reserves. It is possible that AIG's actual results and financial condition may differ, possibly materially, from the anticipated results and financial condition indicated in these projections and statements. Factors that could cause AIG's actual results to differ, possibly materially, from those in the specific projections and statements are discussed throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations and in Item 1A. Risk Factors of this Annual Report on Form 10-K. AIG is not under any obligation (and expressly disclaims any such obligations) to update or alter any projection or other statement, whether written or oral, that may be made from time to time, whether as a result of new information, future events or otherwise.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Overview of Operations and Business Results

AIG identifies its reportable segments by product or service line, consistent with its management structure. AIG's major product and service groupings are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management. AIG's operations in 2006 were conducted by its subsidiaries through these segments. Through these segments, AIG provides insurance, financial and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. This geographic, product and service diversification is one of AIG's major strengths and sets it apart from its competitors. AIG's Other category consists of items not allocated to AIG's operating segments.

AIG's subsidiaries serve commercial, institutional and individual customers through an extensive property-casualty and life insurance and retirement services network. In the United States, AIG companies are the largest underwriters of commercial and industrial insurance and are among the largest life insurance and retirement services operations as well. AIG's Financial Services businesses include commercial aircraft and equipment leasing, capital markets operations and consumer finance, both in the United States and abroad. AIG also provides asset management services to institutions and individuals. As part of its spread-based business activities, AIG issues various debt instruments in the public and private markets.

AIG's operating performance reflects implementation of various long-term strategies and defined goals in its various operating segments. A primary goal of AIG in managing its General Insurance operations is to achieve an underwriting profit. To achieve this goal, AIG must be disciplined in its risk selection, and premiums must be adequate and terms and conditions appropriate to cover the risks accepted and expenses incurred. Expense efficiency is also a primary goal of AIG.

A central focus of AIG operations in recent years has been the development and expansion of distribution channels. In 2006, AIG continued to expand its distribution channels, which now include banks, credit card companies, television-media home shopping, affinity groups, direct response, worksite marketing and e-commerce.

AIG patiently builds relationships in markets around the world where it sees long-term growth opportunities. For example, the fact that AIG has the only wholly owned foreign life insurance operations in eleven cities in China is the result of relationships developed over nearly 30 years. AIG's more recent extensions of operations into India, Vietnam, Russia and other emerging markets reflect the same growth strategy. Moreover, AIG believes in investing in the economies and infrastructures of these countries and growing with them. When AIG companies enter a new jurisdiction, they typically offer both basic protection and savings products. As the economies evolve, AIG's products evolve with them, to more sophisticated and investment-oriented models.

Growth for AIG may be generated internally as well as through acquisitions which both fulfill strategic goals and offer adequate return on capital. During 2006, AIG acquired Travel Guard International, one of the nation's leading providers of travel insurance programs and emergency travel assistance, and ac-

quired Central Insurance Co., Ltd., a leading general insurance company in Taiwan.

Outlook

The commercial property and casualty insurance industry has historically experienced cycles of price erosion followed by rate strengthening as a result of catastrophe or other significant losses that affect the overall capacity of the industry to provide coverage. Despite industry price erosion in commercial lines, AIG expects to continue to identify profitable opportunities and build attractive new general insurance businesses as a result of AIG's broad product line and extensive distribution networks in the U.S. and abroad. Workers compensation remains under considerable pricing pressure, as statutory rates continue to decline. Rates for D&O insurance also continue to decline due to competitive pressures. There can be no assurance that price erosion will not become more widespread or that AIG's profitability will not deteriorate from current levels in major commercial lines, as well as in personal lines and specialty coverages, such as mortgage guaranty, where the loss ratio has increased due to softening in the U.S. housing market and the weakening performance of non-traditional mortgage products. In Foreign General, opportunities for growth exist in the consumer lines due to increased demand in emerging markets and the trend toward privatization of health insurance. Growth in the Personal Lines marketplace remains challenged from flat renewal pricing, consumer price shopping and increased advertising spending by market leaders. However, the high net worth market continues to provide opportunities for growth as a result of AIG's innovative products and services specifically designed for that market. AIG expects that the acquisition of the remaining interest in 21st Century will enhance AIG's ability to grow the Personal Lines business while gaining efficiencies of scale.

Losses caused by catastrophes can fluctuate widely from year to year, making comparisons of results more difficult. With respect to catastrophe losses, AIG believes that it has taken appropriate steps, such as careful exposure selection and adequate reinsurance coverage, to reduce the effect of possible future losses. The occurrence of one or more catastrophic events of unanticipated frequency or severity, such as a terrorist attack, earthquake or hurricane, that causes insured losses, however, could have a material adverse effect on AIG's results of operations, liquidity or financial condition.

AIG's operations in China continue to expand, but AIG expects competition in China to remain strong and AIG's success in China will depend on its ability to execute its growth strategy.

In India, AIG expects to grow all segments, both organically and through acquisitions and joint ventures.

In Japan, AIG expects its Life Insurance & Retirement Services earnings growth may be challenged by increased competition in light of a new industry-wide mortality table, the continued runoff of the older, higher-margin in-force business of AIG Star Life and AIG Edison Life and lower consumer demand for certain accident and health products in light of tax law changes. The flat yield curve and declining Yen foreign exchange environment may continue to constrain certain fixed annuity production. To leverage

AIG's leadership position in the distribution of annuities through banks in Japan, ALICO launched new life products in this distribution channel. Although ALICO's direct marketing activities in Japan could experience a contraction while it re-positions its brand and products in a very competitive market, AIG expects that further deregulation will provide additional growth opportunities. In addition, AIG expects that the planned integration of AIG Star Life and AIG Edison Life will provide enhanced distribution opportunities and scale economies with an anticipated completion date of 2009.

AIG is a leader in direct marketing through sponsors and in the broad market in Japan and Korea, and AIG is investing in expanding distribution channels in India, Korea and Vietnam.

Through new operations in Bahrain designed to comply with Islamic law, AIG is tapping into a growing market. Islamic insurance, called Takaful, is an alternative to conventional insurance based on the concept of mutual assistance through pooling of resources.

Domestically, AIG plans to continue expansion of its Life Insurance & Retirement Services businesses through direct marketing and independent agent distribution channels. The aging population in the U.S. provides a growth opportunity for a variety of products, including longevity, guaranteed income and supplemental accident and health products. Certain other demographic groups that have traditionally been underserved provide additional growth opportunities. The home service operation, a slow growth business, has not met business objectives, although its cash flow has been steady. Domestic group life/health operations continue to face competitors with greater scale in group benefits. At the end of 2006, AIG exited the financial institutions credit life business in the U.S. as a result of competition from bank products and low profit margins. The individual fixed annuities business will continue to be challenged due to the interest rate environment and increased competition from bank products, while lower margin variable annuity products with living benefits will continue to be the product of consumer choice in the individual

variable annuity markets. The group annuity market is undergoing a transition from group annuities to mutual fund products that have lower profit margins.

Globally, heightened regulatory scrutiny of financial services companies in many jurisdictions has the potential to affect future financial results through higher compliance costs. This is particularly true in Japan and Southeast Asia where financial institutions have received remediation orders affecting consumer and policyholder rights.

Within Financial Services, demand for ILFC's modern, fuel efficient aircraft remains strong, and ILFC plans to increase its fleet by purchasing 83 aircraft in 2007. However, ILFC's margins may be adversely affected by further increases in interest rates. AIGFP expects opportunities for growth across its product segments, but AIGFP is a transaction-oriented business, and its operating results will depend to a significant extent on actual transaction flow, which can be affected by market conditions and other variables outside its control. AIG continues to explore opportunities to expand its Consumer Finance operations into new foreign markets. Consumer Finance operations overseas were negatively affected in 2006 by industry-wide credit deterioration in the Taiwan credit card market, however, and operating results in the U.S. could be affected by the residential housing market, interest rates and unemployment.

The GIC portfolio, which is reported within the Asset Management segment, continues to run off and the MIP has replaced the GIC program as AIG's principal institutional spread-based investment activity. The MIP program is expected to continue to grow in 2007. Because the asset mix under the MIP does not include the alternative investments utilized in the GIC program, however, AIG does not expect that the income growth in the MIP will offset the runoff in the GIC portfolio for the foreseeable future.

For a description of important factors that may affect the operations and initiatives described above, see Item 1A. Risk Factors.

Consolidated Results

The following table summarizes AIG's consolidated revenues, income before income taxes, minority interest and cumulative effect of accounting changes and net income for the years ended December 31, 2006, 2005 and 2004:

Years Ended December 31, <i>(in millions)</i>	2006	2005	2004
Total revenues	\$113,194	\$108,905	\$97,666
Income before income taxes, minority interest and cumulative effect of accounting changes	21,687	15,213	14,845
Net income	\$ 14,048	\$ 10,477	\$ 9,839

2006 and 2005 Comparison

The 4 percent growth in revenues in 2006 was primarily attributable to the growth in net premiums earned and net investment income from General Insurance operations and growth in Life Insurance & Retirement Services GAAP premiums and net investment income. Revenues in the Financial Services segment declined as a result of the effect of hedging activities for AIGFP that did not qualify for hedge accounting treatment under

FAS 133, decreasing revenues by \$1.8 billion in 2006 and increasing revenues by \$2.01 billion in 2005.

Income before income taxes, minority interest and cumulative effect of accounting changes increased 43 percent in 2006 compared to 2005, reflecting higher General Insurance and Life Insurance & Retirement Services operating income. These increases were partially offset by lower Financial Services operating income reflecting the effects of hedging activities that did not qualify for hedge accounting treatment under FAS 133. Results in

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

2005 reflected the negative effect of \$3.28 billion (pre-tax) in catastrophe-related losses incurred that year. Net income in 2005 also reflected the charges related to regulatory settlements, as described in Item 3. Legal Proceedings, and the fourth quarter charge resulting from the annual review of General Insurance loss and loss adjustment reserves.

2005 and 2004 Comparison

Revenues grew 12 percent in 2005 compared to 2004 primarily due to the growth in net premiums earned from General Insurance operations as well as growth in both General Insurance and Life Insurance & Retirement Services net investment income and Life Insurance & Retirement Services GAAP premiums. Hedging activities for AIGFP that did not qualify for hedge accounting treatment under FAS 133 caused an increase in Financial Services revenues of \$2.01 billion in 2005 and a decrease of \$122 million in 2004.

AIG's income before income taxes, minority interest and cumulative effect of accounting changes increased 2 percent in 2005 compared to 2004. Life Insurance & Retirement Services, Financial Services and Asset Management operating income gains accounted for the increase over 2004 in both pretax income and net income. Offsetting these gains was the effect of the charges related to regulatory settlements.

Remediation and Other Items

Throughout 2006, as part of its continuing remediation efforts, AIG recorded out of period adjustments. The net effect of out of period adjustments relating to prior years increased 2006 net income by \$65 million. The more significant adjustments included increases in unit investment trust income of \$773 million (\$428 million after tax) (more fully described below) and other expenses of \$356 million (\$231 million after tax), and a decrease in revenues for certain derivative transactions of \$300 million (\$145 million after tax).

During the fourth quarter, as part of its ongoing remediation efforts, AIG recorded out of period adjustments. These adjustments collectively increased net income in the fourth quarter by \$56 million but were offset by fourth quarter charges to expense within Domestic Life for the adverse ruling in the Superior National arbitration of \$125 million (\$81 million after tax) and a charge of \$66 million (\$43 million after tax) in connection with the exit of the financial institutions credit life business. The more significant out of period adjustments included the following: a decrease in income tax expense of \$181 million relating to AIG's ongoing remediation of internal controls over income tax accounting, an increase in other expenses of \$167 million (\$109 million after tax) relating to AIG's remediation of internal controls over reconciliation of certain balance sheet accounts, an increase in incurred policy losses and benefits of \$103 million (\$67 million after tax) in Domestic General Insurance for corrections of certain reserves for losses and loss expenses, a reduction in incurred policy benefits in the Foreign Life participating policyholder fund

stemming from deferred tax adjustments in Foreign Life of \$190 million (\$124 million after tax), an increase in insurance operating expenses of \$61 million (\$40 million after tax) within Foreign Life for corrections of expense allocations to certain par fund accounts, and a \$79 million (\$51 million after tax) charge related to purchases of life insurance policies for AIG's life settlements portfolio that were issued by AIG subsidiaries.

During 2006, AIG identified and recorded out of period adjustments related to the accounting for certain interests in unit investment trusts in accordance with FIN 46(R), "Consolidation of Variable Interest Entities" and APB Opinion No. 18, "The Equity Method of Accounting for Investments in Common Stock." These investments had previously been accounted for as available for sale securities, with changes in market values being reflected in other comprehensive income, net of deferred income taxes. Beginning with the second quarter of 2006, the changes in market values are included in net investment income. The adjustments decreased unrealized appreciation (depreciation) of investments — net of reclassification adjustments, and the related deferred income tax benefit (expense), in the Consolidated Statement of Comprehensive Income (Loss) by approximately \$659 million and approximately \$231 million, respectively, and increased net investment income by \$844 million, increased Incurred policy losses and benefits (related to certain participating policyholder funds) by \$71 million, increased Income taxes by \$231 million and increased minority interest expense by \$114 million in the Consolidated Statement of Income. There was no effect on Total shareholders' equity at December 31, 2006 or December 31, 2005.

Results for 2006 were negatively affected by a one-time charge relating to the Starr tender offer (\$54 million before and after tax) and an additional allowance for losses in AIG Credit Card Company (Taiwan) (\$94 million before and after tax).

The effective income tax rate increased from 28.0 percent for 2005 to 30.1 percent for 2006, reflecting changes in the sources of foreign taxable income, the effect of the phase out of synfuel tax credits, the effect of consolidating certain limited partnerships and a reduction in the proportion of total income derived from tax exempt income, which was partially offset by the aforementioned out of period income tax adjustments.

There were no significant catastrophe-related losses for the year ended December 31, 2006.

The following table summarizes the net effect of catastrophe-related losses for the years ended December 31, 2005 and 2004.

<i>(in millions)</i>	2005	2004
Pretax*	\$3,280	\$1,155
Net of tax and minority interest	2,109	729

* Includes \$312 million and \$96 million in catastrophe-related losses from partially owned companies in 2005 and 2004, respectively.

Segment Results

The following table summarizes the operations of each principal segment for the years ended December 31, 2006, 2005 and 2004. See also Note 2 of Notes to Consolidated Financial Statements.

(in millions)	2006	2005	2004
Revenues^(a):			
General Insurance ^{(b)(c)}	\$ 49,206	\$ 45,174	\$41,961
Life Insurance & Retirement Services ^{(c)(d)}	50,163	47,376	43,402
Financial Services ^{(e)(f)}	8,010	10,525	7,495
Asset Management ^(g)	5,814	5,325	4,714
Other ^(h)	1	505	94
Total	\$113,194	\$108,905	\$97,666
Operating Income^{(a)(i)(j)}:			
General Insurance ^(c)	\$ 10,412	\$ 2,315	\$ 3,177
Life Insurance & Retirement Services ^(c)	10,032	8,904	7,925
Financial Services ^(f)	524	4,276	2,180
Asset Management	2,346	2,253	2,125
Other ^{(h)(k)}	(1,627)	(2,535)	(562)
Total	\$ 21,687	\$ 15,213	\$14,845

(a) Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For 2006, 2005 and 2004, respectively, the effect was \$(1.86) billion, \$2.02 billion and \$385 million in revenues and \$(1.86) billion, \$2.02 billion and \$671 million in operating income. These amounts result primarily from interest rate and foreign currency derivatives that are hedging available for sale securities and borrowings.

(b) Represents the sum of General Insurance net premiums earned, net investment income and realized capital gains (losses).

(c) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts. For 2006, the effect was an increase of \$490 million in both revenues and operating income for General Insurance and an increase of \$240 million and \$169 million in revenues and operating income, respectively, for Life Insurance & Retirement Services.

(d) Represents the sum of Life Insurance & Retirement Services GAAP premiums, net investment income and realized capital gains (losses). Included in realized capital gains (losses) and operating income is the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133 and the application of FAS 52, of \$355 million, \$(495) million and \$(140) million for 2006, 2005 and 2004, respectively.

(e) Represents interest, lease and finance charges.

(f) Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For 2006, 2005 and 2004, respectively, the effect was \$(1.82) billion, \$2.01 billion, and \$(122) million in both revenues and operating income for Capital Markets. These amounts result primarily from interest rate and foreign currency derivatives that are economically hedging available for sale securities and borrowings. For 2004, the effect was \$(27) million in operating income for Aircraft Leasing. During 2006 and 2005, Aircraft Leasing derivative gains and losses were reported as part of AIG's Other category, and were not reported in Aircraft Leasing operating income.

(g) Represents net investment income with respect to spread-based products and management and advisory fees.

(h) Includes consolidation and elimination adjustments which increased revenues and operating income by \$296 million and \$74 million, respectively, in 2006.

(i) Represents income before income taxes, minority interest, and cumulative effect of accounting changes.

(j) Includes current year catastrophe-related losses of \$3.28 billion and \$1.16 billion in 2005 and 2004, respectively. There were no significant catastrophe-related losses in 2006. Includes additional losses incurred and net reinstatement premiums related to prior year catastrophes of \$165 million and \$292 million in 2006 and 2005, respectively.

(k) Includes current year catastrophe-related losses from unconsolidated subsidiaries of \$312 million and \$96 million in 2005 and 2004. There were no significant catastrophe-related losses in 2006.

General Insurance

AIG's General Insurance operations provide property and casualty products and services throughout the world. The increase in General Insurance operating income in 2006 compared to 2005 was primarily attributable to an improvement in underwriting results for DBG, including the absence of catastrophe-related losses, which amounted to \$2.89 billion in 2005. Operating income for 2006 also reflected higher net investment income, including the effect of the out of period adjustments related to the accounting for certain interests in unit investment trusts.

Life Insurance & Retirement Services

AIG's Life Insurance & Retirement Services operations provide insurance, financial and investment products throughout the world. Foreign operations contributed approximately 68 percent, 59 percent and 61 percent of AIG's Life Insurance & Retirement Services operating income in 2006, 2005 and 2004, respectively.

Life Insurance & Retirement Services operating income increased 13 percent in 2006 compared to 2005 on higher GAAP premiums and an increase in net investment income. Net investment income in 2006 included the effect of an out of period adjustment related to the accounting for certain interests in unit investment trusts. Realized capital gains included in revenues and operating income were \$88 million in 2006 compared to realized capital losses of \$158 million in 2005. Results for 2006 were particularly strong in the Foreign Life operations that were helped by increased net investment income, higher realized gains and lower acquisition costs. Domestic Life Insurance & Retirement Services operating income declined from the prior year on lower realized gains, the charge discussed above relating to the Superior National arbitration and the exiting of the financial institutions credit insurance business.

Financial Services

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance.

Financial Services operating income decreased in 2006 compared to 2005 primarily due to the effects of hedging activities that did not qualify for hedge accounting treatment under FAS 133. AIG is reinstating hedge accounting in the first quarter of 2007 for AIGFP. In addition to the effects of FAS 133, fluctuations in revenues and operating income from period to

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

period are not unusual because of the transaction-oriented nature of Capital Markets operations.

Asset Management

AIG's Asset Management operations include institutional and retail asset management, broker-dealer services and institutional spread-based investment businesses. The MIP has replaced the GIC program as AIG's principal spread-based investment activity.

Asset Management operating income increased 4 percent in 2006 compared to 2005 due primarily to growth in asset management fees within Institutional Asset Management and income from the MIP. These increases were partially offset by the continued runoff of GIC balances, spread compression in the remaining GIC portfolio as well as decreased performance-based fees. Gains and losses arising from the consolidation of certain variable interest entities (VIEs) and partnerships are included in operating income, but are offset in minority interest expense, which is not a component of operating income.

Capital Resources

At December 31, 2006, AIG had total consolidated shareholders' equity of \$101.68 billion and total consolidated borrowings of \$148.68 billion. At that date, \$131.55 billion of such borrowings were not guaranteed by AIG, were matched borrowings by AIG or AIGFP, or represented liabilities connected to trust preferred stock.

AIG did not purchase shares of its common stock under its common stock repurchase authorization during 2006. In February 2007, AIG's Board of Directors increased the repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion.

In 2007, AIG expects to issue capital securities in one or more series. The proceeds will be used to repurchase shares of common stock or to otherwise improve the efficiency of AIG's capital structure.

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At December 31, 2006, AIG's consolidated invested assets, primarily held by its subsidiaries, included \$26.8 billion in cash and short-term investments. Consolidated net cash provided from operating activities in 2006 amounted to \$6.8 billion. At the parent company level, liquidity management activities are conducted in a manner to preserve and enhance funding stability, flexibility, and diversity through the full range of potential operating environments and market conditions. AIG's primary sources of cash flow are dividends and other payments from its regulated and unregulated subsidiaries, as well as issuances of debt securities. Primary uses of cash flow are for debt service, subsidiary funding and shareholder dividend payments. Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements, including the funding of increased dividends under AIG's new dividend policy and repurchases of common stock.

Critical Accounting Estimates

AIG considers its most critical accounting estimates to be those relating to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts, recoverability of DAC, estimated gross profits for investment-oriented products, fair value determinations for certain Capital Markets assets and liabilities, other-than-temporary declines in the value of investments and flight equipment recoverability. These accounting estimates require the use of assumptions about matters, some of which are highly uncertain at the time of estimation. To the extent actual experience differs from the assumptions used, AIG's results of operations would be directly affected.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG's critical accounting estimates are discussed in detail. The major categories for which assumptions are developed and used to establish each critical accounting estimate are highlighted below. For a discussion regarding the significant accounting policies relating to these estimates, see Note 1 of Notes to Consolidated Financial Statements.

Reserves for Losses and Loss Expenses (General Insurance):

- *Loss trend factors*: used to establish expected loss ratios for subsequent accident years based on premium rate adequacy and the projected loss ratio with respect to prior accident years.
- *Expected loss ratios for the latest accident year*: in this case, accident year 2006 for the year end 2006 loss reserve analysis. For low-frequency, high-severity classes such as excess casualty, expected loss ratios generally are utilized for at least the three most recent accident years.
- *Loss development factors*: used to project the reported losses for each accident year to an ultimate amount.
- *Reinsurance recoverable on unpaid losses*: the expected recoveries from reinsurers on losses that have not yet been reported and/or settled.

Future Policy Benefits for Life and Accident and Health Contracts (Life Insurance & Retirement Services):

- *Interest rates*: which vary by geographical region, year of issuance and products.
- *Mortality, morbidity and surrender rates*: based upon actual experience by geographical region modified to allow for variation in policy form, risk classification and distribution channel.

Estimated Gross Profits (Life Insurance & Retirement Services):

- *Estimated gross profits*: to be realized over the estimated duration of the contracts (investment-oriented products) affect the carrying value of DAC, unearned revenue liability and associated amortization patterns under FAS 97 and Sales Inducement Assets under SOP 03-1. Estimated gross profits include investment income and gains and losses on investments less required interest, actual mortality and other expenses.

Deferred Policy Acquisition Costs (Life Insurance & Retirement Services):

- *Recoverability*: based on current and future expected profitability, which is affected by interest rates, foreign exchange rates, mortality experience, and policy persistency.

Deferred Policy Acquisition Costs (General Insurance):

- *Recoverability and eligibility*: based upon the current terms and profitability of the underlying insurance contracts.

Fair Value Determinations Of Certain Assets And Liabilities (Financial Services):

- *Valuation models*: utilizing factors, such as market liquidity and current interest, foreign exchange and volatility rates.
- *Market price data*: AIG attempts to secure reliable and independent current market price data, such as published exchange rates from external subscription services such as Bloomberg or Reuters or third-party broker quotes for use in its models. When such data is not available, AIG uses an internal methodology, which includes interpolation and extrapolation from verifiable prices from trades occurring on dates nearest to the dates of the transactions.

Other-Than-Temporary Declines In The Value Of Investments:

A security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer);
- The occurrence of a discrete credit event resulting in the debtor defaulting or seeking bankruptcy or insolvency protection or voluntary reorganization; or
- The probability of non-realization of a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

At each balance sheet date, AIG evaluates its securities holdings in an unrealized loss position. Where AIG does not intend to hold such securities until they have fully recovered their carrying value, based on the circumstances present at the date of evaluation, AIG records the unrealized loss in income. If events or circumstances change, such as unexpected changes in the creditworthiness of the obligor, unanticipated changes in interest rates, tax laws, statutory capital positions and unforeseen liquidity events, among others, AIG revisits its intent. Further, if a loss is recognized from a sale subsequent to a balance sheet date pursuant to these unexpected changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer existed.

In periods subsequent to the recognition of an other-than-temporary impairment loss for debt securities, AIG amortizes the discount or reduced premium over the remaining life of the security in a prospective manner based on the amount and timing of estimated future cash flows.

Flight Equipment — Recoverability (Financial Services):

- *Expected undiscounted future net cash flows*: based upon current lease rates, projected future lease rates and estimated terminal values of each aircraft based on third party information.

Operating Review

General Insurance Operations

AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of commercial property and casualty insurance and various personal lines both domestically and abroad.

As previously noted, AIG believes it should present and discuss its financial information in a manner most meaningful to its financial statement users. Accordingly, in its General Insurance business, AIG uses certain regulatory measures, where AIG has determined these measurements to be useful and meaningful.

A critical discipline of a successful general insurance business is the objective to produce profit from underwriting activities exclusive of investment-related income. When underwriting is not profitable, premiums are inadequate to pay for insured losses and underwriting related expenses. In these situations, the addition of general insurance related investment income and realized capital gains may, however, enable a general insurance business to produce operating income. For these reasons, AIG views underwriting results to be critical in the overall evaluation of performance. See also Liquidity herein.

Statutory underwriting profit is derived by reducing net premiums earned by net losses and loss expenses incurred and net expenses incurred. Statutory accounting generally requires immediate expense recognition and ignores the matching of revenues and expenses as required by GAAP. That is, for statutory purposes, expenses (including acquisition costs) are recognized immediately, not over the same period that the revenues are earned. Thus, statutory expenses exclude changes in DAC.

GAAP provides for the recognition of expenses at the same time revenues are earned, the accounting principle of matching. Therefore, acquisition expenses are deferred and amortized over the period the related net premiums written are earned. DAC is reviewed for recoverability, and such review requires management judgment. The most comparable GAAP measure to statutory underwriting profit is income before income taxes, minority interest and cumulative effect of an accounting change. A table reconciling statutory underwriting profit to income before income taxes, minority interest and cumulative effect of an accounting change is contained in footnote (g) to the following table. See also Critical Accounting Estimates herein and Notes 1 and 4 of Notes to Consolidated Financial Statements.

AIG, along with most general insurance companies, uses the loss ratio, the expense ratio and the combined ratio as measures of underwriting performance. The loss ratio is the sum of losses and loss expenses incurred divided by net premiums earned. The expense ratio is statutory underwriting expenses divided by net premiums written. These ratios are relative measurements that describe, for every \$100 of net premiums earned or written, the

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

cost of losses and statutory expenses, respectively. The combined ratio is the sum of the loss ratio and the expense ratio. The combined ratio presents the total cost per \$100 of premium production. A combined ratio below 100 demonstrates underwriting profit; a combined ratio above 100 demonstrates underwriting loss.

Net premiums written are initially deferred and earned based upon the terms of the underlying policies. The net unearned premium reserve constitutes deferred revenues which are gener-

ally earned ratably over the policy period. Thus, the net unearned premium reserve is not fully recognized in income as net premiums earned until the end of the policy period.

The underwriting environment varies from country to country, as does the degree of litigation activity. Regulation, product type and competition have a direct effect on pricing and consequently on profitability as reflected in underwriting profit and statutory general insurance ratios.

General Insurance Results

General Insurance operating income is comprised of statutory underwriting results, changes in DAC, net investment income and realized capital gains and losses. Operating income, as well as net premiums written, net premiums earned, net investment income and realized capital gains (losses) and statutory ratios for 2006, 2005 and 2004 were as follows:

<i>(in millions, except ratios)</i>	2006	2005	2004

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

AIG transacts business in most major foreign currencies. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of General Insurance net premiums written for the years ended December 31, 2006 and 2005.

	2006	2005
Growth in original currency*	7.4%	2.6%
Foreign exchange effect	(0.2)	0.5
Growth as reported in U.S. dollars	7.2%	3.1%

* Computed using a constant exchange rate for each period.

2006 and 2005 Comparison

General Insurance operating income increased in 2006 compared to 2005 due to growth in net premiums, a reduction in both catastrophe losses and prior accident year development, and growth in net investment income. The combined ratio improved to 89.1, a reduction of 15.6 points from 2005, including an improvement in the loss ratio of 16.5 points. The reduction in catastrophe losses represented 6.9 points and the reduction in prior year adverse development represented 11.5 points of the overall reduction. Net premiums written increased \$3.0 billion or 7 percent in 2006 compared to 2005. Domestic General accounted for \$1.6 billion of the increase as property rates improved and submission activity increased due to the strength of AIG's capacity, commitment to difficult markets and diverse product offerings. Foreign General contributed \$1.4 billion to the increase in net premiums written. In 2005, Domestic General net premiums written increased by \$300 million and Foreign General net premiums written decreased by the same amount as a result of the commutation of the Richmond reinsurance contract. The commutation partially offset the increase in Domestic General net premiums written in 2006 compared to 2005 and increased Foreign General net premiums written in 2006 compared to 2005.

In 2006, certain adjustments were made in conjunction with the remediation of the material weakness relating to balance sheet account reconciliations which increased earned premiums by \$189 million and increased other expenses by \$415 million. These adjustments reflect continuing progress in AIG's ongoing remediation efforts. The combined effect of these adjustments increased the expense ratio by 0.9 points and decreased the loss ratio by 0.3 points.

General Insurance net investment income increased \$1.67 billion in 2006 to \$5.7 billion on higher levels of invested assets, strong cash flows, slightly higher yields and increased partnership income, and included increases from out of period adjustments of \$490 million related to the accounting for certain interests in unit investment trusts, \$43 million related to partnership income and \$85 million related to interest earned on a DBG deposit contract. See also Capital Resources and Liquidity — Liquidity and Invested Assets herein.

2005 and 2004 Comparison

General Insurance operating income in 2005 decreased from 2004 due to higher catastrophe-related losses and the fourth

quarter 2005 increase in reserves and changes in estimates related to remediation of the material weakness in reconciliation of balance sheet accounts. Catastrophe-related losses were \$2.89 billion and \$1.05 billion in 2005 and 2004, respectively. These decreases in operating income were partially offset by strong growth in statutory underwriting profit and increases in net investment income. General Insurance operating income in 2004 also included a \$232 million charge reflecting a change in estimate for salvage and subrogation recoveries.

General Insurance net investment income grew in 2005 compared to 2004 due to strong cash flows, higher interest rates and increased partnership income. See also Capital Resources and Liquidity — Liquidity herein and Note 8 of Notes to Consolidated Financial Statements.

DBG Results

2006 and 2005 Comparison

DBG's operating income increased to \$5.99 billion in 2006 compared to a loss of \$646 million in 2005, an improvement of \$6.63 billion. The improvement is also reflected in the combined ratio, which declined to 89.4 in 2006 compared to 113.8 in 2005 primarily due to an improvement in the loss ratio of 24.9 points. The reduction in prior year adverse development and the reduction in catastrophe losses and related reinstatement premiums accounted for 21.0 points and 8.2 points, respectively, of the improvement.

DBG's net premiums written increased 5 percent in 2006 compared to 2005 as property rates improved and submission activity increased due to the strength of AIG's capacity, commitment to difficult markets and diverse product offerings. Net premiums written in 2005 were reduced by \$122 million due to reinstatement premiums related to catastrophes, offset by increases of \$300 million for the Richmond commutation and \$147 million related to an accrual for workers compensation premiums for payroll not yet reported by insured employers. The combined effect of these items reduced the growth rate for net premiums written by 1.5 percent.

The loss ratio for 2006 declined 24.9 points to 69.4. The 2005 loss ratio was negatively affected by catastrophe-related losses of \$1.7 billion and related reinstatement premiums of \$122 million. Adverse development on reserves for loss and loss adjustment expenses declined to \$110 million in 2006 compared to \$4.9 billion in 2005, accounting for 21.0 points of the decrease in the loss ratio.

DBG's expense ratio increased to 20.0 in 2006 compared to 19.5 in 2005, primarily due to an increase in other expenses that amounted to \$498 million in 2006 (including out of period charges of \$356 million) compared to \$372 million in 2005. This increase added 0.4 points to the expense ratio. Overall allowances decreased, however, due to charge-offs against previously established allowances resulting from AIG's remediation activities.

DBG's net investment income increased by \$1.0 billion in 2006 compared to 2005, as interest income increased \$482 million on growth in the bond portfolio resulting from investment of operating cash flows and capital contributions. Partnership income

increased from 2005 due to improved performance of the underlying investments, including initial public offering activity. Net investment income in 2006 included increases relating to out of period adjustments of \$109 million for the accounting for certain investments in unit investment trusts and partnerships and \$85 million related to interest earned on a deposit contract that did not exist in the prior year.

2005 and 2004 Comparison

DBG's net premiums written increased modestly in 2005 compared to 2004, reflecting generally improving renewal retention rates and a modest change in the mix of business towards smaller accounts for which DBG purchases less reinsurance. DBG also continued to expand its relationships with a larger number and broader range of brokers. DBG saw improvement in domestic property rates as well as increases in submission activity in the aftermath of the 2005 hurricanes. DBG attributes the increase in submissions to its overall financial strength in comparison to many insurers that experienced significant losses and reductions of surplus as a result of the hurricanes.

The DBG loss ratio increased in 2005 from 2004 principally as a result of adverse loss development, higher catastrophe-related losses and \$197 million of losses incurred in 2005 resulting from the 2004 catastrophes.

The DBG expense ratio increased in 2005 from 2004, principally due to an increase in net commissions resulting from the replacement of certain ceded quota share reinsurance, for which DBG earns a ceding commission, with excess-of-loss reinsurance, which generally does not include a ceding commission. Increases in other underwriting expenses reflect a change in estimates for salvage and subrogation recoveries.

DBG's net investment income increased in 2005 compared to 2004 due to strong cash flows, higher interest rates and increased partnership income.

Transatlantic Results

2006 and 2005 Comparison

Transatlantic's net premiums written and net premiums earned increased in 2006 by 5 percent and 6 percent, respectively, compared to 2005 due primarily to increased writings in domestic operations. Operating income increased in 2006 compared to 2005 due largely to lower catastrophe losses and net ceded reinstatement premiums, and increased net investment income.

2005 and 2004 Comparison

Transatlantic's net premiums written and net premiums earned for 2005 decreased compared to 2004, principally due to competitive market conditions and increased ceding company retentions in certain classes of business, largely resulting from Transatlantic's domestic operations. Operating income decreased principally as a result of the increased level of catastrophe losses.

Personal Lines Results

2006 and 2005 Comparison

Personal Lines operating income increased \$237 million in 2006 compared to 2005 reflecting a reduction in the loss ratio of 5.8 points. Favorable development on prior accident years reduced incurred losses by \$111 million in 2006 compared to an increase of \$14 million in 2005, accounting for 2.7 points of the decrease in the loss ratio. The 2005 catastrophe-related losses of \$112 million added 2.4 points to the loss ratio. The loss ratio for the 2006 accident year improved 0.7 points primarily due to the termination of The Robert Plan relationship effective December 31, 2005 and growth in the Private Client Group. The improvement in the loss ratio was partially offset by an increase in the expense ratio of 0.6 points primarily due to investments in people and technology, national expansion efforts and lower response rates. Net premiums written were flat in 2006 compared to 2005, with growth in the Private Client Group and Agency Auto divisions offset by termination of The Robert Plan relationship. Growth in the Private Client Group spans multiple products, with a continued penetration of the high net worth market, strong brand promotion and innovative loss prevention programs.

2005 and 2004 Comparison

Personal Lines net premiums written and net premiums earned for 2005 increased compared to 2004 as a result of strong growth in the Private Client Group and Agency Auto divisions due to increased agent/broker appointments, greater market penetration and enhanced product offerings. AIG direct premiums in 2005 were down slightly from 2004 due to aggressive re-underwriting of the previously acquired GE business and the discontinuation of underwriting homeowners business. Involuntary auto premiums were down in 2005 due to the decline in the assigned risk marketplace. Statutory underwriting profit declined in 2005 as a result of hurricane losses and related expenses, reserve strengthening, an increase in Agency Auto's current accident year physical damage loss ratio, and expenses incurred related to terminating AIG's relationship with The Robert Plan effective December 31, 2005.

Mortgage Guaranty Results

2006 and 2005 Comparison

UGC's operating income declined \$35 million in 2006, down 10 percent from 2005 due primarily to unfavorable loss experience on third-party originated second lien business with a credit quality lower than typical for UGC and a softening U.S. housing market. This increased UGC's consolidated loss ratio for 2006 to 47.2 compared to 26.0 in 2005. The writing of this second lien coverage, which began in 2005, was discontinued as of year end 2006. Losses in the second lien business have been mitigated by a policy year aggregate limitation provision that is typically established for each lender.

Net premiums written increased 38 percent from growth in the domestic second lien and international businesses as well as improved persistency in the domestic first lien business. The

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

expense ratio remained flat as premium growth covered increased expenses related to expansion internationally and continued investment in risk management resources. UGC had approximately \$27 billion of guaranty risk in force at December 31, 2006.

2005 and 2004 Comparison

UGC's net premiums written were up slightly for 2005 compared to 2004 as strong growth in the international and domestic second lien businesses was mostly offset by lower persistency in domestic first lien residential renewal premiums. Statutory underwriting profit rose from 2004 due to lower contract underwriting expenses and favorable loss development.

Foreign General Insurance Results

2006 and 2005 Comparison

Foreign General's operating income increased \$661 million or 27 percent in 2006 compared to 2005 due to out of period adjustments related to the accounting for interests in unit investment trusts, the absence of significant catastrophe-related losses in 2006, rate increases and lower current accident year losses by the Lloyd's syndicate Ascot (Ascot) on its U.S. book of business and lower asbestos and environmental reserve increases. Partially offsetting these increases in operating income were lower favorable loss development from prior accident years and adverse loss development on the 2005 hurricanes. Statutory underwriting profit increased \$152 million in 2006 compared to 2005. Catastrophes in 2005 resulted in losses of \$293 million and reinstatement premiums of \$94 million.

Net premiums written increased \$1.4 billion or 14 percent (15 percent in original currency) in 2006 compared to 2005, reflecting growth in both commercial and consumer lines driven by new business from both established and new distribution channels, including a wholly owned insurance company in Vietnam and Central Insurance Co., Ltd. in Taiwan. Ascot also contributed to the growth in net premiums written as a result of rate increases on its U.S. business. Consumer lines in Latin America and commercial lines in Europe, including the U.K., also contributed to the increase. Net premiums written for 2005 were reduced by reinstatement premiums related to catastrophes and a portfolio transfer of unearned premium reserves to DBG related to the Richmond commutation, accounting for 3 percent of the increase in 2006 compared to 2005.

The 2006 combined ratio declined to 83.7, a decrease of 1.9 points from 2005. The 2005 catastrophes added 3.5 points to the 2005 loss ratio. The expense ratio in 2006 increased by 1.3 points as a result of increased amortization of deferred advertising costs and a continued change in the business mix towards products with higher acquisition costs but historically lower loss ratios. The loss ratio decreased 3.2 points in 2006 as the absence of significant catastrophes in 2006 resulted in a decrease of 3.5 points, rate increases and lower current year losses by Ascot on its U.S. book of business accounted for 1.3 points of the decrease and lower asbestos and environmental reserve increases accounted for 1.2 points of the decrease. These declines were partially offset by lower favorable loss

development from prior accident years and adverse development on 2005 hurricanes.

The expense ratio increased 1.3 points in 2006 compared to 2005. Underwriting expenses for 2006 increased \$59 million due to an out of period adjustment for amortization of deferred advertising costs and premiums were reduced by \$61 million due to reconciliation remediation activities, in aggregate accounting for 0.7 points of the increase in the expense ratio. The expense ratio also increased due to growth in consumer business lines, which have higher acquisition expenses but historically lower loss ratios. The expense ratio for 2005 increased by 1.2 points due to the decline in net premiums written from reinstatement premiums related to catastrophes and the portfolio transfer of the Richmond unearned premium reserves. Due to the current mix of business, AIG expects the expense ratio to continue to increase during 2007, principally for classes of business with historically lower than average loss ratios.

Net investment income increased \$540 million or 57 percent in 2006 compared to 2005 primarily due to a \$424 million out of period adjustment related to the accounting for interests in unit investment trusts.

2005 and 2004 Comparison

Foreign General operating income increased 81 percent in 2005 compared to 2004 due primarily to favorable loss development from prior accident years and increased net investment income.

Net premiums written increased 6 percent (4 percent in original currency) in 2005 compared to 2004 as a result of new business as well as new distribution channels such as the February 2005 purchase of the insurance portfolio of the Royal & Sun Alliance branch operations in Japan. The personal accident business in the Far East and the personal lines operations in Latin America also contributed to the growth. Partially offsetting these increases was the portfolio transfer of Richmond's unearned premium reserves to DBG, which reduced net premiums in 2005 and reinstatement premiums related to catastrophes.

The 2005 combined ratio of 85.6 decreased 5.3 points from 2004. The loss ratio decreased 8.0 points in 2005 from 2004. The loss ratio decreased 4.7 points due to favorable loss development from prior accident years, excluding catastrophes, and 2.3 points related to a 2004 loss reserve restatement adjustment. The loss ratio increased 0.9 points due to higher catastrophe losses in 2005 related to hurricanes. The expense ratio increased 2.7 points in 2005 from 2004 principally due to the portfolio transfer of Richmond's unearned premium reserves to DBG in 2005, loyalty business initiatives in the consumer business lines, which have higher acquisition costs, and also due to reinstatement premiums.

Foreign General net investment income increased \$326 million in 2005 compared to 2004 on increased partnership income, reflecting increases in market valuations of infrastructure fund investments in Africa, Asia, China, Eastern Europe and India. Additionally, net investment income was positively affected by positive cash flows, higher interest rates and the compounding of previously earned and reinvested net investment income. Cash flow was lower in 2005 compared to 2004 due to payments for

catastrophe-related losses incurred in 2005 and 2004 and for the purchase of the Royal & Sun Alliance branch operations.

Reserve for Losses and Loss Expenses

The following table presents the components of the General Insurance gross reserve for losses and loss expenses (loss reserves) as of December 31, 2006 and 2005 by major lines of business on a statutory Annual Statement basis*:

(in millions)	2006	2005
Other liability occurrence	\$19,156	\$18,116
Workers compensation	13,465	11,630
Other liability claims made	12,394	12,447
Property	6,663	7,217
Auto liability	5,931	6,569
International	5,810	4,939
Reinsurance	2,960	2,886
Medical malpractice	2,308	2,363
Products liability	2,168	1,937
Accident and health	1,649	1,678
Commercial multiple peril	1,621	1,359
Aircraft	1,562	1,844
Fidelity/surety	1,127	1,072
Other	3,185	3,112
Total	\$79,999	\$77,169

* Presented by lines of business pursuant to statutory reporting requirements as prescribed by the National Association of Insurance Commissioners (NAIC).

AIG's gross reserve for losses and loss expenses represents the accumulation of estimates of ultimate losses, including IBNR and loss expenses. The methods used to determine loss reserve estimates and to establish the resulting reserves are continually reviewed and updated by management. Any adjustments resulting therefrom are reflected in operating income currently. Because loss reserve estimates are subject to the outcome of future events, changes in estimates are unavoidable given that loss trends vary and time is often required for changes in trends to be recognized and confirmed. Reserve changes that increase previous estimates of ultimate cost are referred to as unfavorable or adverse development or reserve strengthening. Reserve changes that decrease previous estimates of ultimate cost are referred to as favorable development.

At December 31, 2006, General Insurance net loss reserves increased \$5.15 billion from 2005 to \$62.63 billion. The net loss reserves represent loss reserves reduced by reinsurance recoverables, net of an allowance for unrecoverable reinsurance and applicable discount for future investment income.

The following table classifies the components of the General Insurance net loss reserves by business unit as of December 31, 2006 and 2005.

(in millions)	2006	2005
DBG ^(a)	\$43,998	\$40,782
Transatlantic	6,207	5,690
Personal Lines ^(b)	2,440	2,578
Mortgage Guaranty	460	340
Foreign General ^(c)	9,525	8,086
Total Net Loss Reserve	\$62,630	\$57,476

(a) At December 31, 2006 and 2005, respectively, DBG loss reserves include approximately \$3.33 billion and \$3.77 billion (\$3.66 billion and \$4.26 billion, respectively, before discount), related to business written by DBG but ceded to AIRCO and reported in AIRCO's statutory filings.

DBG loss reserves also include approximately \$535 million and \$407 million related to business included in AIUO's statutory filings at December 31, 2006 and 2005, respectively.

(b) At December 31, 2006 and 2005, respectively, Personal Lines loss reserves include \$861 million and \$878 million related to business ceded to DBG and reported in DBG's statutory filings.

(c) At December 31, 2006 and 2005, respectively, Foreign General loss reserves include approximately \$2.87 billion and \$2.15 billion related to business reported in DBG's statutory filings.

The DBG net loss reserve of \$44.0 billion is comprised principally of the business of AIG subsidiaries participating in the American Home/National Union pool (11 companies) and the surplus lines pool (Lexington, Starr Excess Liability Insurance Company and Landmark Insurance Company).

Beginning in 1998, DBG ceded a quota share percentage of its other liability occurrence and products liability occurrence business to AIRCO. The quota share percentage ceded was 40 percent in 1998, 65 percent in 1999, 75 percent in 2000 and 2001, 50 percent in 2002 and 2003, 40 percent in 2004, 35 percent in 2005 and 20 percent in 2006 and covered all business written in these years for these lines by participants in the American Home/National Union pool. In 1998 the cession reflected only the other liability occurrence business, but in 1999 and subsequent years included products liability occurrence. AIRCO's loss reserves relating to these quota share cessions from DBG are recorded on a discounted basis. As of year-end 2006, AIRCO carried a discount of approximately \$330 million applicable to the \$3.66 billion in undiscounted reserves it assumed from the American Home/National Union pool via this quota share cession. AIRCO also carries approximately \$467 million in net loss reserves relating to Foreign General insurance business. These reserves are carried on an undiscounted basis.

Beginning in 1997, the Personal Lines division ceded a percentage of all business written by the companies participating in the personal lines pool to the American Home/National Union pool. As noted above, the total reserves carried by participants in the American Home/National Union pool relating to this cession amounted to \$861 million as of year-end 2006.

The companies participating in the American Home/National Union pool have maintained a participation in the business written by AIU for decades. As of year-end 2006, these AIU reserves carried by participants in the American Home/National Union pool amounted to approximately \$2.87 billion. The remaining Foreign

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

General reserves are carried by AIUO, AIRCO, and other smaller AIG subsidiaries domiciled outside the United States. Statutory filings in the U.S. by AIG companies reflect all the business written by U.S. domiciled entities only, and therefore exclude business written by AIUO, AIRCO, and all other internationally domiciled subsidiaries. The total reserves carried at year-end 2006 by AIUO and AIRCO were approximately \$4.57 billion and \$3.80 billion, respectively. AIRCO's \$3.80 billion in total general insurance reserves consists of approximately \$3.33 billion from business assumed from the American Home/National Union pool and an additional \$467 million relating to Foreign General Insurance business.

Discounting of Reserves

At December 31, 2006, AIG's overall General Insurance net loss reserves reflect a loss reserve discount of \$2.26 billion, including tabular and non-tabular calculations. The tabular workers compensation discount is calculated using a 3.5 percent interest rate and the 1979-81 Decennial Mortality Table. The non-tabular workers compensation discount is calculated separately for companies domiciled in New York and Pennsylvania, and follows the statutory regulations for each state. For New York companies, the discount is based on a five percent interest rate and the companies' own payout patterns. For Pennsylvania companies, the statute has specified discount factors for accident years 2001 and prior, which are based on a six percent interest rate and an industry payout pattern. For accident years 2002 and subsequent, the discount is based on the yield of U.S. Treasury securities ranging from one to twenty years and the company's own payout pattern, with the future expected payment for each year using the interest rate associated with the corresponding Treasury security yield for that time period. The discount is comprised of the following: \$662 million — tabular discount for workers compensation in DBG; \$1.27 billion — non-tabular discount for workers compensation in DBG; and, \$330 million — non-tabular discount for other liability occurrence and products liability occurrence in AIRCO. The total undiscounted workers compensation loss reserve carried by DBG is approximately \$11.5 billion as of year-end 2006. The other liability occurrence and products liability occurrence business in AIRCO that is assumed from DBG is discounted based on the yield of U.S. Treasury securities ranging from one to twenty years and the DBG payout pattern for this business. The undiscounted reserves assumed by AIRCO from DBG totaled approximately \$3.66 billion at December 31, 2006.

Results of 2006 Reserving Process

Management believes that the General Insurance net loss reserves are adequate to cover General Insurance net losses and loss expenses as of December 31, 2006. While AIG regularly reviews the adequacy of established loss reserves, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's loss reserves as of December 31, 2006. In the opinion of management, such adverse

development and resulting increase in reserves is not likely to have a material adverse effect on AIG's consolidated financial condition, although it could have a material adverse effect on AIG's consolidated results of operations for an individual reporting period. See also Item 1A. Risk Factors — Casualty Insurance and Underwriting Reserves.

The following table presents the reconciliation of net loss reserves for 2006, 2005 and 2004 as follows:

<i>(in millions)</i>	2006	2005	2004
Net reserve for losses and loss expenses at beginning of year	\$57,476	\$47,254	\$36,228

The loss ratios recorded by AIG for 2006 took into account the results of the comprehensive reserve reviews that were completed in the fourth quarter of 2005. AIG's year-end 2005 reserve review reflected careful consideration of the reserve analyses prepared by AIG's internal actuarial staff with the assistance of third party actuaries. In determining the appropriate loss ratios for accident year 2006 for each class of business, AIG gave consideration to the loss ratios resulting from the 2005 reserve analyses as well as all other relevant information including rate changes, expected changes in loss costs, changes in coverage, reinsurance or mix of business, and other factors that may affect the loss ratios.

In 2006, AIG enhanced its process of determining the quarterly loss development from prior accident years. In the first quarter of 2006, AIG began conducting additional analyses to determine the change in estimated ultimate loss for each accident year for each profit center. For example, if loss emergence for a profit center is different than expected for certain accident years, the actuaries now take additional steps to examine the indicated effect such emergence would have on the reserves of that profit center. In some cases, the higher or lower than expected emergence may result in no

clear change in the ultimate loss estimate for the accident years in question, and no adjustment would be made to the profit center's reserves for prior accident years. In other cases, the higher or lower than expected emergence may result in a larger change, either favorable or unfavorable, than the difference between the actual and expected loss emergence. Such additional analyses were conducted for each profit center, as appropriate, in the first, second and third quarters of 2006 to determine the loss development from prior accident years for the first, second and third quarters of 2006. As part of its quarterly reserving process, AIG also considers notices of claims received with respect to emerging issues, such as those related to stock option backdating. In the fourth quarter of 2006, a comprehensive loss reserve review was completed for each AIG general insurance subsidiary. The prior accident year loss reserve development shown in the tables above for 2006 reflects the results of these comprehensive reviews, including the effect of actual loss emergence in the fourth quarter of 2006.

In 2006, net loss development from prior accident years was favorable by approximately \$53 million, including approximately \$198 million in net adverse development from asbestos and environmental reserves resulting from the updated ground up analysis of these exposures in the fourth quarter of 2006; approximately \$103 million of adverse development pertaining to the major hurricanes in 2004 and 2005; and \$181 million of adverse development from the general reinsurance operations of Transatlantic; and excluding approximately \$300 million from accretion of loss reserve discount. Excluding the fourth quarter asbestos and environmental reserve increase, catastrophes and Transatlantic, as well as accretion of discount, net loss development in 2006 from prior accident years was favorable by approximately \$535 million. The overall favorable development of \$53 million consisted of approximately \$2.30 billion of favorable development from accident years 2003 through 2005, partially offset by approximately \$2.25 billion of adverse development from accident years 2002 and prior. For 2006, most classes of AIG's business continued to experience favorable development for accident years 2003 through 2005. The adverse development from accident years 2002 and prior reflected development from excess casualty, workers compensation, excess workers compensation, and post-1986 environmental liability classes of business, all within DBG, from asbestos reserves within DBG and Foreign General, and from Transatlantic.

For 2005, net loss development from prior accident years was adverse by approximately \$4.68 billion, including approximately \$269 million from the general reinsurance operations of Transatlantic. This \$4.68 billion adverse development in 2005 was comprised of approximately \$8.60 billion for the 2002 and prior accident years, partially offset by favorable development for accident years 2003 and 2004 for most classes of business, with the notable exception of D&O. The adverse loss development for 2002 and prior accident years was attributable to approximately \$4.0 billion of development from the D&O and related management liability classes of business, excess casualty, and excess workers compensation, and to approximately \$900 million of adverse development from asbestos and environmental claims. The remaining portion of the adverse development from 2002 and

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

prior accident years included approximately \$520 million related to Transatlantic with the balance spread across many other classes of business. Most classes of business produced favorable development for accident years 2003 and 2004, and adverse development for accident years 2001 and prior.

For 2004, AIG's overall net loss reserve development from prior accident years was an increase of approximately \$3.19 billion, including approximately \$317 million from the general reinsurance operations of Transatlantic and excluding approximately \$377 million from accretion of loss reserve discount. This \$3.19 billion adverse development in 2004 was comprised of approximately \$4.67 billion of adverse development for the 2002 and prior accident years, partially offset by approximately \$1.48 billion of favorable development for accident year 2003. The adverse development for the 2002 and prior accident years was primarily attributable to excess casualty, D&O and related management liability classes, and asbestos and environmental reserves, all within DBG, and also to Transatlantic. Most classes of business throughout AIG produced favorable development for accident year 2003.

The following is a discussion of the primary reasons for the development in 2006, 2005 and 2004 for those classes of business that experienced significant prior accident year developments during the three-year period. See Asbestos and Environmental Reserves below for a further discussion of asbestos and environmental reserves and developments.

Excess Casualty: Excess Casualty reserves experienced significant adverse loss development in 2004 and 2005, but in 2006 there was only a relatively minor amount of adverse development. The adverse development for all periods shown related principally to accident years 2000 and prior, and to a lesser extent 2001, and resulted from significant loss cost increases due to both frequency and severity of claims. The increase in loss costs resulted primarily from medical inflation, which increased the economic loss component of tort claims, advances in medical care, which extended the life span of severely injured claimants, and larger jury verdicts, which increased the value of severe tort claims. An additional factor affecting AIG's excess casualty experience in recent years has been the accelerated exhaustion of underlying primary policies for homebuilders. This has led to increased construction defect-related claims activity on AIG's excess policies. Many excess casualty policies were written on a multi-year basis in the late 1990s, which limited AIG's ability to respond to emerging market trends as rapidly as would otherwise be the case. In subsequent years, AIG responded to these emerging trends by increasing rates and implementing numerous policy form and coverage changes. This led to a significant improvement in experience beginning with accident year 2001.

In the year-end 2004 loss reserve review, AIG's actuaries responded to the adverse development for excess casualty by increasing the loss development factor assumptions. In the year-end 2004 reserve study, the development factors applicable to accident years 1998 and subsequent were increased by approximately 12 percent. In addition, the expected loss ratios for accident years 2002 and subsequent were increased to take into

account the higher ultimate loss ratios for accident years 2001 and prior.

For the year-end 2005 loss reserve review, AIG's actuaries responded to the continuing adverse development by further increasing the loss development factors applicable to accident years 1999 and subsequent by approximately 5 percent. In addition, to more accurately estimate losses for construction defect-related claims, a separate review was performed by AIG claims staff for accounts with significant exposure to these claims.

For the year-end 2006 loss reserve review, AIG claims staff updated the separate review for accounts with significant exposure to construction defect-related claims in order to assist the actuaries in determining the proper reserve for this exposure. AIG's actuaries determined that no significant changes in the assumptions were required. Prior accident year loss development in 2006 was adverse by approximately \$100 million, a relatively minor amount for this class of business. However, AIG continues to experience adverse development for this class for accident years prior to 2003.

Loss reserves pertaining to the excess casualty class of business are generally included in the Other liability occurrence line of business, with a small portion of the excess casualty reserves included in the Other liability claims made line of business, as presented in the table on page 37.

D&O and Related Management Liability Classes of Business:

These classes of business experienced significant adverse development in 2004 and 2005, but experienced slightly favorable development in 2006. The adverse development in 2004 and 2005 related principally to accident years 2002 and prior. This adverse development resulted from significant loss cost escalation due to a variety of factors, including the following: the increase in frequency and severity of corporate bankruptcies; the increase in frequency of financial statement restatements; the sharp rise in market capitalization of publicly traded companies; and the increase in the number of initial public offerings, which led to an unprecedented number of IPO allocation/laddering suits in 2001. In addition, extensive utilization of multi-year policies during this period limited AIG's ability to respond to emerging trends as rapidly as would otherwise be the case. AIG experienced significant adverse loss development since 2002 as a result of these issues. AIG responded to this development with rate increases and policy form and coverage changes to better contain future loss costs in this class of business.

In the year-end 2004 loss reserve review, AIG's actuaries responded to the adverse development for D&O and related management liability classes by increasing the loss development factor assumptions. The development factors applicable to accident years 1997 and subsequent were increased by approximately 5 percent in the year-end 2004 reserve study. In addition, the expected loss ratios for accident years 2002 and subsequent were increased to take into account the higher ultimate loss ratios for accident years 2001 and prior. The loss ratios for the older accident years increased due to the combination of higher than expected loss development in the year and the increase in the loss development factor assumptions.

For the year-end 2005 loss reserve review, AIG's actuaries responded to the continuing adverse development by further increasing the loss development factor assumptions. The loss development factors applicable to 1997 and subsequent accident years were increased by approximately 4 percent. In addition, AIG's actuaries began to give greater weight to loss development methods for accident years 2002 and 2003, in order to more fully respond to the recent loss experience. AIG's claims staff also conducted a series of ground-up claim projections covering all open claims for this business through accident year 2004. AIG's actuaries benchmarked the loss reserve indications for all accident years through 2004 to these claim projections.

For the year-end 2006 loss reserve review, AIG's actuaries determined that no significant changes in the assumptions were required. Prior accident year loss development in 2006 was favorable by approximately \$20 million, an insignificant amount for these classes. AIG's actuaries continued to benchmark the loss reserve indications to the ground up claim projections provided by AIG claims staff for this class of business. For the year-end 2006 loss reserve review, the ground up claim projections included all accident years through 2005.

Loss reserves pertaining to D&O and related management liability classes of business are included in the Other liability claims made line of business, as presented in the table on page 37.

Excess Workers Compensation: This class of business experienced significant adverse development in 2005, and a relatively minor amount of adverse development in 2006. The adverse development in 2005 related to 2002 and prior accident years. This adverse development resulted primarily from significant loss cost increases, primarily attributable to rapidly increasing medical inflation and advances in medical care, which increased the cost of covered medical care and extended the life span of severely injured workers. The effect of these factors on excess workers compensation claims experience is leveraged, as frequency is increased by the rising number of claims that reach the excess layers.

In response to the significantly adverse loss development in 2005, an additional study was conducted for the 2005 year-end actuarial reserve analysis for DBG pertaining to the selection of loss development factors for this class of business. Claims for excess workers compensation exhibit an exceptionally long-tail of loss development, running for decades from the date the loss is incurred. Thus, the adequacy of loss reserves for this class is sensitive to the estimated loss development factors, as such factors may be applied to many years of loss experience. In order to better estimate the tail development for this class, AIG claims staff conducted a claim-by-claim projection of the expected ultimate paid loss for each open claim for 1998 and prior accident years as these are the primary years from which the tail factors are derived. The objective of the study was to provide a benchmark against which loss development factors in the tail could be evaluated. The resulting loss development factors utilized by the actuaries in the year-end 2005 study reflected an increase of approximately 18 percent from the factors used in the prior year study without the benefit of the claims benchmark. In addition, the loss cost trend

assumption for excess workers compensation was increased from approximately 2.5 percent to 6 percent for the 2005 study.

For the year-end 2006 loss reserve review, AIG claims staff updated the claim-by-claim projection for each open claim for accident years 1999 and prior. These updated claims projections were utilized by the actuaries as a benchmark for loss development factors in the year-end 2006 study. AIG's actuaries determined that no significant changes in the assumptions were required. Prior accident year development in 2006 was adverse by approximately \$70 million, a relatively minor amount for this class.

Overview of Loss Reserving Process

The General Insurance loss reserves can generally be categorized into two distinct groups. One group is short-tail classes of business consisting principally of property, personal lines and certain casualty classes. The other group is long-tail casualty classes of business which includes excess and umbrella liability, D&O, professional liability, medical malpractice, workers compensation, general liability, products liability, and related classes.

Short-Tail Reserves

For operations writing short-tail coverages, such as property coverages, the process of recording quarterly loss reserves is generally geared toward maintaining an appropriate reserve for the outstanding exposure, rather than determining an expected loss ratio for current business. For example, the IBNR reserve required for a class of property business might be expected to approximate 20 percent of the latest year's earned premiums, and this level of reserve would generally be maintained regardless of the loss ratio emerging in the current quarter. The 20 percent factor would be adjusted to reflect changes in rate levels, loss reporting patterns, known exposure to unreported losses, or other factors affecting the particular class of business.

Long-Tail Reserves

Estimation of ultimate net losses and loss expenses (net losses) for long-tail casualty classes of business is a complex process and depends on a number of factors, including the class and volume of business involved. Experience in the more recent accident years of long-tail casualty classes of business shows limited statistical credibility in reported net losses because a relatively low proportion of net losses would be reported claims and expenses and an even smaller percentage would be net losses paid. Therefore, IBNR would constitute a relatively high proportion of net losses.

AIG's carried net long-tail loss reserves are tested using loss trend factors that AIG considers appropriate for each class of business. A variety of actuarial methods and assumptions is normally employed to estimate net losses for long-tail casualty classes of businesses. These methods ordinarily involve the use of loss trend factors intended to reflect the annual growth in loss costs from one accident year to the next. For the majority of long-tail casualty classes of business, net loss trend factors approximated five percent. Loss trend factors reflect many items

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

including changes in claims handling, exposure and policy forms, current and future estimates of monetary inflation and social inflation and increases in litigation and awards. These factors are periodically reviewed and adjusted, as appropriate, to reflect emerging trends which are based upon past loss experience. Thus, many factors are implicitly considered in estimating the year to year growth in loss costs.

A number of actuarial assumptions are generally made in the review of reserves for each class of business. For longer tail classes of business, actuarial assumptions generally are made with respect to the following:

- Loss trend factors which are used to establish expected loss ratios for subsequent accident years based on the projected loss ratio for prior accident years.
- Expected loss ratios for the latest accident year (i.e., accident year 2006 for the year-end 2006 loss reserve analysis) and, in some cases for accident years prior to the latest accident year. The expected loss ratio generally reflects the projected loss ratio from prior accident years, adjusted for the loss trend (see above) and the effect of rate changes and other quantifiable factors on the loss ratio. For low-frequency, high-severity classes such as excess casualty, expected loss ratios generally are used for at least the three most recent accident years.
- Loss development factors which are used to project the reported losses for each accident year to an ultimate basis. Generally, the actual loss development factors observed from prior accident years would be used as a basis to determine the loss development factors for the subsequent accident years.

AIG records quarterly changes in loss reserves for each of its many General Insurance classes of business. The overall change in AIG's loss reserves is based on the sum of these classes of business changes. For most long-tail classes of business, the process of recording quarterly loss reserve changes involves determining the estimated current loss ratio for each class of coverage. This loss ratio is multiplied by the current quarter's net earned premium for that class of coverage to determine the current accident quarter's total estimated net incurred loss and loss expense. The change in loss reserves for the quarter for each class is thus the difference between the net incurred loss and loss expense, estimated as described above, and the net paid losses and loss expenses in the quarter. Also any change in estimated ultimate losses from prior accident years, either positive or negative, is reflected in the loss reserve for the current quarter.

Details of the Loss Reserving Process

The process of determining the current loss ratio for each class of business is based on a variety of factors. These include, but are not limited to, the following considerations: prior accident year and policy year loss ratios; rate changes; changes in coverage, reinsurance, or mix of business; and actual and anticipated changes in external factors affecting results, such as trends in loss costs or in the legal and claims environment. The current loss ratio for each class of business reflects input from actuarial, underwriting and claims staff and is intended to represent management's best estimate of the current loss ratio after

reflecting all of the factors described above. At the close of each quarter, the assumptions underlying the loss ratios are reviewed to determine if the loss ratios based thereon remain appropriate. This process includes a review of the actual claims experience in the quarter, actual rate changes achieved, actual changes in coverage, reinsurance or mix of business, and changes in certain other factors that may affect the loss ratio. When this review suggests that the initially determined loss ratio is no longer appropriate, the loss ratio for current business is changed to reflect the revised assumptions.

A comprehensive annual loss reserve review is completed in the fourth quarter of each year for each AIG general insurance subsidiary. These reviews are conducted in full detail for each class of business for each subsidiary, and thus consist of hundreds of individual analyses. The purpose of these reviews is to confirm the appropriateness of the reserves carried by each of the individual subsidiaries, and therefore of AIG's overall carried reserves. The reserve analysis for each class of business is performed by the actuarial personnel who are most familiar with that class of business. In completing these detailed actuarial reserve analyses, the actuaries are required to make numerous assumptions, including the selection of loss development factors and loss cost trend factors. They are also required to determine and select the most appropriate actuarial methods to employ for each business class. Additionally, they must determine the appropriate segmentation of data from which the adequacy of the reserves can be most accurately tested. In the course of these detailed reserve reviews a point estimate of the loss reserve is determined. The sum of these point estimates for each class of business for each subsidiary provides an overall actuarial point estimate of the loss reserve for that subsidiary. The ultimate process by which the actual carried reserves are determined considers both the actuarial point estimate and numerous other internal and external factors including a qualitative assessment of inflation and other economic conditions in the United States and abroad, changes in the legal, regulatory, judicial and social environment, underlying policy pricing, terms and conditions, and claims handling. Loss reserve development can also be affected by commutations of assumed and ceded reinsurance agreements.

Actuarial Methods for Major Classes of Business

In testing the reserves for each class of business, a determination is made by AIG's actuaries as to the most appropriate actuarial methods. This determination is based on a variety of factors including the nature of the claims associated with the class of business, such as frequency or severity. Other factors considered include the loss development characteristics associated with the claims, the volume of claim data available for the applicable class, and the applicability of various actuarial methods to the class. In addition to determining the actuarial methods, the actuaries determine the appropriate loss reserve groupings of data. For example, AIG writes a great number of unique subclasses of professional liability. For pricing or other purposes, it is appropriate to evaluate the profitability of each subclass individually. However, for purposes of estimating the loss reserves for professional liability, it is appropriate to combine the subclasses

into larger groups. The greater degree of credibility in the claims experience of the larger groups may outweigh the greater degree of homogeneity of the individual subclasses. This determination of data segmentation and actuarial methods is carefully considered for each class of business. The segmentation and actuarial methods chosen are those which together are expected to produce the most accurate estimate of the loss reserves.

Actuarial methods used by AIG for most long-tail casualty classes of business include loss development methods and expected loss ratio methods, including "Bornhuetter Ferguson" methods described below. Other methods considered include frequency/severity methods, although these are generally used by AIG more for pricing analysis than for loss reserve analysis. Loss development methods utilize the actual loss development patterns from prior accident years to project the reported losses to an ultimate basis for subsequent accident years. Loss development methods generally are most appropriate for classes of business which exhibit a stable pattern of loss development from one accident year to the next, and for which the components of the classes have similar development characteristics. For example, property exposures would generally not be combined into the same class as casualty exposures, and primary casualty exposures would generally not be combined into the same class as excess casualty exposures. Expected loss ratio methods are generally utilized by AIG where the reported loss data lacks sufficient credibility to utilize loss development methods, such as for new classes of business or for long-tail classes at early stages of loss development.

Expected loss ratio methods rely on the application of an expected loss ratio to the earned premium for the class of business to determine the loss reserves. For example, an expected loss ratio of 70 percent applied to an earned premium base of \$10 million for a class of business would generate an ultimate loss estimate of \$7 million. Subtracting any reported paid losses and loss expense would result in the indicated loss reserve for this class. "Bornhuetter Ferguson" methods are expected loss ratio methods for which the expected loss ratio is applied only to the expected unreported portion of the losses. For example, for a long-tail class of business for which only 10 percent of the losses are expected to be reported at the end of the accident year, the expected loss ratio would be applied to the 90 percent of the losses still unreported. The actual reported losses at the end of the accident year would be added to determine the total ultimate loss estimate for the accident year. Subtracting the reported paid losses and loss expenses would result in the indicated loss reserve. In the example above, the expected loss ratio of 70 percent would be multiplied by 90 percent. The result of 63 percent would be applied to the earned premium of \$10 million resulting in an estimated unreported loss of \$6.3 million. Actual reported losses would be added to arrive at the total ultimate losses. If the reported losses were \$1 million, the ultimate loss estimate under the "Bornhuetter Ferguson" method would be \$7.3 million versus the \$7 million amount under the expected loss ratio method described above. Thus, the "Bornhuetter Ferguson" method gives partial credibility to the actual loss experience to date for the class of business.

Loss development methods generally give full credibility to the reported loss experience to date. In the example above, loss development methods would typically indicate an ultimate loss estimate of \$10 million, as the reported losses of \$1 million would be estimated to reflect only 10 percent of the ultimate losses.

A key advantage of loss development methods is that they respond quickly to any actual changes in loss costs for the class of business. Therefore, if loss experience is unexpectedly deteriorating or improving, the loss development method gives full credibility to the changing experience. Expected loss ratio methods would be slower to respond to the change, as they would continue to give more weight to the expected loss ratio, until enough evidence emerged for the expected loss ratio to be modified to reflect the changing loss experience. On the other hand, loss development methods have the disadvantage of overreacting to changes in reported losses if in fact the loss experience is not credible. For example, the presence or absence of large losses at the early stages of loss development could cause the loss development method to overreact to the favorable or unfavorable experience by assuming it will continue at later stages of development. In these instances, expected loss ratio methods such as "Bornhuetter Ferguson" have the advantage of properly recognizing large losses without extrapolating unusual large loss activity onto the unreported portion of the losses for the accident year. AIG's loss reserve reviews for long-tail classes typically utilize a combination of both loss development and expected loss ratio methods. Loss development methods are generally given more weight for accident years and classes of business where the loss experience is highly credible. Expected loss ratio methods are given more weight where the reported loss experience is less credible, or is driven more by large losses. Expected loss ratio methods require sufficient information to determine the appropriate expected loss ratio. This information generally includes the actual loss ratios for prior accident years, and rate changes as well as underwriting or other changes which would affect the loss ratio. Further, an estimate of the loss cost trend or loss ratio trend is required in order to allow for the effect of inflation and other factors which may increase or otherwise change the loss costs from one accident year to the next.

Frequency/severity methods generally rely on the determination of an ultimate number of claims and an average severity for each claim for each accident year. Multiplying the estimated ultimate number of claims for each accident year by the expected average severity of each claim produces the estimated ultimate loss for the accident year. Frequency/severity methods generally require a sufficient volume of claims in order for the average severity to be predictable. Average severity for subsequent accident years is generally determined by applying an estimated annual loss cost trend to the estimated average claim severity from prior accident years. Frequency/severity methods have the advantage that ultimate claim counts can generally be estimated more quickly and accurately than can ultimate losses. Thus, if the average claim severity can be accurately estimated, these methods can more quickly respond to changes in loss experience than other methods. However, for average severity to be predictable, the

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

class of business must consist of homogeneous types of claims for which loss severity trends from one year to the next are reasonably consistent. Generally these methods work best for high frequency, low severity classes of business such as personal auto. AIG utilizes these methods in pricing subclasses of professional liability. However, AIG does not generally utilize frequency/severity methods to test loss reserves, due to the general nature of AIG's reserves being applicable to lower frequency, higher severity commercial classes of business where average claim severity is volatile.

Excess Casualty: AIG generally uses a combination of loss development methods and expected loss ratio methods for excess casualty classes. Expected loss ratio methods are generally utilized for at least the three latest accident years, due to the relatively low credibility of the reported losses. The loss experience is generally reviewed separately for lead umbrella classes and for other excess classes, due to the relatively shorter tail for lead umbrella business. Automobile-related claims are generally reviewed separately from non-auto claims, due to the shorter tail nature of the automobile related claims. The expected loss ratios utilized for recent accident years are based on the projected ultimate loss ratios of prior years, adjusted for rate changes, estimated loss cost trends and all other changes that can be quantified. The estimated loss cost trend utilized in the year-end 2006 reviews averaged approximately 6 percent for excess casualty classes. Frequency/severity methods are generally not utilized as the vast majority of reported claims do not result in a claim payment. In addition, the average severity varies significantly from accident year to accident year due to large losses which characterize this class of business, as well as changing proportions of claims which do not result in a claim payment.

D&O: AIG generally utilizes a combination of loss development methods and expected loss ratio methods for D&O and related management liability classes of business. Expected loss ratio methods are given more weight in the two most recent accident years, whereas loss development methods are given more weight in more mature accident years. Beginning with the year-end 2005 loss reserve review, AIG's actuaries began to utilize claim projections provided by AIG claims staff as a benchmark for determining the indicated ultimate losses for accident years 2004 and prior. For the year end 2006 loss reserve review, claims projections for accident years 2005 and prior were utilized. In prior years, AIG's actuaries had utilized these claims projections as a benchmark for profitability studies for major classes of D&O and related management liability business. The track record of these claims projections has indicated a very low margin of error, thus providing support for their usage as a benchmark in determining the estimated loss reserve. These classes of business reflect claims made coverage, and losses are characterized by low frequency and high severity. Thus, the claim projections can produce an accurate overall indicator of the ultimate loss exposure for these classes by identifying and estimating all large losses. Frequency/severity methods are generally not utilized for these classes as the overall losses are driven by large losses

more than by claim frequency. Severity trends have varied significantly from accident year to accident year.

Workers Compensation: AIG generally utilizes loss development methods for all but the most recent accident year. Expected loss ratio methods generally are given significant weight only in the most recent accident year. Workers compensation claims are generally characterized by high frequency, low severity, and relatively consistent loss development from one accident year to the next. AIG is a leading writer of workers compensation, and thus has sufficient volume of claims experience to utilize development methods. AIG does not believe frequency/severity methods are as appropriate, due to significant growth and changes in AIG's workers compensation business over the years. AIG generally segregates California business from other business in evaluating workers compensation reserves. Certain classes of workers compensation, such as construction, are also evaluated separately. Additionally, AIG writes a number of very large accounts which include workers compensation coverage. These accounts are generally priced by AIG actuaries, and to the extent appropriate, the indicated losses based on the pricing analysis may be utilized to record the initial estimated loss reserves for these accounts.

Excess Workers Compensation: AIG generally utilizes a combination of loss development methods and expected loss ratio methods. Loss development methods are given the greater weight for mature accident years such as 2000 and prior. Expected loss ratio methods are given the greater weight for the more recent accident years. Excess workers compensation is an extremely long-tail class of business, with loss emergence extending for decades. Therefore there is limited credibility in the reported losses for many of the more recent accident years. Beginning with the year-end 2005 loss reserve review, AIG's actuaries began to utilize claims projections provided by AIG claims staff to help determine the loss development factors for this class of business.

General Liability: AIG generally uses a combination of loss development methods and expected loss ratio methods for primary general liability or products liability classes. For certain classes of business with sufficient loss volume, loss development methods may be given significant weight for all but the most recent one or two accident years, whereas for smaller or more volatile classes of business, loss development methods may be given limited weight for the five or more most recent accident years. Expected loss ratio methods would be utilized for the more recent accident years for these classes. The loss experience for primary general liability business is generally reviewed at a level that is believed to provide the most appropriate data for reserve analysis. For example, primary claims made business is generally segregated from business written on an occurrence policy form. Additionally, certain subclasses, such as construction, are generally reviewed separately from business in other subclasses. Due to the fairly long-tail nature of general liability business, and the many subclasses that are reviewed individually, there is less credibility in the reported losses and increased reliance on expected loss ratio methods. AIG's actuaries generally do not

utilize frequency/severity methods to test reserves for this business, due to significant changes and growth in AIG's general liability and products liability business over the years.

Commercial Automobile Liability: AIG generally utilizes loss development methods for all but the most recent accident year for commercial automobile classes of business. Expected loss ratio methods are generally given significant weight only in the most recent accident year. Frequency/severity methods are generally not utilized due to significant changes and growth in this business over the years.

Healthcare: AIG generally uses a combination of loss development methods and expected loss ratio methods for healthcare classes of business. The largest component of the healthcare business consists of coverage written for hospitals and other healthcare facilities. Reserves for excess coverage are tested separately from those for primary coverage. For primary coverages, loss development methods are generally given the majority of the weight for all but the latest three accident years, and are given some weight for all years other than the latest accident year. For excess coverages, expected loss methods are generally given all the weight for the latest three accident years, and are also given considerable weight for accident years prior to the latest three years. For other classes of healthcare coverage, an analogous weighting between loss development and expected loss ratio methods is utilized. The weights assigned to each method are those which are believed to result in the best combination of responsiveness and stability. Frequency/severity methods are sometimes utilized for pricing certain healthcare accounts or business. However, in testing loss reserves the business is generally combined into larger groupings to enhance the credibility of the loss experience. The frequency/severity methods that are applicable in pricing may not be appropriate for reserve testing and thus frequency/severity methods are not generally employed in AIG's healthcare reserve analyses.

Professional Liability: AIG generally uses a combination of loss development methods and expected loss ratio methods for professional liability classes of business. Loss development methods are used for the more mature accident years. Greater weight is given to expected loss ratio methods in the more recent accident years. Reserves are tested separately for claims made classes and classes written on occurrence policy forms. Further segmentations are made in a manner believed to provide the most appropriate balance between credibility and homogeneity of the data. Frequency/severity methods are used in pricing and profitability analyses for some classes of professional liability; however, for loss reserve testing, the need to enhance credibility generally results in classes that are not sufficiently homogenous to utilize frequency/severity methods.

Aviation: AIG generally uses a combination of loss development methods and expected loss ratio methods for aviation exposures. Aviation claims are not very long-tail in nature; however, they are driven by claim severity. Thus a combination of both development and expected loss ratio methods are used for all but the latest accident year to determine the loss reserves. Expected loss ratio

methods are used to determine the loss reserves for the latest accident year. Frequency/severity methods are not employed due to the high severity nature of the claims and different mix of claims from year to year.

Personal Auto (Domestic): AIG generally utilizes frequency/severity methods and loss development methods for domestic personal auto classes. For many classes of business, greater reliance is placed on frequency/severity methods as claim counts emerge quickly for personal auto and allow for more immediate analysis of resulting loss trends and comparisons to industry and other diagnostic metrics.

Fidelity/Surety: AIG generally uses loss development methods for fidelity exposures for all but the latest accident year. Expected loss ratio methods are also given weight for the more recent accident years, and for the latest accident year they may be given 100 percent weight. For surety exposures, AIG generally uses the same method as for short-tail classes.

Mortgage Guaranty: AIG tests mortgage guaranty reserves using loss development methods, supplemented by an internal claim analysis by actuaries and staff who specialize in the mortgage guaranty business. The claim analysis projects ultimate losses for claims within each of several categories of default based on actual historical experience and is essentially a frequency/severity analysis for each category of default.

Short-Tail Classes: AIG generally uses either loss development methods or IBNR factor methods to set reserves for short-tail classes such as property coverages. Where a factor is used, it generally represents a percent of earned premium or other exposure measure. The factor is determined based on prior accident year experience. For example, the IBNR for a class of property coverage might be expected to approximate 20 percent of the latest year's earned premium. The factor is continually reevaluated in light of emerging claim experience as well as rate changes or other factors that could affect the adequacy of the IBNR factor being employed.

International: Business written by AIG's Foreign General Insurance sub-segment includes both long-tail and short-tail classes of business. For long-tail classes of business, the actuarial methods utilized would be analogous to those described above. However, the majority of business written by Foreign General Insurance is short-tail, high frequency and low severity in nature. For this business, loss development methods are generally employed to test the loss reserves. AIG maintains a data base of detailed historical premium and loss transactions in original currency for business written by Foreign General Insurance, thereby allowing AIG actuaries to determine the current reserves without any distortion from changes in exchange rates over time. In testing the Foreign General Insurance reserves, AIG's actuaries segment the data by region, country or class of business as appropriate to determine the optimal balance between homogeneity and credibility.

Loss Adjustment Expenses: AIG determines reserves for legal defense and cost containment loss adjustment expenses for each

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

class of business by one or more actuarial methods. The methods generally include development methods analogous to those described for loss development methods. The developments could be based on either the paid loss adjustment expenses or the ratio of paid loss adjustment expenses to paid losses, or both. Other methods include the utilization of expected ultimate ratios of paid loss expense to paid losses, based on actual experience from prior accident years or from similar classes of business. AIG generally determines reserves for adjuster loss adjustment expenses based on calendar year ratios of adjuster expenses paid to losses paid for the particular class of business. AIG generally determines reserves for other unallocated loss adjustment expenses based on the ratio of the calendar year expenses paid to overall losses paid. This determination is generally done for all classes of business combined, and reflects costs of home office claim overhead as a percent of losses paid.

Catastrophes: Special analyses are conducted by AIG in response to major catastrophes in order to estimate AIG's gross and net loss and loss expense liability from the event. These analyses may include a combination of approaches, including modeling estimates, ground up claim analysis, loss evaluation reports from on-site field adjusters, and market share estimates.

AIG's loss reserve analyses do not calculate a range of loss reserve estimates. Because a large portion of the loss reserves from AIG's General Insurance business relates to longer-tail casualty classes of business driven by severity rather than frequency of claims, such as excess casualty and D&O, developing a range around loss reserve estimates would not be meaningful. Using the reserving methodologies described above, AIG's actuaries determine their best estimate of the required reserve and advise Management of that amount. AIG then adjusts its aggregate carried reserves as necessary so that the actual carried reserves as of December 31 reflect this best estimate.

Volatility of Reserve Estimates and Sensitivity Analyses

As described above, AIG uses numerous assumptions in determining its best estimate of reserves for each class of business. The importance of any specific assumption can vary by both class of business and accident year. If actual experience differs from key assumptions used in establishing reserves, there is potential for significant variation in the development of loss reserves, particularly for long-tail casualty classes of business such as excess casualty, D&O or workers compensation. Set forth below is a sensitivity analysis that estimates the effect on the loss reserve position of using alternative loss trend or loss development factor assumptions rather than those actually used in determining AIG's best estimates in the year-end loss reserve analyses for 2006. The analysis addresses each major class of business for which a material deviation to AIG's overall reserve position is believed reasonably possible, and uses what AIG believes is a reasonably likely range of potential deviation for each class. There can be no assurance, however, that actual reserve development will be consistent with either the original or the adjusted loss trend or loss development factor assumptions, or that other assumptions

made in the reserving process will not materially affect reserve development for a particular class of business.

Excess Casualty: For the excess casualty class of business, the assumed loss cost trend was approximately six percent. After evaluating the historical loss cost trends from prior accident years since the early 1990s, in AIG's judgment, it is reasonably likely that actual loss cost trends applicable to the year-end 2006 loss reserve review for excess casualty will range from negative four percent to positive 16 percent, or approximately ten percent lower or higher than the assumption actually utilized in the year-end 2006 reserve review. A ten percent change in the assumed loss cost trend for excess casualty would cause approximately a \$1.7 billion increase or a \$1.2 billion decrease in the net loss and loss expense reserve for this class of business. It should be emphasized that the ten percent deviations are not considered the highest possible deviations that might be expected, but rather what is considered by AIG to reflect a reasonably likely range of potential deviation. Actual loss cost trends in the early 1990s were negative for several years, including amounts below the negative four percent cited above, whereas actual loss cost trends in the late 1990s ran well into the double digits for several years, including amounts greater than the 16 percent cited above. Thus, there can be no assurance that loss trends will not deviate by more than ten percent. The loss cost trend assumption is critical for the excess casualty class of business due the long-tail nature of the claims and therefore is applied across many accident years.

For the excess casualty class of business, the assumed loss development factors are also a key assumption. After evaluating the historical loss development factors from prior accident years since the early 1990s, in AIG's judgment, it is reasonably likely that actual loss development factors will range from approximately 3.25 percent below those actually utilized in the year-end 2006 reserve review to approximately ten percent above those factors actually utilized. If the loss development factor assumptions were changed by 3.25 percent and ten percent, respectively, the net loss reserves for the excess casualty class would decrease by approximately \$450 million under the lower assumptions or increase by approximately \$1.25 billion under the higher assumptions. Generally, actual historical loss development factors are used to project future loss development. However there can be no assurance that future loss development patterns will be the same as in the past, or that they will not deviate by more than the amounts illustrated above. Moreover, as excess casualty is a long-tail class of business, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for the reserves with respect to a number of accident years to be significantly affected by changes in the loss cost trends or loss development factors that were initially relied upon in setting the reserves. These changes in loss trends or loss development factors could be attributable to changes in inflation or in the judicial environment, or in other social or economic conditions affecting claims. Thus, there is the potential for

variations greater than the amounts cited above, either positively or negatively.

D&O and Related Management Liability Classes of Business: For D&O and related management liability classes of business, the assumed loss cost trend was approximately four percent. After evaluating the historical loss cost trends from prior accident years since the early 1990s, in AIG's judgment, it is reasonably likely that actual loss cost trends applicable to the year-end 2006 loss reserve review for these classes will range from negative 11 percent to positive 19 percent, or approximately 15 percent lower or higher than the assumption actually utilized in the year-end 2006 reserve review. A 15 percent change in the assumed loss cost trend for these classes would cause approximately a \$625 million increase or a \$550 million decrease in the net loss and loss expense reserves for these classes of business. It should be emphasized that the 15 percent deviations are not considered the highest possible deviations that might be expected, but rather what is considered by AIG to reflect a reasonably likely range of potential deviation. Actual loss cost trends for these classes in the early 1990s were negative for several years, including amounts below the negative 11 percent cited above, whereas actual loss cost trends in the late 1990s ran at nearly 50 percent per year for several years, vastly exceeding the 19 percent figure cited above. Because the D&O class of business has exhibited highly volatile loss trends from one accident year to the next, there is the possibility of an exceptionally high deviation.

For D&O and related management liability classes of business, the assumed loss development factors are also an important assumption but less critical than for excess casualty. Because these classes are written on a claims made basis, the loss reporting and development tail is much shorter than for excess casualty. However, the high severity nature of the claims does create the potential for significant deviations in loss development patterns from one year to the next. After evaluating the historical loss development factors for these classes of business for accident years since the early 1990s, in AIG's judgment, it is reasonably likely that actual loss development factors will range approximately five percent lower or higher than those factors actually utilized in the year-end 2006 loss reserve review for these classes. If the loss development factor assumptions were changed by five percent, the net loss reserves for these classes would be estimated to increase or decrease by approximately \$200 million. As noted above for excess casualty, actual historical loss development factors are generally used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past, or that they will not deviate by more than the five percent.

Excess Workers Compensation: For excess workers compensation business, loss costs were trended at six percent per annum. After reviewing actual industry loss trends for the past ten years, in AIG's judgment, it is reasonably likely that actual loss cost trends applicable to the year-end 2006 loss reserve review for excess workers compensation will range five percent lower or higher than this estimated loss trend. A five percent change in the assumed

loss cost trend would cause approximately a \$350 million increase or a \$225 million decrease in the net loss reserves for this business. It should be emphasized that the actual loss cost trend could vary significantly from this assumption, and there can be no assurance that actual loss costs will not deviate, perhaps materially, by greater than five percent.

For excess workers compensation business, the assumed loss development factors are a critical assumption. Excess workers compensation is an extremely long-tail class of business, with a much greater than normal uncertainty as to the appropriate loss development factors for the tail of the loss development. After evaluating the historical loss development factors for prior accident years since the 1980s, in AIG's judgment, it is reasonably likely that actual loss development factors will range approximately 15 percent lower or higher than those factors actually utilized in the year-end 2006 loss reserve review for excess workers compensation. If the loss development factor assumptions were changed by 15 percent, the net loss reserves for excess workers compensation would increase or decrease by approximately \$600 million. Given the exceptionally long-tail for this class of business, there is the potential for actual deviations in the loss development tail to exceed the deviations assumed, perhaps materially.

Primary Workers Compensation: For primary workers compensation, the loss cost trend assumption is not believed to be material with respect to AIG's loss reserves. This is primarily because AIG's actuaries are generally able to use loss development projections for all but the most recent accident year's reserves, so there is limited need to rely on loss cost trend assumptions for primary workers compensation business.

However, for primary workers compensation business the loss development factor assumptions are important. Generally, AIG's actual historical workers compensation loss development factors would be expected to provide a reasonably accurate predictor of future loss development. However, workers compensation is a long-tail class of business, and AIG's business reflects a very significant volume of losses particularly in recent accident years due to growth of the business. After evaluating the actual historical loss developments since the 1980s for this business, in AIG's judgment, it is reasonably likely that actual loss development factors will fall within the range of approximately 2.75 percent below to 7.5 percent above those actually utilized in the year-end 2006 loss reserve review. If the loss development factor assumptions were changed by 2.75 percent and 7.5 percent, respectively, the net loss reserves for workers compensation would decrease or increase by approximately \$525 million and \$1.5 billion, respectively. It should be noted that loss emergence in 2006 for this class was higher than historical averages, resulting in an increase in loss reserves for prior accident years. However, it is too soon to ascertain if this increased emergence represents a new trend in the pattern of loss development. For this class of business, there can be no assurance that actual deviations from the expected loss development factors will not exceed the deviations assumed, perhaps materially.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Other Casualty Classes of Business: For casualty business other than the classes discussed above, there is generally some potential for deviation in both the loss cost trend and loss development factor assumptions. However, the effect of such deviations is expected to be less material when compared to the effect on the classes cited above.

Asbestos and Environmental Reserves

The estimation of loss reserves relating to asbestos and environmental claims on insurance policies written many years ago is subject to greater uncertainty than other types of claims due to inconsistent court decisions as well as judicial interpretations and legislative actions that in some cases have tended to broaden coverage beyond the original intent of such policies and in others have expanded theories of liability. The insurance industry as a whole is engaged in extensive litigation over these coverage and liability issues and is thus confronted with a continuing uncertainty in its efforts to quantify these exposures.

AIG continues to receive claims asserting injuries and damages from toxic waste, hazardous substances, and other environmental pollutants and alleged claims to cover the cleanup costs of hazardous waste dump sites, referred to collectively as environmental claims, and indemnity claims asserting injuries from asbestos.

The vast majority of these asbestos and environmental claims emanate from policies written in 1984 and prior years. Commencing in 1985, standard policies contained an absolute exclusion for pollution-related damage and an absolute asbestos exclusion was also implemented. The current environmental policies that AIG underwrites on a claims-made basis have been excluded from the analysis herein.

The majority of AIG's exposures for asbestos and environmental claims are excess casualty coverages, not primary coverages. Thus, the litigation costs are treated in the same manner as indemnity amounts. That is, litigation expenses are included within the limits of the liability AIG incurs. Individual significant claim liabilities, where future litigation costs are reasonably determinable, are established on a case-by-case basis.

Estimation of asbestos and environmental claims loss reserves is a subjective process and reserves for asbestos and environmental claims cannot be estimated using conventional reserving techniques such as those that rely on historical accident year loss development factors. The methods used to determine asbestos and environmental loss estimates and to establish the resulting reserves are continually reviewed and updated by management.

Significant factors which affect the trends that influence the asbestos and environmental claims estimation process are the inconsistent court resolutions and judicial interpretations which broaden the intent of the policies and scope of coverage. The current case law can be characterized as still evolving, and there is little likelihood that any firm direction will develop in the near future. Additionally, the exposures for cleanup costs of hazardous waste dump sites involve issues such as allocation of responsibility among potentially responsible parties and the government's refusal to release parties.

Due to this uncertainty, it is not possible to determine the future development of asbestos and environmental claims with the same degree of reliability as with other types of claims. Such future development will be affected by the extent to which courts continue to expand the intent of the policies and the scope of the coverage, as they have in the past, as well as by the changes in Superfund and waste dump site coverage and liability issues. If the asbestos and environmental reserves develop deficiently, such deficiency would have an adverse effect on AIG's future results of operations.

With respect to known asbestos and environmental claims, AIG established over a decade ago specialized toxic tort and environmental claims units, which investigate and adjust all such asbestos and environmental claims. These units evaluate these asbestos and environmental claims utilizing a claim-by-claim approach that involves a detailed review of individual policy terms and exposures. Because each policyholder presents different liability and coverage issues, AIG generally evaluates exposure on a policy-by-policy basis, considering a variety of factors such as known facts, current law, jurisdiction, policy language and other factors that are unique to each policy. Quantitative techniques have to be supplemented by subjective considerations, including management judgment. Each claim is reviewed at least semi-annually utilizing the aforementioned approach and adjusted as necessary to reflect the current information.

In both the specialized and dedicated asbestos and environmental claims units, AIG actively manages and pursues early resolution with respect to these claims in an attempt to mitigate its exposure to the unpredictable development of these claims. AIG attempts to mitigate its known long-tail environmental exposures by utilizing a combination of proactive claim-resolution techniques, including policy buybacks, complete environmental releases, compromise settlements, and, where indicated, litigation.

With respect to asbestos claims handling, AIG's specialized claims staff operates to mitigate losses through proactive handling, supervision and resolution of asbestos cases. Thus, while AIG has resolved all claims with respect to miners and major manufacturers (Tier One), its claims staff continues to operate under the same proactive philosophy to resolve claims involving accounts with products containing asbestos (Tier Two), products containing small amounts of asbestos, companies in the distribution process, and parties with remote, ill-defined involvement in asbestos (Tiers Three and Four). Through its commitment to appropriate staffing, training, and management oversight of asbestos cases, AIG mitigates to the extent possible its exposure to these claims.

To determine the appropriate loss reserve as of December 31, 2006 for its asbestos and environmental exposures, AIG performed a series of top-down and ground-up reserve analyses. In order to ensure it had the most comprehensive analysis possible, AIG engaged a third-party actuary to assist in a review of these exposures, including ground-up estimates for both asbestos reserves and environmental reserves consistent with the 2005 review. Prior to 2005, AIG's reserve analyses for asbestos and environmental exposures was focused around a report year projection of aggregate losses for both asbestos and environmental reserves. Additional tests such as market share analyses were also performed. Ground-up analyses take into account policy-

holder-specific and claim-specific information that has been gathered over many years from a variety of sources. Ground-up studies can thus more accurately assess the exposure to AIG's layers of coverage for each policyholder, and hence for all policyholders in the aggregate, provided a sufficient sample of the policyholders can be modeled in this manner.

In order to ensure its ground-up analyses were comprehensive, AIG staff produced in the 2006 analyses the information required at policy and claim level detail for over 1,000 asbestos defendants and nearly 1,000 environmental defendants. This represented over 95 percent of all accounts for which AIG had received any claim notice of any amount pertaining to asbestos or environmental exposure. AIG did not set any minimum thresholds, such as amount of case reserve outstanding, or paid losses to date, that would have served to reduce the sample size and hence the comprehensiveness of the ground-up analysis. The results of the ground-up analysis for each significant account were examined by AIG's claims staff for reasonableness, for consistency with policy coverage terms, and any claim settlement terms applicable. Adjustments were incorporated accordingly. The results from the universe of modeled accounts, which as noted above reflects the vast majority of AIG's known exposures, were then utilized to estimate the ultimate losses from accounts or exposures that could not be modeled and to determine the appropriate provision for all unreported claims.

AIG conducted a comprehensive analysis of reinsurance recoverability to establish the appropriate asbestos and environmental reserve net of reinsurance. AIG determined the amount of reinsurance that would be ceded to insolvent reinsurers or to commuted reinsurance contracts for both reported claims and for IBNR. These amounts were then deducted from the indicated amount of reinsurance recoverable. The year-end 2006 analysis reflected an update to the comprehensive analysis of reinsurance recoverability that was first completed in 2005. All asbestos accounts for which there was a significant change in estimated losses in the 2006 review were analyzed to determine the appropriate reserve net of reinsurance.

AIG also completed a top-down report year projection of its indicated asbestos and environmental loss reserves. These projections consist of a series of tests performed separately for asbestos and for environmental exposures.

For asbestos, these tests project the expected losses to be reported over the next twenty years, i.e., from 2007 through 2026, based on the actual losses reported through 2006 and the expected future loss emergence for these claims. Three scenarios were tested, with a series of assumptions ranging from more optimistic to more conservative. In the first scenario, all carried asbestos case reserves are assumed to be within ten percent of their ultimate settlement value. The second scenario relies on an actuarial projection of report year development for asbestos claims reported from 1993 to the present to estimate case reserve adequacy as of year-end 2006. The third scenario relies on an actuarial projection of report year claims for asbestos but reflects claims reported from 1989 to the present to estimate case reserve adequacy as of year-end 2006. Based on the results of the prior report years for each of the three scenarios described above, the report year approach then projects forward to the year 2026 the expected future report year losses, based on AIG's estimate of reasonable loss trend assumptions. These calcula-

tions are performed on losses gross of reinsurance. The IBNR (including a provision for development of reported claims) on a net basis is based on applying a factor reflecting the expected ratio of net losses to gross losses for future loss emergence.

For environmental claims, an analogous series of frequency/severity tests are produced. Environmental claims from future report years, (i.e., IBNR) are projected out ten years, i.e., through the year 2016.

At year-end 2006, AIG considered a number of factors and recent experience in addition to the results of the respective top-down and ground-up analyses performed for asbestos and environmental reserves. AIG considered the significant uncertainty that remains as to AIG's ultimate liability relating to asbestos and environmental claims. This uncertainty is due to several factors including:

- The long latency period between asbestos exposure and disease manifestation and the resulting potential for involvement of multiple policy periods for individual claims;
- The increase in the volume of claims by currently unimpaired plaintiffs;
- Claims filed under the non-aggregate premises or operations section of general liability policies;
- The number of insureds seeking bankruptcy protection and the effect of prepackaged bankruptcies;
- Diverging legal interpretations; and
- With respect to environmental claims, the difficulty in estimating the allocation of remediation cost among various parties.

After carefully considering the results of the ground-up analysis, which AIG updates on an annual basis, as well as all of the above factors, including the recent report year experience, AIG determined its best estimate was to recognize an increase of \$256 million in its carried net asbestos reserves, and a decrease of \$58 million in its carried net environmental reserves at December 31, 2006. The corresponding changes in gross reserves were an increase of approximately \$570 million for asbestos and a decrease of approximately \$230 million for environmental, respectively. A minor amount of additional incurred loss emergence pertaining to asbestos was reflected in 2006, primarily attributable to the general reinsurance operations of Transatlantic. The majority of the increase in asbestos reserves resulting from the 2006 review is attributable to higher than expected emergence of claims pertaining to new asbestos policy exposures. A significant portion of this increase pertains to higher layers of excess coverage for certain major asbestos defendants on business written by DBG. Approximately \$80 million of the overall \$256 million net asbestos reserve increase is attributable to business written by Foreign General, approximately \$30 million of which is in turn ceded to DBG. In 2006, Foreign General enhanced its capability to identify asbestos exposures, resulting in the identification of additional asbestos defendants in 2006, as well as higher layers of exposure for certain existing defendants. As described above, the ground up analysis as of 2006 now models over 1,000 asbestos defendants and over 95 percent of all known reported asbestos claims.

The decrease in environmental reserves resulting from the 2006 review is primarily attributable to favorable loss trends in recent report years. These favorable trends resulted in a reduced expectation of unreported claims, i.e., IBNR, for future report years.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

A summary of reserve activity, including estimates for applicable IBNR, relating to asbestos and environmental claims separately and combined at December 31, 2006, 2005 and 2004 appears in the table below. The vast majority of such claims arise from policies written in 1984 and prior years. The current environmental policies that AIG underwrites on a claims-made basis have been excluded from the table below.

(in millions)	2006		2005		2004	
	Gross	Net	Gross	Net	Gross	Net
Asbestos:						
Reserve for losses and loss expenses at beginning of year	\$ 4,441	\$ 1,840	\$ 2,559	\$ 1,060	\$ 1,235	\$ 386
Losses and loss expenses incurred ^(a)	571	267	2,207 ^(b)	903 ^(b)	1,595 ^(b)	772 ^(b)
Losses and loss expenses paid ^(a)	(548)	(218)	(325)	(123)	(271)	(98)
Reserve for losses and loss expenses at end of year	\$ 4,464	\$ 1,889	\$ 4,441	\$ 1,840	\$ 2,559	\$ 1,060
Environmental:						
Reserve for losses and loss expenses at beginning of year	\$ 926	\$ 410	\$ 974	\$ 451	\$ 789	\$ 283
Losses and loss expenses incurred ^(a)	(232)	(59)	47 ^(c)	27 ^(c)	314 ^(c)	234 ^(c)
Losses and loss expenses paid ^(a)	(106)	(61)	(95)	(68)	(129)	(66)
Reserve for losses and loss expenses at end of year	\$ 588	\$ 290	\$ 926	\$ 410	\$ 974	\$ 451
Combined:						
Reserve for losses and loss expenses at beginning of year	\$ 5,367	\$ 2,250	\$ 3,533	\$ 1,511	\$ 2,024	\$ 669
Losses and loss expenses incurred ^(a)	339	208	2,254 ^(d)	930 ^(d)	1,909 ^(d)	1,006 ^(d)
Losses and loss expenses paid ^(a)	(654)	(279)	(420)	(191)	(400)	(164)
Reserve for losses and loss expenses at end of year	\$ 5,052	\$ 2,179	\$ 5,367	\$ 2,250	\$ 3,533	\$ 1,511

(a) All amounts pertain to policies underwritten in prior years, primarily to policies issued in 1984 and prior.

(b) Includes increases to gross losses and loss expense reserves of \$2.0 billion and \$1.2 billion in the fourth quarter of 2005 and 2004, respectively, and increases to net losses and loss expense reserves of \$843 million and \$650 million for the fourth quarter of 2005 and 2004, respectively.

(c) Includes increases to gross losses and loss expense reserves of \$56 million and \$250 million in the fourth quarter of 2005 and 2004, respectively, and increases to net losses and loss expense reserves of \$30 million and \$200 million for the fourth quarter of 2005 and 2004, respectively.

(d) Includes increases to gross losses and loss expense reserves of \$2.0 billion and \$1.5 billion in the fourth quarter of 2005 and 2004, respectively, and increases to net losses and loss expense reserves of \$873 million and \$850 million for the fourth quarter of 2005 and 2004, respectively.

As indicated in the table above, asbestos loss payments increased significantly in 2006 compared to the prior years, primarily as a result of payments pertaining to settlements that had been negotiated in earlier periods.

The gross and net IBNR included in the reserve for losses and loss expenses, relating to asbestos and environmental claims separately and combined, at December 31, 2006, 2005 and 2004 were estimated as follows:

(in millions)	2006		2005		2004	
	Gross	Net	Gross	Net	Gross	Net
Asbestos	\$3,212	\$1,469	\$3,401	\$1,465	\$2,033	\$ 876
Environmental	340	173	586	266	606	284
Combined	\$3,552	\$1,642	\$3,987	\$1,731	\$2,639	\$1,160

A summary of asbestos and environmental claims count activity for the years ended December 31, 2006, 2005 and 2004 was as follows:

	2006			2005			2004		
	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined
Claims at beginning of year	7,293	9,873	17,166	7,575	8,216	15,791	7,474	8,852	16,326
Claims during year:									
Opened	643	1,383	2,026	854	5,253*	6,107	909	2,592	3,501
Settled	(150)	(155)	(305)	(67)	(219)	(286)	(100)	(279)	(379)
Dismissed or otherwise resolved	(908)	(1,659)	(2,567)	(1,069)	(3,377)	(4,446)	(708)	(2,949)	(3,657)
Claims at end of year	6,878	9,442	16,320	7,293	9,873	17,166	7,575	8,216	15,791

* The opened claims count increased substantially during 2005 compared to 2004 because a court ruling led AIG to report separate opened claims for previously pending cases relating to alleged MTBE exposures that AIG previously had counted in the aggregate as only a single claim on the assumption that the cases would be consolidated into a single federal court proceeding.

Survival Ratios — Asbestos and Environmental

The following table presents AIG's survival ratios for asbestos and environmental claims for year-end 2006, 2005 and 2004. The survival ratio is derived by dividing the year end carried loss reserve by the average payments for the three most recent calendar years for these claims. Therefore, the survival ratio is a simplistic measure estimating the number of years it would be before the current ending loss reserves for these claims would be paid off using recent year average payments. The December 31, 2006 survival ratio is lower than the ratio at December 31, 2005 because the more recent periods included in the rolling average reflect higher claims payments. Many factors, such as aggressive settlement procedures, mix of business and level of coverage provided, have a significant effect on the amount of asbestos and environmental reserves and payments and the resultant survival ratio. Thus, caution should be exercised in attempting to determine reserve adequacy for these claims based simply on this survival ratio.

AIG's survival ratios for asbestos and environmental claims, separately and combined were based upon a three-year average payment. These ratios for the years ended December 31, 2006, 2005 and 2004 were as follows:

	Gross	Net
2006		
Survival ratios:		
Asbestos	11.7	12.9
Environmental	5.3	4.5
Combined	10.3	10.3
2005		
Survival ratios:		
Asbestos	15.9	19.8
Environmental	6.9	6.2
Combined	13.0	14.2
2004		
Survival ratios:		
Asbestos	10.7	13.5
Environmental	6.5	6.8
Combined	9.1	10.5

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad.

Domestically, AIG's Life Insurance & Retirement Services operations offer a broad range of protection products, such as life insurance and group life and health products, including disability income products and payout annuities, which include single premium immediate annuities, structured settlements and terminal funding annuities. Home service operations include an array of life insurance, accident and health and annuity products sold primarily through career agents. In addition, home service includes a small block of runoff property and casualty coverage. Retirement services include group retirement products, individual fixed and variable annuities sold through banks, broker-dealers and exclusive sales representatives, and annuity runoff operations, which include previously acquired "closed blocks" and other fixed and variable annuities largely sold through distribution relationships that have been discontinued.

Overseas, AIG's Life Insurance & Retirement Services operations include insurance and investment-oriented products such as whole and term life, investment linked, universal life and endowments, personal accident and health products, group products including pension, life and health, and fixed and variable annuities.

AIG's Life Insurance & Retirement Services subsidiaries report their operations through the following major internal reporting units and business units:

Foreign Life Insurance & Retirement Services

Japan and Other*

- ALICO
- AIG Star Life
- AIG Edison Life

Asia

- AIA
- Nan Shan
- AIRCO
- Philamlife

Domestic Life Insurance

- AIG American General
- USLIFE
- AGLA

Domestic Retirement Services

- VALIC
- AIG Annuity
- AIG SunAmerica

* Japan and Other consists of all operations in Japan and the operations of ALICO and its subsidiaries worldwide.

Total	\$28,088	\$15,269	\$ 45	\$43,402	\$ 7,925

The following table presents the Insurance In-force for Life Insurance & Retirement Services for the years ended December 31, 2006, 2005 and 2004:

<i>(in millions)</i>	Years Ended December 31,		
	2006	2005	2004
Foreign	\$1,162,699	\$1,027,682	\$1,085,843
Domestic*	907,901	825,151	772,251
Total	\$2,070,600	\$1,852,833	\$1,858,094

* Domestic insurance in-force for 2005 includes the effect of the non-renewal of a single large group life case of \$36 billion.

2006 and 2005 Comparison

Life Insurance & Retirement Service revenues increased \$2.8 billion in 2006, to \$50.2 billion. The increased revenues reflect growth in the underlying global Life Insurance & Retirement Services businesses. Revenues include the positive effect of out of period adjustments related to the accounting for certain interests in unit investment trusts totaling \$240 million in 2006. Operating income grew by \$1.1 billion from 2005, to \$10.0 billion, reflecting higher revenues and out of period reductions of policy benefits expense of \$163 million resulting from corrections of par policyholder dividend reserves and allocations between participating and non-participating accounts, both of which were related to remediation efforts. Net investment income increased \$1.3 billion, reflecting growth in the underlying global business and the related increased level of

invested assets. Realized capital gains increased \$246 million in 2006 compared to 2005. In addition, operating income in 2006 includes charges of \$125 million for the adverse Superior National arbitration ruling (see Note 12(c) of Notes to Consolidated Financial Statements) and \$66 million related to the exiting of the domestic financial institutions credit life business.

2005 and 2004 Comparison

Life Insurance & Retirement Services revenues, including realized capital losses of \$158 million, grew \$4.0 billion to \$47.4 billion. The increase in revenues reflects growth in the underlying global Life Insurance & Retirement Services businesses. Operating income grew \$979 million in 2005, reflecting growth in both domestic and overseas operations. In 2005, the Domestic Life Insurance reporting unit performed well in its life insurance and payout annuities businesses, but results were offset by restructuring efforts in both home services and group life/health. The Domestic Retirement Services reporting unit faced a challenging environment in 2005, resulting in lower deposits and increased surrender rates. The Foreign Life Insurance & Retirement Services reporting unit had improved operating income in 2005 helped by higher net investment income, lower acquisition and operating expenses in life insurance and strong growth in annuities, partially offset by lower realized capital gains and higher incurred policy benefit costs.

(a) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts. For 2006, the effect was an increase of \$32 million in both net investment income and operating income.

(b) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts. For 2006, the effect was an increase of \$208 million and \$137 million in net investment income and operating income, respectively. Operating income also includes an out of period reduction in participating policyholder dividend reserves of \$163 million, primarily as a result of tax remediation adjustments.

(c) Revenues include approximately \$640 million of premiums from a single reinsurance transaction involving terminal funding business, which is offset by a similar increase of benefit reserves.

AIG transacts business in most major foreign currencies and therefore premiums reported in U.S. dollars vary by volume and from changes in foreign currency translation rates. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of the Foreign Life Insurance & Retirement Services GAAP premiums for the year ended December 31, 2006 and 2005:

	2006	2005
Growth in original currency*	6.4%	2.5%
Foreign exchange effect	(2.0)	2.5
Growth as reported in U.S. dollars	4.4%	5.0%

* Computed using a constant exchange rate for each period.

Japan and Other

2006 and 2005 Comparison

Total revenues for Japan and Other increased \$743 million in 2006, to \$16.0 billion, compared to 2005. Operating income grew \$773 million, due to growth in the underlying retirement services businesses and realized capital gains of \$406 million. The 2006 results for the reporting unit were negatively affected by the weakening of the Japanese Yen against the U.S. dollar during

2006. In addition, operating income was negatively affected by the continued runoff of the older, higher margin in-force business of AIG Star Life and AIG Edison Life.

Life insurance GAAP premiums declined in 2006 compared to 2005 primarily due to the effect of foreign exchange. Foreign exchange negatively affected GAAP premiums by approximately \$250 million, most notably as a result of the weakening in the Japanese Yen. Life insurance operating income grew \$445 million, primarily due to an increase of \$368 million of realized capital gains. Life insurance growth improved due to an increase in single premium life insurance sales in Japan as a result of further bank deregulation effective in December 2005. The expansion of the bank distribution platform for single premium life insurance products adds to the existing multiple distribution platforms in Japan, where AIG remains the leading foreign insurance provider.

Personal accident revenues grew \$258 million or 7 percent resulting in operating income growth of \$71 million or 7 percent. Personal accident operating income includes the effect of higher terminations of certain accident and health policies in Japan which increased expenses by \$54 million in 2006. The higher terminations are a result of a change in the Japanese tax regulations that reduced the tax deduction for premiums. AIG's Japanese operations have experienced lower sales and higher terminations of these contracts. DAC related to these accident

and health policies in force at December 31, 2006 totaled \$214 million. In response to the tax law change, AIG has introduced new products, both life and health, to meet the needs of clients in that market. AIG continues to believe that the effect of future policy terminations will not be material to AIG's consolidated financial condition or results of operations.

Revenues from group products increased in 2006 by \$320 million, to \$2.3 billion, resulting in an increase in operating income of \$81 million to \$272 million. Fixed annuity reserves continued to grow due to positive net flows, but demand for U.S. dollar fixed annuities has slowed due to a weaker Japanese Yen. The individual fixed annuity revenues grew \$302 million to \$2.3 billion resulting in an increase in operating income of \$163 million to \$553 million. Growth in variable annuity deposits has accelerated compared to 2005 due to new product offerings and stronger equity markets, resulting in higher fees and policy charges included in GAAP premiums. Variable annuity revenues declined in 2006 compared to 2005 due to lower policyholder trading gains which comprise the entirety of variable annuity net investment income. Policyholder trading gains are offset by an equal increase in policy benefits expense, as all investment returns for these variable annuities accrue to the benefit of the policyholder.

2005 and 2004 Comparison

In 2005, total revenues for the Japan and Other reporting unit grew \$3.1 billion to \$15.3 billion, including policyholder trading gains of \$1.3 billion. Operating income grew \$566 million to \$3.0 billion. Compared to 2004, results reported in U.S. dollars were negatively affected by foreign exchange, particularly the weakening of the Japanese Yen to the U.S. dollar. In addition, Japan and Other operating income was negatively affected by the runoff of older higher margin in-force business of AIG Star Life and AIG Edison Life. Life insurance operating income grew primarily due to lower realized capital losses and higher GAAP premiums. Personal accident operating income continued to report stable profit margins and grew \$119 million to \$1.05 billion. Group operating income grew to \$191 million on strong growth in ALICO operations outside of Japan. Individual fixed annuities operating income grew to \$390 million, primarily from strong growth of net flows that increased underlying reserves in Japan. Individual fixed annuity operating income for 2005 included a charge of \$47 million related to the unwinding of certain businesses in Chile that were sold in 2006. Individual variable annuities operating income grew to \$47 million on higher average reserves. Net investment income for individual variable annuities grew to \$767 million in 2005 and represents policyholder trading gains (losses) that are offset by an equal amount in incurred policy losses and benefits.

Asia

2006 and 2005 Comparison

Revenues for Asia grew \$1.9 billion in 2006 to \$17.9 billion. Operating income grew \$774 million, to \$3.1 billion, includ-

ing realized capital gains of \$301 million. Revenues and operating income in 2006 include \$208 million and \$137 million, respectively, from out of period adjustments related to certain investments in unit trusts. GAAP premiums grew 4 percent in 2006 compared to 2005. The GAAP premium growth rate was negatively affected by the continuing trend towards investment-oriented products in Asia as only a portion of policy charges collected from the customers are reported as GAAP premiums. AIG's Life Insurance operations in Asia have responded to this trend by offering a wide array of investment linked products, with multiple fund choices but with minimal investment guarantees.

Operating income benefited in 2006 from an out of period reduction in participating policyholder dividend reserves of \$163 million, primarily as a result of tax remediation adjustments and a correction to expense allocations between participating and non-participating accounts. Certain participating policyholder dividend reserves are determined on an after tax basis and as a result any change in the local tax provision will have a partially offsetting, but not equal, effect on participating policyholder dividend reserves. The amount of the offsetting effect depends on the level of participation required by law or regulation in that specific country or by the participation level provided for in the underlying contracts. In 2005, operating income for Asia included a charge of \$137 million related to an increase in participating policyholder dividends as a result of the settlement of a tax dispute in Singapore. Life insurance revenues grew \$1.4 billion to \$15.4 billion in 2006, including realized capital gains of \$258 million and policyholder trading gains of \$552 million, helped by strong growth in investment linked products throughout Asia. Operating income grew \$609 million, including adjustments in 2006 and 2005 for participating policyholder dividend reserves mentioned above. Operating income includes the Life Insurance & Retirement Services segment's equal share of the results of AIG Credit Card Company (Taiwan), which amounted to a loss of \$47 million in 2006 compared to a gain of \$26 million in 2005. Personal accident revenues grew 28 percent to \$1.7 billion, reflecting increased focus on risk based accident and health products. The growth in revenues resulted in operating income of \$337 million for the year, an increase of 40 percent over 2005. Group products revenues increased \$72 million from 2005, to \$627 million, resulting in operating income growth of \$47 million to \$178 million.

2005 and 2004 Comparison

In 2005, revenues were essentially unchanged at \$16.0 billion on lower realized capital gains that declined \$372 million, due to lower gains on derivatives that did not qualify for hedge accounting. Operating income declined in 2005 by \$169 million due to the decrease in realized capital gains and an increase in liabilities for participating policyholder dividends of \$137 million as a result of the settlement of a tax dispute in Singapore. Life insurance GAAP premiums grew \$310 million to \$10.8 billion. Life insurance operating income did not grow in 2005 due to the effect of the additional par policy dividend reserves previously noted and

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

lower realized capital gains. Personal accident operating income declined primarily due to realized capital losses in 2005 compared to realized capital gains in 2004. Group products GAAP premiums dropped in 2005 compared to

2004. 2004 GAAP premiums included premiums of approximately \$640 million from a single reinsurance transaction involving terminal funding business, which is offset by a similar increase in benefit reserves.

Domestic Life Insurance Results

Domestic Life Insurance results, presented on a sub-product basis for 2006, 2005 and 2004 were as follows:

<i>(in millions)</i>	GAAP Premiums	Net Investment Income	Realized Capital Gains (Losses)	Total Revenues	Operating Income (Loss)

(a) Effective January 1, 2006, the broker-dealer operations of the Domestic Life Insurance companies are being reported and managed within the Asset Management segment. Included in GAAP premiums and Total Revenues were revenues of \$102 million and \$96 million, respectively, for 2005 and 2004.

(b) GAAP Premiums and Total Revenues include structured settlements, single premium immediate annuities and terminal funding annuities.

(c) Primarily represents runoff annuity business sold through discontinued distribution relationships.

The following table reflects periodic Domestic Life insurance sales by product for 2006, 2005 and 2004, respectively:

Domestic Life Insurance			
<i>(in millions)</i>	2006	2005	2004
Periodic Premium Sales By Product*:			
Universal life	\$334	\$271	\$201
Variable universal life	56	44	79
Term life	240	229	215
Whole life/other	13	10	13
Total	\$643	\$554	\$508

* Periodic premium represents premium from new business expected to be collected over a one-year period.

2006 and 2005 Comparison

GAAP premiums for Domestic Life Insurance were \$5.5 billion in 2006, a 2 percent increase compared to 2005. Overall, periodic life insurance sales grew by 16 percent, compared to 2005, reflecting increased growth from the independent distribution platform. During the second half of 2006, certain universal life products were re-priced and underwriting standards were tightened, which could affect future periodic life insurance sales. GAAP premiums from AGLA, AIG's home service business, declined slightly in 2006 as the reduction of premium in-force from normal lapses and maturities exceeded sales growth for the period. GAAP premiums for group life/health for 2006 declined over the prior year primarily due to restructuring efforts in certain product lines, including the financial institutions credit life business and the employer benefits business. The GAAP premium growth from payout annuities for 2006 reflects increased sales of single premium annuities and structured settlements when compared to 2005. At December 31, 2006, AIG effectively exited the financial institutions credit business through a third party indemnity reinsurance agreement. The transaction is expected to close in the first quarter of 2007, subject to normal closing requirements, including regulatory approval. GAAP premiums in 2006 related to this business were approximately \$100 million.

Domestic Life Insurance operating income of \$917 million declined by 39 percent in 2006 compared to 2005 due to several significant transactions, including a \$125 million charge resulting from the loss of the Superior National arbitration. For a further discussion of the Superior National arbitration see Note 12(c) of Notes to Consolidated Financial Statements. In addition, Domestic Life operating income was negatively affected by a \$55 million accrual related to other litigation and a \$66 million loss related to exiting the financial institutions credit business.

Life insurance operating income decreased by \$220 million or 25 percent for 2006 due to a \$45 million decrease in partnership income, \$30 million in litigation-related charges and realized capital losses that offset growth in the underlying business. Home service operating income was flat compared with 2005 due to increased net investment income from partnerships and lower acquisition costs and catastrophe losses, partially offset by a

DAC unlocking charge of \$11 million and higher realized capital losses. Group life/health operating income for 2006 was lower than 2005 primarily due to the \$125 million Superior National charge and the \$66 million loss associated with the exit from the financial institutions credit business. The group life/health lines operating income was also affected by a \$25 million charge for litigation reserves. Payout annuities operating income declined for 2006 due to lower calls and tenders on fixed maturity securities. In addition, various methodologies and assumptions were enhanced for payout annuity reserves, resulting in a \$24 million increase to the payout annuity reserves. Individual annuities — runoff operating income is down from 2005 due to the decline in the block of business and the related DAC unlocking charge of \$30 million to reflect lower in-force amounts.

2005 and 2004 Comparison

The Domestic Life Insurance operations in 2005 had continued growth in term and universal life sales with good performance from the independent distribution channels. GAAP premiums for life insurance grew 12 percent in 2005 reflecting consistently strong sales from the independent distribution platform. Payout annuities declined slightly due to the low interest rate environment and the competitive market conditions for structured settlement and single premiums individual annuity business. Home service GAAP premiums were essentially flat in this slow growth business. The group life/health GAAP premiums declined by \$116 million, or 10 percent, primarily due to the non-renewal of several accounts where pricing was unacceptable and loss experience was higher than anticipated.

Domestic Life Insurance operating income of \$1.5 billion increased 46 percent in 2005 resulting from increased realized capital gains, higher partnership income and growth in the underlying business compared to 2004. Life insurance operating income was up 43 percent in 2005 compared to 2004 due in part to growth in the underlying business, improved mortality results and higher realized capital gains, offset by higher losses from partnership investments in synthetic fuel production facilities. Home service operating income declined as a result of a reduction in premiums in-force and higher insurance and acquisitions expenses, combined with an increase in losses related to hurricanes. Group life/health operating income was affected by the non-renewal of cases where acceptable margins could not be achieved. Operating income in 2004 includes a \$178 million charge related to a workers compensation quota share reinsurance agreement with Superior National. In addition, in 2004, as part of the business review of group life/health, approximately \$68 million was incurred for reserve strengthening and allowances for receivables. Payout annuities operating income increased 3 percent as growth in the business base was offset by higher realized capital losses. Individual annuities runoff operating income increased in 2005 primarily as a result of lower operating expenses offset by higher realized capital losses when compared to 2004.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Domestic Retirement Services Results

Domestic Retirement Services results, presented on a sub-product basis for 2006, 2005 and 2004 were as follows:

<i>(in millions)</i>	GAAP Premiums	Net Investment Income	Realized Capital Gains (Losses)	Total Revenue	Operating Income
2006					
Group retirement products	\$ 386	\$2,279	\$(144)	\$2,521	\$1,017
Individual fixed annuities	122	3,581	(257)	3,446	1,036

* Primarily represents runoff annuity business sold through discontinued distribution relationships.

2006 and 2005 Comparison

Domestic Retirement Services total deposits decreased slightly for 2006 compared to 2005. The decrease in total deposits reflects lower fixed annuity sales that continued to face increased competition from bank deposit products and money market funds offering very competitive short-term rates in the flat yield curve environment. This was partially offset by substantially higher individual variable annuity sales and group mutual fund deposits. Individual variable annuity deposits grew 29 percent in 2006 from 2005, reflecting growth in products with living benefit guarantee features. Group retirement deposits grew 6 percent in 2006, reflecting 51 percent growth in group mutual fund sales partially offset by a 1 percent sales drop in annuity deposits. Over time, this will result in a gradual reduction in overall profit margins of this business driven by the growth in the lower-margin mutual fund products relative to the annuity products. Fixed annuity surrender rates increased in 2006 compared to 2005 due to products coming out of their surrender charge period and the increased competition from banks. Individual fixed annuity net flows for 2006 were negative \$2.7 billion compared to positive net flows of \$1.3 billion in 2005, reflecting both the lower deposits and higher surrenders, caused by the flat or inverted yield curve.

Total domestic retirement service operating income for 2006 of \$2.3 billion increased 7 percent from 2005. Group retirement products total revenues were flat in 2006 primarily due to improvements in partnership income and variable annuity fees being offset by increased capital losses. The flat revenues, coupled with higher amortization of deferred acquisition costs related to internal replacements of existing contracts into new contracts, resulted in a 4 percent decrease in group retirement

operating income. Total revenues for individual fixed annuities were up 7 percent in 2006 and operating income was up 21 percent primarily driven by higher partnership and yield enhancement income. Individual variable annuity total revenues were up 7 percent in 2006, primarily driven by higher variable annuity fees resulting from the increase in the equity markets. Offsetting somewhat the growth in total revenues was an increase in DAC amortization resulting from increased surrender activity in the first half of 2006, with operating income up 2 percent for the year. In 2006, the individual annuities runoff operating income increased \$15 million even though the underlying reserves decreased. The higher income in 2006 was primarily due to increased net spreads as a result of higher investment yields partially offset by increased realized capital losses and lower volumes due to the continued runoff of the business.

2005 and 2004 Comparison

The Domestic Retirement Services businesses faced a challenging environment in 2005, as deposits declined approximately 18 percent from 2004. The decrease in AIG's individual variable annuity product sales in 2005 was largely attributable to significant variable annuity sales declines at several of AIG's largest distribution firms due to lackluster equity markets, more intense industry competition with regard to living benefit product features and heightened compliance procedures over selling practices. AIG's introduction of more competitive guaranteed minimum withdrawal features was delayed until late in the fourth quarter of 2005 due to filing delays associated with the restatements. During 2005, the interest yield curve flattened and, as a result, competing bank products such as certificates of deposit and other

money market instruments with shorter durations than AIG's individual fixed annuity products became more attractive.

Total Domestic Retirement Services operating income for 2005 of \$2.2 billion increased 5 percent compared to 2004 operating income of \$2.1 billion. Total revenues for the group retirement products increased 5 percent in 2005 compared to 2004 while operating income increased 7 percent, primarily due to higher variable annuity fee income and lower realized capital losses. Individual fixed annuity total revenues were up 6 percent in 2005 primarily due to an increase in net investment income, partially offset by higher realized capital losses. Operating income for individual fixed annuities increased primarily due to the increase in net investment income from growth in average reserves and higher surrender charges, partially offset by the higher level of realized capital losses. Individual variable annuities total revenues were up 9 percent in 2005, primarily driven by higher variable annuity fees resulting from the increase in the equity markets in the fourth quarter of 2004 and an increase in realized capital gains. The 7 percent growth in individual variable annuities income was consistent with the overall growth in reserves. In 2005, the individual annuities runoff operating income increased \$22 million even though the underlying reserves decreased. The higher income in 2005 was due to lower interest crediting rates and lower DAC amortization due to lower surrenders.

Domestic Retirement Services Supplemental Data

The following table presents deposits for 2006, 2005 and 2004:

<i>(in millions)</i>	2006	2005	2004
Group retirement products:			
Annuities	\$ 5,464	\$ 5,532	\$ 5,555
Mutual funds	1,361	904	947
Individual fixed annuities	5,330	6,861	9,713
Individual variable annuities	4,266	3,319	4,126
Individual fixed annuities — runoff	56	67	77
Total	\$16,477	\$16,683	\$20,418

The following table presents the amount of reserves by surrender charge category as of December 31, 2006:

<i>(in millions)</i>	Group Retirement Products*	Individual Fixed Annuities	Individual Variable Annuities
Zero or no surrender charge	\$42,741	\$10,187	\$11,467
0% — 2%	6,921	4,503	4,869
Greater than 2% — 4%	4,573	6,422	4,830
Greater than 4%	2,842	28,109	9,836
Non-Surrenderable	877	3,464	91
Total	\$57,954	\$52,685	\$31,093

* Excludes mutual funds.

In 2006, surrender rates increased for individual fixed annuities, group retirement products and individual variable annuities. The increase in surrender rate for fixed annuities continues to be driven by the shape of the yield curve and general aging of the in-force block; however, less than 20 percent of the individual fixed annuity reserves as of December 31, 2006 were available to be surrendered without charge. Surrender rates for group retirement products increased only slightly as a result of successful retention efforts. In 2006, new products were introduced to retain assets and AIG has retained or attracted over \$1 billion in assets. Individual variable annuity surrender rates for 2006 primarily reflect higher shock-lapses that occur following expiration of the surrender charge period on certain 3-year and 7-year contracts, although the trend moderated during the year. Reflecting a widespread industry phenomenon, this lapse rate, much of which was anticipated when the products were issued, has recently been affected by investor demand to exchange existing policies for new-generation contracts with living benefits or lower fees. In addition, the high lapse rates are in part due to the surrenders within certain acquired blocks of business.

A further increase in the level of surrenders in any of these businesses or in the individual fixed annuities runoff block could accelerate the amortization of DAC and negatively affect fee income earned on assets under management.

The following table presents the net flows by line of business for 2006, 2005 and 2004:

<i>(in millions)</i>	Net Flows ^(a)		
	2006	2005	2004
Group retirement products ^(b)	\$ 467	\$ 628	\$ 1,706
Individual fixed annuities	(2,697)	1,288	5,936
Individual variable annuities	(114)	(336)	1,145
Individual fixed annuities — runoff	(1,009)	(818)	(714)
Total	\$(3,353)	\$ 762	\$ 8,073

(a) Net flows are defined as deposits received less benefits, surrenders, withdrawals and death benefits.

(b) Includes mutual funds.

The combination of lower deposits and higher surrenders in the individual fixed annuity and individual fixed annuity-runoff blocks, which include closed blocks of business from acquired companies or terminated distribution relationships, resulted in negative net flows for 2006. The continuation of the current interest rate and competitive environment could prolong this trend.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Life Insurance & Retirement Services Net Investment Income and Realized Capital Gains (Losses)

(a) Other net investment income includes real estate income, income on non-partnership invested assets, securities lending and Life Insurance & Retirement Services' equal share of the results of AIG Credit Card Company (Taiwan).

(b) Includes the effect of out of period adjustments relating to the accounting for certain interests in unit investment trusts. For 2006, the effect was an increase of \$240 million.

(c) Relates principally to assets held in various trading securities accounts that do not qualify for separate account treatment under SOP 03-1. These amounts are offset by an equal change included in incurred policy losses and benefits.

(d) Includes call and tender income.

The following table summarizes Domestic Life Insurance & Retirement Services partnership income (losses) by sub-product line for 2006, 2005 and 2004:

(in millions)	2006	2005	2004
Domestic Life — excluding Synfuels:			
Life insurance	\$ 67	\$ 136	\$ 43
Home service	13	(1)	8
Subtotal	80	135	51
Domestic Life — Synfuels:			
Life insurance	(73)	(97)	(74)
Home service	(34)	(46)	(47)
Subtotal	(107)	(143)	(121)
Total Domestic Life	(27)	(8)	(70)
Retirement Services:			
Group retirement products	178	89	95
Individual fixed annuities	247	135	147
Total Retirement Services	425	224	242
Total	\$ 398	\$ 216	\$ 172

2006 and 2005 Comparison

Net investment income increased 7 percent for 2006 compared to 2005 as income from fixed maturity and equity securities increased as levels of invested assets grew. Net investment income in 2006 also included out of period adjustments relating to the accounting for certain interests in unit investment trusts of \$240 million. Partially offsetting this growth were lower policyholder trading gains (losses) in 2006. Net Investment income for certain operations include investments in structured notes linked to emerging market sovereign debt that incorporates both interest rate risk and currency risk. In addition, period to period comparisons of investment income for some lines of business are affected by yield enhancement activity, particularly partnership income as shown in the above table. See also Insurance and Asset Management Invested Assets herein.

AIG generates income tax credits as a result of investing in synthetic fuel production (synfuels) related to the investment loss shown in the above table and records those benefits in its provision for income taxes. The amounts of those income tax credits were \$127 million, \$203 million and \$160 million for 2006, 2005 and 2004, respectively. For a further discussion of the effect of fluctuating domestic crude oil prices on synfuel tax credits, see Note 12(c) of Notes to Consolidated Financial Statements.

2005 and 2004 Comparison

The growth in net investment income in 2005 compared to 2004 reflects growth in general account reserves and surplus for both Foreign and Domestic Life Insurance & Retirement Services companies. Also, net investment income was positively affected by the compounding of previously earned and reinvested net investment income along with the addition of new cash flow from operations available for investment. The global flattening of the yield curve put additional pressure on yields and spreads, which was partially offset with income generated from other investment sources, including income from partnerships.

The following table summarizes realized capital gains (losses) by major category for 2006, 2005 and 2004:

<i>(in millions)</i>	2006	2005	2004
Domestic Life Insurance:			
Sales of fixed maturities	\$ (33)	\$ 65	\$ (4)
Sales of equity securities	17	18	7
Other:

* Net of allocations to participating policyholders of \$88 million, \$109 million and \$65 million for 2006, 2005 and 2004, respectively.

Realized capital gains (losses) include normal portfolio transactions as well as derivative gains (losses) for transactions that did not qualify for hedge accounting treatment under FAS 133, transactional foreign exchange gains and losses and other-than-temporary declines in the value of investments. Realized capital gains (losses) for derivatives in Foreign Life Insurance & Retirement Services are related primarily to hedging of fixed income instruments denominated in a currency other than the functional currency of the respective country to such functional currency. The related currency gain or loss of the available for sale fixed income instrument is deferred until the date of the sale.

Deferred Policy Acquisition Costs

DAC for Life Insurance & Retirement Services products arises from the deferral of those costs that vary with, and are directly related to, the acquisition of new or renewal business. Policy acquisition costs for life insurance products are generally deferred and amortized over the premium paying period of the policy. Policy acquisition costs that relate to universal life and investment-type products, including variable and fixed annuities (investment-oriented products), are deferred and amortized, with interest, as appropriate, in relation to the historical and future incidence of estimated gross profits to be realized over the estimated lives of the contracts. Total acquisition costs deferred increased \$310 million over 2005 and were generally in line with growth in new business. Total DAC amortization expense, excluding VOBA, grew \$432 million over 2005 with each year's amortization expense level at approximately 14 percent of the opening DAC balance. Amortization expense includes the effects of current period realized capital gains and losses for investment type products. With respect to investment-oriented products, AIG's policy is to adjust amortization assumptions for DAC when estimates of current or future gross profits to be realized from these contracts are revised. With respect to variable annuities sold domestically (representing the vast majority of AIG's variable annuity business), the assumption for the long-term annual net growth rate of the equity markets used in the determination of DAC amortization is approximately ten percent. A methodology referred to as "reversion to the mean" is used to maintain this long-term net growth rate assumption, while giving consideration to short-term variations in equity markets. Estimated gross profits include investment income and gains and losses less interest required on policyholder reserves, as well as other charges in the contract less actual mortality and expenses. Current experience and changes in the expected future gross profits are analyzed to determine the effect on the amortization of DAC. The projection of estimated gross profits requires significant management judgment. The assumptions with respect to the current and projected gross profits are reviewed and analyzed quarterly and are adjusted accordingly.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

The following table summarizes the major components of the changes in DAC and Value of Business Acquired (VOBA) for 2006 and 2005:

(in millions)	2006			2005		
	DAC	VOBA	Total	DAC	VOBA	Total
Domestic Life Insurance & Retirement Services:						
Balance at beginning of year ^(a)	\$ 9,599	\$ 869	\$10,468	\$ 8,214	\$ 836	\$ 9,050

Related to change in unrealized gains (losses) on securities	(127)	(5)	(132)	(47)	8	(39)
Increase (decrease) due to foreign exchange	904	44	948	(943)	(206)	(1,149)
Balance at end of year	\$20,005	\$1,148	\$21,153	\$16,360	\$1,278	\$17,638
Total Life Insurance & Retirement Services:						
Balance at beginning of year ^(a)	\$25,959	\$2,147	\$28,106	\$22,563	\$2,517	\$25,080
Acquisition costs deferred	6,823	—	6,823	6,513	—	6,513
Amortization (charged) or credited to operating income:						
Related to realized capital gains (losses)	81	17	98	44	2	46
Related to unlocking future assumptions	47	10	57	78	—	78
All other amortization	(3,601)	(266)	(3,867)	(3,163)	(289)	(3,452)
Related to change in unrealized gains (losses) on securities	617	29	646	857	120	977
Increase (decrease) due to foreign exchange	903	44	947	(933)	(203)	(1,136)
Balance at end of year	\$30,829	\$1,981	\$32,810	\$25,959	\$2,147	\$28,106

(a) In 2006, sales inducement assets were reclassified to Other assets in the consolidated balance sheet. All periods have been adjusted to reflect this reclassification.

(b) In 2006, all other amortization for Domestic Life Insurance & Retirement Services includes \$136 million of negative amortization related to changes in estimates from conversion of actuarial systems, which is substantially offset by related adjustments in incurred policy losses and benefits in the consolidated statement of income.

AIG's variable annuity earnings will be affected by changes in market returns because separate account revenues, primarily composed of mortality and expense charges and asset management fees, are a function of asset values.

DAC for both insurance-oriented and investment-oriented products as well as retirement services products is reviewed for

recoverability, which involves estimating the future profitability of current business. This review also involves significant management judgment. If the actual emergence of future profitability were to be substantially lower than estimated, AIG's results of operations could be significantly affected in future periods.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance.

Financial Services Results

Financial Services results for 2006, 2005 and 2004 were as follows:

(in millions)	2006	2005	2004
Revenues ^(a) :			
Aircraft Leasing ^(b)	\$ 4,143	\$ 3,578	\$ 3,136
Capital Markets ^{(c)(d)}	(186)	3,260	1,278
Consumer Finance ^(e)	3,819	3,613	2,978
Other	234	74	103
Total	\$ 8,010	\$ 10,525	\$ 7,495
Operating income (loss) ^(a) :			
Aircraft Leasing	\$ 639	\$ 679	\$ 642
Capital Markets ^(d)	(873)	2,661	662
Consumer Finance ^(f)	761	876	786
Other, including intercompany adjustments ^(g)	(3)	60	90
Total	\$ 524	\$ 4,276	\$ 2,180

(a) Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For 2006, 2005 and 2004, respectively, the effect was \$(1.8) billion, \$2.0 billion and \$(122) million in both revenues and operating income for Capital Markets. These amounts result primarily from interest rate and foreign currency derivatives that are economically hedging available for sale securities and borrowings. For 2004, the effect was \$(27) million in operating income for Aircraft Leasing. During 2006 and 2005, Aircraft Leasing derivative gains and losses were reported as part of AIG's Other category, and were not reported in Aircraft Leasing operating income.

(b) Revenues are primarily aircraft lease rentals from ILFC.

(c) Revenues, shown net of interest expense of \$3.2 billion, \$3.0 billion and \$2.3 billion, in 2006, 2005 and 2004, respectively, were primarily from hedged financial positions entered into in connection with counterparty transactions and the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133 described in (a) above.

(d) Certain transactions entered into by AIGFP generate tax credits and benefits which are included in income taxes in the consolidated statement of income. The amounts of such tax credits and benefits for the years ended December 31, 2006, 2005 and 2004, respectively, are \$50 million, \$67 million and \$107 million.

(e) Revenues are primarily finance charges.

(f) Includes catastrophe-related losses of \$62 million recorded in the third quarter of 2005 resulting from hurricane Katrina, which were reduced by \$35 million in 2006 due to the reevaluation of the remaining estimated losses.

(g) Includes specific reserves recorded during 2006 in the amount of \$42 million related to two commercial lending transactions.

Financial Services operating income decreased in 2006 compared to 2005 and increased in 2005 compared to 2004, due primarily to the effect of hedging activities that did not qualify for hedge accounting under FAS 133. AIG is reinstating hedge accounting in the first quarter of 2007 for AIGFP and later in 2007 for the balance of the Financial Services operations.

Aircraft Leasing

AIG's Aircraft Leasing operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to foreign and domestic airlines. Revenues also result from the remarketing of commercial jets for ILFC's own account, and remarketing and fleet management services for airlines and financial institutions. ILFC finances its purchases of aircraft primarily through the issuance of a variety of debt instruments. The composite borrowing rates at December 31, 2006 and 2005 were 5.17 percent and 4.61 percent, respectively. The composite borrowing rates did not reflect the benefit of economically hedging ILFC's floating rate and foreign currency denominated debt using interest rate and foreign currency derivatives. These derivatives are effective economic hedges; however, since hedge accounting under FAS 133 was not applied, the benefits of using derivatives to hedge these exposures were not reflected in ILFC's borrowing rates.

ILFC's sources of revenue are principally from scheduled and charter airlines and companies associated with the airline industry. The airline industry is sensitive to changes in economic conditions and is cyclical and highly competitive. Airlines and related companies may be affected by political or economic instability, terrorist activities, changes in national policy, competitive pressures on certain air carriers, fuel prices and shortages, labor stoppages, insurance costs, recessions, world health issues and other political or economic events adversely affecting world or regional trading markets.

ILFC is exposed to operating loss and liquidity strain through nonperformance of aircraft lessees, through owning aircraft which it would be unable to sell or re-lease at acceptable rates at lease expiration and, in part, through committing to purchase aircraft which it would be unable to lease.

ILFC's revenues and operating income may be adversely affected by the volatile competitive environment in which its customers operate. ILFC manages the risk of nonperformance by its lessees with security deposit requirements, repossession rights, overhaul requirements and close monitoring of industry conditions through its marketing force. However, there can be no assurance that ILFC would be able to successfully manage the risks relating to the effect of possible future deterioration in the airline industry. Approximately 90 percent of ILFC's fleet is leased to non-U.S. carriers, and the fleet, comprised of the most efficient aircraft in the airline industry, continues to be in high demand from such carriers.

ILFC typically contracts to re-lease aircraft before the end of the existing lease term. For aircraft returned before the end of the lease term, ILFC has generally been able to re-lease such aircraft within two to six months of its return. As a lessor, ILFC considers an aircraft "idle" or "off lease" when the aircraft is not subject to a signed lease agreement or signed letter of intent. ILFC had one aircraft off lease at December 31, 2006, and all new aircraft scheduled for delivery through 2007 have been leased.

Management formally reviews regularly, and no less frequently than quarterly, issues affecting ILFC's fleet, including events and circumstances that may cause impairment of aircraft values. Management evaluates aircraft in the fleet as necessary based on

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

these events and circumstances in accordance with Statement of Financial Accounting Standards No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets" (FAS 144). ILFC has not recognized any impairment related to its fleet in 2006, 2005 and 2004. ILFC has been able to re-lease the aircraft without diminution in lease rates that would result in an impairment under FAS 144.

Aircraft Leasing Results

2006 and 2005 Comparison

ILFC's operating income decreased in 2006 compared to 2005 by \$40 million, or 6 percent. Rental revenues increased by \$536 million or 16 percent, driven by a larger aircraft fleet, increased utilization and higher lease rates. During 2006, ILFC's fleet subject to operating leases increased by 78 airplanes to a total of 824. The increase in rental revenues was offset in part by increases in depreciation expense and interest expense, charges related to bankrupt airlines, as well as the settlement of a tax dispute in Australia related to the restructuring of ownership of aircraft. Depreciation expense increased by \$200 million, or 14 percent, in line with the increase in the size of the aircraft fleet. Interest expense increased by \$317 million, or 28 percent, driven by rising cost of funds, a weaker U.S. dollar against the Euro and the British Pound and additional borrowings funding aircraft purchases. As noted above, ILFC's interest expense did not reflect the benefit of hedging these exposures. Gains or losses on derivatives for ILFC are reported in AIG's Other category.

2005 and 2004 Comparison

ILFC's operating income increased in 2005 compared to 2004 by \$37 million, or 6 percent. Rental revenues increased by \$499 million, or 17 percent, driven by a larger aircraft fleet and increased utilization. During 2005, ILFC's fleet subject to operating leases increased by 79 airplanes to a total of 746. The increase in rental revenues was offset in part by increases in depreciation expense, interest expense, leasing-related costs and other reserves. Depreciation expense increased by \$111 million, or 9 percent, in line with the increase in the size of the aircraft fleet. Interest expense increased by \$132 million, or 13 percent, driven by rising cost of funds and additional borrowings funding aircraft purchases.

Capital Markets

Capital Markets represents the operations of AIGFP, which engages as principal in a wide variety of financial transactions, including standard and customized financial products involving commodities, credit, currencies, energy, equities and rates. AIGFP also invests in a diversified portfolio of securities and principal investments and engages in borrowing activities involving issuing standard and structured notes and other securities, and entering into GIAs.

As Capital Markets is a transaction-oriented operation, current and past revenues and operating results may not provide a basis for predicting future performance. AIG's Capital Markets opera-

tions derive substantially all their revenues from hedged financial positions entered into in connection with counterparty transactions rather than from speculative transactions. AIGFP also participates as a dealer in a wide variety of financial derivatives transactions. AIGFP economically hedges the market risks arising from its transactions, although hedge accounting under FAS 133 was not being applied during 2006, 2005 and 2004 to any of the derivatives and related assets and liabilities. Accordingly, revenues and operating income were exposed to volatility resulting from differences in the timing of revenue recognition between the derivatives and the hedged assets and liabilities. Revenues and operating income of the Capital Markets operations and the percentage change in these amounts for any given period are also significantly affected by the number, size and profitability of transactions entered into by these subsidiaries during that period relative to those entered into during the prior period. Generally, the realization of transaction revenues as measured by the receipt of funds is not a significant reporting event as the gain or loss on AIGFP's trading transactions is currently reflected in operating income as the fair values change from period to period.

Derivative transactions are entered into in the ordinary course of AIGFP operations. Derivatives are recorded at fair value, determined by reference to the mark to market value of the derivative or their estimated fair value where market prices are not readily available. The resulting aggregate unrealized gains or losses from the derivatives are reflected in the consolidated income statement. Where AIGFP cannot verify significant model inputs to observable market data and cannot verify the model value to market transactions, AIGFP values the contract at the transaction price at inception and, consequently, records no initial gain or loss in accordance with Emerging Issues Task Force Issue No. 02-03, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities" (EITF 02-03). Such initial gain or loss is recognized over the life of the transaction. AIGFP periodically reevaluates its revenue recognition under EITF 02-03 based on the observability of market parameters. The mark to fair value of derivative transactions is reflected in the consolidated balance sheet in the captions "Unrealized gain on swaps, options and forward transactions" and "Unrealized loss on swaps, options and forward transactions." Unrealized gains represent the present value of the aggregate of each net receivable, by counterparty, and the unrealized losses represent the present value of the aggregate of each net payable, by counterparty, as of December 31, 2006. These amounts will change from one period to the next due to changes in interest rates, currency rates, equity and commodity prices and other market variables, as well as cash movements, execution of new transactions and the maturing of existing transactions.

Spread income on investments and borrowings is recorded on an accrual basis over the life of the transaction. Investments are classified as securities available for sale and are carried at fair value with the resulting unrealized gains or losses reflected in accumulated other comprehensive income. U.S. dollar denominated borrowings are carried at cost, while borrowings in any currency other than the U.S. dollar result in unrealized foreign

exchange gains or losses reported in income. AIGFP hedges the economic exposure on its investments and borrowings on a portfolio basis using derivatives and other financial instruments. While these hedges are highly effective economic hedges, they did not qualify for hedge accounting treatment under FAS 133 through 2006. The change in the fair value of the derivatives used to hedge these economic exposures is therefore included in Other income, while the offsetting change in fair value of the hedged investments and borrowings is not recognized in income. AIG is reinstating hedge accounting in the first quarter of 2007 for AIGFP.

To the extent the Financial Services subsidiaries, other than AIGFP, use derivatives to economically hedge their assets or liabilities with respect to their future cash flows, and such hedges did not qualify for hedge accounting treatment under FAS 133, the changes in fair value of such derivatives were recorded in realized capital gains (losses) or other income. Amounts recorded in realized capital gains (losses) are reported as part of AIG's Other category.

Capital Markets Results

2006 and 2005 Comparison

Capital Markets operating income in 2006 decreased by \$3.53 billion compared to 2005. Improved results, primarily from increased transaction flow in AIGFP's credit, commodity index, energy and equity products, were more than offset by the loss resulting from the effect of derivatives not qualifying for hedge accounting treatment under FAS 133. This loss was \$1.82 billion in 2006 compared to a gain of \$2.01 billion in 2005, a decrease of \$3.83 billion. A large part of the net loss on AIGFP's derivatives recognized in 2006 was due to the weakening of the U.S. dollar, primarily against the British Pound and Euro, resulting in a decrease in the fair value of the foreign currency derivatives hedging AIGFP's available for sale securities. The majority of the net gain on AIGFP's derivatives in 2005 was due to the strengthening of the U.S. dollar, primarily against the British Pound and Euro, which increased the fair value of the foreign currency derivatives hedging available for sale securities. To a lesser extent, the net gain in 2005 was due to the decrease in long-term U.S. interest rates, which increased the fair value of derivatives hedging AIGFP's assets and liabilities.

Financial market conditions in 2006 were characterized by a general flattening of interest rate yield curves across fixed income markets globally, tightening of credit spreads, higher equity valuations and a weaker U.S. dollar.

The most significant component of Capital Markets operating expenses is compensation, which was approximately \$544 million, \$481 million and \$497 million in 2006, 2005 and 2004, respectively. The amount of compensation was not affected by gains and losses arising from derivatives not qualifying for hedge accounting treatment under FAS 133.

AIG elected to early adopt FAS 155, "Accounting for Certain Hybrid Financial Instruments" (FAS 155), in 2006 and AIGFP elected to apply the fair value option to its structured notes and other financial liabilities containing embedded derivatives out-

standing as of January 1, 2006. The cumulative effect of the adoption of FAS 155 on these instruments at January 1, 2006 was a pre-tax loss of \$29 million. The effect of these hybrid financial instruments reflected in AIGFP's operating income in 2006 was a pretax loss of \$287 million, largely offset by gains on economic hedge positions also reflected in AIGFP's operating income.

2005 and 2004 Comparison

Capital Markets operating income in 2005 increased by \$2 billion compared to 2004, primarily due to a gain related to derivatives not qualifying for hedge accounting treatment of \$2.01 billion in 2005 compared to a loss of \$122 million in 2004. The majority of the net gain on AIGFP's derivatives recognized in 2005 was due to the strengthening of the U.S. dollar against the Euro and British Pound, which resulted in an increase in the fair value of the foreign currency derivatives hedging available for sale securities. To a lesser extent, the net gain was also due to the fall in long-term U.S. interest rates, which resulted in an increase in the fair value of AIGFP's interest rate derivatives hedging its assets and liabilities. The majority of the net loss on AIGFP's derivatives recognized in 2004 was due to the weakening of the U.S. dollar against the Euro and British Pound, which resulted in a decrease in the fair value of the foreign currency derivatives hedging available for sale securities. This loss was partially offset by an increase in the fair value of its interest rate derivatives hedging its assets and liabilities as a result of the decrease in long-term U.S. interest rates.

Financial market conditions in 2005 compared to 2004 were characterized by a general flattening of interest rate yield curves across fixed income markets globally, some tightening of credit spreads, higher equity valuations and a stronger U.S. dollar. AIGFP's 2005 results were adversely affected by customer uncertainty surrounding the negative actions of the rating agencies and the investigations, as well as the negative effect on its structured notes business of AIG being unable to fully access the capital markets during 2005.

Capital Markets operating income was also negatively affected in 2004 by the costs of the PNC settlement.

Consumer Finance

AIG's consumer finance operations in North America are principally conducted through AGF. Effective January 2, 2007, AGF expanded its operations into the United Kingdom through the acquisition of Ocean Finance and Mortgages Limited, a finance broker for home owner loans in the United Kingdom. AGF derives a substantial portion of its revenues from finance charges assessed on outstanding real estate loans, secured and unsecured non-real estate loans and retail sales finance receivables. The real estate loans are comprised principally of first lien and some second lien mortgages on residential real estate generally having a maximum term of 360 months, and are considered non-conforming. The real estate loans may be closed-end accounts or open-end home equity lines of credit and may be fixed rate or adjustable rate products. AGF does not offer mortgage products

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

with borrower payment options that allow for negative amortization of the principal balance. The secured non-real estate loans are secured by consumer goods, automobiles or other personal property. Both secured and unsecured non-real estate loans and retail sales finance receivables generally have a maximum term of 60 months. The core of AGF's originations is sourced through its branches. However, a significant volume of real estate loans is also originated through broker relationships, and to lesser extents, through correspondent relationships and direct mail solicitations. In the first quarter of 2006, two wholly owned subsidiaries of AGF discontinued originating real estate loans through an arrangement with AIG Federal Savings Bank, a federally chartered thrift, and began originating such loans under their own state licenses.

AIG's foreign consumer finance operations are principally conducted through AIGCFG. AIGCFG operates primarily in emerging and developing markets. AIGCFG has operations in Argentina, China, Hong Kong, Mexico, Philippines, Poland, Taiwan and Thailand. Certain of the AIGCFG operations are owned in part or in whole by Life Insurance subsidiaries. Accordingly, the financial results of those companies are shared between Financial Services and Life Insurance & Retirement Services according to their ownership percentages. While products vary by market, the businesses generally provide credit cards, unsecured and secured non-real estate loans, term deposits, savings accounts, retail sales finance and real estate loans. AIGCFG originates finance receivables through its branches and direct solicitation. AIGCFG also originates finance receivables indirectly through relationships with retailers, auto dealers, and independent agents.

Consumer Finance Results

2006 and 2005 Comparison

Consumer Finance operating income decreased to \$761 million, or 13 percent, in 2006 compared to 2005. Operating income from domestic consumer finance operations declined as a result of decreased originations and purchases of real estate loans and margin compression resulting from increased interest rates and flattened yield curves. The foreign operations operating income decreased primarily due to the credit deterioration in the Taiwan credit card market.

Domestically, the U.S. housing market deteriorated throughout 2006 and ended the year fairly weak compared to recent years. As a result, the real estate loan portfolio decreased slightly during 2006 due to lower refinancing activity. This lower refinancing activity also caused a significant decrease in originations and whole loan sales in AGF's mortgage banking operation, which resulted in a substantial reduction of revenue and operating income compared to the prior year. However, softening home prices (reducing the equity customers are able to extract from their homes when refinancing) and higher mortgage rates contributed to customers utilizing non-real estate loans, which increased 10 percent compared to 2005. Retail sales finance receivables also increased 23 percent due to increased marketing efforts and customer demand. Higher revenue resulting from portfolio growth was more than offset by higher interest expense. AGF's short-

term borrowing rates were 5.14 percent in 2006 compared to 3.58 percent in 2005. AGF's long-term borrowing rates were 5.05 percent in 2006 compared to 4.41 percent in 2005. AGF's net charge-off ratio improved to 0.95 percent in 2006 from 1.19 percent in 2005. The improvement in the net charge-off ratio in 2006 was primarily due to positive economic fundamentals. The U.S. economy continued to expand during the year, and the unemployment rate remained low, which improved the credit quality of AGF's portfolio. AGF's delinquency ratio remained relatively low, although it increased to 2.06 percent at December 31, 2006 from 1.93 percent at December 31, 2005. AGF reduced the hurricane Katrina portion of its allowance for finance receivable losses to \$15 million at December 31, 2006 after the reevaluation of its remaining estimated losses. AGF's allowance ratio was 2.01 percent at December 31, 2006 compared to 2.20 percent at December 31, 2005.

Revenues from the foreign consumer finance operations increased by approximately 19 percent in 2006 compared to 2005. Loan growth, particularly in Poland and Argentina, was the primary driver behind the higher revenues. Higher revenues were more than offset, however, by AIGCFG's \$47 million share of the allowance for losses related to industry-wide credit deterioration in the Taiwan credit card market, increased cost of funds, and higher operating expenses in connection with expansion into new markets and distribution channels and new product promotions, resulting in lower operating income for 2006 compared to 2005.

2005 and 2004 Comparison

Revenues and operating income from the Consumer Finance operations improved in 2005, both domestically and internationally.

Domestically, the relatively low interest rate environment contributed to a high level of mortgage refinancing activity. AGF's real estate loans increased 21 percent during 2005 compared to 2004. AGF's short-term borrowing rates rose to 3.58 percent in 2005 compared to 2.68 percent in 2004. AGF's long-term borrowing rates were 4.41 percent in 2005 compared to 4.28 percent in 2004. Despite high energy costs, the U.S. economy continued to expand during 2005, improving consumer credit quality. Both AGF's net charge-off ratio and delinquency ratio improved in 2005 compared to 2004. AGF's net charge-off ratio improved to 1.19 percent in 2005 from 1.60 percent in 2004. The improvement in the net charge-off ratio in 2005 was primarily due to the improving economy and a higher proportion of average net receivables that were real estate loans. AGF's delinquency ratio at December 31, 2005 was 1.93 percent compared to 2.31 percent at December 31, 2004. However, AGF incurred charges of approximately \$62 million for the estimated effect of hurricane Katrina on customers in the Gulf Coast areas affected by the storm. At December 31, 2005, AGF's allowance ratio was 2.20 percent compared to 2.26 percent at December 31, 2004.

Foreign consumer finance operations performed well, as the operations in Poland and Argentina recorded improved growth in operating income. The Hong Kong businesses experienced improved loan and earnings growth in a strengthening economy.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products. Such services and products are offered to individuals and institutions both domestically and overseas, and are primarily comprised of Spread-Based Investment Businesses, Institutional Asset Management and Brokerage Services and Mutual Funds.

The revenues and operating income for this segment are subject to variability because they are affected by the general conditions in the equity and credit markets. In addition, realized gains and performance fees are contingent upon various fund closings, maturity levels and market conditions.

Spread-Based Investment Business

In prior years, the sale of GICs to investors, both domestically and overseas, was AIG's primary institutional Spread-Based Investment Business. During 2005, AIG launched its MIP and its asset management subsidiaries, primarily SunAmerica Life, ceased writing new GIC business. The GIC business will continue to run off for the foreseeable future while the MIP business is expected to grow.

Institutional Asset Management

AIG's Institutional Asset Management business provides an array of investment products and services globally to institutional investors, AIG subsidiaries and affiliates and high net worth investors. These products and services include traditional equity and fixed income investment management and a full range of alternative asset classes. Delivery of AIG's Institutional Asset Management products and services is accomplished via a global network of operating subsidiaries comprising AIGGIG. The primary operating entities within this group are AIG Global Investment Corp., AIG Global Real Estate Investment Corp. and AIG Private Bank. AIG Private Bank offers banking, trading and investment management services to private client and high net worth individuals and institutions globally.

Within the alternative investment asset class, AIGGIG offers hedge and private equity fund-of-funds, direct investments and distressed debt investments. Within the structured fixed income and equity product asset class, AIGGIG offers various forms of structured and credit linked notes, various forms of collateralized debt obligations and other investment strategies aimed at achieving superior returns or capital preservation. In addition, Institutional Asset Management's product offerings include various forms of principal protected and liability management structures.

Brokerage Services and Mutual Funds

AIG's Brokerage Services and Mutual Funds business provides mutual fund and broker-dealer related services to retail investors, group trusts and corporate accounts through an independent network of financial advisors. The AIG Advisor Group, Inc., a subsidiary of AIG Retirement Services, Inc., is comprised of several broker-dealer entities that provide these services to

clients primarily in the U.S. marketplace. SAAMCo manages, advises and/or administers retail mutual funds, as well as the underlying assets of variable annuities sold by AIG SunAmerica and VALIC to individuals and groups throughout the United States.

Other

Included in the Other category for Asset Management is income or loss from partnerships. Partnership assets consist of investments in a diversified portfolio of private equity funds, affordable housing partnerships and hedge fund investments.

Asset Management Results

Asset Management results for 2006, 2005 and 2004 were as follows:

(in millions)	2006	2005	2004
Revenues:			
Spread-Based Investment Business	\$3,554	\$3,547	\$3,192
Institutional Asset Management	1,670	1,195	1,049
Brokerage Services and Mutual Funds	293	257	249
Other	297	326	224
Total	\$5,814	\$5,325	\$4,714
Operating income:			
Spread-Based Investment Business ^(a)	\$ 947	\$1,185	\$1,328
Institutional Asset Management ^{(b)(c)}	1,031	686	515
Brokerage Services and Mutual Funds	87	66	70
Other	281	316	212
Total	\$2,346	\$2,253	\$2,125

(a) Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For 2004, the effect was a gain of \$313 million in operating income. During 2006 and 2005, these derivative gains and losses were reported as part of AIG's Other category, and were not reported in Asset Management operating income.

(b) Includes the full results of certain AIG managed private equity and real estate funds that are consolidated pursuant to FIN 46(R), "Consolidation of Variable Interest Entities". Also includes \$346 million, \$261 million and \$195 million for 2006, 2005 and 2004, respectively, of third-party limited partner earnings offset in minority interest expense on the consolidated statement of income which is not a component of operating income.

(c) Includes the full results of certain AIG managed partnerships that are consolidated effective January 1, 2006 pursuant to EITF 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights". For 2006, operating income includes \$252 million of third-party limited partner earnings offset in minority interest expense which is not a component of operating income.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

2006 and 2005 Comparison

Asset Management operating income increased 4 percent in 2006 compared to 2005 on revenues that increased 9 percent.

Operating income related to the Spread-Based Investment Business declined 20 percent in 2006 compared to 2005 due primarily to the continued runoff of GIC balances and spread compression related to increases in short-term interest rates. A significant portion of the remaining GIC portfolio consists of floating rate obligations. AIG has entered into hedges to manage against increases in short-term interest rates. AIG believes these hedges are economically effective, but they did not qualify for hedge accounting treatment under FAS 133. Income or loss from these hedges are classified as realized capital gains or losses and are included in AIG's Other category. The decline in operating income was partially offset by improved partnership income, particularly during the fourth quarter of 2006. Partnership income is primarily derived from alternative investments and is affected by performance in the equity markets. Thus, revenues, operating income and cash flow attributable to GICs will vary among reporting periods. Commencing with transactions initiated in the first quarter of 2007, AIG is reinstating hedge accounting for derivative transactions related to the MIP.

During 2005, the MIP replaced the GIC program as AIG's principal spread-based investment activity. While the MIP showed strong growth in operating income, AIG does not expect that the income growth in the MIP will offset the runoff in the GIC portfolio for the foreseeable future, because the asset mix under the MIP does not include the alternative investments utilized in the GIC program.

The MIP was initially launched in the Euromarkets in September 2005 through AIG's \$10 billion Euro medium term note program. Through December 31, 2006, AIG has issued the equivalent of \$5.3 billion for the MIP in the Euromarkets and the U.S. public and private markets.

Operating income related to Institutional Asset Management increased 50 percent in 2006 to \$1.0 billion compared to 2005, primarily due to an increase of \$337 million in gains on certain VIEs and partnerships. These gains are offset in minority interest expense, which is not a component of operating income. AIG's unaffiliated client assets under management, including both retail mutual funds and institutional accounts, increased 21 percent from year-end 2005 to \$75 billion, resulting in higher management fee income. Increased realized capital gains on real estate investments from 2005 also contributed to the increase in operating income. The growth in Institutional Asset Management revenues and operating income were driven by contributions from all asset classes globally. Partially offsetting this growth were lower performance-based fees on private equity investments, and higher expenses related to the planned expansion of marketing and distribution capabilities, combined with technology and operational infrastructure-related enhancements.

2005 and 2004 Comparison

Asset Management operating income increased in 2005 compared to 2004 as a result of growth in institutional assets under

management, and the associated fee revenue, along with strong realized gains on sales of real estate investments and performance fees earned on various private equity investments. The increase in operating income was achieved despite the runoff of the existing GIC portfolio and the delay in the MIP. The decline in GIC operating income compared to 2004 reflects tighter spreads in the GIC portfolio, partially offset by improved partnership returns. Spread compression occurred as the base portfolio yield declined due to an increase in the cost of funds in the short-term floating rate portion of the GIC portfolio, only partially offset by increased investment income from the floating rate assets backing the portfolio.

Other Operations

The operating loss of AIG's Other category for the years ended December 31, 2006, 2005 and 2004 was as follows:

<i>(in millions)</i>	2006	2005	2004
Other Operating Income			
(Loss):			
Equity earnings in unconsolidated entities	\$ 193	\$ (124)	\$ 157
Interest expense	(859)	(541)	(435)
Unallocated corporate expenses	(555)	(413)	(316)
Compensation expense — SICO Plans	(108)	(205)	(62)
Compensation expense — Starr tender offer	(54)	—	—
Realized capital gains (losses)	(295)	505	94
Regulatory settlement costs	—	(1,644)	—
Other miscellaneous, net	(23)	(113)	—
Total Other	\$ (1,701)	\$ (2,535)	\$ (562)

2006 and 2005 Comparison

Operating loss for AIG's Other category declined to \$1.7 billion in 2006 compared to \$2.5 billion in 2005, largely due to regulatory settlement costs of \$1.6 billion in 2005 as described under Item 3. Legal Proceedings. Interest expense grew in 2006 as a result of increased borrowings by the parent holding company. Unallocated corporate expenses increased \$142 million due to increases in general corporate expenses primarily resulting from ongoing efforts to improve internal controls, higher stock compensation expenses and expenses relating to executive departures in 2005 and 2006. AIG expects these compensation expenses to continue to increase as these improvement efforts progress. Operating income in 2006 also includes realized capital losses of \$295 million, primarily reflecting the effect of hedging activities in the Financial Services and Asset Management segments that did not qualify for hedge accounting treatment under FAS 133. Also reflected in Other operating loss in 2006 is an out of period charge of \$61 million with respect to the SICO Plans and a one-time charge related to the Starr tender offer of \$54 million. For a further discussion of these items, see Note 16 of Notes to Consolidated Financial Statements. These declines were partially

offset by increased equity earnings in certain unconsolidated subsidiaries.

2005 and 2004 Comparison

AIG's Other operating loss was \$2.5 billion in 2005 compared to \$562 million in 2004, reflecting the \$1.6 billion of regulatory settlement costs in 2005. In addition, AIG's equity in certain partially owned subsidiaries includes \$312 million and \$96 million in catastrophe losses in 2005 and 2004, respectively.

Capital Resources and Liquidity

At December 31, 2006, AIG had total consolidated shareholders' equity of \$101.68 billion and total consolidated borrowings of \$148.68 billion. At that date, \$131.55 billion of such borrowings were not guaranteed by AIG, were matched borrowings by AIG or AIGFP, or represented liabilities connected to trust preferred stock.

In 2007, AIG expects to issue capital securities in one or more series. The proceeds will be used to repurchase shares of common stock or to otherwise improve the efficiency of AIG's capital structure.

Borrowings

At December 31, 2006, AIG's net borrowings were \$17.13 billion after reflecting amounts that were matched borrowings by AIG and AIGFP, amounts not guaranteed by AIG and liabilities connected to trust preferred stock. The following table summarizes borrowings outstanding at December 31, 2006 and 2005:

<i>(in millions)</i>	2006	2005
AIG's net borrowings	\$ 17,126	\$ 10,425

AIG (Parent Company)

AIG intends to continue its customary practice of issuing debt securities from time to time to meet its financing needs and those of certain of its subsidiaries for general corporate purposes, as well as for the MIP. In July 2006, AIG filed and had declared effective a post-effective amendment to its universal shelf registration statement to sell up to \$25.1 billion of debt securities, preferred and common stock and other securities.

In October 2006, AIG established a medium term note program under its shelf registration statement providing for the issuance of up to \$25.1 billion of AIG debt securities. The proceeds from the issuance of these debt securities may be used (i) by AIG for general corporate purposes, (ii) by AIGFP as it would use the proceeds from its own borrowings as discussed below or (iii) to fund the MIP. As of December 31, 2006, \$1.8 billion principal amount of notes were outstanding under the medium term note program, of which (i) \$749 million was used for AIG's general corporate purposes, (ii) \$72 million was used by AIGFP and (iii) \$1.0 billion was used to fund the MIP. The maturity dates of these notes range from 2011 to 2046. To the extent deemed appropriate, AIG may enter into swap transactions to manage its effective borrowing with respect to these notes.

AIG also maintains a Euro medium term note program under which an aggregate nominal amount of up to \$10.0 billion of notes may be outstanding at any one time. The program provides that additional notes may be issued to replace matured or redeemed notes. As of December 31, 2006, the equivalent of \$5.7 billion of notes were outstanding under the program, of which \$3.7 billion were used to fund the MIP and the remainder was used for AIG's general corporate purposes. The aggregate amount outstanding includes \$249 million resulting from foreign exchange translation into U.S. dollars, of which \$151 million relates to notes issued by AIG for general corporate purposes and

\$98 million relates to notes issued to fund the MIP. AIG has hedged the currency exposure arising from foreign currency denominated notes by effectively economically hedging that exposure, although such hedges did not qualify for hedge accounting treatment under FAS 133. In 2007, through February 15, AIG issued the equivalent of \$194 million under the Euro program to fund the MIP.

In 2006, AIG issued in Rule 144A/Regulation S offerings \$3 billion principal amount of senior notes, of which \$1.0 billion was exchanged by AIG for substantially identical notes that are registered under the Securities Act. The proceeds from the sale of \$2.25 billion of these notes were used for AIG's general corporate purposes and \$750 million was used to fund the MIP. In 2007, through February 15, AIG issued in Rule 144A offerings an aggregate of \$750 million principal amount of senior notes, of which \$500 million was used to fund the MIP and \$250 million was used for AIG's general corporate purposes.

In November 2006, AIG filed a shelf registration statement in Japan, providing for the issuance of up to Japanese Yen 300 billion principal amount of senior notes. In December 2006, AIG issued the equivalent of \$429 million under the Japanese shelf registration statement, the proceeds of which were used for AIG's general corporate purposes.

In November 2006, AIG established an Australian dollar debt program under which senior notes with an aggregate amount of up to 5 billion Australian dollars may be outstanding at any one time. The program provides that additional notes may be issued to replace matured or redeemed notes. Although as of December 31, 2006 there were no outstanding notes under the Australian program, AIG intends to use the program opportunistically to fund the MIP or for AIG's general corporate purposes.

In March 2006, AIG borrowed a total of \$1.3 billion on an unsecured basis pursuant to loan agreements with third-party banks, of which \$700 million remained outstanding on Decem-

ber 31, 2006; \$500 million was repaid in February 2007, and the balance matures in March 2007.

AIGFP

AIGFP uses the proceeds from the issuance of notes and bonds and GIA borrowings to invest in a diversified portfolio of securities and derivative transactions. The borrowings may also be temporarily invested in securities purchased under agreements to resell. AIGFP's notes and bonds include structured debt instruments whose payment terms are linked to one or more financial or other indices (such as an equity index or commodity index or another measure that is not considered to be clearly and closely related to the debt instrument). These notes contain embedded derivatives that otherwise would be required to be accounted for separately under FAS 133. Upon AIG's early adoption of FAS 155, AIGFP elected the fair value option for these notes. The notes that are accounted for using the fair value option are reported separately under hybrid financial instrument liabilities. AIG guarantees the obligations of AIGFP under AIGFP's notes and bonds and GIA borrowings. See Operating Review — Financial Services Operations, Liquidity and Derivatives herein.

In June 2006, AIGFP sold an aggregate of \$2.0 billion principal amount of senior, floating rate notes in Rule 144A offerings, of which \$1.0 billion matures in 2007 and \$1.0 billion matures in 2008. AIGFP also has a Euro medium term note program under which an aggregate nominal amount of up to \$10.0 billion of notes may be outstanding at any one time. The program provides that additional notes may be issued to replace matured or redeemed notes. As of December 31, 2006, \$5.66 billion of notes were outstanding under the program, including \$575 million resulting from foreign exchange translation into U.S. dollars. AIGFP's Rule 144A Notes and the notes issued under this program are guaranteed by AIG and are included in AIGFP's Notes and Bonds Payable in the preceding table of borrowings.

AIG Funding

AIG Funding, Inc. (AIG Funding), issues commercial paper that is guaranteed by AIG in order to help fulfill the short-term cash requirements of AIG and its subsidiaries. The issuance of AIG Funding's commercial paper, including the guarantee by AIG, is subject to the approval of AIG's Board of Directors or the Finance Committee of the Board if it exceeds certain pre-approved limits.

As backup for the commercial paper program and for other general corporate purposes, AIG and AIG Funding maintain revolving credit facilities, which, as of December 31, 2006, had an aggregate of \$5.8 billion available to be drawn and which are summarized below under Revolving Credit Facilities.

ILFC

ILFC fulfills its short-term cash requirements through operating cash flows and the issuance of commercial paper. The issuance of commercial paper is subject to the approval of ILFC's Board of Directors and is not guaranteed by AIG. ILFC maintains syndicated revolving credit facilities which, as of December 31, 2006, aggregated \$6.5 billion and which are summarized below under

Revolving Credit Facilities. These facilities are used as back up for ILFC's maturing debt and other obligations.

As a well-known seasoned issuer, ILFC has filed an automatic shelf registration statement with the SEC allowing ILFC immediate access to the U.S. public debt markets. For 2006, \$1.90 billion of debt securities were issued under this registration statement and \$3.52 billion were issued under a prior registration statement. In addition, ILFC has a Euro medium term note program for \$7.0 billion, under which \$4.28 billion in notes were sold through December 31, 2006. Notes issued under the Euro medium term note program are included in ILFC Notes and bonds payable in the preceding table of borrowings. The foreign exchange adjustment for the foreign currency denominated debt was \$733 million at December 31, 2006 and \$197 million at December 31, 2005. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging the portion of the note exposure not already offset by Euro-denominated operating lease payments, although such hedges did not qualify for hedge accounting treatment under FAS 133.

ILFC had a \$4.3 billion Export Credit Facility for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At December 31, 2006, ILFC had \$1.0 billion outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured Export Credit Facility for up to a maximum of \$2.64 billion for Airbus aircraft to be delivered through May 31, 2005. The facility was subsequently increased to \$3.64 billion and extended to include aircraft to be delivered through May 31, 2007. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a six-month forward-looking calendar, and the interest rate is determined through a bid process. At December 31, 2006, ILFC had \$1.7 billion outstanding under this facility. Borrowings with respect to these facilities are included in ILFC's Notes and bonds payable in the preceding table of borrowings.

From time to time, ILFC enters into funded financing agreements. As of December 31, 2006, ILFC had a total of \$1.2 billion outstanding, which has varying maturities through February 2012. The interest rates are LIBOR-based, with spreads ranging from 0.30 percent to 1.625 percent.

In December of 2005, ILFC issued two tranches of junior subordinated debt totaling \$1.0 billion to underlie trust preferred securities issued by a trust sponsored by ILFC. Both tranches mature on December 21, 2065, but each tranche has a different call option. The \$600 million tranche has a call date of December 21, 2010 and the \$400 million tranche has a call date of December 21, 2015. The tranche with the 2010 call date has a fixed interest rate of 5.90 percent for the first five years. The tranche with the 2015 call date has a fixed interest rate of 6.25 percent for the first ten years.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Both tranches have interest rate adjustments if the call option is not exercised. If the call option is not exercised, the new interest rate will be a floating quarterly reset rate based on the initial credit spread plus the highest of (i) 3-month LIBOR, (ii) 10-year constant maturity treasury and (iii) 30-year constant maturity treasury.

The proceeds of ILFC's debt financing are primarily used to purchase flight equipment, including progress payments during the construction phase. The primary sources for the repayment of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. AIG does not guarantee the debt obligations of ILFC. See also Operating Review — Financial Services Operations and Liquidity herein.

AGF

AGF fulfills its short-term cash requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of AGF's Board of Directors and is not guaranteed by AIG. AGF maintains committed syndicated revolving credit facilities which, as of December 31, 2006, aggregated to \$4.25 billion and which are summarized below under Revolving Credit Facilities. The facilities can be used for general corporate purposes and to provide backup for AGF's commercial paper programs.

AGF issued \$3.62 billion during 2006 and \$5.51 billion during 2005 of notes and bonds ranging in maturities from two to 25 years. As of December 31, 2006, notes and bonds aggregating \$19.59 billion were outstanding with maturity dates ranging from 2007 to 2031 at interest rates ranging from 1.94 percent to 8.45 percent. To the extent deemed appropriate, AGF may enter into swap transactions to manage its effective borrowing with respect to these notes and bonds. As a well-known seasoned issuer, AGF has filed an automatic shelf registration statement

with the SEC allowing AGF immediate access to the U.S. public debt markets. At December 31, 2006, AGF had the corporate authority to issue up to \$13.4 billion of debt securities under its shelf registration statements.

In January 2007, AGF issued junior subordinated debentures in an aggregate principal amount of \$350 million that mature in January 2067. The debentures underlie a series of trust preferred securities sold by a trust sponsored by AGF in a Rule 144A/Regulation S offering. AGF can redeem the debentures at par beginning in January 2017 and until that time will pay a fixed rate of interest. If AGF does not redeem the debentures in January 2017, the interest rate changes to a floating rate, which will reset based on 3-month LIBOR.

AGF's funding sources include a medium term note program, private placement debt, retail note issuances, securitizations of finance receivables that AGF accounts for as on-balance-sheet secured financings and bank financings. In addition, AGF has become an established issuer of long-term debt in the international capital markets.

In addition to debt refinancing activities, proceeds from the collection of finance receivables may be used to pay the principal and interest on AGF's debt. AIG does not guarantee any of the debt obligations of AGF. See also Operating Review — Financial Services Operations and Liquidity herein.

AIGCFG

AIGCFG has a variety of funding mechanisms for its various markets, including: retail and wholesale deposits; short-term and long-term bank loans and intercompany subordinated debt. AIG Credit Card Company (Taiwan), a consumer finance business in Taiwan, has issued commercial paper for the funding of its own operations. AIG does not guarantee any borrowings for AIGCFG businesses, including this commercial paper.

Revolving Credit Facilities

AIG, ILFC and AGF maintain the following committed, unsecured revolving credit facilities in order to support their respective commercial paper programs and for general corporate purposes.

AIG, ILFC and AGF expect to replace or extend these credit facilities on or prior to their expiration. Some of the facilities, as noted below, contain a "term-out option" allowing for the conversion by the borrower of any outstanding loans at expiration into one-year term loans.

(in millions) Facility	Size	Borrower(s)	Available Amount December 31, 2006	Expiration	One-Year Term-Out Option
AIG:					
364-Day Syndicated Facility	\$1,625	AIG AIG Funding ^(a) AIG Capital Corporation ^(a)	\$1,625	July 2007	Yes
5-Year Syndicated Facility	1,625	AIG AIG Funding ^(a) AIG Capital Corporation ^(a)	1,625	July 2011	No
364-Day Bilateral Facility	3,200	AIG ^(b) AIG Funding	505	November 2007	Yes
364-Day Intercompany Facility ^(c)	2,000	AIG	2,000	October 2007	Yes
Total AIG	\$8,450		\$5,755		
ILFC:					
5-Year Syndicated Facility	\$2,500	ILFC	\$2,500	October 2011	No
5-Year Syndicated Facility	2,000	ILFC	2,000	October 2010	No
5-Year Syndicated Facility	2,000	ILFC	2,000	October 2009	No
Total ILFC	\$6,500		\$6,500		
AGF:					
364-Day Syndicated Facility	\$2,125	American General Finance Corporation American General Finance, Inc. ^(d)	\$2,125	July 2007	Yes
5-Year Syndicated Facility	2,125	American General Finance Corporation	2,125	July 2010	No
Total AGF	\$4,250		\$4,250		

(a) Guaranteed by AIG.

(b) This facility can be drawn in the form of loans or letters of credit. All drawn amounts shown above are in the form of letters of credit.

(c) Subsidiaries of AIG are the lenders on this facility.

(d) American General Finance, Inc. is an eligible borrower for up to \$400 million only.

Credit Ratings

The cost and availability of unsecured financing for AIG and its subsidiaries are generally dependent on their short-term and long-term debt ratings. The following table presents the credit ratings of AIG and certain of its subsidiaries as of February 28, 2007. In parentheses, following the initial occurrence in the table of each rating, is an indication of that rating's relative rank within the agency's rating categories. That ranking refers only to the generic or major rating category and not to the modifiers appended to the rating by the rating agencies to denote relative position within such generic or major category.

	Short-term Debt			Senior Long-term Debt		
	Moody's	S&P	Fitch	Moody's ^(a)	S&P ^(b)	Fitch ^(c)
AIG	P-1 (1st of 3)	A-1+ (1st of 6)	F1+ (1st of 5)	Aa2 (2nd of 9)	AA (2nd of 8)	AA (2nd of 9)
AIG Financial Products Corp. ^(d)	P-1	A-1+	—	Aa2	AA	—
AIG Funding, Inc. ^(d)	P-1	A-1+	F1+	—	—	—
ILFC	P-1	A-1+	F1 (1st of 5)	A1 (3rd of 9)	AA ^(e) (2nd of 8)	A+ (3rd of 9)
American General Finance Corporation	P-1	A-1 (1st of 6)	F1	A1	A+ (3rd of 8)	A+
American General Finance, Inc.	P-1	A-1	F1	—	—	A+

(a) Moody's Investors Service (Moody's). Moody's appends numerical modifiers 1, 2 and 3 to the generic rating categories to show relative position within rating categories.

(b) Standard & Poor's, a division of the McGraw-Hill Companies (S&P). S&P ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(c) Fitch Ratings (Fitch). Fitch ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(d) AIG guarantees all obligations of AIG Financial Products Corp. and AIG Funding, Inc.

(e) Negative rating outlook. A negative outlook by S&P indicates that a rating may be lowered, but is not necessarily a precursor of a ratings change. The outlook on all other credit ratings in the table is stable.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

These credit ratings are current opinions of the rating agencies. As such, they may be changed, suspended or withdrawn at any time by the rating agencies as a result of changes in, or unavailability of, information or based on other circumstances. Ratings may also be withdrawn at AIG management's request. This discussion of ratings is not a complete list of ratings of AIG and its subsidiaries. See Item 1A. Risk Factors for more information regarding the credit ratings of AIG and its subsidiaries and certain risks related thereto.

"Rating triggers" have been defined by one independent rating agency to include clauses or agreements the outcome of which depends upon the level of ratings maintained by one or more rating agencies. Rating triggers generally relate to events which (i) could result in the termination or limitation of credit availability, or require accelerated repayment, (ii) could result in the termination of business contracts or (iii) could require a company to post collateral for the benefit of counterparties.

AIG believes that any of its own or its subsidiaries' contractual obligations that are subject to "ratings triggers" or financial covenants relating to "ratings triggers" would not have a material

adverse effect on its financial condition or liquidity. Ratings downgrades could also trigger the application of termination provisions in certain of AIG's contracts, principally agreements entered into by AIGFP and assumed reinsurance contracts entered into by Transatlantic.

It is estimated that, as of the close of business on February 15, 2007, based on AIGFP's outstanding municipal GIAs and financial derivatives transactions as of such date, a downgrade of AIG's long-term senior debt ratings to 'Aa3' by Moody's or 'AA-' by S&P would permit counterparties to call for approximately \$864 million of collateral. Further, additional downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIGFP manages its liquidity. The actual amount of additional collateral that AIGFP would be required to post to counterparties in the event of such downgrades depends on market conditions, the fair value of the outstanding affected transactions and other factors prevailing at the time of the downgrade. Additional obligations to post collateral would increase the demand on AIGFP's liquidity.

Contractual Obligations and Other Commercial Commitments

The maturity schedule of contractual obligations of AIG and its consolidated subsidiaries at December 31, 2006 was as follows:

(in millions)	Total Payments	Payments due by Period			
		Less Than One Year	1-3 Years	3 ⁺ -5 Years	Over Five Years
Borrowings ^(a)	\$ 133,285	\$ 34,670	\$ 29,949	\$ 30,483	\$ 38,183
Interest payments on borrowings	44,090	4,960	8,130	5,445	25,555
Loss reserves ^(b)	79,999	22,000	24,399	11,600	22,000
Insurance and investment contract liabilities ^(c)	577,730	16,023	27,728	39,376	494,603
GIC liabilities ^(d)	56,042	19,399	23,209	3,889	9,545
Aircraft purchase commitments	19,042	5,442	7,079	2,155	4,366
Operating leases	2,763	626	802	581	754
Total	\$ 912,951	\$103,120	\$121,296	\$ 93,529	\$595,006

(a) Excludes commercial paper and obligations included as debt pursuant to FASB Interpretation No. 46, "Consolidation of Variable Interest Entities" (FIN 46R), and includes hybrid financial instrument liabilities recorded at fair value. See also Note 9 of Notes to Consolidated Financial Statements.

(b) Represents future loss and loss adjustment expense payments estimated based on historical loss development payment patterns.

(c) Insurance and investment contract liabilities include various investment-type products with contractually scheduled maturities, including periodic payments of a term certain nature. Insurance and investment contract liabilities also include benefit and claim liabilities, of which a significant portion represents policies and contracts that do not have stated contractual maturity dates and may not result in any future payment obligations. For these policies and contracts (i) AIG is currently not making payments until the occurrence of an insurable event, such as death or disability, (ii) payments are conditional on survivorship, or (iii) the occurrence of a payment due to a surrender or other non-scheduled event out of AIG's control. AIG has made significant assumptions to determine the estimated undiscounted cash flows of these contractual policy benefits which include mortality, morbidity, future lapse rates, expenses, investment returns and interest crediting rates, offset by expected future deposits and premium on in-force policies. Due to the significance of the assumptions used, the amounts presented could be materially different from actual required payments. The amounts presented in this table are undiscounted and therefore exceed the future policy benefits and policyholder contract deposits included in the balance sheet.

(d) Represents guaranteed maturities under GICs.

The maturity schedule of other commercial commitments of AIG and its consolidated subsidiaries at December 31, 2006 was as follows:

	Total Amounts Committed	Amount of Commitment Expiration			
		Less Than One Year	1-3 Years	3 ⁺ -5 Years	Over Five Years
Letters of credit:					
Life Insurance & Retirement Services	\$ 185	\$ 21	\$ 28	\$ —	\$ 136
Parent Company ^(a)	641	522	1	118	—
DBG	198	198	—	—	—
Standby letters of credit:					
Capital Markets	1,739	1,427	104	40	168
Guarantees:					
Life Insurance & Retirement Services ^(b)	2,100	113	423	7	1,557
Aircraft Leasing	161	—	52	—	109
Asset Management	246	23	53	—	170
Other commercial commitments ^(c) :					
Capital Markets ^(d)	15,946	5,127	2,313	2,640	5,866
Aircraft Leasing ^(e)	344	—	—	—	344
Life Insurance & Retirement Services ^(f)	4,896	1,119	1,730	1,177	870
Asset Management ^(g)	1,310	896	255	91	68
Life Settlement	203	—	203	—	—
DBG ^(h)	1,588	690	603	295	—
Parent Company	193	56	137	—	—
Total	\$ 29,750	\$ 10,192	\$ 5,902	\$ 4,368	\$ 9,288

(a) Represents reimbursement obligations under letters of credit issued by commercial banks.

(b) Primarily AIG SunAmerica construction guarantees connected to affordable housing investments.

(c) Excludes commitments with respect to pension plans. The annual pension contribution for 2007 is expected to be approximately \$95 million for U.S. and non-U.S. plans. See also Note 15 of Notes to Consolidated Financial Statements.

(d) Primarily liquidity facilities provided in connection with certain municipal swap transactions and collateralized bond obligations.

(e) Primarily in connection with options to acquire aircraft.

(f) Primarily AIG SunAmerica commitments to invest in partnerships.

(g) Includes commitments to invest in limited partnerships, private equity and hedge funds and real estate.

(h) Primarily commitments to invest in limited partnerships.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Special Purpose Vehicles and Off Balance Sheet Arrangements

AIG transacts with special purpose vehicles (SPVs) in the ordinary course of business. Many of these SPVs are included in the consolidated financial statements but some are off balance sheet.

AIG has guidelines with respect to the formation of and investment in SPVs and off balance sheet arrangements. In addition, AIG has expanded the responsibility of its Complex Structured Financial Transaction Committee (CSFT) to include the review of any transaction that could subject AIG to heightened legal, reputational, regulatory, accounting or other risk. See Item 9A. Controls and Procedures — Management's Report on Internal Control Over Financial Reporting for a further discussion of the CSFT.

For additional information related to AIG's activities with respect to VIEs and certain guarantees, see Notes 1 and 18 of Notes to Consolidated Financial Statements.

Shareholders' Equity

AIG's consolidated shareholders' equity increased during 2006 and 2005 as follows:

<i>(in millions)</i>	2006	2005
Beginning of year	\$ 86,317	\$79,673
Net income	14,048	10,477
Unrealized appreciation (depreciation) of investments, net of tax	1,735	(1,978)
Cumulative translation adjustment, net of tax	936	(540)
Dividends to shareholders	(1,690)	(1,615)
Other*	331	300
End of year	\$101,677	\$86,317

* Reflects the effects of employee stock transactions and in 2006 also reflects the cumulative effect of accounting changes, including the adoption of FAS 158. See Note 1(hh) of Notes to Consolidated Financial Statements.

AIG has in the past reinvested most of its unrestricted earnings in its operations and believes such continued reinvestment in the future will be adequate to meet any foreseeable capital needs. However, AIG may choose from time to time to raise additional funds through the issuance of additional securities.

In February 2007, AIG's Board of Directors adopted a new dividend policy, to take effect with the dividend to be declared in the second quarter of 2007, providing that under ordinary circumstances, AIG's plan will be to increase its common stock dividend by approximately 20 percent annually.

Share Repurchases

During 2006, AIG did not purchase any shares of its common stock under its existing share repurchase authorization. At December 31, 2006, an additional 36,542,700 shares could be purchased under the then current authorization by AIG's Board of Directors. In February 2007, AIG's Board of Directors increased the repurchase program by authorizing the repurchase of shares

with an aggregate purchase price of \$8 billion. AIG or its subsidiaries from time to time may buy shares of its common stock in the open market for general corporate purposes, including to satisfy its obligations under various employee benefit plans. During 2006, ILFC purchased 17,000 shares of AIG common stock at an average cost of \$72.18 per share to satisfy its obligations under an employee benefit plan. See Capital Resources and Liquidity — Liquidity for a discussion of possible share repurchases in 2007.

Dividends from Insurance Subsidiaries

Payments of dividends to AIG by its insurance subsidiaries are subject to certain restrictions imposed by regulatory authorities. With respect to AIG's domestic insurance subsidiaries, the payment of any dividend requires formal notice to the insurance department in which the particular insurance subsidiary is domiciled. Under the laws of many states, an insurer may pay a dividend without prior approval of the insurance regulator when the amount of the dividend is below certain regulatory thresholds. Other foreign jurisdictions may restrict the ability of AIG's foreign insurance subsidiaries to pay dividends. The most significant foreign insurance regulatory jurisdictions include Bermuda, Japan, Hong Kong, Taiwan, the United Kingdom, Thailand and Singapore. Largely as a result of the restrictions, approximately 90 percent of consolidated shareholders' equity was restricted from immediate transfer to AIG parent at December 31, 2006. See Regulation and Supervision herein. AIG cannot predict how recent regulatory investigations may affect the ability of its regulated subsidiaries to pay dividends. To AIG's knowledge, no AIG company is currently on any regulatory or similar "watch list" with regard to solvency. See also Liquidity herein, Note 12 of Notes to Consolidated Financial Statements and Item 1A. Risk Factors — Liquidity.

Regulation and Supervision

AIG's insurance subsidiaries, in common with other insurers, are subject to regulation and supervision by the states and jurisdictions in which they do business. In the U.S., the NAIC has developed Risk-Based Capital (RBC) requirements. RBC relates an individual insurance company's statutory surplus to the risk inherent in its overall operations.

In preparing both its 2004 and 2005 audited statutory financial statements for its Domestic General Insurance companies, AIG agreed with the relevant state regulatory authorities on the statutory accounting treatment of the various items requiring adjustment or restatement. With respect to the 2004 audited statutory financial statements, these adjustments and restatements reduced previously reported General Insurance statutory surplus at December 31, 2004 by approximately \$3.5 billion, to approximately \$20.6 billion. With respect to the 2005 audited statutory financial statements, the state regulators permitted the Domestic General Insurance companies to record a \$724 million reduction to opening statutory surplus as of January 1, 2005.

AIG's insurance subsidiaries file financial statements prepared in accordance with statutory accounting practices prescribed or

permitted by domestic and foreign insurance regulatory authorities. The principal differences between statutory financial statements and financial statements prepared in accordance with U.S. GAAP for domestic companies are that statutory financial statements do not reflect DAC, some bond portfolios may be carried at amortized cost, assets and liabilities are presented net of reinsurance, policyholder liabilities are valued using more conservative assumptions and certain assets are non-admitted.

In connection with the filing of the 2005 statutory financial statements for AIG's Domestic General Insurance companies, AIG agreed with the relevant state insurance regulators on the statutory accounting treatment of various items. The regulatory authorities have also permitted certain of the domestic and foreign insurance subsidiaries to support the carrying value of their investments in certain non-insurance and foreign insurance subsidiaries by utilizing the AIG audited consolidated financial statements to satisfy the requirement that the U.S. GAAP-basis equity of such entities be audited. In addition, the regulatory authorities have permitted the Domestic General Insurance companies to utilize audited financial statements prepared on a basis of accounting other than U.S. GAAP to value investments in joint ventures, limited partnerships and hedge funds. AIG has received similar permitted practices authorizations from insurance regulatory authorities in connection with the 2006 statutory financial statements. These permitted practices did not affect the Domestic General Insurance companies' compliance with minimum regulatory capital requirements.

Statutory capital of each company continued to exceed minimum company action level requirements following the adjustments, but AIG nonetheless contributed an additional \$750 million of capital into American Home effective September 30, 2005 and contributed a further \$2.25 billion of capital in February 2006 for a total of approximately \$3 billion of capital into Domestic General Insurance subsidiaries effective December 31, 2005. To enhance their current capital positions, AIG suspended dividends from the DBG companies from the fourth quarter 2005 through 2006, but AIG expects dividend payments will resume in the first quarter of 2007. AIG believes it has the capital resources and liquidity to fund any necessary statutory capital contributions.

As discussed above, various regulators have commenced investigations into certain insurance business practices. In addition, the OTS and other regulators routinely conduct examinations of AIG and its subsidiaries, including AIG's consumer finance operations. AIG cannot predict the ultimate effect that these investigations and examinations, or any additional regulation arising therefrom, might have on its business. Federal, state or local legislation may affect AIG's ability to operate and expand its various financial services businesses, and changes in the current laws, regulations or interpretations thereof may have a material adverse effect on these businesses.

AIG's U.S. operations are negatively affected under guarantee fund assessment laws which exist in most states. As a result of operating in a state which has guarantee fund assessment laws, a solvent insurance company may be assessed for certain obligations arising from the insolvencies of other insurance companies which operated in that state. AIG generally records

these assessments upon notice. Additionally, certain states permit at least a portion of the assessed amount to be used as a credit against a company's future premium tax liabilities. Therefore, the ultimate net assessment cannot reasonably be estimated. The guarantee fund assessments net of credits for 2006, 2005 and 2004, respectively, were \$97 million, \$124 million and \$118 million.

AIG is also required to participate in various involuntary pools (principally workers compensation business) which provide insurance coverage for those not able to obtain such coverage in the voluntary markets. This participation is also recorded upon notification, as these amounts cannot reasonably be estimated.

A substantial portion of AIG's General Insurance business and a majority of its Life Insurance & Retirement Services business are conducted in foreign countries. The degree of regulation and supervision in foreign jurisdictions varies. Generally, AIG, as well as the underwriting companies operating in such jurisdictions, must satisfy local regulatory requirements. Licenses issued by foreign authorities to AIG subsidiaries are subject to modification and revocation. Thus, AIG's insurance subsidiaries could be prevented from conducting future business in certain of the jurisdictions where they currently operate. AIG's international operations include operations in various developing nations. Both current and future foreign operations could be adversely affected by unfavorable political developments up to and including nationalization of AIG's operations without compensation. Adverse effects resulting from any one country may affect AIG's results of operations, liquidity and financial condition depending on the magnitude of the event and AIG's net financial exposure at that time in that country.

Foreign insurance operations are individually subject to local solvency margin requirements that require maintenance of adequate capitalization, which AIG complies with by country. In addition, certain foreign locations, notably Japan, have established regulations that can result in guarantee fund assessments. These have not had a material effect on AIG's financial condition or results of operations.

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At December 31, 2006, AIG's consolidated invested assets, primarily held by its subsidiaries, included \$26.8 billion in cash and short-term investments. Consolidated net cash provided from operating activities in 2006 amounted to \$6.8 billion. At the parent company level, liquidity management activities are conducted in a manner to preserve and enhance funding stability, flexibility, and diversity through the full range of potential operating environments and market conditions. AIG's primary sources of cash flow are dividends and other payments from its regulated and unregulated subsidiaries, as well as issuances of debt securities. Primary uses of cash flow are for debt service, subsidiary funding and shareholder dividend payments. Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements, including the funding of increased

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

dividends under AIG's new dividend policy and repurchases of common stock.

Insurance Operations

The liquidity of the combined insurance operations is derived both domestically and abroad. The combined insurance operating cash flow is derived from two sources, underwriting operations and investment operations. Cash flow from underwriting operations includes periodic premium collections, including policyholders' contract deposits, and paid loss recoveries, less reinsurance premiums, losses, benefits, and acquisition and operating expenses. Generally, there is a time lag from when premiums are collected and, when as a result of the occurrence of events specified in the policy, the losses and benefits are paid. Investment cash flow is primarily derived from interest and dividends received and includes realized capital gains net of realized capital losses.

In addition to the combined insurance operating cash flow, AIG's insurance operations held \$11.2 billion in cash and short-term investments at December 31, 2006. Operating cash flow and the cash and short-term balances held provided AIG's insurance operations with a significant amount of liquidity. This liquidity is available, among other things, to purchase predominately high quality and diversified fixed income securities and, to a lesser extent, marketable equity securities, and to provide mortgage loans on real estate, policy loans, and collateral loans. This cash flow coupled with proceeds of approximately \$126 billion from the maturities, sales and redemptions of fixed income securities and from the sale of equity securities was used to purchase approximately \$161 billion of fixed income securities and marketable equity securities during 2006.

See also Operating Review — General Insurance Operations — General Insurance Net Investment Income and Life Insurance & Retirement Services Operations — Life Insurance & Retirement Services Net Investment Income and Realized Capital Gains (Losses) herein.

General Insurance

General Insurance operating cash flow is derived from underwriting and investment activities. With respect to General Insurance operations, if paid losses accelerated beyond AIG's ability to fund such paid losses from current operating cash flows, AIG might need to liquidate a portion of its General Insurance investment portfolio and/or arrange for financing. Potential events causing such a liquidity strain could be the result of several significant catastrophic events occurring in a relatively short period of time. Additional strain on liquidity could occur if the investments liquidated to fund such paid losses were sold into a depressed market place and/or reinsurance recoverable on such paid losses became uncollectible or collateral supporting such reinsurance recoverable significantly decreased in value.

Life Insurance & Retirement Services

Life Insurance & Retirement Services operating cash flow is derived from underwriting and investment activities. If a substan-

tial portion of the Life Insurance & Retirement Services operations bond portfolio diminished significantly in value and/or defaulted, AIG might need to liquidate other portions of its Life Insurance & Retirement Services investment portfolio and/or arrange financing. Potential events causing such a liquidity strain could be the result of economic collapse of a nation or region in which Life Insurance & Retirement Services operations exist, nationalization, terrorist acts, or other economic or political upheaval. In addition, a significant rise in interest rates leading to a major increase in policyholder surrenders could also create a liquidity strain.

Financial Services

AIG's major Financial Services operating subsidiaries consist of AIGFP, ILFC, AGF and AIGCFG. Sources of funds considered in meeting the liquidity needs of AIGFP's operations include GIAs, issuance of long-term and short-term debt, proceeds from maturities, sales of securities available for sale and securities and spot commodities leased or sold under repurchase agreements. ILFC, AGF and AIGCFG utilize the commercial paper markets, bank loans and bank credit facilities as sources of liquidity. ILFC and AGF also fund in the domestic and international capital markets without reliance on any guarantee from AIG. An additional source of liquidity for ILFC is the use of export credit facilities. AIGCFG also uses wholesale and retail bank deposits as sources of funds. On occasion, AIG has provided equity capital to ILFC, AGF and AIGCFG and provides intercompany loans to AIGCFG.

Asset Management

Asset Management operating cash flow is derived primarily from investment income in connection with domestic and foreign GICs and from the collection of various forms of investment management fees, brokerage commissions and custody fees earned from affiliated and unaffiliated clients. Investment management fees are typically asset-based fees collected on a periodic basis, while brokerage commissions and custody fees are more transaction driven and received on a continual basis. Asset Management also derives cash from the realization of gains earned through its investment partnership holdings and collects various forms of incentive management fees. These incentive management fees, which are typically based on the appreciation and/or realization of gains on managed assets, are generally received in the form of carried interest earned from sponsored funds managed on behalf of clients. Asset Management's spread-based investment business derives cash from the investment income and the sale of invested assets backing these contract liabilities.

AIGGIG incurs expenses with associated cash outflows from the operation of its business, including costs related to portfolio management and related back and middle office costs. In addition, cash is used in association with investment warehousing activities wherein AIGGIG funds and holds an investment for the benefit of a future investment vehicle.

Cash needs for the spread-based investment business are principally the result of GIC maturities. Significant blocks of the GIC portfolio will mature over the next five years. AIG utilizes asset liability matching to control liquidity risks associated with

this business. In addition, AIG believes that its products incorporate certain restrictions which encourage persistency, limiting the magnitude of unforeseen surrenders in the GIC portfolio.

Liquidity for Asset Management operations can be affected by significant credit or geopolitical events that might cause a delay in fund closings, securitizations or an inability of AIG's clients to fund their capital commitments. AIGGIG has relied upon AIG from time to time in order to fund certain liquidity requirements associated with investment warehousing. In addition, AIG Global Real Estate maintains several external credit lines in order to fund its ongoing property development and construction related activities.

AIG (Parent Company)

The liquidity of the parent company is principally derived from its subsidiaries. The primary sources of cash flow are dividends and other payments from its regulated and unregulated subsidiaries, as well as issuance of debt securities. Primary uses of cash flow are for debt service, subsidiary funding, shareholder dividend payments and purchases of outstanding shares of common stock. In 2006, AIG Parent collected \$2.1 billion in dividends and other payments from subsidiaries and issued \$6.6 billion in debt securities excluding MIP and Series AIGFP debt. AIG Parent also made interest payments totaling \$232 million, made \$2.9 billion in capital contributions to subsidiaries (principally \$2.3 billion to DBG), and paid \$1.6 billion in dividends to shareholders in 2006. No share repurchases were made by AIG Parent in 2006.

AIG funds its short-term working capital needs through commercial paper issued by AIG Funding. As of December 31, 2006, AIG Funding had \$4.8 billion of commercial paper outstanding with an average maturity of 28 days. As additional liquidity, AIG and AIG Funding maintain revolving credit facilities that, as of December 31, 2006, had an aggregate of \$5.8 billion available to be drawn, which are summarized above under Revolving Credit Facilities.

At the parent company level, liquidity management activities are conducted in a manner intended to preserve and enhance funding stability, flexibility, and diversity through the full range of

potential operating environments and market conditions. Assessing liquidity risk involves forecasting of cash inflows/outflows on both a short- and long-term basis. Corporate Treasury is responsible for formulating the parent company's liquidity and contingency planning efforts, as well as for execution of AIG's specific funding activities. Through active liquidity management, AIG seeks to retain stable, reliable and cost-effective funding sources. In addition to current liquidity requirements, factors which affect funding decisions include market conditions, prevailing interest rates and the desired maturity profile of liabilities. The objectives of contingency planning are to ensure maintenance of appropriate liquidity during normal and stress periods, to measure and project funding requirements during periods of stress, and to manage access to funding sources. Diversification of funding sources is an important element of AIG's liquidity risk management approach.

AIG's liquidity could be impaired by an inability to access the capital markets or by unforeseen significant outflows of cash. This situation may arise due to circumstances that AIG may be unable to control, such as a general market disruption or an operational problem that affects third parties or AIG. Regulatory and other legal restrictions may limit AIG's ability to transfer funds freely, either to or from its subsidiaries. In particular, many of AIG's subsidiaries, including its insurance subsidiaries, are subject to laws and regulations that authorize regulatory bodies to block or reduce the flow of funds to the parent holding company, or that prohibit such transfers altogether in certain circumstances. These laws and regulations may hinder AIG's ability to access funds that it may need to make payments on its obligations. Because of the wide geographic profile of AIG's regulated subsidiaries, management believes that these cash flows represent a diversified source of liquidity for AIG. For a further discussion of the regulatory environment in which AIG subsidiaries operate and other issues affecting AIG's liquidity, see Item 1A. Risk Factors.

Invested Assets

AIG's investment strategy is to invest primarily in high quality securities while maintaining diversification to avoid significant exposure to issuer, industry and/or country concentrations.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

The following tables summarize the composition of AIG's invested assets by segment, at December 31, 2006 and 2005:

<i>(in millions)</i>	General Insurance	Life Insurance & Retirement Services	Financial Services	Asset Management	Other	Total
2006						
Fixed maturities:

* At December 31, 2005, approximately 70 percent and 30 percent of invested assets were held in domestic and foreign investments, respectively.

General Insurance Invested Assets

In AIG's General Insurance business, the duration of liabilities for long-tail casualty lines is greater than other lines. As differentiated from the Life Insurance & Retirement Services companies, the focus is not on asset-liability matching, but on preservation of capital and growth of surplus.

Fixed income holdings of the Domestic General Insurance companies are comprised primarily of tax-exempt securities, which provide attractive risk-adjusted after-tax returns. These high quality municipal investments have an average rating of high AA.

Fixed income assets held in Foreign General Insurance are of high quality and short to intermediate duration, averaging 4.2 years compared to 7.2 years for those in Domestic General Insurance.

While reserves are invested in conventional fixed income securities in Domestic General Insurance, a modest portion of surplus is allocated to large capitalization, high-dividend, public equity strategies and to alternative investments, including private equity and hedge funds. These investments have provided a

combination of added diversification and attractive long-term returns.

General Insurance invested assets grew by \$21.3 billion, or 22 percent, during 2006 as bond holdings grew by \$17 billion, or 24 percent. Listed equity holdings remained essentially flat at \$6.5 billion.

Life Insurance & Retirement Services Invested Assets

With respect to Life Insurance & Retirement Services, AIG's investment strategy is to produce cash flows greater than maturing insurance liabilities. AIG actively manages the asset-liability relationship in its foreign operations, as it has been doing throughout AIG's history, even though certain territories lack qualified long-term investments or certain local regulatory authorities may impose investment restrictions. For example, in several Southeast Asian countries, the duration of investments is shorter than the effective maturity of the related policy liabilities.

Therefore, there is risk that the reinvestment of the proceeds at

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

the maturity of the initial investments may be at a yield below that of the interest required for the accretion of the policy liabilities. Additionally, there exists a future investment risk associated with certain policies currently in-force which will have premium receipts in the future. That is, the investment of these future premium receipts may be at a yield below that required to meet future policy liabilities.

In 2006, new money investment rates generally increased in the U.S., Japan and Taiwan, and were generally unchanged in Thailand. In regard to in-force business, management focus is required in both the investment and product management process to maintain an adequate yield to match the interest necessary to support future policy liabilities. Business strategies continue to evolve to maintain profitability of the overall business. In some countries, new products are being introduced with minimal investment guarantees resulting in a shift toward investment linked savings products and away from traditional savings products with higher guarantees.

The investment of insurance cash flows and reinvestment of the proceeds of matured securities and coupons requires active management of investment yields while maintaining satisfactory investment quality and liquidity.

AIG may use alternative investments in certain foreign jurisdictions where interest rates remain low and there are limited long-dated bond markets, including equities, real estate and foreign currency denominated fixed income instruments to extend the duration or increase the yield of the investment portfolio to more closely match the requirements of the policyholder liabilities and DAC recoverability. This strategy has been effectively used in Japan and more recently by Nan Shan in Taiwan. In Japan, foreign assets, excluding those matched to foreign liabilities, were approximately 30 percent of statutory assets, which is below the maximum allowable percentage under current local regulation. Foreign assets comprised approximately 32 percent of Nan Shan's invested assets at December 31, 2006, slightly below the maximum allowable percentage under current local regulation. The majority of Nan Shan's in-force policy portfolio is traditional life and endowment insurance products with implicit interest rate guarantees. New business with lower interest rate guarantees are gradually reducing the overall interest requirements, but asset portfolio yields have declined faster due to the prolonged low interest rate environment. As a result, although the investment margins for a large block of in-force policies are negative, the block remains profitable because the mortality and expense margins presently exceed the negative investment spread. In response to the low interest rate environment and the volatile exchange rate of the NT dollar, Nan Shan is emphasizing new products with lower implied guarantees, including participating endowments and investment linked products. Although the risks of a continued low interest rate environment coupled with a volatile NT dollar could increase net liabilities and require additional capital to maintain adequate local solvency margins, Nan Shan currently believes it has adequate resources to meet all future policy obligations.

AIG actively manages the asset-liability relationship in its domestic operations. This relationship is more easily managed through the availability of qualified long-term investments.

A number of guaranteed benefits, such as living benefits or guaranteed minimum death benefits, are offered on certain variable life and variable annuity products. AIG manages its exposure resulting from these long-term guarantees through reinsurance or capital market hedging instruments.

AIG invests in equities for various reasons, including diversifying its overall exposure to interest rate risk. Available for sale bonds and equity securities are subject to declines in fair value. Such declines in fair value are presented in unrealized appreciation or depreciation of investments, net of taxes, as a component of Accumulated other comprehensive income. Declines that are determined to be other-than-temporary are reflected in income in the period in which the intent to hold the securities to recovery no longer exists. See Valuation of Invested Assets herein. Generally, insurance regulations restrict the types of assets in which an insurance company may invest. When permitted by regulatory authorities and when deemed necessary to protect insurance assets, including invested assets, from adverse movements in foreign currency exchange rates, interest rates and equity prices, AIG and its insurance subsidiaries may enter into derivative transactions as end users to hedge their exposures. For a further discussion of AIG's use of derivatives, see Risk Management — Credit Risk Management — Derivatives herein.

In certain jurisdictions, significant regulatory and/or foreign governmental barriers exist which may not permit the immediate free flow of funds between insurance subsidiaries or from the insurance subsidiaries to AIG parent. For a discussion of these restrictions, see Item 1. Business — Regulation.

Life Insurance & Retirement Services invested assets grew by \$37.0 billion, or 10 percent, during 2006 as bond holdings grew by \$15.1 billion, or 6 percent, and listed equity holdings grew by \$6.7 billion, or 41 percent. For a discussion of credit risk exposures, see Risk Management — Credit Risk Management herein.

Financial Services Invested Assets

ILFC

The cash used for the purchase of flight equipment is derived primarily from the proceeds of ILFC's debt financings. The primary sources for the repayment of this debt and the related interest expense are ILFC's cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. During 2006, ILFC acquired flight equipment costing \$6.0 billion. For a further discussion of ILFC's borrowings, see Operating Review — Financial Services Operations — Aircraft Leasing and Capital Resources — Borrowings herein.

At December 31, 2006, ILFC had committed to purchase 254 new aircraft deliverable from 2007 through 2015 for an estimated aggregate purchase price of \$19.0 billion. As of February 22, 2007, ILFC has entered into leases for all of the new aircraft to be delivered in 2007, and 64 of 171 of the new aircraft to be delivered subsequent to 2007. ILFC will be required to find customers for any aircraft currently on order and any aircraft to be

ordered, and it must arrange financing for portions of the purchase price of such equipment. ILFC has been successful to date both in placing its new aircraft on lease or under sales contract and obtaining adequate financing, but there can be no assurance that such success will continue in future environments.

Capital Markets

Capital Markets derivative transactions are carried at market value or at estimated fair value when market prices are not readily available. AIGFP reduces its economic risk exposure through similarly valued offsetting transactions including swaps, trading securities, options, forwards and futures. The estimated fair values of these transactions represent assessments of the present value of expected future cash flows. These transactions would be exposed to liquidity risk if AIGFP were required to sell or close out the transactions prior to maturity. AIG believes that the effect of any such event would not be significant to AIG's financial condition or its overall liquidity. For a further discussion on the use of derivatives by Capital Markets, see Operating Review — Financial Services Operations — Capital Markets and Risk Management — Derivatives herein and Note 19 of Notes to Consolidated Financial Statements.

AIGFP uses the proceeds from the issuance of notes and bonds and GIAs to invest in a diversified portfolio of securities, including securities available for sale, at market, and derivative transactions. The funds may also be invested in securities purchased under agreements to resell. The proceeds from the disposal of the aforementioned securities available for sale and securities purchased under agreements to resell are used to fund the maturing GIAs or other AIGFP financings, or invest in new assets. For a further discussion of AIGFP's borrowings, see Capital Resources — Borrowings herein.

Securities available for sale is predominately a diversified portfolio of high grade fixed income securities, where the individual securities have varying degrees of credit risk. At December 31, 2006, the average credit rating of this portfolio was in the AA+ category or the equivalent thereto as determined through rating agencies or internal review. AIGFP has also entered into credit derivative transactions to economically hedge its credit risk associated with \$128 million of these securities. Securities deemed below investment grade at December 31, 2006 amounted to approximately \$340 million in fair value, representing 0.7 percent of the total AIGFP securities available for sale. There have been no significant downgrades through February 15, 2007. If its securities available for sale portfolio were to suffer significant default and the collateral held declined significantly in value with no replacement or the credit default swap counterparty failed to perform, AIGFP could have a liquidity strain. AIG guarantees AIGFP's payment obligations, including its debt obligations.

AIGFP's exposure management objective is to minimize interest rate, currency, commodity and equity risks associated with its securities available for sale. That is, when AIGFP purchases a security for its securities available for sale investment portfolio, it simultaneously enters into an offsetting internal hedge such that the payment terms of the hedging transaction offset the payment

terms of the investment security, which achieves the economic result of converting the return on the underlying security to U.S. dollar LIBOR plus or minus a spread based on the underlying profit on each security on the initial trade date. The market risk associated with such internal hedges is managed on a portfolio basis, with third-party hedging transactions executed as necessary. As hedge accounting treatment was not achieved in 2006, the unrealized gains and losses on the derivative transactions with unaffiliated third parties were reflected in operating income. The unrealized gains and losses on the underlying securities available for sale resulting from changes in interest rates and currency rates and commodity and equity prices were included in Accumulated other comprehensive income, or in operating income, as appropriate. When a security is sold, the realized gain or loss with respect to this security is then included in operating income.

Securities purchased under agreements to resell are treated as collateralized financing transactions. AIGFP takes possession of or obtains a security interest in securities purchased under agreements to resell.

AIGFP owns inventories in certain commodities in which it trades, and may reduce the exposure to market risk through the use of swaps, forwards, futures, and option contracts. Physical commodities held in AIGFP's wholly owned broker-dealer subsidiary are recorded at fair value. All other commodities are recorded at the lower of cost or market value.

Trading securities, at fair value, and securities and spot commodities sold but not yet purchased, at fair value, are marked to market daily with the unrealized gain or loss being recognized in income at that time. These trading securities are purchased and sold as necessary to meet the risk management objectives of Capital Markets operations.

The gross unrealized gains and gross unrealized losses of Capital Markets operations included in the financial services assets and liabilities at December 31, 2006 were as follows:

<i>(in millions)</i>	Gross Unrealized Gains	Gross Unrealized Losses
Securities available for sale, at fair value ^(a)	\$ 1,575	\$ 282
Unrealized gain/loss on swaps, options and forward transactions ^(b)	19,252	11,401

(a) See Note 8(i) of Notes to Consolidated Financial Statements.

(b) These amounts are also presented as the respective balance sheet amounts.

The senior management of AIG defines the policies and establishes general operating parameters for Capital Markets operations. AIG's senior management has established various oversight committees to monitor on an ongoing basis the various financial market, operational and credit risks attendant to the Capital Markets operations. The senior management of AIGFP reports the results of its operations to and reviews future strategies with AIG's senior management.

AIGFP actively manages the exposures to limit potential losses, while maximizing the rewards afforded by these business opportu-

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

nities. In doing so, AIGFP must continually manage a variety of exposures, including credit, market, liquidity, operational and legal risks.

Consumer Finance

AIG's Consumer Finance operations provide a wide variety of consumer finance products, including real estate and other consumer loans, credit card loans, retail sales finance and credit-related insurance to customers both domestically and overseas, particularly in emerging markets. These products are funded through a combination of deposits and various borrowings, including commercial paper and medium-term notes. AIG's Consumer Finance operations are exposed to credit risk and risk of loss resulting from adverse fluctuations in interest rates. Over half of the finance receivables are real estate loans which are substantially collateralized by the related properties.

With respect to credit losses, the allowance for losses is maintained at a level considered adequate to absorb anticipated credit losses existing in that portfolio as of the balance sheet date.

Asset Management Invested Assets

Asset Management invested assets are primarily comprised of assets supporting AIG's spread-based investment business, which includes AIG's MIP and domestic GIC programs as well as AIG's foreign spread-based business. Asset Management invested assets also include assets attributable to certain consolidated partnerships and variable interest entities. A portion of these consolidated assets is offset by minority interest liabilities attributable to unaffiliated investor entities in AIG-sponsored investment vehicles.

The spread-based investment business strategy is to produce cash flows greater than maturing liabilities. The asset-liability relationship is managed actively, leveraging the organization's experience in the Life Insurance & Retirement Services segment. Margins are emphasized while maintaining satisfactory investment quality and liquidity. The invested assets are predominantly fixed income securities for the spread-based investment business.

Asset Management invested assets grew by \$14.3 billion, or 20 percent during 2006, although aggregate Asset Management fixed income investments remained essentially flat at \$37.7 billion. The growth in invested assets was primarily attributable to increases in short-term investments, securities lending collateral and real estate investments. These increases were primarily driven by continued growth of the MIP and AIG's foreign spread-based business, and the growth of AIG's institutional Asset Management business. These increases were partially offset by the decrease in assets associated with the runoff of the domestic GIC program.

Valuation of Invested Assets

AIG has the ability to hold any fixed maturity security to its stated maturity, including those fixed maturity securities classified as

available for sale. Therefore, the decision to sell any such fixed maturity security classified as available for sale reflects the judgment of AIG's management that the security sold is unlikely to provide, on a relative value basis, as attractive a return in the future as alternative securities entailing comparable risks. With respect to distressed securities, the sale decision reflects management's judgment that the risk-discounted anticipated ultimate recovery is less than the value achievable on sale.

Traded Securities

The valuation of AIG's investment portfolio involves obtaining a market value for each security. The source for the fair value is generally from market exchanges or dealer quotations, with the exception of nontraded securities. AIG considers nontraded securities to mean certain fixed income investments, certain structured securities, direct private equities, limited partnerships, and hedge funds.

Nontraded Securities

The aggregate carrying value of AIG's nontraded securities at December 31, 2006 was approximately \$67 billion. The methodology used to estimate fair value of nontraded fixed income investments is by reference to traded securities with similar attributes and using a matrix pricing methodology. This methodology takes into account such factors as the issuer's industry, the security's rating and tenor, its coupon rate, its position in the capital structure of the issuer, and other relevant factors. The change in fair value is recognized as a component of Accumulated other comprehensive income, net of tax.

For certain structured securities, the carrying value is based on an estimate of the security's future cash flows pursuant to the requirements of Emerging Issues Task Force Issue No. 99-20, "Recognition of Interest Income and Impairment on Purchased and Retained Beneficial Interests in Securitized Financial Assets." The change in carrying value is recognized in income.

Hedge funds and limited partnerships in which AIG holds in the aggregate less than a five percent interest are carried at fair value. The change in fair value is recognized as a component of Accumulated other comprehensive income, net of tax.

With respect to hedge funds and limited partnerships in which AIG holds in the aggregate a five percent or greater interest, or less than a five percent interest but where AIG has more than a minor influence over the operations of the investee, AIG accounts for these investments using the equity method. The changes in such net asset values are included in operating income.

AIG obtains the fair value of its investments in limited partnerships and hedge funds from information provided by the general partner or manager of each of these investments, the accounts of which generally are audited on an annual basis.

Each of these investment categories is regularly tested to determine if impairment in value exists. Various valuation techniques are used with respect to each category in this determination.

Portfolio Review

AIG periodically evaluates its securities for other-than-temporary impairments in valuation. As a matter of policy, the determination that a security has incurred an other-than-temporary decline in value and the amount of any loss recognition requires the judgment of AIG's management and a continual review of its investments. See Note 1(e) of Notes to Consolidated Financial Statements for further information on AIG's policy.

Once a security has been identified as other-than-temporarily impaired, the amount of such impairment is determined by reference to that security's contemporaneous market price and recorded as a charge to earnings.

As a result of these policies, AIG recorded, in realized capital gains (losses), other-than-temporary impairment pretax losses of

\$944 million, \$598 million and \$684 million in 2006, 2005 and 2004, respectively. Just over half of other-than-temporary impairment charges in 2006 were a result of the decision not to hold these investment securities until they fully recover in value. The writedowns recorded in 2005 and 2004 were primarily the result of adverse changes in the creditworthiness of the issuer.

No impairment charge with respect to any one single credit was significant to AIG's consolidated financial condition or results of operations, and no individual impairment loss exceeded 1.0 percent of consolidated net income for 2006.

Excluding the other-than-temporary impairments noted above, the changes in fair value for AIG's available for sale portfolio, which constitutes the vast majority of AIG's investments, were recorded in Accumulated other comprehensive income as unrealized gains or losses, net of tax.

At December 31, 2006, aggregate pretax unrealized gains were \$17.5 billion, while the pretax unrealized losses with respect to investment grade bonds, non-investment grade bonds and equity securities were \$3.6 billion, \$134 million and \$159 million, respectively. Aging of the pretax unrealized losses with respect to these securities, distributed as a percentage of cost relative to unrealized loss (the extent by which the fair value is less than amortized cost or cost), including the number of respective items, was as follows:

Aging (dollars in millions)	Less than or equal to 20% of Cost ^(a)			Greater than 20% to 50% of Cost ^(a)			Greater than 50% of Cost ^(a)			Total		
	Unrealized Cost ^(a)	Loss	Items	Unrealized Cost ^(a)	Loss	Items	Unrealized Cost ^(a)	Loss	Items	Unrealized Cost ^(a)	Loss ^(b)	Items

(a) For bonds, represents amortized cost.

(b) As more fully described above, upon realization, certain realized losses will be charged to participating policyholder accounts, or realization will result in a current decrease in the amortization of DAC.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

At December 31, 2006, the fair value of AIG's fixed maturities and equity securities aggregated \$496.0 billion. At December 31, 2006, aggregate unrealized gains after taxes for fixed maturity and equity securities were \$11.4 billion. At December 31, 2006, the aggregate unrealized losses after taxes of fixed maturity and equity securities were approximately \$2.5 billion.

The effect on net income of unrealized losses after taxes will be mitigated upon realization because certain realized losses will be charged to participating policyholder accounts, or realization will result in current decreases in the amortization of certain DAC.

At December 31, 2006, unrealized losses for fixed maturity securities and equity securities did not reflect any significant industry concentrations.

The amortized cost of fixed maturities available for sale in an unrealized loss position at December 31, 2006, by contractual maturity, is shown below:

(in millions)	Amortized Cost
Due in one year or less	\$ 6,139
Due after one year through five years	31,839
Due after five years through ten years	51,084
Due after ten years	64,634
Total	\$153,696

For the year ended December 31, 2006, the pretax realized losses incurred with respect to the sale of fixed maturities and equity securities were \$1.3 billion. The aggregate fair value of securities sold was \$43 billion, which was approximately 97 percent of amortized cost. The average period of time that securities sold at a loss during the year ended December 31, 2006 were trading continuously at a price below book value was approximately four months. See Risk Management — Investments herein for an additional discussion of investment risks associated with AIG's investment portfolio.

Risk Management Overview

AIG believes that strong risk management practices and a sound internal control environment are fundamental to its continued success and profitable growth. Failure to manage risk properly could expose AIG to significant losses, regulatory issues and a damaged reputation.

The major risks to which AIG is exposed include the following:

- **Insurance risk** — the potential loss resulting from ultimate claims and expenses exceeding held reserves.
- **Credit risk** — the potential loss arising from an obligor's inability or unwillingness to meet its obligations to AIG.
- **Market risk** — the potential loss arising from adverse fluctuations in interest rates, foreign currencies, equity and commodity prices, and their levels of volatility.
- **Operational risk** — the potential loss resulting from inadequate or failed internal processes, people, and systems, or from external events.

AIG senior management establishes the framework, principles and guidelines for risk management. The business executives are

responsible for establishing and implementing risk management processes and responding to the individual needs and issues within their business, including risk concentrations within their business segments.

Corporate Risk Management

AIG's major risks are addressed at the corporate level through the Enterprise Risk Management Department (ERM). ERM is headed by AIG's Chief Risk Officer (CRO) and is responsible for assisting AIG's business leaders, executive management and the Board of Directors to identify, assess, quantify, manage and mitigate the risks incurred by AIG. An important goal of ERM is to ensure that once appropriate governance, authorities, procedures and policies have been established, aggregated risks do not result in inappropriate concentrations.

Senior management defines the policies, has established general operating parameters for its global businesses and has established various oversight committees to monitor the risks attendant to its businesses:

- The Credit Risk Committee (CRC) is responsible for (i) approving credit risk policies and procedures for use throughout AIG; (ii) delegating credit authority to business unit credit officers and select business unit managers; (iii) approving transaction requests and limits for corporate, sovereign and cross-border credit exposures that exceed the delegated authorities; (iv) establishing and maintaining AIG's risk rating process for corporate, financial and sovereign obligors; and (v) regular reviews of credit risk exposures in the portfolios of all credit-incurring business units.
- The Financial Risk Committee (FRC) oversees AIG's market risk exposures to interest rates, foreign exchange and equity prices and provides strategic direction for AIG's asset-liability management. The FRC meets monthly and acts as a central mechanism for AIG senior management to review comprehensive information on AIG's financial exposures and to exercise broad control over these exposures.
- The Foreign Exchange Committee (FEC) monitors trends in foreign exchange rates, reviews AIG's foreign exchange exposures, and provides recommendations on foreign currency asset allocation and remittance hedging.
- The Derivatives Review Committee (DRC) provides an independent review of any proposed derivative transaction or program not otherwise managed by AIGFP. The DRC examines, among other things, the nature and purpose of the derivative transaction, its potential credit exposure, if any, and the estimated benefits.
- The Complex Structured Finance Transaction Committee (CSFTC) has the authority and responsibility to review and approve proposed transactions that could subject AIG to heightened legal, reputational, accounting, or regulatory risk (CSFTs). The CSFTC provides guidance to and monitors the activities of transaction review committees (TRCs) which have been established in all major business units. TRCs have the responsibility to identify, review and refer CSFTs to the CSFTC.

Credit Risk Management

Credit risk is one of AIG's largest single business risks and AIG devotes considerable resources, expertise and controls to managing its credit exposures. Credit risk is defined as the risk that AIG's customers or counterparties are unable or unwilling to repay their contractual obligations when they come due. Credit risk may also be manifested: (i) through the downgrading of credit ratings of counterparties whose credit instruments AIG may be holding, or, in some cases, insuring, causing the value of the assets to decline or insured risks to rise and (ii) as cross-border risk where a country (sovereign government risk) or one or more non-sovereign obligors within a country are unable to repay an obligation or are unable to provide foreign exchange to service a credit or equity exposure incurred by another AIG business unit located outside that country.

AIG's credit risks are managed at the corporate level by the Credit Risk Management Department (CRM) whose primary role is to support and supplement the work of the CRC. CRM is headed by AIG's Chief Credit Officer (CCO), who reports to AIG's CRO. AIG's CCO is primarily responsible for the development and maintenance of credit risk policies and procedures approved by the CRC. In discharging this function CRM has the following responsibilities:

- Manage the approval process for all requests for credit limits, program limits and transactions.
- Approve delegated credit authorities to CRM credit executives and business unit credit officers.
- Aggregate globally all credit exposure data by counterparty, country and industry and report risk concentrations regularly to the CRC.
- Administer regular portfolio credit reviews of all investment, derivative and credit-incurring business units.
- Develop methodologies for quantification and assessment of credit risks, including the establishment and maintenance of AIG's internal risk rating process.
- Approve appropriate credit reserves and methodologies at the business unit and enterprise levels.

AIG closely monitors and controls its company-wide credit risk concentrations and attempts to avoid unwanted or excessive risk accumulations, whether funded or unfunded. To minimize the level of credit risk in certain circumstances, AIG may require collateral, guarantees and/or reinsurance support such as letters of credit.

AIG defines its aggregate credit exposures to a counterparty as the sum of its fixed maturities, loans, derivatives (mark to market), deposits (in the case of financial institutions) and the specified credit equivalent exposure to certain insurance products which embody credit risk.

The following table presents AIG's largest credit exposures at December 31, 2006 as a percentage of total shareholders' equity.

Category	Risk Rating ^(a)	Credit Exposure as a percentage of Total Shareholders' Equity
<i>Investment Grade:</i>		
10 largest combined	AA (weighted average) ^(b)	73.5%
Single largest non-sovereign (financial institution)	AA	7.4
Single largest corporate	AAA	5.6
Single largest sovereign	AA-	14.3
<i>Non-Investment Grade:</i>		
Single largest sovereign	BB	1.4
Single largest non-sovereign	BB	0.6

(a) Risk rating is based on external ratings, or equivalent, based on AIG's internal risk rating process.

(b) Six are highly-rated financial institutions and three are investment-grade rated sovereigns; none is rated lower than BBB+ or its equivalent.

AIG closely controls its aggregate cross-border exposures to avoid excessive concentrations in any one country or regional group of countries. AIG defines its cross-border exposure to include both cross-border credit exposures and its large cross-border investments in its own international subsidiaries. Nine countries had cross-border exposures in excess of 10 percent of total shareholders' equity; seven are AAA-rated and two are AA-rated.

In addition, AIG closely monitors its industry concentrations, the risks of which are often mitigated by the breadth and scope of AIG's international operations.

- AIG's single largest industry credit exposure is to the highly-rated global financial institutions sector, accounting for 72 percent of total shareholders' equity at December 31, 2006.
- AIG's other industry credit concentrations in excess of 10 percent of total shareholders' equity at December 31, 2006 exist

to the following industries (in descending order by approximate size):

- global telecommunications companies;
- U.S. residential mortgages;
- global life insurance carriers;
- U.S.-based regional financial institutions;
- U.S. commercial mortgages;
- global reinsurance firms; and
- global securities firms.

The CRC reviews quarterly concentration reports in all categories listed above as well as credit trends by risk ratings. The CRC may adjust limits to provide reasonable assurance that AIG does not incur excessive levels of credit risk and that AIG's credit risk profile is properly calibrated across business units.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Market Risk Management

AIG seeks to minimize market risks by matching the market risks in its assets with the market risks in its liabilities. Nevertheless, AIG does have net exposure to market risks, primarily within its insurance businesses. These asset-liability exposures are predominantly structural in nature, and not the result of speculative positioning to take advantage of short-term market opportunities. The Market Risk Management Department (MRM), which reports to the CRO, is responsible for control and oversight of market risks in all aspects of AIG's financial services, insurance, and investment activities.

AIG's market exposures arise from the following:

- AIG is a globally diversified enterprise with capital deployed in a variety of currencies. Capital deployed in AIG's overseas businesses, when converted into U.S. dollars for financial reporting purposes, constitutes a "long foreign currency/short U.S. dollar" market exposure on AIG's balance sheet. Similarly, overseas earnings denominated in foreign currency also represent a "long foreign currency/short U.S. dollar" market exposure on AIG's income statement.
- Much of AIG's domestic capital is invested in fixed income or equity securities, leading to exposures to U.S. yields and equity markets.
- Several of AIG's Foreign Life subsidiaries operate in developing markets where maturities on longer-term life insurance liabilities exceed the maximum maturities of available local currency assets.

AIG analyzes market risk using various statistical techniques including Value at Risk (VaR). VaR is a summary statistical measure that uses the estimated volatility and correlation of market factors to calculate the maximum loss that could occur over a defined period of time given a certain probability. VaR measures not only the size of individual exposures but also the interaction between different market exposures, thereby providing a portfolio approach to measuring market risk. Substantially similar VaR methodologies are used to determine capital requirements for market risk within AIG's economic capital framework.

While VaR models are relatively sophisticated, their results are limited by the assumptions and parameters used in these models. AIG believes that statistical models alone do not provide a reliable method of monitoring and controlling market risk. Therefore, such models are tools and do not substitute for the experience or judgment of senior management.

Insurance, Asset Management and Non-Trading Financial Services VaR

AIG has performed one comprehensive VaR analysis across all of its non-trading businesses, and a separate VaR analysis for its trading business at AIGFP. The comprehensive VaR is categorized by AIG business segment (General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management) and also by market risk factor (interest rate, currency and equity).

For the insurance segments, assets included are invested assets (excluding real estate and investment income due and accrued), and liabilities included are reserve for losses and loss expenses, reserve for unearned premiums, future policy benefits for life and accident and health insurance contracts and other policyholders' funds. For financial services companies, loans and leases represent the majority of assets represented in the VaR calculation, while bonds and notes issued represent the majority of liabilities.

AIG calculated the VaR with respect to net fair values as of December 31, 2006 and 2005. The VaR number represents the maximum potential loss as of those dates that could be incurred with a 95 percent confidence (i.e., only five percent of historical scenarios show losses greater than the VaR figure) within a one-month holding period. AIG uses the historical simulation methodology that entails repricing all assets and liabilities under explicit changes in market rates within a specific historical time period. AIG uses the most recent three years of historical market information for interest rates, foreign exchange rates, and equity index prices. For each scenario, each transaction was repriced. Segment and AIG-wide scenario values are then calculated by netting the values of all the underlying assets and liabilities.

The following table presents the year-end, average, high and low VaRs on a diversified basis and of each component of market risk for each of AIG's non-trading investments as of December 31, 2006 and 2005. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

(in millions)	As of December 31	For the Year Ended December 31, 2006			As of December 31	For the Year Ended December 31, 2005

Equity	8	9	13	8	13	75	178	13

AIG's total VaR declined from \$5.2 billion at the end of 2005 to \$5.1 billion at the end of 2006, even as the diversified VaR in each of the Insurance segments grew modestly. Two factors contributed to the decline in total VaR. A reduction in interest rate volatility in many currencies moderated AIG's interest rate risk profile, and higher correlations between the long asset duration exposure in U.S. fixed income and long liability duration exposures in many emerging markets provided a greater diversification benefit during 2006. Lower VaR figures in both the Financial Services and Asset Management segments during 2006 were the result of a combination of closer duration matching and a reduction of interest rate volatility.

Operational Risk Management

AIG has established a corporate-level Operational Risk Management Department (ORM) to oversee AIG's operational risk management practices. The Director of ORM reports to the CRO. ORM

is responsible for establishing the framework, principles and guidelines for operational risk management. This framework also utilizes the risk management efforts of AIG's compliance, legal and regulatory and internal audit functions. ORM also manages compliance with the requirements of the Sarbanes-Oxley Act of 2002.

Each business is responsible for implementing the components of AIG's operational risk management program to ensure that effective operational risk management practices are utilized throughout AIG. These components include governance, risk and control self assessment, risk event data analysis, and key risk indicators. The program currently incorporates the following:

- *Governance*

Strong governance sets the appropriate tone to enable effective management of the risks inherent in each of AIG's businesses, as well as aid in the management of reputational risk. Each AIG business is responsible for maintaining appropriate governance over its management of operational risk. This respon-

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

sibility includes developing and implementing policies, procedures, management oversight processes, and other governance-related activities consistent with AIG's overall operational risk management process.

- *Risk and Control Self Assessment*

AIG's operational risk management program includes a self assessment process. The self assessment process is used to identify key operational risks in a business and evaluate the effectiveness of existing controls to mitigate those risks, as well as develop corrective action plans for identified deficiencies.

Insurance Risk Management

Reinsurance

AIG uses reinsurance programs for its general insurance risks as follows: (i) facultative to cover large individual exposures; (ii) quota share treaties to cover specific books of business; (iii) excess of loss treaties to cover large losses; and (iv) catastrophe treaties to cover certain catastrophes including earthquake, flood, wind and terror. AIG's Reinsurance Security Department conducts periodic detailed assessments of the reinsurance markets and current and potential reinsurers, both foreign and domestic. Such assessments may include, but are not limited to, identifying if a reinsurer is appropriately licensed and has sufficient financial capacity, and evaluating the local economic environment in which a foreign reinsurer operates.

AIG enters into intercompany reinsurance transactions, primarily through AIRCO, for its General Insurance and Life Insurance & Retirement Services operations. AIG enters into these transactions as a sound and prudent business practice in order to maintain underwriting control and spread insurance risk among AIG's various legal entities. AIG generally obtains letters of credit from third-party financial institutions in order to obtain statutory recognition of these intercompany reinsurance transactions. At December 31, 2006, approximately \$4.0 billion of letters of credit were outstanding to cover intercompany reinsurance transactions with AIRCO or other General Insurance subsidiaries.

Although reinsurance arrangements do not relieve AIG subsidiaries from their direct obligations to insureds, an efficient and effective reinsurance program substantially limits AIG's exposure to potentially significant losses. AIG continually evaluates the reinsurance markets and the relative attractiveness of various arrangements for coverage, including structures such as catastrophe bonds, insurance risk securitizations and "sidecar" and similar vehicles.

Effective July 15, 2006, Lexington and Concord Re Limited (Concord Re), a "sidecar" reinsurer that was established exclusively to reinsure Lexington, entered into a quota share reinsurance agreement covering the U.S. commercial property insurance

business written by Lexington. Concord Re was capitalized with approximately \$730 million through the issuance of equity securities and loans from third party investors. AIG and its subsidiaries invest in a wide variety of investment vehicles managed by third parties where AIG has no control over investment decisions. Accordingly, there can be no assurance that such vehicles do not, or will not, hold securities of Concord Re.

Reinsurance Recoverable

The Reinsurance Security Department reviews the nature of the risks ceded to reinsurers and the requirements for credit risk mitigants. For example, in AIG's treaty reinsurance contracts, AIG frequently includes provisions that require a reinsurer to post collateral when a referenced event occurs. Furthermore, AIG limits its unsecured exposure to reinsurers through the use of credit triggers, which include, but are not limited to, insurer financial strength rating downgrades, declines in policyholders surplus below predetermined levels or reaching maximum limits of reinsurance recoverable. In addition, AIG's CRC reviews all reinsurer exposures and credit limits and approves most large reinsurer credit limits that represent actual or potential credit concentrations. AIG believes that no exposure to a single reinsurer represents an inappropriate concentration of risk to AIG, nor is AIG's business substantially dependent upon any single reinsurance contract.

AIG's consolidated general reinsurance assets amounted to \$21.8 billion at December 31, 2006. AIG manages the credit risk in its reinsurance relationships by transacting with reinsurers that it considers financially sound, and when necessary AIG holds substantial collateral in the form of funds, securities and/or irrevocable letters of credit. This collateral can be drawn on for amounts that remain unpaid beyond specified time periods on an individual reinsurer basis. At December 31, 2006, approximately 54 percent of the general reinsurance assets were from unauthorized reinsurers. Many of these balances were collateralized, permitting statutory recognition. Additionally, with the approval of insurance regulators, AIG posted approximately \$2 billion of letters of credit issued by commercial banks in favor of certain Domestic General Insurance companies to permit those companies statutory recognition of balances otherwise uncollateralized at December 31, 2006. The remaining 46 percent of the general reinsurance assets were from authorized reinsurers. The terms authorized and unauthorized pertain to regulatory categories, not creditworthiness. At December 31, 2006, approximately 85 percent of the balances with respect to authorized reinsurers are from reinsurers rated A (excellent) or better, as rated by A.M. Best, or A (strong) or better, as rated by S&P. These ratings are measures of financial strength.

The following table provides information for each reinsurer representing in excess of five percent of AIG's general reinsurance assets at December 31, 2006.

<i>(in millions)</i>	S&P Rating	A.M. Best Rating	Gross Reinsurance Assets	Percent of General Reinsurance Assets, Net	Collateral Held ^(a)	Uncollateralized Reinsurance Assets
Reinsurer:						
Swiss Reinsurance Group	AA-	A+	\$2,032	9.3%	\$339	\$1,693
Berkshire Hathaway Insurance Group	AAA	A++	\$1,575	7.2%	\$144	\$1,431
Munich Reinsurance Group	AA-	A+	\$1,268	5.8%	\$341	\$ 927
Lloyd's Syndicates — Lloyd's of London ^(b)	A	A	\$1,250	5.7%	\$101	\$1,149

(a) Excludes collateral held in excess of applicable treaty balances.

(b) Excludes Equitas gross reinsurance assets that are unrated, which are less than five percent of AIG's general reinsurance assets.

At December 31, 2006, consolidated general reinsurance assets of \$21.8 billion include reinsurance recoverables for paid losses and loss expenses of \$1.0 billion and \$17.3 billion with respect to the ceded reserve for losses and loss expenses, including ceded losses IBNR (ceded reserves) and \$3.5 billion of ceded reserve for unearned premiums. The ceded reserve for losses and loss expenses represent the accumulation of estimates of ultimate ceded losses including provisions for ceded IBNR and loss expenses. The methods used to determine such estimates and to establish the resulting ceded reserves involve significant judgment in projecting the frequency and severity of losses over multiple years and are continually reviewed and updated by management. Any adjustments thereto are reflected in income currently. It is AIG's belief that the ceded reserves for losses and loss expenses at December 31, 2006 were representative of the ultimate losses recoverable. In the future, as the ceded reserves continue to develop to ultimate amounts, the ultimate loss recoverable may be greater or less than the reserves currently ceded.

AIG maintains an allowance for estimated unrecoverable reinsurance of \$536 million. The allowance was reduced substantially during 2006, as uncollectible amounts due from individual reinsurers were charged off against the allowance, primarily as a result of the balance sheet reconciliation remediation process; in addition, a portion of the allowance was reclassified to align it with the related receivable. The reduction for charge offs was partially offset by additional provisions totaling \$147 million during 2006. At December 31, 2006, AIG had no significant reinsurance recoverables due from any individual reinsurer that was financially troubled (i.e., liquidated, insolvent, in receivership or otherwise subject to formal or informal regulatory restriction).

Segment Risk Management

Other than as described above, AIG manages its business risk oversight activities through its business segments.

Insurance Operations

AIG's multiple insurance businesses conducted on a global basis expose AIG to a wide variety of risks with different time horizons. These risks are managed throughout the organization, both centrally and locally, through a number of procedures, including: (i) pre-launch approval of product design, development and

distribution; (ii) underwriting approval processes and authorities; (iii) exposure limits with ongoing monitoring; (iv) modeling and reporting of aggregations and limit concentrations at multiple levels (policy, line of business, product group, country, individual/group, correlation and catastrophic risk events); (v) compliance with financial reporting and capital and solvency targets; (vi) extensive use of reinsurance, both internal and third-party; and (vii) review and establishment of reserves.

AIG has two major categories of insurance risks as follows:

- **General Insurance** — risks covered include property, casualty, fidelity/surety, management liability and mortgage insurance. Risks in the general insurance segment are managed through aggregations and limitations of concentrations at multiple levels: policy, line of business, correlation and catastrophic risk events.
 - **Life Insurance & Retirement Services** — risks include mortality and morbidity in the insurance-oriented products and insufficient cash flows to cover contract liabilities in the retirement savings-oriented products. In the Life Insurance & Retirement Services segment, risk is aggregated and limited by individual/group, product group, country and catastrophic risk events.
- AIG closely manages insurance risk by overseeing and controlling the nature and geographic location of the risks in each line of business underwritten, the terms and conditions of the underwriting and the premiums charged for taking on the risk. Concentrations of risk primarily arise from external events, such as wind, flood, earthquake, terrorism and pandemics, which are analyzed using various modeling techniques.

AIG is a major purchaser of reinsurance for its insurance operations. The use of reinsurance facilitates insurance risk management (retention, volatility, concentrations) and capital planning locally (branch and subsidiary). Pooling of AIG's reinsurance risks enables AIG to purchase reinsurance more efficiently at a consolidated level, manage global counterparty risk and relationships and manage global catastrophe risks, both for the General Insurance and Life Insurance & Retirement Services businesses.

General Insurance

In General Insurance, underwriting risks are managed through the application approval process, exposure limitations as well as through exclusions, coverage limits and reinsurance. The risks covered by AIG are managed through limits on delegated under-

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

writing authority, the use of sound underwriting practices, pricing procedures and the use of actuarial analysis as part of the determination of overall adequacy of provisions for insurance contract liabilities.

A primary goal of AIG in managing its General Insurance operations is to achieve an underwriting profit. To achieve this goal, AIG must be disciplined in its risk selection, and premiums must be adequate and terms and conditions appropriate to cover the risk accepted.

Catastrophe Exposures

The nature of AIG's business exposes it to various catastrophic risk events in which multiple losses across multiple lines of business can occur in any calendar year. In order to control this exposure, AIG uses a combination of techniques, including setting aggregate limits in key business units, monitoring and modeling accumulated exposures and purchasing catastrophe reinsurance to supplement its other reinsurance protections.

Natural disasters such as hurricanes, earthquakes and other catastrophes have the potential to adversely affect AIG's operating results. Other risks, such as an outbreak of a pandemic disease, such as the Avian Influenza A Virus (H5N1), could adversely affect AIG's business and operating results to an extent that may be only partially offset by reinsurance programs.

AIG evaluates catastrophic events and assesses the probability of occurrence and magnitude of catastrophic events through the use of state-of-the-art industry recognized models, among other techniques. AIG supplements these models by periodically monitoring the risk exposure of AIG's worldwide General Insurance operations and adjusting such models accordingly. Following is an

overview of modeled losses associated with the more significant natural perils, which includes exposures for DBG, Personal Lines, Foreign General (other than Ascot), HSB and 21st Century. Transatlantic and Ascot utilize a different model, and their combined results are presented separately below. The modeled results assume that all reinsurers fulfill their obligations to AIG in accordance with their terms.

It is important to recognize that there is no standard methodology to project the possible losses from total property and workers compensation exposures. Further, there are no industry standard assumptions to be utilized in projecting these losses. The use of different methodologies and assumptions could materially change the projected losses. Therefore, these modeled losses may not be comparable to estimates made by other companies.

These estimates are inherently uncertain and may not reflect AIG's maximum exposures to these events. It is highly likely that AIG's losses will vary, perhaps significantly, from these estimates.

The modeled results provided in the table below were based on the aggregate exceedence probability (AEP) losses which represent total property and workers compensation losses that may occur in any single year from one or more natural events. The model, which has been updated to reflect 2005 catastrophes, generally used exposure data as of mid-year 2006 and the current reinsurance program structure. The values provided were based on 100-year return period losses, which have a one percent likelihood of being exceeded in any single year. Thus, the model projects that there is a one percent probability that AIG could incur in any year losses in excess of the modeled amounts for these perils.

<i>(in millions)</i>	Gross	Net of Reinsurance	Net, After Income Taxes	Percentage of Total Shareholders' Equity at December 31, 2006
Natural Peril:				
Earthquake	\$3,676	\$2,474	\$1,608	1.6%
Tropical Cyclone*	\$4,780	\$3,196	\$2,077	2.0%

* Includes hurricanes, typhoons and other wind-related events.

The combined earthquake and tropical cyclone 100-year return period modeled losses for Ascot and Transatlantic together are estimated to be \$1.1 billion, on a gross basis, \$761 million, net of reinsurance, and \$494 million, net after income taxes, or 0.5 percent of total shareholders' equity at December 31, 2006.

In addition, AIG evaluates potential single event earthquake and hurricane losses that may be incurred. The single events utilized are a subset of potential events identified and utilized by Lloyd's⁽¹⁾ and referred to as Realistic Disaster Scenarios (RDSs). The purpose of this analysis is to utilize these RDSs to provide a reference frame and place into context the model results. However, it is important to note that the specific events used for this analysis do not necessarily represent the worst case loss that AIG could incur from this type of an event in these regions. The losses associated with the RDSs are included in the table below.

Single event modeled property and workers compensation losses to AIG's worldwide portfolio of risk for key geographic areas. Gross values represent AIG's liability after the application of policy limits and deductibles, and net values represent losses after all reinsurance is applied.

<i>(in millions)</i>	Gross	Net of Reinsurance
Natural Peril:		
Miami Hurricane	\$4,493	\$2,798
San Francisco Earthquake	4,029	2,613
Northeast Hurricane	3,711	2,592
Los Angeles Earthquake	3,508	2,440
Gulf Coast Hurricane	2,609	1,717
Japanese Earthquake	553	150
European Windstorm	230	83
Japanese Typhoon	178	143

(1) Lloyd's Realistic Disaster Scenarios, Scenario Specifications, April 2006

The specific international RDS events do not necessarily correspond to AIG's international exposures. As a result, AIG runs its own simulations where statistical return period losses associated with the written exposure specific to AIG provide the basis for monitoring risk. Based on these simulations, the 100-year return period for Japanese Earthquake is \$296 million gross, and \$120 million net, the 100-year return period for European Windstorm is \$269 million gross, and \$80 million net, and the 100-year return period for Japanese Typhoon is \$306 million gross, and \$252 million net.

ACTUAL RESULTS IN ANY PERIOD ARE LIKELY TO VARY, PERHAPS MATERIALLY, FROM THE MODELED SCENARIOS, AND THE OCCURRENCE OF ONE OR MORE SEVERE EVENTS COULD HAVE A MATERIAL ADVERSE EFFECT ON AIG'S FINANCIAL CONDITION, RESULTS OF OPERATIONS AND LIQUIDITY.

Measures Implemented to Control Hurricane and Earthquake Catastrophic Risk

Catastrophic risk from the earthquake and hurricane perils is proactively managed through reinsurance programs, and aggregate accumulation monitoring. Catastrophe reinsurance is purchased by AIG from financially sound reinsurers. Recoveries under this program, along with other non-catastrophic reinsurance protections, are reflected in the net values provided in the tables above. In addition to catastrophic reinsurance programs, hurricane and earthquake exposures are controlled by periodically monitoring aggregate exposures. The aggregate exposures are calculated by compiling total liability within AIG defined hurricane and earthquake catastrophe risk zones and therefore represent the maximum that could be lost in any individual zone. These aggregate accumulations are tracked over time in order to monitor both long and short term trends. AIG's major property writers, Lexington and AIG private client group, have also implemented catastrophe-related underwriting procedures and manage their books at an account level. Lexington individually models most accounts prior to binding in order to specifically quantify catastrophic risk for each account.

Terrorism

Exposure to loss from terrorist attack is controlled by limiting the aggregate accumulation of workers compensation and property insurance that is underwritten within defined target locations. Modeling is used to provide projections of probable maximum loss by target location based upon the actual exposures of AIG policyholders.

Terrorism risk is monitored to manage AIG's exposure. AIG shares its exposures to terrorism risks under the Terrorism Risk Insurance Act (TRIA). During 2006, AIG's deductible under TRIA was approximately \$3.3 billion, with a 10 percent share of certified terrorism losses in excess of the deductible. As of January 1, 2007, the deductible increased to approximately \$4.0 billion, with a 15 percent share of certified terrorism losses in excess of the deductible. Without an extension by Congress, TRIA will sunset at December 31, 2007. Should TRIA not be renewed, AIG would expect to reassess and modify its underwriting guidelines and retention levels as appropriate.

Life Insurance & Retirement Services

In Life Insurance & Retirement Services, the primary risks are (i) underwriting, which represents the exposure to loss resulting from the actual policy experience emerging adversely in comparison to the assumptions made in the product pricing associated with mortality, morbidity, termination and expenses; and (ii) investment risk which represents the exposure to loss resulting from the cash flows from the invested assets being less than the cash flows required to meet the obligations of the expected policy and contract liabilities and the necessary return on investments. AIG businesses manage these risks through exposure limitations and the active management of the asset-liability relationship in their operations. The emergence of significant adverse experience would require an adjustment to DAC and benefit reserves that could have a material adverse effect on AIG's consolidated results of operations for a particular period.

AIG's Foreign Life Insurance & Retirement Services companies generally limit their maximum underwriting exposure on life insurance of a single life to approximately \$1.7 million of coverage. AIG's Domestic Life Insurance & Retirement Services companies limit their maximum underwriting exposure on life insurance of a single life to \$10 million of coverage in certain circumstances by using yearly renewable term reinsurance. In Life Insurance & Retirement Services, the reinsurance programs provide risk mitigation per policy, per individual life and group covers and for catastrophic risk events.

Pandemic Influenza

The potential for a pandemic influenza outbreak has received much recent attention. While outbreaks of the Avian Flu continue to occur among poultry or wild birds in a number of countries in Asia, Europe, including the U.K., and Africa, transmission to humans has been rare to date. If the virus mutates to a form that can be transmitted from human to human, it has the potential to spread rapidly worldwide. If such an outbreak were to take place, early quarantine and vaccination could be critical to containment.

The contagion and mortality rates of any mutated H5N1 virus that can be transmitted from human to human are highly speculative. AIG continues to monitor the developing facts. A significant global outbreak could have a material adverse effect on Life Insurance & Retirement Services operating results and liquidity from increased mortality and morbidity rates. AIG continues to analyze its exposure to this serious threat and has engaged an external risk management firm to model loss scenarios associated with an outbreak of Avian Flu. Using a 1 in 100-year return period, AIG estimates its after-tax net losses under its life insurance policies due to Avian Flu at less than 1 percent of consolidated shareholders' equity as of December 31, 2006. This estimate was calculated over a 3-year period, although the majority of the losses would be incurred in the first year. The modeled losses calculated were based on 2005 policy data representing approximately 90 percent of AIG's individual life, group life and credit life books of business, net of reinsurance. This estimate does not include claims that could be made under other policies, such as business interruption or general liability

Management’s Discussion and Analysis of Financial Condition and Results of Operations *Continued*

policies, and does not reflect estimates for losses resulting from disruption of AIG’s own business operations that may arise out of such a pandemic. The model used to generate this estimate has only recently been developed. The reasonableness of the model and its underlying assumptions cannot readily be verified by reference to comparable historical events. As a result, AIG’s actual losses from a pandemic influenza outbreak are likely to vary significantly from those predicted by the model.

Investments

AIG’s fixed maturity investments totaled \$417.9 billion at December 31, 2006, compared to \$385.7 billion at December 31, 2005. AIG’s investment strategies are tailored to the specific business needs of each operating unit based on considerations that include the local market, liability duration and cash flow characteristics, rating agency and regulatory capital considerations, legal investment limitations, tax optimization, diversification and credit limits. These strategies are intended to produce a reasonably stable and predictable return throughout the economic cycle, without undue risk or volatility.

At December 31, 2006, approximately 57 percent of the fixed maturities investments were domestic securities. Approximately 39 percent of such domestic securities were rated AAA by one or more of the principal rating agencies. Approximately five percent were below investment grade or not rated.

A significant portion of the foreign fixed income portfolio is rated by Moody’s, S&P or similar foreign rating services. Rating services are not available in all overseas locations. The CRC closely reviews the credit quality of the foreign portfolio’s non-rated fixed income investments. At December 31, 2006, approximately 20 percent of the foreign fixed income investments were either rated AAA or, on the basis of AIG’s internal analysis, were equivalent from a credit standpoint to securities so rated. Approximately five percent were below investment grade or not rated at that date. A large portion of the foreign fixed income portfolio is sovereign fixed maturity securities supporting the policy liabilities in the country of issuance.

The credit ratings of fixed maturity investments, other than those of AIGFP, at December 31, 2006 were:

	2006
AAA	31%
AA	26
A	23
BBB	14
Below investment grade	4
Non-rated	2
Total	100%

AIG uses asset-liability matching as a management tool worldwide in the life insurance business to determine the composition of the invested assets and appropriate marketing strategies. AIG’s objective is to maintain a matched asset-liability structure. However, in certain markets, the absence of long-dated fixed income instruments may preclude a matched asset-liability position in those markets. In addition, AIG may occasionally

determine that it is economically advantageous to be temporarily in an unmatched position.

Financial Services

AIG’s Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance.

Aircraft Leasing

AIG’s Aircraft Leasing operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to scheduled and charter airlines and companies associated with the airline industry. Risks inherent in this business, and which are managed at the business unit level, include: (i) the risk that there will be no market for the aircraft acquired; (ii) the risk that aircraft cannot be placed with lessees; (iii) the risk of nonperformance by lessees; and (iv) the risk that aircraft and related assets cannot be disposed of at the time and in a manner desired.

Capital Markets

The Capital Markets operations of AIG are conducted primarily through AIGFP, which engages as principal in standard and customized interest rate, currency, equity, commodity, energy and credit products with top-tier corporations, financial institutions, governments, agencies, institutional investors and high-net-worth individuals throughout the world.

The senior management of AIG defines the policies and establishes general operating parameters for Capital Markets operations. AIG’s senior management has established various oversight committees to monitor on an ongoing basis the various financial market, operational and credit risk attendant to the Capital Markets operations. The senior management of AIGFP reports the results of its operations to and reviews future strategies with AIG’s senior management.

AIGFP actively manages its exposures to limit potential losses, while maximizing the rewards afforded by these business opportunities. In doing so, AIGFP must continually manage a variety of exposures including credit, market, liquidity, operational and legal risks.

AIGFP enters into credit derivative transactions in the ordinary course of its business. The majority of AIGFP’s credit derivatives require AIGFP to provide credit protection on a designated portfolio of loans or debt securities. AIGFP provides such credit protection on a “second loss” basis, under which AIGFP’s payment obligations arise only after credit losses in the designated portfolio exceed a specified threshold amount or level of “first losses.” The threshold amount of credit losses that must be realized before AIGFP has any payment obligation is negotiated by AIGFP for each transaction to provide that the likelihood of any payment obligation by AIGFP under each transaction is remote, even in severe recessionary market scenarios.

In certain cases, the credit risk associated with a designated portfolio is tranching into different layers of risk, which are then analyzed and rated by the credit rating agencies. Typically, there

will be an equity layer covering the first credit losses in respect of the portfolio up to a specified percentage of the total portfolio, and then successive layers that are rated, generally a BBB-rated layer, an A-rated layer, an AA-rated layer, and one or more AAA-rated layers. In transactions that are rated, the risk layer or tranche that is immediately junior to the threshold level above which AIGFP's payment obligation would generally arise is rated AAA by the rating agencies. In transactions that are not rated, AIGFP applies the same risk criteria for setting the threshold level for its payment obligations. Therefore, the risk layer assumed by AIGFP with respect to the designated portfolio in these transactions is often called the "super senior" risk layer, defined as the layer of credit risk senior to a risk layer that has been rated AAA by the credit rating agencies, or if the transaction is not rated, equivalent thereto.

AIGFP continually monitors the underlying portfolios to determine whether the credit loss experience for any particular portfolio has caused the likelihood of AIGFP having a payment obligation under the transaction to be greater than super senior risk. AIGFP maintains the ability opportunistically to economically hedge specific securities in a portfolio and thereby further limit its exposure to loss and has hedged outstanding transactions in this manner on occasion. At December 31, 2006, the notional amount with respect to the Capital Markets credit derivative portfolio (including the super senior transactions) was \$483.6 billion.

Financial Services securities available for sale is predominately a diversified portfolio of high grade fixed income securities. At December 31, 2006, the average credit rating of this portfolio was in the AA+ category or the equivalent thereto as determined through rating agencies or internal review. AIGFP has also entered into credit derivative transactions to economically hedge its credit risk associated with \$128 million of these securities. Securities deemed below investment grade at December 31, 2006 amounted to approximately \$340 million in fair value representing 0.7 percent of the total AIGFP securities available for sale. There have been no significant downgrades through February 15, 2007. If its securities available for sale portfolio were to suffer significant default and the collateral held declined significantly in value with no replacement or the credit default swap counterparty failed to perform, AIGFP could have a liquidity strain. AIG guarantees AIGFP's payment obligations, including its debt obligations.

AIGFP's management objective is to minimize interest rate, currency, commodity and equity risks associated with its securities available for sale. That is, when AIGFP purchases a security for its securities available for sale investment portfolio, it simultaneously enters into an offsetting internal hedge such that the payment terms of the hedging transaction offset the payment terms of the investment security, which achieves the economic result of converting the return on the underlying security to U.S. dollar LIBOR plus or minus a spread based on the underlying profit on each security on the initial trade date. The market risk

associated with such internal hedges is managed on a portfolio basis, with third-party hedging transactions executed as necessary. These hedging activities did not qualify for hedge accounting treatment under FAS 133.

Securities purchased under agreements to resell are treated as collateralized financing transactions. AIGFP takes possession of or obtains a security interest in securities purchased under agreements to resell.

A counterparty may default on any obligation to AIG, including a derivative contract. Credit risk is a consequence of extending credit and/or carrying trading and investment positions. Credit risk exists for a derivative contract when that contract has a positive fair value to AIG. The maximum potential exposure will increase or decrease during the life of the derivative commitments as a function of maturity and market conditions. To help manage this risk, AIGFP's credit department operates within the guidelines set by the CRC. Transactions which fall outside these pre-established guidelines require the specific approval of the CRC. It is also AIG's policy to establish reserves for potential credit impairment when necessary.

In addition, AIGFP utilizes various credit enhancements, including letters of credit, guarantees, collateral, credit triggers, credit derivatives and margin agreements to reduce the credit risk relating to its outstanding financial derivative transactions. AIGFP requires credit enhancements in connection with specific transactions based on, among other things, the creditworthiness of the counterparties, and the transaction's size and maturity. Furthermore, AIGFP generally seeks to enter into agreements that have the benefit of set-off and close-out netting provisions. These provisions provide that, in the case of an early termination of a transaction, AIGFP can set-off its receivables from a counterparty against its payables to the same counterparty arising out of all covered transactions. As a result, where a legally enforceable netting agreement exists, the fair value of the transaction with the counterparty represents the net sum of estimated positive fair values. The fair value of AIGFP's interest rate, currency, commodity and equity swaps, options, swaptions, and forward commitments, futures, and forward contracts approximated \$19.25 billion at December 31, 2006 and \$18.70 billion at December 31, 2005. Where applicable, these amounts have been determined in accordance with the respective close-out netting provisions.

AIGFP independently evaluates the counterparty credit quality by reference to ratings from rating agencies or, where such ratings are not available, by internal analysis consistent with the risk rating policies of the CRC. In addition, AIGFP's credit approval process involves pre-set counterparty and country credit exposure limits and, for particularly credit-intensive transactions, requires approval from the CRC. AIG estimates that the average credit rating of Capital Markets derivatives counterparties, measured by reference to the fair value of its derivative portfolio as a whole, is equivalent to the AA rating category.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

At December 31, 2006 and 2005, the distribution by counterparty credit quality with respect to the fair value of Capital Markets derivatives portfolios was as follows:

	Percentage of Total Fair Value	
	2006	2005
Counterparty credit quality:		
AAA	28%	24%
AA	41	43
A	19	21
BBB	11	9
Below investment grade	1	3
Total	100%	100%

Capital Markets Trading VaR

AIGFP maintains a very conservative market risk profile and minimizes risk in interest rates, equities, commodities and foreign exchange. Market exposures in option implied volatilities, correlations and basis risks are also minimized over time but those are the main types of market risks that AIGFP manages. As a result, AIGFP's operating income due to changes in market prices and rates is generally a very small percentage of its overall operating income.

The following table presents the year-end, average, high, and low VaRs on a diversified basis and of each component of market risk for Capital Markets operations for the years 2006 and 2005. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

(in millions)	As of December 31	For the Year Ended December 31, 2006			As of December 31	For the Year Ended December 31, 2005		
		Average	High	Low		Average	High	Low
Total AIG trading market risk:								
Diversified	\$4	\$4	\$7	\$3	\$5	\$4	\$7	\$3
Interest rate	2	2	3	1	2	2	3	1
Currency	1	1	3	1	1	1	1	—
Equity	3	3	4	2	3	2	5	—
Commodity	3	3	4	2	2	2	3	1

* In 2006, VaR calculations were changed from a 30-day holding period to a one-day holding period. Accordingly, the 2005 VaR amounts have been restated to reflect this change.

Consumer Finance

AIG's Consumer Finance operations provide a wide variety of consumer finance products, including real estate and other consumer loans, credit card loans, retail sales finance and credit-related insurance to customers both domestically and overseas, particularly in emerging markets. Consumer Finance operations include AGF as well as AIGCFG. AGF provides a wide variety of consumer finance products, including real estate loans, non-real estate loans, retail sales finance and credit-related insurance to customers in the United States, Puerto Rico and the U.S. Virgin Islands. AIGCFG, through its subsidiaries, is engaged in developing a multi-product consumer finance business with an emphasis on emerging markets.

Many of AGF's borrowers are non-prime or sub-prime. Current economic conditions, such as interest rate and employment levels, can have a direct effect on the borrowers' ability to repay

AIGFP's minimal reliance on market risk driven revenue is reflected in its VaR. AIGFP's VaR calculation is based on the interest rate, equity, commodity and foreign exchange risk arising from its portfolio. Because the market risk with respect to securities available for sale, at market, is substantially hedged, segregation of the financial instruments into trading and other than trading was not deemed necessary.

In the calculation of VaR for AIGFP, AIG uses the historical simulation methodology that entails repricing all transactions under explicit changes in market rates within a specific historical time period. AIGFP attempts to secure reliable and independent current market prices, such as published exchange prices, external subscription services such as Bloomberg or Reuters, or third-party broker quotes. When such prices are not available, AIGFP uses an internal methodology which includes extrapolation from observable and verifiable prices nearest to the dates of the transactions. Historically, actual results have not deviated from these models in any material respect.

AIGFP reports its VaR using a 95 percent confidence interval and a one-day holding period, facilitating risk comparison with AIGFP's trading peers and reflecting the fact that market risks can be actively assumed and offset in AIGFP's trading portfolio.

these loans. AGF manages the credit risk inherent in its portfolio by using credit scoring models at the time of credit applications, established underwriting criteria, and, in certain cases, individual loan reviews. AGF monitors the quality of the finance receivables portfolio and determines the appropriate level of the allowance for losses through its Credit Strategy and Policy Committee. This Committee bases its conclusions on quantitative analyses, qualitative factors, current economic conditions and trends, and each Committee member's experience in the consumer finance industry. Through 2006, the credit quality of AGF's finance receivables continued to be strong. However, declines in the strength of the U.S. housing market or economy may adversely affect the future credit quality of these receivables.

AIGCFG monitors the quality of its finance receivable portfolio and determines the appropriate level of the allowance for losses through several internal committees. These committees base their

conclusions on quantitative analysis, qualitative factors, current economic conditions and trends, political and regulatory implications, competition and the judgment of the committees' members.

AIG's Consumer Finance operations are exposed to credit risk and risk of loss resulting from adverse fluctuations in interest rates and payment defaults. Credit loss exposure is managed through a combination of underwriting controls, mix of finance receivables, collateral and collection efficiency. Large product programs are subject to CRC approval.

Over half of the finance receivables are real estate loans which are collateralized by the related properties. With respect to credit losses, the allowance for losses is maintained at a level considered adequate to absorb anticipated credit losses existing in that portfolio as of the balance sheet date.

Asset Management

AIG's Asset Management operations are exposed to various forms of credit, market and operational risks. Asset Management complies with AIG's corporate risk management guidelines and framework and is subject to periodic reviews by the CRC. In addition, transactions are referred to the Asset Management investment committees for approval of investment decisions.

The majority of the credit and market risk exposures within Asset Management results from the spread-based investment business and the investment activities of AIG Global Real Estate Investment Corp.

In the spread-based investment businesses, GIC and MIP, the primary risk is investment risk, which represents the exposure to loss resulting from the cash flows from the invested assets being less than the cash flows required to meet the obligations of the liabilities and the necessary return on investments. Credit risk is also a significant component of the investment strategy for these businesses. Market risk is taken in the form of duration and convexity risk. While AIG generally maintains a matched asset-liability relationship, it may occasionally determine that it is economically advantageous to be in an unmatched duration position. The risks in the spread-based businesses are managed through exposure limitations, active management of the investment portfolios and close oversight of the asset-liability relationship.

Within AIG Global Real Estate Investment Corp., AIG is exposed to the general conditions in global real estate markets and the credit markets. Such exposure can subject Asset Management to delays in real estate sales, additional carrying costs and in turn affect operating results within the segment. These risks are mitigated through the underwriting process, transaction and contract terms and conditions and portfolio diversification by type of project, sponsor, real estate market and country. AIG's exposure to real estate investments is monitored on an ongoing basis by the Asset Management real estate investment committee.

Economic Capital

Since mid 2005, AIG has been developing a firm-wide economic capital model to improve decision making and to enhance shareholder value. Economic Capital is the amount of capital the organization, its segments, profit centers, products or transac-

tions require to cover potential, unexpected losses within a confidence level consistent with the risk profile selected by management. The Economic Capital requirement can then be compared with the economic capital resources available to AIG.

The Economic Capital requirement is driven by exposures to risks and correlations among various types of risks. As a global financial conglomerate, AIG is exposed to various risks including underwriting, financial and operational risks. The Economic Capital initiative has modeled these risks into five major categories: property & casualty insurance risk, life insurance risk, market risk, credit risk and operational risk. Within each risk category, there are sub-risks that have been modeled in greater detail. The Economic Capital initiative also analyzes and includes diversification benefits within and across risk categories and business segments.

A primary objective of the Economic Capital initiative is to develop a comprehensive framework to discuss capital and performance on a risk-adjusted basis internally with AIG management and externally with the investment community, credit providers, regulators and rating agencies. Economic Capital analysis provides a framework to validate AIG's capital adequacy, to measure more precisely capital efficiency at various levels throughout the organization, to allocate capital consistently among AIG's businesses, to quantify the specific areas of diversification benefits and to assess relative economic value added by a business, product or transaction to AIG as a whole. The Economic Capital initiative will also be a component in developing a more efficient capital structure. Other key areas of Economic Capital applications include strategic decision-making for mergers, acquisitions and divestitures, risk retention, reinsurance and hedging strategies and product development and pricing.

During 2006, AIG developed a methodology framework that incorporates financial services industry best practices, maintains consistency with regulatory frameworks and reflects AIG's distinct global business and management strategies. By utilizing stochastic simulation techniques, where appropriate, AIG enhanced existing models or developed new ones through a collaborative effort among business executives, actuaries, finance specialists and risk professionals. Initial assessments of Economic Capital were made and AIG began reviewing its economic capital model methodology with the rating agencies.

The initial assessments were made at the corporate, segment and major business unit level, and detailed analyses of selected businesses and products were undertaken. AIG also developed assessments of diversification benefits across lines of business, geographic regions and risk categories. Given the breadth and global nature of AIG's businesses, these benefits were found to be significant.

The initial assessments have provided useful insight into the overall capital strength of the corporation and its segments and, to date, the initiative has introduced guidance concerning processes to assess economic risk and returns for selected issues, including funding and investment strategies for the MIP, product development, pricing, hedging for living benefits in the variable annuity business and asset-liability management strategies for life insurance products, particularly in Asian markets.

Management's Discussion and Analysis of Financial Condition and Results of Operations *Continued*

Throughout 2007, AIG will continue to enhance the methodology to provide assurance regarding the completeness and relevance of the model's results. AIG will continue discussions with the rating agencies concerning its enterprise risk management processes and the results of its new economic capital model for their consideration in the rating process. AIG's analysis and conclusions concerning the economic capital support of its segments and major business units will be further extended to include consideration for capital availability and mobility. The framework and process will increasingly provide assistance in management's decision-making concerning capital management and capital allocation, mergers, acquisitions and divestitures, risk retention, reinsurance and hedging strategies and product development and pricing.

Recent Accounting Standards

At the March 2004 meeting, the Emerging Issues Task Force (EITF) reached a consensus with respect to Issue No. 03-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments." On September 30, 2004, the FASB issued FASB Staff Position (FSP) EITF Issue 03-1-1, Effective Date of Paragraphs 10-20 of EITF Issue No. 03-1, "The Meaning of Other-Than-Temporary Impairment and its Application to Certain Investments." In November 2005, the FASB issued FSP FAS 115-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments," which replaces the measurement and recognition guidance set forth in Issue No. 03-1 and codifies certain existing guidance on impairment.

At the June 2005 meeting, the EITF reached a consensus with respect to Issue No. 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners have Certain Rights."

On June 29, 2005, the FASB issued Statement 133 Implementation Issues No. B38, "Embedded Derivatives: Evaluation of Net Settlement with Respect to the Settlement of a Debt Instrument through Exercise of an Embedded Put Option or Call Option" and No. B39, "Application of Paragraph 13(b) to Call Options That are Exercisable Only by the Debtor."

On September 19, 2005, the FASB issued Statement of Position 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts."

On February 16, 2006, the FASB issued FAS No. 155, "Accounting for Certain Hybrid Financial Instruments."

On January 17, 2007, the FASB issued Statement 133 Implementation Issue No. B40, "Embedded Derivatives: Application of Paragraph 13(b) to Securitized Interests in Prepayable Financial Assets" (Issue B40).

On March 27, 2006, the FASB issued FASB FTB 85-4-1, "Accounting for Life Settlement Contracts by Third-Party Investors" (FSP 85-4-1), an amendment of FTB 85-4, "Accounting for Purchases of Life Insurance."

On April 13, 2006, the FASB issued FSP FIN 46(R)-6, "Determining the Variability to be Considered in Applying FASB Interpretation No. 46(R)."

On July 13, 2006, the FASB issued FIN 48, "Accounting for Uncertainty in Income Taxes — an interpretation of FASB Statement No. 109" (FIN 48).

Effective January 1, 2006, AIG adopted the fair value recognition provisions of Statement of FAS No. 123R "Share-Based Payments" (FAS 123R). For further discussion of this recent accounting standard and its application to AIG, see Note 14 of Notes to Consolidated Financial Statements.

In September 2006, the FASB issued FAS No. 157, "Fair Value Measurements" (FAS 157).

In September 2006, the FASB issued FAS No. 158, "Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106 and 132(R)" (FAS 158).

In February 2007, the FASB issued FAS No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities" (FAS 159).

For further discussion of these recent accounting standards and their application to AIG, see Note 1(hh) of Notes to Consolidated Financial Statements.

Notes to Consolidated Financial Statements	110		

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of American International Group, Inc.:

We have completed integrated audits of American International Group, Inc.'s consolidated financial statements and of its internal control over financial reporting as of December 31, 2006, in accordance with the standards of the Public Company Accounting Oversight Board (United States). Our opinions, based on our audits, are presented below.

Consolidated Financial Statements and Financial Statement Schedules

In our opinion, the consolidated financial statements listed in the accompanying index present fairly, in all material respects, the financial position of American International Group, Inc. and its subsidiaries (AIG) at December 31, 2006 and 2005, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2006 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedules listed in the accompanying index present fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. These financial statements and financial statement schedules are the responsibility of AIG's management. Our responsibility is to express an opinion on these financial statements and financial statement schedules based on our audits. We conducted our audits of these statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit of financial statements includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As described in Notes 1, 14 and 15 to the consolidated financial statements, AIG changed its accounting for certain hybrid financial instruments, life settlement contracts and share based compensation as of January 1, 2006, and certain employee benefit plans as of December 31, 2006.

Internal Control Over Financial Reporting

Also, we have audited management's assessment, included in Management's Report on Internal Control Over Financial Reporting appearing under Item 9A, that AIG did not maintain effective internal control over financial reporting as of December 31, 2006 because of the effect of the material weakness relating to controls over income tax accounting, based on criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). AIG's management is responsible for maintaining effective internal control over financial reporting and for its assessment

of the effectiveness of internal control over financial reporting. Our responsibility is to express opinions on management's assessment and on the effectiveness of AIG's internal control over financial reporting based on our audit.

We conducted our audit of internal control over financial reporting in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. An audit of internal control over financial reporting includes obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we consider necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

A material weakness is a control deficiency, or a combination of control deficiencies, that results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected. As of December 31, 2006, a material weakness relating to the controls over income tax accounting has been identified and included in management's assessment.

Controls over income tax accounting: AIG did not maintain effective controls over the determination and reporting of certain components of the provision for income taxes and related income tax balances. Specifically, AIG did not maintain effective controls to review and monitor the accuracy of the components of the income tax provision calculations and related income tax balances and to monitor the differences between the income tax basis and the financial reporting basis of assets and liabilities to effectively

Report of Independent Registered Public Accounting Firm *Continued*

reconcile the differences to the deferred income tax balances. These control deficiencies resulted in adjustments to income tax expense, income taxes payable and deferred income tax asset and liability accounts in the 2006 annual and interim consolidated financial statements. Furthermore, these control deficiencies could result in a material misstatement of the annual or interim AIG consolidated financial statements that would not be prevented or detected. Accordingly, AIG management has concluded that these control deficiencies constitute a material weakness.

This material weakness was considered in determining the nature, timing, and extent of audit tests applied in our audit of the 2006 consolidated financial statements, and our opinion regarding the effectiveness of AIG's internal control over financial reporting does not affect our opinion on those consolidated financial statements.

In our opinion, management's assessment that AIG did not maintain effective internal control over financial reporting as of December 31, 2006 is fairly stated, in all material respects, based on criteria established in *Internal Control — Integrated Framework* issued by the COSO. Also, in our opinion, because of the effect of the material weakness described above on the achievement of the objectives of the control criteria, AIG has not maintained effective internal control over financial reporting as of December 31, 2006, based on criteria established in *Internal Control — Integrated Framework* issued by the COSO.

Notes to Consolidated Financial Statements

1. Summary of Significant Accounting Policies

Basis of Presentation

The consolidated financial statements include the accounts of AIG and its majority owned subsidiaries. AIG consolidates subsidiaries in which it holds a controlling financial interest. Entities that AIG does not consolidate but of which it holds 20 percent to 50 percent of the voting rights and/or has the ability to exercise significant influence are accounted for under the equity method.

Certain of AIG's foreign subsidiaries included in the consolidated financial statements report on a fiscal year ending November 30. The effect on AIG's consolidated financial condition and results of operations of all material events occurring after November 30 and prior to the applicable balance sheet date has been recorded.

The accompanying consolidated financial statements have been prepared in accordance with U.S. generally accepted accounting principles (GAAP). All material intercompany accounts and transactions have been eliminated.

Description of Business

See Note 2 herein for a description of AIG's businesses.

Use of Estimates

AIG considers its most critical accounting estimates to be those with respect to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts, recoverability of deferred policy acquisition costs (DAC), estimated gross profits for investment-oriented products, fair value determinations for certain Capital Markets assets and liabilities, other-than-temporary declines in the value of investments and flight equipment recoverability.

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting periods. Actual results could differ, possibly materially, from those estimates.

Revisions and Reclassifications

It was determined during 2006 that for certain deferred sales inducement assets, the asset and related amortization expense had historically been reported within deferred policy acquisition costs on the consolidated balance sheet and income statement. Under Statement of Position 03-1, "Accounting and Reporting by Insurance Enterprises for Certain Nontraditional Long-Duration Contracts and for Separate Accounts" (SOP 03-1), such assets should be classified separately from DAC and the amortization reported in benefit expense. Accordingly, the December 31, 2005 consolidated balance sheet reflects a revision of \$1.1 billion from DAC to other assets, and the consolidated income statement includes a revision from acquisition expense to policy benefit

expense of \$153 million and \$149 million in the years ended December 31, 2005 and 2004, respectively, to conform to the current year's presentation. This revision did not have any effect on consolidated pre-tax income, net income or shareholders' equity.

In 2006 AIG determined that certain products that were historically reported as separate account assets under SOP 03-1 should have been reported as general account assets. Accordingly, AIG revised the classification of approximately \$2.7 billion of assets from separate account assets in prior years to general account assets, and the same amount of liabilities from separate account liabilities to policyholders' contract deposits at December 31, 2006. As a result, Net investment income and Incurred policy losses and benefits each increased approximately \$258 million for the earnings on the general account assets that accrue directly to the benefit of the policyholders. This revision did not have any effect on consolidated income before income taxes, net income, or shareholders' equity for any period presented.

Certain reclassifications and format changes have been made to prior year amounts to conform to the current year presentation.

Accounting Policies

(a) Revenue Recognition and Expenses:

Premiums and other Considerations: Premiums for short duration contracts and considerations received from retailers in connection with the sale of extended service contracts are earned primarily on a pro rata basis over the term of the related coverage. The reserve for unearned premium includes the portion of premiums written and other considerations relating to the unexpired terms of coverage. Premiums for long duration insurance products and life contingent annuities are recognized as revenues when due. Estimates for premiums due but not yet collected are accrued. Consideration for universal life and investment-type products consist of policy charges for the cost of insurance, administration, and surrenders during the period. Policy charges collected with respect to future services are deferred and recognized in a manner similar to DAC related to such products.

Net Investment Income: Net investment income represents income primarily from the following sources in AIG's insurance operations:

- Accrued interest income, as well as amortization and accretion of premiums and discounts on bonds.
- Dividend income and distributions from common and preferred stock and other investments when receivable.
- Unrealized gains and losses from investments in trading securities and hybrid financial instruments.
- Earnings from hedge funds and limited partnership investments accounted for under the equity method.
- The difference between the carrying amount of a life settlement contract and the life insurance proceeds of the underlying life insurance policy recorded in income upon the death of the insured.

1. Summary of Significant Accounting Policies

Continued

Realized Capital Gains (Losses): Realized capital gains and losses are determined principally by specific identification. The realized capital gains and losses are generated primarily from the following sources (in AIG's insurance operations and Other category):

- Sales of fixed maturity securities, equity securities, real estate, investments in joint ventures and limited partnerships and other types of investments.
- Reductions to the cost basis of fixed maturities, equity securities and other invested assets for other-than-temporary impairments.
- Changes in fair value of derivatives used for other than hedging activities.
- Exchange gains and losses resulting from foreign currency transactions.

Other Income: Other income includes income from flight equipment, finance charges on consumer loans and income generated from asset management activities and from the operations of AIGFP.

Income from flight equipment under operating leases is recognized over the life of the lease as rentals become receivable under the provisions of the lease or, in the case of leases with varying payments, under the straight-line method over the noncancelable term of the lease. In certain cases, leases provide for additional payments contingent on usage. Rental income is recognized at the time such usage occurs less a provision for future contractual aircraft maintenance. Gains and losses on flight equipment are recognized when flight equipment is sold and the risk of ownership of the equipment is passed to the new owner.

Finance charges on consumer loans are recognized as revenue using the interest method. Revenue ceases to be accrued when contractual payments are not received for four consecutive months for loans and retail sales contracts, and for six months for revolving retail accounts and private label receivables. Extension fees, late charges, and prepayment penalties are recognized as revenue when received.

Income generated with respect to asset management operations is generally recognized as revenues as services are performed. Certain costs incurred in the sale of mutual funds are deferred and subsequently amortized.

Income generated from the operations of AIGFP includes the following:

- Accrued interest income and expense, as well as amortization and accretion of premiums and discounts on bonds.
- Dividend income and distributions from common and preferred stock and other investments when receivable.
- Changes in the fair value of derivatives. In certain instances, no initial gain or loss is recognized in accordance with Emerging Issues Task Force Issue No. 02-3, "Issues Involved in Accounting for Derivative Contracts held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities" (EITF 02-3). The initial gain or loss is recognized over the life of the transactions and as observable market data becomes available.

- Unrealized gains and losses from trading securities, commodities sold, but not yet purchased, futures and hybrid financial instruments.
- Realized gains and losses from the sale of available for sale securities and investments in private equities, joint ventures and limited partnerships.
- Exchange gains and losses resulting from foreign currency transactions.
- Reductions to the cost basis of equity securities for other-than-temporary impairments.
- Earnings from hedge funds and limited partnership investments accounted for under the equity method.

Incurred policy losses and benefits: Incurred policy losses for short duration insurance contracts consist of the estimated ultimate cost of settling claims incurred within the reporting period, including incurred but not reported claims, plus the changes in estimates of current and prior period losses resulting from the continuous review process. Benefits for long duration insurance contracts consist of benefits paid and changes in future policy benefits liabilities. Benefits for universal life and investment-type products primarily consists of interest credited to policy account balances and benefit payments made in excess of policy account balances.

(b) Foreign Currency: Financial statement accounts expressed in foreign currencies are translated into U.S. dollars in accordance with Statement of Financial Accounting Standards (FAS) 52, "Foreign Currency Translation" (FAS 52). Under FAS 52, functional currency assets and liabilities are translated into U.S. dollars generally using current rates of exchange prevailing at the balance sheet date of each respective subsidiary and the related translation adjustments are recorded as a separate component of other comprehensive income, net of any related taxes, in consolidated shareholders' equity. Functional currencies are generally the currencies of the local operating environment. Income statement accounts expressed in functional currencies are translated using average exchange rates. The adjustments resulting from translation of financial statements of foreign entities operating in highly inflationary economies are recorded in income. Exchange gains and losses resulting from foreign currency transactions are recorded in income currently.

(c) Income Taxes: Deferred tax assets and liabilities are recorded for the effects of temporary differences between the tax basis of an asset or liability and its reported amount in the consolidated financial statements. AIG assesses its ability to realize deferred tax assets primarily based on the earnings history, future earnings potential, the reversal of taxable temporary differences, and the tax planning strategies available to the legal entities recognizing deferred tax assets, in accordance with FAS 109, "Accounting for Income Taxes." See Note 3 herein for a further discussion of income taxes.

(d) Contingencies: Amounts are accrued for the financial resolution of claims that have either been asserted or are deemed probable of assertion if, in the opinion of management, it is both probable that a liability has been incurred and the amount

Notes to Consolidated Financial Statements *Continued*

1. Summary of Significant Accounting Policies

Continued

of the liability can be reasonably estimated. In many cases, it is not possible to determine whether a liability has been incurred or to estimate the ultimate or minimum amount of that liability until years after the contingency arises, in which case no accrual is made until that time.

(e) Investments in Fixed Maturities and Equity Securities:

Bonds held to maturity are principally owned by the insurance subsidiaries and are carried at amortized cost where AIG has the ability and positive intent to hold these securities until maturity.

Where AIG may not have the positive intent to hold bonds until maturity and such securities are not designated as trading, these securities are considered to be available for sale and carried at current fair values.

Premiums and discounts arising from the purchase of bonds are treated as yield adjustments over their estimated lives, until maturity, or call date, if applicable.

Bond trading securities are carried at current fair values.

Common and preferred stocks are carried at current fair values.

AIG may also enter into dollar roll agreements. These are agreements to sell mortgage-backed securities and to repurchase substantially similar securities at a specified price and date in the future. At December 31, 2006, 2005 and 2004, there were no dollar roll agreements outstanding.

Unrealized gains and losses from available for sale investments in equity and fixed maturity securities are reflected as a separate component of other comprehensive income, net of deferred income taxes currently. Unrealized gains and losses from investments in trading securities are reflected in income currently. Investments in fixed maturities and equity securities are recorded on a trade date basis.

AIG evaluates its investments for impairment. As a matter of policy, the determination that a security has incurred an other-than-temporary decline in value and the amount of any loss recognition requires the judgment of AIG's management and a continual review of its investments.

In general, a security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer);
- The occurrence of a discrete credit event resulting in the debtor defaulting or seeking bankruptcy or insolvency protection or voluntary reorganization; or
- The probability of non-realization of a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

At each balance sheet date, AIG evaluates its securities holdings in an unrealized loss position. Where AIG does not intend to hold such securities until they have fully recovered their carrying value, based on the circumstances present at the date of evaluation, AIG records the unrealized loss in income. If events or circumstances change, such as unexpected changes in the

creditworthiness of the obligor, unanticipated changes in interest rates, tax laws, statutory capital positions and liquidity events, among others, AIG revisits its intent. Further, if a loss is recognized from a sale subsequent to a balance sheet date pursuant to these unexpected changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer existed.

In periods subsequent to the recognition of an other-than-temporary impairment loss for debt securities, AIG generally amortizes the discount or reduced premium over the remaining life of the security in a prospective manner based on the amount and timing of future estimated cash flows.

(f) Mortgage Loans on Real Estate — net, Policy, Collateral and Guaranteed Loans — net: Mortgage loans on real estate, policy, collateral and guaranteed loans are carried at unpaid principal balances. Interest income on such loans is accrued as earned.

Impairment of mortgage loans on real estate and collateral loans is based upon certain risk factors and when collection of all amounts due under the contractual term is not probable. This impairment is generally measured based on the present value of expected future cash flows discounted at the loan's effective interest rate subject to the fair value of underlying collateral if the loan is collateral dependent. Interest income on such impaired loans is recognized as cash is received.

There is no allowance for policy loans, as these loans serve to reduce the death benefit paid when the death claim is made and the balances are effectively collateralized by the cash surrender value of the policy.

(g) Financial Services — Flight Equipment: Flight equipment is stated at cost, net of accumulated depreciation. Major additions, modifications and interest are capitalized. Normal maintenance and repairs, airframe and engine overhauls and compliance with return conditions of flight equipment on lease are provided by and paid for by the lessee. Under the provisions of most leases for certain airframe and engine overhauls, the lessee is reimbursed for certain costs incurred up to but not exceeding contingent rentals paid to AIG by the lessee. AIG provides a charge to income for such reimbursements based upon the expected reimbursements during the life of the lease. Depreciation and amortization are computed on the straight-line basis to a residual value of approximately 15 percent over the estimated useful lives of the related assets but not exceeding 25 years. Aircraft in the fleet are evaluated, as necessary, based on these events and circumstances in accordance with FAS No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets" (FAS 144). FAS 144 requires that long-lived assets be reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Recoverability of assets is measured by comparing the carrying amount of an asset to future undiscounted net cash flows expected to be generated by the asset. These evaluations for impairment are significantly affected by estimates of future revenues and other factors which involve some amount of uncertainty.

1. Summary of Significant Accounting Policies

Continued

This caption also includes deposits for aircraft to be purchased. At the time the assets are retired or disposed of, the cost and associated accumulated depreciation and amortization are removed from the related accounts and the difference, net of proceeds, is recorded as a gain or loss in Other income.

(h) Financial Services — Securities Available for Sale, at fair value: These securities are held to meet long-term investment objectives and are accounted for as available for sale, carried at current fair values and recorded on a trade-date basis. This portfolio is hedged using interest rate, foreign exchange, commodity and equity derivatives. The market risk associated with such hedges is managed on a portfolio basis, with third party hedging transactions executed as necessary. As hedge accounting treatment is not achieved in accordance with FAS 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133), the unrealized gains and losses on these securities resulting from changes in interest rates, currency rates and equity prices are recorded in Other comprehensive income in consolidated shareholders' equity while the unrealized gains and losses on the related economic hedges are reflected in Other income.

(i) Financial Services — Trading Securities, at fair value: Trading securities are held to meet short-term investment objectives, including hedging securities. These securities are recorded on a trade-date basis and carried at current fair values. Unrealized gains and losses are reflected in Other income currently.

(j) Financial Services — Spot Commodities: Spot commodities held in AIGFP's wholly owned broker-dealer subsidiary are recorded at fair value. All other commodities are recorded at the lower of cost or market value. Spot commodities are recorded on a trade-date basis. The exposure to market risk may be reduced through the use of forwards, futures and option contracts. Lower of cost or fair value reductions in commodity positions and unrealized gains and losses in related derivatives are reflected in Other income currently.

(k) Financial Services — Unrealized Gain and Unrealized Loss on Swaps, Options and Forward Transactions: Interest rate, currency, equity and commodity swaps, swaptions, options and forward transactions are accounted for as derivatives recorded on a trade-date basis and are carried at current market values or estimated fair values when market prices are not available. Unrealized gains and losses are reflected in income currently, where appropriate. In certain instances, when income is not recognized at inception of the contract under EITF 02-03, income is recognized over the life of the contract and as observable market data becomes available. Estimated fair values are based on the use of valuation models that utilize, among other things, current interest, foreign exchange, equity, commodity and volatility rates. AIG attempts to secure reliable and independent current market prices, such as published exchange prices, external subscription services' prices such as Bloomberg or Reuters or third-party broker quotes for use in its models. When such prices are not available, AIG uses an internal methodology

which includes interpolation and extrapolation from observable and verifiable prices nearest to the dates of the transactions. These valuations represent an assessment of the present values of expected future cash flows of these transactions and reflect market and credit risk. The portfolio's discounted cash flows are evaluated with reference to current market conditions, maturities within the portfolio, and other relevant factors. Based upon this evaluation, it is determined what offsetting transactions, if any, are necessary to reduce the market risk of the portfolio. AIG manages its market risk with a variety of transactions, including swaps, trading securities, futures and forward contracts and other transactions as appropriate. Because of the limited liquidity of some of these instruments, the recorded values of these transactions may be different from the values that might be realized if AIG were to sell or close out the transactions prior to maturity. AIG believes that such differences are not significant to its financial condition or liquidity. Such differences would be immediately recognized in income when the transactions were sold or closed out prior to maturity.

(l) Financial Services — Trading Assets and Trading Liabilities: Trading assets and trading liabilities include option premiums paid and received and receivables from and payables to counterparties which relate to unrealized gains and losses on futures, forwards, and options and balances due from and due to clearing brokers and exchanges.

(m) Financial Services — Securities Purchased (Sold) Under Agreements to Resell (Repurchase), at contract value: Purchases of securities under agreements to resell and sales of securities under agreements to repurchase are accounted for as collateralized borrowing or lending transactions and are recorded at their contracted resale or repurchase amounts, plus accrued interest. AIG's policy is to take possession of or obtain a security interest in securities purchased under agreements to resell.

AIG minimizes the credit risk that counterparties to transactions might be unable to fulfill their contractual obligations by monitoring customer credit exposure and collateral value and generally requiring additional collateral to be deposited with AIG when deemed necessary.

(n) Financial Services — Finance Receivables: Finance receivables, which are net of unearned finance charges, are held for both investment purposes and for sale. Finance receivables held for investment purposes are carried at amortized cost which includes accrued finance charges on interest bearing finance receivables, unamortized deferred origination costs, and unamortized net premiums and discounts on purchased finance receivables. The allowance for finance receivable losses is established through the provision for finance receivable losses charged to expense and is maintained at a level considered adequate to absorb estimated credit losses in the existing portfolio. The portfolio is periodically evaluated on a pooled basis and factors such as economic conditions, portfolio composition, and loss and delinquency experience are considered in the evaluation of the allowance.

Notes to Consolidated Financial Statements *Continued*

1. Summary of Significant Accounting Policies

Continued

Direct costs of originating loans, net of nonrefundable points and fees, are deferred and included in the carrying amount of the related loans. The amount deferred is recognized as an adjustment to finance charge revenues, using the interest method.

Finance receivables originated and intended for sale in the secondary market are carried at the lower of cost or market value, as determined by aggregate outstanding commitments from investors or current investor yield requirements. AGF recognizes net unrealized losses through a valuation allowance by charges to income.

(o) Securities Lending Collateral and Securities Lending Payable, at fair value: AIG's insurance and asset management operations lend their securities and primarily take cash as collateral with respect to the securities lent. Invested collateral consists primarily of floating rate bonds. Income earned on invested collateral, net of interest payable to the collateral provider, is recorded in net investment income.

The fair value of securities pledged under securities lending arrangements was \$69 billion and \$59 billion as of December 31, 2006 and 2005, respectively. These securities are included in bonds available for sale in AIG's consolidated balance sheet.

(p) Other Invested Assets: Other invested assets consist primarily of investments by AIG's insurance operations in hedge funds and limited partnerships.

Hedge funds and limited partnerships in which AIG holds in the aggregate less than a five percent interest are reported at fair value. The change in fair value is recognized as a component of Other comprehensive income.

With respect to hedge funds and limited partnerships in which AIG holds in the aggregate a five percent or greater interest or less than a five percent interest but where AIG has more than a minor influence over the operations of the investee, AIG's carrying value is its share of the net asset value of the funds or the partnerships. The changes in such net asset values, accounted for under the equity method, are recorded in earnings through net investment income.

AIG obtains the fair values of its investments in limited partnerships and hedge funds from information provided by the general partner or manager of each of these investments, the accounts of which generally are audited on an annual basis.

Also included in other invested assets are real estate held for investment, aircraft asset investments held by non-financial services subsidiaries and investments in life settlement contracts. See Notes 8(g) and 8(h) herein for further information.

(q) Short-term Investments: Short-term investments consist of interest bearing cash equivalents, time deposits, and investments with original maturities within one year, such as commercial paper.

(r) Cash: Cash represents cash on hand and non-interest bearing demand deposits.

(s) Reinsurance Assets: Reinsurance assets include the balances due from reinsurance and insurance companies under the terms of AIG's reinsurance agreements for paid and unpaid losses and loss expenses, ceded unearned premiums and ceded future policy benefits for life and accident and health insurance contracts and benefits paid and unpaid. Amounts related to paid and unpaid losses, benefits and loss expenses with respect to these reinsurance agreements are substantially collateralized.

(t) Deferred Policy Acquisition Costs:

General Insurance: Acquisition costs represent those costs, including commissions, premium taxes and other underwriting expenses, that vary with and are primarily related to the acquisition of new business. These costs are deferred and amortized over the period in which the related premiums written are earned. DAC is grouped consistent with the manner in which the insurance contracts are acquired, serviced and measured for profitability and is reviewed for recoverability based on the profitability of the underlying insurance contracts. Investment income is not anticipated in the recoverability of deferred policy acquisition costs.

Life Insurance & Retirement Services: Acquisition costs represent those costs, including commissions, underwriting and marketing expenses, that vary with, and are primarily related to, the acquisition of new business. Policy acquisition costs for traditional life insurance products are generally deferred and amortized over the premium paying period in accordance with FAS 60, "Accounting and Reporting by Insurance Enterprises" (FAS 60). Policy acquisition costs and policy issuance costs related to universal life, participating life, and investment-type products (investment-oriented products) are deferred and amortized, with interest, in relation to the incidence of estimated gross profits to be realized over the estimated lives of the contracts in accordance with FAS 97, "Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments" (FAS 97). Estimated gross profits are composed of net interest income, net realized investment gains and losses, fees, surrender charges, expenses, and mortality and morbidity gains and losses. If estimated gross profits change significantly, DAC is recalculated using the new assumptions. Any resulting adjustment is included in current earnings as an adjustment to DAC. DAC is grouped consistent with the manner in which the insurance contracts are acquired, serviced and measured for profitability and is reviewed for recoverability based on the profitability (both current and projected future) of the underlying insurance contracts.

The DAC for investment-oriented products is also adjusted with respect to estimated gross profits as a result of changes in the net unrealized gains or losses on debt and equity securities available for sale. That is, as debt and equity securities available for sale are carried at aggregate fair value, an adjustment is made to DAC equal to the change in amortization that would have been recorded if such securities had been sold at their stated aggregate fair value and the proceeds reinvested at current yields. The change in this adjustment, net of tax, is included with the change in net unrealized gains/losses on debt and equity

1. Summary of Significant Accounting Policies

Continued

securities available for sale that is credited or charged directly to other comprehensive income. DAC has been decreased by \$720 million at December 31, 2006 and decreased by \$1.14 billion at December 31, 2005 for this adjustment. See also Note 4 herein.

Value of Business Acquired (VOBA) is determined at the time of acquisition and is reported on the consolidated balance sheet with DAC. This value is based on present value of future pre-tax profits discounted at current yields applicable at time of purchase. For products accounted under FAS 60, VOBA is amortized over the life of the business similar to that for DAC based on the assumptions at purchase. For FAS 97 products, VOBA is amortized in relation to the estimated gross profits to date for each period. As of December 31, 2006, there have been no impairments of VOBA.

(u) Investments in Partially Owned Companies: At December 31, 2006, AIG's significant investments in partially owned companies included its 19.4 percent interest in Allied World Assurance Holdings, Ltd., its 26 percent interest in Tata AIG Life Insurance Company, Ltd., its 26 percent interest in Tata AIG General Insurance Company, Ltd. and its 24.5 percent interest in The Fuji Fire and Marine Insurance Co., Ltd. This balance sheet caption also includes investments in less significant partially owned companies. The amounts of dividends received from unconsolidated entities where AIG's ownership interest is less than 50 percent were \$28 million, \$146 million and \$22 million in 2006, 2005 and 2004, respectively. The undistributed earnings of unconsolidated entities where AIG's ownership interest is less than 50 percent were \$300 million, \$179 million and \$445 million as of December 31, 2006, 2005 and 2004, respectively.

(v) Real Estate and Other Fixed Assets: The costs of buildings and furniture and equipment are depreciated principally on a straight-line basis over their estimated useful lives (maximum of 40 years for buildings and ten years for furniture and equipment). Expenditures for maintenance and repairs are charged to income as incurred; expenditures for betterments are capitalized and depreciated.

AIG periodically assesses the carrying value of its real estate for purposes of determining any asset impairment.

Also included in Real Estate and Other Fixed Assets are capitalized software costs, which represent costs directly related to obtaining, developing or upgrading internal use software. Such costs are capitalized and amortized using the straight-line method over a period generally not to exceed five years.

(w) Separate and Variable Accounts: Separate and variable accounts represent funds for which investment income and investment gains and losses accrue directly to the policyholders who predominantly bear the investment risk. Each account has specific investment objectives, and the assets are carried at fair value. The assets of each account are legally segregated and are not subject to claims which arise out of any other business of AIG. The liabilities for these accounts are generally equal to the account assets.

(x) Goodwill and Intangible Assets: Goodwill is the excess of cost over the fair value of net assets acquired. Goodwill is reviewed for impairment on an annual basis, or more frequently if circumstances indicate that a possible impairment has occurred. The assessment of impairment involves a two-step process whereby an initial assessment for potential impairment is performed, followed by a measurement of the amount of impairment, if any. Impairment testing is performed using the fair value approach, which requires the use of estimates and judgment, at the "reporting unit" level. A reporting unit is the operating segment, or a business that is one level below the operating segment if discrete financial information is prepared and regularly reviewed by management at that level. The determination of a reporting unit's fair value is based on management's best estimate, which generally considers the unit's market-based earning multiples of peer companies and expected future earnings. If the carrying value of a reporting unit's goodwill exceeds its fair value, the excess is recognized as an impairment and recorded as a charge against net income. No impairment has been recorded by AIG in 2006, 2005 or 2004. Changes in the carrying amount of goodwill result from foreign currency translation adjustments and other purchase price adjustments.

(y) Other Assets: Other assets consist of prepaid expenses, including deferred advertising costs, sales inducement assets and derivatives assets at fair value, other than derivatives in AIGFP, and other deferred charges.

Generally, advertising costs are expensed as incurred except for certain direct response stand-alone cost pools, which are deferred over the expected future benefit period in accordance with Statement of Position 93-7, "Reporting on Advertising Costs." In instances where AIG can demonstrate that its customers have responded specifically to direct-response advertising, whose primary purpose is to elicit sales to customers and where it can be shown that such advertising results in probable future economic benefits, the advertising costs are capitalized. Deferred advertising costs are amortized on a cost-pool by cost-pool basis over the expected economic future benefit period and are reviewed regularly for recoverability. Deferred advertising costs amounted to \$1.05 billion and \$915 million at December 31, 2006 and 2005, respectively. The amount of expense amortized into earnings was \$359 million, \$272 million and \$244 million, for 2006, 2005, and 2004, respectively.

AIG offers sales inducements, which include enhanced crediting rates or bonus payments to contract holders (bonus interest) on certain annuity and investment contract products. Sales inducements provided to the contractholder are recognized as part of the liability for policyholders' contract deposits on the consolidated balance sheet. Such amounts are deferred and amortized over the life of the contract using the same methodology and assumptions used to amortize DAC. To qualify for such accounting treatment, the bonus interest must be explicitly identified in the contract at inception, and AIG must demonstrate that such amounts are incremental to amounts AIG credits on similar contracts without bonus interest, and are higher than the contract's expected ongoing crediting rates for periods after the bonus period. The deferred bonus interest and other deferred

Notes to Consolidated Financial Statements *Continued*

1. Summary of Significant Accounting Policies

Continued

sales inducement assets amounted to \$1.3 billion and \$1.1 billion at December 31, 2006 and 2005, respectively. The amortization expense associated with these assets is reported within Incurred policy losses and benefits expense on the consolidated statement of income. Such amortization expense totaled \$135 million, \$127 million and \$104 million for the years ended December 31, 2006, 2005 and 2004, respectively.

See Note 19 herein for a discussion of derivatives.

(z) Reserve for Losses and Loss Expenses: Losses and loss expenses are charged to income as incurred. The reserve for losses and loss expenses represents the accumulation of estimates for unpaid reported losses and includes provisions for losses incurred but not reported. The methods of determining such estimates and establishing resulting reserves, including amounts relating to allowances for estimated unrecoverable reinsurance, are reviewed and updated. If the estimate of reserves is determined to be inadequate or redundant, the increase or decrease is reflected in income. AIG discounts its loss reserves relating to workers compensation business written by its U.S. domiciled subsidiaries as permitted by the domiciliary statutory regulatory authorities.

(aa) Future Policy Benefits for Life and Accident and Health Contracts: The liabilities for future policy benefits and policyholders' contract deposits are established using assumptions described in Note 6 herein.

(bb) Other Policyholders' Funds: Other policyholders' funds are reported at cost and include any policyholders' funds on deposit which encompasses premium deposits and similar items.

(cc) Financial Services — Securities and Spot Commodities Sold but not yet Purchased, at market value: Securities and spot commodities sold but not yet purchased represent sales of securities and spot commodities not owned at the time of sale. The obligations arising from such transactions are recorded on a trade-date basis and carried at fair value. Also included are obligations under gold leases, which are accounted for as a debt host with an embedded gold derivative.

(dd) Short- and Long-Term Borrowings: AIG's funding is principally obtained from medium term and long-term borrowings and commercial paper. Commercial paper, when issued at a discount, is recorded at the proceeds received and accreted to its par value. Long-term borrowings are carried at the principal amount borrowed, net of unamortized discounts or premiums. See Note 9 herein for additional information.

(ee) Liabilities Connected to Trust Preferred Stock: Liabilities connected to trust preferred stock principally relates to outstanding securities issued by American General Corporation (AGC), a wholly owned subsidiary of AIG. Cash distributions on such preferred stock are accounted for as interest expense.

(ff) Other Liabilities: Other liabilities consist of other funds on deposit, derivatives liabilities at fair value, other than derivatives

in AIGFP, and other payables. See Note 19 herein for a discussion of Derivatives. AIG has entered into certain insurance and reinsurance contracts, primarily in its general insurance segment, that do not contain sufficient insurance risk to be accounted for as insurance or reinsurance. Accordingly, these transactions are recorded based upon deposit accounting, and the premiums received, after deduction for certain related expenses, are recorded as deposits within Other liabilities on the consolidated balance sheet. Net proceeds of these deposits are invested and generate net investment income. As amounts are paid, consistent with the underlying contracts, the deposit liability is reduced.

(gg) Preferred Shareholders' Equity in Subsidiary Companies: Preferred shareholders' equity in subsidiary companies relates principally to outstanding preferred stock or interest of ILFC, a wholly owned subsidiary of AIG. Cash distributions on such preferred stock or interest are accounted for as interest expense.

(hh) Recent Accounting Standards:

Accounting Changes

FSP FAS 115-1, "The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments," replaces the measurement and recognition guidance set forth in EITF Issue No. 03-1 and codifies certain existing guidance on impairment and accretion of income in periods subsequent to an other-than-temporary impairment, where appropriate. AIG's adoption of FSP FAS 115-1 on January 1, 2006 did not have a material effect on AIG's consolidated financial condition or results of operations.

In December 2004, the FASB issued FAS 123, "Share-Based Payment" (FAS 123R). FAS 123R and its related interpretive guidance replaces FAS 123, "Accounting for Stock-Based Compensation" (FAS 123), which superseded Accounting Principles Board Opinion No. 25, "Accounting for Stock Issued to Employees" (APB 25) and amended FAS 95, "Statement of Cash Flows." FAS 123, as originally issued in 1995, established as preferable a fair-value-based method of accounting for share-based payment transactions with employees. On January 1, 2003, AIG adopted the recognition provisions of FAS 123. See also Note 14 herein. AIG adopted the provisions of the revised FAS 123R and its related interpretive guidance on January 1, 2006.

For its service-based awards under the 1999 Stock Option Plan, 2002 Stock Incentive Plan and 1996 Employee Stock Purchase Plan, AIG recognizes compensation on a straight-line basis over the scheduled vesting period. Unrecognized unvested compensation expense for stock option awards granted under APB 25 (i.e., before January 1, 2003) will be recognized from January 1, 2006 to the vesting date. However, for the SICO Plans, the AIG Deferred Compensation Profit Participant Plan (AIG DCPFP) and the AIG Partners Plan, which contain both performance and service conditions, AIG recognizes compensation utilizing a graded vesting expense attribution method. The effect of this approach is to recognize compensation cost over the requisite service period for each separately vesting tranche of the award.

AIG's share-based plans generally provide for accelerated vesting after the participant turns 65 and retires. For awards

1. Summary of Significant Accounting Policies

Continued

granted after January 1, 2006, compensation expense is recognized ratably from the date of grant through the shorter of age 65 or the vesting period. This change did not have a material effect on AIG's consolidated financial position or results of operations. Awards granted prior to January 1, 2006 will continue to be recognized over the vesting period with accelerated expense recognition upon an actual retirement. Starr International Company, Inc. (SICO) compensation expense for participants retiring after age 65 had been reflected in prior years' results consistent with vested status under the SICO Plans.

At the June 2005 meeting, the FASB's Emerging Issues Task Force (EITF) reached a consensus with respect to Issue No. 04-5, "Determining Whether a General Partner, or the General Partners as a Group, Controls a Limited Partnership or Similar Entity When the Limited Partners Have Certain Rights" (EITF 04-5). EITF 04-5 addresses what rights held by the limited partner(s) preclude consolidation in circumstances in which the sole general partner would consolidate the limited partnership in accordance with generally accepted accounting principles absent the existence of the rights held by the limited partner(s). Based on that consensus, the EITF 04-5 also agreed to amend the consensus in Issue No. 96-16, "Investor's Accounting for an Investee When the Investor Has a Majority of the Voting Interest but the Minority Shareholders Have Certain Approval or Veto Rights." The guidance in this Issue was effective after June 29, 2005 for general partners of all new limited partnerships formed and for existing limited partnerships for which the partnership agreements are modified. For general partners in all other limited partnerships, the guidance in this Issue was effective beginning January 1, 2006. The effect of the adoption of this EITF Issue was not material to AIG's consolidated financial condition or results of operations.

On June 29, 2005, the FASB issued Statement 133 Implementation Issue No. B38, "Embedded Derivatives: Evaluation of Net Settlement with Respect to the Settlement of a Debt Instrument through Exercise of an Embedded Put Option or Call Option." This implementation guidance relates to the potential settlement of the debtor's obligation to the creditor that would occur upon exercise of the put option or call option, which meets the net settlement criterion in FAS 133. The effective date of the implementation guidance was January 1, 2006. The adoption of this guidance did not have a material effect on AIG's consolidated financial condition or results of operations.

On June 29, 2005, the FASB issued Statement 133 Implementation Issue No. B39, "Application of Paragraph 13(b) to Call Options That Are Exercisable Only by the Debtor." The conditions in FAS 133 paragraph 13(b) do not apply to an embedded call option in a hybrid instrument containing a debt host contract if the right to accelerate the settlement of the debt can be exercised only by the debtor (issuer/borrower). This guidance does not apply to other embedded derivative features that may be present in the same hybrid instrument. The effective date of the implementation guidance was January 1, 2006. The adoption of this guidance did

not have a material effect on AIG's consolidated financial condition or results of operations.

On February 16, 2006, the FASB issued FAS 155, "Accounting for Certain Hybrid Financial Instruments" (FAS 155), an amendment of FAS 140 and FAS 133. FAS 155 allows AIG to include changes in fair value in earnings on an instrument-by-instrument basis for any hybrid financial instrument that contains an embedded derivative that would otherwise be required to be bifurcated and accounted for separately under FAS 133. The election to measure the hybrid instrument at fair value is irrevocable at the acquisition or issuance date.

AIG elected to early adopt FAS 155 as of January 1, 2006, and apply FAS 155 fair value measurement to certain structured note liabilities and structured investments in AIG's available for sale portfolio that existed at December 31, 2005. The effect of this adoption resulted in an \$11 million after-tax (\$18 million pre-tax) decrease to opening retained earnings as of January 1, 2006, representing the difference between the fair value of these hybrid financial instruments and the prior carrying value as of December 31, 2005. The effect of adoption on after-tax gross gains and losses was \$218 million (\$336 million pre-tax) and \$229 million (\$354 million pre-tax), respectively.

In connection with AIG's early adoption of FAS 155, structured note liabilities of \$8.9 billion, other structured liabilities in conjunction with equity derivative transactions of \$111 million, and hybrid financial instruments of \$522 million at December 31, 2006 are now carried at fair value. The effect on earnings for 2006, for changes in the fair value of hybrid financial instruments, was a pre-tax loss of \$313 million, of which \$287 million is reflected in Other income and is largely offset by gains on economic hedge positions which are also reflected in operating income, and \$26 million is reflected in Net investment income.

In January 2007, the FASB issued Statement 133 Implementation Issue No. B40, "Embedded Derivatives: Application of Paragraph 13(b) to Securitized Interests in Prepayable Financial Assets" (Issue B40). Issue B40 provides guidance for when prepayment risk needs to be considered in determining whether mortgage-backed and other asset-backed securities contain an embedded derivative requiring bifurcation. Effective with AIG's adoption of FAS 155 beginning January 1, 2006, AIG has been treating derivatives embedded in securitized interests in prepayable financial assets in accordance with the guidance in Issue B40. Therefore, the adoption of this guidance did not have a material effect on AIG's consolidated financial condition or results of operations.

On March 27, 2006, the FASB issued FSP FTB 85-4-1, "Accounting for Life Settlement Contracts by Third-Party Investors" (FSP 85-4-1), an amendment of FTB 85-4, "Accounting for Purchases of Life Insurance." Life settlements are designed to assist life insurance policyholders in monetizing the existing value of life insurance policies. FSP 85-4-1 allows AIG to measure life settlement contracts using either the investment method or fair value method. The election is made on an instrument-by-instrument basis and is irrevocable. AIG elected to early adopt FSP 85-4-1 as of January 1, 2006 using the investment method for pre-existing investments held at December 31, 2005. The effect of this adoption resulted in a \$31.9 million after-tax (\$48.7 million pre-tax)

Notes to Consolidated Financial Statements *Continued*

1. Summary of Significant Accounting Policies

Continued

increase to opening retained earnings. See Note 8(h) herein for additional disclosures related to life settlement contracts.

On April 13, 2006, the FASB issued FSP FIN 46(R)-6, "Determining the Variability to be Considered in Applying FASB Interpretation No. 46(R)" (FIN 46(R)-6 or FSP). The FSP affects the identification of which entities are variable interest entities (VIEs) through a "by design" approach in identifying and measuring the variable interests of the VIE and its primary beneficiary. The requirements became effective beginning in the third quarter of 2006 and are to be applied to all new VIEs with which AIG becomes involved. The new requirements need not be applied to entities that have previously been analyzed under FIN 46(R) unless a reconsideration event occurs. The adoption of this guidance did not have a material effect on AIG's consolidated financial condition or results of operations.

In September 2006, the FASB issued FAS 158, "Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans — an amendment of FASB Statements No. 87, 88, 106 and 132(R)" (FAS 158). FAS 158 requires AIG to prospectively recognize the over funded or under funded status of defined benefit postretirement plans as an asset or liability in AIG's consolidated balance sheet and to recognize changes in that funded status in the year in which the changes occur through Other Comprehensive Income. FAS 158 also requires AIG to measure the funded status of plans as of the date of its year-end balance sheet, with limited exceptions. AIG adopted FAS 158 for the year ending December 31, 2006. The cumulative effect, net of deferred income taxes, on AIG's consolidated balance sheet at December 31, 2006 was a net reduction in shareholders' equity through a charge to Accumulated other comprehensive income of \$532 million, with a corresponding net decrease of \$538 million in total assets, and a net decrease of \$6 million in total liabilities. See Note 15 herein for additional information on the adoption of FAS 158.

Future Application of Accounting Standards

On September 19, 2005, the AICPA issued Statement of Position 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts" (SOP 05-1). SOP 05-1 provides guidance on accounting for DAC on internal replacements of insurance and investment contracts other than those specifically described in FAS 97. SOP 05-1 defines an internal replacement as a modification in product benefits, features, rights, or coverage that occurs by the exchange of a contract for a new contract, or by amendment, endorsement, or rider to a contract, or by the election of a feature or coverage within a contract.

The effective date of the implementation guidance is January 1, 2007. Upon implementation, AIG expects to record a decrease to opening retained earnings of approximately \$100 million, net of tax, to reflect changes in unamortized DAC, VOBA, unearned revenue liabilities and deferred sales inducement assets. This adjustment will reflect changes including the cumulative

effect of a shorter expected amortization period for deferred items related to certain group life and health insurance contracts and the effect on the estimated gross profits of investment-oriented products related to previously anticipated future internal replacements. AIG does not expect the implementation of SOP 05-1 to have a material effect on its consolidated financial condition or its consolidated results of operations, although operating income for the Life Insurance & Retirement Services segment will be negatively affected.

On July 13, 2006, the FASB issued FASB Interpretation No. 48, "Accounting for Uncertainty in Income Taxes — an interpretation of FASB Statement No. 109" (FIN 48), which clarifies the accounting for uncertainty in income tax positions. FIN 48 prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of an income tax position taken or expected to be taken in a tax return. FIN 48 also provides guidance on derecognition, classification, interest and penalties, accounting in interim periods, and additional disclosures. The effective date of this implementation guidance is January 1, 2007, with the cumulative effect of the change in accounting principles recorded as an adjustment to opening retained earnings. AIG does not expect the implementation of FIN 48 to be material to its consolidated financial condition.

In September 2006, the FASB issued FAS 157, "Fair Value Measurements" (FAS 157). FAS 157 defines fair value, establishes a framework for measuring fair value and expands disclosures about fair value measurements. FAS 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007. AIG is currently assessing the effect of implementing this guidance.

In February 2007, the FASB issued FAS 159, "The Fair Value Option for Financial Assets and Financial Liabilities" (FAS 159). FAS 159 permits entities to choose to measure at fair value many financial instruments and certain other items that are not currently required to be measured at fair value. Subsequent changes in fair value for designated items will be required to be reported in earnings in the current period. FAS 159 also establishes presentation and disclosure requirements for similar types of assets and liabilities measured at fair value. FAS 159 is effective for financial statements issued for fiscal years beginning after November 15, 2007. AIG is currently assessing the effect of implementing this guidance, which depends on the nature and extent of items elected to be measured at fair value, upon initial application of the standard on January 1, 2008.

2. Segment Information

AIG identifies its reportable segments by product line consistent with its management structure. These segments and their respective operations are as follows:

General Insurance: AIG's General Insurance subsidiaries are multi-line companies writing substantially all lines of commercial property and casualty insurance and various personal lines both domestically and abroad. AIG's principal General Insurance operations are as follows:

2. Segment Information

Continued

Domestic Brokerage Group (DBG) writes substantially all classes of business insurance in the U.S. and Canada, accepting such business mainly from insurance brokers.

Transatlantic Holdings, Inc. (Transatlantic) subsidiaries offer reinsurance on both a treaty and facultative basis to insurers in the U.S. and abroad. Transatlantic structures programs for a full range of property and casualty products with an emphasis on specialty risks.

AIG's Personal Lines operations provide automobile insurance through AIG Direct, a mass marketing operation, Agency Auto Division and 21st Century Insurance Group (21st Century), as well as a broad range of coverages for high net-worth individuals through the AIG Private Client Group.

Mortgage Guaranty operations provide guaranty insurance primarily on conventional first mortgage loans on single family dwellings and condominiums.

AIG's Foreign General Insurance group accepts risks primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance group also includes business written by AIG's foreign-based insurance subsidiaries. The Foreign General Insurance group uses various marketing methods to write both business and consumer lines insurance with certain refinements for local laws, customs and needs. AIU operates in Asia, the Pacific Rim, Europe, including the U.K., Africa, the Middle East and Latin America.

Each of the General Insurance sub-segments is comprised of groupings of major products and services as follows: DBG is comprised of domestic commercial insurance products and services; Transatlantic is comprised of reinsurance products and services sold to other general insurance companies; Personal Lines are comprised of general insurance products and services sold to individuals; Mortgage Guaranty is comprised of products insuring against losses arising under certain loan agreements; and Foreign General is comprised of general insurance products sold overseas.

Life Insurance & Retirement Services: AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad. Insurance-oriented products consist of individual and group life, payout annuities (including structured settlements), endowment and accident and health policies. Retirement savings products consist generally of fixed and variable annuities.

AIG's principal overseas Life Insurance & Retirement Services operations are American Life Insurance Company (ALICO), American International Assurance Company, Limited, together with American International Assurance Company (Bermuda) Limited (AIA), Nan Shan Life Insurance Company, Ltd. (Nan Shan), The Philippine American Life and General Insurance Company (PhilamLife), AIG Edison Life Insurance Company (AIG Edison Life) and AIG Star Life Insurance Co. Ltd. (AIG Star Life). In 2006, the major internal reporting units for the Foreign Life operations were realigned to better reflect the current management structure. PhilamLife and other Life operations were classified as a reporting unit in 2005. In 2006, PhilamLife is included with AIA, AIRCO and

Nan Shan in the Asia internal reporting unit and other operations are included with ALICO, AIG Star Life and AIG Edison Life in the Japan and Other reporting unit. Prior period amounts have been reclassified to conform to the current period presentation.

AIG's principal Domestic Life Insurance & Retirement Services operations are American General Life Insurance Company (AG Life), The United States Life Insurance Company in the City of New York (USLIFE), American General Life and Accident Insurance Company (AGLA and, collectively with AG Life and USLIFE, the Domestic Life Insurance internal reporting unit), AIG Annuity Insurance Company (AIG Annuity), The Variable Annuity Life Insurance Company (VALIC) and AIG Retirement Services, Inc (AIG SunAmerica and, collectively with AIG Annuity and VALIC, the Domestic Retirement Services internal reporting unit).

American International Reinsurance Company (AIRCO) acts primarily as an internal reinsurance company for AIG's insurance operations.

Life Insurance & Retirement Services is comprised of two major groupings of products and services: insurance-oriented products and services and retirement savings products and services.

Financial Services: AIG's Financial Services subsidiaries engage in diversified financial products and services including aircraft and equipment leasing, capital markets transactions, consumer finance and insurance premium finance.

AIG's Aircraft Leasing operations represent the operations of International Lease Finance Corporation (ILFC), which generates its revenues primarily from leasing new and used commercial jet aircraft to domestic and foreign airlines. Revenues also result from the remarketing of commercial jets for its own account, and remarketing and fleet management services for airlines and for financial institutions.

AIG's Capital Markets operations are conducted through AIGFP. As Capital Markets is a transaction-oriented operation, current and past revenues and operating results may not provide a basis for predicting future performance.

AIG's Capital Markets operations derive substantially all their revenues from hedged financial positions entered in connection with counterparty transactions rather than from speculative transactions. These subsidiaries participate in the derivatives and financial transactions dealer markets conducting, primarily as principal, an interest rate, currency, equity, commodity, energy and credit products business.

Consumer Finance operations include American General Finance Inc. (AGF) as well as AIG Consumer Finance Group Inc. (AIGCFG). AGF and AIGCFG provide a wide variety of consumer finance products, including non-conforming real estate mortgages, consumer loans, retail sales finance and credit-related insurance to customers both domestically and overseas, particularly in emerging markets.

Asset Management: AIG's Asset Management operations comprise a wide variety of investment-related services and investment products including institutional and retail asset management, broker-dealer services and institutional spread-based investment business. Such services and products are offered to individuals and institutions both domestically and overseas.

(a) Represents the sum of General Insurance net premiums earned, net investment income and realized capital gains (losses).

(b) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts. For DBG, the effect was an increase of \$66 million in both revenues and operating income and for Foreign General, the effect was an increase of \$424 million in both revenues and operating income.

(c) There were no significant catastrophe-related losses in 2006. Catastrophe-related losses for 2005 and 2004 by reporting unit were:

(in millions)	2005		2004	
	Insurance Related Losses	Net Reinstatement Premium Cost	Insurance Related Losses	Net Reinstatement Premium Cost
Reporting Unit:				
DBG	\$1,747	\$122	\$ 582	\$ —
Transatlantic	463	45	215	—

Mortgage Guaranty	10	—	—	—
Foreign General	293	94	232	—
Total	\$2,625	\$263	\$1,054	\$ —

(d) Includes additional losses incurred and net reinstatement premiums related to prior year catastrophes of \$199 million and \$277 million in 2006 and 2005, respectively.

(e) Includes the fourth quarter 2005 increase in net reserves of approximately \$1.8 billion resulting from the annual review of General Insurance loss and loss adjustment reserves.

(f) Includes \$291 million of expenses related to changes in estimates for uncollectible reinsurance and other premium balances, and \$100 million of accrued expenses in connection with certain workers compensation insurance policies written between 1985 and 1996.

Notes to Consolidated Financial Statements *Continued*

(a) Revenues and operating income include realized capital gains (losses) of \$406 million, \$(72) million and \$(156) million for 2006, 2005 and 2004, respectively. Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133 and the application of FAS 52, which were \$191 million, \$(462) million and \$(300) million for 2006, 2005 and 2004, respectively.

(b) Revenues in 2004 include approximately \$640 million of premium from a single reinsurance transaction involving terminal funding pension business, which is offset by a similar increase in benefit reserves. Revenues and operating income include realized capital gains (losses) of \$301 million, \$156 million and \$528 million for 2006, 2005 and 2004, respectively. Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133 and the application of FAS 52, which were \$191 million, \$(97) million and \$166 million for 2006, 2005 and 2004, respectively.

(c) Includes the life operations of AIG Life Insurance Company and American International Life Assurance Company of New York. Operating income in 2006 included charges of \$125 million resulting from the adverse Superior National arbitration ruling and \$66 million related to the exiting of the domestic financial institutions credit life business. Operating income in 2004 included a \$178 million charge related to a workers compensation quota share reinsurance agreement with Superior National. See Note 12(c) herein for additional information. In addition, in 2004, as part of the business review of group life/health, approximately \$68 million was incurred for reserve strengthening and allowances for receivables. Revenues and operating income include realized capital gains (losses) of \$(215) million, \$35 million and \$(120) million for 2006, 2005 and 2004, respectively. Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133 and the application of FAS 52, which were \$19 million, \$76 million and \$8 million for 2006, 2005 and 2004, respectively.

(d) Revenues and operating income include realized capital gains (losses) of \$(404) million, \$(277) million and \$(207) million for 2006, 2005 and 2004, respectively. Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133 and the application of FAS 52, which were \$(46) million, \$(12) million and \$(14) million for 2006, 2005 and 2004, respectively.

(e) Represents the sum of Life Insurance & Retirement Services GAAP premiums, net investment income and realized capital gains (losses).

(f) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts. For 2006 the effect was an increase of \$240 million in revenues and \$169 million in operating income.

(a) Certain transactions entered into by AIGFP generate tax credits and benefits which are included in income taxes in the consolidated statement of income. The amount of such tax credits and benefits for the years ended December 31, 2006, 2005 and 2004 were \$50 million, \$67 million, and \$107 million, respectively.

(b) Operating loss in 2006 includes specific reserves of \$42 million related to two commercial lending transactions.

(c) Represents primarily the sum of aircraft lease rentals from ILFC, AIGFP hedged financial positions entered into in connection with counterparty transactions, the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses, and finance charges from consumer finance operations.

(d) Interest expense for the Capital Markets business is included in Revenues above and in Other income on the Consolidated Statement of Income.

(e) Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For 2006, 2005 and 2004, respectively, the effect was \$(1.82) billion, \$2.01 billion and \$(122) million in both revenues and operating income for Capital Markets. These amounts result primarily from interest rate and foreign currency derivatives that are economically hedging available for sale securities and borrowings. For 2004, the effect was \$(27) million in operating income for Aircraft Leasing. During 2006 and 2005, Aircraft Leasing derivative gains and losses were reported as part of AIG's Other category, and were not reported in Aircraft Leasing's operating income.

(f) Includes catastrophe-related losses of \$62 million recorded in 2005 resulting from hurricane Katrina, which were reduced by \$35 million in 2006 as a result of reevaluation of the remaining estimated losses.

Notes to Consolidated Financial Statements *Continued*

2. Segment Information

Continued

A substantial portion of AIG's operations is conducted in countries other than the United States and Canada. The following table summarizes AIG's operations by major geographic segment. Allocations have been made on the basis of the location of operations and assets.

(in millions)	Geographic Segments			Consolidated
	Domestic ^(a)	Far East	Other Foreign	
2006				
Revenues ^(b)	\$57,986	\$33,795	\$21,413	\$113,194

Flight equipment primarily under operating leases, net of accumulated depreciation ^(c)	32,130	—	—	32,130

(a) Including revenues from General Insurance operations in Canada of \$691 million, \$638 million and \$549 million in 2006, 2005 and 2004, respectively.

(b) Represents the sum of General Insurance net premiums earned, Life Insurance & Retirement Services GAAP premiums, net investment income, Financial Services interest, lease and finance charges, Asset Management net investment income with respect to spread-based products and advisory and management fees, and realized capital gains (losses).

(c) Approximately 90 percent of ILFC's fleet is operated by foreign airlines.

3. Federal Income Taxes

AIG and its eligible U.S. subsidiaries file a consolidated U.S. federal income tax return. Life Insurance subsidiaries of American General Corporation (AGC) also file a consolidated U.S. federal income tax return and will not be included in AIG's consolidated federal income tax return until 2007. Other U.S. entities included in the consolidated financial statements also file separate U.S. federal income tax returns. Subsidiaries operating outside the U.S. are taxed, and income tax expense is recorded, based on applicable U.S. and foreign statutes.

U.S. federal income taxes have not been provided on \$1.3 billion of undistributed earnings of certain U.S. subsidiaries that are not included in the consolidated AIG U.S. federal income tax return because tax planning strategies are available, and would be utilized, to eliminate the tax liability related to these earnings. U.S. federal income taxes have not been provided on the undistributed earnings of certain non-U.S. subsidiaries to the extent that such earnings have been reinvested abroad for an indefinite period of time. At December 31, 2006, the cumulative amount of undistributed earnings in these subsidiaries approximated \$17.6 billion. Determining the deferred tax liability that would arise if these earnings were not permanently reinvested abroad is not practicable.

A component of life insurance surplus accumulated prior to 1984 is not taxable unless it exceeds certain statutory limitations or is distributed to shareholders. The American Jobs Creation Act of 2004 amended the federal income tax law to permit life

insurance companies to distribute amounts from their policyholders' surplus accounts in 2005 and 2006 without incurring federal income tax on the distributions. In 2005 and 2006, AIG made distributions and eliminated the aggregate balance of \$945 million from its policyholders' surplus accounts.

A Revenue Agent's Report proposing to assess additional taxes for the years 1997 to 1999 has been issued to AIG and a Letter of Protest contesting the proposed assessments has been filed with the Internal Revenue Service (IRS). A draft settlement agreed to in substance has been received from the IRS for years 1997 to 1999. Settlement has been reached with the IRS for years prior to 1997 although AIG has reserved the right to timely claim refunds for items related to the restatements of AIG's 2004 and prior financial statements during 2005.

In addition, for the years ended September 30, 1993 and 1994, a Notice of Deficiency assessing additional taxes has been issued to AIG Retirement Services Inc., which has filed a petition for redetermination with the United States Tax Court challenging the Notice. Revenue Agents' Reports for the years ended September 30, 1995 and 1996 and for the period from September 30, 1997 to December 31, 1998 have also been issued to AIG Retirement Services Inc., and Letters of Protest contesting the proposed assessments have been filed with the IRS. Similarly, SunAmerica Life Insurance Company (SunAmerica Life) has also received a proposed assessment and has filed a protest for the year ended December 31, 1999.

3. Federal Income Taxes

Continued

It is management's belief that there are substantial arguments in support of the positions taken by AIG, AIG Retirement Services Inc., and SunAmerica Life in their Letters of Protest and Tax Court litigation. Although the final outcome of any issues raised in connection with these years is uncertain, AIG believes that any tax obligation, including interest thereon, would not be material to AIG's consolidated financial condition, results of operations or liquidity.

AGC's tax years through 1999 have been audited and settled with the IRS. Although a Revenue Agent's Report has not yet been issued to AGC for years ended December 31, 2000, 2001 and 2002, AIG has received a notice of proposed adjustment for certain items during that period from the IRS.

The pretax components of U.S. and foreign income reflect the locations in which such pretax income was generated. The pretax U.S. and foreign income was as follows for the years ended December 31, 2006, 2005 and 2004:

<i>(in millions)</i>	2006	2005	2004
U.S.	\$ 9,862	\$ 6,103	\$ 6,069
Foreign	11,825	9,110	8,776
Total	\$21,687	\$15,213	\$14,845

The U.S. federal income tax rate was 35 percent for 2006, 2005 and 2004. Actual tax expense on income differs from the "expected" amount computed by applying the federal income tax rate because of the following:

Years Ended December 31, <i>(dollars in millions)</i>	2006		2005		2004	
	Amount	Percent of Pretax Income	Amount	Percent of Pretax Income	Amount	Percent of Pretax Income
U.S. federal income tax at statutory rate	\$7,591	35.0%	\$5,325	35.0%	\$5,197	35.0%
Adjustments:						
Tax exempt interest	(718)	(3.3)	(566)	(3.7)	(440)	(2.9)
Partnerships and joint ventures	(265)	(1.2)	(85)	(0.5)	(27)	(0.2)

Other	236	1.0	5	—	10	0.1
Actual income tax expense	\$6,537	30.1%	\$4,258	28.0%	\$4,407	29.7%
Foreign and U.S. components of actual income tax expense:						
Foreign:						
Current	\$2,725		\$ 974		\$1,104	
Deferred	933		426		561	
U.S.:						
Current	2,764		1,613		1,541	
Deferred	115		1,245		1,201	
Total	\$6,537		\$4,258		\$4,407	

Notes to Consolidated Financial Statements *Continued***3. Federal Income Taxes***Continued***The components of the net deferred tax liability as of December 31, 2006 and 2005 were as follows:**

<i>(in millions)</i>	2006	2005
Deferred tax assets:		
Loss reserve discount	\$ 1,969	\$ 2,242
Unearned premium reserve reduction	1,352	1,042
Loan loss and other reserves	1,054	419
Investment in foreign subsidiaries and joint ventures	420	349
Adjustment to life policy reserves	3,584	3,170
Accruals not currently deductible, and other	1,420	1,189
Total deferred tax assets	9,799	8,411
Deferred tax liabilities:		
Deferred policy acquisition costs	10,396	7,573
Flight equipment, fixed assets and intangible assets	4,377	3,196
Unrealized appreciation of investments	3,370	4,025
Other	508	224
Total deferred tax liabilities	18,651	15,018
Net deferred tax liability	\$ 8,852	\$ 6,607

AIG has recorded alternative minimum tax credit carry forwards of \$222 million and \$192 million at December 31, 2006 and 2005, respectively. The alternative minimum tax credits do not expire.

4. Deferred Policy Acquisition Costs**The following reflects the policy acquisition costs deferred for amortization against future income and the related amortization charged to income for General Insurance and Life Insurance & Retirement Services operations:**

Years Ended December 31, <i>(in millions)</i>	2006	2005	2004
General Insurance operations:			
Balance at beginning of year	\$ 4,048	\$ 3,998	\$ 3,619
Acquisition costs deferred	8,115	7,480	6,617
Amortization expense	(7,866)	(7,365)	(6,301)
Increase (decrease) due to foreign exchange	58	(65)	63
Balance at end of year	\$ 4,355	\$ 4,048	\$ 3,998
Life Insurance & Retirement Services operations:			
Balance at beginning of year	\$28,106	\$25,080	\$21,822
Acquisition costs deferred	6,823	6,513	6,266
Amortization expense	(3,712)	(3,328)	(3,514)
Change in net unrealized gains (losses) on securities	646	977	(198)
Increase (decrease) due to foreign exchange	947	(1,136)	704
Subtotal	\$32,810	\$28,106	\$25,080
Consolidation and elimination	70	—	—
Balance at end of year	\$32,880	\$28,106	\$25,080
Total deferred policy acquisition costs	\$37,235	\$32,154	\$29,078

Included in the above table is the VOBA, an intangible asset recorded during purchase accounting, which is amortized in a manner similar to DAC. Amortization of VOBA was \$239 million, \$291 million and \$407 million while the unamortized balance was \$1.98 billion, \$2.14 billion and \$2.52 billion for 2006, 2005 and 2004, respectively. The percentage of the unamortized balance of VOBA at 2006 expected to be amortized for 2007 through 2012 by year is: 11.3 percent, 10.0 percent, 8.8 percent, 7.3 percent and 6.0 percent, respectively, with 56.6 percent being amortized

after five years. These projections are based on current estimates for investment, persistency, mortality, and morbidity assumptions. The DAC amortization charged to income includes the increase or decrease of amortization for FAS 97-related realized capital gains (losses), primarily in the Domestic Retirement Services business. For 2006, 2005 and 2004, respectively, the rate of amortization expense decreased by \$98 million, \$46 million and \$41 million.

There were no impairments of DAC or VOBA for the years ended December 31, 2006, 2005 and 2004.

5. Reinsurance

In the ordinary course of business, AIG's General Insurance and Life Insurance companies place reinsurance with other insurance companies in order to provide greater diversification of AIG's business and limit the potential for losses arising from large risks. In addition, AIG's General Insurance subsidiaries assume reinsurance from other insurance companies.

General Reinsurance: General reinsurance is effected under reinsurance treaties and by negotiation on individual risks. Certain of these reinsurance arrangements consist of excess of loss contracts which protect AIG against losses over stipulated amounts. Ceded premiums are considered prepaid reinsurance premiums and are recognized as a reduction of premiums earned over the contract period in proportion to the protection received. Amounts recoverable from general reinsurers are estimated in a manner consistent with the claims liabilities associated with the reinsurance and presented as a component of reinsurance assets. Assumed reinsurance premiums are earned primarily on a pro-rata basis over the terms of the reinsurance contracts.

General Insurance premiums written and earned were comprised of the following:

Years Ended December 31, (in millions)	2006	2005	2004
Premiums written:			
Direct	\$ 49,609	\$ 46,689	\$ 44,692
Assumed	6,671	6,036	7,354
Ceded	(11,414)	(10,853)	(11,423)
Total	\$ 44,866	\$ 41,872	\$ 40,623
Premiums earned:			
Direct	\$ 47,973	\$ 45,794	\$ 43,109
Assumed	6,449	5,921	7,094
Ceded	(10,971)	(10,906)	(11,666)
Total	\$ 43,451	\$ 40,809	\$ 38,537

For the years ended December 31, 2006, 2005 and 2004, reinsurance recoveries, which reduced loss and loss expenses incurred, amounted to \$8.3 billion, \$20.7 billion and \$12.1 billion, respectively.

Life Insurance: Life reinsurance is effected principally under yearly renewable term treaties. The premiums with respect to these treaties are considered prepaid reinsurance premiums and are recognized as a reduction of premiums earned over the contract period in proportion to the protection provided. Amounts recoverable from life reinsurers are estimated in a manner consistent with the assumptions used for the underlying policy benefits and are presented as a component of reinsurance assets.

Life Insurance & Retirement Services premiums were comprised of the following:

Years Ended December 31, (in millions)	2006	2005	2004
Gross premiums	\$32,117	\$30,717	\$29,202
Ceded premiums	(1,481)	(1,317)	(1,114)
Premiums	\$30,636	\$29,400	\$28,088

Life Insurance recoveries, which reduced death and other benefits, approximated \$806 million, \$770 million and \$779 million, respectively, for the years ended December 31, 2006, 2005 and 2004.

Life Insurance in force ceded to other insurance companies was as follows:

Years Ended December 31, (in millions)	2006	2005	2004
Life Insurance in force ceded	\$408,970	\$365,082	\$344,036

Life Insurance assumed represented 0.1 percent, 0.8 percent and 0.7 percent of gross Life Insurance in force at December 31, 2006, 2005 and 2004, respectively, and Life Insurance & Retirement Services premiums assumed represented 0.1 percent, 0.3 percent and 2.5 percent of gross GAAP premiums for the years ended December 31, 2006, 2005 and 2004, respectively.

Supplemental information for gross loss and benefit reserves net of ceded reinsurance at December 31, 2006 and 2005 follows:

(in millions)	As Reported	Net of Reinsurance
2006		
Reserve for losses and loss expenses	\$ (79,999)	\$ (62,630)
Future policy benefits for life and accident and health insurance contracts	(122,230)	(120,656)
Reserve for unearned premiums	(26,271)	(22,759)
Reinsurance assets	23,355	—
2005		
Reserve for losses and loss expenses	\$ (77,169)	\$ (57,476)
Future policy benefits for life and accident and health insurance contracts	(108,807)	(107,420)
Reserve for unearned premiums	(24,243)	(21,174)
Reinsurance assets	24,978	—

AIRCO acts primarily as an internal reinsurance company for AIG's insurance operations. This facilitates insurance risk management (retention, volatility, concentrations) and capital planning locally (branch and subsidiary). It also allows AIG to pool its insurance risks and purchase reinsurance more efficiently at a consolidated level, manage global counterparty risk and relationships and manage global life catastrophe risks.

AIG's Domestic Life Insurance & Retirement Services operations utilize internal and third-party reinsurance relationships to

Notes to Consolidated Financial Statements *Continued*

5. Reinsurance

Continued

manage insurance risks and to facilitate capital management strategies. Pools of highly-rated third-party reinsurers are utilized to manage net amounts at risk in excess of retention limits. AIG's Domestic Life Insurance companies also cede excess, non-economic reserves carried on a statutory-basis only on certain term and universal life insurance policies and certain fixed annuities to an offshore affiliate.

AIG generally obtains letters of credit in order to obtain statutory recognition of its intercompany reinsurance transactions. For this purpose, AIG has a \$2.5 billion syndicated letter of credit facility outstanding as of December 31, 2006, all of which relates to life intercompany reinsurance transactions.

AIG is also a party to a 364-day bilateral revolving credit facility for an aggregate amount of \$3.2 billion. The facility can be drawn in the form of letters of credit with terms of up to eight years. As of December 31, 2006, approximately \$2.69 billion principal amount of letters of credit are outstanding under this facility, of which approximately \$1.3 billion relates to life intercompany reinsurance transactions. AIG has also obtained approximately \$201 million of letters of credit on a bilateral basis.

Reinsurance Security: AIG's third party reinsurance arrangements do not relieve AIG from its direct obligation to its insureds. Thus, a credit exposure exists with respect to both general and life reinsurance ceded to the extent that any reinsurer fails to meet the obligations assumed under any reinsurance agreement. AIG holds substantial collateral as security under related reinsurance agreements in the form of funds, securities, and/or letters of credit. A provision has been recorded for estimated unrecoverable reinsurance. AIG has been largely successful in prior recovery efforts.

AIG evaluates the financial condition of its reinsurers and establishes limits per reinsurer through AIG's Credit Risk Committee. AIG believes that no exposure to a single reinsurer represents an inappropriate concentration of risk to AIG, nor is AIG's business substantially dependent upon any single reinsurer.

6. Reserve for Losses and Loss Expenses and Future Life Policy Benefits and Policyholders' Contract Deposits

The following analysis provides a reconciliation of the activity in the reserve for losses and loss expenses:

Years Ended December 31, (in millions)	2006	2005	2004
At beginning of year:			
Reserve for losses and loss expenses	\$ 77,169	\$ 61,878	\$ 51,871
Reinsurance recoverable	(19,693)	(14,624)	(15,643)
Total	57,476	47,254	36,228
Foreign exchange effect	741	(628)	524
Acquisition ^(a)	55	—	—
Losses and loss expenses incurred:			
Current year	27,805	28,426	26,793
Prior years, other than accretion of discount	(53)	4,680 ^(b)	3,187 ^(c)
Prior years, accretion of discount	300	(15)	377
Total	28,052	33,091	30,357
Losses and loss expenses paid:			
Current year	8,368	7,331	7,692
Prior years	15,326	14,910	12,163
Total	23,694	22,241	19,855
At end of year:			
Net reserve for losses and loss expenses	62,630	57,476	47,254
Reinsurance recoverable	17,369	19,693	14,624
Total	\$ 79,999	\$ 77,169	\$ 61,878

(a) Reflects the opening balance with respect to the acquisition of the Central Insurance Co., Ltd. in the third quarter of 2006.

(b) Includes fourth quarter charge of \$1.8 billion resulting from the annual review of General Insurance loss and loss adjustment reserves.

(c) Includes fourth quarter charge of \$850 million attributable to the change in estimate for asbestos and environmental exposures.

The analysis of the future policy benefits and policyholders' contract deposits liabilities follows:

Years Ended December 31, (in millions)	2006	2005*
Future policy benefits:		
Long duration contracts	\$121,364	\$107,877
Short duration contracts	866	930
Total	\$122,230	\$108,807

* 2005 amounts have been reclassified to conform to 2006 presentation.

6. Reserve for Losses and Loss Expenses and Future Life Policy Benefits and Policyholders' Contract Deposits

Continued

Years Ended December 31, (in millions)	2006	2005*
Policyholders' contract deposits:		
Annuities	\$144,599	\$142,057
GICs	34,746	39,705
Universal life products	22,632	18,682
Variable investment contracts	14,289	8,373
Variable products	14,264	7,799
Corporate life products	2,083	2,077
Other investment contracts	12,045	8,334
Total	\$244,658	\$227,027

Long duration contract liabilities included in future policy benefits, as presented in the preceding table, result from life products. Short duration contract liabilities are primarily accident and health products. The liability for future life policy benefits has been established based upon the following assumptions:

- Interest rates (exclusive of immediate/terminal funding annuities), which vary by territory, year of issuance and products, range from 1.0 percent to 12.5 percent within the first 20 years. Interest rates on immediate/terminal funding annuities are at a maximum of 11.5 percent and grade to not greater than 6.0 percent.
- Mortality and surrender rates are based upon actual experience by geographical area modified to allow for variations in policy form. The weighted average lapse rate, including surrenders, for individual and group life approximated 7.4 percent.
- The portions of current and prior net income and of current unrealized appreciation of investments that can inure to the benefit of AIG are restricted in some cases by the insurance contracts and by the local insurance regulations of the countries in which the policies are in force.
- Participating life business represented approximately 19 percent of the gross insurance in force at December 31, 2006 and 34 percent of gross GAAP premiums in 2006. The amount of annual dividends to be paid is determined locally by the boards of directors. Provisions for future dividend payments are computed by jurisdiction, reflecting local regulations.

The liability for policyholders' contract deposits has been established based on the following assumptions:

- Interest rates credited on deferred annuities, which vary by territory and year of issuance, range from 1.2 percent to,

including bonuses, 12.0 percent. Less than 1.0 percent of the liabilities are credited at a rate greater than 9.0 percent. Current declared interest rates are generally guaranteed to remain in effect for a period of one year though some are guaranteed for longer periods. Withdrawal charges generally range from zero percent to 20.0 percent grading to zero over a period of zero to 19 years.

- Domestically, guaranteed investment contracts (GICs) have market value withdrawal provisions for any funds withdrawn other than benefit responsive payments. Interest rates credited generally range from 2.6 percent to 9.0 percent. The vast majority of these GICs mature within five years. Overseas, interest rates credited on GICs generally range from 1.2 percent to 5.2 percent and maturities range from one to five years.
- Interest rates on corporate life insurance products are guaranteed at 4.0 percent and the weighted average rate credited in 2006 was 5.2 percent.
- The universal life funds have credited interest rates of 1.5 percent to 7.0 percent and guarantees ranging from 1.5 percent to 5.5 percent depending on the year of issue. Additionally, universal life funds are subject to surrender charges that amount to 12.2 percent of the aggregate fund balance grading to zero over a period not longer than 20 years.
- For variable products and investment contracts, policy values are expressed in terms of investment units. Each unit is linked to an asset portfolio. The value of a unit increases or decreases based on the value of the linked asset portfolio. The current liability at any time is the sum of the current unit value of all investment units plus any liability for guaranteed minimum death or withdrawal benefits. A portion of these liabilities are classified in the Spread-Based Investment Business for segment reporting purposes.

Certain products are subject to experience adjustments. These include group life and group medical products, credit life contracts, accident and health insurance contracts/riders attached to life policies and, to a limited extent, reinsurance agreements with other direct insurers. Ultimate premiums from these contracts are estimated and recognized as revenue, and the unearned portions of the premiums recorded as liabilities. Experience adjustments vary according to the type of contract and the territory in which the policy is in force and are subject to local regulatory guidance.

Notes to Consolidated Financial Statements *Continued*

7. Statutory Financial Data

Statutory surplus and net income for General Insurance, Life Insurance & Retirement Services operations in accordance with regulatory accounting practices were as follows:

Years Ended December 31, (in millions)	2006	2005	2004
Statutory surplus ^(a) :			
General Insurance	\$32,665	\$24,508	\$20,632
Life Insurance & Retirement Services	35,058	30,739	28,609
Statutory net income ^{(a)(b)} :			
General Insurance ^(c)	8,010	1,713	3,028
Life Insurance & Retirement Services ^(a)	5,088	4,762	4,474

(a) Statutory surplus and net income with respect to foreign operations are estimated as of November 30. The basis of presentation for branches of AIA is the Hong Kong statutory filing basis. The basis of presentation for branches of ALICO is the U.S. statutory filing basis. AIG Star Life, AIG Edison Life, Nan Shan and Philamlife are estimated based on their respective local country filing basis.

(b) Includes realized capital gains and losses and taxes.

(c) Includes catastrophe losses, net of tax, of \$1.9 billion and \$660 million in 2005 and 2004, respectively.

AIG's insurance subsidiaries file financial statements prepared in accordance with statutory accounting practices prescribed or permitted by domestic and foreign insurance regulatory authorities. The differences between statutory financial statements and financial statements prepared in accordance with U.S. GAAP vary between domestic and foreign by jurisdiction. The principal differences are that statutory financial statements do not reflect DAC, some bond portfolios may be carried at amortized cost, assets and liabilities are presented net of reinsurance, policyholder liabilities are valued using more conservative assumptions and certain assets are non-admitted.

Statutory capital of each company continued to exceed minimum company action level requirements following the adjustments, but AIG nonetheless contributed an additional \$750 million of capital into American Home Assurance Company (American Home) effective September 30, 2005 and contributed a further \$2.25 billion of capital in February 2006 for a total of approximately \$3 billion of capital into Domestic General Insurance subsidiaries effective December 31, 2005.

8. Investment Information

Insurance Operations

(a) Statutory Deposits: Cash and securities with carrying values of \$16.5 billion and \$11.8 billion were deposited by AIG's insurance subsidiaries under requirements of regulatory authorities as of December 31, 2006 and 2005, respectively.

(b) Net Investment Income: An analysis of net investment income follows:

Years Ended December 31, (in millions)	2006	2005	2004
Fixed maturities	\$19,078	\$17,685	\$15,884
Equity securities	1,693	1,730	621
Short-term investments	719	494	177
Interest on mortgage, policy and collateral loans	1,253	1,177	1,096
Other invested assets	3,551	1,905	1,444
Total investment income	26,294	22,991	19,222
Investment expenses	1,002	826	757
Net investment income	\$25,292	\$22,165	\$18,465

(a) For bonds, represents amortized cost.

(b) Primarily relates to the corporate debt category.

8. Investment Information

Continued

As of December 31, 2006, AIG held 20,172 and 1,750 of individual bond and stock investments, respectively, that were in an unrealized loss position, of which 10,846 individual investments were in an unrealized loss position continuously for 12 months or more.

AIG recorded other-than-temporary impairment losses of approximately \$944 million, \$598 million and \$684 million in realized capital gains (losses) in 2006, 2005 and 2004, respectively. See Note 1(e) herein for AIG's other-than-temporary impairment accounting policy.

(g) Other Invested Assets: Other invested assets as of December 31, 2006 were \$42.1 billion, consisting primarily of hedge funds and limited partnerships. Approximately \$5.3 billion relates to available for sale investments carried at fair value, with unrealized gains and losses recorded in a separate component of Other comprehensive income, net of deferred taxes, with almost all of the remaining investments being accounted for on the equity method of accounting. All of the investments are subject to impairment testing (see Note 1(e) herein). The gross unrealized loss on the investments accounted for as available for sale as of December 31, 2006 was \$167 million, the majority of which represents investments that have been in a continuous unrealized loss position for less than 12 months.

Other invested assets at December 31, 2006, also includes approximately \$1.8 billion of aircraft asset investments held by non-financial services subsidiaries.

(h) Investments in Life Settlement Contracts: In June 2006, AIG restructured its ownership of life settlement contracts with no effect on the economic substance of these investments. At the same time, AIG paid \$610 million to its former co-investors to acquire all the remaining interests in life settlement contracts held in previously non-consolidated trusts. The life insurers for a small portion of these newly consolidated life settlement contracts include AIG subsidiaries. As a result, amounts related to life insurance issued by AIG subsidiaries are eliminated in consolidation.

At December 31, 2006, the carrying value of AIG's life settlement contracts was \$1.1 billion, and is included in Other

invested assets on the consolidated balance sheet. These investments are monitored for impairment on a contract by contract basis quarterly. During 2006, income recognized on life settlement contracts previously held in non-consolidated trusts was \$38 million, and is included in net investment income on the consolidated statement of income. Further information regarding life settlement contracts as of December 31, 2006 is as follows:

(dollars in millions)

Remaining Life Expectancy of Insureds	Number of Contracts	Carrying Value	Face Value (Death Benefits)
0 – 1 year	4	\$ 6	\$ 8
1 – 2 years	23	10	15
2 – 3 years	61	58	88
3 – 4 years	123	108	188
4 – 5 years	135	79	170
Thereafter	1,453	829	3,197
Total	1,799	\$1,090	\$3,666

As of December 31, 2006, the anticipated life insurance premiums required to keep the life settlement contracts in force, payable in the ensuing twelve months ending December 31, 2007 and the four succeeding years ending December 31, 2011 are \$77 million, \$81 million, \$85 million, \$86 million, and \$87 million, respectively.

Financial Services

(i) Economic Hedging of Securities Available for Sale:

AIGFP follows a policy of minimizing interest rate, currency, commodity, and equity risks associated with securities available for sale by entering into internal offsetting positions, on a security by security basis within its derivatives portfolio, thereby offsetting a significant portion of the unrealized appreciation and depreciation. In addition, to reduce its credit risk, AIGFP has entered into credit derivative transactions with respect to \$128 million of securities available for sale to economically hedge its credit risk. As previously discussed, these economic offsets did not meet the hedge accounting requirements of FAS 133 and, therefore, are recorded in Other income in the Consolidated Statement of Income.

(j) Fair Value of Fixed Maturities and Unrealized Appreciation of Investments — Capital Markets

The amortized cost and estimated fair value of Capital Markets securities available for sale at December 31, 2006 and 2005 were as follows:

(in millions)	December 31, 2006				December 31, 2005			
	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Fair Value	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Fair Value
Securities available for sale:								
Corporate and bank debt	\$40,194	\$1,257	\$265	\$41,186	\$30,690	\$386	\$783	\$30,293
Foreign governments	706	33	1	738	825	5	31	799
Asset-backed and collateralized	2,731	170	6	2,895	3,522	202	42	3,682
U.S. government and government sponsored entities	2,281	115	10	2,386	2,535	209	7	2,737
Total	\$45,912	\$1,575	\$282	\$47,205	\$37,572	\$802	\$863	\$37,511

The amortized cost and estimated fair values of Capital Markets securities available for sale at December 31, 2006, by contractual maturity, are shown below. Actual maturities may differ from contractual maturities because certain borrowers have the right to call or prepay certain obligations with or without call or prepayment penalties.

(in millions)	Amortized Cost	Estimated Fair Value
Securities available for sale:		
Due in one year or less	\$ 1,235	\$ 1,336
Due after one year through five years	7,509	7,746
Due after five years through ten years	10,570	11,023
Due after ten years	23,867	24,204
Asset-backed and collateralized	2,731	2,896
Total securities available for sale	\$45,912	\$47,205

The following table summarizes the gross unrealized losses and cost basis on Capital Markets securities available for sale, aggregated by length of time that individual securities have been in a continuous unrealized loss position, at December 31, 2006 and 2005.

(in millions)	Less than 12 Months		12 Months or More		Total

(k) Finance Receivables:

Finance receivables, net of unearned finance charges, were as follows:

Years Ended December 31, (in millions)	2006	2005
Real estate loans	\$20,321	\$20,407
Non-real estate loans	4,506	3,831
Retail sales finance	3,092	2,522
Credit card loans	1,413	1,498
Other loans	978	407
Total finance receivables	30,310	28,665
Allowance for losses	(737)	(670)
Finance receivables, net	\$29,573	\$27,995

9. Debt Outstanding

At December 31, 2006, AIG's net borrowings were \$17.13 billion after reflecting amounts not guaranteed by AIG, amounts that were matched borrowings by AIG and AIGFP and liabilities connected to trust preferred stock. The following table summarizes borrowings outstanding at December 31, 2006 and 2005:

(in millions)	2006	2005
AIG's net borrowings	\$ 17,126	\$ 10,425
Liabilities connected to trust preferred stock	1,440	1,391
AIG Matched Investment Program		
matched notes and bonds payable	5,468	—
Series AIGFP matched notes and bonds payable	72	—
AIGFP:		
GIAs	20,664	20,811
Matched notes and bonds payable	35,776	24,950
Hybrid financial instrument liabilities ^(a)	8,856	—
Borrowings not guaranteed by AIG ^(b)	59,277	52,272
Total debt ^(c)	\$148,679	\$109,849

(a) Represents structured notes issued by AIGFP that are accounted for under the fair value option.

(b) Includes commercial paper not guaranteed by AIG.

(c) Total debt in 2006 includes commercial paper of \$12.15 billion and \$3.25 billion of debt related to VIEs required to be consolidated under the provisions of FIN 46R.

(a) Excludes \$12.15 billion of commercial paper and \$3.25 billion of debt related to VIEs required to be consolidated under the provisions of FIN 46R.

(b) Represents structured notes issued by AIGFP that are accounted for under the fair value option.

(c) AIG does not guarantee these borrowings.

(d) Reflects future minimum payment for ILFC's borrowing under the Export Credit Facility.

9. Debt Outstanding

Continued

At December 31, 2006, long-term borrowings were \$98.68 billion and short-term borrowings were \$34.6 billion, excluding \$3.25 billion with respect to VIE debt required to be consolidated under the provisions of FIN 46R. Long-term borrowings exclude that portion of long-term debt maturing in less than one year.

(a) Commercial Paper:

At December 31, 2006, the commercial paper issued and outstanding was as follows:

<i>(dollars in millions)</i>	Net Book Value	Unamortized Discount and Accrued Interest	Face Amount	Weighted Average Interest Rate	Weighted Average Maturity in Days
ILFC	\$ 2,747	\$11	\$ 2,758	5.30%	28

Taiwan ^(a)	227	1	228	2.32	48
AIGF —					
Taiwan ^(a)	26	—	26	2.00	83
Total^(b)	\$12,149	\$44	\$12,193	—	—

(a) Issued in Taiwan N.T. dollars at prevailing local interest rates.

(b) Excludes \$880 million of VIE commercial paper required to be consolidated under the provisions of FIN 46R.

At December 31, 2006, AIG did not guarantee the commercial paper of any of its subsidiaries other than AIG Funding.

(b) AIG Borrowings:

(i) **Notes and bonds issued by AIG:** In October 2006, AIG established a medium term note program under its shelf registration statement providing for the issuance of up to \$25.1 billion of AIG debt securities. The proceeds from the issuance of these debt securities may be used (i) by AIG (ii) by AIGFP as it would use the proceeds from its own borrowings as discussed below or (iii) to fund the Matched Investment Program (MIP). As of December 31, 2006, \$1.8 billion principal amount of notes were outstanding under the medium term note program, of which (i) \$749 million was used for AIG's general corporate purposes, (ii) \$72 million was used by AIGFP and (iii) \$1.0 billion was used to fund the MIP. The maturity dates of these notes range from 2011 to 2046. To the extent deemed appropriate, AIG may enter into swap transactions to manage its effective borrowing rate with respect to these notes.

As of December 31, 2006, the equivalent of \$5.7 billion of notes were outstanding under AIG's Euro medium term note program, of which the proceeds from \$3.7 billion of notes were used to fund the MIP and the remainder was used for AIG's general corporate purposes. AIG has hedged the currency exposure arising from foreign currency denominated notes by economically hedging that exposure, although such hedges did not qualify for hedge accounting treatment under FAS 133.

In 2006, AIG issued in Rule 144A/Regulation S offerings \$3 billion principal amount of senior notes, of which \$1.0 billion was exchanged by AIG for substantially identical notes that are registered under the Securities Act of 1933 (Securities Act). The proceeds from the sale of \$2.25 billion of these notes were used for AIG's general corporate purposes and \$750 million were used to fund the MIP.

In November 2006, AIG filed a shelf registration statement in Japan, providing for the issuance of up to Japanese Yen 300 billion principal amount of senior notes in the aggregate. In December 2006, AIG issued the equivalent of \$429 million under this shelf registration statement, the proceeds of which were used for AIG's general corporate purposes.

(ii) **Notes and bonds issued by SunAmerica Inc. (SAI):** As of December 31, 2006, notes and bonds originally issued by SAI aggregating \$435 million (net of unamortized discount of \$40 million) were outstanding with maturity dates from 2007 to 2097 at interest rates ranging from 5.60 percent to 9.95 percent.

(iii) **Redemption of Zero Coupon Convertible Senior Debentures:** On November 9, 2006, AIG redeemed all of its outstanding Zero Coupon Convertible Senior Debentures initially issued in 2001 for an aggregate redemption price of \$1.07 billion.

(c) AIGFP Borrowings:

(i) **Borrowings under Obligations of Guaranteed Investment Agreements:** Borrowings under obligations of guaranteed investment agreements (GIAs), which are guaranteed by AIG, are recorded at the amount outstanding under each contract. Obligations may be called at various times prior to maturity at the option of the counterparty. Interest rates on these borrowings are primarily fixed, vary by maturity, and range up to 9.8 percent.

Funds received from GIA borrowings are invested in a diversified portfolio of securities and derivative transactions. At December 31, 2006, the fair value of securities pledged as collateral with respect to these obligations approximated \$7.4 billion.

(ii) **Notes and Bonds issued by AIGFP:**

At December 31, 2006, AIGFP's notes and bonds outstanding, the proceeds of which are invested in a diversified portfolio of securities and derivative transactions, were as follows:

Range of Maturities <i>(dollars in millions)</i>	Currency	Range of Interest Rates	U.S. Dollar Carrying Value
2007-2046	U.S. dollar	0.18 - 8.60%	\$ 34,788
2007-2011	United Kingdom pound	4.68 - 5.31	4,285
2007-2024	Euro	0.29 - 9.25	3,312
2008-2011	New Zealand dollar	6.30 - 8.35	1,395
2007-2036	Japanese Yen	0.01 - 7.00	1,533
2007-2015	Australian dollar	1.14 - 4.89	392
2007-2024	Swiss francs	0.25 - 1.38	600
2007-2015	Other	2.53 - 3.72	79
Total			\$ 46,384

Notes to Consolidated Financial Statements *Continued*

9. Debt Outstanding

Continued

AIGFP economically hedges its notes and bonds. AIG guarantees all of AIGFP's debt.

(iii) **Hybrid financial instrument liabilities:** AIGFP's notes and bonds include structured debt instruments whose payment terms are linked to one or more financial or other indices (such as an equity index or commodity index or another measure that is not considered to be clearly and closely related to the debt instrument). These notes contain embedded derivatives that otherwise would be required to be accounted for separately under FAS 133. Upon AIG's early adoption of FAS 155, AIGFP elected the fair value option for these notes. The notes that are accounted for using the fair value option are reported separately under hybrid financial instrument liabilities at fair value.

(d) **AGC Borrowings:** As of December 31, 2006, AGC notes aggregating \$797 million were outstanding with maturity dates ranging from 2010 to 2029 at interest rates of up to 7.50 percent. AIG guarantees the notes and bonds of AGC.

(e) **Liabilities Connected to Trust Preferred Stock:** AGC issued Junior Subordinated Debentures (liabilities) to certain trusts established by AGC, which represent the sole assets of the trusts. The trusts have no independent operations. The trusts issued mandatory redeemable preferred stock to investors. The interest terms and payment dates of the liabilities correspond to those of the preferred stock. AGC's obligations with respect to the liabilities and related agreements, when taken together, constitute a full and unconditional guarantee by AGC of payments due on the preferred securities. AIG guarantees the obligations of AGC with respect to these liabilities and related agreements. The liabilities are redeemable, under certain conditions, at the option of AGC on a proportionate basis.

As of December 31, 2006, the preferred stock outstanding consisted of \$300 million liquidation value of 8.5 percent preferred stock issued by American General Capital II in June 2000, \$500 million liquidation value of 8.125 percent preferred stock issued by American General Institutional Capital B in March 1997, and \$500 million liquidation value of 7.57 percent preferred stock issued by American General Institutional Capital A in December 1996.

(f) ILFC Borrowings:

(i) **Notes and Bonds issued by ILFC:** As of December 31, 2006, notes aggregating \$22.8 billion were outstanding, consisting of \$12.8 billion of term notes, \$9.0 billion of medium-term notes with maturities ranging from 2007 to 2013 and interest rates ranging from 3.32 percent to 6.62 percent and \$1.0 billion of junior subordinated debt as discussed below. Notes aggregating \$5.1 billion are at floating interest rates and the remainder are at fixed rates. To the extent deemed appropriate, ILFC may enter into swap transactions to manage its effective borrowing rates with respect to these notes.

As a well-known seasoned issuer, ILFC has filed an automatic shelf registration statement with the Securities and Exchange

Commission (SEC) allowing ILFC immediate access to the U.S. public debt markets. During 2006, \$1.9 billion of debt securities were issued under this registration statement and \$3.52 billion were issued under a prior registration statement. In addition, ILFC has a Euro medium term note program for \$7.0 billion, under which \$4.28 billion in notes were sold through December 31, 2006. The foreign exchange adjustment for the foreign currency denominated debt was \$733 million at December 31, 2006 and \$197 million at December 31, 2005. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging the portion of the note exposure not already offset by Euro-denominated operating lease payments, although such hedges did not qualify for hedge accounting treatment under FAS 133.

In December 2005, ILFC issued two tranches of junior subordinated debt totaling \$1.0 billion to underlie trust preferred securities issued by a trust sponsored by ILFC. Both tranches mature on December 21, 2065, but each tranche has a different call option. The \$600 million tranche has a call date of December 21, 2010 and the \$400 million tranche has a call date of December 21, 2015. The note with the 2010 call date has a fixed interest rate of 5.90 percent for the first five years. The note with the 2015 call date has a fixed interest rate of 6.25 percent for the first ten years. Both tranches have interest rate adjustments if the call option is not exercised. The new interest rate is a floating quarterly reset rate based on the initial credit spread plus the highest of (i) 3 month LIBOR, (ii) 10-year constant maturity treasury and (iii) 30-year constant maturity treasury.

(ii) **Export credit facility:** ILFC had a \$4.3 billion Export Credit Facility (ECA) for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At December 31, 2006, ILFC had \$1.0 billion outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured ECA for up to a maximum of \$2.64 billion for Airbus aircraft to be delivered through May 31, 2005. The facility was subsequently increased to \$3.64 billion and extended to include aircraft to be delivered through May 31, 2007. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a six-month forward-looking calendar, and the interest rate is determined through a bid process. At December 31, 2006, ILFC had \$1.7 billion outstanding under this facility.

(iii) **Bank Financings:** From time to time, ILFC enters into various bank financings. As of December 31, 2006, the total funded amount was \$1.2 billion. The financings mature through 2012.

AIG does not guarantee any of the debt obligations of ILFC.

(g) **AGF Borrowings:** As of December 31, 2006, notes and bonds aggregating \$19.59 billion were outstanding with maturity dates ranging from 2007 to 2031 at interest rates ranging from

9. Debt Outstanding

Continued

1.94 percent to 8.45 percent. To the extent deemed appropriate, AGF may enter into swap transactions to manage its effective borrowing rates with respect to these notes.

As a well-known seasoned issuer, AGF has filed an automatic shelf registration statement with the SEC allowing AGF immediate access to the U.S. public debt markets. At December 31, 2006, AGF had the corporate authority to issue up to \$13.4 billion of debt securities registered under the Securities Act using AGF's effective shelf registration statements.

AGF uses the proceeds from the issuance of notes and bonds for the funding of its finance receivables. AIG does not guarantee any of the debt obligations of AGF.

(h) Other Notes, Bonds, Loans and Mortgages Payable at December 31, 2006, consisted of the following:

(in millions)	Uncollateralized Notes/Bonds/Loans Payable	Collateralized Loans and Mortgages Payable
AIGCFG	\$1,453	\$ —
AIG	841	—
Other subsidiaries	774	291
Total	\$3,068	\$291

(i) Revolving Credit Facilities of AIG, ILFC and AGF: AIG, ILFC and AGF maintain the following committed, unsecured revolving credit facilities in order to support their respective commercial paper programs and for general corporate purposes. AIG, ILFC and AGF each expects to replace or extend these credit facilities on or prior to their expiration. Some of the facilities, as noted below, contain a "term-out option" allowing for the conversion by the borrower of any outstanding loans at expiration into one-year term loans.

(in millions) Facility	Size	Borrower(s)	Available Amount December 31, 2006	Expiration	One-Year Term- Out Option

Total AGF	\$ 4,250		\$ 4,250		

(a) Guaranteed by AIG.

(b) This facility can be drawn in the form of loans or letters of credit. All drawn amounts shown above are in the form of letters of credit.

(c) Subsidiaries of AIG are the lenders on this facility.

(d) American General Finance, Inc. is an eligible borrower for up to \$400 million only.

Notes to Consolidated Financial Statements *Continued*

(j) Interest Expense for All Indebtedness: Total interest expense for all indebtedness, net of capitalized interest, aggregated \$6.95 billion in 2006, \$5.7 billion in 2005 and \$4.4 billion in 2004. Capitalized interest was \$59 million in 2006, \$64 million in 2005 and \$59 million in 2004. Cash distributions on the preferred shareholders' equity in subsidiary companies of ILFC and liabilities connected to trust preferred stock of AGC subsidiaries are accounted for as interest expense in the consolidated statement of income. The cash distributions for ILFC were approximately \$5 million, \$5 million and \$4 million for the years ended December 31, 2006, 2005 and 2004, respectively. The cash distributions for AGC subsidiaries were approximately \$107 million, \$112 million and \$123 million for the years ended December 31, 2006, 2005 and 2004, respectively.

10. Preferred Shareholders' Equity in Subsidiary Companies

As of December 31, 2006, preferred shareholders' equity in subsidiary companies represents preferred stocks issued by ILFC, a wholly owned subsidiary of AIG.

At December 31, 2006, the preferred stock consists of 1,000 shares of market auction preferred stock (MAPS) in two series (Series A and B) of 500 shares each. Each of the MAPS shares has a liquidation value of \$100,000 per share and is not convertible. The dividend rate, other than the initial rate, for each dividend period for each series is reset approximately every seven weeks (49 days) on the basis of orders placed in an auction. During 2006, ILFC extended each of the MAPS dividend periods for three years. At December 31, 2006, the dividend rate for Series A MAPS was 4.70 percent and the dividend rate for Series B MAPS was 5.59 percent.

11. Shareholders' Equity and Earnings Per Share

Shareholders' Equity

AIG parent depends on its subsidiaries for cash flow in the form of loans, advances, reimbursement for shared expenses, and dividends. AIG's insurance subsidiaries are subject to regulatory restrictions on the amount of dividends which can be remitted to AIG parent. These restrictions vary by state. For example, unless permitted by the New York Superintendent of Insurance, general insurance companies domiciled in New York may not pay dividends to shareholders which in any twelve month period exceed the lesser of ten percent of the company's statutory policyholders' surplus or 100 percent of its "adjusted net investment income," as defined. Generally, less severe restrictions applicable to both General and Life Insurance companies exist in most of the other states in which AIG's insurance subsidiaries are domiciled. Certain foreign jurisdictions have restrictions which could delay or limit the remittance of dividends. There are also various local restrictions limiting cash loans and advances to AIG by its subsidiaries. Largely as a result of the restrictions, approximately 90 percent of consolidated shareholders' equity was restricted from immediate transfer to AIG parent at December 31, 2006.

At December 31, 2006, there were 6,000,000 shares of AIG's \$5 par value serial preferred stock authorized, issuable in series, none of which were outstanding.

11. Shareholders' Equity and Earnings Per Share

Continued

Earnings Per Share

Basic earnings per share are based on the weighted average number of common shares outstanding, retroactively adjusted to reflect all stock dividends and stock splits. Diluted earnings per share are based on those shares used in basic earnings per share plus shares that would have been outstanding assuming issuance of common shares for all dilutive potential common shares outstanding, retroactively adjusted to reflect all stock dividends and stock splits.

The computation of earnings per share for December 31, 2006, 2005 and 2004 was as follows:

Years Ended December 31, (in millions, except per share data)	2006	2005	2004
Numerator for earnings per share:			
Income before cumulative effect of accounting changes	\$14,014	\$10,477	\$9,983

Income before cumulative effect of accounting changes	\$ 5.35	\$ 3.99	\$ 3.79
Cumulative effect of accounting changes, net of tax	0.01	—	(0.06)
Net income	\$ 5.36	\$ 3.99	\$ 3.73

(a) Assumes conversion of contingently convertible bonds due to the adoption of EITF Issue No. 04-8 "Accounting Issues Related to Certain Features of Contingently Convertible Debt and the Effect on Diluted Earnings per Share."

(b) Certain shares arising from employee stock plans were not included in the computation of diluted earnings per share where the exercise price of the options exceeded the average market price and would have been antidilutive. The number of shares excluded were 13 million, 19 million and 7 million for 2006, 2005 and 2004, respectively.

12. Commitments, Contingencies and Guarantees

In the normal course of business, various commitments and contingent liabilities are entered into by AIG and certain of its subsidiaries. In addition, AIG guarantees various obligations of certain subsidiaries.

(a) Litigation and Investigations

Litigation Arising from Operations. AIG and its subsidiaries, in common with the insurance and financial services industries in general, are subject to litigation, including claims for punitive

damages, in the normal course of their business. In AIG's insurance operations, litigation arising from claims settlement activities is generally considered in the establishment of AIG's reserve for losses and loss expenses. However, in certain circumstances, AIG provides disclosure because of the size or nature of the potential liability to AIG. The potential for increasing jury awards and settlements makes it difficult to assess the ultimate outcome of such litigation.

Notes to Consolidated Financial Statements *Continued*

12. Commitments, Contingencies and Guarantees

Continued

Litigation Arising from Insurance Operations — Caremark. AIG and certain of its subsidiaries have been named defendants in two putative class actions in state court in Alabama that arise out of the 1999 settlement of class and derivative litigation involving Caremark Rx, Inc. (Caremark). An excess policy issued by a subsidiary of AIG with respect to the 1999 litigation was expressly stated to be without limit of liability. In the current actions, plaintiffs allege that the judge approving the 1999 settlement was misled as to the extent of available insurance coverage and would not have approved the settlement had he known of the existence and/or unlimited nature of the excess policy. They further allege that AIG, its subsidiaries, and Caremark are liable for fraud and suppression for misrepresenting and/or concealing the nature and extent of coverage. In their complaint, plaintiffs request compensatory damages for the 1999 class in the amount of \$3.2 billion, plus punitive damages. AIG and its subsidiaries deny the allegations of fraud and suppression and have asserted, *inter alia*, that information concerning the excess policy was publicly disclosed months prior to the approval of the settlement. AIG and its subsidiaries further assert that the current claims are barred by the statute of limitations and that plaintiffs' assertions that the statute was tolled cannot stand against the public disclosure of the excess coverage. Plaintiffs, in turn, have asserted that the disclosure was insufficient to inform them of the nature of the coverage and did not start the running of the statute of limitations. The trial court is currently considering, under standards mandated by the Alabama Supreme Court, whether a class action can be certified. AIG cannot reasonably estimate either the likelihood of its prevailing in these actions or the potential damages in the event liability is determined.

Litigation Arising from Insurance Operations — Gunderson. A subsidiary of AIG has been named as a defendant in a putative class action lawsuit in the 14th Judicial District Court for the State of Louisiana. The *Gunderson* complaint alleges failure to comply with certain provisions of the Louisiana Any Willing Provider Act (the Act) relating to discounts taken by defendants on bills submitted by Louisiana medical providers and hospitals that provided treatment or services to workers compensation claimants and seeks monetary penalties and injunctive relief. On July 20, 2006, the court denied defendants' motion for summary judgment and granted plaintiffs' partial motion for summary judgment, holding that the AIG subsidiary was a "group purchaser" and, therefore, potentially subject to liability under the Act. On November 28, 2006, the court issued an order certifying a class of providers and hospitals. In an unrelated action also arising under the Act, a Louisiana appellate court ruled that the district court lacked jurisdiction to adjudicate the claims at issue. In response, defendants in *Gunderson* filed an exception for lack of subject matter jurisdiction. On January 19, 2007, the court denied the motion, holding that it has jurisdiction over the putative class claims. The AIG subsidiary is appealing the class certification ruling and intends to seek an appeal from the jurisdictional ruling. While AIG believes that it has meritorious defenses to

plaintiffs' claims, it cannot currently estimate the likelihood of prevailing in this action or reasonably estimate the likely damages, if any.

2006 Regulatory Settlements. In February 2006, AIG reached a resolution of claims and matters under investigation with the United States Department of Justice (DOJ), SEC, the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). AIG recorded an after-tax charge of \$1.15 billion relating to these settlements in the fourth quarter of 2005.

The settlements resolved investigations conducted by the SEC, NYAG and DOI in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. These settlements did not, however, resolve investigations by regulators from other states into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Nor did the settlements resolve any obligations that AIG may have to state guarantee funds in connection with any of these matters.

As a result of these settlements, AIG made payments or placed amounts in escrow in 2006 totaling approximately \$1.64 billion, \$225 million of which represented fines and penalties. Amounts held in escrow totaling \$699 million, including interest thereon, are included in other assets at December 31, 2006. At that date, approximately \$314 million of the funds were escrowed for settlement of claims resulting from the underpayment by AIG of its residual market assessments for workers compensation. The National Workers Compensation Reinsurance Pool on behalf of its participant members and various states have communicated to AIG that they may assert claims with respect to the underpayment of such assessments. AIG cannot currently estimate whether the amount ultimately required to settle these claims will exceed the funds escrowed for this purpose.

The remaining escrowed funds, which amounted to \$385 at December 31, 2006, are set aside for settlements with certain AIG policyholders specified in the settlements who claimed to have been harmed by AIG's insurance brokerage practices. Any funds remaining at the end of the escrow period will be used to resolve claims asserted by policyholders relating to such insurance brokerage practices, including those described in Private Litigation below.

In addition to the escrowed funds, the \$800 million was deposited into a fund under the supervision of the SEC as part of the settlements to be available to resolve claims asserted against AIG by investors including, the shareholder lawsuits described herein.

At the current time, AIG cannot predict the outcome of the matters described above, or estimate any potential additional cost related to these matters.

Also, as part of the settlements, AIG has agreed to retain, for a period of three years, an independent consultant who will conduct a review that will include, among other things, the adequacy of AIG's internal control over financial reporting, the policies, procedures and effectiveness of AIG's regulatory, compli-

12. Commitments, Contingencies and Guarantees

Continued

ance and legal functions and the remediation plan that AIG has implemented as a result of its own internal review.

Private Litigation

Securities Actions. Beginning in October 2004, a number of putative securities fraud class action suits were filed against AIG and consolidated as *In re American International Group, Inc. Securities Litigation*. Subsequently, a separate, though similar, securities fraud action was also brought against AIG by certain Florida pension funds. The lead plaintiff in the class action is a group of public retirement systems and pension funds benefiting Ohio state employees, suing on behalf of themselves and all purchasers of AIG's publicly traded securities between October 28, 1999 and April 1, 2005. The named defendants are AIG and a number of present and former AIG officers and directors, as well as Starr, SICO, General Reinsurance Corporation, and PricewaterhouseCoopers LLP (PwC), among others. The lead plaintiff alleges, among other things, that AIG: (1) concealed that it engaged in anti-competitive conduct through alleged payment of contingent commissions to brokers and participation in illegal bid-rigging; (2) concealed that it used "income smoothing" products and other techniques to inflate its earnings; (3) concealed that it marketed and sold "income smoothing" insurance products to other companies; and (4) misled investors about the scope of government investigations. In addition, the lead plaintiff alleges that AIG's former Chief Executive Officer manipulated AIG's stock price. The lead plaintiff asserts claims for violations of Sections 11 and 15 of the Securities Act, Section 10(b) of the Exchange Act, and Rule 10b-5 promulgated thereunder, Section 20(a) of the Exchange Act, and Section 20A of the Exchange Act. In April 2006, the court denied the defendants' motions to dismiss the second amended class action complaint and the Florida complaint. In December 2006, a third amended class action complaint was filed, which does not differ substantially from the prior complaint. Fact and class discovery is currently ongoing.

ERISA Action. Between November 30, 2004 and July 1, 2005, several ERISA actions were filed on behalf of purported class of participants and beneficiaries of three pension plans sponsored by AIG or its subsidiaries. A consolidated complaint filed on September 26, 2005 alleges a class period between September 30, 2000 and May 31, 2005 and names as defendants AIG, the members of AIG's Retirement Board and the Administrative Boards of the plans at issue, and four present or former members of AIG's Board of Directors. The factual allegations in the complaint are essentially identical to those in the securities actions described above. Plaintiffs allege that defendants violated duties under ERISA by allowing the plans to offer AIG stock as a permitted investment, when defendants allegedly knew it was not a prudent investment, and by failing to provide participants with accurate information about AIG stock. AIG's motion to dismiss was denied by order dated December 12, 2006. Discovery will be consolidated with proceedings in the securities actions.

Derivative Actions — Southern District of New York. Between October 25, 2004 and July 14, 2005, seven separate derivative actions were filed in the Southern District of New York, five of which were consolidated into a single action. The New York derivative complaint contains nearly the same types of allegations made in the securities fraud and ERISA actions described above. The named defendants include current and former officers and directors of AIG, as well as Marsh & McLennan Companies, Inc. (Marsh), SICO, Starr, ACE Limited and subsidiaries (ACE), General Reinsurance Corporation, PwC, and certain employees or officers of these entity defendants. Plaintiffs assert claims for breach of fiduciary duty, gross mismanagement, waste of corporate assets, unjust enrichment, insider selling, auditor breach of contract, auditor professional negligence and disgorgement from AIG's former Chief Executive Officer and Chief Financial Officer of incentive-based compensation and AIG share proceeds under Section 304 of the Sarbanes-Oxley Act, among others. Plaintiffs seek, among other things, compensatory damages, corporate governance reforms, and a voiding of the election of certain AIG directors. AIG's Board of Directors has appointed a special committee of independent directors (special committee) to review the matters asserted in the operative consolidated derivative complaint. The court has approved agreements staying the derivative case pending in the Southern District of New York while the special committee performs its work. The current stay extends until March 14, 2007.

Derivative Actions — Delaware Chancery Court. From October 2004 to April 2005, AIG shareholders filed five derivative complaints in the Delaware Chancery Court. All of these derivative lawsuits have been consolidated into a single action. The amended consolidated complaint names 43 defendants (not including nominal defendant AIG) who, like the New York consolidated derivative litigation, are current and former officers and directors of AIG, as well as other entities and certain of their current and former employees and directors. The factual allegations, legal claims and relief sought in Delaware action are similar to those alleged in the New York derivative actions, except that plaintiffs in the Delaware derivative action assert claims only under state law. The court has approved agreements staying the derivative case pending in the Delaware Chancery Court while the special committee performs its work. The current stay extends until March 14, 2007.

An additional derivative lawsuit was filed in the Delaware Chancery Court in December 2002 against twenty directors and executives of AIG as well as against AIG as a nominal defendant, alleges, among other things, that the directors of AIG breached the fiduciary duties of loyalty and care by approving the payment of commissions to Starr and of rental and service fees to SICO and the executives breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and their fiduciary duties by usurping AIG's corporate opportunity. The complaint further alleges that the Starr agencies did not provide any services that AIG was not capable of providing itself, and that the diversion of commissions to these entities was solely for the benefit of Starr's owners. The complaint also alleged that the service fees and rental payments made to SICO and its subsidiaries were improper.

Notes to Consolidated Financial Statements *Continued*

12. Commitments, Contingencies and Guarantees

Continued

Under the terms of a stipulation approved by the Court on February 16, 2006, the claims against the outside independent directors were dismissed with prejudice, while the claims against the other directors were dismissed without prejudice. On October 31, 2005, Messrs. Greenberg, Matthews and Smith, SICO and Starr filed motions to dismiss the amended complaint. In an opinion dated June 21, 2006, the Court denied defendants' motion to dismiss, except with respect to plaintiff's challenge to payments made to Starr before January 1, 2000. On July 21, 2006, plaintiff filed its second amended complaint, which alleges that, between January 1, 2000 and May 31, 2005, individual defendants breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and breached their fiduciary duties by usurping AIG's corporate opportunity. Starr is charged with aiding and abetting breaches of fiduciary duty and unjust enrichment for its acceptance of the fees. SICO is no longer named as a defendant. Discovery is currently ongoing.

Policyholder Actions. After the NYAG filed its complaint against insurance broker Marsh, policyholders brought multiple federal antitrust and Racketeer Influenced and Corrupt Organizations Act (RICO) class actions in jurisdictions across the nation against insurers and brokers, including AIG and a number of its subsidiaries, alleging that the insurers and brokers engaged in a broad conspiracy to allocate customers, steer business, and rig bids. These actions, including 18 complaints filed in different federal courts naming AIG or an AIG subsidiary as a defendant, were consolidated by the judicial panel on multi-district litigation and transferred to the United States District Court for the District of New Jersey for coordinated pretrial proceedings. The consolidated actions have proceeded in that court in two parallel actions, *In re Insurance Brokerage Antitrust Litigation* (the *Commercial Complaint*) and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the *Employee Benefits Complaint*, and together with the *Commercial Complaint*, the multi-district litigation).

The plaintiffs in the *Commercial Complaint* are nineteen corporations, individuals and public entities that contracted with the broker defendants for the provision of insurance brokerage services for a variety of insurance needs. The broker defendants are alleged to have placed insurance coverage on the plaintiffs' behalf with a number of insurance companies named as defendants, including AIG subsidiaries. The *Commercial Complaint* also named ten brokers and fourteen other insurers (one of which has since settled) as defendants. The *Commercial Complaint* alleges that defendants engaged in a widespread conspiracy to allocate customers through "bid-rigging" and "steering" practices. The *Commercial Complaint* also alleges that the insurer defendants permitted brokers to place business with AIG subsidiaries through wholesale intermediaries affiliated with or owned by those same brokers rather than placing the business with AIG subsidiaries directly. Finally, the *Commercial Complaint* alleges that the insurer defendants entered into agreements with broker defendants that tied insurance placements to reinsurance placements in order to provide additional compensation to each broker. Plaintiffs assert

that the defendants violated the Sherman Antitrust Act, RICO, the antitrust laws of 48 states and the District of Columbia, and are liable under common law breach of fiduciary duty and unjust enrichment theories. Plaintiffs seek treble damages plus interest and attorneys' fees as a result of the alleged RICO and Sherman Act violations.

The plaintiffs in the *Employee Benefits Complaint* are nine individual employees and corporate and municipal employers alleging claims on behalf of two separate nationwide purported classes: an employee class and an employer class that acquired insurance products from the defendants from August 26, 1994 to the date of any class certification. The *Employee Benefits Complaint* names AIG, as well as eleven brokers and five other insurers, as defendants. The activities alleged in the *Employee Benefits Complaint*, with certain exceptions, track the allegations of contingent commissions, bid-rigging and tying made in the *Commercial Complaint*.

On October 3, 2006, Judge Hochberg of the District of New Jersey reserved in part and denied in part motions filed by the insurer defendants and broker defendants to dismiss the multi-district litigation. The Court also ordered the plaintiffs in both actions to file supplemental statements of particularity to elaborate on the allegations in their complaints. Plaintiffs filed their supplemental statements on October 25, 2006, and the AIG defendants, along with other insurer and broker defendants in the two consolidated actions, filed renewed motions to dismiss on November 30, 2006. Briefing has been completed on the renewed motions to dismiss, as well as plaintiffs' motion for class certification in both cases. On February 16, 2007, Chief Judge Brown of the District of New Jersey transferred the multi-district litigation to himself. Oral argument on the renewed motions to dismiss has been scheduled before Chief Judge Brown on March 1, 2007. Fact discovery in the multi-district litigation proceeding is ongoing.

A number of complaints making allegations similar to those in the *Commercial Complaint* have been filed against AIG and other defendants in state and federal courts around the country. The defendants have thus far been successful in having the federal actions transferred to the District of New Jersey and consolidated into the multi-district litigation. The AIG defendants have also sought to have state court actions making similar allegations stayed pending resolution of the multi-district litigation proceeding. In one state court action pending in Florida, the trial court recently decided not to grant an additional stay, but instead to allow the case to proceed.

Litigation Relating to 21st Century. Shortly after the announcement in late January 2007 of AIG's offer to acquire the outstanding shares of 21st Century not already owned by AIG and its subsidiaries, two related class actions were filed in the Superior Court of California, Los Angeles County, against AIG, 21st Century, and the individual members of 21st Century's Board of Directors, two of whom are current executive officers of AIG. The actions were filed purportedly on behalf of the minority shareholders of 21st Century and assert breaches of fiduciary duty in connection with the AIG proposal. The complaints allege that the proposed per share price is unfair and seek preliminary

12. Commitments, Contingencies and Guarantees

Continued

and permanent injunctive relief to enjoin the consummation of the proposed transaction.

SICO. In July, 2005, SICO filed a complaint against AIG in the Southern District of New York, claiming that AIG had refused to provide SICO access to certain artwork and asked the court to order AIG immediately to release the property to SICO. AIG filed an answer denying SICO's allegations and setting forth defenses to SICO's claims. In addition, AIG filed counterclaims asserting breach of contract, unjust enrichment, conversion, breach of fiduciary duty, a constructive trust and declaratory judgment, relating to SICO's breach of its commitment to use its AIG shares only for the benefit of AIG and AIG employees. Fact and expert discovery has been substantially concluded and briefing on SICO's motion for summary judgment is underway.

Regulatory Investigations. Regulators from several states have commenced investigations into insurance brokerage practices related to contingent commissions and other industry-wide practices as well as other broker-related conduct, such as alleged bid-rigging. In addition, various federal and state regulatory agencies are reviewing certain transactions and practices of AIG and its subsidiaries in connection with industry-wide and other inquiries. AIG has cooperated, and will continue to cooperate, in producing documents and other information in response to subpoenas and other requests.

Wells Notices. AIG understands that some of its employees have received Wells notices in connection with previously disclosed SEC investigations of certain of AIG's transactions or accounting practices. Under SEC procedures, a Wells notice is an indication that the SEC staff has made a preliminary decision to recommend enforcement action that provides recipients with an opportunity to respond to the SEC staff before a formal recommendation is finalized. It is possible that additional current and former employees could receive similar notices in the future as the regulatory investigations proceed.

Effect on AIG

In the opinion of AIG management, AIG's ultimate liability for the unresolved litigation and investigation matters referred to above is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

(b) Commitments

Flight Equipment

At December 31, 2006, ILFC had committed to purchase 254 new aircraft deliverable from 2007 through 2015 at an estimated aggregate purchase price of \$19.0 billion. ILFC will be required to find customers for any aircraft acquired, and it must arrange financing for portions of the purchase price of such equipment.

Minimum future rental income on noncancelable operating leases of flight equipment which have been delivered at December 31, 2006 was as follows:

<i>(in millions)</i>	
2007	\$ 3,663
2008	3,220
2009	2,682
2010	2,271
2011	1,800
Remaining years after 2011	4,011
Total	\$17,647

Flight equipment is leased, under operating leases, with remaining terms ranging from 1 to 13 years.

Lease Commitments

AIG and its subsidiaries occupy leased space in many locations under various long-term leases and have entered into various leases covering the long-term use of data processing equipment.

At December 31, 2006, the future minimum lease payments under operating leases were as follows:

<i>(in millions)</i>	
2007	\$ 626
2008	461
2009	341
2010	274
2011	307
Remaining years after 2011	754
Total	\$2,763

Rent expense approximated \$657 million, \$597 million, and \$568 million for the years ended December 31, 2006, 2005, and 2004, respectively.

Other Commitments

On June 27, 2005, AIG entered into an agreement pursuant to which AIG agrees, subject to certain conditions, to make any payment that is not promptly paid with respect to the benefits accrued by certain employees of AIG and its subsidiaries under the SICO Plans (as discussed in Note 16 herein).

(c) Contingencies

Loss Reserves

Although AIG regularly reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, directors and officers liability (D&O), professional liability, medical malpractice, workers compensation, general liability, products liability and related classes, as well as for asbestos and environmental exposures. Generally, actual historical loss development factors are used to project

Notes to Consolidated Financial Statements *Continued*

12. Commitments, Contingencies and Guarantees

Continued

future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss cost trends or loss development factors could be attributable to changes in inflation, in labor and material costs or in the judicial environment, or in other social or economic phenomena affecting claims.

Superior National. On December 30, 2004, an arbitration panel issued its ruling in connection with a 1998 workers compensation quota share reinsurance agreement under which Superior National Insurance Company, among others, was reinsured by USLIFE, a subsidiary of AGC. In its 2-1 ruling, the arbitration panel refused to rescind the contract as requested by USLIFE. Instead, the panel reformed the contract to reduce USLIFE's participation by ten percent. Further, the arbitration ruling established a second phase of arbitration for USLIFE to present its challenges to certain cessions to the contract. The second phase has now been completed, and the arbitration panel has issued two awards resolving the issues presented in phase two in favor of the cedents. USLIFE has filed a petition to vacate all of the arbitration awards from both phases of the arbitration in California federal court. In addition, USLIFE is pursuing certain insurance recoverables in connection with the contract. As a result of the ruling AIG increased its reserves by \$125 million in the fourth quarter to \$478 million. AIG believes that the reserves should be adequate to fund unpaid claims.

Synthetic Fuel Tax Credits. AIG generates income tax credits as a result of investing in synthetic fuel production. Tax credits generated from the production and sale of synthetic fuel under the Internal Revenue Code are subject to an annual phase-out provision that is based on the average wellhead price of domestic crude oil. The price range within which the tax credits are phased-out was originally established in 1980 and is adjusted annually for inflation. Depending on the price of domestic crude oil for a particular year, all or a portion of the tax credits generated in that year might be eliminated. AIG evaluates the production levels of its synthetic fuel production facilities in light of the risk of phase-out of the associated tax credits. As a result of fluctuating domestic crude oil prices, AIG evaluates and adjusts production levels when appropriate in light of this risk. Regardless of oil prices, the tax credits expire after 2007.

(d) Guarantees

AIG and certain of its subsidiaries become parties to derivative financial instruments with market risk resulting from both dealer and end-user activities and to reduce currency, interest rate, equity and commodity exposures. These instruments are carried

at their estimated fair values in the consolidated balance sheet. The vast majority of AIG's derivative activity is transacted by AIGFP. See also Note 19 herein.

AIG has issued unconditional guarantees with respect to the prompt payment, when due, of all present and future payment obligations and liabilities of AIGFP arising from transactions entered into by AIGFP.

SAI Deferred Compensation Holdings, Inc., a wholly owned subsidiary of AIG, has established a deferred compensation plan for registered representatives of certain AIG subsidiaries, pursuant to which participants have the opportunity to invest deferred commissions and fees on a notional basis. The value of the deferred compensation fluctuates with the value of the deferred investment alternatives chosen. AIG has provided a full and unconditional guarantee of the obligations of SAI Deferred Compensation Holdings, Inc. to pay the deferred compensation under the plan.

13. Fair Value of Financial Instruments

Statement of Financial Accounting Standards No. 107, "Disclosures about Fair Value of Financial Instruments" (FAS 107), requires disclosure of fair value information about financial instruments, as defined therein, for which it is practicable to estimate such fair value. In the measurement of the fair value of certain financial instruments, where quoted market prices are not available, other valuation techniques are utilized. These fair value estimates are derived using internally developed valuation methodologies based on available and observable market information. FAS 107 excludes certain financial instruments, including those related to insurance contracts and lease contracts.

The following methods and assumptions were used by AIG in estimating the fair value of the financial instruments presented:

Cash and short-term investments: The carrying amounts approximate fair values.

Fixed maturity securities: Fair values were generally based upon quoted market prices. For certain fixed maturity securities for which market prices were not readily available, fair values were estimated using values obtained from independent pricing services.

Equity securities: Fair values were based on quoted market prices. Where market prices were not readily available, fair values were estimated using quoted market prices of comparable investments.

Mortgage loans on real estate, policy and collateral loans: Where practical, the fair values of loans on real estate and collateral loans were estimated using discounted cash flow calculations based upon AIG's current incremental lending rates for similar type loans. The fair values of the policy loans were not calculated as AIG believes it would have to expend excessive costs for the benefits derived.

Trading assets and trading liabilities: Fair values approximate the carrying values.

13. Fair Value of Financial Instruments

Continued

Finance receivables: Fair values were estimated using discounted cash flow calculations based upon the weighted average rates currently being offered for similar finance receivables.

Securities lending collateral and securities lending payable: The contract values of these financial instruments approximate fair value.

Spot commodities: Fair values are based on current market prices.

Unrealized gains and losses on swaps, options and forward transactions: Fair values were based on the use of valuation models that utilize, among other things, current interest, foreign exchange commodity, equity and volatility rates, as applicable.

Securities purchased (sold) under agreements to resell (repurchase), at contract value: As these securities (obligations) are short-term in nature, the contract values approximate fair values.

Other invested assets: Consisting principally of hedge funds and limited partnerships. Fair values are determined based on the net asset values provided by the general partner or manager of each investment.

Policyholders' contract deposits: Fair values were estimated using discounted cash flow calculations based upon interest rates

currently being offered for similar contracts with maturities consistent with those remaining for the contracts being valued.

GIAs: Fair values of AIG's obligations under investment type agreements were estimated using discounted cash flow calculations based on interest rates currently being offered for similar agreements with maturities consistent with those remaining for the agreements being valued.

Securities and spot commodities sold but not yet purchased: The carrying amounts for the securities and spot commodities sold but not yet purchased approximate fair values. Fair values for spot commodities sold short were based on current market prices.

Trust deposits and deposits due to banks and other depositors: To the extent certain amounts are not demand deposits or certificates of deposit which mature in more than one year, fair values were not calculated as AIG believes it would have to expend excessive costs for the benefits derived.

Commercial paper: The carrying amount approximates fair value.

Notes, bonds, loans and mortgages: Where practical, the fair values of these obligations were estimated using discounted cash flow calculations based upon AIG's current incremental borrowing rates for similar types of borrowings with maturities consistent with those remaining for the debt being valued.

Notes to Consolidated Financial Statements *Continued*

13. Fair Value of Financial Instruments

Continued

The carrying values and fair values of AIG's financial instruments at December 31, 2006 and 2005 were as follows:

(in millions)	2006		2005	
	Carrying Value ^(a)	Fair Value	Carrying Value ^(a)	Fair Value
Assets:				
Fixed maturities	\$417,865	\$418,582	\$385,680	\$386,199

(a) The carrying value of all other financial instruments approximates fair value.

(b) Excludes aircraft asset investments held by non-Financial Services subsidiaries.

14. Stock Compensation Plans

At December 31, 2006, AIG employees could be awarded compensation pursuant to six different stock-based compensation plan arrangements: (i) AIG 1999 Stock Option Plan, as amended (1999 Plan); (ii) AIG 1996 Employee Stock Purchase Plan, as amended (1996 Plan); (iii) AIG 2002 Stock Incentive Plan, as amended (2002 Plan) under which AIG has issued time-vested restricted stock units (RSUs) and performance restricted stock units (performance RSUs); (iv) SICO's Deferred Compensation Profit Participation Plans (SICO Plans); (v) AIG's 2005-2006 Deferred Compensation Profit Participation Plan (AIG DCPPP) and (vi) the AIG Partners Plan. The AIG DCPPP was adopted as a replacement for the SICO Plans for the 2005-2006 period, and the AIG Partners Plan replaces the AIG DCPPP. Stock-based compensation earned under the AIG DCPPP and the AIG Partners Plan is issued as awards under the 2002 Plan. AIG currently settles share option exercises and other share awards to participants through the issuance of shares it has previously acquired and holds in its treasury account, except for share awards made by SICO, which are settled by SICO.

At December 31, 2006, AIG's non-employee directors received stock-based compensation in two forms, options granted pursuant to the 1999 Plan and grants of AIG common stock with delivery deferred until retirement from the Board, pursuant to the AIG Director Stock Plan, which was approved by the shareholders at the 2004 Annual Meeting of Shareholders.

From January 1, 2003 through December 31, 2005, AIG accounted for share-based payment transactions with employees under FAS No. 123, "Accounting for Stock-Based Compensation." Share-based employee compensation expense from option awards was not recognized in the statement of income in prior periods. Effective January 1, 2006, AIG adopted the fair value recognition provisions of FAS 123R. FAS 123R requires that companies use a fair value method to value share-based payments and recognize the related compensation expense in net earnings. AIG adopted FAS 123R using the modified prospective application method, and accordingly, financial statement amounts for the prior periods presented have not been restated to reflect the fair value method of expensing share-based compensation under FAS 123R. The modified prospective application method provides for the recognition of the fair value with respect to share-based compensation

14. Stock Compensation Plans

Continued

for shares subscribed for or granted on or after January 1, 2006 and all previously granted but unvested awards as of January 1, 2006.

The adoption of FAS 123R resulted in share-based compensation expense of approximately \$17 million during 2006, related to awards which were accounted for under the provisions of Accounting Principles Board Opinion No. 25, "Accounting for Stock Issued to Employees." FAS 123R also requires AIG to estimate forfeitures in calculating the expense relating to share-based compensation, rather than recognizing these forfeitures and

corresponding reductions in expense as they occur. The pre-tax cumulative effect of adoption, recognized as a reduction in stock-based compensation of \$46 million, was recorded as a cumulative effect of an accounting change, net of tax. FAS 123R requires AIG to reflect the cash savings resulting from excess tax benefits in its financial statements as cash flow from financing activities, rather than as cash flow from operating activities as in prior periods. The amount of this excess tax benefit for 2006 was \$27.9 million.

Included in AIG's consolidated statement of income for the year ended December 31, 2006 was pre-tax share-based compensation expense of \$353 million (\$326 million after tax).

The effect of the adoption of FAS 123R on the consolidated statements of income and cash flows for the year ended December 31, 2006 was as follows:

<i>(in millions, except per share data)</i>	Pre-adoption of FAS 123R	Effect of Adoption of FAS 123R	Including Effect of Adoption of FAS 123R
Income before income taxes, minority interest and cumulative effect of an accounting change	\$21,704	\$ (17)	\$21,687
Provision for income taxes	\$ 6,539	\$ (2)	\$ 6,537
Income before minority interest and cumulative effect of an accounting change	\$15,165	\$ (15)	\$15,150
Cumulative effect of an accounting change, net of tax	\$ —	\$ 34	\$ 34
Net income	\$14,029	\$ 19	\$14,048
Net cash provided by (used in) operating activities	\$ 6,857	\$ (28)	\$ 6,829
Net cash provided by financing activities	\$59,762	\$ 28	\$59,790
Basic earnings per share	\$ 5.38	\$0.01	\$ 5.39
Diluted earnings per share	\$ 5.35	\$0.01	\$ 5.36

Notes to Consolidated Financial Statements *Continued*

14. Stock Compensation Plans

Continued

Included in share-based compensation expense of \$353 million for 2006 was a one-time compensation cost of approximately \$54 million related to the Starr tender offer and various out of period adjustments totalling \$61 million, primarily relating to stock-splits and other miscellaneous items for the SICO Plans, offset by a \$46 million pre-tax adjustment for the cumulative effect of the adoption of FAS 123R. See Note 16 herein for a discussion of the Starr tender offer.

If AIG had adopted the FAS 123 provisions for recognizing compensation expense commencing at the date of grant of the awards, the effect would not have been material to net income or basic or diluted earnings per share for 2005.

1999 Stock Option Plan

The 1999 Plan provides that options to purchase a maximum of 45,000,000 shares of common stock can be granted to certain key employees and members of the Board of Directors at prices not less than fair market value at the date of grant.

The 1999 Plan was approved by the shareholders at the 2000 Annual Meeting of Shareholders, with certain amendments approved at the 2003 Annual Meeting of Shareholders. The 1999 Plan superseded the 1991 Employee Stock Option Plan (the 1991 Plan), although outstanding options granted under the 1991 Plan continue in-force until exercise or expiration. The maximum number of shares that may be granted to any employee in any one year under the 1999 Plan is 900,000. Options granted under the 1999 Plan generally vest over four years (25 percent vesting per year) and expire 10 years from the date of grant.

At December 31, 2006, there were 19,615,911 shares reserved for future grants under the 1999 Plan and 28,021,943 shares reserved for issuance under the 1999 and 1991 Plans.

Deferrals

At December 31, 2006, AIG was obligated to issue 8,382,632 shares in connection with previous exercises of options with delivery deferred.

Valuation Methodology

In 2004, AIG developed a binomial lattice model to calculate the fair value of stock option grants. In prior years, a Black-Scholes model was used. A more detailed description of the valuation methodology is provided below.

The following weighted average assumptions were used for stock options granted in 2006 and 2005:

	2006	2005
Expected annual dividend yield ^(a)	0.92%	0.71%
Expected volatility ^(b)	23.50%	27.3%
Risk-free interest rate ^(c)	4.61%	4.17%
Expected term ^(d)	7 years	7 years

(a) The dividend yield is based on the dividend yield over the twelve month period prior to the grant date.

(b) In 2006, expected volatility is the average of historical volatility (based on seven years of daily stock price changes) and the implied volatility of actively traded options on AIG shares and in 2005, expected volatility is the historical volatility based on five years of daily stock price changes.

(c) The interest rate curves used in the valuation model were the U.S. Treasury STRIP rates with terms from 3 months to 10 years.

(d) The contractual term of the option is generally 10 years with an expected term of 7 years calculated based on an analysis of historical employee exercise behavior and employee turnover (post-vesting terminations). The early exercise rate is a function of time elapsed since the grant. Fifteen years of historical data were used to estimate the early exercise rate.

Additional information with respect to AIG's stock option plans at December 31, 2006, and changes for the year then ended, were as follows:

Options:	Shares	Weighted Average Exercise Price
Outstanding at beginning of year	52,545,425	\$ 54.84
Granted	1,621,910	\$70.51
Exercised*	(5,329,026)	\$27.97
Forfeited or expired	(1,182,589)	\$70.76
Outstanding at end of year	47,655,720	\$57.99
Options exercisable at end of year	39,383,670	\$56.81
Weighted average fair value per share of options granted		\$23.41

* Includes options with respect to 2,067,643 shares exercised with delivery deferred, resulting in obligations to issue 1,527,613 shares.

14. Stock Compensation Plans

Continued

The following table presents information about stock options outstanding at December 31, 2006:

Range of Exercise Prices	Options Outstanding				Options Exercisable			
	Number Outstanding	Weighted Average Remaining Contractual Life	Weighted Average Exercise Price	Aggregate Intrinsic Values (in millions)	Number Exercisable (vested)	Weighted Average Remaining Contractual Life	Weighted Average Exercise Price	Aggregate Intrinsic Values (in millions)
\$24.55-\$26.45	3,077,376	0.82	\$24.67	\$144	3,077,376	0.82	\$24.67	\$144
\$31.02-\$41.51	5,198,823	1.58	36.91	181	5,198,823	1.58	36.91	181
\$43.31-\$53.40	6,665,147	3.83	48.59	154	5,900,494	3.53	48.80	135
\$54.11-\$59.99	8,314,413	4.07	57.86	115	6,780,399	3.01	57.52	96
\$60.13-\$63.95	8,766,329	5.94	62.33	82	7,547,511	5.77	62.12	72
\$64.01-\$69.63	8,034,276	6.82	65.45	50	4,948,364	5.75	65.53	30
\$70.35-\$98.00	7,599,356	5.53	81.36	1	5,930,703	4.40	84.06	—
Total	47,655,720	4.60	\$57.99	\$727	39,383,670	3.81	\$56.81	\$658

Vested and expected-to-vest options as of December 31, 2006, included in the table above, totaled 45,382,149, with a weighted average exercise price of \$57.42, a weighted average contractual life of 4.33 years and an aggregate intrinsic value of \$720 million.

As of December 31, 2006, total unrecognized compensation cost (net of expected forfeitures) was \$133 million and \$3 million related to non-vested share-based compensation awards granted under the 1999 Plan and the 1996 Plan, respectively, with blended weighted average periods of 1.44 years and 0.41 years, respectively. The cost of awards outstanding under these plans at December 31, 2006 is expected to be recognized over approximately three years and one year, respectively, for the 1999 Plan and the 1996 Plan.

The intrinsic value of options exercised during 2006 was approximately \$215 million. The fair value of options vesting during 2006 was approximately \$97 million. AIG received \$104 million and \$65 million in cash during 2006 and 2005, respectively, from the exercise of stock options. The tax benefits realized as a result of stock option exercises were \$35 million and \$20 million for 2006 and 2005, respectively.

2002 Stock Incentive Plan

The 2002 Plan was adopted at the 2002 Annual Meeting of shareholders and amended and restated by the AIG Board of Directors on September 18, 2002. The 2002 Plan provides that equity-based or equity-related awards with respect to shares of common stock can be issued to employees in any year up to a maximum of that number of shares equal to (a) 1,000,000 shares plus (b) the number of shares available but not issued in the prior calendar year. The maximum award that a grantee may receive under the 2002 Plan per year is rights with respect to 250,000 shares. During 2006 and 2005, 6,836,785 RSUs, including performance RSUs, and 3,055,835 RSUs, respectively, were granted by AIG. There were 4,488,458 shares reserved for issuance in connection with future awards at December 31, 2006. Substantially all RSUs granted to date under the 2002 Plan other

than performance RSUs granted under the AIG DCPPP and the AIG Partners Plan vest on the fourth anniversary of the date of grant.

Director Stock Awards

The methodology used for valuing employee stock options is also used to value director stock options. Director stock options vest one year after the grant date, but are otherwise the same as employee stock options. Options with respect to 40,000 shares and 32,500 shares were granted during 2006 and 2005, respectively.

AIG also granted 14,000 shares and 6,250 shares, with delivery deferred, to directors during 2006 and 2005, respectively, under the Director Stock Plan. At December 31, 2006, there were 71,000 shares reserved for future grants under the Director Stock Plan.

Employee Stock Purchase Plan

AIG's 1996 Plan provides that eligible employees (those employed at least one year) may receive privileges to purchase up to an aggregate of 10,000,000 shares of AIG common stock, at a price equal to 85 percent of the fair market value on the date of the grant of the purchase privilege. Purchase privileges are granted quarterly and are limited to the number of whole shares that can be purchased on an annual basis by an amount equal to the lesser of 10 percent of an employee's annual salary or \$10,000.

SICO Plans

The SICO Plans provide that shares of AIG common stock currently held by SICO are set aside for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of shares under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain

Notes to Consolidated Financial Statements *Continued*

14. Stock Compensation Plans

Continued

conditions, including but not limited to the participant's termination of employment with AIG prior to normal retirement age.

Historically, SICO's Board of Directors could elect to pay a participant cash in lieu of shares of AIG common stock. On December 9, 2005, SICO notified participants that essentially all subsequent distributions would be made only in shares, and not cash. As of that date, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. Variable measurement accounting is used for those few awards for which cash elections had been made prior to March 2005. The SICO Plans are also described in Note 16 herein.

Although none of the costs of the various benefits provided under the SICO Plans have been paid by AIG, AIG has recorded compensation expense for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts deemed contributed by SICO.

As of December 9, 2005, there were 12,650,292 non-vested AIG shares under the SICO Plans with a weighted-average fair value per share of \$61.92. As of December 31, 2006, there were 11,443,772 non-vested AIG shares under the SICO Plans with a weighted-average fair value per share of \$61.72.

A significant portion of the awards under the SICO Plans vest upon retirement when or after the participant reaches age 65. The portion of the awards for which early payout is available vest on the applicable payout date.

AIG DCPPP

Effective September 21, 2005, AIG adopted the AIG DCPPP, which provides equity-based compensation to key AIG employees, including senior executive officers. The AIG DCPPP was modeled on the SICO Plans.

The AIG DCPPP contingently allocates a fixed number of shares to each participant if AIG's cumulative adjusted earnings per share, as determined by AIG's Compensation Committee, for 2005 and 2006 exceed that for 2003 and 2004. The perform-

ance period is September 21, 2005 to December 31, 2006. At the end of the performance period, common shares are contingently allocated. The service period and related vesting consists of three pre-retirement tranches and a final retirement tranche at age 65.

At December 31, 2006, there were units representing 4,590,622 shares granted to participants.

AIG Partners Plan

On June 26, 2006, AIG's Compensation Committee approved two grants under the AIG Partners Plan. The first grant has a performance period which runs from January 1, 2006 through December 31, 2007. The second grant has a performance period which runs from January 1, 2007 through December 31, 2008. Both grants vest 50 percent on the fourth and sixth anniversaries of the first day of the related performance period. In addition, the Compensation Committee approved the performance metrics for the two grants prior to the date of grant. The measurement of the grants is deemed to have occurred on June 26, 2006 when there was mutual understanding of the key terms and conditions of the grants. Consistent with this treatment: a) 1,068,605 performance RSUs for the first grant and 2,488,865 performance RSUs for the second grant and b) unrecognized compensation of \$49 million for the first grant and \$137 million for the second grant are included in the related disclosure tables. Performance RSUs related to the first grant are excluded from AIG's diluted shares calculation because an insufficient amount of time has elapsed to conclusively determine that the performance metric will be achieved at the end of the related performance period. Because the performance period for the second grant does not begin until January 1, 2007, compensation expense for the second grant is not included in AIG's 2006 results and diluted shares calculation.

Valuation

The fair value of each award granted under the 2002 Plan, the AIG DCPPP, the AIG Partners Plan, and the SICO Plans is based on the closing price of AIG stock on the date of grant.

The following table presents a summary of shares relating to outstanding awards unvested under the foregoing plans as of December 31, 2006, and changes for the year then ended:

	Number of Shares					Weighted Average Grant-Date Fair Value				
	2002 Plan	AIG DCPPP	AIG Partners Plan	Total 2002 Plan	SICO Plans	2002 Plan	AIG DCPPP	AIG Partners Plan	Total 2002 Plan	SICO Plans
Unvested at January 1, 2006	4,322,265	4,898,880	—	9,221,145	12,650,292	\$63.63	\$52.55	\$ —	\$57.74	\$61.92
Granted	3,198,885	—	3,637,900	6,836,785	—	70.04	—	56.49	62.83	—
Vested	(130,185)	—	—	(130,185)	(794,814)	61.44	—	—	61.44	65.68
Forfeited	(209,370)	(308,258)	(30,860)	(548,488)	(411,706)	62.53	59.40	56.22	60.41	60.38
Unvested at December 31, 2006	7,181,595	4,590,622	3,607,040	15,379,257	11,443,772	\$66.56	\$52.09	\$56.50	\$59.88	\$61.72

14. Stock Compensation Plans

Continued

The total unrecognized compensation cost (net of expected forfeitures) related to non-vested share-based compensation awards granted under the 2002 Plan, the AIG DCPPP, the AIG Partners Plan and the SICO Plans at December 31, 2006 and the blended weighted-average period over which that cost is expected to be recognized at December 31, 2006 are as follows:

	Unrecognized Compensation Cost (in millions)	Blended Weighted- Average Period
2002 Plan	\$322	1.79 years
AIG DCPPP	\$208	4.49 years
AIG Partners Plan	\$191	2.37 years
Total 2002 Plan	\$721	2.72 years
SICO Plans	\$301	5.95 years

The total cost for awards outstanding as of December 31, 2006 under the 2002 Plan, the AIG DCPPP, the AIG Partners Plan, and the SICO Plans is expected to be recognized over approximately 4 years, 11 years, 6 years and 23 years, respectively.

15. Employee Benefits

(a) Pension Plans: Employees of AIG, its subsidiaries and certain affiliated companies, including employees in foreign countries, are generally covered under various funded, unfunded and insured pension plans. Eligibility for participation in the various plans is based on either completion of a specified period of continuous service or date of hire, subject to age limitations. Some AIG subsidiaries provide retirement benefits through defined benefit plans, others employ defined contribution plans and some use both.

AIG's U.S. retirement plan is a qualified, noncontributory defined benefit plan which is subject to the provisions of ERISA. All employees of AIG and most of its subsidiaries and affiliates who are regularly employed in the United States, including certain U.S. citizens employed abroad on a U.S. dollar payroll, and who have attained age 21 and completed twelve months of continuous service are eligible to participate in this plan. An employee with 5 or more years of plan participation is entitled to pension benefits beginning at normal retirement at age 65. Benefits are based upon a percentage of average final compensation multiplied by years of credited service limited to 44 years of credited service. The average final compensation is subject to certain limitations. Employees may elect certain options with respect to receipt of their pension benefits including a joint and survivor annuity. An employee with 10 or more years of plan participation may retire early from age 55 to 64. An early retirement factor is applied resulting in a reduced benefit. If an employee terminates with less than five years of continuous service, the employee forfeits the right to receive any pension benefits accumulated to that time. Annual funding requirements are determined based on the "projected unit credit" cost method, which attributes a pro rata

portion of the total projected benefit payable at normal retirement to each year of credited service.

The HSB Group Inc. (HSB) retirement plan was merged into the AIG U.S. retirement plan effective April 1, 2001. Benefits for HSB participants were changed effective January 1, 2005 to be substantially similar to the AIG U.S. retirement plan benefits subject to a grandfathering agreement.

21st Century sponsors its own benefit plans for its eligible employees. Assets, obligations and costs with respect to 21st Century's plans are included herein. The assumptions used in its plans were not significantly different from those used by AIG in AIG's U.S. plans.

The AIG Excess Retirement Income Plan provides a benefit equal to the reduction in benefits payable under the AIG U.S. retirement plan as a result of federal tax limitations on compensation and benefits payable thereunder. AIG has adopted a Supplemental Executive Retirement Plan (Supplemental Plan) to provide additional retirement benefits to designated executives. Under the Supplemental Plan, an annual benefit accrues at a percentage of final average pay multiplied by each year of credited service, not greater than 60 percent of final average pay, reduced by any benefits from the current and any predecessor retirement plans (including the AIG Excess Retirement Income Plan and any comparable plans), Social Security, if any, and from any qualified pension plan of prior employers. Currently, each of these plans is unfunded. AGC and HSB have adopted similar supplemental type plans. These plans are also unfunded.

Where non-U.S. retirement plans are defined benefit plans, they are generally either based on the employees' years of credited service and compensation in the years preceding retirement, or on points accumulated based on the employee's job grade and other factors during each year of service.

AIG is in the process of spinning off the assets and liabilities in the AIG U.S. retirement plan attributable to employees of Starr and The Starr Foundation. The accumulated benefit obligation of the employees in these two entities was computed as of December 31, 2005. At December 31, 2005, the AIG U.S. retirement plan was funded at an amount slightly greater than the accumulated benefit obligation. In the first quarter of 2007, AIG will transfer assets of approximately \$32 million, which is the equivalent of the present value of the December 31, 2005 accumulated benefit (adjusted for interest and benefit payments through the transfer date) attributable to the employees in those entities. Consistent with this arrangement, the amounts shown in the financial statements and footnote exclude liabilities and assets for employees of Starr.

(b) Postretirement Plans: In addition to AIG's defined benefit pension plans, AIG and its subsidiaries provide a postretirement benefit program for medical care and life insurance in the U.S. and in certain non-U.S. countries. Eligibility in the various plans is generally based upon completion of a specified period of eligible service and attaining a specified age. Overseas, benefits vary by geographic location.

AIG's U.S. postretirement medical and life insurance benefits are based upon the employee electing immediate retirement and having a minimum of ten years of service. Retirees who reached

Notes to Consolidated Financial Statements *Continued*

15. Employee Benefits

Continued

age 65 by May 1, 1989 and their dependents participate in the medical plan at no cost. Employees who retired after May 1, 1989 and prior to January 1, 1993 pay 50 percent of the active employee premium. Retiree contributions are subject to adjustment annually. Other cost sharing features of the medical plan include deductibles, coinsurance and Medicare coordination and a lifetime maximum benefit of \$2.0 million. The maximum life insurance benefit prior to age 70 is \$32,500, with a maximum of \$25,000 thereafter.

Effective January 1, 1993, both plans' provisions were amended. Employees who retire after January 1, 1993 are required to pay the actual cost of the medical benefits premium reduced by a credit of a certain amount, based on years of service at retirement. The life insurance benefit varies by age at retirement from \$5,000 for retirement at ages 55 through 59; \$10,000 for retirement at ages 60 through 64; and \$15,000 for retirement at ages 65 and over.

(c) Voluntary Savings Plans: AIG sponsors a voluntary savings plan for domestic employees (the AIG Incentive Savings plan), which provides for salary reduction contributions by employees and matching contributions by AIG of up to seven percent of annual salary depending on the employees' years of service. Contributions are funded currently.

(d) Postemployment Benefits: AIG provides certain benefits to inactive employees who are not retirees. Certain of these benefits are insured and expensed currently; other expenses are

provided for currently. Such uninsured expenses include long-term disability benefits, medical and life insurance continuation, and COBRA medical subsidies.

(e) Benefit Obligations: The measurement date for some of the non-U.S. defined benefit pension and postretirement plans is November 30, consistent with the fiscal year end of the sponsoring companies. For all other plans, accumulated benefit obligations represent the present value of pension benefits earned as of December 31, 2006 based on service and compensation as of December 31, 2006. Projected benefit obligations for defined benefit plans represent the present value of pension benefits earned as of December 31, 2006 projected for estimated salary increases to an assumed date with respect to retirement, termination, disability or death. Projected benefit obligations for postretirement plans represent the present value of postretirement medical and life insurance benefits deemed earned as of December 31, 2006 projected for estimated salary and medical claim rate increases to an assumed date with respect to retirement, termination, disability, or death.

The accumulated benefit obligations with respect to both non-U.S. and U.S. pension benefit plans as of December 31, 2006 and 2005 were as follows:

<i>(in millions)</i>	2006*	2005
Non-U.S. pension benefit plans	\$1,384	\$ 1,210
U.S. pension benefit plans	\$2,689	\$ 2,704

* As of November 30, 2006 for non-U.S. plans of sponsoring companies with a fiscal year-end date of November 30, 2006.

15. Employee Benefits

Benefit obligation at end of year	\$1,351	\$3,131	\$4,482	\$43	\$205	\$248

(a) Includes excess retirement income type plans and supplemental executive retirement type plans.

(b) As of November 30, 2006 for non-U.S. plans of sponsoring companies with fiscal year-end date of November 30, 2006.

(c) With respect to AIG's non-U.S. plan obligations, \$100 million of this increase is the result of the reclassification of the Swiss plans. The Swiss plans were previously categorized as defined contribution plans since insurance companies have guaranteed the risks associated with these plans. However, the cost of paying for these guarantees is now viewed as a liability for the company in Switzerland. Therefore, the Swiss plans are treated as defined benefit plans. \$45 million of the increase is due to the inclusion of new plans during 2006.

The weighted average assumptions used to determine the benefit obligations at December 31, 2006 and 2005 are as follows:

	Pension		Postretirement	
	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans	U.S. Plans
2006*				
Discount rate	2.25 - 10.75%	6.00%	4.00 - 5.75%	6.00%
Rate of compensation increase	1.50 - 10.00%	4.25%	3.00%	4.25%
2005				
Discount rate	1.75 - 12.00%	5.50%	4.50 - 5.50%	5.50%
Rate of compensation increase	1.50 - 10.00%	4.25%	2.50 - 3.00%	4.25%

* At November 30, 2006 for non-U.S. plans of sponsoring companies with a fiscal year-end date of November 30, 2006.

Notes to Consolidated Financial Statements *Continued*

15. Employee Benefits

Continued

The benefit obligations for non-U.S. plans reflect those assumptions that were most appropriate for the local economic environments of each of the subsidiaries providing such benefits.

To measure the obligations at December 31, 2006 for AIG's U.S. plans, an 8.0 percent annual rate of increase in the per capita cost of covered medical benefits for pre-age-65 retirees, a 6.7 percent annual rate of increase in the per capita cost of covered medical benefits for post-age-65 retirees and a 10.0 percent annual rate of increase in the per capita cost of retiree prescription drug coverage were used for 2007. These rates were assumed to decrease gradually to 5.0 percent in 2013 and remain at that level thereafter.

To measure the obligations at December 31, 2005 for AIG's U.S. plans, a 9.0 percent annual rate of increase in the per capita cost of covered medical benefit for pre-age-65 retirees, a 7.0 percent annual rate of increase in the per capita cost of covered medical benefits for post-age-65 retirees and an 11.0 percent annual rate of increase in the per capita cost of retiree prescription drug coverage was used for 2006.

The assumed range for 2007 with respect to the annual rates of increase in the per capita cost of covered healthcare benefits of AIG's non-U.S. plans is 6.0 to 8.0 percent. These rates are assumed to decrease gradually to 4.0 to 6.0 percent over the next three years and remain at that level thereafter.

A one percent point change in the assumed healthcare cost trend rate would have the following effect on AIG's postretirement benefit obligations at December 31, 2006* and 2005:

<i>(in millions)</i>	One Percent Increase		One Percent Decrease	
	2006	2005	2006	2005
Non-U.S. plans	\$10	\$ 8	\$(7)	\$(6)
U.S. plans	\$ 3	\$(2)	\$(3)	\$ 2

* At November 30, 2006, for non-U.S. plans with a fiscal year-end date of November 30, 2006.

Discount Rate Methodology

The projected benefit cash flows under the AIG Retirement Plan were discounted using the spot rates derived from the Citigroup Pension Discount Curve as of December 31, 2006 and December 31, 2005 and an equivalent single discount rate was derived resulting in the same liability. This single discount rate was rounded to the nearest 25 basis points, namely 6.0 percent and 5.5 percent as of December 31, 2006 and December 31, 2005, respectively. The rates applied to other U.S. plans were not significantly different from those discussed above.

Japan represents over 62 percent of the liabilities of the non-U.S. pension plans. The discount rate for Japan was selected by reference to the published Moody's/S&P AA Corporate Bond Universe at the measurement date having regard to the duration of the plans' liabilities.

The mortality assumption used to determine the obligations for the U.S. plans as of December 31, 2006 and December 31, 2005 was based on the RP2000 White Collar Combined Mortality Table projected to 2006. The mortality assumptions for AIG's non-U.S. plans vary by country. There was a change in the mortality table assumption for Ireland, Japan, Taiwan and United Kingdom as of December 31, 2006 (November 30, 2006 for non-U.S. plans of sponsoring companies with a fiscal year-end date of November 30, 2006). The assumptions used are expected to reasonably anticipate future mortality experience. No other significant changes have been made for the December 31, 2006 obligations (November 30, 2006 obligations for non-U.S. plans of sponsoring companies with a fiscal year-end date of November 30, 2006).

(f) Funded Status: The funded status of the AIG defined benefit plans is a comparison of the projected benefit obligations to the assets related to the respective plan, if any. Effective December 31, 2006, AIG has adopted FAS 158 "Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans" — an amendment of FASB Statements No. 87, 88, 106 and 132(R). All amounts shown are pre-tax, unless noted otherwise.

15. Employee Benefits

Net amount recognized	\$ (427)	\$ 501	\$ 74	\$ (40)	\$ (232)	\$ (272)

(a) A significant portion of these plans, particularly those in Japan, are not required by local regulation to be funded currently. With respect to the funded status of these Japanese plans, the projected benefit obligation amounts to approximately \$414 million and \$410 million of which approximately \$379 million and \$360 million has been recognized at November 30, 2006 and December 31, 2005, respectively.

(b) AIG does not currently fund postretirement benefits.

(c) Actuarial (gains)/losses are amounts included in the projected benefit obligations but not yet recognized in the financial statements.

(a) As of November 30, 2006 for non-U.S. plans of sponsoring companies with fiscal year-end date of November 30, 2006.

(b) With respect to AIG's non-U.S. plan assets \$80 million of this increase resulted from the reclassification of the Swiss plans. For further discussion of the Swiss plans see the preceding discussion in Note 15(e).

The asset allocation percentage by major asset class for AIG's plans at December 31, 2006 and 2005, and the target allocation for 2007 follow:

Asset class:	Non-U.S. Plans-Allocation			U.S. Plans-Allocation		
	Target 2007	Actual 2006*	Actual 2005	Target 2007	Actual 2006	Actual 2005
Equity securities	0-75%	47%	46%	20-70%	64%	59%
Debt securities	0-100	32	27	20-70	26	34
Other	0-100	21	27	5-25	10	7
Total		100%	100%		100%	100%

* At November 30, 2006 for non-U.S. plans of sponsoring companies with fiscal year-end of November 30, 2006.

Other includes cash, insurance contracts and real estate asset classes.

Included in equity securities for the U.S. plans at December 31, 2006 and 2005 were 55,680 and 602,680 shares of AIG common stock, with values of \$4.0 million and \$41.1 million, respectively.

The investment strategy with respect to AIG's pension plan assets is designed to achieve investment returns that will fully fund the pension plan over the long term, while limiting the risk of under funding over shorter time periods.

The expected rate of return with respect to AIG's domestic pension plan was 8.0 percent for years ended December 31, 2006 and 2005. These rates of return are an aggregation of

Notes to Consolidated Financial Statements *Continued*

15. Employee Benefits

Continued

expected returns within each asset category. The return with respect to each asset class considers both historical returns and the future expectations for such returns.

(h) Expected Cash Flows: With respect to AIG's U.S. pension plan, the actuarially prepared funding amount ranges from the minimum amount AIG would be required to contribute to the maximum amount that would be deductible for U.S. tax purposes. This range is generally not determined until the fourth quarter with respect to the contribution year. Contributed amounts in excess of the minimum amounts are deemed voluntary. Amounts in excess of the maximum amount would be subject to an excise tax and may not be deductible under the Internal Revenue Code. Supplemental and excess plans' payments and postretirement plan payments are deductible when paid.

AIG contributed \$80 million during 2006 to its U.S. and non-U.S. pension plans. The annual pension contribution for 2007 is expected to be approximately \$95 million for U.S. and non-U.S. plans.

The expected future benefit payments, net of participants' contributions, with respect to the defined benefit pension plans and other postretirement benefit plans, are as follows:

<i>(in millions)</i>	Pension		Postretirement	
	Non-U.S. Plans	U.S. Plans	Non-U.S. Plans	U.S. Plans
2007	\$ 67	\$108	\$1	\$ 20
2008	71	117	1	21
2009	80	126	1	22
2010	79	136	1	20
2011	83	148	1	21
2012-2016	440	944	3	116

(i) Components of net periodic benefit cost and other amounts recognized in other comprehensive income:

The following table presents the components of net periodic benefit cost recognized in income and other amounts recognized in other comprehensive income with respect to the defined benefit pension plans and other postretirement benefit plans for the year ended December 31, 2006 (no amounts were recognized in other comprehensive income for the years ended 2005 and 2004):

(in millions)	Pensions			Postretirement		
	Non-U.S. Plans	U.S. Plans	Total	Non-U.S. Plans	U.S. Plans	Total

Net periodic benefit cost	\$ 55	\$ 131	\$ 186	\$ 19	\$ 15	\$ 34

* The reduction resulted from transferring to the Japanese government certain Japanese plan obligations approximating \$50 million reduced by approximately \$26 million loss incurred with respect to the settlement of those obligations.

For the U.S. plans, the estimated net loss, prior service credit and transition obligation for the defined benefit pension plans that will be amortized from Accumulated other comprehensive income into net periodic benefit cost over the next fiscal year are \$37 million, \$3 million and \$0 million, respectively. For the non-U.S. plans, the estimated net loss, prior service credit and transition obligation for the defined benefit pension plans that will be amortized from Accumulated other comprehensive income into net periodic benefit cost over the next fiscal year are \$11 million, \$10 million and \$1 million, respectively. The estimated net loss, prior service credit and transition obligation for the other defined benefit postretirement plans that will be amortized from Accumulated other comprehensive income into net periodic benefit cost over the next fiscal year will be less than \$5 million in the aggregate.

Rate of compensation increase	1.50-10.00%	4.25%	3.00%	4.25%
Expected return on assets	2.15-13.50%	8.00%	N/A	N/A
2004				
Discount rate	2.00-8.00%	6.00%	5.50-6.00%	6.00%
Rate of compensation increase	1.50-7.00%	4.25%	5.50%	4.25%
Expected return on assets	2.50-10.00%	8.25%	N/A	N/A

* The benefit obligations for non-U.S. plans reflect those assumptions that were most appropriate for the local economic environments of the subsidiaries providing such benefits.

AIG's postretirement plans provide benefits primarily in the form of defined employer contributions rather than defined employer benefits. Changes in the assumed healthcare cost trend rate do not have a material effect on postretirement expense.

16. Benefits Provided by Starr International Company, Inc. and C.V. Starr & Co., Inc.

SICO has provided a series of two-year Deferred Compensation Profit Participation Plans (SICO Plans) to certain AIG employees. The SICO Plans came into being in 1975 when the voting shareholders and Board of Directors of SICO, a private holding company whose principal asset is AIG common stock, decided that a portion of the capital value of SICO should be used to provide an incentive plan for the current and succeeding managements of all American International companies, including AIG.

None of the costs of the various benefits provided under the SICO Plans has been paid by AIG, although AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts deemed contributed by SICO. The SICO Plans provide that shares currently owned by SICO are set aside by SICO for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's voluntary termination of employment with AIG prior to normal retirement age. Under the SICO Plans, SICO's Board of Directors may elect to pay a participant cash in lieu of shares of AIG common stock. Following notification from SICO to participants in the SICO Plans that it will settle specific future awards under the SICO Plans with shares rather than cash, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. AIG gave effect to this change in settlement method beginning on

December 9, 2005, the date of SICO's notice to participants in the SICO Plans. See also Note 12(b) Commitments herein.

Compensation expense in 2006 included various out of period adjustments totaling \$61 million, primarily relating to stock-splits and other miscellaneous items for the SICO plans. See also Note 14 herein.

In January 2006, C.V. Starr & Co., Inc. (Starr) completed its tender offer to purchase Starr interests from AIG employees. In conjunction with AIG's adoption of FAS 123R, Starr is considered to be an "economic interest holder" in AIG. As a result, compensation expense of \$54 million was recorded in 2006 results with respect to the Starr tender offer.

As a result of its changing relationship with Starr and SICO, AIG has established new executive compensation plans to replace the SICO plans and investment opportunities previously provided by Starr. See Note 14 for a description of these plans.

Compensation expense with respect to the SICO Plans aggregated \$108 million, \$205 million and \$62 million for 2006, 2005 and 2004, respectively.

17. Ownership and Transactions With Related Parties

(a) Ownership: According to the Schedule 13D filed on November 20, 2006 by Starr, SICO, Edward E. Matthews, Maurice R. Greenberg, the Maurice R. and Corinne P. Greenberg Family Foundation, Inc., the Universal Foundation, Inc. and the Maurice R. and Corinne P. Greenberg Joint Tenancy Company, LLC, these reporting persons could be deemed to beneficially own 365,923,844 shares of common stock at that date. Based on the shares of common stock outstanding as of January 31, 2007, this ownership would represent approximately 14 percent of the

17. Ownership and Transactions With Related Parties

Continued

voting stock of AIG. Although these reporting persons have made filings under Section 16 of the Exchange Act, reporting sales of shares of common stock, no amendment to the Schedule 13D has been filed to report a change in ownership subsequent to November 20, 2006.

(b) Transactions with Related Parties: Prior to the termination of their agency relationships with Starr during 2006, AIG and its subsidiaries paid commissions to Starr and its subsidiaries for the production and management of insurance business in the ordinary course of business. Payment for the production of insurance business to Starr aggregated approximately \$47 million in 2006, \$214 million in 2005, and \$205 million in 2004. AIG also received approximately \$4 million in 2006, \$23 million in 2005, and \$24 million in 2004 from Starr and paid none in 2006, approximately \$20,000 in 2005, and \$39,000 in 2004 to Starr in rental fees and none in 2006 and 2005 and \$262,000 in 2004 for services. AIG also received none in 2006, approximately \$2 million in 2005, and \$1 million in 2004, respectively, from SICO and paid none in 2006 and approximately \$1 million in each of the years 2005 and 2004 to SICO as reimbursement for services rendered at cost. AIG also paid to SICO \$2 million in 2006, \$3 million in 2005, and \$4 million in 2004 in rental fees. There are no significant receivables from/payables to related parties at December 31, 2006.

18. Variable Interest Entities

FIN 46R clarifies the consolidation accounting for certain entities in which equity investors do not have the characteristics of a controlling financial interest or do not have sufficient equity that is at risk which would allow the entity to finance its activities without additional subordinated financial support. FIN 46R recognizes that consolidation based on majority voting interest should not apply to certain types of entities that are defined as VIEs. A VIE is consolidated by its primary beneficiary, which is the party that absorbs a majority of the expected losses or a majority of the expected residual returns of the VIE, or both.

AIG, in the normal course of business, is involved with various VIEs. In some cases, AIG has participated to varying degrees in the design of the entity. AIG's involvement in VIEs varies from being a passive investor to managing and structuring the activities of the VIE. AIG engages in transactions with VIEs to manage its investment needs, obtain funding as well as facilitate client needs through AIGGIC and AIGFP. AIG purchases debt securities (rated and unrated) and equity interests issued by VIEs, makes loans and provides other credit support to VIEs, enters into insurance and reinsurance transactions with VIEs, enters into leasing arrangements with VIEs, enters into derivative transactions with VIEs through AIGFP and acts as the collateral manager of VIEs through AIGGIC and AIGFP. Obligations to outside interest holders in VIEs consolidated by AIG are reported as liabilities in the consolidated financial statements. These interest holders generally have recourse only to the assets and cash flows of the VIEs

and do not have recourse to AIG, except where AIG has provided a guarantee to the VIE's interest holders.

AIG determines whether an entity is a VIE, who the variable interest holders are, and which party is the primary beneficiary of the VIE by performing an analysis of the design of the VIE that includes a review of, among other factors, its capital structure, contractual relationships and terms, nature of the entity's operations and purpose, nature of the entity's interests issued, AIG's interests in the entity which either create or absorb variability and related party relationships. AIG consolidates a VIE in situations where all of AIG's interests in the VIE, when combined, absorb a majority of the expected losses or a majority of the expected residual returns of the VIE.

In addition to the VIEs that are consolidated in accordance with FIN 46R, the Company has significant variable interests in certain other VIEs that are not consolidated because the Company is not the primary beneficiary. AIG applies quantitative and qualitative measures in identifying significant variable interests.

Entities for which AIG is the primary beneficiary and consolidates or where AIG has a significant variable interest are as follows:

SunAmerica Affordable Housing Partnerships

SunAmerica Affordable Housing Partners, Inc. (SAAHP) organizes limited partnerships (investment partnerships) that are considered to be VIEs, and that are consolidated by AIG. The investment partnerships invest as limited partners in operating partnerships that develop and operate affordable housing qualifying for federal tax credits and a few market rate properties across the United States. The general partners in the operating partnerships are almost exclusively unaffiliated third-party developers. AIG does not normally consolidate an operating partnership if the general partner is an unaffiliated person. Through approximately 1,150 partnerships, SAAHP has invested in developments with approximately 155,000 apartment units nationwide, and has syndicated over \$6 billion in partnership equity since 1991 to other investors who will receive, among other benefits, tax credits under certain sections of the Internal Revenue Code. AIG Retirement Services, Inc. functions as the general partner in certain investment partnerships and acts both as a credit enhancer in certain transactions, through differing structures with respect to funding development costs for the operating partnerships, and as guarantor that investors will receive the tax benefits projected at the time of syndication. AIG Retirement Services, Inc. consolidates these investment partnerships as a result of the guarantee provided to the investors. As part of their incentive compensation, certain key SAAHP employees have been awarded residual cash flow interests in the partnerships, subject to certain vesting requirements. The operating income of SAAHP is reported, along with other SunAmerica partnership income, as a component of AIG's Asset Management segment.

Asset Management

In certain instances, AIGGIC acts as the collateral manager or general partner of an investment fund, collateralized debt obliga-

18. Variable Interest Entities

Continued

tion (CDO), collateralized loan obligation (CLO), private equity fund or hedge fund. Such entities are typically registered investment companies or qualify for the specialized investment company accounting in accordance with the AICPA Investment Company Audit and Accounting Guide. In CDO and CLO transactions, AIG establishes a trust or other special purpose entity that purchases a portfolio of assets such as bank loans, corporate debt, or non-performing credits and issues trust certificates or debt securities that represent interests in the portfolio of assets. These transactions can be cash-based or synthetic and are actively or passively managed. For investment partnerships, hedge funds and private equity funds, AIG acts as the general partner or manager of the fund and is responsible for carrying out the investment mandate of the VIE. Often, AIG's insurance operations participate in these AIG managed structures as a passive investor in the debt or equity issued by the VIE. Typically, AIG does not provide any guarantees to the investors in the VIE.

AIGGIC is an investor in various real estate investments. These investments are typically with unaffiliated third-party developers via a partnership or limited liability company structure. Some of these entities are VIEs. The activities of these VIEs principally consists of the development or redevelopment of all major types of commercial (retail, office, industrial, logistics parks, mixed use, etc.) and residential real estate. AIG's involvement varies from being a passive equity investor to actively managing the activities of the VIE.

Investment Activities

As part of its investment activities, AIG's insurance operations invest in obligations which include debt and equity securities and interests issued by VIEs. These investments include investments in AIG sponsored and non-sponsored investment funds, hedge funds, private equity funds, and structured financing arrangements. The investments in these VIEs allow AIG's insurance entities to purchase assets permitted by insurance regulations while maximizing their return on these assets. AIG's insurance operations typically are not involved in the design or establishment of the VIE, nor do they actively participate in the management of the VIE.

AIGFP

The variable interests that AIGFP may hold in VIEs include debt securities, equity interests, loans, derivative instruments and other credit support arrangements. Transactions associated with VIEs include an asset-backed commercial paper conduit, asset securitizations, collateralized debt obligations, investment vehicles and other structured financial transactions. AIGFP engages in these transactions to facilitate client needs for investment purposes and to obtain funding.

AIGFP invests in preferred securities issued by VIEs. Additionally, AIGFP establishes VIEs that issue preferred interests to third parties and uses the proceeds to provide financing to AIGFP subsidiaries. In certain instances, AIGFP consolidates these VIEs.

AIGFP is the primary beneficiary of an asset-backed commercial paper conduit with which it entered into several total return swaps covering all the conduit's assets that absorb the majority of the expected losses of the entity. The assets of the conduit serve as collateral for the conduit's obligations. AIGFP is also the primary beneficiary of several structured financing transactions in which AIGFP holds the first loss position either by investing in the equity of the VIE or implicitly through a lending or derivative arrangement.

In certain instances, AIGFP enters into liquidity facilities with various SPEs where AIGFP provides liquidity to the SPE in the form of a guarantee, derivative, or a letter of credit and does not consolidate the VIE. AIGFP also executes various swap and option transactions with VIEs. Such contractual arrangements are done in the ordinary course of business. Typically, interest rate derivatives such as interest rate swaps and options executed with VIEs are not deemed to be variable interests or significant variable interests because the underlying is an observable market interest rate and AIGFP as the derivative counterparty to the VIE is senior to the debt and equity holders.

Asset Management and Insurance Activities

AIG uses VIEs in connection with certain guaranteed investment contract programs written by its Life Insurance & Retirement Services subsidiaries (GIC Programs). In the GIC Programs, AIG's Life Insurance subsidiaries (principally SunAmerica Life) provide guaranteed investment contracts to VIEs in which AIG does not have a direct variable interest, as defined under FIN 46R, in the entity. The VIE issues notes or bonds which are sold to third-party institutional investors. Neither AIG nor the insurance company issuing the GICs has any direct obligation to the investors in the notes or bonds. The proceeds from the securities issued by the VIE are invested by the VIE in the GICs. The insurance company subsidiaries use the proceeds to invest in a diversified portfolio of securities, primarily investment grade bonds. Both the assets and the liabilities of the insurance companies arising from these GIC Programs are presented in AIG's consolidated balance sheet. Thus, at December 31, 2006, approximately \$32 billion of policyholders' contract deposits represented liabilities from issuances of GICs included in these GIC Programs.

Assets held by VIEs which are currently consolidated because AIG is the primary beneficiary (except for those VIEs where AIG also owns a majority voting interest), approximated \$9.1 billion at December 31, 2006. These consolidated assets are reflected in AIG's consolidated balance sheet as Investments and Financial services assets.

Assets of VIEs where AIG has a significant variable interest and does not consolidate the VIE because AIG is not the primary beneficiary, approximated at \$130.1 billion December 31, 2006. Although expected losses are not expected to be material, AIG's maximum exposure to loss from its involvement with these unconsolidated VIEs approximates \$38.7 billion at December 31, 2006. For this purpose, maximum loss is considered to be the notional amount of credit lines, guarantees and other credit support, and liquidity facilities, the notional amounts of credit

18. Variable Interest Entities

Continued

default swaps and certain total return swaps, and the amount invested in the debt or equity issued by the VIE.

19. Derivatives

Derivatives are financial arrangements among two or more parties with returns linked to or "derived" from some underlying equity, debt, commodity or other asset, liability, or index. Derivative payments may be based on interest rates and exchange rates and/or prices of certain securities, commodities, or financial or commodity indices or other variables. Collateral is required, at the discretion of AIG, on certain transactions based on the creditworthiness of the counterparty.

AIG carries all derivatives in the consolidated balance sheet at fair value. The changes in fair value of the derivative transactions of AIGFP are presented as a component of AIG's operating income. However, in certain instances, when income is not recognized up front under EITF 02-03, income is recognized over the life of the contract, where appropriate.

The discussion below relates to the derivative activities of AIG (other than those of AIGFP) that qualify for hedge accounting treatment under FAS 133.

For derivatives designated as hedges, on the date the derivative contract is entered into, AIG designates the derivative as: (i) a hedge of the subsequent changes in the fair value of a recognized asset or liability or of an unrecognized firm commitment ("fair value" hedge); (ii) a hedge of a forecasted transaction, or the variability of cash flows to be received or paid related to a recognized asset or liability ("cash flow" hedge); or (iii) a hedge of a net investment in a foreign operation. Fair value and cash flow hedges may involve foreign currencies ("foreign currency hedges"). The gain or loss in the fair value of a derivative that is appropriately and contemporaneously documented, designated and is highly effective as a fair value hedge is recorded in current period earnings, along with the loss or gain on the hedged item attributable to the hedged risk. The gain or loss in the fair value of a derivative that is appropriately and contemporaneously documented, designated and is highly effective as a cash flow hedge is recorded in other comprehensive income, until earnings are affected by the variability of cash flows in the hedged item. Of the amount deferred in Other comprehensive income at December 31, 2006, AIG does not expect a material amount to be reclassified into earnings over the next twelve months. The portion of the gain or loss in the fair value of a derivative in a cash flow hedge that represents hedge ineffectiveness is recognized immediately in current period earnings. The amount of ineffectiveness was not material for 2006, 2005 and 2004. The gain or loss in the fair value of a derivative that is appropriately and contemporaneously documented, designated and is highly effective as a hedge of a net investment in a foreign operation is recorded in the foreign currency translation adjustments account within other comprehensive income. Changes in the fair value of derivatives used for other than hedging activities are reported in current period earnings (principally in realized capital gains and losses for

AIG's insurance operations). AIG had no hedges that were considered fair value hedges or net investment hedges at December 31, 2006. At December 31, 2006, AIG's hedge accounting was limited to cash flow hedge accounting primarily related to the hedge of forecasted transactions.

AIG assesses, both at the hedge's inception and on an ongoing basis, whether the derivatives used in hedging transactions are highly effective in offsetting changes in fair values or cash flows of hedged items.

As of January 1, 2006 and December 31, 2006, the related balance of accumulated derivative net loss arising from cash flow hedges, net of tax, was \$25 million and \$28 million, respectively. Of the change in accumulated derivative net loss \$3 million represents current period reclassifications to operating income.

In addition to hedging activities, AIG also uses derivative instruments with respect to investment operations, which include, among other things, credit default swaps, and purchasing investments with embedded derivatives, such as equity linked notes and convertible bonds. All changes in the fair value of these derivatives are recorded in earnings. AIG bifurcates an embedded derivative where: (i) the economic characteristics of the embedded instruments are not clearly and closely related to those of the remaining components of the financial instrument; (ii) the contract that embodies both the embedded derivative instrument and the host contract is not remeasured at fair value; and (iii) a separate instrument with the same terms as the embedded instrument meets the definition of a derivative under FAS 133.

The overwhelming majority of AIG's derivatives activities are conducted by AIGFP. AIGFP becomes a party to derivative financial instruments in the normal course of business and to reduce currency, interest rate, commodity, and equity exposures. Such instruments are reflected in the consolidated financial statements and are carried at a market or a fair value, whichever is appropriate. The recorded estimated fair values of such instruments may be different from the values that might be realized if AIGFP was required to sell or close out the transactions prior to maturity.

AIGFP, in the ordinary course of operations and as principal, structures and enters into derivative transactions to meet the needs of counterparties who may be seeking to hedge certain aspects of such counterparties' operations or obtain a desired financial exposure. AIGFP also enters into derivative transactions to hedge the financial exposures arising from its counterparty transactions. Such derivative transactions include interest rate, currency, commodity, credit and equity swaps, swaptions, and forward commitments. Interest rate swap transactions generally involve the exchange of fixed and floating rate interest payment obligations without the exchange of the underlying notional amounts. AIGFP typically becomes a principal in the exchange of interest payments between the parties and, therefore, is exposed to counterparty credit risk and may be exposed to loss, if counterparties default. Currency, commodity, and equity swaps are similar to interest rate swaps, but involve the exchange of specific currencies or cashflows based on the underlying commodity, equity securities or indices. Also, they may involve the exchange of notional amounts at the beginning and end

Notes to Consolidated Financial Statements *Continued*

19. Derivatives

Continued

of the transaction. Swaptions are options where the holder has the right but not the obligation to enter into a swap transaction or cancel an existing swap transaction. At December 31, 2006, the aggregate notional amount of AIGFP's outstanding swap transactions approximated \$1,456 billion, primarily related to interest rate swaps of approximately \$1,058 billion.

Notional amount represents a standard of measurement of the volume of swaps business of Capital Markets operations. Notional

amount is not a quantification of market risk or credit risk and is not recorded on the consolidated balance sheet. Notional amounts generally represent those amounts used to calculate contractual cash flows to be exchanged and are not paid or received, except for certain contracts such as currency swaps.

The timing and the amount of cash flows relating to Capital Markets foreign exchange forwards and exchange traded futures and options contracts are determined by each of the respective contractual agreements.

The following table presents the contractual and notional amounts by maturity and type of derivative of Capital Markets derivatives portfolio at December 31, 2006 and 2005:

<i>(in millions)</i>	Remaining Life of Notional Amount*				Total 2006	Total 2005
	One Year	Two Through Five Years	Six Through Ten Years	After Ten Years		
Capital Markets interest rate, currency and equity swaps and swaptions:						
Notional amount:						
Interest rate swaps	\$380,704	\$505,317	\$149,573	\$22,685	\$1,058,279	\$ 837,389
Currency swaps	59,656	111,571	36,438	10,426	218,091	211,519
Swaptions, equity and commodity swaps	65,402	64,467	30,319	19,852	180,040	175,097
Total	\$505,762	\$681,355	\$216,330	\$52,963	\$1,456,410	\$1,224,005

* Notional amount is not representative of either market risk or credit risk and is not recorded in the consolidated balance sheet.

Futures and forward contracts are contracts that obligate the holder to sell or purchase foreign currencies, commodities or financial indices in which the seller/purchaser agrees to make/take delivery at a specified future date of a specified instrument, at a specified price or yield. Options are contracts that allow the holder of the option to purchase or sell the underlying commodity, currency or index at a specified price and within, or at, a specified period of time. As a writer of options, AIGFP generally receives an option premium and then manages the risk of any unfavorable

change in the value of the underlying commodity, currency or index by entering into offsetting transactions with third-party market participants. Risks arise as a result of movements in current market prices from contracted prices, and the potential inability of the counterparties to meet their obligations under the contracts. At December 31, 2006, the contractual amount of Capital Markets futures, forward and option contracts approximated \$520.2 billion.

The following table presents Capital Markets futures, forward and option contracts portfolio by maturity and type of derivative at December 31, 2006 and 2005:

<i>(in millions)</i>	Remaining Life				Total 2006	Total 2005
	One Year	Two Through Five Years	Six Through Ten Years	After Ten Years		
Futures, forward and options contracts:						
Exchange traded futures and options contracts contractual amount	\$ 25,798	\$1,473	\$ —	\$ —	\$ 27,271	\$ 25,298
Over the counter forward contracts contractual amount	484,524	6,903	1,486	—	492,913	295,778
Total	\$510,322	\$8,376	\$1,486	\$ —	\$520,184	\$321,076

AIGFP enters into credit derivative transactions in the ordinary course of its business. The majority of AIGFP's credit derivatives require AIGFP to provide credit protection on a designated portfolio of loans or debt securities. AIGFP provides such credit protection on a "second loss" basis, under which AIGFP's payment obligations arise only after credit losses in the designated portfolio exceed a specified threshold amount or level of "first losses." The threshold amount of credit losses that must

be realized before AIGFP has any payment obligation is negotiated by AIGFP for each transaction to provide that the likelihood of any payment obligation by AIGFP under each transaction is remote, even in severe recessionary market scenarios. At December 31, 2006 and 2005, the notional amounts of this credit derivatives portfolio (including the super senior transactions) were \$483.6 billion and \$387.2 billion, respectively.

19. Derivatives

Continued

AIG and its subsidiaries also use derivatives and other instruments as part of its financial risk management programs. Interest rate derivatives (such as interest rate swaps) are used to manage interest rate risk associated with its investments in fixed income securities, commercial paper issuances, medium- and long-term note offerings, and other interest rate sensitive assets and liabilities. In addition, foreign exchange derivatives (principally cross currency swaps, forwards and options) are used to economically hedge non-U.S. dollar denominated debt, net capital exposures and foreign exchange transactions. The derivatives are effective economic hedges of the exposures they are meant to offset.

20. Variable Life and Annuity Contracts

AIG follows American Institute of Certified Public Accountants Statement of Position 03-1 (SOP 03-1), which requires recognition of a liability for guaranteed minimum death benefits and other living benefits related to variable annuity and variable life contracts as well as certain disclosures for these products.

AIG reports variable contracts through separate and variable accounts when investment income and investment gains and losses accrue directly to, and investment risk is borne by, the contract holder (traditional variable annuities), and the separate account qualifies for separate account treatment under SOP 03-1. In some foreign jurisdictions, separate accounts are not legally insulated from general account creditors and therefore do not qualify for separate account treatment under SOP 03-1. In such cases, the variable contracts are reported as general account contracts. AIG also reports variable annuity and life contracts through separate and variable accounts, or general accounts when not qualified for separate account reporting, where AIG contractually guarantees to the contract holder (variable contracts with guarantees) either (a) total deposits made to the contract less any partial withdrawals plus a minimum return (and in minor instances, no minimum returns) (Net Deposits Plus a Minimum Return) or (b) the highest contract value attained, typically on any anniversary date minus any subsequent withdrawals following the contract anniversary (Highest Contract Value Attained). These guarantees include benefits that are payable in the event of death, annuitization, or, in other instances, at specified dates during the accumulation period. Such benefits are referred to as guaranteed minimum death benefits (GMDB), guaranteed minimum income benefits (GMIB), and guaranteed minimum withdrawal benefit (GMWB), or guaranteed minimum account value benefits (GMAV), respectively. For AIG, GMDB is by far the most widely offered benefit.

The assets supporting the variable portion of both traditional variable annuities and variable contracts with guarantees are carried at fair value and reported as summary total separate and variable account assets with an equivalent summary total reported for liabilities when the separate account qualifies for separate account treatment under SOP 03-1. Assets for separate accounts that do not qualify for separate account treatment are

reported as trading account assets, and liabilities are included in the respective policyholder liability account of the general account. Amounts assessed against the contract holders for mortality, administrative, and other services are included in revenue and changes in liabilities for minimum guarantees are included in incurred policy losses and benefits in the Consolidated Statement of Income. Separate and variable account net investment income, net investment gains and losses, and the related liability changes are offset within the same line item in the Consolidated Statement of Income for those accounts that qualify for separate account treatment under SOP 03-1. Net investment income and gains and losses on trading accounts for contracts that do not qualify for separate account treatment under SOP 03-1 are reported in net investment income and are offset by an equal amount reported in incurred policy losses and benefits.

The vast majority of AIG's exposure on guarantees made to variable contract holders arises from GMDB. Details concerning AIG's GMDB exposures as of December 31, 2006 and 2005 are as follows:

<i>(dollars in billions)</i>	Net Deposits Plus a Minimum Return	Highest Contract Value Attained
2006		
Account value ^(a)	\$64	\$15
Amount at risk ^(b)	6	1
Average attained age of contract holders by product	38-70 years	56-71 years
Range of guaranteed minimum return rates	0-10%	
2005		
Account value ^(a)	\$59	\$13
Amount at risk ^(b)	7	1
Average attained age of contract holders by product	51-70 years	57-70 years
Range of guaranteed minimum return rates	0-10%	

(a) Included in Policyholders' contract deposits in the Consolidated Balance Sheet.

(b) Represents the amount of death benefit currently in excess of Account value.

The following summarizes GMDB liabilities for guarantees on variable contracts reflected in the general account.

<i>(in millions)</i>	2006	2005
Balance at January 1	\$442	\$485
Reserve increase	35	33
Benefits paid	(71)	(76)
Balance at December 31	\$406	\$442

The GMDB liability is determined each period end by estimating the expected value of death benefits in excess of the projected account balance and recognizing the excess ratably over the accumulation period based on total expected assessments. AIG regularly evaluates estimates used and adjusts the additional liability balance, with a related charge or credit to benefit

Notes to Consolidated Financial Statements *Continued*

20. Variable Life and Annuity Contracts

Continued

expense, if actual experience or other evidence suggests that earlier assumptions should be revised.

The following assumptions and methodology were used to determine the domestic and foreign GMDB liability as of December 31, 2006:

- Data used was up to 5,000 stochastically generated investment performance scenarios.
- Mean investment performance assumptions ranged from 0 percent to approximately ten percent depending on the block of business.
- Volatility assumptions ranged from 10 percent to 30 percent depending on the block of business.
- Mortality was assumed at between 60 percent and 102 percent of various life and annuity mortality tables.
- For domestic contracts, lapse rates vary by contract type and duration and ranged from zero percent to 40 percent. For Japan, lapse rates ranged from zero percent to 20 percent depending on the type of contract.
- For domestic contracts, the discount rate ranged from 3.25 percent to 11 percent. For Japan, the discount rate ranged from zero percent to seven percent.

In addition to GMDB, AIG's contracts currently include to a lesser extent GMIB. The GMIB liability is determined each period end by estimating the expected value of the annuitization benefits in excess of the projected account balance at the date of annuitization and recognizing the excess ratably over the accumulation period based on total expected assessments. AIG regularly evaluates estimates used and adjusts the additional liability balance, with a related charge or credit to benefit expense, if actual experience or other evidence suggests that earlier assumptions should be revised. As of December 31, 2006, most of AIG's GMIB exposure was transferred via reinsurance agreements. Contracts with GMIB not reinsured have account values of \$21 million with a corresponding reserve of less than \$4 million.

AIG contracts currently include a minimal amount of GMAV and GMWB. GMAV and GMWB are considered to be derivatives and are recognized at fair value through earnings. AIG enters into derivative contracts to partially hedge the economic exposure that arises from GMAV and GMWB.

21. Quarterly Financial Information (Unaudited)

The following quarterly financial information for each of the three months ended March 31, June 30, September 30 and December 31, 2006 and 2005 is unaudited. However, in the opinion of management, all adjustments (consisting only of normal recurring adjustments) necessary for a fair statement of the results of operations for such periods, have been made.

Consolidated Statements of Income

Diluted	2,624	2,624	2,625	2,623	2,626	2,624	2,622	2,626

(a) The third quarter of 2005 included catastrophe losses of approximately \$2.4 billion.

(b) The fourth quarter of 2005 included catastrophe losses of \$841 million, regulatory settlement costs of approximately \$1.6 billion, and an increase in net reserves of approximately \$1.8 billion resulting from the annual review of General Insurance loss and loss adjustment reserves.

(c) Diluted earnings per common share were \$1.216 for the quarter ended June 30, 2006, and \$0.666 for the quarter ended September 30, 2005 using the discrete period weighted average shares outstanding for the respective periods.

Notes to Consolidated Financial Statements *Continued*

22. Information Provided in Connection With Outstanding Debt

The following condensed consolidating financial statements are provided in compliance with Regulation S-X of the SEC.

(a) AGC is a holding company and a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all outstanding debt of AGC.

Notes to Consolidated Financial Statements *Continued*

23. Cash Flows

As part of its remediation activities during 2006, AIG determined that certain non-cash activities and adjustments, including the effects of changes in foreign exchange translation on assets and liabilities, previously were misclassified within the operating, investing and financing sections of the Consolidated Statement of Cash Flows. The more significant line items revised include the change in General and life insurance reserves and DAC within operating activities; Purchases of fixed maturity securities within investing activities; and Proceeds from notes, bonds, loans and mortgages payable, and hybrid financial instrument liabilities within financing activities. After evaluating the effect of these items during the third quarter of 2006, AIG has revised the previous periods presented below to conform to the 2006 presentation:

<i>(in millions)</i>	Year Ended December 31, 2005	Year Ended December 31, 2004
Cash flows from operating activities — As previously reported	\$ 25,138	\$ 30,716
Revisions	244	(1,302)
Cash flows from operating activities — As revised	\$ 25,382	\$ 29,414
Cash flows from investing activities — As previously reported	\$(57,321)	\$(97,115)
Revisions	(5,179)	4,519
Cash flows from investing activities — As revised	\$(62,500)	\$(92,596)
Cash flows from financing activities — As previously reported	\$ 32,999	\$ 66,494
Revisions	4,170	(2,277)
Cash flows from financing activities — As revised	\$ 37,169	\$ 64,217
Effect of exchange rate changes on cash — As previously reported	\$ (928)	\$ 992
Revisions	765	(940)
Effect of exchange rate changes on cash — As revised	\$ (163)	\$ 52

There was no effect on ending cash balances.

Part II – Other Information

Item 9. Changes in and Disagreements With Accountants on Accounting and Financial Disclosure

There have been no changes in accountants during the twenty-four months ended December 31, 2006.

Item 9A. Controls and Procedures

Evaluation of Disclosure Controls and Procedures

In connection with the preparation of this Annual Report on Form 10-K, an evaluation was carried out by AIG's management, with the participation of AIG's Chief Executive Officer and Chief Financial Officer, of the effectiveness of AIG's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (Exchange Act)) as of December 31, 2006. Disclosure controls and procedures are designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms and that such information is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial Officer, to allow timely decisions regarding required disclosures.

During the evaluation of disclosure controls and procedures as of December 31, 2005 conducted during the preparation of AIG's financial statements to be included in the Annual Report on Form 10-K for the year ended December 31, 2005, three material weaknesses in internal control over financial reporting were identified, relating to controls over certain balance sheet reconciliations, controls over the accounting for certain derivative transactions and controls over income tax accounting. As a result, AIG's Chief Executive Officer and Chief Financial Officer concluded that, as of December 31, 2005, AIG's disclosure controls and procedures were ineffective.

Under the direction of its Chief Executive Officer and Chief Financial Officer, AIG continued to implement its plans to remediate the material weaknesses, and adjusted these plans as appropriate.

AIG's remediation efforts were governed by a Steering Committee, under the direction of AIG's Chief Risk Officer and also including AIG's Chief Executive Officer, Chief Financial Officer and Comptroller. The status of remediation of each material weakness was reviewed with the Audit Committee and this Committee was advised of issues encountered and key decisions reached by AIG management relating to the remediation efforts.

As of December 31, 2006 and as described under Remediation of Material Weaknesses in Internal Control Over Financial Reporting below, the material weaknesses relating to the controls over certain balance sheet reconciliations and the controls over the accounting for certain derivative transactions were remediated, and the material weakness relating to the controls over income tax accounting was not fully remediated.

As a result of the remaining material weakness in internal control over financial reporting relating to income tax accounting, described more fully below, AIG's Chief Executive Officer and Chief Financial Officer concluded that, as of December 31, 2006, AIG's disclosure controls and procedures were ineffective.

Notwithstanding the existence of this remaining material weakness, AIG believes that the consolidated financial statements in this Annual Report on Form 10-K fairly present, in all material respects, AIG's financial condition as of December 31, 2006 and 2005, and results of its operations and cash flows for the years ended December 31, 2006, 2005 and 2004, in conformity with U.S. generally accepted accounting principles (GAAP).

Management's Report on Internal Control Over Financial Reporting

Management of AIG is responsible for establishing and maintaining adequate internal control over financial reporting. AIG's internal control over financial reporting is a process, under the supervision of AIG's Chief Executive Officer and Chief Financial Officer, designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of AIG's financial statements for external purposes in accordance with GAAP.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions or that the degree of compliance with the policies or procedures may deteriorate.

AIG management conducted an assessment of the effectiveness of AIG's internal control over financial reporting as of December 31, 2006 based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

A material weakness is a control deficiency, or a combination of control deficiencies, that results in more than a remote likelihood that a material misstatement of AIG's annual or interim financial statements will not be prevented or detected. AIG management has concluded that, as of December 31, 2006, the material weakness relating to the controls over income tax accounting was not fully remediated.

Controls over income tax accounting: AIG did not maintain effective controls over the determination and reporting of certain components of the provision for income taxes and related income tax balances. Specifically, AIG did not maintain effective controls to review and monitor the accuracy of the components of the income tax provision calculations and related income tax balances and to monitor the differences between the income tax basis and the financial reporting basis of assets and liabilities to effectively reconcile the differences to the deferred income tax balances. These control deficiencies resulted in adjustments to income tax expense, income taxes payable and deferred income tax asset and liability accounts in the 2006 annual and interim consolidated financial statements. Furthermore, these control deficiencies could result in a material misstatement of the annual or interim

AIG consolidated financial statements that would not be prevented or detected. Accordingly, AIG management has concluded that these control deficiencies constitute a material weakness.

As a result of the material weakness in internal control over financial reporting described above, AIG management has concluded that, as of December 31, 2006, AIG's internal control over financial reporting was not effective based on the criteria in *Internal Control — Integrated Framework* issued by the COSO.

Management's assessment of the effectiveness of AIG's internal control over financial reporting as of December 31, 2006 has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report, which is included in this Annual Report on Form 10-K.

Remediation of Material Weaknesses in Internal Control Over Financial Reporting

Throughout 2006 and continuing in 2007, AIG has been actively engaged in the implementation of remediation efforts to address the three material weaknesses in existence at December 31, 2005. These remediation efforts, outlined below, are specifically designed to address the material weaknesses identified by AIG management. As a result of its assessment of the effectiveness of internal control over financial reporting, AIG management determined that as of December 31, 2006, two material weaknesses, relating to the controls over certain balance sheet reconciliations and the controls over the accounting for certain derivative transactions, had been remediated, but the material weakness relating to the controls over income tax accounting had not been remediated.

Controls over certain balance sheet reconciliations: As of December 31, 2005, AIG did not maintain effective controls to ensure the accuracy of certain balance sheet accounts in certain key segments of AIG's operations, principally in the Domestic Brokerage Group (DBG). Specifically, accounting personnel did not perform timely reconciliations and did not properly resolve reconciling items for premium receivables, reinsurance recoverables and intercompany accounts.

During 2006, AIG management developed and implemented a corporate-wide accounting policy on balance sheet reconciliations, which augments the corporate guidelines on balance sheet reconciliations that were released in 2005. The policy requires all reporting units to perform timely reconciliations of their balance sheet accounts including the resolution of reconciling items and the evaluation of exposure.

AIG reporting units, including DBG, have been performing reconciliations of their accounts consistent with this policy. Implementation of the new policy was supplemented with dedicated training sessions, a self-assessment process and the continued addition of qualified staff to monitor on-going compliance with the new policy.

AIG continues to develop further enhancements to its controls over certain balance sheet reconciliations. Based upon the significant actions taken and the testing and evaluation of the effectiveness of the controls, AIG management has concluded that remediation of the material weakness in AIG's controls over

certain balance sheet reconciliations had been achieved as of December 31, 2006.

Controls over the accounting for certain derivative transactions: As of December 31, 2005, AIG did not maintain effective controls over accounting for certain derivative transactions and related assets and liabilities under FAS 133. In particular, AIG did not maintain effective controls over the evaluation and documentation of whether certain derivative transactions qualified under GAAP for hedge accounting.

During 2006, AIG management implemented effective controls over accounting for derivative transactions. An important element of this implementation was the hiring in key staff positions of additional professionals with expertise in derivatives and hedge accounting.

AIG management has established a new corporate team with the responsibility and authority for overseeing and monitoring the application of hedge accounting throughout AIG. This team, staffed with accounting and quantitative professionals with extensive experience in dealing with derivative accounting matters, is responsible to ensure that the application of hedge accounting by AIG or its subsidiaries is in compliance with FAS 133 and AIG's accounting policies. As part of this activity, both enhancements to existing systems and investments in new applications were made to automate certain processes with respect to the application of hedge accounting and to reduce reliance on manual procedures.

Based upon the significant actions taken and the testing and evaluation of the effectiveness of the controls, AIG management has concluded that remediation of the material weakness in AIG's controls over the accounting for certain derivative transactions had been achieved as of December 31, 2006.

Continuing Remediation

Controls over income tax accounting: As of December 31, 2005, AIG did not maintain effective controls over the determination and reporting of certain components of the provision for income taxes and related income tax balances. During 2006, AIG management took the following actions to remediate this material weakness:

- Continued focus on implementing and testing of standard key controls globally,
- Continued focus on reconciling, evaluating and monitoring of historical balance sheet income tax accounts as well as more detailed financial statement exposure analysis,
- Implementation of a global income tax accounting reporting tool,
- Hiring of additional qualified staff including a new Director of Taxes, as well as Tax Managers and Tax Accountants at designated business units and Corporate, and
- Development and dissemination of income tax accounting training and education programs at the Corporate and business unit levels utilizing site visits and training conferences.

Notwithstanding these significant efforts towards remediation of the material weakness in controls over income tax accounting, implementation and testing of the standard key controls, as well

as procedures and processes, were not completed within all business units as of December 31, 2006. As a result, the effectiveness and sustainability of controls and processes could not be assured as of that date.

Furthermore, during 2006, the reconciliation, evaluation and monitoring of historical balance sheet income tax accounts identified errors in the income tax balances. The errors identified to date were not material; therefore, they were recorded and disclosed in the period in which they were identified. AIG has not completed the necessary reconciliation and evaluation of all historical balance sheet income tax accounts; accordingly, additional work is required in the analysis of the remaining prior year balances. AIG cannot predict the outcome of the review and analysis described above or estimate the potential adjustments related to these remediation activities. However, in the opinion of AIG management and based upon information currently known, resolution of these historical balance sheet income tax accounts is not likely to have a material adverse effect on AIG's consolidated financial condition, but it is possible that the effect could be material to AIG's consolidated results of operations for an individual reporting period.

Remediation of the material weakness in controls over income tax accounting requires completing the implementation of key controls in the applicable AIG business units and testing them after they are in place to validate their effectiveness and sustainability. Due to the nature of these requirements and the need to complete the reconciliation of certain historical balances, no assurance can be given as to the specific timing of the remediation of this material weakness. AIG management continues to assign the highest priority to AIG's remediation efforts in this area, with the goal of remediating this material weakness by year-end 2007.

While the material weakness in controls over income tax accounting was not remediated, due to the substantive alternative

procedures performed and compensating controls in place, AIG believes that the consolidated financial statements present fairly in all material respects AIG's financial condition as of December 31, 2006 and 2005, and results of its operations and cash flows for the years ended December 31, 2006, 2005 and 2004, in conformity with GAAP.

AIG recognizes that improvement in its internal controls over financial reporting and consolidation processes, as well as those over investment accounting, is essential. Over time, AIG intends to reduce its reliance on the manual controls that have been established. AIG is currently developing new systems and processes which will allow it to rely on front end detection and preventative controls which will be more sustainable over the long term. AIG recognizes that, to accomplish its goals, further strengthening and investing are needed in financial personnel, as well as in systems and processes. AIG is committed to making the investments necessary to make these improvements.

Changes in Internal Controls over Financial Reporting

Changes in AIG's internal control over financial reporting during the quarter ended December 31, 2006 that have materially affected, or are reasonably likely to materially affect, AIG's internal control over financial reporting have been described above.

Item 9B. Other Information

None.

Part III

Item 10. Directors, Executive Officers and Corporate Governance

Except for the information provided in Part I under the heading "Directors and Executive Officers of AIG", this item, including information regarding AIG's audit committee and audit committee financial expert, any material changes to the procedures by which security holders may recommend nominees to AIG's board of directors, if any, and information relating to AIG's code of ethics that applies to its directors, executive officers and senior financial officers, is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

Item 11. Executive Compensation

This item is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

This item is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

Item 13. Certain Relationships and Related Transactions, and Director Independence

This item is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

Item 14. Principal Accountant Fees and Services

This item is omitted because a definitive proxy statement which involves the election of directors will be filed with the SEC not later than 120 days after the close of the fiscal year pursuant to Regulation 14A.

Part IV

Item 15. Exhibits and Financial Statement Schedules

Computation of Ratios of Earnings to Fixed Charges**Exhibit 12**

Years Ended December 31, <i>(in millions, except ratios)</i>	2006	2005	2004	2003	2002
Income before income taxes, minority interest and cumulative effect of accounting changes	\$21,687	\$15,213	\$14,845	\$11,907	\$ 7,808
Less — Equity income of less than 50% owned companies	188	(129)	164	146	168
Add — Dividends from less than 50% owned companies	28	146	22	13	13
	21,527	15,488	14,703	11,774	7,653
Add — Fixed charges	9,062	7,663	6,049	5,762	4,893
Less — Capitalized interest	59	64	59	52	61
Income before income taxes, minority interest, cumulative effect of accounting changes and fixed charges	\$30,530	\$23,087	\$20,693	\$17,484	\$12,485
Fixed charges:					
Interest costs	\$ 8,843	\$ 7,464	\$ 5,860	\$ 5,588	\$ 4,725
Rental expense*	219	199	189	174	168
Total fixed charges	\$ 9,062	\$ 7,663	\$ 6,049	\$ 5,762	\$ 4,893
Ratio of earnings to fixed charges	3.37	3.01	3.42	3.03	2.55
Secondary Ratio					
Interest credited to GIC and GIA policy and contract holders	\$ (5,128)	\$ (4,760)	\$ (3,674)	\$ (3,578)	\$ (2,702)
Total fixed charges excluding interest credited to GIC and GIA policy and contract holders	\$ 3,934	\$ 2,903	\$ 2,375	\$ 2,184	\$ 2,191
Secondary ratio of earnings to fixed charges	6.46	6.31	7.17	6.37	4.47

* The proportion deemed representative of the interest factor.

The secondary ratio is disclosed for the convenience of fixed income investors and the rating agencies that serve them and is more comparable to the ratios disclosed by all issuers of fixed income securities. The secondary ratio removes interest credited to guaranteed investment contract (GIC) policyholders and guaranteed investment agreement (GIA) contractholders. Such interest expenses are also removed from earnings used in this calculation. GICs and GIAs are entered into by AIG's insurance subsidiaries,

principally SunAmerica Life Insurance Company and AIG Financial Products Corp. and its subsidiaries, respectively. The proceeds from GICs and GIAs are invested in a diversified portfolio of securities, primarily investment grade bonds. The assets acquired yield rates greater than the rates on the related policyholders obligation or contract, with the intent of earning a profit from the spread.

CERTIFICATION

In connection with this Annual Report on Form 10-K of American International Group, Inc. (the "Company") for the year ended December 31, 2006, as filed with the Securities and Exchange Commission on the date hereof (the "Report"), I, Martin J. Sullivan, President and Chief Executive Officer of the Company, certify, pursuant to 18 U.S.C. Section 1350, that to my knowledge:

(1) The Report fully complies with the requirements of Section 13(a) or 15(d), as applicable, of the Securities Exchange Act of 1934; and

(2) The information contained in the Report fairly presents, in all material respects, the financial condition and results of operations of the Company.

Date: March 1, 2007

/s/ MARTIN J. SULLIVAN

Martin J. Sullivan
President and Chief Executive Officer

The foregoing certification is being furnished solely pursuant to 18 U.S.C. Section 1350 and is not being filed as part of the Report or as a separate disclosure document.

CERTIFICATION

In connection with this Annual Report on Form 10-K of American International Group, Inc. (the "Company") for the year ended December 31, 2006, as filed with the Securities and Exchange Commission on the date hereof (the "Report"), I, Steven J. Bensinger, Executive Vice President and Chief Financial Officer of the Company, certify, pursuant to 18 U.S.C. Section 1350, that to my knowledge:

(1) The Report fully complies with the requirements of Section 13(a) or 15(d), as applicable, of the Securities Exchange Act of 1934; and

(2) The information contained in the Report fairly presents, in all material respects, the financial condition and results of operations of the Company.

Date: March 1, 2007

/s/ STEVEN J. BENSINGER

Steven J. Bensinger
Executive Vice President and Chief Financial Officer

The foregoing certification is being furnished solely pursuant to 18 U.S.C. Section 1350 and is not being filed as part of the Report or as a separate disclosure document.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited)***1. Financial Statement Presentation**

These unaudited condensed consolidated financial statements do not include certain financial information required by U.S. generally accepted accounting principles (GAAP) for complete financial statements and should be read in conjunction with the audited consolidated financial statements and the related notes included in the Annual Report on Form 10-K of American International Group, Inc. (AIG) for the year ended December 31, 2006 (2006 Annual Report on Form 10-K).

2. Segment Information

AIG identifies its reportable segments by product line consistent with its management structure. These segments are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers have managed their businesses, for the three months ended March 31, 2007, AIG realigned certain products among reportable segments and major internal reporting units. AIG also began reporting realized capital gains and losses for the Financial Services and Asset Management segments in the results of these segments. Historically, realized capital gains and losses were included in the Other category. There has been no change in AIG's management structure or in its reportable segments. All prior period amounts presented in the tables below have been revised to conform to the current year's presentation of these items.

The following table summarizes the operations by the major operating segments:

Operating Segments <i>(in millions)</i>	Three Months Ended March 31,	
	2007	2006
Revenues ^(a) :		
General Insurance ^(b)	\$12,903	\$11,656
Life Insurance & Retirement Services ^(c)	13,682	12,850
Financial Services ^{(d)(e)}	2,201	1,666
Asset Management ^(f)	1,908	1,139
Other	102	90
Consolidation and eliminations	(151)	(123)
Consolidated	\$30,645	\$27,278
Operating income (loss) ^{(a)(g)} :		
General Insurance	\$ 3,096	\$ 2,331
Life Insurance & Retirement Services	2,281	2,630
Financial Services ^(e)	292	(108)
Asset Management	994	449
Other ^(h)	(499)	(509)
Consolidation and eliminations	8	-
Consolidated	\$ 6,172	\$ 4,793

(a) Includes the effect of hedging activities that did not qualify for hedge accounting treatment under Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133) or for which hedge accounting was not applied, including the related foreign exchange gains and losses. For the first three months of 2007 and 2006, respectively, the effect was \$(452) million and \$(212) million in both revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are hedging investments and borrowings.

(b) Represents the sum of General Insurance net premiums earned, net investment income and realized capital gains (losses).

(c) Represents the sum of Life Insurance & Retirement Services premiums and other considerations, net investment income and realized capital gains (losses). Included in realized capital gains (losses) and operating income is the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, which were \$(123) million and \$352 million for the first three months of 2007 and 2006, respectively, and the application of Statement of Financial Accounting Standards No. 52 "Foreign Currency Translation" (FAS 52), which were \$123 million and \$4 million for the first three months of 2007 and 2006, respectively.

(d) Represents interest, lease and finance charges.

(e) Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133 or for which hedge accounting was not applied, including the related foreign exchange gains and losses. For the three months ended March 31, 2007 and 2006, respectively, the effect was \$(160) million, and \$(619) million in both revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings. In the first quarter of 2007, AIG began applying hedge accounting for certain transactions, primarily in its Capital Markets operations.

(f) Represents net investment income with respect to spread-based products and management and advisory fees.

(g) Represents income before income taxes, minority interest and cumulative effect of an accounting change.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information** (continued)

(b) Includes AIG parent and other operations which are not required to be reported separately. The following table presents the operating loss for AIG's Other category:

(in millions)	Three Months Ended March 31,	
	2007	2006
Other operating income (loss):		
Equity earnings in unconsolidated entities	\$ 41	\$ 19
Interest expense	(252)	(183)
Unallocated corporate expenses	(162)	(184)
Compensation expense — SICO Plans	(10)	(76)
Compensation expense — Starr tender offer	-	(54)
Realized capital gains (losses)	(78)	(5)
Other miscellaneous, net	(38)	(26)
Total Other	\$(499)	\$(509)

The following table summarizes AIG's General Insurance operations by major internal reporting unit:

(in millions)	Three Months Ended March 31,	
	2007	2006
General Insurance		
Revenues:		
Domestic Brokerage Group	\$ 7,091	\$ 6,561
Transatlantic	1,096	1,016
Personal Lines	1,213	1,215

Total Life Insurance & Retirement Services	\$13,682	\$12,850
Operating Income:		
Foreign:		
Japan and Other	\$ 913	\$ 978
Asia	371	708
Domestic:		
Domestic Life Insurance	345	366
Domestic Retirement Services	652	578
Total Life Insurance & Retirement Services	\$ 2,281	\$ 2,630

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information** (continued)

The following table summarizes **AIG's Financial Services operations by major internal reporting unit:**

Financial Services (in millions)	Three Months Ended March 31,	
	2007	2006
Revenues:		
Aircraft Leasing ^(a)	\$1,058	\$1,012
Capital Markets ^{(b)(c)}	228	(300)
Consumer Finance ^{(d)(e)}	883	925
Other, including intercompany adjustments	32	29
Total Financial Services	\$2,201	\$1,666
Operating income (loss):		
Aircraft Leasing ^(a)	\$ 164	\$ 176
Capital Markets ^{(b)(c)}	68	(470)
Consumer Finance ^{(d)(e)}	36	176
Other, including intercompany adjustments	24	10
Total Financial Services	\$ 292	\$ (108)

(a) Revenues are primarily aircraft lease rentals from International Lease Finance Corporation (ILFC). Both revenues and operating income include the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three months ended March 31, 2007 and 2006, the effect was \$(37) million and \$45 million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings.

(b) Revenues, shown net of interest expense of \$1.1 billion and \$639 million in the first three months of 2007 and 2006, respectively, were primarily from hedged financial positions entered into in connection with counterparty transactions. Both revenues and operating income include the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133 or for which hedge accounting was not applied, including the related foreign exchange gains and losses. For the three months ended March 31, 2007 and 2006, the effect was \$(85) million and \$(678) million, respectively.

(c) Certain transactions entered into by AIGFP generate tax credits and benefits which are included in income taxes in the consolidated statement of income. The amounts of such tax credits and benefits for the three months ended March 31, 2007 and 2006 were \$17 million and \$18 million, respectively.

(d) Revenues are primarily finance charges. Both revenues and operating income include the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three months ended March 31, 2007 and 2006, the effect was \$(36) million and \$3 million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings.

(e) The three months ended March 31, 2007 includes a pre-tax charge of \$128 million (\$83 million after tax) in connection with domestic consumer finance's mortgage banking activities.

3. Shareholders' Equity and Earnings Per Share (EPS)**Earnings Per Share**

Basic EPS of AIG is calculated using the weighted average number of common shares outstanding. Diluted EPS is based on those shares used in basic EPS plus shares that would have been outstanding assuming issuance of common shares for all potentially dilutive common shares outstanding.

The following table presents the computation of basic and diluted EPS:

<i>(in millions, except per share data)</i>	Three Months Ended March 31,	
	2007	2006
Numerator for basic earnings per share:		
Income before cumulative effect of an accounting change	\$4,130	\$3,161
Cumulative effect of an accounting change, net of tax	-	34
Net income applicable to common stock for basic EPS	\$4,130	\$3,195
Interest on contingently convertible bonds, net of tax ^(a)	-	3
Net income applicable to common stock for diluted EPS	\$4,130	\$3,198
Cumulative effect of an accounting change, net of tax	-	(34)
Income before cumulative effect of an accounting change applicable to common stock for diluted EPS	\$4,130	\$3,164
Denominator for earnings per share:		
Weighted-average shares outstanding used in the computation of EPS:		
Common stock issued	2,751	2,751
Common stock in treasury	(150)	(154)
Deferred shares	11	8
Weighted-average shares outstanding – basic	2,612	2,605
Incremental shares from potential common stock:		
Weighted-average number of shares arising from outstanding employee stock plans (treasury stock method) ^(b)	9	10
Contingently convertible bonds ^(a)	-	9
Weighted average shares outstanding – diluted ^(b)	2,621	2,624

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Shareholders' Equity and Earnings Per Share (EPS)** (continued)

(in millions, except per share data)	Three Months Ended March 31,	
	2007	2006
Earnings per share:		
Basic:		
Income before cumulative effect of an accounting change	\$ 1.58	\$ 1.21
Cumulative effect of an accounting change, net of tax	-	0.01
Net income	\$ 1.58	\$ 1.22
Diluted:		
Income before cumulative effect of an accounting change	\$ 1.58	\$ 1.21
Cumulative effect of an accounting change, net of tax	-	0.01
Net income	\$ 1.58	\$ 1.22

(a) Assumes conversion of contingently convertible bonds due to the adoption of Emerging Issues Task Force Issue No. 04-8 "Accounting Issues Related to Certain Features of Contingently Convertible Debt and the Effect on Diluted Earnings per Share."

(b) Certain shares arising from employee stock plans were not included in the computation of diluted earnings per share where the exercise price of the options exceeded the average market price and would have been antidilutive. The number of shares excluded was 7 million for both the three months ended March 31, 2007 and 2006.

Shareholders' Equity

From time to time, AIG may buy shares of its common stock for general corporate purposes, including to satisfy its obligations under various employee benefit plans. At December 31, 2006, an additional 36,542,700 shares could be purchased under the then current authorization by AIG's Board of Directors. In February 2007, AIG's Board of Directors increased the repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. During March 2007, AIG made open market share repurchases and entered into a \$3 billion structured share repurchase arrangement. A total of 2,470,499 shares were repurchased during March 2007. The portion of the payment advanced by AIG under the structured share repurchase ar-

angement that had not yet been utilized to repurchase shares at March 31, 2007, amounting to \$2.85 billion, has been recorded as a component of shareholders' equity under the caption Payments advanced to purchase shares. Purchases have continued since March 31, 2007, with an additional 6,643,052 shares purchased during April 2007, and purchases are anticipated to occur throughout 2007. All shares repurchased are recorded as treasury stock at cost.

The quarterly dividend per common share, commencing with the dividend declared in May 2006 and paid on September 15, 2006, was \$0.165.

The following table summarizes the changes in retained earnings:

(in millions)	Three Months Ended March 31,	
	2007	2006
Retained earnings:		
Balance at beginning of year	\$84,996	\$72,330
Cumulative effect of accounting changes, net of tax	(203)	308
Adjusted balance, beginning of year	84,793	72,638
Net income	4,130	3,195
Dividends to shareholders	(430)	(400)
Balance, end of period	\$88,493	\$75,433

4. Benefits Provided by Starr International Company, Inc. and C.V. Starr & Co., Inc.

Starr International Company, Inc. (SICO) has provided a series of two-year Deferred Compensation Profit Participation Plans (SICO Plans) to certain AIG employees. The SICO Plans came into being in 1975 when the voting shareholders and Board of Directors of SICO, a private holding company whose principal asset is AIG common stock, decided that a portion of the capital value of SICO should be used to provide an incentive plan for the current and succeeding managements of all American International companies, including AIG.

None of the costs of the various benefits provided under the SICO Plans has been paid by AIG, although AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts deemed contributed by SICO. The SICO Plans provide that shares currently owned by SICO are set aside by SICO for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)

may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's voluntary termination of employment with AIG prior to normal retirement age. Under the SICO Plans, SICO's Board of Directors may elect to pay a participant cash in lieu of shares of AIG common stock. Following notification from SICO to participants in the SICO Plans that it will settle specific future awards under the SICO Plans with shares rather than cash, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. AIG gave effect to this change in settlement method beginning on December 9, 2005, the date of SICO's notice to participants in the SICO Plans. See also Note 6(b) "Commitments" herein.

In January 2006, C.V. Starr & Co., Inc. (Starr) completed its tender offer to purchase Starr interests from AIG employees. In conjunction with AIG's adoption of FAS 123R, Starr is considered to be an "economic interest holder" in AIG. As a result, compensation expense of \$54 million was included in the first three months of 2006 with respect to the Starr tender offer.

Compensation expense with respect to the SICO Plans aggregated \$10 million and \$76 million for the first three months of 2007 and 2006, respectively. Compensation expense in 2006 included various out of period adjustments totaling \$61 million, primarily relating to stock splits and other miscellaneous items for the SICO plans.

5. Ownership

According to the Schedule 13D filed on March 20, 2007 by Starr, SICO, Edward E. Matthews, Maurice R. Greenberg, the Maurice R. and Corinne P. Greenberg Family Foundation, Inc., the Universal Foundation, Inc., the Maurice R. and Corinne P. Greenberg Joint Tenancy Company, LLC and the C.V. Starr & Co., Inc. Trust, these reporting persons could be deemed to beneficially own 354,987,261 shares of AIG's common stock at that date. Based on the shares of AIG's common stock outstanding as of April 30, 2007, this ownership would represent approximately 14 percent of the voting stock of AIG. Although these reporting persons have made filings under Section 16 of the Exchange Act, reporting sales of shares of common stock, no amendment to the Schedule 13D has been filed to report a change in ownership subsequent to March 20, 2007.

6. Commitments, Contingencies and Guarantees

In the normal course of business, various commitments and contingent liabilities are entered into by AIG and certain of its

subsidiaries. In addition, AIG guarantees various obligations of certain subsidiaries.

(a) Litigation and Investigations

Litigation Arising from Operations. AIG and its subsidiaries, in common with the insurance and financial services industries in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. In AIG's insurance operations, litigation arising from claims settlement activities is generally considered in the establishment of AIG's reserve for losses and loss expenses. However, in certain circumstances, AIG provides disclosure because of the size or nature of the potential liability to AIG. The potential for increasing jury awards and settlements makes it difficult to assess the ultimate outcome of such litigation.

Litigation Arising from Insurance Operations — Caremark. AIG and certain of its subsidiaries have been named defendants in two putative class actions in state court in Alabama that arise out of the 1999 settlement of class and derivative litigation involving Caremark Rx, Inc. (Caremark). The plaintiffs in the second-filed action have intervened in the first-filed action, and the second-filed action has been dismissed. An excess policy issued by a subsidiary of AIG with respect to the 1999 litigation was expressly stated to be without limit of liability. In the current actions, plaintiffs allege that the judge approving the 1999 settlement was misled as to the extent of available insurance coverage and would not have approved the settlement had he known of the existence and/or unlimited nature of the excess policy. They further allege that AIG, its subsidiaries, and Caremark are liable for fraud and suppression for misrepresenting and/or concealing the nature and extent of coverage. In their complaint, plaintiffs request compensatory damages for the 1999 class in the amount of \$3.2 billion, plus punitive damages. AIG and its subsidiaries deny the allegations of fraud and suppression and have asserted, *inter alia*, that information concerning the excess policy was publicly disclosed months prior to the approval of the settlement. AIG and its subsidiaries further assert that the current claims are barred by the statute of limitations and that plaintiffs' assertions that the statute was tolled cannot stand against the public disclosure of the excess coverage. Plaintiffs, in turn, have asserted that the disclosure was insufficient to inform them of the nature of the coverage and did not start the running of the statute of limitations. The trial court is currently considering, under standards mandated by the Alabama Supreme Court, whether a class action can be certified and whether the defendants in the case brought by the intervenors should be dismissed. AIG cannot reasonably estimate either the likelihood of its prevailing in these actions or the potential damages in the event liability is determined.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

Litigation Arising from Insurance Operations — Gunderson. A subsidiary of AIG has been named as a defendant in a putative class action lawsuit in the 14th Judicial District Court for the State of Louisiana. The *Gunderson* complaint alleges failure to comply with certain provisions of the Louisiana Any Willing Provider Act (the Act) relating to discounts taken by defendants on bills submitted by Louisiana medical providers and hospitals that provided treatment or services to workers compensation claimants and seeks monetary penalties and injunctive relief. On July 20, 2006, the court denied defendants' motion for summary judgment and granted plaintiffs' partial motion for summary judgment, holding that the AIG subsidiary was a "group purchaser" and, therefore, potentially subject to liability under the Act. On November 28, 2006, the court issued an order certifying a class of providers and hospitals. In an unrelated action also arising under the Act, a Louisiana appellate court ruled that the district court lacked jurisdiction to adjudicate the claims at issue. In response, defendants in *Gunderson* filed an exception for lack of subject matter jurisdiction. On January 19, 2007, the court denied the motion, holding that it has jurisdiction over the putative class claims. The AIG subsidiary is appealing the class certification ruling and is seeking an appeal from the jurisdictional ruling. While AIG believes that it has meritorious defenses to plaintiffs' claims, it cannot currently estimate the likelihood of prevailing in this action or reasonably estimate the likely damages, if any.

2006 Regulatory Settlements. In February 2006, AIG reached a resolution of claims and matters under investigation with the United States Department of Justice (DOJ), SEC, the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). AIG recorded an after-tax charge of \$1.15 billion relating to these settlements in the fourth quarter of 2005.

The settlements resolved investigations conducted by the SEC, NYAG and DOI in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. These settlements did not, however, resolve investigations by regulators from other states into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Nor did the settlements resolve any obligations that AIG may have to state guarantee funds in connection with any of these matters.

As a result of these settlements, AIG made payments or placed amounts in escrow in 2006 totaling approximately \$1.64 billion, \$225 million of which represented fines and

penalties. Amounts held in escrow totaling \$380 million, including interest thereon, are included in other assets at March 31, 2007. At that date, approximately \$317 million of the funds were escrowed for settlement of claims resulting from the underpayment by AIG of its residual market assessments for workers compensation. The National Workers Compensation Reinsurance Pool on behalf of its participant members and various states have communicated to AIG that they may assert claims with respect to the underpayment of such assessments. In addition, the National Association of Insurance Commissioners has formed a Settlement Review Working Group, which has commenced its own investigation into the underpayment of such assessments, directed by the State of Indiana. AIG cannot currently estimate whether the amount ultimately required to settle these claims will exceed the funds escrowed for this purpose.

The remaining escrowed funds, which amounted to \$63 million at March 31, 2007, are set aside for settlements with certain AIG policyholders specified in the settlements who claimed to have been harmed by AIG's insurance brokerage practices. During the first three months of 2007, approximately \$323 million was paid out from escrow in exchange for releasing AIG and its subsidiaries from any alleged liability relating to such brokerage practices. Any funds remaining at the end of the escrow period will be used to resolve claims asserted by policyholders relating to such insurance brokerage practices, including those described in Private Litigation below.

In addition to the escrowed funds, \$800 million was deposited into a fund under the supervision of the SEC as part of the settlements to be available to resolve claims asserted against AIG by investors including, the shareholder lawsuits described herein.

At the current time, AIG cannot predict the outcome of the matters described above, or estimate any potential additional cost related to these matters.

Also, as part of the settlements, AIG has agreed to retain, for a period of three years, an independent consultant who will conduct a review that will include, among other things, the adequacy of AIG's internal control over financial reporting, the policies, procedures and effectiveness of AIG's regulatory, compliance and legal functions and the remediation plan that AIG has implemented as a result of its own internal review.

Private Litigation

Securities Actions. Beginning in October 2004, a number of putative securities fraud class action suits were filed against AIG and consolidated as *In re American International Group, Inc. Securities Litigation*. Subsequently, a separate, though similar, securities fraud action was also brought against AIG by certain Florida pension funds. The lead plain-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

tiff in the class action is a group of public retirement systems and pension funds benefiting Ohio state employees, suing on behalf of themselves and all purchasers of AIG's publicly traded securities between October 28, 1999 and April 1, 2005. The named defendants are AIG and a number of present and former AIG officers and directors, as well as Starr, SICO, General Reinsurance Corporation, and PricewaterhouseCoopers LLP (PwC), among others. The lead plaintiff alleges, among other things, that AIG: (1) concealed that it engaged in anti-competitive conduct through alleged payment of contingent commissions to brokers and participation in illegal bid-rigging; (2) concealed that it used "income smoothing" products and other techniques to inflate its earnings; (3) concealed that it marketed and sold "income smoothing" insurance products to other companies; and (4) misled investors about the scope of government investigations. In addition, the lead plaintiff alleges that AIG's former Chief Executive Officer manipulated AIG's stock price. The lead plaintiff asserts claims for violations of Sections 11 and 15 of the Securities Act, Section 10(b) of the Exchange Act, and Rule 10b-5 promulgated thereunder, Section 20(a) of the Exchange Act, and Section 20A of the Exchange Act. In April 2006, the court denied the defendants' motions to dismiss the second amended class action complaint and the Florida complaint. In December 2006, a third amended class action complaint was filed, which does not differ substantially from the prior complaint. Fact and class discovery is currently ongoing.

ERISA Action. Between November 30, 2004 and July 1, 2005, several ERISA actions were filed on behalf of purported class of participants and beneficiaries of three pension plans sponsored by AIG or its subsidiaries. A consolidated complaint filed on September 26, 2005 alleges a class period between September 30, 2000 and May 31, 2005 and names as defendants AIG, the members of AIG's Retirement Board and the Administrative Boards of the plans at issue, and four present or former members of AIG's Board of Directors. The factual allegations in the complaint are essentially identical to those in the securities actions described above. Plaintiffs allege that defendants violated duties under ERISA by allowing the plans to offer AIG stock as a permitted investment, when defendants allegedly knew it was not a prudent investment, and by failing to provide participants with accurate information about AIG stock. AIG's motion to dismiss was denied by order dated December 12, 2006. Discovery will be consolidated with proceedings in the securities actions.

Derivative Actions — Southern District of New York. Between October 25, 2004 and July 14, 2005, seven separate derivative actions were filed in the Southern District of New York, five of which were consolidated into a single action.

The New York derivative complaint contains nearly the same types of allegations made in the securities fraud and ERISA actions described above. The named defendants include current and former officers and directors of AIG, as well as Marsh & McLennan Companies, Inc. (Marsh), SICO, Starr, ACE Limited and subsidiaries (ACE), General Reinsurance Corporation, PwC, and certain employees or officers of these entity defendants. Plaintiffs assert claims for breach of fiduciary duty, gross mismanagement, waste of corporate assets, unjust enrichment, insider selling, auditor breach of contract, auditor professional negligence and disgorgement from AIG's former Chief Executive Officer and Chief Financial Officer of incentive-based compensation and AIG share proceeds under Section 304 of the Sarbanes-Oxley Act, among others. Plaintiffs seek, among other things, compensatory damages, corporate governance reforms, and a voiding of the election of certain AIG directors. AIG's Board of Directors has appointed a special committee of independent directors (special committee) to review the matters asserted in the operative consolidated derivative complaint. The court has approved an agreement staying the derivative case pending in the Southern District of New York. The current stay extends until July 13, 2007.

Derivative Actions — Delaware Chancery Court. From October 2004 to April 2005, AIG shareholders filed five derivative complaints in the Delaware Chancery Court. All of these derivative lawsuits have been consolidated into a single action. The amended consolidated complaint names 43 defendants (not including nominal defendant AIG) who, like the New York consolidated derivative litigation, are current and former officers and directors of AIG, as well as other entities and certain of their current and former employees and directors. The factual allegations, legal claims and relief sought in Delaware action are similar to those alleged in the New York derivative actions, except that plaintiffs in the Delaware derivative action assert claims only under state law. The court has approved an agreement that AIG be realigned as plaintiff. AIG has until June 13, 2007 to file an amended complaint, and the special committee has until June 13, 2007 to file a motion to terminate the litigation with respect to certain defendants.

An additional derivative lawsuit was filed in the Delaware Chancery Court in December 2002 against twenty directors and executives of AIG as well as against AIG as a nominal defendant, alleges, among other things, that the directors of AIG breached the fiduciary duties of loyalty and care by approving the payment of commissions to Starr and of rental and service fees to SICO and the executives breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and their fiduciary duties by usurping AIG's corporate opportunity. The complaint further alleges that the Starr agencies did not provide any services that AIG

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

was not capable of providing itself, and that the diversion of commissions to these entities was solely for the benefit of Starr's owners. The complaint also alleged that the service fees and rental payments made to SICO and its subsidiaries were improper. Under the terms of a stipulation approved by the Court on February 16, 2006, the claims against the outside independent directors were dismissed with prejudice, while the claims against the other directors were dismissed without prejudice. On October 31, 2005, Messrs. Greenberg, Matthews and Smith, SICO and Starr filed motions to dismiss the amended complaint. In an opinion dated June 21, 2006, the Court denied defendants' motion to dismiss, except with respect to plaintiff's challenge to payments made to Starr before January 1, 2000. On July 21, 2006, plaintiff filed its second amended complaint, which alleges that, between January 1, 2000 and May 31, 2005, individual defendants breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and breached their fiduciary duties by usurping AIG's corporate opportunity. Starr is charged with aiding and abetting breaches of fiduciary duty and unjust enrichment for its acceptance of the fees. SICO is no longer named as a defendant. On April 20, 2007, the individual defendants and Starr filed a motion seeking leave of the Court to assert a cross-claim against AIG and a third-party complaint against PwC and the directors previously dismissed from the action, as well as certain other AIG officers and employees. Discovery is currently ongoing.

Policyholder Actions. After the NYAG filed its complaint against insurance broker Marsh, policyholders brought multiple federal antitrust and Racketeer Influenced and Corrupt Organizations Act (RICO) class actions in jurisdictions across the nation against insurers and brokers, including AIG and a number of its subsidiaries, alleging that the insurers and brokers engaged in a broad conspiracy to allocate customers, steer business, and rig bids. These actions, including 18 complaints filed in different federal courts naming AIG or an AIG subsidiary as a defendant, were consolidated by the judicial panel on multi-district litigation and transferred to the United States District Court for the District of New Jersey for coordinated pretrial proceedings. The consolidated actions have proceeded in that court in two parallel actions, *In re Insurance Brokerage Antitrust Litigation* (the *Commercial Complaint*) and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the *Employee Benefits Complaint*), and together with the *Commercial Complaint*, the multi-district litigation).

The plaintiffs in the *Commercial Complaint* are nineteen corporations, individuals and public entities that contracted with the broker defendants for the provision of insurance brokerage services for a variety of insurance needs. The bro-

ker defendants are alleged to have placed insurance coverage on the plaintiffs' behalf with a number of insurance companies named as defendants, including AIG subsidiaries. The *Commercial Complaint* also named ten brokers and fourteen other insurers (one of which has since settled) as defendants. The *Commercial Complaint* alleges that defendants engaged in a widespread conspiracy to allocate customers through "bid-rigging" and "steering" practices. The *Commercial Complaint* also alleges that the insurer defendants permitted brokers to place business with AIG subsidiaries through wholesale intermediaries affiliated with or owned by those same brokers rather than placing the business with AIG subsidiaries directly. Finally, the *Commercial Complaint* alleges that the insurer defendants entered into agreements with broker defendants that tied insurance placements to reinsurance placements in order to provide additional compensation to each broker. Plaintiffs assert that the defendants violated the Sherman Antitrust Act, RICO, the antitrust laws of 48 states and the District of Columbia, and are liable under common law breach of fiduciary duty and unjust enrichment theories. Plaintiffs seek treble damages plus interest and attorneys' fees as a result of the alleged RICO and Sherman Act violations.

The plaintiffs in the *Employee Benefits Complaint* are nine individual employees and corporate and municipal employers alleging claims on behalf of two separate nationwide purported classes: an employee class and an employer class that acquired insurance products from the defendants from August 26, 1994 to the date of any class certification. The *Employee Benefits Complaint* names AIG, as well as eleven brokers and five other insurers, as defendants. The activities alleged in the *Employee Benefits Complaint*, with certain exceptions, track the allegations of contingent commissions, bid-rigging and tying made in the *Commercial Complaint*.

On October 3, 2006, Judge Hochberg of the District of New Jersey reserved in part and denied in part motions filed by the insurer defendants and broker defendants to dismiss the multi-district litigation. The Court also ordered the plaintiffs in both actions to file supplemental statements of particularity to elaborate on the allegations in their complaints. Plaintiffs filed their supplemental statements on October 25, 2006, and the AIG defendants, along with other insurer and broker defendants in the two consolidated actions, filed renewed motions to dismiss on November 30, 2006. On February 16, 2007, the case was transferred to Judge Garrett E. Brown, Chief Judge of the District of New Jersey. On April 5, 2007, Chief Judge Brown granted the defendants' renewed motions to dismiss the *Commercial Complaint* and *Employee Benefits Complaint* with respect to the antitrust and RICO claims. The claims were dismissed without prejudice and the plaintiffs were given 30 days, later extended to 45 days, to file amended complaints. On April 11, 2007, the Court stayed all proceedings, including all discovery, that are part of the

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***6. Commitments, Contingencies and Guarantees** *(continued)*

multi-district litigation until any renewed motions to dismiss the amended complaints are resolved.

A number of complaints making allegations similar to those in the *Commercial Complaint* have been filed against AIG and other defendants in state and federal courts around the country. The defendants have thus far been successful in having the federal actions transferred to the District of New Jersey and consolidated into the multi-district litigation. The AIG defendants have also sought to have state court actions making similar allegations stayed pending resolution of the multi-district litigation proceeding. In one state court action pending in Florida, the trial court recently decided not to grant an additional stay, but instead to allow the case to proceed.

Litigation Relating to 21st Century. Shortly after the announcement in late January 2007 of AIG's offer to acquire the outstanding shares of 21st Century not already owned by AIG and its subsidiaries, two related class actions were filed in the Superior Court of California, Los Angeles County, against AIG, 21st Century, and the individual members of 21st Century's Board of Directors, two of whom are current executive officers of AIG. The actions were filed purportedly on behalf of the minority shareholders of 21st Century and assert breaches of fiduciary duty in connection with the AIG proposal. The complaints allege that the proposed per share price is unfair and seek preliminary and permanent injunctive relief to enjoin the consummation of the proposed transaction.

SICO. In July, 2005, SICO filed a complaint against AIG in the Southern District of New York, claiming that AIG had refused to provide SICO access to certain artwork and asked the court to order AIG immediately to release the property to SICO. AIG filed an answer denying SICO's allegations and setting forth defenses to SICO's claims. In addition, AIG filed counterclaims asserting breach of contract, unjust enrichment, conversion, breach of fiduciary duty, a constructive trust and declaratory judgment, relating to SICO's breach of its commitment to use its AIG shares only for the benefit of AIG and AIG employees. Fact and expert discovery has been substantially concluded and briefing on SICO's motion for summary judgment is underway.

Regulatory Investigations. Regulators from several states have commenced investigations into insurance brokerage practices related to contingent commissions and other industry-wide practices as well as other broker-related conduct, such as alleged bid-rigging. In addition, various federal and state regulatory agencies are reviewing certain transactions and practices of AIG and its subsidiaries in connection with industry-wide and other inquiries. AIG has cooperated,

and will continue to cooperate, in producing documents and other information in response to subpoenas and other requests.

Wells Notices. AIG understands that some of its employees have received Wells notices in connection with previously disclosed SEC investigations of certain of AIG's transactions or accounting practices. Under SEC procedures, a Wells notice is an indication that the SEC staff has made a preliminary decision to recommend enforcement action that provides recipients with an opportunity to respond to the SEC staff before a formal recommendation is finalized. It is possible that additional current and former employees could receive similar notices in the future as the regulatory investigations proceed.

Effect on AIG

In the opinion of AIG management, AIG's ultimate liability for the unresolved litigation and investigation matters referred to above is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

(b) Commitments**Flight Equipment**

At March 31, 2007, ILFC had committed to purchase 224 new aircraft deliverable from 2007 through 2015 at an estimated aggregate purchase price of \$17.2 billion. ILFC will be required to find customers for any aircraft acquired, and it must arrange financing for portions of the purchase price of such equipment.

Other Commitments

On June 27, 2005, AIG entered into an agreement pursuant to which AIG agrees, subject to certain conditions, to make any payment that is not promptly paid with respect to the benefits accrued by certain employees of AIG and its subsidiaries under the SICO Plans (as discussed in Note 4 herein).

(c) Contingencies**Loss Reserves**

Although AIG regularly reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, directors and officers liability (D&O), professional liability, medical malpractice, workers compensation, general liability, products liability and related classes, as well as for asbestos

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss cost trends or loss development factors could be attributable to changes in inflation, in labor and material costs or in the judicial environment, or in other social or economic phenomena affecting claims.

Synthetic Fuel Tax Credits. AIG generates income tax credits as a result of investing in synthetic fuel production. Tax credits generated from the production and sale of synthetic fuel under the Internal Revenue Code are subject to an annual phase-out provision that is based on the average well-head price of domestic crude oil. The price range within which the tax credits are phased-out was originally established in 1980 and is adjusted annually for inflation. Depending on the price of domestic crude oil for a particular year, all or a portion of the tax credits generated in that year might be eliminated. AIG evaluates the production levels of its synthetic fuel production facilities in light of the risk of phase-out of the associated tax credits. As a result of fluctuating

domestic crude oil prices, AIG evaluates and adjusts production levels when appropriate in light of this risk. Regardless of oil prices, the tax credits expire after 2007.

(d) Guarantees

AIG and certain of its subsidiaries become parties to derivative financial instruments with market risk resulting from both dealer and end-user activities and to reduce currency, interest rate, equity and commodity exposures. These instruments are carried at their estimated fair values in the consolidated balance sheet. The vast majority of AIG's derivative activity is transacted by AIG Financial Products Corp. and AIG Trading Group Inc. and their respective subsidiaries (collectively, AIGFP). See Note 19 of AIG's 2006 Annual Report on Form 10-K.

AIG has issued unconditional guarantees with respect to the prompt payment, when due, of all present and future payment obligations and liabilities of AIGFP arising from transactions entered into by AIGFP.

SAI Deferred Compensation Holdings, Inc., a wholly owned subsidiary of AIG, has established a deferred compensation plan for registered representatives of certain AIG subsidiaries, pursuant to which participants have the opportunity to invest deferred commissions and fees on a notional basis. The value of the deferred compensation fluctuates with the value of the deferred investment alternatives chosen. AIG has provided a full and unconditional guarantee of the obligations of SAI Deferred Compensation Holdings, Inc. to pay the deferred compensation under the plan.

7. Employee Benefits

The following table presents the components of the net periodic benefit costs with respect to pensions and other postretirement benefits:

	Pensions			Postretirement		
	Non-U.S. Plans	U.S. Plans	Total	Non-U.S. Plans	U.S. Plans	Total
<i>(in millions)</i>						
Three Months Ended March 31, 2007						
Components of net periodic benefit cost:						
Service cost	\$ 23	\$ 30	\$ 53	\$ 1	\$ 2	\$ 3
Interest cost	12	45	57	1	4	5
Expected return on assets	(9)	(53)	(62)	-	-	-
Amortization of prior service cost	(2)	(1)	(3)	-	-	-
Amortization of net loss	2	9	11	-	-	-
Net periodic benefit cost	\$ 26	\$ 30	\$ 56	\$ 2	\$ 6	\$ 8
Three Months Ended March 31, 2006						
Components of net periodic benefit cost:						
Service cost	\$ 19	\$ 31	\$ 50	\$ 1	\$ 1	\$ 2
Interest cost	9	40	49	1	3	4

Amortization of prior service cost	(2)	(1)	(3)	-	(2)	(2)
Recognized actuarial loss	4	19	23	-	-	-
Net periodic benefit cost	\$ 23	\$ 41	\$ 64	\$ 2	\$ 2	\$ 4

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**8. Recent Accounting Standards***Accounting Changes***SOP 05-1**

On September 19, 2005, the AICPA issued Statement of Position 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts" (SOP 05-1). SOP 05-1 provides guidance on accounting for internal replacements of insurance and investment contracts other than those specifically described in FAS 97, "Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments" (FAS 97). SOP 05-1 defines an internal replacement as a modification in product benefits, features, rights, or coverage that occurs by the exchange of a contract for a new contract, or by amendment, endorsement, or rider to a contract, or by the election of a feature or coverage within a contract. Internal replacements that result in a substantially changed contract are accounted for as a termination.

The provisions of SOP 05-1 became effective as of January 1, 2007. On the date of adoption, AIG recorded a cumulative effect reduction of \$82 million, net of tax, to the opening balance of retained earnings to reflect changes in unamortized DAC, value of business acquired, deferred sales inducement assets, unearned revenue liabilities and future policy benefits for life and accident and health insurance contracts. This adjustment primarily reflects a shorter expected life related to certain group life and health insurance contracts and the effect on the gross profits of investment-oriented products related to previously anticipated future internal replacements. This cumulative effect adjustment affected only the Life Insurance & Retirement Services segment.

FIN 48

On July 13, 2006, the FASB issued FASB Interpretation No. 48, "Accounting for Uncertainty in Income Taxes — an interpretation of FASB Statement No. 109" (FIN 48), which clarifies the accounting for uncertainty in income tax positions. FIN 48 prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of an income tax position taken or expected to be taken in a tax return. FIN 48 also provides guidance on derecognition, classification, interest and penalties, accounting in interim periods, and additional disclosures. AIG adopted the provisions of FIN 48 on January 1, 2007. As a result of the adoption of FIN 48, AIG recognized a \$71 million increase in the liability for unrecognized tax benefits, which was accounted for as a decrease to opening retained earnings as of January 1, 2007.

As of the date of adoption and after recognizing the effect of the increase in the liability noted above, the total amount of AIG's unrecognized tax benefit, excluding interest and penalties, is \$1.138 billion. Included in this balance are \$407 million of tax positions, the disallowance of which would not affect the annual effective income tax rate. Accordingly, the amount of unrecognized tax benefit that, if recognized, would favorably affect the effective tax rate is \$731 million.

Interest and penalties related to unrecognized tax benefits are recognized in income tax expense. At January 1, 2007, AIG had accrued \$176 million for the payment of interest (net of the federal benefit) and penalties. At March 31, 2007, there has been no material change in the amount of unrecognized tax benefits and related interest and penalties.

Interest income related to potential tax benefits emanating from prior restatements has not been recognized because this amount is not currently estimable. In addition, certain tax benefits emanating from compensation deductions have not been recognized because of existing uncertainty with respect to the documentation supporting these tax benefits.

AIG continually evaluates proposed adjustments by taxing authorities. At March 31, 2007, such proposed adjustments would not result in a material change to its consolidated financial condition. However, AIG believes that it is reasonably possible that the balance of the unrecognized tax benefits could decrease by \$0 to \$150 million by the end of 2007 due to settlements or expiration of statutes.

Listed below are the tax years that remain subject to examination by major tax jurisdiction:

Major Tax Jurisdictions	Open Tax Years
United States	1991-2006
Hong Kong	1997-2006
Malaysia	1999-2006
Singapore	1993-2006
Thailand	2001-2006
Taiwan	2000-2006
Japan	2000-2006
United Kingdom	2003-2006
France	2003-2006
Korea	2001-2006

FSP 13-2

On July 13, 2006, the FASB issued FASB Staff Position (FSP) No. 13-2, "Accounting for a Change or Projected Change in the Timing of Cash Flows Relating to Income Taxes Generated by a Leveraged Lease Transaction" (FSP 13-2). FSP 13-2 addresses how a change or projected change in the timing of cash flows relating to income taxes generated

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***8. Recent Accounting Standards** *(continued)*

by a leveraged lease transaction affects the accounting for the lease by the lessor, and directs that the tax assumptions be consistent with any FIN 48 uncertain tax position related to the lease. FSP 13-2 is effective for fiscal years beginning after December 15, 2006. Upon adoption, AIG recorded a \$50 million decrease in the opening balance of retained earnings, net of tax, as of January 1, 2007 to reflect the cumulative effect of this change in accounting. The adoption of this guidance is not expected to have a material effect on the Company's results of operations in 2007.

As a result of the adoptions of SOP 05-1, FIN 48 and FSP 13-2, AIG recorded a total decrease to opening retained earnings of \$203 million.

Future Application of Accounting Standards**FAS 157**

In September 2006, the FASB issued FAS No. 157, "Fair Value Measurements" (FAS 157). FAS 157 defines fair value,

establishes a framework for measuring fair value and expands disclosures about fair value measurements. FAS 157 is effective January 1, 2008. AIG is currently assessing the effect of implementing this guidance.

FAS 159

In February 2007, the FASB issued FAS No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities" (FAS 159). FAS 159 permits entities to choose to measure at fair value many financial instruments and certain other items that are not currently required to be measured at fair value. Subsequent changes in fair value for designated items will be required to be reported in earnings in the current period. FAS 159 also establishes presentation and disclosure requirements for similar types of assets and liabilities measured at fair value. FAS 159 is effective January 1, 2008. AIG is currently assessing the effect of implementing this guidance, which depends on the nature and extent of items elected to be measured at fair value upon initial application of the standard on January 1, 2008.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**9. Information Provided in Connection with Outstanding Debt**

The following condensed consolidating financial statements are provided in compliance with Regulation S-X of the Securities and Exchange Commission.

(a) American General Corporation (AGC) is a holding company and a wholly owned subsidiary of AIG. AIG provides a full and unconditional guarantee of all outstanding debt of AGC.

American General Corporation:

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**10. Derivatives and Hedge Accounting**

Derivatives, as defined in FAS 133, are financial arrangements among two or more parties with returns linked to or “derived” from some underlying equity, debt, commodity or other asset, liability, or foreign exchange rate or other index or the occurrence of a specified payment event. Derivative payments may be based on interest rates, exchange rates, prices of certain securities, commodities, or financial or commodity indices or other variables. Collateral is required on certain transactions based on the creditworthiness of the counterparty.

Unless subject to a scope exclusion, AIG carries all derivatives on the Consolidated Balance Sheet at fair value. The changes in fair value of the derivative transactions of AIGFP are presented as a component of AIG’s operating income. Gains or losses on derivative transactions for AIG other than those of AIGFP, and only the effective portion of those held as cash flow hedges, are presented in realized capital gains (losses). However, in certain instances, when significant inputs into model valuations are not supported by observable market data, income is not recognized at inception under EITF 02-03, and instead income is recognized over the life of the contract when those inputs become sufficiently observable.

AIG also uses derivatives and other instruments as part of its financial risk management programs. AIG applies hedge accounting to certain derivative instruments used to hedge interest rate and foreign exchange risk arising from assets, liabilities, and forecasted transactions. These derivative financial instruments are included in Other assets or Other liabilities for derivative activities of AIG other than those of AIGFP, and in Unrealized gain or loss on swaps, options and forward transactions for those of AIGFP.

AIG designates the derivative as: (i) a hedge of the changes in the fair value of a recognized asset or liability or of an unrecognized firm commitment (“fair value” hedge); (ii) a hedge of a forecasted transaction, or the variability of cash flows to be received or paid related to a recognized asset or liability (“cash flow” hedge); or (iii) a hedge of a net investment in a foreign operation (“net investment” hedge). Fair value and cash flow hedges may involve hedges of foreign currencies exposure (“foreign currency” hedge).

The change in fair value of a derivative that qualifies under the requirements of FAS 133 as a fair value hedge is recorded in current period earnings, along with the gain or loss on the hedged item attributable to the risk being hedged. The effective portion of the change in the fair value

of a derivative that qualifies under the requirements of FAS 133 as a cash flow hedge is recorded in Accumulated other comprehensive income (loss), until earnings are affected by the variability of cash flows in the hedged item. The effective portion of the change in the fair value of a derivative that qualifies under the requirements of FAS 133 as a net investment hedge is recorded in the foreign currency translation adjustments account reported within Accumulated other comprehensive income (loss). Changes in the fair value of the hedging instrument measured as ineffectiveness are reported in current period earnings. AIG had no hedges that were designated as net investment hedges at March 31, 2007.

AIG performs and documents an initial prospective assessment of hedge effectiveness to demonstrate that the hedge is expected to be highly effective in future periods. Subsequently, on a regular basis, AIG performs a prospective hedge effectiveness assessment to demonstrate the continued expectation that the hedge will be highly effective in future periods and a retrospective hedge effectiveness assessment to demonstrate that the hedge was effective in the most recent period. AIG does not utilize the short cut method or equivalent methods for its ongoing assessment of hedge effectiveness.

Upon the discontinuance of hedge accounting, the derivatives are carried on the Consolidated Balance Sheet at fair value, with changes in fair value recognized currently in earnings. The carrying value of the hedged recognized asset or liability under a fair value hedge is no longer adjusted for changes in its fair value due to the hedged risk, and the cumulative adjustment to its carrying value is amortized into income over the remaining life of the hedged item. Provided the hedged forecasted transaction is still probable of occurrence, the changes in fair value of derivatives recorded in Other comprehensive income (loss) related to discontinued cash flow hedges are released into the Consolidated Statement of Income when AIG’s earnings are affected by the variability in cash flows of the hedged item.

Upon the discontinuance of hedge accounting because it is no longer probable that the forecasted transactions will occur by the end of the specified time period or the hedged item no longer meets the definition of a firm commitment, the derivatives continue to be carried on the Consolidated Balance Sheet at fair value, with changes in fair value recognized currently in earnings. Any asset or liability associated with a recognized firm commitment is derecognized from

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***10. Derivatives and Hedge Accounting** *(continued)*

the Consolidated Balance Sheet and recorded currently in earnings. Deferred gains and losses of a derivative recorded in Other comprehensive income (loss) pursuant to the cash flow hedge of a forecasted transaction are recognized immediately in earnings. AIG had no hedges for firm commitments or forecasted transactions at March 31, 2007.

For the first three months of 2007, the preponderance of the derivative transactions that were designated for hedge accounting were at AIGFP. AIGFP designated interest rate swaps as fair value hedges of the benchmark interest rate risk on its interest bearing financial assets and liabilities, and in particular, on its fixed rate available for sale debt securities and fixed rate borrowings. AIGFP also designated its foreign currency forwards as hedging its foreign currency denominated available for sale debt securities for changes in spot foreign exchange rates. AIG designated interest rate swaps and cross currency swaps as either fair value or cash flow hedges of certain of the borrowings of AIG parent.

Fair Value Hedges

AIG designates and accounts for the following as fair value hedges when they have met the requirements of FAS 133: (i) interest rate swaps to hedge issued fixed rate debt against changes in fair value due to changes in the benchmark interest rate; (ii) foreign currency swaps to hedge issued foreign currency debt against changes in fair value due to changes in the benchmark interest rate and/or spot foreign exchange rates; (iii) interest rate swaps to hedge fixed rate investments including available for sale debt securities against changes in fair value due to changes in the benchmark interest rate; and (iv) foreign currency forwards to hedge foreign currency investment securities classified as available for sale against changes in fair value due to changes in the spot foreign exchange rates.

During the three months ended March 31, 2007, AIG recognized a net gain of \$2 million in Other income related to the ineffective portion of its hedging instruments, and a net loss of \$54 million in Other income related to the por-

tion of the hedging instruments related to the passage of time excluded from the assessment of hedge ineffectiveness. The amount recognized in Realized gains and losses for hedge ineffectiveness and the change in the hedging instrument's forward points excluded from the assessment of hedge ineffectiveness during the three months ended March 31, 2007 were each less than \$1 million.

Cash Flow Hedges

AIG designates and accounts for the following as cash flow hedges, when they have met the requirements of FAS 133: (i) interest rate swaps to hedge issued floating rate debt against changes in its cash flows attributable to changes in the benchmark interest rate; (ii) foreign currency swaps to hedge issued foreign currency fixed rate debt against changes in its cash flows attributable to changes in the forward foreign exchange rates; and (iii) foreign currency swaps to hedge issued foreign currency floating rate debt against changes in its cash flows attributable to changes in the benchmark interest rate and spot foreign exchange rates.

The portion of the gain or loss in the fair value of a derivative instrument in a cash flow hedge that represents hedge ineffectiveness is recognized immediately in current period earnings. The amounts recognized during the three months ended March 31, 2007 were less than \$1 million. There were no amounts recognized in 2006. All components of each derivative's gain or loss were included in the assessment of hedge ineffectiveness.

At March 31, 2007, \$2 million of the deferred net gain (loss) on derivative instruments in Accumulated other comprehensive income (loss) is expected to be reclassified to earnings during the 12 months ending March 31, 2008. For the first three months ended March 31, 2007, there were no instances in which AIG reclassified amounts from Other comprehensive income to earnings as a result of a discontinuance of a cash flow hedge because it was probable the original forecasted transaction would not occur at the end of the specified time period.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**11. Cash Flows**

As part of its remediation activities during 2006, AIG determined that certain non-cash activities and adjustments, including the effects of changes in foreign exchange translation on assets and liabilities, previously were misclassified within the operating, investing and financing sections of the Consolidated Statement of Cash flows. The more significant line items revised include the change in General and life insurance reserves and DAC within operating activities; Purchases of fixed maturity securities within investing activities; and Proceeds from notes, bonds, loans and mortgages payable, and hybrid financial instrument liabilities

within financing activities. After evaluating the effect of these items during the third quarter of 2006, AIG revised the previous periods presented in its September 30, 2006 consolidated financial statements included in that quarter's Form 10-Q to conform to the 2006 presentation.

Subsequent to that revision, additional revisions were made, primarily relating to certain elements of realized capital gains and the effect of reclassifying certain policyholders' account balances from Other policyholder funds to Policyholders' contract deposits.

The effect of these revisions on the Consolidated Statement of Cash flows for the three months ended March 31, 2006 is presented below:

<i>(in millions)</i>	Originally Reported March 31, 2006	Revisions Third Quarter 2006	As Revised Third Quarter 2006	Additional Revisions	As Revised
For the three months ended March 31, 2006

Cautionary Statement Regarding Projections and Other Information About Future Events

This Quarterly Report on Form 10-Q and other publicly available documents may include, and AIG's officers and representatives may from time to time make, projections concerning financial information and statements concerning future economic performance and events, plans and objectives relating to management, operations, products and services, and assumptions underlying these projections and statements. These projections and statements are not historical facts but instead represent only AIG's belief regarding future events, many of which, by their nature, are inherently uncertain and outside AIG's control. These projections and statements may address, among other things, the status and potential future outcome of the current regulatory and civil proceedings against AIG and their potential effect on AIG's businesses, financial position, results of operations, cash flows and liquidity, the effect of credit rating changes on AIG's businesses and competitive position, the unwinding and resolving of various relationships between AIG and SICO and AIG's strategy for growth, product development, market position, financial results and reserves. It is possible that AIG's actual results and financial condition may differ, possibly materially, from the anticipated results and financial condition indicated in these projections and statements. Factors that could cause AIG's actual results to differ, possibly materially, from those in the specific projections and statements are discussed throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations and in Item 1A. Risk Factors of AIG's Annual Report on Form 10-K for the year ended December 31, 2006 (2006 Annual Report on Form 10-K). AIG is not under any obligation (and expressly disclaims any such obligations) to update or alter any projection or other statement, whether written or oral, that may be made from time to time, whether as a result of new information, future events or otherwise.

In addition to reviewing AIG's results for the first three months of 2007, this Management's Discussion and Analysis supplements and updates the information and discussion included in the 2006 Annual Report on Form 10-K. Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG presents its operations in the way it believes will be most meaningful. Statutory loss ratios and combined ratios are presented in accordance with accounting principles prescribed by insurance regulatory authorities because these are standard measures of performance filed with insurance regulatory authorities and used for analysis in the insurance industry and thus allow more meaningful comparisons with AIG's insurance competitors. AIG has also incorporated into this discussion cross-references to additional information included in this Quarterly Report on Form 10-Q and in its 2006 Annual Report on Form 10-K to assist readers seeking related information on a particular subject.

Overview of Operations and Business Results

AIG identifies its reportable segments by product or service line, consistent with its management structure. AIG's segments are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management. AIG's operations in 2007 and 2006 were conducted by its subsidiaries through these segments. Through these segments, AIG provides insurance, financial and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. This geographic, product and service diversification is one of AIG's major strengths and sets it apart from its competitors. AIG's Other category consists of items not allocated to AIG's operating segments.

AIG's subsidiaries serve commercial, institutional and individual customers through an extensive property-casualty and life insurance and retirement services network. In the United States, AIG companies are the largest underwriters of commercial and industrial insurance and are among the largest life insurance and retirement services operations as well. AIG's Financial Services businesses include commercial aircraft and equipment leasing, capital markets operations and consumer finance, both in the United States and abroad. AIG also provides asset management services to institutions and individuals. As part of its spread-based business activities, AIG issues various debt instruments in the public and private markets.

Outlook

The commercial property and casualty insurance industry has historically experienced cycles of price erosion followed by

rate strengthening as a result of catastrophes or other significant losses that affect the overall capacity of the industry to provide coverage. Despite industry price erosion in commercial lines, AIG expects to continue to identify profitable opportunities and build attractive new general insurance businesses as a result of AIG's broad product line and extensive distribution networks in the U.S. and abroad. Workers compensation remains under considerable pricing pressure, as statutory rates continue to decline. Rates for excess casualty, D&O and certain other lines of insurance also continue to decline due to competitive pressures. There can be no assurance that price erosion will not become more widespread or that AIG's profitability will not deteriorate from current levels in major commercial lines; however, AIG seeks to mitigate this risk by constantly seeking out profitable opportunities across its diverse product lines and distribution networks.

In Japan, the National Tax Authority in cooperation with the Life Insurance Association of Japan is reviewing the tax treatment for increasing term life insurance, which may affect the amount of premiums that qualify as tax deductions for business owners. As a result of this review, AIG's life insurance companies in Japan suspended the sale of increasing term life insurance and other corporate tax products from early April 2007. This action will have an adverse effect on life insurance sales. AIG companies in Japan have taken several measures aimed at increasing sales of other products in the Japanese market, especially sales of U.S. dollar life insurance products.

In March 2007, the U.S. Treasury Department published proposed new regulations that, if adopted in their current form, would limit the ability of U.S. taxpayers to claim foreign tax credits in certain circumstances under the Internal Revenue Code. Should the proposed regulations be adopted in their current form, they would limit AIG's ability to claim foreign tax credits in connection with certain structured transactions entered into by AIGFP, resulting in a material adverse effect on AIGFP's operating results.

The operating results of AIG's consumer finance operations in the United States may be affected by further deterioration in the credit quality of loans originated to non-prime borrowers, the evolving changes in the regulatory environment and a slower residential housing market.

Consolidated Results

The following table summarizes AIG's consolidated revenues, income before income taxes, minority interest and cumulative effect of an accounting change and net income:

<i>(in millions)</i>	Three Months Ended March 31,		Percentage Increase/ (Decrease)
	2007	2006	
Total revenues	\$30,645	\$27,278	12%
Income before income taxes, minority interest and cumulative effect of an accounting change	6,172	4,793	29
Net income	\$ 4,130	\$ 3,195	29%

Revenues for the first three months of 2007 increased from the same period of 2006 as revenues grew in each of AIG's operating segments.

AIG's income before income taxes, minority interest and cumulative effect of an accounting change increased in the first three months of 2007 compared to the same period of 2006 as growth in the General Insurance, Financial Services and Asset Management segments were partially offset by a decline in the Life Insurance & Retirement Services segment. Financial Services results reflect the reinstatement of hedge accounting in the Capital Markets operation.

During the first quarter of 2007, AIG recorded certain out of period adjustments. These adjustments collectively decreased pre-tax operating income by \$192 million and net income by \$254 million. The adjustments are comprised principally of a \$129 million increase to tax expense related to the remediation of the material weakness in controls over income tax accounting, and \$130 million in pre-tax charges and write-offs related to other remediation activities (\$97 million after tax).

The effective tax rate decreased from 29.9 percent for the first three months of 2006 to 28.0 percent for the first

three months of 2007, primarily due to the recognition of \$175 million of tax benefits associated with the SICO Plans for which the compensation expense had been recognized in prior years.

Results for the first three months of 2006 were negatively affected by the compensation expense relating to the Starr tender offer (\$54 million before and after tax) and an additional allowance for losses in AIG Credit Card Company (Taiwan) (\$88 million before tax and \$57 million after tax). Results in the first three months of 2006 were also negatively affected by certain out of period adjustments of \$61 million (before and after tax) of expenses related to the SICO Plans, \$59 million (\$38 million after tax) of expenses related to deferred advertising costs in General Insurance, a decrease of \$300 million (\$145 million after tax) in revenues related to the remediation of the 2006 material weakness in accounting for certain derivative transactions under FAS 133, and a \$126 million of income tax expense as part of the ongoing remediation of the material weakness in controls over income tax accounting.

Segment Results

The following table summarizes the operations of each principal segment. (See also Note 2 of Notes to Consolidated Financial Statements.)

<i>(in millions)</i>	Three Months Ended March 31,		Percentage Increase/ (Decrease)
	2007	2006	
Revenues ^(a) :			
General Insurance ^(b)	\$12,903	\$11,656	11%
Life Insurance & Retirement Services ^(c)	13,682	12,850	6
Financial Services ^{(d)(e)}	2,201	1,666	32
Asset Management ^(f)	1,908	1,139	68
Other	102	90	13
Consolidation and eliminations	(151)	(123)	-
Consolidated	\$30,645	\$27,278	12%
Operating income (loss) ^{(a)(g)} :			
General Insurance	\$ 3,096	\$ 2,331	33%
Life Insurance & Retirement Services	2,281	2,630	(13)
Financial Services ^(e)	292	(108)	-
Asset Management	994	449	121
Other	(499)	(509)	-
Consolidation and eliminations	8	-	-
Consolidated	\$ 6,172	\$ 4,793	29%

(a) Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133 or for which hedge accounting was not applied, including the related foreign exchange gains and losses. For the first three months of 2007 and 2006, respectively, the effect was \$(452) million and \$(212) million in revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are hedging investments and borrowings.

(b) Represents the sum of General Insurance net premiums earned, net investment income and realized capital gains (losses).

(c) Represents the sum of Life Insurance & Retirement Services premiums and other considerations, net investment income and realized capital gains (losses). Included in realized capital gains (losses) and operating income is the effect of hedging activities that did not qualify for hedge accounting treatment under

FAS 133 which were \$(123) million and \$352 million for the first three months of 2007 and 2006, respectively, and the application of FAS 52, which were \$123 million and \$4 million for the first three months of 2007 and 2006, respectively.

(d) Represents interest, lease and finance charges.

(e) Includes the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133 or for which hedge accounting was not applied, including the related foreign exchange gains and losses. For the three months ended March 31, 2007 and 2006, respectively, the effect was \$(160) million, and \$(619) million in both revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings. In the first quarter of 2007, AIG began applying hedge accounting for certain transactions, primarily in its Capital Markets operations.

(f) Represents net investment income with respect to spread-based products and management and advisory fees.

(g) Represents income before income taxes, minority interest and cumulative effect of an accounting change.

General Insurance

AIG's General Insurance operations provide property and casualty products and services throughout the world. The increase in General Insurance operating income in the first three months of 2007 compared to the same period of 2006 was primarily attributable to improved underwriting results for DBG and higher net investment income.

Life Insurance & Retirement Services

AIG's Life Insurance & Retirement Services operations provide insurance, financial and investment products throughout the world. Foreign operations provided approximately 56 percent and 64 percent of AIG's Life Insurance & Retirement Services operating income for the first three months of 2007 and 2006, respectively. This decline resulted principally from realized capital losses in the first three months of 2007.

Life Insurance & Retirement Services total revenues increased in the first three months of 2007 compared to the same period of 2006, reflecting growth in premiums and net investment income partially offset by decreased realized capital gains (losses). Operating income decreased in the first three months of 2007 compared to the same period of 2006 due to realized capital gains (losses). Realized capital losses included in revenues and operating income were \$256 million in the first three months of 2007 compared to realized capital gains of \$216 million in the same period of 2006. Foreign Life operations' results for 2007 also included an out of period charge of \$50 million related to balance sheet reconciliation remediation, a \$37 million charge for additional claim expense resulting from a continuing industry-wide regulatory review of claims in Japan and a \$10 million charge related to the adoption of SOP 05-1. Domestic Life Insurance operating income declined from the prior year primarily due to a \$22 million charge related to the adoption of SOP 05-1 along with lower realized capital gains. Domestic Retirement Services operating results increased in the first three months of 2007 compared to the same period of 2006 due to higher premiums and other considerations along with lower realized capital losses.

Financial Services

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance.

Financial Services operating income increased in the first three months of 2007 compared to the same period of 2006

primarily due to differences in the accounting treatment for hedging activities. In the first three months of 2007, AIGFP applied hedge accounting to certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. As a result, AIGFP was able to recognize in earnings the change in the fair value on the hedged items attributable to the hedged risks offsetting the gains and losses on the derivatives designated as hedges. In 2006, AIGFP did not apply hedge accounting under FAS 133 to any of its derivatives or related assets and liabilities.

In the first three months of 2007, the domestic consumer finance operations recorded a pre-tax charge of \$128 million in connection with its mortgage banking activities.

Asset Management

AIG's Asset Management operations include institutional and retail asset management, broker-dealer services and institutional spread-based investment businesses. The Matched Investment Program (MIP) has replaced the GIC program as AIG's principal institutional spread-based investment activity.

Asset Management operating income increased in the first three months of 2007 compared to the same period of 2006 due primarily to growth in the Spread-Based Investment and Institutional Asset Management businesses. Other revenues and operating income for Asset Management also increased from a year ago due to higher income from partnerships. Gains and losses arising from the consolidation of certain partnerships, private equity investments and real estate funds are included in operating income, but are offset in minority interest expense, which is not a component of operating income.

Capital Resources

In March 2007, AIG issued \$3.7 billion of junior subordinated debentures in three series of securities. The proceeds from the sales are being used to repurchase shares of AIG's common stock.

At March 31, 2007, AIG had total consolidated shareholders' equity of \$103.1 billion and total consolidated borrowings of \$157.2 billion. At that date, \$140.3 billion of such borrowings were not guaranteed by AIG, were matched borrowings by AIG Parent or AIGFP, or represented junior subordinated debt or liabilities connected to trust preferred stock.

In February 2007, AIG's Board of Directors increased its share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. Share repurchases during 2007 are described under Capital Resources and Liquidity — Share Repurchases and in Item 2. of Part II of this Quarterly Report on Form 10-Q.

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At March 31, 2007, AIG's consolidated invested assets, primarily held by its subsidiaries, included \$27.6 billion in cash and short-term investments. Consolidated net cash provided from operating activities in the first three months of 2007 amounted to \$8.6 billion. Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements, including the funding of increased dividends under AIG's new dividend policy and repurchases of common stock.

Critical Accounting Estimates

AIG considers its most critical accounting estimates to be those relating to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts, recoverability of DAC, estimated gross profits for investment-oriented products, fair value determinations for certain Capital Markets assets and liabilities, other-than-temporary declines in the value of investments and flight equipment recoverability. These accounting estimates require the use of assumptions about matters, some of which are highly uncertain at the time of estimation. To the extent actual experience differs from the assumptions used, AIG's results of operations would be directly affected.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG's critical accounting estimates are discussed in detail. The major categories for which assumptions are developed and used to establish each critical accounting estimate are highlighted below.

Reserves for Losses and Loss Expenses (General Insurance):

- *Loss trend factors:* used to establish expected loss ratios for subsequent accident years based on premium rate adequacy and the projected loss ratio with respect to prior accident years.
- *Expected loss ratios for the latest accident year:* in this case, accident year 2006 for the year-end 2006 loss reserve analysis. For low-frequency, high-severity classes such as excess casualty, expected loss ratios generally are utilized for at least the three most recent accident years.
- *Loss development factors:* used to project the reported losses for each accident year to an ultimate amount.

- *Reinsurance recoverable on unpaid losses:* the expected recoveries from reinsurers on losses that have not yet been reported and/or settled.

Future Policy Benefits for Life and Accident and Health Contracts (Life Insurance & Retirement Services):

- *Interest rates:* which vary by geographical region, year of issuance and products.
- *Mortality, morbidity and surrender rates:* based upon actual experience by geographical region modified to allow for variation in policy form, risk classification and distribution channel.

Estimated Gross Profits (Life Insurance & Retirement Services):

- *Estimated gross profits:* to be realized over the estimated duration of the contracts (investment-oriented products) affect the carrying value of DAC, unearned revenue liability and associated amortization patterns under FAS 97 and Sales Inducement Assets under Statement of Position 03-1, "Accounting and Reporting by Insurance Enterprises for Certain Nontraditional Long-Duration Contracts and for Separate Accounts" (SOP 03-1). Estimated gross profits include investment income and gains and losses on investments less required interest, actual mortality and other expenses.

Deferred Policy Acquisition Costs (Life Insurance & Retirement Services):

- *Recoverability:* based on current and future expected profitability, which is affected by interest rates, foreign exchange rates, mortality experience, and policy persistency.

Deferred Policy Acquisition Costs (General Insurance):

- *Recoverability and eligibility:* based upon the current terms and profitability of the underlying insurance contracts.

Fair Value Determinations Of Certain Assets And Liabilities (Financial Services):

- *Valuation models:* utilizing factors, such as market liquidity and current interest, foreign exchange and volatility rates.
- *Market price data:* AIG attempts to secure reliable and independent current market price data, such as published exchange rates from external subscription services such as Bloomberg or Reuters or third-party broker quotes for use in its models. When such data is not available, AIG uses an internal methodology, which includes interpolation and extrapolation from verifiable recent prices.

Other-Than-Temporary Declines In The Value Of Investments:

A security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer);
- The occurrence of a discrete credit event resulting in the debtor defaulting or seeking bankruptcy or insolvency protection or voluntary reorganization; or
- The probability of non-realization of a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

At each balance sheet date, AIG evaluates its securities holdings in an unrealized loss position. Where AIG does not intend to hold such securities until they have fully recovered their carrying value, based on the circumstances present at the date of evaluation, AIG records the unrealized loss in income. If events or circumstances change, such as unexpected changes in the creditworthiness of the obligor, unanticipated changes in interest rates, tax laws, statutory capital positions and unforeseen liquidity events, among others, AIG revisits its intent. Further, if a loss is recognized from a sale subsequent to a balance sheet date pursuant to these unexpected changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer existed.

In periods subsequent to the recognition of an other-than-temporary impairment loss for debt securities, AIG amortizes the discount or reduced premium over the remaining life of the security in a prospective manner based on the amount and timing of estimated future cash flows.

Flight Equipment — Recoverability (Financial Services):

- *Expected undiscounted future net cash flows:* based upon current lease rates, projected future lease rates and estimated terminal values of each aircraft based on third party information.

Operating Review

General Insurance Operations

AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of property and casualty insurance and various personal lines both domestically and abroad.

Domestic General Insurance operations are comprised of DBG, Reinsurance, Personal Lines and Mortgage Guaranty businesses.

DBG writes substantially all classes of business insurance, accepting such business mainly from insurance brokers. This provides DBG the opportunity to select specialized markets and retain underwriting control. Any licensed broker is able to submit business to DBG without the traditional agent-company contractual relationship, but such broker usually has no authority to commit DBG to accept a risk.

Transatlantic subsidiaries offer reinsurance capacity on both a treaty and facultative basis both in the U.S. and abroad. Transatlantic structures programs for a full range of property and casualty products with an emphasis on specialty risk.

AIG's Personal Lines operations provide automobile insurance through AIG Direct, a mass marketing operation, the Agency Auto Division and 21st Century, as well as a broad range of coverages for high net-worth individuals through the AIG Private Client Group.

The main business of the UGC subsidiaries is the issuance of residential mortgage guaranty insurance on conventional first lien mortgages for the purchase or refinance of one to four family residences. UGC subsidiaries also write second-lien and private student loan guaranty insurance.

AIG's Foreign General Insurance group accepts risks primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance group also includes business written by AIG's foreign-based insurance subsidiaries.

General Insurance Results

General Insurance operating income is comprised of statutory underwriting results, changes in DAC, net investment income and realized capital gains and losses. Operating income, as well as net premiums written, net premiums earned, net investment income and realized capital gains (losses) and statutory ratios were as follows:

<i>(in millions, except ratios)</i>	Three Months Ended March 31,		Percentage Increase/ (Decrease)
	2007	2006	
Net premiums written:			
Domestic General			
DBG	\$ 6,009	\$ 5,860	3%

Three Months Ended March 31, 2006:							
Statutory underwriting profit (loss)	\$ 484	\$ 30	\$ 40	\$ 70	\$ 333	\$ -	\$ 957
Increase (decrease) in DAC	29	3	5	7	144	-	188
Net investment income	745	102	57	32	182	-	1,118
Realized capital gains (losses)	47	6	(1)	-	14	2	68
Operating income (loss)	\$ 1,305	\$ 141	\$101	\$109	\$ 673	\$ 2	\$ 2,331

AIG transacts business in most major foreign currencies. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of General Insurance net premiums written:

	Three Months Ended March 31,	
	2007	2006
Growth in original currency*	6.2%	6.0%
Foreign exchange effect	1.4	(1.7)
Growth as reported in U.S. dollars	7.6%	4.3%

* Computed using a constant exchange rate throughout each period.

General Insurance operating income increased in the first three months of 2007 compared to the same period of 2006 due to growth in net premiums, a reduction in incurred losses and growth in net investment income. The combined ratio improved to 87.5, a reduction of 1.7 points from 2006, including an improvement in the loss ratio of 2.5 points. Prior year development reduced incurred losses by \$131 million in the first three months of 2007, compared to an increase of \$35 million in the first three months of 2006, representing 1.5 points of the overall reduction. The loss ratio for accident year 2007 recorded in the first quarter of 2007 was 1.0 point lower than the loss ratio recorded in the first quarter of 2006 for accident year 2006, despite an increase in Mortgage Guaranty losses in the 2007 period. The downward cycle in the U.S. housing market is not expected to improve until residential inventories return to a more normal level, and AIG expects that this downward cycle will continue to adversely affect UGC's loss ratios for the foreseeable future. Domestic General net premiums written increased as submission activity increased due to the strength of AIG's capacity, commitment during challenging market conditions and diverse product offerings. Foreign General also contributed to the increase in net premiums written, reflecting growth from both established and new distribution channels.

General Insurance net investment income increased in the first three months of 2007 to \$1.6 billion. Interest and dividend income increased \$195 million for the first three

months of 2007 compared to the same period of 2006 as fixed maturities and equity securities increased by \$13.9 billion and the yield remained consistent at 4.6 percent. Income from partnership investments increased \$182 million for the first three months of 2007 compared to the year ago period, primarily due to improved returns on underlying investments and higher levels of invested assets, which increased by \$900 million. See also Capital Resources and Liquidity — Liquidity and Invested Assets herein.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers have managed their businesses, for the three months ended March 31, 2007, the foreign aviation business, which was historically reported in DBG, is now being reported as part of Foreign General and the oil rig and marine businesses, which were historically reported in Foreign General, are now being reported as part of DBG. Prior period amounts have been revised to conform to the current presentation.

DBG Results

DBG's operating income increased in the first three months of 2007 compared to the first three months of 2006. The improvement is also reflected in the combined ratio, which declined 4.6 points in the first three months of 2007 compared to the first three months of 2006 primarily due to an improvement in the loss ratio of 5.3 points. The loss ratio for accident year 2007 recorded in the first quarter of 2007 was

2.5 points lower than the loss ratio recorded in the first quarter of 2006 for accident year 2006. Prior year development reduced incurred losses by \$87 million in the first three months of 2007 compared to an increase of \$74 million in the first three months of 2006, accounting for 2.7 points of the improvement.

DBG's net premiums written increased 3 percent in the first three months of 2007 compared to the same period of 2006 due to the strength of AIG's capacity, commitment during challenging market conditions, diverse product offerings and the acquisition of TravelGuard, which markets accident and health products. Ceded premiums as a percentage of gross written premiums increased to 24 percent in the first three months of 2007 compared to 22 percent in the first three months of 2006, primarily due to additional reinsurance for property risks to manage catastrophe exposures.

DBG's expense ratio increased to 19.2 in the first three months of 2007 compared to 18.5 in the same period of 2006, primarily due to changes in the mix of business towards products with lower loss ratios and higher expense ratios.

DBG's net investment income increased in the first three months of 2007 compared to the same period of 2006, as interest income increased \$120 million on growth in the bond portfolio resulting from investment of operating cash flows and capital contributions. Income from partnership investments increased \$155 million in the first three months of 2007 compared to the same period of 2006, primarily due to improved returns on the underlying investments.

Transatlantic Results

Transatlantic's net premiums written and net premiums earned increased in the first three months of 2007 compared to the same period of 2006 due primarily to increased writings in domestic operations. Underwriting results were adversely affected by European windstorm losses, only partially offset by lower adverse development for the first three months of 2007 compared to the same period in 2006, resulting in an overall decline in statutory underwriting profit for the 2007 period. Operating income, however, increased in the first three months of 2007 compared to the same period of 2006 as increased net investment income and realized capital gains more than offset the decline in underwriting results.

Personal Lines Results

The modest increase in Personal Lines operating income in the first three months of 2007 compared to the same period of 2006 reflects a reduction in the loss ratio of 1.6 points. Favorable development of prior accident years reduced incurred losses by \$29 million in the first three months of 2007 compared to a decrease of \$19 million in the same period of 2006, accounting for 0.9 points of the decrease in the loss

ratio. The loss ratio for the first three months of 2007 also improved 0.7 points compared to the same period in 2006, primarily due to favorable loss trends and growth in the Private Client Group, partially offset by increased losses in 21st Century. The improvement in the loss ratio was partially offset by an increase in the expense ratio of 1.4 points, primarily due to increased acquisition expenses by 21st Century along with growth in the Private Client Group, investments in human resources and technology, and lower average premiums.

The increase in net premiums written was driven by continued growth in the Private Client Group. 21st Century and AIG Direct net premiums written grew modestly at 3.6 percent and 2.4 percent, respectively, while Agency Auto declined 8.4 percent.

Mortgage Guaranty Results

The significant decline in Mortgage Guaranty operating income in the first quarter of 2007 compared to the same period in 2006 was due primarily to unfavorable loss experience in both the domestic first and second-lien businesses as a result of the continued softening in the U.S. housing market. Losses on UGC's subprime business were not significant. However the third-party originated second-lien product continued to perform poorly, resulting in \$61 million of losses incurred in the first quarter of 2007. UGC's consolidated loss ratio for the quarter was 92.2 compared to a loss ratio of 30.4 for the same period in 2006. Prior year development increased incurred losses by \$31 million in the first three months of 2007 compared to a reduction of \$12 million in the first three months of 2006, accounting for 22 points of the increase in the loss ratio. The downward cycle in the U.S. housing market is not expected to improve until residential inventories return to a more normal level, and AIG expects that this downward cycle will continue to adversely affect UGC's operating results for the foreseeable future.

Net premiums written increased 35 percent in the first quarter of 2007 compared to the first quarter of 2006 as growth in the European markets resulted in a 189 percent increase in international premiums. In addition, second-lien premiums increased 49 percent due to higher renewal premiums on the domestic second-lien business. Although UGC discontinued accepting new business for the poorly performing third-party originated second-lien product in the fourth quarter of 2006, UGC will continue to receive renewal premiums on the existing portfolio for the life of the loans, estimated to be three to five years. The expense ratio of 21.7 in the first quarter of 2007 declined from 22.7 in the year ago quarter as premium growth offset expenses related to UGC's international expansion and additional operational resources in the second-lien and private education loan businesses.

Foreign General Insurance Results

Foreign General's operating income increased in the first three months of 2007 compared to the same period of 2006 due to increases in net investment income and statutory underwriting profit and the effect of changes in the exchange rates of the Euro and Sterling.

Net premiums written increased 17 percent (13 percent in original currency) in the first three months of 2007 compared to the same period of 2006, reflecting growth in commercial and consumer lines driven by new business from both established and new distribution channels, including a wholly owned insurance company in Vietnam and Central Insurance Co., Ltd. in Taiwan, and by greater retention of commercial lines accounts on renewal. Consumer lines in Latin America and commercial lines in Europe, the Far East and the U.K., also contributed to the increase. Net premiums written by the Lloyd's syndicate Ascot were essentially unchanged from the same period in 2006 as increased premiums due to rate increases were offset by decreased premiums due to loss of market share and higher reinsurance costs.

The loss ratio in the first three months of 2007 was essentially flat compared to the first quarter of 2006. Favorable loss development from prior accident years was relatively consistent in both periods. The 2007 loss ratio was negatively affected by an increase in personal accident losses in the Far East and an increase in severe but non-catastrophic losses, which were more than offset by reduced adverse development relating to the 2005 hurricanes.

The expense ratio was unchanged in the first three months of 2007 compared to the same period of 2006. The 2006 expense ratio reflected an out of period adjustment for amortization of deferred advertising costs which increased the first quarter 2006 expense ratio by 1.7 points. The comparable increase in the expense ratio in 2007 resulted from growth in certain commercial lines, which have higher acquisition expenses but historically lower loss ratios. AIG expects the expense ratio to increase during the remainder of 2007 as the consumer lines of business, which have higher acquisition costs, increase in significance as a component of net premiums written.

Net investment income increased in the first three months of 2007 compared to the same period of 2006 due to higher interest and dividend income of \$56 million as a result of increased cash flows, higher interest rates and the compounding of previously earned and reinvested interest income. Net investment income also reflects increased equity mutual fund income of \$52 million related to certain interests in unit investment trusts that AIG began recognizing in the

second quarter of 2006, as well as increased equity partnership income.

Reserve for Losses and Loss Expenses

The following table presents the components of the General Insurance gross reserve for losses and loss expenses (loss reserves) as of March 31, 2007 and December 31, 2006 by major line of business on a statutory Annual Statement basis^(a):

<i>(in millions)</i>	March 31, 2007	December 31, 2006 ^(b)
Other liability occurrence	\$ 19,763	\$19,327
Workers compensation	14,265	13,612
Other liability claims made	13,180	12,513
Auto liability	6,144	6,070
International	6,049	6,006
Property	4,766	5,499
Reinsurance	3,108	2,979
Medical malpractice	2,332	2,347
Products liability	2,181	2,239
Accident and health	1,817	1,693
Commercial multiple peril	1,744	1,651
Aircraft	1,688	1,629
Fidelity/surety	1,234	1,148
Other	2,864	3,286
Total	\$ 81,135	\$79,999

^(a)Presented by lines of business pursuant to statutory reporting requirements as prescribed by the National Association of Insurance Commissioners.

^(b)Allocations among various lines were revised from the previous presentation.

AIG's gross reserve for losses and loss expenses represents the accumulation of estimates of ultimate losses, including IBNR and loss expenses. The methods used to determine loss reserve estimates and to establish the resulting reserves are continually reviewed and updated by management. Any adjustments resulting therefrom are reflected in operating income currently. Because loss reserve estimates are subject to the outcome of future events, changes in estimates are unavoidable given that loss trends vary and time is often required for changes in trends to be recognized and confirmed. Reserve changes that increase previous estimates of ultimate cost are referred to as unfavorable or adverse development or reserve strengthening. Reserve changes that decrease previous estimates of ultimate cost are referred to as favorable development.

At March 31, 2007, General Insurance net loss reserves increased \$1.40 billion from the prior year-end to \$64.03 billion. The net loss reserves represent loss reserves reduced by reinsurance recoverables, net of an allowance for unrecoverable reinsurance and applicable discount for future investment income.

The following table classifies the components of the General Insurance net loss reserves by business unit:

<i>(in millions)</i>	March 31, 2007	December 31, 2006
DBG ^(a)	\$45,014	\$44,119
Transatlantic	6,407	6,207
Personal Lines ^(b)	2,373	2,440
Mortgage Guaranty	544	460
Foreign General ^(c)	9,696	9,404
Total Net Loss Reserve	\$64,034	\$62,630

(a) At March 31, 2007 and December 31, 2006, respectively, DBG loss reserves include approximately \$3.30 billion and \$3.33 billion (\$3.60 billion and \$3.66 billion, respectively, before discount), related to business written by DBG but ceded to American International Reinsurance Company Limited (AIRCO) and reported in AIRCO's statutory filings. DBG loss reserves also include approximately \$574 million and \$535 million related to business included in American International Underwriters Overseas, Ltd.'s (AIUO) statutory filings at March 31, 2007 and December 31, 2006, respectively.

(b) At March 31, 2007 and December 31, 2006, respectively, Personal Lines loss reserves include \$844 million and \$861 million related to business ceded to DBG and reported in DBG's statutory filings.

(c) At March 31, 2007 and December 31, 2006, respectively, Foreign General loss reserves include approximately \$2.80 billion and \$2.75 billion related to business reported in DBG's statutory filings.

The DBG net loss reserve of \$45.0 billion is comprised principally of the business of AIG subsidiaries participating in the American Home Assurance Company (American Home)/National Union Fire Insurance Company of Pittsburgh, Pa. (National Union) pool (11 companies) and the surplus lines pool (Lexington, Starr Excess Liability Insurance Company and Landmark Insurance Company).

DBG cedes a quota share percentage of its other liability occurrence and products liability occurrence business to AIRCO. The quota share percentage ceded was 15 percent for the first quarter 2007 and 20 percent for the year 2006 and covered all business written in these years for these lines by participants in the American Home/National Union pool. AIRCO's loss reserves relating to these quota share cessions from DBG are recorded on a discounted basis. As of March 31, 2007, AIRCO carried a discount of approximately \$300 million applicable to the \$3.60 billion in undiscounted reserves it assumed from the American Home/National Union pool via this quota share cession. AIRCO also carries approximately \$488 million in net loss reserves relating to Foreign General insurance business. These reserves are carried on an undiscounted basis.

The companies participating in the American Home/National Union pool have maintained a participation in the business written by AIU for decades. As of March 31, 2007, these AIU reserves carried by participants in the American Home/National Union pool totaled approximately \$2.80 billion. The remaining Foreign General reserves are carried by AIUO, AIRCO, and other smaller AIG subsidiaries domiciled outside the United States. Statutory filings in the U.S. by AIG companies reflect all the business written by U.S. domiciled

entities only, and therefore exclude business written by AIUO, AIRCO, and all other internationally domiciled subsidiaries. The total reserves carried at March 31, 2007 by AIUO and AIRCO were approximately \$4.70 billion and \$3.79 billion, respectively. AIRCO's \$3.79 billion in total general insurance reserves consist of approximately \$3.30 billion from business assumed from the American Home/National Union pool and an additional \$488 million relating to Foreign General Insurance business.

Discounting of Reserves

At March 31, 2007, AIG's overall General Insurance net loss reserves reflects a loss reserve discount of \$2.26 billion, including tabular and non-tabular calculations. The tabular workers compensation discount is calculated using a 3.5 percent interest rate and the 1979-81 Decennial Mortality Table. The non-tabular workers compensation discount is calculated separately for companies domiciled in New York and Pennsylvania, and follows the statutory regulations for each state. For New York companies, the discount is based on a five percent interest rate and the companies' own payout patterns. For Pennsylvania companies, the statute has specified discount factors for accident years 2001 and prior, which are based on a six percent interest rate and an industry payout pattern. For accident years 2002 and subsequent, the discount is based on the yield of U.S. Treasury securities ranging from one to twenty years and the company's own payout pattern, with the future expected payment for each year using the interest rate associated with the corresponding Treasury security yield for that time period. The discount is comprised of the following: \$662 million – tabular discount for workers compensation in DBG; \$1.30 billion – non-tabular discount for workers compensation in DBG; and, \$300 million – non-tabular discount for other liability occurrence and products liability occurrence in AIRCO. The total undiscounted workers compensation loss reserve carried by DBG is approximately \$11.8 billion as of March 31, 2007. The other liability occurrence and products liability occurrence business in AIRCO that is assumed from DBG is discounted based on the yield of U.S. Treasury securities ranging from one to twenty years and the DBG payout pattern for this business. The undiscounted reserves assumed by AIRCO from DBG totaled approximately \$3.60 billion at March 31, 2007.

Quarterly Reserving Process

Management believes that the General Insurance net loss reserves are adequate to cover General Insurance net losses and loss expenses as of March 31, 2007. While AIG regularly reviews the adequacy of established loss reserves, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's loss reserves as of March 31, 2007. In the opinion of management, such adverse development and resulting increase in reserves is not likely to have a material adverse effect on AIG's consolidated

financial condition, although it could have a material adverse effect on AIG's consolidated results of operations for an individual reporting period.

The following table presents the reconciliation of net loss reserves:

<i>(in millions)</i>	Three Months Ended March 31,	
	2007	2006
Net reserve for losses and loss expenses at beginning of year	\$62,630	\$57,476
Foreign exchange effect	(38)	117
Losses and loss expenses incurred:		
Current year	7,215	6,841
Prior years, other than accretion of discount	(131)	35
Prior years, accretion of discount	116	101
Losses and loss expenses incurred	7,200	6,977
Losses and loss expenses paid	5,758	5,678
Net reserve for losses and loss expenses at end of period	\$64,034	\$58,892

The following tables summarize development, (favorable) or unfavorable, of incurred losses and loss expenses for prior years (other than accretion of discount):

<i>(in millions)</i>	Three Months Ended March 31,	
	2007	2006
Prior Accident Year Development by Reporting Unit:		
DBG	\$ (87)	\$ 74

2005	(31)	\$ (74)
2004	(47)	(124)
2003	(9)	(87)
2002	18	66
2001 & prior	116	254
Prior years, other than accretion of discount	\$ (131)	\$ 35

In determining the quarterly loss development from prior accident years, AIG conducts analyses to determine the change in estimated ultimate loss for each accident year for each profit center. For example, if loss emergence for a profit center is different than expected for certain accident years, the actuaries examine the indicated effect such emergence would have on the reserves of that profit center. In some cases, the higher or lower than expected emergence may result in no clear change in the ultimate loss estimate for the accident years in question, and no adjustment would be made to the profit center's reserves for prior accident years. In other

cases, the higher or lower than expected emergence may result in a larger change, either favorable or unfavorable, than the difference between the actual and expected loss emergence. Such additional analyses were conducted for each profit center, as appropriate, in the first quarter of 2007 to determine the loss development from prior accident years for the first quarter of 2007. As part of its quarterly reserving process, AIG also considers notices of claims received with respect to emerging issues, such as those related to stock option backdating.

In the first three months of 2007, net loss development from prior accident years was favorable by approximately \$131 million, including approximately \$36 million of adverse development pertaining to the major hurricanes in 2004 and 2005; and \$18 million of adverse development from the general reinsurance operations of Transatlantic; and excluding approximately \$116 million from accretion of loss reserve discount. Excluding catastrophes and Transatlantic, as well as accretion of discount, net loss development in the first three months of 2007 from prior accident years was favorable by approximately \$185 million. The overall favorable development of \$131 million consisted of approximately \$265 million of favorable development from accident years 2003 through 2006, partially offset by approximately \$134 million of adverse development from accident years 2002 and prior. For the first three months of 2007, most classes of AIG's business continued to experience favorable development for accident years 2003 through 2006. The adverse development from accident years 2002 and prior reflected development from excess casualty within DBG and from Transatlantic. This adverse development from accident years 2002 and prior in the first three months of 2007 pertaining to excess casualty and to Transatlantic was significantly lower than the amounts of adverse development from these accident years observed during the first three months of 2006.

In the first three months of 2006, net adverse loss development from prior accident years was approximately \$35 million, including approximately \$98 million pertaining to catastrophes in 2004 and 2005 and \$35 million from the general reinsurance operations of Transatlantic, but excluding approximately \$101 million pertaining to accretion of loss reserve discount applicable to accident years 2005 and prior. Excluding catastrophes and Transatlantic, as well as accretion of discount, net loss development from prior accident years in the first three months of 2006 was favorable by approximately \$98 million. The overall adverse development of \$35 million consisted of approximately \$285 million of favorable development from accident years 2003 through 2005, offset by approximately \$320 million of adverse development from accident years 2002 and prior. Most classes of business throughout AIG experienced favorable development from accident years 2003 through 2005, other than the adverse development of \$98 million pertaining to the 2004 and

2005 hurricanes. The adverse development from accident years 2002 and prior was primarily attributable to excess casualty business within DBG, and to Transatlantic, with a much smaller amount attributable to excess workers compensation business within DBG.

Asbestos and Environmental Reserves

The estimation of loss reserves relating to asbestos and environmental claims on insurance policies written many years ago is subject to greater uncertainty than other types of claims due to inconsistent court decisions as well as judicial interpretations and legislative actions that in some cases have tended to broaden coverage beyond the original intent of

such policies and in others have expanded theories of liability.

As described more fully in the 2006 Annual Report on Form 10-K, AIG's reserves relating to asbestos and environmental claims reflect a comprehensive ground up analysis. In the first three months of 2007, AIG maintained the ultimate loss estimates for asbestos and environmental claims resulting from the recently completed reserve analyses. A minor amount of favorable incurred loss development pertaining to asbestos was reflected in the first three months of 2007, as depicted in the table that follows. This minor development is primarily attributable to one large settlement.

A summary of reserve activity, including estimates for applicable IBNR, relating to asbestos and environmental claims separately and combined:

	Three Months Ended March 31,			
	2007		2006	
(in millions)	Gross	Net	Gross	Net
Asbestos:				
Reserve for losses and loss expenses at beginning of year	\$4,464	\$1,889	\$4,441	\$1,840
Losses and loss expenses incurred*	(11)	(17)	5	2
Losses and loss expenses paid*	(199)	(128)	(149)	(54)
Reserve for losses and loss expenses at end of period	\$4,254	\$1,744	\$4,297	\$1,788
Environmental:				
Reserve for losses and loss expenses at beginning of year	\$ 588	\$ 290	\$ 926	\$ 410
Losses and loss expenses incurred*	-	-	-	-
Losses and loss expenses paid*	(15)	(9)	(21)	(9)
Reserve for losses and loss expenses at end of period	\$ 573	\$ 281	\$ 905	\$ 401
Combined:				
Reserve for losses and loss expenses at beginning of year	\$5,052	\$2,179	\$5,367	\$2,250
Losses and loss expenses incurred*	(11)	(17)	5	2
Losses and loss expenses paid*	(214)	(137)	(170)	(63)
Reserve for losses and loss expenses at end of period	\$4,827	\$2,025	\$5,202	\$2,189

* All amounts pertain to policies underwritten in prior years, primarily to policies issued in 1984 and prior.

The gross and net IBNR included in the reserve for losses and loss expenses, relating to asbestos and environmental claims separately and combined, were estimated as follows:

	Three Months Ended March 31,			
	2007		2006	
(in millions)	Gross	Net	Gross	Net
Asbestos	\$3,191	\$1,436	\$3,314	\$1,425
Environmental	329	161	572	256
Combined	\$3,520	\$1,597	\$3,886	\$1,681

A summary of asbestos and environmental claims count activity was as follows:

	Three Months Ended March 31,					
	2007			2006		
	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined
Claims at beginning of year	6,878	9,442	16,320	7,293	9,873	17,166
Claims during year:						
Opened	200	411	611	286	388	674
Settled	(32)	(13)	(45)	(37)	(42)	(79)
Dismissed or otherwise resolved	(246)	(389)	(635)	(295)	(296)	(591)
Claims at end of period	6,800	9,451	16,251	7,247	9,923	17,170

Survival Ratios — Asbestos and Environmental

The table below presents AIG's survival ratios for asbestos and environmental claims at March 31, 2007 and 2006. The survival ratio is derived by dividing the current carried loss reserve by the average payments for the three most recent calendar years for these claims. Therefore, the survival ratio is a simplistic measure estimating the number of years it would be before the current ending loss reserves for these claims would be paid off using recent year average payments. The March 31, 2007 survival ratio is lower than the ratio at March 31, 2006 because the more recent periods included in the rolling average reflect higher claims payments. In addition, AIG's survival ratio for asbestos claims was negatively affected in the first quarter of 2007 as a result of a large settlement. Many factors, such as aggressive settlement procedures, mix of business and level of coverage provided, have a significant effect on the amount of asbestos and environmental reserves and payments and the resultant survival ratio. Thus, caution should be exercised in attempting to determine reserve adequacy for these claims based simply on this survival ratio.

AIG's survival ratios for asbestos and environmental claims, separately and combined were based upon a three-year average payment. These ratios at March 31, 2007 and 2006 were as follows:

<i>(number of years)</i>	Gross	Net
2007		
Survival ratios:		
Asbestos	10.3	9.9
Environmental	5.5	4.4
Combined	9.4	8.4
2006		
Survival ratios:		
Asbestos	14.7	17.8
Environmental	7.1	6.4
Combined	12.4	13.5

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad.

Domestically, AIG's Life Insurance & Retirement Services operations offer a broad range of protection products, such as life insurance and group life and health products, including disability income products and payout annuities,

which include single premium immediate annuities, structured settlements and terminal funding annuities. Home service operations include an array of life insurance, accident and health and annuity products sold primarily through career agents. In addition, home service includes a small block of runoff property and casualty coverage. Retirement services include group retirement products, individual fixed and variable annuities sold through banks, broker-dealers and exclusive sales representatives, and annuity runoff operations, which include previously acquired "closed blocks" and other fixed and variable annuities largely sold through distribution relationships that have been discontinued.

Overseas, AIG's Life Insurance & Retirement Services operations include insurance and investment-oriented products such as whole and term life, investment linked, universal life and endowments, personal accident and health products, group products including pension, life and health, and fixed and variable annuities.

AIG's Life Insurance & Retirement Services subsidiaries report their operations through the following major internal reporting units and business units:

Foreign Life Insurance & Retirement Services

Percentage Increase/(Decrease) from Prior Year:					
Foreign Life Insurance & Retirement Services	8%	28%	–%	6%	(24)%
Domestic Life Insurance	7	8	–	7	(6)
Domestic Retirement Services	11	(1)	94	8	13
Total	8%	14%	–%	6%	(13)%

The following table presents the Insurance In-force for Life Insurance & Retirement Services:

<i>(in millions)</i>	March 31, 2007	December 31, 2006
Foreign	\$1,158,107	\$ 1,162,699
Domestic	924,440	907,901
Total	\$2,082,547	\$ 2,070,600

Life Insurance & Retirement Services operating results for the first three months of 2007 reflect growth in premium and net investment income offset by realized capital losses. Realized capital losses reduced revenues and operating income by \$256 million in the first three months of 2007 while realized capital gains increased revenues and operating income by \$216 million in the same period of 2006. Realized capital losses in the Foreign Life operations in 2007 included losses related to derivatives that do not qualify for hedge accounting treatment and losses related to the decline in value of securities deemed to be other-than-temporary.

Operating results in the first three months of 2007 includes a charge of \$32 million as a result of the adoption of SOP 05-1 which generally requires DAC related to group contracts to be amortized over a shorter duration than in prior periods, and also requires that DAC be expensed at the time a policy is terminated and cannot be re-capitalized if that policy is reinstated. The effect of SOP 05-1 was most significant to the group products line in the Domestic Life operations and was a significant factor in the decline of operating income for Domestic Life in the first three months of 2007 compared to the same period of 2006.

The growth in Domestic Retirement Services operating income in the first quarter of 2007 compared to the same period last year was driven by higher premiums and other considerations and lower realized capital losses. Although Domestic Retirement Services had realized capital losses of \$144 million in the first three months of 2006 compared to a loss of \$9 million in the same period of 2007, the effect of those losses in 2006 was partially offset by a corresponding reduction of \$26 million in amortization of DAC.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers have managed their businesses, for the three months ended March 31, 2007, revenues and operating income related to foreign investment contacts, which were historically reported as a component of the Spread-Based Investment Business in the Asset Management segment, are now being reported as part of Foreign Life Insurance & Retirement Services. Prior period amounts have been revised to conform to the current presentation.

*Foreign Life Insurance & Retirement Services Results***Foreign Life Insurance & Retirement Services results were as follows:**

<i>(in millions)</i>	Premiums and Other Considerations	Net Investment Income	Realized Capital Gains (Losses)	Total Revenues	Operating Income

AIG transacts business in most major foreign currencies and therefore premiums reported in U.S. dollars vary by volume and from changes in foreign currency translation rates. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of the Foreign Life Insurance & Retirement Services premiums and other considerations:

	Three Months Ended March 31,	
	2007	2006
Growth in original currency*	5.2%	7.1%
Foreign exchange effect	2.9	(4.0)
Growth as reported in U.S. dollars	8.1%	3.1%

* Computed using a constant exchange rate throughout each period.

Japan and Other

Total revenues for the first three months of 2007 increased compared to the same period of 2006, primarily due to higher premium and net investment income partially offset by a decline in realized capital gains. Operating income growth decreased in the first three months of 2007 compared to the first three months of 2006 due to lower realized capital gains. In addition, a \$37 million provision, including \$25 million for personal accident, for additional claim expense was established in Japan as a result of a continuing industry-wide regulatory review of claims. That review is expected to be completed in late 2007.

Life insurance premiums and other considerations increased modestly in the first three months of 2007 compared to the same period of 2006. In Japan, increased fees and policy charges related to interest sensitive universal life and U.S. dollar life insurance products were partially offset by the runoff of the acquired blocks of business in AIG Star Life and AIG Edison Life. In Europe, growth in premiums and other considerations was enhanced by the foreign exchange effect. The growth in net investment income included higher partnership income, equity in unit investment trusts and growth in underlying invested assets. Life insurance operating income declined in the first three months of 2007 compared to the same period last year due to lower realized capital gains and an \$11 million provision for additional claim expense resulting from the continuing industry-wide regulatory review of claims in Japan.

Personal accident premiums and other considerations continue to grow. New business in Japan has been adversely

affected by increased competition and lower sales of tax-related products. Net investment income increased in the first three months of 2007 compared to the same period last year primarily due to higher invested assets and increased partnership income. Operating income growth in the first three months of 2007 was affected by lower realized capital gains, the \$25 million provision for additional claim expenses and \$15 million of higher expenses related to the termination of certain tax-related products in Japan. Loss ratios remained stable for this business which continues to enjoy relatively high margins.

Group products premiums and other considerations reflected growth for the first three months of 2007 compared to the same period last year primarily due to sales of credit and pension business in Europe. Net investment income declined from first quarter 2006 primarily due to the decline in interest rates in Brazil which adversely affected the pension business results. Operating income for the first quarter of 2007 declined from the same period last year primarily due to the decline in net investment income and lower realized capital gains.

Individual fixed annuities' premium and other considerations growth reflects higher surrender charges from U.S. dollar contracts in Japan where a weak yen makes it attractive for certain policyholders to lock in foreign exchange gains in excess of surrender charges. Net investment income increased due to higher average investment yields and higher assets under management. Management implemented a new investment strategy during the quarter to enhance future investment yields which resulted in realized capital losses in the current quarter as a small portion of the existing bond portfolio was sold and reinvested in higher yielding assets. The positive effect on operating income for the realized capital losses was \$13 million, primarily related to lower DAC amortization. Operating income increased for the first three months of 2007 compared to the first three months of 2006 primarily due to growth in reserves and surrender charges.

Individual variable annuity assets under management, particularly in Europe, continued to grow due to new product offerings and stronger equity markets. The fees generated from the growth in assets under management increased premiums and operating income for the first three months of 2007 compared to the same period last year. Net investment income grew in the first three months of 2007 compared to the same period of 2006 due to increased policyholder trad-

ing gains which comprise the entirety of variable annuity net investment income. Policyholder trading gains are offset by an equal increase in policy benefits expense, as all investment returns for these variable annuities accrue to the benefit of the policyholder.

Asia

Total revenues for the first three months of 2007 were up slightly from last year's levels, while the growth in operating income fell compared to the same period of 2006. Net realized capital losses recorded in the current period compared to net realized capital gains recorded in the same period last year greatly influenced the low growth rate in total revenues and caused the decline in operating income. The net realized capital losses recorded in the current period were driven primarily by the mark to market of derivatives that did not qualify for hedge accounting treatment under FAS 133 along with the write-down of U.S. dollar bonds held in Singapore and Thailand where the decline in the value of those bonds when measured in the local currency was determined to be other than temporary. Premiums and other considerations grew in the current period reflecting a continued trend toward investment-oriented products where only a portion of policy charges collected from policyholders are reported as premium. Net investment income grew in the current period in line with the growth in underlying invested assets. Higher income from interests in unit investment trusts and higher policyholder trading gains, which are offset by an equal charge to incurred policy losses and benefits, also contributed to the growth.

Life insurance premiums and other considerations were flat in the first three months of 2007 compared to the same period of 2006, due to the shift in product mix from traditional life insurance products to investment-oriented products as mentioned above. Net investment income grew in the current period compared to the same period of 2006, due primarily to the growth in the underlying invested assets and

in part due to earnings on certain interests in unit investment trusts along with higher policyholder trading gains. Operating income decreased in the first three months of 2007 compared to the same period last year, due mainly to the change in net realized capital gains (losses) which more than offset the growth in other sources of earnings. Operating income for the first three months of 2007 included a \$50 million charge related to balance sheet reconciliation remediation activity. Operating income results for the first three months of 2006 included a \$40 million loss from the Life Insurance & Retirement Services segment's share of the loss of AIG Credit Card Company (Taiwan).

Personal accident reported growth in total revenues and operating income for the first three months of 2007 compared to the same period in 2006. The higher revenues resulted from an increased focus on risk based accident and health products particularly in Korea and Taiwan. Operating earnings reflect the combined effect of premium growth and stable loss ratios that were partially offset by net realized capital losses.

Group products premiums and other considerations grew in the first three months of 2007 compared to the same period of 2006. The increase reflects the new business written in China, where AIG received approval to write group insurance in the second quarter of 2006, improved sales due to promotional activities in Thailand, and new business written in Hong Kong. Operating income declined in the first three months of 2007 compared to the same period of 2006, due in part to the net realized capital losses incurred and higher incurred policy losses and benefits of \$13 million due to a 2007 out of period reserve charge.

Individual fixed annuity premiums declined in the first three months of 2007 compared to the same period of 2006, due primarily to the erosion of market share in Korea as a result of competition from higher yielding bank products.

Domestic Life Insurance Results

Domestic Life Insurance results, presented by sub-product were as follows:

(in millions)	Premiums and Other Considerations ^(a)	Net Investment Income	Realized Capital Gains (Losses)	Total Revenues	Operating Income (Loss)

Individual annuities – runoff ^(b)	(8)	(21)	–	(14)	(36)
Total	7%	8%	–%	7%	(6)%

(a) Premiums and other considerations include structured settlements, single premium immediate annuities and terminal funding annuities.

(b) Primarily represents runoff annuity business sold through discontinued distribution relationships.

The following table reflects periodic Domestic Life insurance sales by product:

Domestic Life Insurance

(in millions)	Three Months Ended March 31,		Percentage Increase/ (Decrease)
	2007	2006	
Periodic premium sales by product*:			
Universal life	\$51	\$136	(62)%
Variable universal life	13	9	44
Term life	55	60	(8)
Whole life/other	2	3	(33)
Total	\$121	\$208	(42)%

* Periodic premium represents premium from new business expected to be collected over a one-year period.

Premiums and other considerations for Domestic Life Insurance in the first three months of 2007 increased compared to the same period of 2006, primarily due to the growth in life insurance business in force. Periodic life insurance sales declined compared to the first three months of 2006 as a result of re-pricing certain universal life products and tightening of underwriting standards during the second half of 2006. In the first quarter of 2007, the Domestic Life Insurance operating unit acquired Matrix Direct, a leading direct marketer of life insurance, which will further expand its already broad distribution network. Premiums and other considerations for the home service segment declined compared to the same period in 2006 as the reduction in premium in force from normal lapses and maturities exceeded sales growth. Premiums and other considerations for group life/health for the first three months of 2007 declined over the same period of 2006, pri-

marily due to exiting the financial institutions credit life business and tightened pricing and underwriting in the group employer lines. Premiums and other considerations growth from payout annuities for the first three months of 2007 reflects increased sales of structured settlements and terminal funding compared to the same period of 2006.

Domestic Life Insurance operating income declined in the first three months of 2007 compared to the same period of 2006, primarily due to a \$22 million charge related to the adoption of SOP 05-1 and an increase in realized capital losses, offset by growth in the underlying business and increases in net investment income.

Life insurance operating income decreased for the first three months of 2007 compared to the first three months of 2006 primarily due to increased realized capital losses and higher policyholder benefits, partially offset by growth in the underlying business and increased partnership income. Home service operating income increased due to lower realized capital losses. Group life/health lines operating income decreased due to a charge of \$16 million resulting from the adoption of SOP 05-1. Payout annuities operating income increased for the first three months of 2007 due to growth in the business, lower realized capital losses and an increase in calls and tenders on fixed maturity securities. Individual fixed annuities operating income increased primarily from lower realized capital losses. Individual annuities – runoff operating income is down from the first three months of 2006 due to the decline in the block of business partially offset by lower realized capital losses.

Domestic Retirement Services Results

Domestic Retirement Services results, presented on a sub-product basis were as follows:

<i>(in millions)</i>	Premiums and Other Considerations	Net Investment Income	Realized Capital Gains (Losses)	Total Revenues	Operating Income
Three months ended March 31, 2007					
Group retirement products	\$ 105	\$ 570	\$ (10)	\$ 665	\$276
Individual fixed annuities	25	914	(11)	928	303
Individual variable annuities	146	42	10	198	52

Individual fixed annuities	(11)	–	89	10	17
Individual variable annuities	14	(19)	–	9	13
Individual annuities – runoff*	14	(6)	–	6	163
Total	11%	(1)%	94%	8%	13%

* Primarily represents runoff annuity business sold through discontinued distribution relationships.

Domestic Retirement Services total deposits decreased for the first three months of 2007 compared to the same period of 2006. The decrease in total deposits primarily reflects lower fixed annuity sales that continued to face increased competition from bank deposit products and money market funds offering very competitive short-term rates in the flat yield curve environment. Individual variable annuity deposits declined slightly in the first three months of 2007 compared to the same period in 2006, due to discontinuing a proprietary product in a major bank. Absent the loss of this product, deposits would have increased 2 percent. Group retirement deposits declined in the first three months of 2007 as a result of higher external mutual fund conversions in the prior year period partially offset by an increase in variable annuity deposits. Over time, AIG expects that mutual fund sales will result in a gradual reduction in overall profit margins of this business driven by the growth in the lower-margin mutual fund products relative to the annuity products. Group retirement surrenders increased as a result of a few large group mutual fund surrenders in the first three months of 2007 compared to the same period last year. Fixed annuity surrender rates increased in the first three months of 2007 compared to the same period in 2006 due to products coming out of their surrender charge period and increased competition from banks. Individual fixed annuity net flows for the first three months of 2007 declined compared to the same period of 2006, reflecting both the lower deposits and higher surrenders, caused by the flat or inverted yield curve.

Total Domestic Retirement Services operating income for the first three months of 2007 increased over the same period of 2006. Group retirement products total revenues

increased in the first three months of 2007 compared to the same period in 2006, primarily due to lower realized capital losses and an increase in fee income, primarily driven by higher variable annuity fees and other advisory fees. The higher revenues, partially offset by higher amortization of DAC related to the increase in surrenders and internal replacements of existing contracts into new contracts and general account spread compression, resulted in an increase in group retirement operating income over the first three months of 2006. Total revenues and operating income for individual fixed annuities were up in the first three months of 2007 compared to the first three months of 2006 primarily driven by lower realized capital losses, partially offset by higher amortization of DAC as a result of lower realized capital losses and increased early duration surrenders. Individual variable annuity total revenues increased in the first three months of 2007 compared to the first three months of 2006, primarily driven by higher variable annuity fees resulting from the increase in the equity markets in 2006 and increases in realized capital gains partially offset by lower investment income. The higher revenues, partially offset by higher amortization of DAC, resulted in the increase in individual variable annuity operating income. Individual annuities – runoff operating income increased in the first three months of 2007 over the same period of 2006 even though the underlying reserves decreased. The higher income was primarily due to lower realized capital losses and increased net spreads as a result of higher investment yields partially offset by lower volumes due to the continued runoff of the business.

Domestic Retirement Services Supplemental Data

The following table presents deposits*:

(in millions)	Three Months Ended March 31,	
	2007	2006
Group retirement products:		
Annuities	\$1,418	\$1,396
Mutual funds	465	545
Individual fixed annuities	1,231	1,541
Individual variable annuities	1,008	1,027
Individual fixed annuities – runoff	14	15
Total	\$4,136	\$4,524

* Excludes internal replacements.

The following table presents Domestic Retirement Services reserves by surrender charge category as of March 31, 2007:

(in millions)	Group Retirement Products*	Individual Fixed Annuities	Individual Variable Annuities
Zero or no surrender charge	\$43,889	\$10,513	\$11,721
0% - 2%	6,323	4,406	5,022
Greater than 2% - 4%	3,732	6,395	4,960
Greater than 4%	3,523	27,579	9,640
Non-Surrenderable	879	3,446	89
Total	\$58,346	\$52,339	\$31,432

* Excludes mutual funds of \$6.9 billion.

Surrender rates increased for individual fixed annuities and group retirement products for the first three months of 2007 compared to the same period of the prior year. The increase in the surrender rate for fixed annuities continues to be driven by the shape of the yield curve and general aging of the in-force block; however, less than 21 percent of the individual fixed annuity reserves as of March 31, 2007 were available to be surrendered without charge. Surrender rates for group retirement products increased as a result of an increase in mutual fund and annuity surrenders. New products have been introduced to retain assets and AIG has retained or attracted over \$293 million in assets in the first three months of 2007. Individual variable annuity surrender rates were higher in the first three months of 2006 reflecting higher shock-lapses that occur following expiration of the surrender charge period on certain 3-year and 7-year contracts.

A further increase in the level of surrenders in any of these businesses or in the individual fixed annuities runoff block could accelerate the amortization of DAC and negatively affect fee income earned on assets under management.

The following table presents the net flows^(a) by line of business:

(in millions)	Three Months Ended March 31,	
	2007	2006
Group retirement products ^(b)	\$ (102)	\$ 441
Individual fixed annuities	(837)	(146)
Individual variable annuities	(103)	(133)
Individual fixed annuities – runoff	(263)	(228)
Total	\$(1,305)	\$ (66)

(a) Net flows are defined as deposits received less benefits, surrenders, withdrawals and death benefits.

(b) Includes mutual funds.

The combination of lower deposits and higher surrenders in the individual fixed annuity and individual fixed annuity – runoff blocks, which include closed blocks of business from acquired companies or terminated distribution relationships, resulted in negative net flows for the first three months of 2007. The continuation of the current interest rate and competitive environment could prolong this trend.

Life Insurance & Retirement Services Net Investment Income and Realized Capital Gains (Losses)

The following table summarizes the components of Net investment income:

(in millions)	Three Months Ended March 31,	
	2007	2006
Foreign Life Insurance & Retirement Services:		
Fixed maturities, including short-term investments	\$2,076	\$1,655
Equity securities	64	71
Interest on mortgage, policy and collateral loans	146	108
Partnership income	48	17
Unit investment trusts	86	–
Other ^(a)	64	69
Total investment income before policyholder trading gains (losses)	2,484	1,920
Policyholder trading gains (losses) ^(b)	475	390
Total investment income	2,959	2,310
Investment expenses	76	55
Net investment income	\$2,883	\$2,255
Domestic Life Insurance:		
Fixed maturities, including short-term investments	\$ 911	\$ 870
Equity securities	(1)	2
Interest on mortgage, policy and collateral loans	100	85
Partnership income – excluding Synfuels	27	10
Partnership income (loss) – Synfuels	(33)	(37)
Unit investment trusts	2	–
Other ^(a)	14	14
Total investment income	1,020	944
Investment expenses	15	11
Net investment income	\$1,005	\$ 933
Domestic Retirement Services:		
Fixed maturities, including short-term investments	\$1,400	\$1,438
Equity securities	3	3
Interest on mortgage, policy and collateral loans	121	104
Partnership income – excluding Synfuels	130	131
Unit investment trusts	–	–
Other ^(a)	(12)	(17)
Total investment income before policyholder trading gains (losses)	1,642	1,659
Investment expenses	17	13
Net investment income	\$1,625	\$1,646
Total:		
Fixed maturities, including short-term investments	\$4,387	\$3,963
Equity securities	66	76
Interest on mortgage, policy and collateral loans	367	297
Partnership income – excluding Synfuels	205	158
Partnership income (loss) – Synfuels	(33)	(37)
Unit investment trusts	88	–
Other ^(a)	66	66

(in millions)	Three Months Ended March 31,	
	2007	2006
Total investment income before policyholder trading gains (losses)	5,146	4,523
Policyholder trading gains (losses) ^(b)	475	390
Total investment income	5,621	4,913
Investment expenses	108	79
Net investment income ^(c)	\$5,513	\$4,834

(a) Other includes real estate income, income on non-partnership invested assets, securities lending and Foreign Life Insurance & Retirement Services' equal share of the results of AIG Credit Card Company (Taiwan).

(b) Relates principally to assets held in various trading securities accounts that do not qualify for separate account treatment under SOP 03-1. These amounts are offset by an equal change included in incurred policy losses and benefits.

(c) Includes call and tender income.

Net investment income increased for the first three months of 2007 compared to the same period of 2006. Fixed maturities income rose as the underlying invested asset base grew. Yield enhancement activity, including partnership income, increased for the first three months of 2007 compared to the same period last year. The first quarter 2007 results included \$88 million in earnings on certain interests in unit investment trusts, of which \$41 million was allocated to policyholder accounts through incurred policy losses and benefits. Policyholder trading gains (losses) increased in the first three months of 2007 compared to the same period last year. These gains have no effect on operating income because there is an equal charge to incurred policy losses and benefits to offset these results. Net investment income for certain operations include investments in structured notes linked to emerging market sovereign debt that incorporates both interest rate risk and currency risk. In addition, period to period comparisons of investment income for some lines of business are affected by yield enhancement activity, particularly partnership income as shown in the above table. See also Insurance and Asset Management Invested Assets herein.

AIG generates income tax credits as a result of investing in synthetic fuel production (synfuels) related to the investment loss shown in the above table and records those benefits in its provision for income taxes. The amounts of those in-

come tax credits were \$51 million and \$40 million for the first three months of 2007 and 2006, respectively. For a further discussion of the effect of fluctuating domestic crude oil prices on synfuel tax credits, see Note 6(c) of Notes to Consolidated Financial Statements.

The following table summarizes Realized capital gains (losses) by major category:

(in millions)	Three Months Ended March 31,	
	2007	2006
Foreign Life Insurance & Retirement Services:		
Sales of fixed maturities	\$ (20)	\$ (21)
Sales of equity securities	32	151
Other:		
Foreign exchange transactions	115	5

* Includes losses of \$71 million and gains of \$67 million allocated to participating policyholders for the first three months of 2007 and 2006, respectively.

Realized capital gains (losses) include normal portfolio transactions as well as derivative gains (losses) for transactions that did not qualify for hedge accounting treatment under FAS 133, foreign exchange gains and losses and other-than-temporary declines in the value of investments. Realized capital losses in the Foreign Life operations in the first three months of 2007 include losses of \$117 million related to derivatives that did not qualify for hedge accounting treatment compared to a gain of \$259 million in the same period of 2006. Derivatives in the Foreign Life operations are primarily used to economically hedge cash flows related to U.S. dollar bonds back to the respective currency of the country, principally in Taiwan, Thailand, and Singapore. The corresponding foreign exchange gain or loss of the economically hedged bond is deferred in Other comprehensive income until sold or deemed to be other than temporary. In the first quarter of 2007, Foreign Life operations incurred losses of \$331 million for the decline in the value of securities deemed to be other than temporarily impaired. A significant portion of those losses was related to the decline in value of U.S. dollar bonds held in Thailand and Singapore reflecting the depreciation of the U.S. dollar against the local currency.

Deferred Policy Acquisition Costs

DAC for Life Insurance & Retirement Services products arises from the deferral of those costs that vary with, and are directly related to, the acquisition of new or renewal business. Policy acquisition costs for life insurance products are generally deferred and amortized over the premium paying period of the policy. Policy acquisition costs that relate to universal life and investment-type products, including variable and fixed annuities (investment-oriented products), are deferred and amortized, with interest, as appropriate, in relation to the historical and future incidence of estimated gross profits to be realized over the estimated lives of the contracts. Total acquisition costs deferred decreased \$69 million in the first three months of 2007 compared to the first three months of 2006 due to lower sales in the Domestic Life business. Total DAC amortization expense, excluding VOBA, increased \$127 million compared to the first three months of 2006 with each period's annualized amortization expense level at approximately 13 percent of the opening DAC balance.

The following table summarizes the major components of the changes in DAC and VOBA:

<i>(in millions)</i>	Three Months Ended March 31,					
	2007			2006		
	DAC	VOBA	Total	DAC	VOBA	Total

* Represents the cumulative effect of the adoption of SOP 05-1.

DAC for insurance-oriented, investment-oriented and retirement services products is reviewed for recoverability, which involves estimating the future profitability of current business. This review involves significant management judgment. If actual future profitability is substantially lower than estimated, AIG's results of operations could be significantly affected in future periods.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance. (See also Note 2 of Notes to Consolidated Financial Statements.)

Financial Services Results

Financial Services results were as follows:

<i>(in millions)</i>	Three Months Ended March 31, 2007	2006	Percentage Increase/ (Decrease)
Revenues:			
Aircraft Leasing ^(a)	\$1,058	\$1,012	5%
Capital Markets ^{(b)(c)}	228	(300)	-
Consumer Finance ^{(d)(e)}	883	925	(5)
Other, including intercompany adjustments	32	29	10
Total	\$2,201	\$1,666	32%
Operating income (loss):			
Aircraft Leasing ^(a)	\$ 164	\$ 176	(7)%
Capital Markets ^{(b)(c)}	68	(470)	-
Consumer Finance ^{(d)(e)}	36	176	(80)
Other, including intercompany adjustments	24	10	140
Total	\$ 292	\$ (108)	-%

(a) Revenues are primarily aircraft lease rentals from ILFC. Both revenues and operating income include the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the first three months of 2007 and 2006, the effect was \$(37) million and \$45 million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings.

(b) Revenues, shown net of interest expense of \$1.1 billion and \$639 million in the first three months of 2007 and 2006, respectively, were primarily from hedged financial positions entered into in connection with counterparty transactions. Both revenues and operating income include the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133 or for which hedge accounting was not applied, including the related foreign exchange gains and losses. For the first three months of 2007 and 2006, the effect was \$(85) million and \$(678) million, respectively.

(c) Certain transactions entered into by AIGFP generate tax credits and benefits which are included in income taxes in the consolidated statement of income. The amounts of such tax credits and benefits for the first three months of 2007 and 2006 were \$17 million and \$18 million, respectively.

(d) Revenues are primarily finance charges. Both revenues and operating income include the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the first three months of 2007 and 2006, the effect was \$(36) million and \$3 million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings.

(e) The three months ended March 31, 2007 includes a pre-tax charge of \$128 million in connection with domestic consumer finance's mortgage banking activities.

Financial Services operating income increased in the first three months of 2007 compared to the same period of 2006 primarily due to differences in the accounting treatment for hedging activities. In the first three months of 2007, AIGFP began applying hedge accounting to certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. As a result of the application of hedge accounting, AIGFP recognized in earnings the change in the fair value on the hedged items attributable to the

hedged risks offsetting the gains and losses on the derivatives designated as hedges. Prior to 2007, hedge accounting under FAS 133 was not being applied to any of the derivatives and related assets and liabilities. Accordingly, revenues and operating income were exposed to volatility resulting from differences in the timing of revenue recognition between the derivatives and the hedged assets and liabilities.

Beginning in the first quarter of 2007, derivative gains and losses and foreign exchange transaction gains and losses for Financial Services entities other than AIGFP, which were previously reported as part of AIG's Other category, are now included in Financial Services revenues and operating income. For the first three months of 2007, the amount included in both Financial Services revenues and operating income was a loss of \$67 million. All prior periods have been revised to conform to the current presentation.

Aircraft Leasing

AIG's Aircraft Leasing operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to foreign and domestic airlines. Revenues also result from the remarketing of commercial jets for ILFC's own account, and remarketing and fleet management services for airlines and financial institutions. ILFC finances its aircraft purchases primarily through the issuance of debt instruments. ILFC economically hedges its floating rate and foreign currency denominated debt using interest rate and foreign currency derivatives. These derivatives are effective economic hedges; however, since hedge accounting under FAS 133 was not applied, the benefits of using derivatives to hedge these exposures are not reflected in ILFC's corporate borrowing rates. The composite borrowing rates at March 31, 2007 and 2006 were 5.19 percent and 4.77 percent, respectively. ILFC has begun to apply hedge accounting in the second quarter of 2007.

ILFC typically contracts to re-lease aircraft before the end of the existing lease term. For aircraft returned before the end of the lease term, ILFC has generally been able to re-lease such aircraft within two to six months of its return. As a lessor, ILFC considers an aircraft "idle" or "off lease" when the aircraft is not subject to a signed lease agreement or signed letter of intent. ILFC had one aircraft off lease at March 31, 2007, and all new aircraft scheduled for delivery through 2007 have been leased.

Aircraft Leasing Results

ILFC's operating income decreased in the first three months of 2007 compared to the same period of 2006 by \$12 million, or 6.8 percent. For the first three months of 2007 and 2006, the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses, was \$(37) million and \$45 million, respectively, in both revenues and operating income. Rental revenues increased by \$142 million or 15.4 per-

cent, driven by a larger aircraft fleet, increased utilization and higher lease rates. During the first three months of 2007, ILFC's fleet subject to operating leases increased by 32 airplanes to a total of 856. The increase in rental revenues was partially offset by increases in depreciation expense and interest expense. Depreciation expense increased by \$42 million, or 11.5 percent, in line with the increase in the size of the aircraft fleet. Interest expense increased by \$71 million, or 22.6 percent, driven by rising cost of funds, a weaker U.S. dollar against the Euro and the British Pound and additional borrowings to fund aircraft purchases. As noted above, ILFC's interest expense did not reflect the benefit of hedging these exposures.

Capital Markets

Capital Markets represents the operations of AIGFP, which engages as principal in a wide variety of financial transactions, including standard and customized financial products involving commodities, credit, currencies, energy, equities and rates. AIGFP also invests in a diversified portfolio of securities and principal investments and engages in borrowing activities involving issuing standard and structured notes and other securities, and entering into GIAs.

Beginning in 2007, AIGFP applied hedge accounting under FAS 133 to certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. As a result, AIGFP recognized in earnings the change in the fair value on the hedged items attributable to the hedged risks offsetting the gains and losses on the derivatives designated as hedges. Prior to 2007, AIGFP did not apply hedge accounting under FAS 133 to any of its derivatives or related assets and liabilities.

Capital Markets Results

Capital Markets operating income increased in the first three months of 2007 by \$538 million compared to the same period of 2006, primarily due to differences in its accounting treatment for hedging activities. In the first three months of 2007, AIGFP began applying hedge accounting under FAS 133 to certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. As a result, AIGFP recognized in earnings the change in the fair value on the hedged items attributable to the hedged risks offsetting the gains and losses on the derivatives designated as hedges. In the first three months of 2007, AIGFP recognized a net loss of \$85 million related to hedging activities for which hedge accounting was not applied compared to a net loss of \$678 million in the first three months of 2006. The net loss recognized for the first three months of 2007 included a \$166 million reduction in fair value at March 31, 2007 of certain derivatives that are an integral part of, and economically hedge, the structured transactions potentially affected by the proposed guidance by the U.S. Treasury Department discussed above in Overview of Opera-

tions and Business — Outlook. This valuation adjustment effectively reverses the cumulative gains resulting from movements in market interest rates on the derivatives since their inception through March 31, 2007. While these derivatives were economically hedging the preferred interests in the structured transactions, for accounting purposes the preferred interests were accounted for either at amortized cost, or as available for sale debt securities. Accordingly, no changes in market value on these securities have been recognized in income. The net loss on AIGFP's derivatives recognized in the first three months of 2006 was partially due to an out of period charge of \$300 million related to the remediation of the material weakness in accounting for certain derivative transactions under FAS 133. The remainder of the net loss reflected the effect of increases in U.S. interest rates resulting in a decrease in the fair value of the interest rate derivatives hedging AIGFP's assets and liabilities. The improved results in the first three months of 2007 were partially offset by reduced transaction flow in AIGFP's equity, commodity and interest rate products.

Financial market conditions in the first three months of 2007 were characterized by slight increases in global interest rates, increases in credit spreads, slightly higher equity valuations and a slightly weaker U.S. dollar.

The most significant component of Capital Markets operating expenses is compensation, which was \$123 million and \$136 million in the first three months of 2007 and 2006, respectively. The amount of compensation was not affected by gains and losses arising from derivatives not qualifying for hedge accounting treatment under FAS 133.

AIG elected to early adopt FAS 155, "Accounting for Certain Hybrid Financial Instruments" (FAS 155), in 2006 and AIGFP elected to apply the fair value option to certain structured notes and other financial liabilities containing embedded derivatives outstanding as of January 1, 2006. The cumulative effect of the adoption of FAS 155 on these instruments at January 1, 2006 was a pre-tax loss of \$29 million. The effect of these hybrid financial instruments reflected in AIGFP's operating income in the first three months of 2007 and 2006 was a pre-tax loss of \$166 million and a pre-tax gain of \$9 million, respectively. These amounts were largely offset by gains and losses on economic hedge positions also reflected in AIGFP's operating income.

Consumer Finance

AIG's consumer finance operations in North America are principally conducted through American General Finance, Inc. (AGF). Effective January 2, 2007, AGF expanded its operations into the United Kingdom through the acquisition of Ocean Finance and Mortgages Limited, a finance broker for home owner loans in the United Kingdom. AGF derives a substantial portion of its revenues from finance charges assessed on outstanding real estate loans, secured and un-

secured non-real estate loans and retail sales finance receivables. The real estate loans are comprised principally of first lien mortgages on residential real estate generally having a maximum term of 360 months, and are considered non-conforming. The real estate loans may be closed-end accounts or open-end home equity lines of credit and are principally fixed rate products. AGF does not offer mortgage products with borrower payment options that allow for negative amortization of the principal balance. The secured non-real estate loans are secured by consumer goods, automobiles or other personal property. Both secured and unsecured non-real estate loans and retail sales finance receivables generally have a maximum term of 60 months. The majority of AGF's originations is sourced through its branches. However, a significant volume of real estate loans is also originated through broker relationships, and to lesser extents, through correspondent relationships and direct mail solicitations.

AGF also conducts mortgage banking activities through its centralized real estate operations. It originates residential real estate loans, the majority of which are sold to investors on a servicing-released basis. These loans are collateralized by first and second-liens on one to four family properties and are originated largely through broker relationships and to a lesser extent are originated directly to consumers or through correspondent relationships. From July 2003 through February 2006, these loans were originated through an arrangement with AIG Federal Savings Bank, a federally chartered thrift. The origination relationship was terminated in the first quarter of 2006. Since then, all new loans were originated directly by AGF subsidiaries under their own state licenses.

AIG's foreign consumer finance operations are principally conducted through AIGCFG. AIGCFG operates primarily in emerging and developing markets. AIGCFG has operations in Argentina, China, Hong Kong, Mexico, Philippines, Poland, Taiwan and Thailand and most recently began operations in India through the acquisition of a majority interest in a sales finance lending operation. In addition, AIGCFG expanded its distribution channels in Thailand by acquiring in the first quarter of 2007 an 80 percent interest in a company with a network of over 130 branches for secured consumer lending. Certain of the AIGCFG operations are partly or wholly owned by life insurance subsidiaries of AIG. Accordingly, the financial results of those companies are allocated between Financial Services and Life Insurance & Retirement Services according to their ownership percentages. While products vary by market, the businesses generally provide credit cards, unsecured and secured non-real estate loans, term deposits, savings accounts, retail sales finance and real estate loans. AIGCFG originates finance receivables through its branches and direct solicitation. AIGCFG also originates finance receivables indirectly through relationships with retailers, auto dealers, and independent agents.

Consumer Finance Results

Consumer Finance operating income decreased by \$140 million, or 79.5 percent, in the first three months of 2007 compared to the same period of 2006. Included in operating income is the effect of hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses on the related hedged items, of \$(36) million and \$3 million in the first three months of 2007 and 2006, respectively.

The operating income for the first three months of 2007 from the domestic consumer finance operations, which includes the operations of AGF and AIG Federal Savings Bank, decreased by \$184 million or 93 percent from the same period of 2006. In light of evolving market and regulatory developments affecting non-prime mortgage lending, AIG's domestic consumer finance operations are in ongoing discussions with the Office of Thrift Supervision relating to loans originated in the name of AIG Federal Savings Bank during the period from the beginning of July 2003 to the beginning of May 2006. Management expects that the application of underwriting criteria developed in consideration of regulatory guidance issued by the banking agencies will result in significant costs to the domestic consumer finance operations. At this time, management's best estimate of these costs is \$128 million pre-tax, and a charge for this amount has been included in Consumer Finance operating income for the three months ended March 31, 2007.

First quarter domestic consumer finance revenues and operating income also declined from the prior year partially due to the change in fair value of the derivatives hedging borrowings for which hedge accounting was not applied during either period. During the first three months of 2007, AGF recorded a net loss of \$36 million on its derivatives for which hedge accounting was not applied, including the related foreign exchange losses, compared to a net gain of \$1 million for the same period of 2006. Additionally, for the first quarter of 2007, domestic results were adversely affected by the slower housing market, higher interest rates on most long-term fixed rate loans and evolving changes in the regulatory environment which resulted in lower real estate loan originations. For the first three months of 2007, results from mortgage banking activities also included a \$25 million increase in AGF's warranty reserve which covers its obligations to repurchase loans sold to third-party investors should there be a first payment default or breach of representations and warranties. Although mortgage loan originations declined in the first quarter of 2007, the softening of home price appreciation (reducing the equity customers may be able to extract from their homes by refinancing) and higher mortgage loan rates contributed to an increase in non-real estate loans of 11 percent at March 31, 2007 compared to March 31, 2006. Retail sales finance receivables also increased 23 percent compared to March 31, 2006 due to increased marketing efforts and customer demand. AGF's results for the first three

months of 2007 also included \$65 million from a favorable out of court settlement.

The credit quality of AGF's finance receivables during the first three months of 2007 remained stable. Its net charge-off ratio increased to 0.97 percent compared to 0.88 percent in the same period in 2006, which reflected \$6 million of non-recurring recoveries that were recorded in the first quarter of 2006. AGF's delinquency ratio remained relatively low, although it increased by 31 basis points to 2.05 percent at March 31, 2007 compared to March 31, 2006. AGF's allowance for finance receivables losses as a percentage of outstanding receivables was 1.99 percent at March 31, 2007 compared to 2.10 percent at March 31, 2006. The allowance for finance receivables losses includes an allowance for catastrophe-related losses relating to hurricane Katrina of \$12 million at March 31, 2007 compared to \$56 million at March 31, 2006.

AGF's interest expense increased by \$47 million or 18 percent as both its short-term and long-term borrowing rates increased in the first three months of 2007 compared to the same period of 2006. Its short-term borrowing rates averaged 5.42 percent in the first three months of 2007 compared to 4.59 percent in the same period of 2006, while long-term borrowing rates averaged 5.19 percent in the first quarter of 2007 compared to 4.84 percent in the first quarter of 2006.

Revenues from the foreign consumer finance operations increased by approximately 17 percent in the first three months of 2007 compared to the same period of 2006. Loan growth, particularly in Poland and Argentina, was the primary driver behind the higher revenues. Operating income in the first quarter of 2006 reflects AIGCFG's \$44 million share of the allowance for losses related to industry-wide credit deterioration in the Taiwan credit card market.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products. Such services and products are offered to individuals and institutions both domestically and overseas, and are primarily comprised of Spread-Based Investment Businesses, Institutional Asset Management and Brokerage Services and Mutual Funds.

The revenues and operating income for this segment are affected by the general conditions in the equity and credit markets. In addition, realized gains and performance fees are contingent upon various fund closings, maturity levels and market conditions.

Spread-Based Investment Business

In prior years, the sale of GICs to investors, both domestically and overseas, was AIG's primary institutional Spread-Based Investment Business. During 2005, AIG launched its MIP and

its asset management subsidiaries, primarily SunAmerica Life, ceased writing new GIC business. The GIC business will continue to run off for the foreseeable future while the MIP business is expected to grow.

Institutional Asset Management

AIG's Institutional Asset Management business provides an array of investment products and services globally to institutional investors, AIG subsidiaries and affiliates and high net worth investors. These products and services include traditional equity and fixed income investment management and a full range of alternative asset classes. Delivery of AIG's Institutional Asset Management products and services is accomplished via a global network of operating subsidiaries comprising AIG Global Asset Management Holdings Corp. and its subsidiaries and affiliated companies (collectively, AIGGIG). The primary operating entities within this group are AIG Global Investment Corp., AIG Global Real Estate Investment Corp. and AIG Private Bank. AIG Private Bank offers banking, trading and investment management services to private client and high net worth individuals and institutions globally.

Within the alternative investment asset class, AIGGIG offers hedge and private equity fund-of-funds, direct investments and distressed debt investments. Within the structured fixed income and equity product asset class, AIGGIG offers various forms of structured and credit linked notes, various forms of collateralized debt obligations and other investment strategies aimed at achieving superior returns or capital preservation. In addition, Institutional Asset Management's product offerings include various forms of principal protected and liability management structures.

Brokerage Services and Mutual Funds

AIG's Brokerage Services and Mutual Funds business provides mutual fund and broker-dealer related services to retail investors, group trusts and corporate accounts through an independent network of financial advisors. The AIG Advisor Group, Inc., a subsidiary of AIG Retirement Services, Inc., is comprised of several broker-dealer entities that provide these services to clients primarily in the U.S. marketplace. AIG SunAmerica Asset Management Corp. manages, advises and/or administers retail mutual funds, as well as the underlying assets of variable annuities sold by AIG SunAmerica and VALIC to individuals and groups throughout the United States.

Other

Included in the Other category for Asset Management is income or loss from certain SunAmerica sponsored partnerships and partnership investments. Partnership assets consist of investments in a diversified portfolio of private equity

funds, affordable housing partnerships and hedge fund investments.

Asset Management Results

Asset Management results were as follows:

<i>(in millions)</i>	Three Months Ended March 31,		Percentage Increase/ (Decrease)
	2007	2006	
Revenues:			
Spread-Based Investment			
Business	\$1,015	\$ 675	50%
Institutional Asset Management	668	326	105
Brokerage Services and Mutual Funds	78	73	7
Other	147	65	126
Total	\$1,908	\$1,139	68%
Operating income:			
Spread-Based Investment			
Business	\$ 491	\$ 207	137%
Institutional Asset Management *	333	158	111
Brokerage Services and Mutual Funds	26	23	13
Other	144	61	136
Total	\$ 994	\$ 449	121%

* Includes a total of \$228 million and \$96 million for the three months ended March 31, 2007 and 2006, respectively, of income from certain AIG managed partnerships, private equity and real estate funds that are consolidated. Such income is offset in minority interest expense, which is not a component of operating income, on the consolidated statement of income.

Asset Management revenues and operating income increased significantly in the first three months of 2007 compared to the same period of 2006 due primarily to growth in the Spread-Based Investment and Institutional Asset Management businesses. Other revenues and operating income for Asset Management also increased significantly from a year ago due to higher income from partnerships.

Beginning in the first quarter of 2007, derivative gains and losses and foreign exchange transaction gains and losses, which were previously reported as part of AIG's Other category, are now included in Asset Management revenues and operating income. For the first three months of 2007, the amount included in both Asset Management revenues and operating income was a loss of \$20 million. All prior periods have been revised to conform to the current presentation.

Spread-Based Investment Business Results

Operating income related to the Spread-Based Investment Business increased in the first three months of 2007 compared to the same period of 2006 due to a significant increase in partnership income associated with the Domestic GIC program. Partnership income in the first quarter of 2007 included a distribution from a single partnership of \$164 million, which became available after a five-year restriction on capital withdrawals. Also contributing to the increase in operating income of the Spread-Based Investment Business

were increases in operating income generated by hedge funds and affordable housing partnerships. Partnership income is primarily derived from alternative investments and is affected by performance in the equity markets. Thus, revenues, operating income and cash flows attributable to GICs will vary from reporting period to reporting period.

Offsetting this growth in operating income was the continued runoff of GIC balances. A significant portion of the remaining GIC portfolio consists of floating rate obligations. AIG has entered into hedges to manage against increases in short-term interest rates. AIG believes these hedges are economically effective, but they did not qualify for hedge accounting treatment under FAS 133. Income or loss from these hedges are classified as realized capital gains or losses in the Asset Management segment results.

The following table illustrates the anticipated runoff of the domestic GIC portfolio at March 31, 2007:

<i>(in billions)</i>	Less Than One Year	1-3 Years	3+5 Years	Over Five Years	Total
Domestic GICs	\$6.4	\$13.5	\$2.7	\$6.6	\$29.2

MIP operating income, which is reported in the Spread-Based Investment Business, improved during the first three months of 2007 compared to the same period of 2006. During 2005, the MIP replaced the GIC program as AIG's principal spread-based investment activity. Despite the growth in MIP operating income, AIG does not expect that the income growth in the MIP will offset the runoff in the GIC portfolio for the foreseeable future because the asset mix under the MIP does not include the alternative investments utilized in the GIC program. Through March 31, 2007, AIG has issued the equivalent of \$7.5 billion of securities to fund the MIP in the Euromarkets and the U.S. public and private markets. Commencing with transactions initiated in the first quarter of 2007, AIG applied hedge accounting for certain derivative transactions related to the MIP.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers have managed their businesses, for the three months ended March 31, 2007, revenues and operating income related to foreign investment contracts, which were historically reported as a component of the Spread-Based Investment Business, are now being reported in the Life Insurance & Retirement Services segment. All prior periods have been revised to conform to the current presentation.

Institutional Asset Management Results

Operating income for Institutional Asset Management increased significantly in the first three months of 2007 compared to the same period of 2006, primarily due to an increase in carried interest and realized capital gains related to hedge funds as well as private equity and real estate partnerships. The increase in carried interest was driven by higher

valuations of portfolio investments and is generally associated with improved performance in the equity markets. Operating income also reflects higher gains on certain consolidated investments and partnerships; however, these gains are offset in minority interest expense, which is not a component of operating income, on the Consolidated Statement of Income.

AIG's unaffiliated client assets under management, including both retail mutual funds and institutional accounts, increased 17 percent from March 31, 2006 to \$76.5 billion at March 31, 2007, resulting in higher management fee income. The growth in Institutional Asset Management revenues and operating income were driven by contributions from all asset classes globally.

While unaffiliated client assets under management and the resulting management fees continue to increase, the growth in operating income has trailed the growth in revenues due to higher fund-related expenses as well as sales and infrastructure enhancements. The fund-related expenses are associated with AIG Global Asset Management Holdings Corp. and its subsidiaries and affiliated companies (collectively, AIGGIG) purchasing and carrying investments on its balance sheet in anticipation of future fund launches. AIGGIG held over \$2.3 billion in warehoused investments as of March 31, 2007. It is anticipated that these expenses will be recovered from fund entities in future periods. The sales and infrastructure enhancements are associated with AIG's planned expansion of marketing and distribution capabilities, combined with technology and operational infrastructure-related improvements.

Other Operations

The operating loss of AIG's Other category was as follows:

<i>(in millions)</i>	Three Months Ended March 31,	
	2007	2006
Other operating income (loss):		
Equity earnings in unconsolidated entities	\$ 41	\$ 19
Interest expense	(252)	(183)
Unallocated corporate expenses	(162)	(184)
Compensation expense – SICO Plans	(10)	(76)
Compensation expense – Starr tender offer	–	(54)
Realized capital gains (losses)	(78)	(5)
Other miscellaneous, net	(38)	(26)
Total Other	\$(499)	\$(509)

The operating loss for AIG's Other category declined in the first three months of 2007 compared to the same period of 2006. Increased earnings from unconsolidated entities and lower unallocated corporate expenses were offset by higher interest expenses in the first three months of 2007 resulting

from increased borrowings at the parent company. The operating loss in the first three months of 2006 included an out of period charge of \$61 million related to the SICO Plans and a one-time charge related to the Starr tender offer of \$54 million. Realized capital losses for the first three months of 2007 increased from the same period of 2006 due to foreign exchange losses on foreign denominated debt issued by AIG parent.

Beginning in the first quarter of 2007, derivative gains and losses and foreign exchange transaction gains and losses for Asset Management and Financial Services entities (other than AIGFP) are now included in Asset Management and Financial Services revenues and operating income. These amounts were previously reported as part of AIG's Other category. All prior periods have been revised to conform to the current presentation.

Capital Resources and Liquidity

At March 31, 2007, AIG had total consolidated shareholders' equity of \$103.1 billion and total consolidated borrowings of \$157.2 billion. At that date, \$140.3 billion of such borrowings were not guaranteed by AIG, were matched borrowings by AIG or AIGFP, or represented junior subordinated debt or liabilities connected to trust preferred stock.

Borrowings

At March 31, 2007, AIG's net borrowings were \$16.9 billion, excluding amounts that were matched borrowings by AIG and AIGFP, amounts not guaranteed by AIG, junior subordinated debt and liabilities connected to trust preferred stock. The following table summarizes borrowings outstanding:

<i>(in millions)</i>	March 31, 2007	December 31, 2006
AIG's net borrowings	\$ 16,853	\$ 17,126

AIG (Parent Company)

AIG intends to continue its customary practice of issuing debt securities from time to time to meet its financing needs and those of certain of its subsidiaries for general corporate purposes, as well as for the MIP. As of March 31, 2007, AIG had up to \$18.6 billion of debt securities, preferred and common stock and other securities registered under its universal shelf registration statement and available for issuance from time to time.

AIG maintains a medium term note program under its shelf registration statement. As of March 31, 2007, approximately \$2.75 billion principal amount of notes were outstanding under the medium term note program, of which \$750 million was used for AIG's general corporate purposes, \$97 million was used by AIGFP and \$1.9 billion was used to fund the MIP. The maturity dates of these notes range from 2011 to 2047. To the extent deemed appropriate, AIG may enter into swap transactions to manage its effective borrowing with respect to these notes.

AIG also maintains a Euro medium term note program under which an aggregate nominal amount of up to \$10.0 billion of notes may be outstanding at any one time. As of March 31, 2007, the equivalent of \$6.5 billion of notes were outstanding under the program, of which \$4.5 billion were used to fund the MIP and the remainder was used for AIG's general corporate purposes. The aggregate amount outstanding includes \$255 million resulting from foreign exchange translation into U.S. dollars, of which \$171 million relates to notes issued by AIG for general corporate purposes and \$84 million relates to notes issued to fund the MIP.

During the first quarter of 2007, AIG issued in Rule 144A offerings an aggregate of \$1.35 billion principal amount of senior notes, of which \$500 million was used to fund the MIP and \$850 million was used for AIG's general corporate purposes.

AIG maintains a shelf registration statement in Japan, providing for the issuance of up to Japanese Yen 300 billion principal amount of senior notes, of which the equivalent of \$425 million was outstanding as of March 31, 2007, the proceeds of which were used for AIG's general corporate purposes. AIG also maintains an Australian dollar debt program under which senior notes with an aggregate principal amount of up to 5 billion Australian dollars may be outstanding at any one time. Although as of March 31, 2007 there were no outstanding notes under the Australian program, AIG intends to use the program opportunistically to fund the MIP or for AIG's general corporate purposes.

In March 2007, AIG issued \$3.7 billion of junior subordinated debentures in three series. The proceeds from the issuance are being used to repurchase shares of AIG's common stock. This issuance consisted of: \$1 billion aggregate principal amount of Series A-1 6.25 percent junior subordinated debentures (U.S. Dollar Debentures); British Pound 750 million aggregate principal amount of Series A-2 5.75 percent junior subordinated debentures (Sterling Debentures); and Euro 1 billion aggregate principal amount of Series A-3 4.875 percent junior subordinated debentures (Euro Debentures and together with the U.S. Dollar Debentures and Sterling Debentures, the Debentures). Subject to the applicable Replacement Capital Covenant (RCC) described below, the U.S. Dollar Debentures are scheduled for repayment in

2037 and have a final maturity in 2087, and the Sterling and Euro Debentures are scheduled for repayment in 2037 and have a final maturity in 2067. The Debentures are redeemable by AIG prior to those times at make-whole redemption prices. In addition, the Sterling and Euro Debentures are redeemable by AIG at par beginning in 2017.

In connection with each series of Debentures, AIG entered into an RCC for the benefit of the holders of AIG's 6.25 percent Notes Due 2036. The RCCs provide that AIG will not repay, redeem, or purchase the U.S. Dollar Debentures on or before March 15, 2067, or the Sterling and Euro Debentures on or before March 15, 2047, unless it has received qualifying proceeds from the sale of replacement capital securities.

Also, in the first quarter of 2007, AIG repaid the remaining \$700 million of bank term loans that were borrowed by AIG in March 2006.

AIG began applying hedge accounting for certain AIG parent transactions in the first quarter of 2007.

AIGFP

AIGFP uses the proceeds from the issuance of notes and bonds and GIA borrowings to invest in a diversified portfolio of securities and derivative transactions. The borrowings may also be temporarily invested in securities purchased under agreements to resell. AIGFP's notes and bonds include structured debt instruments whose payment terms are linked to one or more financial or other indices (such as an equity index or commodity index or another measure that is not considered to be clearly and closely related to the debt instrument). These notes contain embedded derivatives that otherwise would be required to be accounted for separately under FAS 133. Upon AIG's early adoption of FAS 155, AIGFP elected the fair value option for these notes. The notes that are accounted for using the fair value option are reported separately under hybrid financial instrument liabilities. AIG guarantees the obligations of AIGFP under AIGFP's notes and bonds and GIA borrowings. See Operating Review — Financial Services Operations, Liquidity and Derivatives herein.

AIGFP has a Euro medium term note program under which an aggregate nominal amount of up to \$10.0 billion of notes may be outstanding at any one time. As of March 31, 2007, \$7.16 billion of notes were outstanding under the program, including \$649 million resulting from foreign exchange translation into U.S. dollars. The notes issued under this program are guaranteed by AIG and are included in AIGFP's Notes and Bonds Payable in the preceding table of borrowings.

AIG Funding

AIG Funding, Inc. (AIG Funding) issues commercial paper that is guaranteed by AIG in order to help fulfill the short-term cash requirements of AIG and its subsidiaries. The issuance of AIG Funding's commercial paper, including the guarantee by AIG, is subject to the approval of AIG's Board of Directors or the Finance Committee of the Board if it exceeds certain pre-approved limits.

As backup for the commercial paper program and for other general corporate purposes, AIG and AIG Funding maintain revolving credit facilities, which, as of March 31, 2007, had an aggregate of \$5.5 billion available to be drawn and which are summarized below under Revolving Credit Facilities.

ILFC

ILFC fulfills its short-term cash requirements through operating cash flows and the issuance of commercial paper. The issuance of commercial paper is subject to the approval of ILFC's Board of Directors and is not guaranteed by AIG. ILFC maintains syndicated revolving credit facilities which, as of March 31, 2007, totaled \$6.5 billion and which are summarized below under Revolving Credit Facilities. These facilities are used as back up for ILFC's maturing debt and other obligations.

As a well-known seasoned issuer, ILFC has filed an automatic shelf registration statement with the SEC allowing ILFC immediate access to the U.S. public debt markets. At March 31, 2007, \$2.50 billion of debt securities were issued under this registration statement and \$5.82 billion were issued under a prior registration statement. In addition, ILFC has a Euro medium term note program for \$7.0 billion, under which \$4.28 billion in notes were sold through March 31, 2007. Notes issued under the Euro medium term note program are included in ILFC Notes and bonds payable in the preceding table of borrowings. The foreign exchange adjustment for the foreign currency denominated debt was \$796 million at March 31, 2007 and \$733 million at December 31, 2006. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging the portion of the note exposure not already offset by Euro-denominated operating lease payments, although such hedges did not qualify for hedge accounting treatment under FAS 133.

ILFC had a \$4.3 billion Export Credit Facility for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At March 31, 2007, ILFC had \$0.9 billion outstanding under this facility. The debt is collateralized by a pledge of the

shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured Export Credit Facility for up to a maximum of \$2.64 billion for Airbus aircraft to be delivered through May 31, 2005. The facility was subsequently increased to \$3.64 billion and extended to include aircraft to be delivered through May 31, 2007. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a six-month forward-looking calendar, and the interest rate is determined through a bid process. At March 31, 2007, ILFC had \$1.8 billion outstanding under this facility. Borrowings with respect to these facilities are included in ILFC's Notes and bonds payable in the preceding table of borrowings.

From time to time, ILFC enters into funded financing agreements. As of March 31, 2007, ILFC had a total of \$1.2 billion outstanding, which has varying maturities through February 2012. The interest rates are LIBOR-based, with spreads ranging from 0.30 percent to 1.625 percent.

The proceeds of ILFC's debt financing are primarily used to purchase flight equipment, including progress payments during the construction phase. The primary sources for the repayment of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. AIG does not guarantee the debt obligations of ILFC. See also Operating Review — Financial Services Operations and Liquidity herein.

AGF

AGF fulfills most of its short-term cash borrowing requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of AGF's Board of Directors and is not guaranteed by AIG. AGF maintains committed syndicated revolving credit facilities which, as of March 31, 2007, totaled \$4.25 billion and which are summarized below under Revolving Credit Facilities. The facilities can be used for general corporate purposes and to provide backup for AGF's commercial paper programs.

As of March 31, 2007, notes and bonds aggregating \$19.69 billion were outstanding with maturity dates ranging from 2007 to 2067 at interest rates ranging from 1.94 percent to 8.45 percent. To the extent deemed appropriate, AGF may enter into swap transactions to manage its effective borrowing with respect to these notes and bonds. As a well-known seasoned issuer, AGF has filed an automatic shelf registration statement with the SEC allowing AGF immediate access to the U.S. public debt markets. At March 31, 2007, AGF had the corporate authorization to issue up to \$12.5 billion of debt securities under its shelf registration statements.

In January 2007, AGF issued junior subordinated debentures in an aggregate principal amount of \$350 million that mature in January 2067. The debentures underlie a series of trust preferred securities sold by a trust sponsored by AGF in a Rule 144A/Regulation S offering. AGF can redeem the debentures at par beginning in January 2017.

AGF's funding sources include a medium term note program, private placement debt, retail note issuances, bank financing and securitizations of finance receivables that AGF accounts for as on-balance-sheet secured financings. In addition, AGF has become an established issuer of long-term debt in the international capital markets.

In addition to debt refinancing activities, proceeds from the collection of finance receivables are used to fund cash needs including the payment of principal and interest on AGF's debt. AIG does not guarantee any of the debt obligations of AGF. See also Operating Review — Financial Services Operations and Liquidity herein.

AIGCFG

AIGCFG has a variety of funding mechanisms for its various markets, including retail and wholesale deposits, short-term and long-term bank loans, and intercompany subordinated debt. AIG Credit Card Company (Taiwan), a consumer finance business in Taiwan, and AIG Finance (Thailand) PLC have issued commercial paper for the funding of their respective operations. AIG does not guarantee any borrowings for AIGCFG businesses, including this commercial paper.

Revolving Credit Facilities

AIG, ILFC and AGF maintain committed, unsecured revolving credit facilities listed on the table below in order to support their respective commercial paper programs and for general corporate purposes. AIG, ILFC and AGF expect to replace or extend these credit facilities on or prior to their

expiration. Some of the facilities, as noted below, contain a “term-out option” allowing for the conversion by the borrower of any outstanding loans at expiration into one-year term loans.

Facility	Size	Borrower(s)	Available Amount March 31, 2007	Expiration	One-Year Term-Out Option

(a) Guaranteed by AIG.

(b) This facility can be drawn in the form of loans or letters of credit. All drawn amounts shown above are in the form of letters of credit.

(c) Subsidiaries of AIG are the lenders on this facility.

(d) American General Finance, Inc. is an eligible borrower for up to \$400 million only.

Credit Ratings

The cost and availability of unsecured financing for AIG and its subsidiaries are generally dependent on their short-term and long-term debt ratings. The following table presents the credit ratings of AIG and certain of its subsidiaries as of April 30, 2007. In parentheses, following the initial occurrence in the table of each rating, is an indication of that

rating’s relative rank within the agency’s rating categories. That ranking refers only to the generic or major rating category and not to the modifiers appended to the rating by the rating agencies to denote relative position within such generic or major category.

	Short-term Debt			Senior Long-term Debt		
	Moody’s	S&P	Fitch	Moody’s ^(a)	S&P ^(b)	Fitch ^(c)
AIG	P-1 (1st of 3)	A-1+ (1st of 6)	F1+ (1st of 5)	Aa2 (2nd of 9)	AA (2nd of 8)	AA (2nd of 9)
AIG Financial Products Corp. ^(d)	P-1	A-1+	—	Aa2	AA	—
AIG Funding, Inc. ^(d)	P-1	A-1+	F1+	—	—	—
ILFC	P-1	A-1+	F1 (1st of 5)	A1 (3rd of 9)	AA ^(e) (2nd of 8)	A+ (3rd of 9)
American General Finance Corporation	P-1	A-1 (1st of 6)	F1	A1	A+ (3rd of 8)	A+
American General Finance, Inc.	P-1	A-1	F1	—	—	A+

(a) Moody’s Investors Service (Moody’s). Moody’s appends numerical modifiers 1, 2 and 3 to the generic rating categories to show relative position within rating categories.

(b) Standard & Poor’s, a division of the McGraw-Hill Companies (S&P). S&P ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(c) Fitch Ratings (Fitch). Fitch ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(d) AIG guarantees all obligations of AIG Financial Products Corp. and AIG Funding, Inc.

(e) Negative rating outlook. A negative outlook by S&P indicates that a rating may be lowered, but is not necessarily a precursor of a ratings change. The outlook on all other credit ratings in the table is stable.

These credit ratings are current opinions of the rating agencies. As such, they may be changed, suspended or withdrawn at any time by the rating agencies as a result of changes in, or unavailability of, information or based on other circumstances. Ratings may also be withdrawn at AIG management's request. This discussion of ratings is not a complete list of ratings of AIG and its subsidiaries.

"Rating triggers" have been defined by one independent rating agency to include clauses or agreements the outcome of which depends upon the level of ratings maintained by one or more rating agencies. Rating triggers generally relate to events which (i) could result in the termination or limitation of credit availability, or require accelerated repayment, (ii) could result in the termination of business contracts or (iii) could require a company to post collateral for the benefit of counterparties.

AIG believes that any of its own or its subsidiaries' contractual obligations that are subject to "ratings triggers" or financial covenants relating to "ratings triggers" would not have a material adverse effect on its financial condition or

liquidity. Ratings downgrades could also trigger the application of termination provisions in certain of AIG's contracts, principally agreements entered into by AIGFP and assumed reinsurance contracts entered into by Transatlantic.

It is estimated that, as of the close of business on April 30, 2007, based on AIGFP's outstanding municipal GIAs and financial derivatives transactions as of such date, a downgrade of AIG's long-term senior debt ratings to 'Aa3' by Moody's or 'AA-' by S&P would permit counterparties to call for approximately \$902 million of collateral. Further, additional downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIGFP manages its liquidity. The actual amount of additional collateral that AIGFP would be required to post to counterparties in the event of such downgrades depends on market conditions, the fair value of the outstanding affected transactions and other factors prevailing at the time of the downgrade. Additional obligations to post collateral would increase the demand on AIGFP's liquidity.

Contractual Obligations and Other Commercial Commitments

The maturity schedule of AIG's contractual obligations at March 31, 2007 was as follows:

<i>(in millions)</i>	Total Payments	Payments due by Period			
		Less Than One Year	1-3 Years	3 ⁺ -5 Years	Over Five Years
Borrowings ^(a)	\$142,068	\$35,916	\$ 34,260	\$ 34,865	\$ 37,027
Interest payments on borrowings	80,102	5,204	8,535	6,166	60,197
Loss reserves ^(b)	81,135	22,312	24,747	11,764	22,312
Insurance and investment contract liabilities ^(c)	593,578	22,560	34,274	41,429	495,315
GIC liabilities ^(d)	36,224	5,495	17,240	3,000	10,489
Aircraft purchase commitments	17,177	3,249	7,185	2,377	4,366
Total	\$950,284	\$94,736	\$126,241	\$ 99,601	\$629,706

(a) Excludes commercial paper and obligations included as debt pursuant to FASB Interpretation No. 46, "Consolidation of Variable Interest Entities" (FIN 46R), and includes hybrid financial instrument liabilities recorded at fair value.

(b) Represents future loss and loss adjustment expense payments estimated based on historical loss development payment patterns.

(c) Insurance and investment contract liabilities include various investment-type products with contractually scheduled maturities, including periodic payments of a term certain nature. Insurance and investment contract liabilities also include benefit and claim liabilities, of which a significant portion represents policies and contracts that do not have stated contractual maturity dates and may not result in any future payment obligations. For these policies and contracts (i) AIG is currently not making payments until the occurrence of an insurable event, such as death or disability, (ii) payments are conditional on survivorship, or (iii) payment may occur due to a surrender or other non-scheduled event out of AIG's control. AIG has made significant assumptions to determine the estimated undiscounted cash flows of these contractual policy benefits, which assumptions include mortality, morbidity, future lapse rates, expenses, investment returns and interest crediting rates, offset by expected future deposits and premium on in-force policies. Due to the significance of the assumptions used, the amounts presented could be materially different from actual required payments. The amounts presented in this table are undiscounted and therefore exceed the future policy benefits and policyholder contract deposits included in the balance sheet.

(d) Represents guaranteed maturities under GICs.

The maturity schedule of other commercial commitments of AIG and its consolidated subsidiaries at March 31, 2007 was as follows:

<i>(in millions)</i>	Total Amounts Committed	Amount of Commitment Expiration			
		Less Than One Year	1-3 Years	3+5 Years	Over Five Years
Letters of credit:					
Life Insurance & Retirement Services	\$ 185	\$ 17	\$ 4	\$ 22	\$ 142
DBG	191	191	—	—	—
Standby letters of credit:					
Capital Markets	1,728	1,452	72	42	162
Parent Company ^(a)	739	620	1	118	—
Guarantees:

Parent and other companies	318	112	181	25	—
Total	\$ 31,145	\$ 11,173	\$ 5,164	\$ 5,095	\$ 9,713

(a) Represents reimbursement obligations under letters of credit issued by commercial banks.

(b) Primarily AIG SunAmerica construction guarantees connected to affordable housing investments.

(c) Excludes commitments with respect to pension plans. The annual pension contribution for 2007 is expected to be approximately \$95 million for U.S. and non-U.S. plans.

(d) Primarily liquidity facilities provided in connection with certain municipal swap transactions and collateralized bond obligations.

(e) Primarily in connection with options to acquire aircraft.

(f) Primarily AIG SunAmerica commitments to invest in partnerships.

(g) Includes commitments to invest in limited partnerships, private equity and hedge funds and real estate.

(h) Primarily commitments to invest in limited partnerships.

Shareholders' Equity

AIG's consolidated shareholders' equity increased during the first three months of 2007 and twelve months of 2006 as follows:

<i>(in millions)</i>	March 31, 2007	December 31, 2006
Beginning of year	\$101,677	\$86,317
Net income	4,130	14,048
Unrealized appreciation (depreciation) of investments, net of tax	851	1,735
Cumulative translation adjustment, net of tax	(137)	936
Dividends to shareholders	(430)	(1,690)
Payments advanced to purchase shares	(2,851)	—
Other*	(185)	331
End of period	\$103,055	\$101,677

* Reflects the effects of employee stock transactions and cumulative effect of accounting changes.

AIG has in the past reinvested most of its unrestricted earnings in its operations and believes such continued reinvestment in the future will be adequate to meet any foreseeable capital needs. However, AIG may choose from time to time to raise additional funds through the issuance of additional securities.

In February 2007, AIG's Board of Directors adopted a new dividend policy, to take effect with the dividend to be declared in the second quarter of 2007, providing that under ordinary circumstances, AIG's plan will be to increase its common stock dividend by approximately 20 percent annually. The payment of any dividend, however, is at the discretion of AIG's Board of Directors, and the future payment of dividends will depend on various factors, including the performance of AIG's businesses, AIG's consolidated financial position, results of operations and liquidity and the existence of investment opportunities.

Share Repurchases

From time to time, AIG may buy shares of its common stock for general corporate purposes, including to satisfy its obligations under various employee benefit plans. In February 2007, AIG's Board of Directors increased its share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. During March 2007, AIG made open market share repurchases and entered into a \$3 billion structured share repurchase arrangement. A total of 2,470,499 shares were repurchased during March 2007. The portion of the payment advanced by AIG under the structured share repurchase arrangement that had not yet been utilized to repurchase shares at March 31, 2007, amounting to \$2.85 billion, has been recorded as a component of shareholders' equity under the caption Payments advanced to purchase shares. Purchases have continued since March 31, 2007, with an additional 6,643,052 shares purchased during April 2007, and purchases are anticipated to occur throughout 2007. All shares repurchased are recorded as treasury stock at cost.

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At March 31, 2007, AIG's consolidated invested assets, primarily held by its subsidiaries, included \$27.6 billion in cash and short-term investments. Consolidated net cash provided from operating activities in the first three months of 2007 amounted to \$8.6 billion. At the parent company level, liquidity management activities are conducted in a manner to preserve and enhance funding stability, flexibility, and diversity through the full range of potential operating environments and market conditions. AIG's primary sources of cash flow are dividends and other payments from

its regulated and unregulated subsidiaries, as well as issuances of debt securities. Primary uses of cash flow are for debt service, subsidiary funding, shareholder dividend payments and common stock repurchases. Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements, including the funding of increased dividends under AIG's new dividend policy and repurchases of common stock.

In the first three months of 2007, AIG parent collected \$1.3 billion in dividends and other payments from subsidiaries, principally from DBG companies, issued \$4.6 billion of debt securities and retired \$700 million of debt, excluding MIP and Series AIGFP debt. AIG parent also advanced \$3 billion for a structured share repurchase arrangement. AIG parent made interest payments totaling \$16 million, made \$82 million in capital contributions to subsidiaries, and paid \$430 million in dividends to shareholders in the first three months of 2007.

AIG funds its short-term working capital needs through commercial paper issued by AIG Funding. As of March 31, 2007, AIG Funding had \$4.1 billion of commercial paper outstanding with an average maturity of 35 days. As additional liquidity, AIG parent and AIG Funding maintain revolving credit facilities that, as of March 31, 2007, had an aggregate of \$5.5 billion available to be drawn, which are summarized above under Revolving Credit Facilities.

Invested Assets

AIG's investment strategy is to invest primarily in high quality securities while maintaining diversification to avoid significant exposure to issuer, industry and/or country concentrations.

The following tables summarize the composition of AIG's invested assets by segment.

<i>(in millions)</i>	General Insurance	Life Insurance & Retirement Services	Financial Services	Asset Management	Other	Total
March 31, 2007						
Fixed maturities:

Total invested assets*	\$116,059	\$426,735	\$ 185,049	\$ 70,905	\$805	\$ 799,553

* At December 31, 2006, approximately 68 percent and 32 percent of invested assets were held in domestic and foreign investments, respectively.

As a result of AIG's periodic evaluation of its securities for other-than-temporary impairments in value, AIG recorded, in realized capital gains (losses), other-than-temporary impairment pre-tax losses of \$467 million and \$226 million in the first three months of 2007 and 2006, respectively. The majority of the losses in the first three months of 2007 related to the Foreign Life operations and reflected a decline in value of U.S. dollar bonds held in Thai-

land and Singapore due to the depreciation of the U.S. dollar against the local currency.

No impairment charge with respect to any one single credit was significant to AIG's consolidated financial condition or results of operations, and no individual impairment loss exceeded 1.0 percent of consolidated net income for the first three months of 2007.

At March 31, 2007, aggregate pre-tax unrealized gains were \$17.9 billion, while the pre-tax unrealized losses with respect to investment grade bonds, non-investment grade bonds and equity securities were \$2.6 billion, \$79 million and \$116 million, respectively. Aging of the pre-tax unrealized losses with respect to these securities, distributed as a percentage of cost relative to unrealized loss (the extent by which the fair value is less than amortized cost or cost), including the number of respective items, was as follows:

Aging (dollars in millions)	Less than or equal to 20% of Cost			Greater than 20% to 50% of Cost			Greater than 50% of Cost			Total		
	Cost ^(a)	Unrealized Loss	Items	Cost ^(a)	Unrealized Loss	Items	Cost ^(a)	Unrealized Loss	Items	Cost ^(a)	Unrealized Loss ^(b)	Items

(a) For bonds, represents amortized cost.

(b) As more fully described above, upon realization, certain realized losses will be charged to participating policyholder accounts, or realization will result in a current decrease in the amortization of DAC.

At March 31, 2007, the fair value of AIG's fixed maturities and equity securities aggregated \$501.6 billion. At March 31, 2007, aggregate unrealized gains after taxes for fixed maturity and equity securities were \$11.6 billion. At March 31, 2007, the aggregate unrealized losses after taxes of fixed maturity and equity securities were approximately \$1.8 billion.

The effect on net income of unrealized losses after taxes will be mitigated upon realization because certain realized losses will be charged to participating policyholder accounts, or realization will result in current decreases in the amortization of certain DAC.

At March 31, 2007, unrealized losses for fixed maturity securities and equity securities did not reflect any significant industry concentrations.

The amortized cost of fixed maturities available for sale in an unrealized loss position at March 31, 2007, by contractual maturity, is shown below:

(in millions)	Amortized Cost
Due in one year or less	\$ 6,525
Due after one year through five years	28,993
Due after five years through ten years	48,604
Due after ten years	61,769
Total	\$145,891

For the three months ended March 31, 2007, the pre-tax realized losses incurred with respect to the sale of fixed maturities and equity securities were \$255 million. The aggregate fair value of securities sold was \$7.3 billion, which was approximately 97 percent of amortized cost. The average period of time that securities sold at a loss during the three months ended March 31, 2007 were trading continuously at a price below book value was approximately four months.

Risk Management

AIG believes that strong risk management practices and a sound internal control environment are fundamental to its continued success and profitable growth. Through its extensive global operations, AIG is exposed to a number of major risks, including insurance, credit, market and operational risks. AIG senior management establishes the framework, principles and guidelines for risk management. AIG business executives are responsible for establishing and implementing risk management processes and responding to the individual needs and issues within their businesses, including risk concentrations within their business segments.

For a complete discussion of AIG's risk management program, see Management's Discussion and Analysis of Financial Condition and Results of Operations in the 2006 Annual Report on Form 10-K.

Insurance, Asset Management and Non-Trading Financial Services VaR

AIG has performed one comprehensive Value at Risk (VaR) analysis across all of its non-trading businesses, and a separate VaR analysis for its trading business at AIGFP. The comprehensive VaR is categorized by AIG business segment (General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management) and also by market risk factor (interest rate, currency and equity).

AIG calculated the VaR with respect to net fair values as of March 31, 2007 and December 31, 2006. The VaR number represents the maximum potential loss as of those dates that could be incurred with a 95 percent confidence and a one-month holding period.

The following table presents the period-end, average, high and low VaRs on a diversified basis and of each component of market risk for each of AIG's non-trading investments. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

Equity	11	10	11	8	8	9	13	8

AIG's total Non-Trading VaR for the first three months of 2007 was largely unchanged from the total Non-Trading VaR at the end of 2006. VaR increases resulting from busi-

ness growth during the first three months of 2007 were offset by a reduction in interest rate volatility in many currencies.

Capital Markets Trading VaR

AIGFP maintains a very conservative market risk profile and minimizes risk in interest rates, equities, commodities and foreign exchange. Market exposures in option implied volatilities, correlations and basis risks are also minimized over time but those are the main types of market risks that AIGFP manages.

AIGFP's minimal reliance on market risk driven revenue is reflected in its VaR. Because the market risk with respect to securities available for sale, at market, is substantially hedged, segregation of the financial instruments into trading and other than trading was not deemed necessary.

AIGFP reports its VaR using a 95 percent confidence interval and a one-day holding period.

The following table presents the period-end, average, high, and low VaRs (based on daily observations) on a diversified basis and of each component of market risk for Capital Markets operations. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

(in millions)	2007				2006			
	As of March 31,	Three months ended March 31,			As of December 31,	Year ended December 31,		
		Average	High	Low		Average	High	Low

Commodity	3	4	5	3	3	3	4	2

ITEM 3. Quantitative and Qualitative Disclosures About Market Risk

Included in Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations.

ITEM 4. Controls and Procedures

In connection with the preparation of this Form 10-Q, an evaluation was carried out by AIG's management, with the participation of AIG's Chief Executive Officer and Chief Financial Officer, of the effectiveness of AIG's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (Exchange Act)). Disclosure controls and procedures are designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms and that such information is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial Officer, to allow timely decisions regarding required disclo-

ures. Based on its evaluation, and in light of the previously identified material weakness in internal control over financial reporting, as of December 31, 2006, relating to controls over income tax accounting described in the 2006 Annual Report on Form 10-K, AIG's Chief Executive Officer and Chief Financial Officer concluded that, as of March 31, 2007, AIG's disclosure controls and procedures were ineffective. In addition, there has been no change in AIG's internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) that occurred during the quarter ended March 31, 2007 that has materially affected, or is reasonably likely to materially affect, AIG's internal control over financial reporting.

Part II

ITEM 2. Unregistered Sales of Equity Securities and Use of Proceeds

The table below provides information with respect to purchases of AIG Common stock during the three months ended March 31, 2007.

Period	Total Number of Shares Purchased⁽¹⁾	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares that May Yet Be Purchased Under the Plans or Programs at End of Month⁽²⁾
January 1 - 31	–	\$ –	–	36,542,700
February 1 - 28	–	–	–	⁽²⁾
March 1 - 31	2,470,499	66.54	2,470,499	⁽²⁾
Total	2,470,499	\$66.54	2,470,499	

(1) Does not include 34,839 shares delivered or attested to in satisfaction of the exercise price by holders of AIG employee stock options exercised during the three months ended March 31, 2007.

(2) In July 2002, AIG announced that its Board of Directors had authorized the purchase of up to 10 million shares of AIG common stock. In February 2003, AIG announced that the Board had expanded the existing program through the authorization of an additional 50 million shares. In February 2007, AIG's Board of Directors increased the repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. A balance of \$7.84 billion remained for purchases under the program as of March 31, 2007, although \$2.85 billion of that amount has been advanced by AIG to purchase shares under the program. The purchase program has no set expiration or termination date.

32	Section 1350 Certifications	Filed herewith.

American International Group, Inc.
 Computation of Ratios of Earnings to Fixed Charges

	Three Months Ended March 31,	
	2007	2006
<i>(in millions, except ratios)</i>		
Income before income taxes, minority interest and cumulative effect of an accounting change	\$ 6,172	\$ 4,793
Less – Equity income of less than 50% owned persons	42	20
Add – Dividends from less than 50% owned persons	—	3
	6,130	4,776
Add – Fixed charges	2,672	1,948
Less – Capitalized interest	11	15
Income before income taxes, minority interest, cumulative effect of an accounting change and fixed charges	\$ 8,791	\$ 6,709
Fixed charges:		
Interest costs	\$ 2,612	\$ 1,896
Rental expense*	60	52
Total fixed charges	\$ 2,672	\$ 1,948
Ratio of earnings to fixed charges	3.29	3.44
Secondary Ratio		
Interest credited to GIC and GIA policy and contract holders	\$ (1,579)	\$ (1,090)
Total fixed charges excluding interest credited to GIC and GIA policy and contract holders	\$ 1,093	\$ 858
Secondary ratio of earnings to fixed charges	6.60	6.55

* The proportion deemed representative of the interest factor.

The secondary ratio is disclosed for the convenience of fixed income investors and the rating agencies that serve them and is more comparable to the ratios disclosed by all issuers of fixed income securities. The secondary ratio removes interest credited to guaranteed investment contract (GIC) policyholders and guaranteed investment agreement (GIA) contractholders. Such interest expenses are also removed from income before income taxes, minority interest and cumulative effect of an accounting change used in this calculation. GICs

and GIAs are entered into by AIG's insurance subsidiaries, principally Sun America Life Insurance Company and AIG Financial Products Corp. and its subsidiaries, respectively. The proceeds from GICs and GIAs are invested in a diversified portfolio of securities, primarily investment grade bonds. The assets acquired yield rates greater than the rates on the related policyholders obligation or agreement, with the intent of earning operating income from the spread.

CERTIFICATIONS

I, Martin J. Sullivan, certify that:

1. I have reviewed this Quarterly Report on Form 10-Q of American International Group, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

Adjustments to reconcile net income to net cash provided by operating activities:		
Noncash revenues, expenses, gains and losses included in income:		
Net gains on sales of securities available for sale and other assets	(732)	(226)
Foreign exchange transaction (gains) losses	639	915
Net unrealized (gains) losses on non-AIGFP derivative assets and liabilities	(123)	(770)
Equity in income of partially owned companies and other invested assets	(2,747)	(1,410)
Amortization of deferred policy acquisition costs	5,976	5,607
Amortization of premium and discount on securities	41	39
Depreciation expenses, principally flight equipment	1,337	1,137
Provision for finance receivable losses	229	245
Impairment losses	884	596
Changes in operating assets and liabilities:		
General and life insurance reserves	8,202	7,290
Premiums and insurance balances receivable and payable – net	(941)	(1,229)
Reinsurance assets	434	707
Capitalization of deferred policy acquisition costs	(7,678)	(8,346)
Investment income due and accrued	(46)	(5)
Funds held under reinsurance treaties	(210)	(953)
Other policyholders' funds	339	(233)
Income taxes payable	(225)	885
Commissions, expenses and taxes payable	724	291
Other assets and liabilities – net	832	(1,475)
Bonds, common and preferred stocks trading, at fair value	(2,962)	(2,921)
Trade receivables and payables – net	(925)	20
Trading securities, at fair value	465	1,334
Spot commodities	127	(705)
Net unrealized (gain) loss on swaps, options and forward transactions	1,317	(425)
Securities purchased under agreements to resell	258	1,174
Securities sold under agreements to repurchase	(226)	(4,390)
Securities and spot commodities sold but not yet purchased, at market value	221	(248)
Finance receivables held for sale – originations and purchases	(3,652)	(4,911)
Sales of finance receivables – held for sale	4,168	5,250
Other, net	938	1,637
Total adjustments	6,664	(1,120)
Net cash provided by operating activities	\$ 15,071	\$ 5,265

See Accompanying Notes to Consolidated Financial Statements.

CONSOLIDATED STATEMENT OF CASH FLOWS *(continued)**(in millions) (unaudited)*

	Six Months Ended June 30,	
	2007	2006
Cash flows from investing activities:

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited)*

1. Summary of Significant Accounting Policies

Basis of Presentation

These unaudited condensed consolidated financial statements do not include certain financial information required by U.S. generally accepted accounting principles (GAAP) for complete financial statements and should be read in conjunction with the audited consolidated financial statements and the related notes included in the Annual Report on Form 10-K of American International Group, Inc. (AIG) for the year ended December 31, 2006 (2006 Annual Report on Form 10-K).

In the opinion of management, these consolidated financial statements contain the normal recurring adjustments necessary for a fair statement of the results presented herein. All material intercompany accounts and transactions have been eliminated.

Certain reclassifications and format changes have been made to prior period amounts to conform to the current period presentation.

Out of period adjustments

During the three and six-month periods ended June 30, 2007, AIG recorded the effects of certain out of period adjustments which reduced net income by \$139 million and \$373 million, respectively, and diluted earnings per share by \$0.05 per share and \$0.14 per share, respectively.

During the three and six-month periods ended June 30, 2006, AIG recorded the effects of certain out of period adjustments which increased (decreased) net income by \$279 million and \$(67) million, respectively, and diluted earnings per share by \$0.11 per share and \$(0.03) per share, respectively.

Recent Accounting Standards

Accounting Changes

SOP 05-1

On September 19, 2005, the American Institute of Certified Public Accountants (AICPA) issued Statement of Position 05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts" (SOP 05-1). SOP 05-1 provides guidance on accounting for internal replacements of insurance and investment contracts other than those specifically described in Statement of Financial Accounting Standards (FAS) No. 97, "Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments" (FAS 97). SOP 05-1 defines an internal replacement as a modification in product

benefits, features, rights, or coverage that occurs by the exchange of a contract for a new contract, or by amendment, endorsement, or rider to a contract, or by the election of a feature or coverage within a contract. Internal replacements that result in a substantially changed contract are accounted for as a termination and a replacement contract.

The provisions of SOP 05-1 became effective as of January 1, 2007. On the date of adoption, AIG recorded a cumulative effect reduction of \$82 million, net of tax, to the opening balance of retained earnings to reflect changes in unamortized deferred policy acquisition costs (DAC), value of business acquired, deferred sales inducement assets, unearned revenue liabilities and future policy benefits for life and accident and health insurance contracts. This adjustment primarily reflects a shorter expected life related to certain group life and health insurance contracts and the effect on the gross profits of investment-oriented products related to previously anticipated future internal replacements. This cumulative effect adjustment affected only the Life Insurance & Retirement Services segment.

FIN 48

On July 13, 2006, the Financial Accounting Standards Board (FASB) issued FASB Interpretation No. 48, "Accounting for Uncertainty in Income Taxes – an interpretation of FASB Statement No. 109" (FIN 48), which clarifies the accounting for uncertainty in income tax positions. FIN 48 prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of an income tax position taken or expected to be taken in a tax return. FIN 48 also provides guidance on derecognition, classification, interest and penalties, accounting in interim periods, and additional disclosures. AIG adopted the provisions of FIN 48 on January 1, 2007. As a result of the adoption of FIN 48, AIG recognized a \$71 million increase in the liability for unrecognized tax benefits, which was accounted for as a decrease to opening retained earnings as of January 1, 2007.

As of the date of adoption and after recognizing the effect of the increase in the liability noted above, the total amount of AIG's unrecognized tax benefit, excluding interest and penalties, was \$1.138 billion. Included in this balance are \$407 million related to tax positions the disallowance of which would not affect the annual effective income tax rate. Accordingly, the amount of unrecognized tax benefit that, if recognized, would favorably affect the effective tax rate is \$731 million.

At June 30, 2007, AIG's unrecognized tax benefit, excluding interest and penalties, was \$1.274 billion which includes \$577 million related to tax positions the disallowance of which would not affect the annual effective income tax rate. Accordingly, the amount of unrecognized tax benefit

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**1. Summary of Significant Accounting Policies** (continued)

that, if recognized, would favorably affect the effective tax rate was \$697 million.

Interest and penalties related to unrecognized tax benefits are recognized in income tax expense. At January 1, 2007 and June 30, 2007, AIG had accrued \$176 million and \$203 million, respectively, for the payment of interest (net of the federal benefit) and penalties.

Neither reserves for uncertain tax positions attributable to prior restatements (including various other remediation-related adjustments) nor the corresponding interest income have been recognized because such amounts are not currently estimable. In addition, certain tax benefits from compensation deductions have not been recognized because of existing uncertainty with respect to the documentation supporting these tax benefits.

AIG continually evaluates proposed adjustments by taxing authorities. At June 30, 2007, such proposed adjustments would not result in a material change to AIG's consolidated financial condition. However, AIG believes that it is reasonably possible that the balance of the unrecognized tax benefits could decrease by \$0 to \$150 million by the end of 2007 due to settlements or expiration of statutes.

Listed below are the tax years that remain subject to examination by major tax jurisdiction:

Major Tax Jurisdictions	Open Tax Years
United States	1991-2006
Hong Kong	1997-2006
Malaysia	1999-2006
Singapore	1993-2006
Thailand	2001-2006
Taiwan	2000-2006
Japan	2000-2006
United Kingdom	2003-2006
France	2003-2006
Korea	2001-2006

FSP 13-2

On July 13, 2006, the FASB issued FASB Staff Position (FSP) No. 13-2, "Accounting for a Change or Projected Change in the Timing of Cash Flows Relating to Income Taxes Generated by a Leveraged Lease Transaction" (FSP 13-2). FSP 13-2 addresses how a change or projected change in the timing of cash flows relating to income taxes generated by a leveraged lease transaction affects the accounting for the lease by the lessor, and directs that the tax assumptions be consistent with any FIN 48 uncertain tax position related to the lease. FSP 13-2 is effective for fiscal years beginning after December 15, 2006. Upon adoption, AIG recorded at January 1, 2007, a \$50 million decrease in the opening balance of retained earnings, net of tax, as of January 1, 2007 to reflect the cumulative effect of this change in accounting. The adop-

tion of this guidance is not expected to have a material effect on the Company's results of operations in 2007.

As a result of the adoptions of SOP 05-1, FIN 48 and FSP 13-2, AIG recorded a total decrease to opening retained earnings of \$203 million as of January 1, 2007.

Future Application of Accounting Standards**FAS 157**

In September 2006, the FASB issued FAS No. 157, "Fair Value Measurements" (FAS 157). FAS 157 defines fair value, establishes a framework for measuring fair value and expands disclosure requirements regarding fair value measurements. FAS 157 will be effective January 1, 2008. AIG is currently assessing the effect of implementing this guidance.

FAS 159

In February 2007, the FASB issued FAS No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities" (FAS 159). FAS 159 permits entities to choose to measure at fair value many financial instruments and certain other items that are not currently required to be measured at fair value. Subsequent changes in fair value for designated items will be required to be reported in earnings in the current period. FAS 159 also establishes presentation and disclosure requirements for similar types of assets and liabilities measured at fair value. FAS 159 will be effective January 1, 2008. AIG is currently assessing the effect of implementing this guidance, which depends on the nature and extent of items elected to be measured at fair value upon initial application of the standard on January 1, 2008.

SOP 07-1

In June 2007, the AICPA issued Statement of Position No. 07-1 (SOP 07-1), "Clarification of the Scope of the Audit and Accounting Guide 'Audits of Investment Companies' and Accounting by Parent Companies and Equity Method Investors for Investments in Investment Companies." SOP 07-1 amends the guidance for whether an entity may apply the provisions of the Audit and Accounting Guide, "Audits of Investment Companies" (the Guide). Investment companies that are subject to the Guide must report all investments at fair value regardless of the nature of the investment or the level of ownership. SOP 07-1 also establishes new requirements for whether a parent company can retain specialized investment company accounting in its consolidated financial statements for subsidiaries and equity method investees that are covered by the Guide. SOP 07-1 will be effective on January 1, 2008. AIG is currently assessing the effect of implementing this guidance.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information**

AIG identifies its reportable segments by product line consistent with its management structure. These segments are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers have managed their businesses, commencing in the first quarter of 2007, AIG realigned certain products among reportable segments and major internal reporting units. AIG also began

reporting net realized capital gains and losses for the Financial Services and Asset Management segments in the results of these segments. Historically, net realized capital gains and losses were included in the Other category. There has been no change in AIG's management structure or in its reportable segments. All prior period amounts presented in the tables below have been revised to conform to the current year's presentation of these items.

The following table summarizes AIG's operations by major operating segment:

Operating Segments (in millions)	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006
Revenues ^(a) :				
General Insurance ^{(b)(c)}	\$12,928	\$12,167	\$25,831	\$23,823
Life Insurance & Retirement Services ^{(c)(d)}	14,023	11,911	27,705	24,761
Financial Services ^{(e)(f)}	2,123	1,246	4,324	2,912
Asset Management ^(g)	1,989	1,515	3,897	2,654
Other	263	138	394	228
Consolidation and eliminations	(176)	(123)	(356)	(246)
Consolidated	\$31,150	\$26,854	\$61,795	\$54,132
Operating income (loss) ^{(a)(h)} :				
General Insurance ^(c)	\$ 2,976	\$ 2,863	\$ 6,072	\$ 5,194
Life Insurance & Retirement Services ^(c)	2,620	2,381	4,901	5,011
Financial Services ^(f)	47	(530)	339	(638)
Asset Management	1,128	785	2,122	1,234
Other ^(f)	(460)	(258)	(930)	(767)
Consolidation and eliminations	17	—	(4)	—
Consolidated	\$ 6,328	\$ 5,241	\$12,500	\$10,034

(a) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS No. 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133), including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2007 and 2006, respectively, the effect was \$(430) million and \$(1.08) billion in both revenues and operating income. For the six-month periods ended June 30, 2007 and 2006, respectively, the effect was \$(882) million and \$(1.30) billion in both revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are hedging investments and borrowings. These gains (losses) for the three and six months ended June 30, 2007 include out of period charges of \$431 million and \$326 million, respectively, including a \$380 million charge in both periods to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIG Financial Products Corp. and AIG Trading Group Inc. and their respective subsidiaries (collectively, AIGFP). The first six months of 2006 include an out of period charge of \$300 million related to the remediation of the material weakness in accounting for certain derivative transactions under FAS 133.

(b) Represents the sum of General Insurance net premiums earned, net investment income and net realized capital gains (losses).

(c) Includes the effect of an out of period adjustment in the second quarter of 2006 related to the accounting for certain interests in unit investment trusts (UCITS). For the three and six-month periods ended June 30, 2006, the effect was an increase of \$432 million and \$405 million, respectively, in both revenues and operating income for General Insurance and an increase of \$221 million and \$203 million, respectively, in revenues and \$144 million and \$132 million, respectively, in operating income for Life Insurance & Retirement Services.

(d) Represents the sum of Life Insurance & Retirement Services premiums and other considerations, net investment income and net realized capital gains (losses). Included in net realized capital gains (losses) and operating income are gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, which were \$41 million and \$73 million for the three-month periods ended June 30, 2007 and 2006, respectively, and \$(82) million and \$425 million for the six-month periods ended June 30, 2007 and 2006, respectively. Also included in net realized capital gains (losses) was the application of FAS No. 52 "Foreign Currency Translation" (FAS 52), the effects of which were \$(24) million and \$(94) million for the three-month periods ended June 30, 2007 and 2006, respectively, and \$99 million and \$(90) million for the six-month periods ended June 30, 2007 and 2006, respectively.

(e) Primarily represents interest, lease and finance charges.

(f) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2007 and 2006, respectively, the effect was \$(443) million, and \$(1.1) billion in both revenues and operating income. For the six-month periods ended June 30, 2007 and 2006, respectively, the effect was \$(603) million and \$(1.8) billion in both revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings. The second quarter and the first six months of 2007 include the out of period charges of \$431 million and \$326 million, respectively, as discussed above. The first six months of 2006 include an out of period charge of \$300 million as discussed above. In the first quarter of 2007, AIG began applying hedge accounting for certain transactions, primarily in its Capital Markets operations. In the second quarter of 2007, American General Finance, Inc. (AGF) and International Lease Finance Corporation (ILFC) began applying hedge accounting to most of their derivatives hedging interest rate and foreign exchange risks associated with their floating rate and foreign currency denominated borrowings.

(g) Represents net investment income with respect to spread-based products and management and advisory fees.

(h) Represents income before income taxes, minority interest and cumulative effect of an accounting change.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information** (continued)

(i) Includes AIG parent and other operations which are not required to be reported separately. The following table presents the operating loss for AIG's Other category:

(in millions)	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006

(a) Revenues are primarily aircraft lease rentals from ILFC. Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2007 and 2006, the effect was \$24 million and \$10 million, respectively. For the six-month periods ended June 30, 2007 and 2006, the effect was \$(13) million and \$55 million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings. In the second quarter of 2007, ILFC began applying hedge accounting to most of its derivatives hedging interest rate and foreign exchange risks associated with its floating rate and foreign currency denominated borrowings.

(b) Revenues, shown net of interest expense of \$805 million and \$633 million for the three-month periods ended June 30, 2007 and 2006, respectively, and \$1.9 billion and \$1.3 billion for the six-month periods ended June 30, 2007 and 2006, respectively, were primarily from hedged financial positions entered into in connection with counterparty transactions. Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2007 and 2006, the effect was \$(528) million and \$(1.2) billion, respectively. For the six-month periods ended June 30, 2007 and 2006, the effect was \$(613) million and \$(1.8) billion, respectively. The second quarter and the first six months of 2007 include out of period charges of \$431 million and \$326 million, respectively, including a \$380 million charge in both periods to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIGFP. The first six months of 2006 include an out of period charge of \$300 million related to the remediation of the material weakness in accounting for certain derivative transactions under FAS 133. In the first quarter of 2007, AIGFP began applying hedge accounting for certain transactions.

(c) Certain transactions entered into by AIGFP generate tax credits and benefits which are included in income taxes in the consolidated statement of income. The amounts of such tax credits and benefits for the three-month periods ended June 30, 2007 and 2006 were \$18 million and \$8 million, respectively. The amounts of such tax credits and benefits for the six-month periods ended June 30, 2007 and 2006 were \$35 million and \$26 million, respectively.

(d) Revenues are primarily finance charges. Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2007 and 2006, the effect was \$20 million and \$5 million, respectively. For the six-month periods ended June 30, 2007 and 2006, the effect was \$(15) million and \$8 million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings. In the second quarter of 2007, AGF began applying hedge accounting to most of its derivatives hedging interest rate and foreign exchange risks associated with its floating rate and foreign currency denominated borrowings.

(e) The three-month and six-month periods ended June 30, 2007 included pre-tax charges of \$50 million and \$178 million, respectively, in connection with domestic consumer finance's mortgage banking activities.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Shareholders' Equity and Earnings Per Share****Earnings Per Share (EPS)**

Basic EPS of AIG is calculated using the weighted average number of common shares outstanding. Diluted EPS is based on those shares used in basic EPS plus shares that would have been outstanding assuming issuance of common shares for all potentially dilutive common shares outstanding.

The following table presents the computation of basic and diluted EPS:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006
<i>(in millions, except per share data)</i>				
Numerator for earnings per share:				
Income before cumulative effect of an accounting change	\$4,277	\$3,190	\$8,407	\$6,351
Cumulative effect of an accounting change, net of tax	-	-	-	34
Net income applicable to common stock for basic EPS	\$4,277	\$3,190	\$8,407	\$6,385
Interest on contingently convertible bonds, net of tax ^(a)	-	3	-	6
Net income applicable to common stock for diluted EPS	\$4,277	\$3,193	\$8,407	\$6,391
Cumulative effect of an accounting change, net of tax	-	-	-	(34)
Income before cumulative effect of an accounting change applicable to common stock for diluted EPS	\$4,277	\$3,193	\$8,407	\$6,357
Denominator for earnings per share:				
Weighted average shares outstanding used in the computation of EPS:				
Common stock issued	2,751	2,751	2,751	2,751
Common stock in treasury	(161)	(153)	(156)	(153)
Deferred shares	12	8	12	8
Weighted average shares outstanding – basic	2,602	2,606	2,607	2,606
Incremental shares from potential common stock:				
Weighted average number of shares arising from outstanding employee stock plans (treasury stock method) ^(b)	11	10	14	9
Contingently convertible bonds ^(a)	-	9	-	9
Weighted average shares outstanding – diluted ^(b)	2,613	2,625	2,621	2,624
Earnings per share:				
Basic:				
Income before cumulative effect of an accounting change	\$ 1.64	\$ 1.23	\$ 3.22	\$ 2.44
Cumulative effect of an accounting change, net of tax	-	-	-	0.01
Net income	\$ 1.64	\$ 1.23	\$ 3.22	\$ 2.45
Diluted:				
Income before cumulative effect of an accounting change	\$ 1.64	\$ 1.21	\$ 3.21	\$ 2.42
Cumulative effect of an accounting change, net of tax	-	-	-	0.01
Net income	\$ 1.64	\$ 1.21	\$ 3.21	\$ 2.43

(a) Assumes conversion of contingently convertible bonds due to the adoption of Emerging Issues Task Force Issue No. 04-8 "Accounting Issues Related to Certain Features of Contingently Convertible Debt and the Effect on Diluted Earnings per Share."

(b) Certain shares arising from employee stock plans were not included in the computation of diluted earnings per share where the exercise price of the options exceeded the average market price for the period and would have been antidilutive. The number of shares excluded was 7 million and 15 million for the six-month periods ended June 30, 2007 and 2006, respectively.

Shareholders' Equity

From time to time, AIG may buy shares of its common stock for general corporate purposes, including to satisfy its obligations under various employee benefit plans. In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. During March 2007, AIG entered into a \$3 billion structured share repurchase arrangement, and in May 2007 AIG entered into an additional \$1 billion structured share repurchase arrangement. A total of 24,491,961 shares were repurchased during

the first six months of 2007. The portion of the payments advanced by AIG under the structured share repurchase arrangements that had not yet been utilized to repurchase shares at June 30, 2007, amounting to \$2.34 billion, has been recorded as a component of shareholders' equity under the caption Payments advanced to purchase shares. Purchases have continued subsequent to June 30, 2007, with an additional 24,501,510 shares purchased from July 1 through August 6, 2007. All shares repurchased are recorded as treasury stock at cost.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)

The quarterly dividend per common share, commencing with the dividend declared in May 2007 and payable on September 21, 2007, was \$0.20.

The following table summarizes the changes in retained earnings during the first six months of 2007:

<i>(in millions)</i>	June 30, 2007
Retained earnings:	
Balance at beginning of year	\$ 84,996
Cumulative effect of accounting changes, net of tax	(203)
Adjusted balance, beginning of year	84,793
Net income	8,407
Dividends to shareholders	(949)
Balance, end of period	\$ 92,251

4. Benefits Provided by Starr International Company, Inc. and C.V. Starr & Co., Inc.

Starr International Company, Inc. (SICO) has provided a series of two-year Deferred Compensation Profit Participation Plans (SICO Plans) to certain AIG employees. The SICO Plans came into being in 1975 when the voting shareholders and Board of Directors of SICO, a private holding company whose principal asset is AIG common stock, decided that a portion of the capital value of SICO should be used to provide an incentive plan for the current and succeeding managements of all American International companies, including AIG.

None of the costs of the various benefits provided under the SICO Plans has been paid by AIG, although AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts deemed contributed by SICO. The SICO Plans provide that shares currently owned by SICO are set aside by SICO for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's voluntary termination of employment with AIG prior to normal retirement age. Under the SICO Plans, SICO's Board of Directors may elect to pay a participant cash in lieu of shares of AIG common stock. Following notification from SICO to participants in the SICO Plans that it will settle specific future awards under the SICO Plans with shares rather than cash, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. AIG gave effect to this change in settlement method beginning on December 9, 2005, the date of SICO's notice to participants in the SICO Plans. See also Note 6(b) "Commitments" herein.

In January 2006, C.V. Starr & Co., Inc. (Starr) completed its tender offer to purchase Starr interests from AIG employees. In conjunction with AIG's adoption of FAS

No. 123R "Share-Based Payments" (FAS 123R), Starr is considered to be an "economic interest holder" in AIG. As a result, compensation expense of \$54 million was included in the first six months of 2006 with respect to the Starr tender offer.

Compensation expense with respect to the SICO Plans aggregated \$10 million and \$14 million for the three-month periods ended June 30, 2007 and 2006, respectively, and \$20 million and \$90 million for the six-month periods ended June 30, 2007 and 2006, respectively. Compensation expense for the first six months of 2006 included various out of period adjustments totaling \$61 million, primarily relating to stock splits and other miscellaneous items for the SICO plans.

5. Ownership

According to the Schedule 13D filed on March 20, 2007 by Starr, SICO, Edward E. Matthews, Maurice R. Greenberg, the Maurice R. and Corinne P. Greenberg Family Foundation, Inc., the Universal Foundation, Inc., the Maurice R. and Corinne P. Greenberg Joint Tenancy Company, LLC and the C.V. Starr & Co., Inc. Trust, these reporting persons could be deemed to beneficially own 354,987,261 shares of AIG's common stock at that date. Based on the shares of AIG's common stock outstanding as of July 31, 2007, this ownership would represent approximately 14 percent of the voting stock of AIG. Although these reporting persons have made filings under Section 16 of the Securities Exchange Act of 1934 (Exchange Act), reporting sales of shares of common stock, no amendment to the Schedule 13D has been filed to report a change in ownership subsequent to March 20, 2007.

6. Commitments, Contingencies and Guarantees

In the normal course of business, various commitments and contingent liabilities are entered into by AIG and certain of its

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

subsidiaries. In addition, AIG guarantees various obligations of certain subsidiaries.

(a) Litigation and Investigations

Litigation Arising from Operations. AIG and its subsidiaries, in common with the insurance and financial services industries in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. In AIG's insurance operations, litigation arising from claims settlement activities is generally considered in the establishment of AIG's reserve for losses and loss expenses. However, in certain circumstances, AIG provides disclosure because of the size or nature of the potential liability to AIG. The potential for increasing jury awards and settlements makes it difficult to assess the ultimate outcome of such litigation.

Litigation Arising from Insurance Operations — Caremark. AIG and certain of its subsidiaries have been named defendants in two putative class actions in state court in Alabama that arise out of the 1999 settlement of class and derivative litigation involving Caremark Rx, Inc. (Caremark). The plaintiffs in the second-filed action have intervened in the first-filed action, and the second-filed action has been dismissed. An excess policy issued by a subsidiary of AIG with respect to the 1999 litigation was expressly stated to be without limit of liability. In the current actions, plaintiffs allege that the judge approving the 1999 settlement was misled as to the extent of available insurance coverage and would not have approved the settlement had he known of the existence and/or unlimited nature of the excess policy. They further allege that AIG, its subsidiaries, and Caremark are liable for fraud and suppression for misrepresenting and/or concealing the nature and extent of coverage. In their complaint, plaintiffs request compensatory damages for the 1999 class in the amount of \$3.2 billion, plus punitive damages. AIG and its subsidiaries deny the allegations of fraud and suppression and have asserted, *inter alia*, that information concerning the excess policy was publicly disclosed months prior to the approval of the settlement. AIG and its subsidiaries further assert that the current claims are barred by the statute of limitations and that plaintiffs' assertions that the statute was tolled cannot stand against the public disclosure of the excess coverage. Plaintiffs, in turn, have asserted that the disclosure was insufficient to inform them of the nature of the coverage and did not start the running of the statute of limitations. The trial court is currently considering, under standards mandated by the Alabama Supreme Court, whether a class action can be certified and whether the defendants in the case brought by the intervenors should be dismissed. AIG cannot reasonably estimate either the likelihood of its prevailing in

these actions or the potential damages in the event liability is determined.

Litigation Arising from Insurance Operations — Gunderson. A subsidiary of AIG has been named as a defendant in a putative class action lawsuit in the 14th Judicial District Court for the State of Louisiana. The *Gunderson* complaint alleges failure to comply with certain provisions of the Louisiana Any Willing Provider Act (the Act) relating to discounts taken by defendants on bills submitted by Louisiana medical providers and hospitals that provided treatment or services to workers compensation claimants and seeks monetary penalties and injunctive relief. On July 20, 2006, the court denied defendants' motion for summary judgment and granted plaintiffs' partial motion for summary judgment, holding that the AIG subsidiary was a "group purchaser" and, therefore, potentially subject to liability under the Act. On November 28, 2006, the court issued an order certifying a class of providers and hospitals. In an unrelated action also arising under the Act, a Louisiana appellate court ruled that the district court lacked jurisdiction to adjudicate the claims at issue. In response, defendants in *Gunderson* filed an exception for lack of subject matter jurisdiction. On January 19, 2007, the court denied the motion, holding that it has jurisdiction over the putative class claims. The AIG subsidiary is appealing the class certification ruling and is seeking an appeal from the jurisdictional ruling. While AIG believes that it has meritorious defenses to plaintiffs' claims, it cannot currently estimate the likelihood of prevailing in this action or reasonably estimate the likely damages, if any.

2006 Regulatory Settlements. In February 2006, AIG reached a resolution of claims and matters under investigation with the United States Department of Justice (DOJ), the Securities and Exchange Commission (SEC), the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). AIG recorded an after-tax charge of \$1.15 billion relating to these settlements in the fourth quarter of 2005.

The settlements resolved investigations conducted by the SEC, NYAG and DOI in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. These settlements did not, however, resolve investigations by regulators from other states into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Nor did the settlements resolve any obligations that AIG may have to state guarantee funds in connection with any of these matters.

As a result of these settlements, AIG made payments or placed amounts in escrow in 2006 totaling approximately

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

\$1.64 billion, \$225 million of which represented fines and penalties. Amounts held in escrow totaling \$341 million, including interest thereon, are included in other assets at June 30, 2007. At that date, approximately \$322 million of the funds were escrowed for settlement of claims resulting from the underpayment by AIG of its residual market assessments for workers compensation. The National Workers Compensation Reinsurance Pool, on behalf of its participant members, has filed a lawsuit against AIG with respect to the underpayment of such assessments. The National Association of Insurance Commissioners has formed a Settlement Review Working Group directed by the State of Indiana, which has commenced its own investigation into the underreporting of workers compensation premium. In addition, similar lawsuits filed by the Attorney General of the State of Minnesota, the Minnesota Workers Compensation Reinsurance Association and the Minnesota Workers Compensation Insurers Association are pending. AIG cannot currently estimate whether the amount ultimately required to settle these claims will exceed the funds escrowed or otherwise accrued for this purpose.

The remaining escrowed funds, which amounted to \$19 million at June 30, 2007, are set aside for settlements for certain specified AIG policyholders. During the first six months of 2007, approximately \$366 million was paid out from escrow in exchange for releasing AIG and its subsidiaries from any alleged liability relating to, among other things, brokerage practices alleged in the NYAG settlement. Any funds remaining at the end of the escrow period can be used to resolve claims asserted by policyholders relating to such insurance brokerage practices, including those described in Private Litigation below.

In addition to the escrowed funds, \$800 million was deposited into a fund under the supervision of the SEC as part of the settlements to be available to resolve claims asserted against AIG by investors, including the shareholder lawsuits described herein.

At the current time, AIG cannot predict the outcome of the matters described above, or estimate any potential additional cost related to these matters.

Also, as part of the settlements, AIG agreed to retain, for a period of three years, an independent consultant to conduct a review that will include, among other things, the adequacy of AIG's internal control over financial reporting, the policies, procedures and effectiveness of AIG's regulatory, compliance and legal functions and the remediation plan that AIG has implemented as a result of its own internal review.

Private Litigation

Securities Actions. Beginning in October 2004, a number of putative securities fraud class action suits were filed against AIG and consolidated as *In re American International Group, Inc. Securities Litigation*. Subsequently, a separate, though similar, securities fraud action was also brought against AIG by certain Florida pension funds. The lead plaintiff in the class action is a group of public retirement systems and pension funds benefiting Ohio state employees, suing on behalf of themselves and all purchasers of AIG's publicly traded securities between October 28, 1999 and April 1, 2005. The named defendants are AIG and a number of present and former AIG officers and directors, as well as Starr, SICO, General Reinsurance Corporation, and PricewaterhouseCoopers LLP (PwC), among others. The lead plaintiff alleges, among other things, that AIG: (1) concealed that it engaged in anti-competitive conduct through alleged payment of contingent commissions to brokers and participation in illegal bid-rigging; (2) concealed that it used "income smoothing" products and other techniques to inflate its earnings; (3) concealed that it marketed and sold "income smoothing" insurance products to other companies; and (4) misled investors about the scope of government investigations. In addition, the lead plaintiff alleges that AIG's former Chief Executive Officer manipulated AIG's stock price. The lead plaintiff asserts claims for violations of Sections 11 and 15 of the Securities Act of 1933, Section 10(b) of the Exchange Act, and Rule 10b-5 promulgated thereunder, Section 20(a) of the Exchange Act, and Section 20A of the Exchange Act. In April 2006, the court denied the defendants' motions to dismiss the second amended class action complaint and the Florida complaint. In December 2006, a third amended class action complaint was filed, which does not differ substantially from the prior complaint. Fact and class discovery is currently ongoing.

ERISA Action. Between November 30, 2004 and July 1, 2005, several Employee Retirement Income Security Act of 1974 (ERISA) actions were filed on behalf of purported class of participants and beneficiaries of three pension plans sponsored by AIG or its subsidiaries. A consolidated complaint filed on September 26, 2005 alleges a class period between September 30, 2000 and May 31, 2005 and names as defendants AIG, the members of AIG's Retirement Board and the Administrative Boards of the plans at issue, and four present or former members of AIG's Board of Directors. The factual allegations in the complaint are essentially identical to those in the securities actions described above. Plaintiffs allege that defendants violated duties under ERISA by allowing the plans to offer AIG stock as a permitted investment, when defendants allegedly knew it was not a prudent investment, and by failing to provide participants with accurate information about AIG stock. AIG's motion to dismiss was denied by

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

order dated December 12, 2006. AIG filed an answer on February 12, 2007, denying plaintiffs' allegations of wrongdoing and asserting affirmative defenses to plaintiffs' claims. Discovery was consolidated with proceedings in the securities actions and is ongoing.

Derivative Actions — Southern District of New York. Between October 25, 2004 and July 14, 2005, seven separate derivative actions were filed in the Southern District of New York, five of which were consolidated into a single action. The New York derivative complaint contains nearly the same types of allegations made in the securities fraud and ERISA actions described above. The named defendants include current and former officers and directors of AIG, as well as Marsh & McLennan Companies, Inc. (Marsh), SICO, Starr, ACE Limited and subsidiaries (ACE), General Reinsurance Corporation, PwC, and certain employees or officers of these entity defendants. Plaintiffs assert claims for breach of fiduciary duty, gross mismanagement, waste of corporate assets, unjust enrichment, insider selling, auditor breach of contract, auditor professional negligence and disgorgement from AIG's former Chief Executive Officer and Chief Financial Officer of incentive-based compensation and AIG share proceeds under Section 304 of the Sarbanes-Oxley Act, among others. Plaintiffs seek, among other things, compensatory damages, corporate governance reforms, and a voiding of the election of certain AIG directors. AIG's Board of Directors has appointed a special committee of independent directors (special committee) to review the matters asserted in the operative consolidated derivative complaint. The court has approved an agreement staying the derivative case pending in the Southern District of New York. The current stay extends until September 14, 2007.

Derivative Actions — Delaware Chancery Court. From October 2004 to April 2005, AIG shareholders filed five derivative complaints in the Delaware Chancery Court. All of these derivative lawsuits have been consolidated into a single action. The amended consolidated complaint names 43 defendants (not including nominal defendant AIG) who, like the New York consolidated derivative litigation, are current and former officers and directors of AIG, as well as other entities and certain of their current and former employees and directors. The factual allegations, legal claims and relief sought in Delaware action are similar to those alleged in the New York derivative actions, except that plaintiffs in the Delaware derivative action assert claims only under state law. Earlier in 2007, the Court approved an agreement that AIG be realigned as plaintiff, and, on June 13, 2007, acting on the direction of the special committee, AIG filed an amended complaint against former directors and officers Maurice R. Greenberg and Howard I. Smith, alleging breach of fiduciary

duty and indemnification. Also on June 13, 2007, the special committee filed a motion to terminate the litigation as to certain defendants, while taking no action as to others. Defendants Greenberg and Smith filed answers to AIG's complaint and brought third-party complaints against certain current and former AIG directors and officers, PwC and Regulatory Insurance Services, Inc. Certain defendants have subsequently filed motions to dismiss plaintiff's complaint, as well as defendants Greenberg and Smith's third-party complaints. Both plaintiff and defendant Smith have served initial discovery requests; however, certain defendants have sought to stay discovery pending the resolution of the motions to dismiss. Such motions are currently before the Court.

In December 2002, a derivative lawsuit was filed in the Delaware Chancery Court against twenty directors and executives of AIG as well as against AIG as a nominal defendant that alleges, among other things, that the directors of AIG breached the fiduciary duties of loyalty and care by approving the payment of commissions to Starr and of rental and service fees to SICO and the executives breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and their fiduciary duties by usurping AIG's corporate opportunity. The complaint further alleges that the Starr agencies did not provide any services that AIG was not capable of providing itself, and that the diversion of commissions to these entities was solely for the benefit of Starr's owners. The complaint also alleged that the service fees and rental payments made to SICO and its subsidiaries were improper. Under the terms of a stipulation approved by the Court on February 16, 2006, the claims against the outside independent directors were dismissed with prejudice, while the claims against the other directors were dismissed without prejudice. On October 31, 2005, Messrs. Greenberg, Matthews and Smith, SICO and Starr filed motions to dismiss the amended complaint. In an opinion dated June 21, 2006, the Court denied defendants' motion to dismiss, except with respect to plaintiff's challenge to payments made to Starr before January 1, 2000. On July 21, 2006, plaintiff filed its second amended complaint, which alleges that, between January 1, 2000 and May 31, 2005, individual defendants breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and breached their fiduciary duties by usurping AIG's corporate opportunity. Starr is charged with aiding and abetting breaches of fiduciary duty and unjust enrichment for its acceptance of the fees. SICO is no longer named as a defendant. On April 20, 2007, the individual defendants and Starr filed a motion seeking leave of the Court to assert a cross-claim against AIG and a third-party complaint against PwC and the directors previously dismissed from the action, as well as certain other AIG officers and employees. On June 13, 2007, the Court denied the individual defendants' motion to file a third-party complaint, but granted the proposed cross-claim against AIG. On June 27,

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)*

6. Commitments, Contingencies and Guarantees *(continued)*

2007, Starr filed its cross-claim against AIG, alleging one count that includes contribution, unjust enrichment and set-off. On July 16, 2007, AIG filed its answer and motion to dismiss Starr's cross-claim to the extent it seeks contribution by Starr and/or the individual defendants. That motion is currently before the Court. Document discovery and depositions are currently ongoing.

Policyholder Actions. After the NYAG filed its complaint against insurance broker Marsh, policyholders brought multiple federal antitrust and Racketeer Influenced and Corrupt Organizations Act (RICO) class actions in jurisdictions across the nation against insurers and brokers, including AIG and a number of its subsidiaries, alleging that the insurers and brokers engaged in a broad conspiracy to allocate customers, steer business, and rig bids. These actions, including 23 complaints filed in different federal courts naming AIG or an AIG subsidiary as a defendant, were consolidated or will be consolidated by the judicial panel on multi-district litigation and transferred to the United States District Court for the District of New Jersey for coordinated pretrial proceedings. The consolidated actions have proceeded in that court in two parallel actions, *In re Insurance Brokerage Antitrust Litigation* (the *First Commercial Complaint*) and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the *First Employee Benefits Complaint*, and together with the *First Commercial Complaint*, the multi-district litigation).

The plaintiffs in the *First Commercial Complaint* are nineteen corporations, individuals and public entities that contracted with the broker defendants for the provision of insurance brokerage services for a variety of insurance needs. The broker defendants are alleged to have placed insurance coverage on the plaintiffs' behalf with a number of insurance companies named as defendants, including AIG subsidiaries. The *First Commercial Complaint* also named ten brokers and fourteen other insurers as defendants (two of which have since settled). The *First Commercial Complaint* alleges that defendants engaged in a widespread conspiracy to allocate customers through "bid-rigging" and "steering" practices. The *First Commercial Complaint* also alleges that the insurer defendants permitted brokers to place business with AIG subsidiaries through wholesale intermediaries affiliated with or owned by those same brokers rather than placing the business with AIG subsidiaries directly. Finally, the *First Commercial Complaint* alleges that the insurer defendants entered into agreements with broker defendants that tied insurance placements to reinsurance placements in order to provide additional compensation to each broker. Plaintiffs assert that the defendants violated the Sherman Antitrust Act, RICO, the antitrust laws of 48 states and the District of Columbia, and

are liable under common law breach of fiduciary duty and unjust enrichment theories. Plaintiffs seek treble damages plus interest and attorneys' fees as a result of the alleged RICO and Sherman Antitrust Act violations.

The plaintiffs in the *First Employee Benefits Complaint* are nine individual employees and corporate and municipal employers alleging claims on behalf of two separate nationwide purported classes: an employee class and an employer class that acquired insurance products from the defendants from August 26, 1994 to the date of any class certification. The *First Employee Benefits Complaint* names AIG, as well as eleven brokers and five other insurers, as defendants. The activities alleged in the *First Employee Benefits Complaint*, with certain exceptions, track the allegations of contingent commissions, bid-rigging and tying made in the *First Commercial Complaint*.

On October 3, 2006, Judge Hochberg of the District of New Jersey reserved in part and denied in part motions filed by the insurer defendants and broker defendants to dismiss the multi-district litigation. The Court also ordered the plaintiffs in both actions to file supplemental statements of particularity to elaborate on the allegations in their complaints. Plaintiffs filed their supplemental statements on October 25, 2006, and the AIG defendants, along with other insurer and broker defendants in the two consolidated actions, filed renewed motions to dismiss on November 30, 2006. On February 16, 2007, the case was transferred to Judge Garrett E. Brown, Chief Judge of the District of New Jersey. On April 5, 2007, Chief Judge Brown granted the defendants' renewed motions to dismiss the *First Commercial Complaint* and *First Employee Benefits Complaint* with respect to the antitrust and RICO claims. The claims were dismissed without prejudice and the plaintiffs were given 30 days, later extended to 45 days, to file amended complaints. On April 11, 2007, the Court stayed all proceedings, including all discovery, that are part of the multi-district litigation until any renewed motions to dismiss the amended complaints are resolved.

A number of complaints making allegations similar to those in the *First Commercial Complaint* have been filed against AIG and other defendants in state and federal courts around the country. The defendants have thus far been successful in having the federal actions transferred to the District of New Jersey and consolidated into the multi-district litigation. The AIG defendants have also sought to have state court actions making similar allegations stayed pending resolution of the multi-district litigation proceeding. In one state court action pending in Florida, the trial court recently decided not to grant an additional stay, but instead to allow the case to proceed. The parties in that case are currently awaiting the trial court's ruling on the defendants' motions to dismiss the complaint.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

Plaintiffs filed amended complaints in both *In re Insurance Brokerage Antitrust Litigation* (the *Second Commercial Complaint*) and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the *Second Employee Benefits Complaint*) along with revised particularized statements in both actions on May 22, 2007. The allegations in the *Second Commercial Complaint* and the *Second Employee Benefits Complaint* are substantially similar to the allegations in the *First Commercial Complaint* and *First Employee Benefits Complaint*, respectively. The complaints also attempt to add several new parties and delete others; the *Second Commercial Complaint* adds two new plaintiffs and twenty seven new defendants (including three new AIG defendants), and the *Second Employee Benefits Complaint* adds eight new plaintiffs and nine new defendants (including two new AIG defendants). The defendants filed motions to dismiss the amended complaints and to strike the newly added parties, and the parties are currently awaiting the court's ruling on the motions.

Litigation Relating to 21st Century. Shortly after the announcement in late January 2007 of AIG's offer to acquire the outstanding shares of 21st Century Insurance Group (21st Century) not already owned by AIG and its subsidiaries, two related class actions were filed in the Superior Court of California, Los Angeles County, against AIG, 21st Century, and the individual members of 21st Century's Board of Directors, two of whom are current executive officers of AIG. The actions were filed purportedly on behalf of the minority shareholders of 21st Century and assert breaches of fiduciary duty in connection with the AIG proposal. The complaints allege that the proposed per share price is unfair and seek preliminary and permanent injunctive relief to enjoin the consummation of the proposed transaction. On May 23, 2007, a third action was filed alleging breaches of fiduciary duty by the same defendants based upon their entering into the merger agreement and taking steps to complete the contemplated merger, and seeking injunctive relief comparable to that sought in the first two complaints. All three actions have been consolidated under the caption *In re 21st Century Shareholder Litigation*. Plaintiffs have stated an intention to file a consolidated amended complaint.

SICO. In July, 2005, SICO filed a complaint against AIG in the Southern District of New York, claiming that AIG had refused to provide SICO access to certain artwork and asked the court to order AIG immediately to release the property to SICO. AIG filed an answer denying SICO's allegations and setting forth defenses to SICO's claims. In addition, AIG filed counterclaims asserting breach of contract, unjust enrichment, conversion, breach of fiduciary duty, a constructive trust and declaratory judgment, relating to SICO's breach of

its commitment to use its AIG shares only for the benefit of AIG and AIG employees. Fact and expert discovery has been substantially concluded and SICO's motion for summary judgment is pending.

Regulatory Investigations. Regulators from several states have commenced investigations into insurance brokerage practices related to contingent commissions and other industry-wide practices as well as other broker-related conduct, such as alleged bid-rigging. In addition, various federal and state regulatory agencies are reviewing certain transactions and practices of AIG and its subsidiaries in connection with industry-wide and other inquiries. AIG has cooperated, and will continue to cooperate, in producing documents and other information in response to subpoenas and other requests.

Wells Notices. AIG understands that some of its employees have received Wells notices in connection with previously disclosed SEC investigations of certain of AIG's transactions or accounting practices. Under SEC procedures, a Wells notice is an indication that the SEC staff has made a preliminary decision to recommend enforcement action that provides recipients with an opportunity to respond to the SEC staff before a formal recommendation is finalized. It is possible that additional current and former employees could receive similar notices in the future as the regulatory investigations proceed.

Effect on AIG

In the opinion of AIG management, AIG's ultimate liability for the unresolved litigation and investigation matters referred to above is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

(b) Commitments**Flight Equipment**

At June 30, 2007, ILFC had committed to purchase 246 new aircraft deliverable from 2007 through 2017 at an estimated aggregate purchase price of \$20.9 billion. ILFC will be required to find customers for any aircraft acquired, and it must arrange financing for portions of the purchase price of such equipment.

Other Commitments

In the normal course of business, AIG enters into commitments to invest in limited partnerships, private equities and hedge funds and to purchase and develop real estate in the U.S. and abroad. These commitments totaled \$6.73 billion at June 30, 2007.

On June 27, 2005, AIG entered into an agreement pursuant to which AIG agrees, subject to certain conditions, to

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

make any payment that is not promptly paid with respect to the benefits accrued by certain employees of AIG and its subsidiaries under the SICO Plans (as discussed in Note 4 herein).

(c) Contingencies

Loss Reserves. Although AIG regularly reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, directors and officers liability (D&O), professional liability, medical malpractice, workers compensation, general liability, products liability and related classes, as well as for asbestos and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss cost trends or loss development factors could be attributable to changes in inflation, in labor and material costs or in the judicial environment, or in other social or economic phenomena affecting claims.

Synthetic Fuel Tax Credits. AIG generates income tax credits as a result of investing in synthetic fuel production. Tax credits generated from the production and sale of synthetic fuel under the Internal Revenue Code are subject to an annual phase-out provision that is based on the average well-head price of domestic crude oil. The price range within which the tax credits are phased-out was originally established in 1980 and is adjusted annually for inflation. Depending on the price of domestic crude oil for a particular year, all or a portion of the tax credits generated in that year might be eliminated. AIG evaluates the production levels of its syn-

thetic fuel production facilities in light of the risk of phase-out of the associated tax credits. As a result of fluctuating domestic crude oil prices, AIG evaluates and adjusts production levels when appropriate in light of this risk. Under current legislation, the opportunity to generate additional tax credits from the production and sale of synthetic fuel expires on December 31, 2007.

Lease Transactions. On June 27, 2007, field agents at the Internal Revenue Service issued three Notices of Proposed Adjustment (NOPAs) relating to a series of lease transactions by an AIG subsidiary. In the NOPAs, the field agents asserted that the leasing transactions were "lease-in lease-out" transactions described in Revenue Ruling 2002-69 and proposed adjustments to taxable income of approximately \$81 million in the aggregate for the years 1998 and 1999. AIG cannot currently estimate the effect, if any, of the resolution of these matters.

(d) Guarantees

AIG and certain of its subsidiaries become parties to derivative financial instruments with market risk resulting from both dealer and end-user activities and to reduce currency, interest rate, equity and commodity exposures. These instruments are carried at their estimated fair values in the consolidated balance sheet. The vast majority of AIG's derivative activity is transacted by AIGFP. See Note 9 below and see Note 19 to the consolidated financial statements in the 2006 Annual Report on Form 10-K.

AIG has issued unconditional guarantees with respect to the prompt payment, when due, of all present and future payment obligations and liabilities of AIGFP arising from transactions entered into by AIGFP.

SAI Deferred Compensation Holdings, Inc., a wholly owned subsidiary of AIG, has established a deferred compensation plan for registered representatives of certain AIG subsidiaries, pursuant to which participants have the opportunity to invest deferred commissions and fees on a notional basis. The value of the deferred compensation fluctuates with the value of the deferred investment alternatives chosen. AIG has provided a full and unconditional guarantee of the obligations of SAI Deferred Compensation Holdings, Inc. to pay the deferred compensation under the plan.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***9. Derivatives and Hedge Accounting**

AIG uses derivatives and other instruments as part of its financial risk management programs and as part of its investment operations. AIGFP also transacts in derivatives as a dealer.

Derivatives, as defined in FAS 133, are financial arrangements among two or more parties with returns linked to or “derived” from some underlying equity, debt, commodity or other asset, liability, or foreign exchange rate or other index or the occurrence of a specified payment event. Derivative payments may be based on interest rates, exchange rates, prices of certain securities, commodities, or financial or commodity indices or other variables. Collateral is required on certain transactions based on the creditworthiness of the counterparty.

Unless subject to a scope exclusion, AIG carries all derivatives on the consolidated balance sheet at fair value. The changes in fair value of the derivative transactions of AIGFP are presented as a component of AIG’s operating income.

AIGFP

AIGFP, in the ordinary course of operations and as principal, structures and enters into derivative transactions to meet the needs of counterparties who may be seeking to hedge certain aspects of such counterparties’ operations or obtain a desired financial exposure. AIGFP also enters into derivative transactions to mitigate risk in its exposures (interest rates, currencies, commodities and equities) arising from such transactions. Such instruments are carried at market or fair value, whichever is appropriate, and are reflected on the balance sheet in “Unrealized gain on swaps, options and forward transactions” and “Unrealized loss on swaps, options and forward contracts.”

Beginning in the first quarter of 2007, AIGFP designated certain interest rate swaps as fair value hedges of the benchmark interest rate risk on certain of its interest bearing financial assets and liabilities. In these hedging relationships, AIG is hedging its fixed rate available for sale securities and fixed rate borrowings. AIGFP also designated foreign currency forward contracts as fair value hedges for changes in spot foreign exchange rates of the non-U.S. dollar denominated available for sale debt securities. Under these strategies, all or portions of individual or multiple derivatives may be designated against a single hedged item.

At inception of each hedging relationship, AIGFP performs and documents its prospective assessments of hedge

effectiveness to demonstrate that the hedge is expected to be highly effective. For hedges of interest rate risk, AIGFP uses regression to demonstrate the hedge is highly effective, while it uses the periodic dollar offset method for its foreign currency hedges. AIGFP uses the periodic dollar offset method to assess whether its hedging relationships were highly effective on a retrospective basis. The prospective and retrospective assessments are updated on a daily basis. The passage of time component of the hedging instruments is excluded from the assessment of hedge effectiveness and measurement of hedge ineffectiveness. AIGFP does not utilize the shortcut, match terms or equivalent methods.

The change in fair value of the derivative that qualifies under the requirements of FAS 133 as a fair value hedge is recorded in current period earnings along with the gain or loss on the hedged item for the hedged risk. For interest rate hedges, the adjustments to the carrying value of the hedged items are amortized into income using the effective yield method over the remaining life of the hedged item. Amounts excluded from the assessment of hedge effectiveness are recognized in current period earnings.

For the three and six months ended June 30, 2007, AIGFP recognized a net loss of less than \$1 million and a net gain of \$2 million in earnings, respectively, representing hedge ineffectiveness, and also recognized a net loss of \$157 million and \$211 million, respectively, related to the portion of the hedging instruments excluded from the assessment of hedge effectiveness. All these amounts are reflected in Other income. AIGFP did not apply hedge accounting in 2006.

Other Derivative Users

AIG and its subsidiaries (other than AIGFP) also use derivatives and other instruments as part of their financial risk management programs. Interest rate derivatives (such as interest rate swaps) are used to manage interest rate risk associated with investments in fixed income securities, commercial paper issuances, medium- and long-term note offerings, and other interest rate sensitive assets and liabilities. In addition, foreign exchange derivatives (principally cross currency swaps, forwards and options) are used to economically mitigate risk associated with non-U.S. dollar denominated debt, net capital exposures and foreign exchange transactions. The derivatives are effective economic hedges of the exposures they are meant to offset.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***9. Derivatives and Hedge Accounting** *(continued)*

In 2007, AIG and its subsidiaries other than AIGFP designated certain derivatives as either fair value or cash flow hedges of their debt. The fair value hedges included (i) interest rate swaps that were designated as hedges of the change in the fair value of fixed rate debt attributable to changes in the benchmark interest rate and (ii) foreign currency swaps designated as hedges of the change in fair value of foreign currency denominated debt attributable to changes in foreign exchange rates and/or the benchmark interest rate. With respect to the cash flow hedges, (i) interest rate swaps were designated as hedges of the changes in cash flows on floating rate debt attributable to changes in the benchmark interest rate, and (ii) foreign currency swaps were designated as hedges of changes in cash flows on foreign currency denominated debt attributable to changes in the benchmark interest rate and foreign exchange rates.

AIG assesses, both at the hedge's inception and on an ongoing basis, whether the derivatives used in hedging transactions are highly effective in offsetting changes in fair values or cash flows of hedged items. Regression analysis is employed to assess the effectiveness of these hedges both on a prospective and retrospective basis. AIG does not utilize the shortcut, match terms or equivalent methods.

The change in fair value of derivatives designated and effective as fair value hedges along with the gain or loss on the hedged item are recorded in net realized capital gains (losses). Upon discontinuation of hedge accounting, the

cumulative adjustment to the carrying value of the hedged item resulting from changes in the benchmark interest rate is amortized into income using the effective yield method over the remaining life of the hedged item. Amounts excluded from the assessment of hedge effectiveness are recognized in current period earnings. During both the three and six months ended June 30, 2007, AIG recognized a gain of less than \$1 million in earnings related to the ineffective portion of the hedging instruments. AIG also recognized a loss of \$8 million related to the change in the hedging instruments forward points excluded from the assessment of hedge effectiveness.

The effective portion of the change in fair value of a derivative qualifying as a cash flow hedge is recorded in Accumulated other comprehensive income (loss), until earnings are affected by the variability of cash flows in the hedged item. The ineffective portion of these hedges is recorded in net realized capital gains (losses). During the three and six months ended June 30, 2007, AIG recognized a loss of less than \$1 million and a gain of less than \$1 million, respectively, in earnings representing hedge ineffectiveness. At June 30, 2007, \$10 million of the deferred net gain in Accumulated other comprehensive income is expected to be recognized in earnings during the next 12 months. All components of the derivatives' gains and losses were included in the assessment of hedge effectiveness. There were no instances of the discontinuation of hedge accounting in 2007.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***10. Cash Flows**

As part of its remediation activities during 2006, AIG determined that certain non-cash activities and adjustments, including the effects of changes in foreign exchange translation on assets and liabilities, previously were misclassified within the operating, investing and financing sections of the Consolidated Statement of Cash flows. The more significant line items revised include the change in General and life insurance reserves and DAC within operating activities; Purchases of fixed maturity securities within investing activities; and Proceeds from notes, bonds, loans and mortgages payable, and hybrid financial instrument liabilities within financing activities. After

evaluating the effect of these items during the third quarter of 2006, AIG revised the previous periods presented in its September 30, 2006 consolidated financial statements included in that quarter's Quarterly Report on Form 10-Q to conform to the revised presentation.

Subsequent to that revision, additional revisions were made in 2006, primarily relating to certain elements of net realized capital gains and the effect of reclassifying certain policyholders' account balances from Other policyholder funds to Policyholders' contract deposits.

The effect of these revisions on the Consolidated Statement of Cash flows for the six months ended June 30, 2006 is presented below:

<i>(in millions)</i>	Originally Reported June 30, 2006	Revisions Third Quarter 2006	As Revised Third Quarter 2006	Additional Revisions	As Revised
Cash flows from operating activities	\$ 6,978	\$ (355)	\$ 6,623	\$(1,358)	\$ 5,265
Cash flows from investing activities	(40,048)	5,682	(34,366)	436	(33,930)
Cash flows from financing activities	32,243	(4,304)	27,939	922	28,861
Effect of exchange rate changes on cash	1,070	(1,023)	47	—	47

In addition to reviewing AIG's results for the first six months of 2007, this Management's Discussion and Analysis of Financial Condition and Results of Operations supplements and updates the information and discussion included in the 2006 Annual Report on Form 10-K. Throughout this Management's Discussion and Analysis, AIG presents its operations in the way it believes will be most meaningful. Statutory loss ratios and combined ratios are presented in accordance with accounting principles prescribed by insurance regulatory authorities because these are standard measures of performance filed with insurance regulatory authorities and used for analysis in the insurance industry and thus allow more meaningful comparisons with AIG's insurance competitors. AIG has also incorporated into this discussion cross-references to additional information included in this Quarterly Report on Form 10-Q and in the 2006 Annual Report on Form 10-K to assist readers seeking related information on a particular subject.

Overview of Operations and Business Results

AIG identifies its reportable segments by product or service line, consistent with its management structure. AIG's segments are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management. AIG's operations in 2007 and 2006 were conducted by its subsidiaries through these segments. Through these segments, AIG provides insurance, financial and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. This geographic, product and service diversification is one of AIG's major strengths and sets it apart from its competitors. AIG's Other category consists of items not allocated to AIG's operating segments.

AIG's subsidiaries serve commercial, institutional and individual customers through an extensive property-casualty and life insurance and retirement services network. In the United States, AIG companies are the largest underwriters of commercial and industrial insurance and are among the largest life insurance and retirement services operations as well. AIG's Financial Services businesses include commercial aircraft and equipment leasing, capital markets operations and consumer finance, both in the United States and abroad. AIG also provides asset management services to institutions and individuals. As part of its spread-based business activities, AIG issues various debt instruments in the public and private markets.

Outlook

The following paragraphs supplement and update the information and discussion included in Management's Discussion and Analysis of Financial Condition and Results of Operations — Outlook, in the 2006 Annual Report on Form 10-K to reflect developments in or affecting AIG's business during 2007.

The commercial property and casualty insurance industry has historically experienced cycles of price erosion followed by rate strengthening as a result of catastrophes or other significant losses that affect the overall capacity of the industry to provide coverage. Despite industry price erosion in commercial lines, AIG expects to continue to identify profitable opportunities and build attractive new general insurance businesses as a result of AIG's broad product line and extensive distribution networks in the U.S. and abroad.

Workers compensation remains under considerable pricing pressure, as statutory rates continue to decline. Rates for excess casualty, D&O and certain other lines of insurance also continue to decline due to competitive pressures. There can be no assurance that price erosion will not become more widespread or that AIG's profitability will not deteriorate from current levels in major commercial lines; however, AIG seeks to mitigate this risk by constantly seeking out profitable opportunities across its diverse product lines and distribution networks.

In AIG's Foreign Retirement Services business, the continued weak yen has resulted in higher than normal surrenders and that trend, if prolonged, could further accelerate the amortization of deferred acquisition costs (DAC). Similarly, in the Domestic Retirement Services business, the flat yield curve and the age of the in-force blocks of individual fixed annuities could result in an acceleration of surrender activity as early as 2008.

In Japan, the National Tax Authority in cooperation with the Life Insurance Association of Japan is reviewing the tax treatment for increasing term life insurance, which may affect the amount of premiums that qualify as tax deductions for business owners. As a result of this review, AIG's life insurance companies in Japan suspended the sale of increasing term life insurance from early April 2007. This action will have an adverse effect on life insurance sales in the second half of 2007. AIG companies in Japan have taken several measures aimed at increasing sales of other products in the Japanese market, in particular sales of U.S. dollar life insurance products.

In March 2007, the U.S. Treasury Department published proposed new regulations that, if adopted in their current form, would limit the ability of U.S. taxpayers to claim foreign tax credits in certain circumstances under the Internal Revenue Code. Should the proposed regulations be adopted in their current form, they would limit AIG's ability to claim foreign tax credits in connection with certain structured transactions entered into by AIG Financial Products Corp. and AIG Trading Group Inc. and their respective subsidiaries (collectively, AIGFP), resulting in a material adverse effect on AIGFP's operating results.

The U.S. residential mortgage market is experiencing serious disruption due to deterioration in the credit quality of loans originated to non-prime and subprime borrowers,

evolving changes in the regulatory environment and a slower residential housing market. AIG participates in the U.S. residential mortgage market in several ways: American General Finance, Inc. (AGF) extends first and second-lien mortgage loans to buyers and owners of residential housing; United Guaranty Corporation (UGC) provides mortgage guaranty insurance for first and second-lien residential mortgages; AIG insurance and financial services subsidiaries invest in mortgage-backed securities and collateralized debt obligations (CDOs) in which the underlying collateral is composed in whole or in part of residential mortgage loans; and AIGFP provides credit protection through credit default swaps on certain senior tranches of such CDOs. The operating results of AIG's consumer finance and mortgage guaranty operations in the United States have been and are likely to continue to be adversely affected by the factors referred to above. The downward cycle in the U.S. housing market is not expected to improve until residential inventories return to a more normal level and the mortgage credit market stabilizes. AIG expects that this downward

cycle will continue to adversely affect UGC's operating results for the foreseeable future, although UGC is beginning to experience improved credit quality trends on new production. The effect of the downward cycle in the U.S. housing market on AIG's other operations, investment portfolio and overall consolidated financial position, is not expected to be material due to AIG's disciplined underwriting and active risk management, as well as the high credit ratings for assets collateralized by subprime and non-prime mortgages and the structural protections against loss afforded AIG by its senior position in the investments and exposures that it holds.

In recent quarters, AIG's returns from partnerships and other alternative investments have been particularly strong, driven by favorable equity market performance and credit conditions. These returns may vary significantly from period to period. AIG believes that the particularly strong performance in recent periods is not indicative of the returns to be expected from this asset class in future periods.

Consolidated Results

The following table summarizes AIG's consolidated revenues, income before income taxes, minority interest and cumulative effect of an accounting change and net income:

<i>(in millions)</i>	Three Months Ended June 30,		Percentage Increase/ (Decrease)	Six Months Ended June 30,		Percentage Increase/ (Decrease)
	2007	2006		2007	2006	
Total revenues	\$31,150	\$26,854	16%	\$61,795	\$54,132	14%
Income before income taxes, minority interest and cumulative effect of an accounting change	6,328	5,241	21	12,500	10,034	25
Net income	\$ 4,277	\$ 3,190	34%	\$ 8,407	\$ 6,385	32%

AIG's consolidated revenues for the three and six-month periods ended June 30, 2007 increased compared to the same periods in 2006 as revenues increased in each of AIG's operating segments.

AIG's consolidated income before income taxes, minority interest and cumulative effect of an accounting change increased in the three and six-month periods ended June 30, 2007 compared to the same periods in 2006. During the three months ended June 30, 2007, growth was experienced in all operating segments compared to the same period in 2006. For the six months ended June 30, 2007 operating income grew in all operating segments with the exception of Life Insurance & Retirement Services, which declined marginally due to higher net realized capital losses. Operating income for the three and six-month periods ended June 30, 2007 reflects significant increases from the comparable periods in 2006 related to differences in the accounting treatment for hedging activities. In the first six months of 2007, AIGFP applied hedge accounting to certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. As a result, AIGFP was able to recognize in earnings the change in the fair value on the hedged items attributable to the hedged risks, offsetting the gains and losses on the derivatives designated as hedges. In 2006, AIGFP did not apply hedge

accounting under FAS 133 to any of its derivatives or related assets and liabilities.

During the three months ended June 30, 2007, AIG recorded certain out of period adjustments. These adjustments collectively decreased pre-tax operating income in that quarter by \$334 million and net income by \$139 million. The adjustments were comprised of a charge of \$431 million (\$280 million after tax) in Capital Markets, including \$380 million (\$247 million after tax) to reverse net gains on transfers of investment securities among legal entities consolidated within AIGFP into Accumulated other comprehensive income; a \$78 million decrease in income tax expense related to the remediation of the material weakness in controls over income tax accounting; \$27 million (\$18 million after tax) of net realized capital gains relating to foreign exchange; and \$70 million of additional income primarily relating to other remediation activities (\$45 million after tax).

For the six months ended June 30, 2007, out of period adjustments collectively decreased pre-tax operating income by \$495 million (\$373 million after tax). The adjustments were comprised of a charge of \$380 million (\$247 million after tax) discussed above; \$51 million of additional income tax expense related to the aforementioned remediation

activities; \$74 million (\$48 million after tax) of net realized capital gains related to foreign exchange; and \$189 million (\$123 million after tax) of additional expense, primarily relating to other remediation activities.

During the second quarter of 2006, as part of its remediation efforts, AIG identified and recorded an out of period adjustment related to the accounting for UCITS in accordance with FIN 46(R), "Consolidation of Variable Interest Entities" and APB Opinion No. 18, "The Equity Method of Accounting for Investments in Common Stock." These investments had previously been accounted for as available for sale securities, with changes in market values being reflected in Accumulated other comprehensive income, net of deferred income taxes. Beginning with the second quarter of 2006, the changes in market values are included in Net investment income. For the three and six-month periods ended June 30, 2006, the effect on the Consolidated Statement of Comprehensive Income (Loss) was decreases of \$576 million and \$537 million, respectively, in Unrealized appreciation (depreciation) of investments — net of reclassification adjustments, and increases of \$202 million and \$188 million, respectively, in the related Deferred income tax benefit (expense). For the three and six-month periods ended June 30, 2006, the effect on the Consolidated Statement of Income was increases of \$653 million and \$608 million, respectively, in Net investment income, increases of \$77 million and \$71 million, respectively, in Incurred policy losses and benefits, related to certain participating policyholder funds, and increases in Income taxes of \$202 and \$188 million, respectively. There was no effect on Total shareholders' equity at June 30, 2006.

In the second quarter of 2006, AIG recorded other out of period adjustments of \$85 million (\$55 million after tax) of interest income related to interest earned on deposit contracts and \$199 million (\$150 million after tax) of expenses related to the remediation of a material weakness in controls over certain balance sheet reconciliations and other remediation-related activities.

For the six months ended June 30, 2006, out of period adjustments collectively increased pre-tax operating income

by \$23 million and reduced net income by \$67 million. The adjustments were comprised of \$537 million (\$349 million after tax) of additional investment income related to the accounting for UCITS; \$300 million (\$145 million after tax) of charges related to the remediation of a material weakness in accounting for certain derivative transactions under FAS 133; \$126 million of additional income tax expense related to the aforementioned remediation activities; \$85 million (\$55 million after tax) of interest income related interest earned on deposit contracts; \$61 million (before and after tax) of expenses related to the Starr International Company, Inc. (SICO) Deferred Compensation Profit Participation Plans (SICO Plans); \$59 million (\$38 million after tax) of expenses related to deferred advertising costs; and \$179 million (\$101 million after tax) of additional expense, primarily related to other remediation activities.

Results for the first six months of 2006 were also negatively affected by a one-time charge relating to the C.V. Starr & Co., Inc. (Starr) tender offer (\$54 million before and after tax) and an additional allowance for losses in AIG Credit Card Company (Taiwan) (\$88 million before and after tax), both of which were recorded in first quarter of 2006.

Since March 31, 2006, through its continued remediation efforts, AIG identified additional out of period adjustments relating to the three and six months ended June 30, 2006 that increased (decreased) net income by \$(45) million and \$76 million, respectively. These items primarily relate to AIG's ongoing remediation of internal controls over accounting for UCITS and reconciliation of balance sheet accounts.

The effective income tax rate decreased from 30.1 percent for the full year of 2006 to 26.5 percent and 27.2 percent for the three and six-month periods ended June 30, 2007, respectively, primarily due to the benefits from remediation adjustments and the recognition of tax benefits associated with the SICO Plans for which the compensation expense had been recognized in prior years. Such tax benefits amounted to \$97 million and \$143 million, respectively, for the three and six-month periods ended June 30, 2007.

Segment Results

The following table summarizes AIG's operations by major operating segment. (See also Note 2 of Notes to Consolidated Financial Statements.)

(in millions)	Three Months Ended June 30,		Percentage Increase/ (Decrease)	Six Months Ended June 30,		Percentage Increase/ (Decrease)
	2007	2006		2007	2006	
Revenues ^(a) :

(a) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133), including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2007 and 2006, respectively, the effect was \$(430) million and \$(1.08) billion in both revenues and operating income. For the six-month periods ended June 30, 2007 and 2006, respectively, the effect was \$(882) million and \$(1.30) billion in both revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are hedging investments and borrowings. These gains (losses) for the three and six months ended June 30, 2007 include out of period charges of \$431 million and \$326 million, respectively, including a \$380 million charge in both periods to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIGFP. The first six months of 2006 include an out of period charge of \$300 million related to the remediation of the material weakness in accounting for certain derivative transactions under FAS 133.

(b) Represents the sum of General Insurance net premiums earned, net investment income and net realized capital gains (losses).

(c) Includes the effect of an out of period UCITS adjustment in the second quarter of 2006. For the three and six-month periods ended June 30, 2006, the effect was an increase of \$432 million and \$405 million, respectively, in both revenues and operating income for General Insurance and an increase of \$221 million and \$203 million, respectively, in revenues and \$144 million and \$132 million, respectively, in operating income for Life Insurance & Retirement Services.

(d) Represents the sum of Life Insurance & Retirement Services premiums and other considerations, net investment income and net realized capital gains (losses). Included in net realized capital gains (losses) and operating income are gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, which were \$41 million and \$73 million for the three-month periods ended June 30, 2007 and 2006, respectively, and \$(82) million and \$425 million for the six-month periods ended June 30, 2007 and 2006, respectively. Also included in net realized capital gains (losses) was the application of FAS 52, the effects of which were \$(24) million and \$(94) million for the three-month periods ended June 30, 2007 and 2006, respectively, and \$99 million and \$(90) million for the six-month periods ended June 30, 2007 and 2006, respectively.

(e) Primarily represents interest, lease and finance charges.

(f) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2007 and 2006, respectively, the effect was \$(443) million, and \$(1.1) billion in both revenues and operating income. For the six-month periods ended June 30, 2007 and 2006, respectively, the effect was \$(603) million and \$(1.8) billion in both revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings. The second quarter and the first six months of 2007 include the out of period charges of \$431 million and \$326 million, respectively, as discussed above. The first six months of 2006 include an out of period charge of \$300 million as discussed above. In the first quarter of 2007, AIG began applying hedge accounting for certain transactions, primarily in its Capital Markets operations. In the second quarter of 2007, AGF and ILFC began applying hedge accounting to most of their derivatives hedging interest rate and foreign exchange risks associated with their floating rate and foreign currency denominated borrowings.

(g) Represents net investment income with respect to spread-based products and management and advisory fees.

(h) Represents income before income taxes, minority interest and cumulative effect of an accounting change.

General Insurance

AIG's General Insurance operations provide property and casualty products and services throughout the world. Foreign operations provided approximately 29 percent and 36 percent of General Insurance operating income for the three months ended June 30, 2007 and 2006, respectively, and approximately 29 percent and 33 percent for the six months ended June 30, 2007 and 2006, respectively. The increase in General Insurance operating income in the three and six-month periods ended June 30, 2007 compared to the same periods in 2006 was primarily attributable to improved underwriting results for the Domestic Brokerage Group (DBG) and higher net investment income, partially offset by losses from the Mortgage Guaranty business.

Life Insurance & Retirement Services

AIG's Life Insurance & Retirement Services operations provide insurance, financial and investment products throughout the world. Foreign operations provided approximately 63 percent and 73 percent of Life Insurance & Retirement Services operating income for the three months ended June 30, 2007 and 2006, respectively, and approximately 60 percent and 68 percent for the six months ended June 30, 2007 and 2006, respectively. Operating income for the three months ended June 30, 2007 grew compared to the same period in 2006 primarily due to higher income from partnerships, credit-linked notes and call and

tender activity (other yield enhancement income) and growth in the underlying business. For the six months ended June 30, 2007, operating income declined 2 percent compared to the same period in 2006 due to charges related to balance sheet reconciliation remediation, an industry-wide claims review in Japan, the effect of SOP 05-1 and realized capital losses.

Financial Services

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance.

Financial Services operating income increased in the three and six-month periods ended June 30, 2007 compared to the same periods of 2006 primarily due to differences in the accounting treatment for hedging activities. In the first quarter of 2007, AIGFP applied hedge accounting to certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. In the second quarter of 2007, AGF and International Lease Finance Corporation (ILFC) began applying hedge accounting to most of their derivatives hedging interest rate and foreign currency denominated borrowings. Prior to 2007, hedge accounting under FAS 133 was not being applied to any of AIG's derivatives and related assets and liabilities. Accordingly, revenues and operating income were exposed to volatility resulting from differences in the timing of revenue recognition between the derivatives and the hedged assets and liabilities.

In the second quarter and first six months of 2007, the domestic consumer finance operations recorded pre-tax charges of \$50 million and \$178 million, respectively, representing the estimated cost of implementing the Supervisory Agreement entered into with the Office of Thrift Supervision (OTS), which are discussed in the Consumer Finance results of operations section.

Asset Management

AIG's Asset Management operations include institutional and retail asset management, broker-dealer services and institutional spread-based investment businesses. The Matched Investment Program (MIP) has replaced the GIC program as AIG's principal institutional spread-based investment activity.

Asset Management operating income increased for the three-month period ended June 30, 2007 compared to the same period in 2006 primarily due to higher investment gains, including a realized capital gain of \$398 million on the sale of a portion of AIG's investment in Blackstone Group, LP in connection with its initial public offering. Asset Management operating income increased for the six-month period ended June 30, 2007 compared to the same period in 2006 due to the aforementioned investment gains as well as growth in both the Spread-Based Investment business and the Institutional Asset Management business. Gains and losses

arising from the consolidation of certain partnerships, private equity investments and real estate funds are included in Operating income, but are offset in Minority interest expense, which is not a component of operating income.

Capital Resources

In the first six months of 2007, AIG issued \$4.49 billion of junior subordinated debentures in four series of securities. Substantially all of the proceeds from these sales, net of expenses, are being used to repurchase shares of AIG's common stock.

At June 30, 2007, AIG had total consolidated shareholders' equity of \$104.3 billion and total consolidated borrowings of \$165.3 billion. At that date, \$148.1 billion of such borrowings were not guaranteed by AIG, were matched borrowings by AIG Parent or AIGFP, or represented junior subordinated debt or liabilities connected to trust preferred stock.

In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. Share repurchases during 2007 are described under Capital Resources and Liquidity — Share Repurchases and in Item 2. of Part II of this Quarterly Report on Form 10-Q.

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At June 30, 2007, AIG's consolidated invested assets, primarily held by its subsidiaries, included \$29.4 billion in cash and short-term investments. Consolidated net cash provided from operating activities in the first six months of 2007 amounted to \$15.1 billion. Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements, including the funding of increased dividends under AIG's new dividend policy and repurchases of common stock.

Critical Accounting Estimates

AIG considers its most critical accounting estimates to be those relating to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts, recoverability of DAC, estimated gross profits for investment-oriented products, fair value determinations for certain Capital Markets assets and liabilities, other-than-temporary declines in the value of investments and flight equipment recoverability. These accounting estimates require the use of assumptions about matters, some of which are highly uncertain at the time of estimation. To the extent actual experience differs from the assumptions used, AIG's results of operations would be directly affected.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG's

critical accounting estimates are discussed in detail. The major categories for which assumptions are developed and used to establish each critical accounting estimate are highlighted below.

Reserves for Losses and Loss Expenses (General Insurance):

- *Loss trend factors:* used to establish expected loss ratios for subsequent accident years based on premium rate adequacy and the projected loss ratio with respect to prior accident years.
- *Expected loss ratios for the latest accident year:* in this case, accident year 2007 for the loss reserve analyses updated through June 30, 2007. For low-frequency, high-severity classes such as excess casualty, expected loss ratios generally are utilized for at least the three most recent accident years.
- *Loss development factors:* used to project the reported losses for each accident year to an ultimate amount.
- *Reinsurance recoverable on unpaid losses:* the expected recoveries from reinsurers on losses that have not yet been reported and/or settled.

Future Policy Benefits for Life and Accident and Health Contracts (Life Insurance & Retirement Services):

- *Interest rates:* which vary by geographical region, year of issuance and products.
- *Mortality, morbidity and surrender rates:* based upon actual experience by geographical region modified to allow for variation in policy form, risk classification and distribution channel.

Estimated Gross Profits (Life Insurance & Retirement Services):

- *Estimated gross profits:* to be realized over the estimated duration of the contracts (investment-oriented products) affect the carrying value of DAC, unearned revenue liability and associated amortization patterns under FAS 97 and Sales Inducement Assets under Statement of Position 03-1, "Accounting and Reporting by Insurance Enterprises for Certain Nontraditional Long-Duration Contracts and for Separate Accounts" (SOP 03-1). Estimated gross profits include investment income and gains and losses on investments less required interest, actual mortality and other expenses.

Deferred Policy Acquisition Costs (Life Insurance & Retirement Services):

- *Recoverability:* based on current and future expected profitability, which is affected by interest rates, foreign exchange rates, mortality experience, and policy persistency.

Deferred Policy Acquisition Costs (General Insurance):

- *Recoverability and eligibility:* based upon the current terms and profitability of the underlying insurance contracts.

Fair Value Determinations Of Certain Assets And Liabilities (Financial Services):

- *Valuation models:* utilizing factors, such as market liquidity and current interest, foreign exchange and volatility rates.
- *Market price data:* AIG attempts to secure reliable and independent current market price data, such as published exchange rates from external subscription services such as Bloomberg or Reuters or third-party broker quotes for use in its models. When such data is not available, AIG uses an internal methodology, which includes interpolation and extrapolation from verifiable recent prices.

Other-Than-Temporary Declines In The Value Of Investments:

A security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer);
- The occurrence of a discrete credit event resulting in the debtor defaulting or seeking bankruptcy or insolvency protection or voluntary reorganization; or
- The probability of non-realization of a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

At each balance sheet date, AIG evaluates its securities holdings in an unrealized loss position. Where AIG does not intend to hold such securities until they have fully recovered their carrying value, based on the circumstances present at the date of evaluation, AIG records the unrealized loss in income. If events or circumstances change, such as unexpected changes in the creditworthiness of the obligor, unanticipated changes in interest rates, tax laws, statutory capital positions and unforeseen liquidity events, among others, AIG revisits its intent. Further, if a loss is recognized from a sale subsequent to a balance sheet date pursuant to these unexpected changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer exists.

In periods subsequent to the recognition of an other-than-temporary impairment loss for debt securities, AIG amortizes the discount or reduced premium over the remaining life of the security in a prospective manner based on the amount and timing of estimated future cash flows.

Flight Equipment — Recoverability (Financial Services):

- *Expected undiscounted future net cash flows:* based upon current lease rates, projected future lease rates and estimated terminal values of each aircraft based on third party information.

Operating Review

General Insurance Operations

AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of property and casualty insurance and various personal lines both domestically and abroad.

Domestic General Insurance operations are comprised of DBG, Reinsurance, Personal Lines and Mortgage Guaranty businesses.

DBG writes substantially all classes of business insurance, accepting such business mainly from insurance brokers. This provides DBG the opportunity to select specialized markets and retain underwriting control. Any licensed broker is able to submit business to DBG without the traditional agent-company contractual relationship, but such broker usually has no authority to commit DBG to accept a risk.

Transatlantic Holdings, Inc. (Transatlantic) subsidiaries offer reinsurance capacity on both a treaty and facultative basis both in the U.S. and abroad. Transatlantic structures

programs for a full range of property and casualty products with an emphasis on specialty risk.

AIG's Personal Lines operations provide automobile insurance through AIG Direct, a mass marketing operation, the Agency Auto Division and 21st Century, as well as a broad range of coverages for high net worth individuals through the AIG Private Client Group.

The main business of the UGC subsidiaries is the issuance of residential mortgage guaranty insurance on conventional first-lien mortgages for the purchase or refinance of one to four family residences. UGC subsidiaries also write second-lien and private student loan guaranty insurance.

AIG's Foreign General Insurance group accepts risks primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance group also includes business written by AIG's foreign-based insurance subsidiaries.

General Insurance Results

General Insurance operating income is comprised of statutory underwriting results, changes in DAC, net investment income and net realized capital gains and losses.

Operating income, as well as net premiums written, net premiums earned, net investment income and net realized capital gains (losses) and statutory ratios were as follows:

<i>(in millions, except ratios)</i>	Three Months Ended June 30,		Percentage Increase/ (Decrease)	Six Months Ended June 30,		Percentage Increase/ (Decrease)
	2007	2006		2007	2006

(a) Income statement accounts expressed in non-functional currencies are translated into U.S. dollars using average exchange rates.

(b) The three and six-month periods ended June 30, 2006 include increases of \$412 million and \$386 million, respectively, relating to an out of period UCITS adjustment recorded in the second quarter of 2006.

(c) Includes additional losses incurred and net reinstatement premiums related to prior year catastrophes of \$18 million and \$(51) million in the three-month periods ended June 30, 2007 and 2006, respectively, and \$53 million and \$48 million in the six-month periods ended June 30, 2007 and 2006, respectively.

(d) Includes the results of wholly owned Foreign General agencies.

(e) Includes losses incurred and net reinstatement premiums related to current year catastrophes of \$68 million in both the three and six-month periods ended June 30, 2007.

(f) Statutory underwriting profit (loss) is a measure that U.S. domiciled insurance companies are required to report to their regulatory authorities. The following table reconciles statutory underwriting profit (loss) to operating income for General Insurance:

<i>(in millions)</i>	Domestic Brokerage Group	Transatlantic	Personal Lines	Mortgage Guaranty	Foreign General	Reclassifications and Eliminations	Total
Three Months Ended June 30, 2007:							
Statutory underwriting profit (loss)	\$ 946	\$ 37	\$ 56	\$(126)	\$ 371	\$ -	\$ 1,284
Increase (decrease) in DAC	50	10	7	9	51	-	127

AIG transacts business in most major foreign currencies. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of General Insurance net premiums written:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006
Growth in original currency*	3.3%	9.7%	4.7%	7.9%
Foreign exchange effect	1.0	(0.4)	1.2	(1.1)
Growth as reported in U.S. dollars	4.3%	9.3%	5.9%	6.8%

* Computed using a constant exchange rate throughout each period.

Quarterly General Insurance Results

General Insurance operating income increased in the three months ended June 30, 2007 compared to the same period in 2006. The 2007 combined ratio increased to 87.1, an increase of 0.6 points over 2006, including an increase in the loss ratio of 0.5 points. Prior year development and increases in the loss reserve discount reduced incurred losses by \$212 million and \$248 million for the three months ended June 30, 2007 and 2006, respectively, accounting for 0.5 points of the increase. The loss ratio for accident year 2007 recorded in the three months ended June 30, 2007 was substantially the same as the loss ratio recorded in the three months ended June 30, 2006 for accident year 2006, despite a \$68 million loss from the June 2007 U.K. floods and an increase in Mortgage Guaranty losses in the 2007 period. The downward cycle in the U.S. housing market is not expected to improve until residential inventories return to a more normal level, and AIG expects that this downward cycle will continue

to adversely affect UGC's loss ratios for the foreseeable future. Net premiums written increased for the three months ended June 30, 2007 compared to the same period in 2006, driven by Foreign General growth from both established and new distribution channels and the effect of changes in foreign currency exchange rates.

General Insurance net investment income was essentially unchanged for the three months ended June 30, 2007 compared to the same period in 2006. Interest and dividend income increased \$138 million for the second quarter of 2007 compared to the same period in 2006 as investment in fixed maturities and equity securities increased by \$11.9 billion and the yield on interest earning investments remained consistent at 4.6 percent. Income from partnership investments increased \$120 million for the three months ended June 30, 2007 compared to the same period in 2006, primarily due to improved returns on underlying investments. Other investment income decreased \$250 million, primarily

due to the effect of the \$432 million out of period adjustment related to the accounting for UCITS recorded in 2006.

Year-to-Date General Insurance Results

General Insurance operating income increased for the first six months of 2007 compared to the same period in 2006 due to growth in net investment income and an increase in underwriting profit, which is reflected in the combined ratio. The combined ratio improved to 87.3, a reduction of 0.5 points from 2006, including an improvement in the loss ratio of 1.0 point. Prior year development and increases in the loss reserve discount reduced incurred losses by \$343 million and \$213 million for the first six months of 2007 and 2006, respectively, accounting for 0.5 points of the improvement in the loss ratio. The loss ratio for accident year 2007 recorded in the first six months of 2007 was 0.5 points lower than the loss ratio recorded in the first six months of 2006 for accident year 2006, despite the loss from the June 2007 U.K. floods and an increase in Mortgage Guaranty losses in the 2007 period.

General Insurance net premiums written increased in the first six months of 2007 compared to the same period in 2006, reflecting growth in Foreign General from both established and new distribution channels, the effect of changes in foreign currency exchange rates, and growth in Mortgage Guaranty, primarily from international business.

General Insurance net investment income increased in the first six months of 2007 to \$3.2 billion. Interest and dividend income increased \$333 million for the first six months of 2007 compared to the same period of 2006 as fixed maturities and equity securities increased by \$11.9 billion and the yield remained consistent at 4.6 percent. Income from partnership investments increased \$302 million for the first six months of 2007 compared to the same period in 2006, primarily due to improved returns on underlying investments and higher levels of invested assets, which increased by \$1.3 billion. Other investment income decreased by \$154 million, which reflects the effect of the \$405 million out of period UCITS adjustment recorded in 2006. See also Capital Resources and Liquidity — Liquidity and Invested Assets herein.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers have managed their businesses, commencing in the first quarter of 2007, the foreign aviation business, which was historically reported in DBG, is now being reported as part of Foreign General, and the oil rig and marine businesses, which were historically reported in Foreign General, are now being reported as part of DBG. Prior period amounts have been revised to conform to the current presentation.

Quarterly DBG Results

DBG's operating income increased in the three months ended June 30, 2007 compared to the same period of 2006. The improvement is also reflected in the combined ratio, which declined 3.9 points in the three months ended June 30, 2007 compared to the same period of 2006 primarily due to an improvement in the loss ratio of 3.8 points. The loss ratio for accident year 2007 recorded in the three months ended June 30, 2007 was 2.4 points lower than the loss ratio recorded in the same period of 2006 for accident year 2006. Prior year development and increases in the loss reserve discount reduced incurred losses by \$190 million and \$106 million for the three months ended June 30, 2007 and 2006, respectively, accounting for 1.4 points of the improvement.

DBG's net premiums written declined for the three months ended June 30, 2007 compared to the same period in 2006 due to an increase in ceded premiums and declines in premium rates in casualty lines of business. These declines were partially offset by the renewal of a property reinsurance treaty in 2007 at rates lower than the expiring treaty, resulting in a \$52 million increase in net premiums written. Ceded premiums as a percentage of gross written premiums increased to 26 percent for the three months ended June 30, 2007 compared to 24 percent in the same period in 2006, primarily due to additional reinsurance for property risks to manage catastrophe exposures.

DBG's expense ratio decreased to 17.5 for the three months ended June 30, 2007 compared to 17.7 in the same period in 2006, primarily due to a decrease in charges related to remediation of the material weakness in balance sheet reconciliations which included a \$32 million out of period charge in the second quarter of 2006. This decline was partially offset by increases in expenses for marketing initiatives in 2007.

DBG's net investment income increased for the three months ended June 30, 2007 compared to the same period in 2006, as interest income increased \$95 million for the three months ended June 30, 2007, on growth in the bond portfolio resulting from investment of operating cash flows and capital contributions. Income from partnership investments increased \$44 million for the three months ended June 30, 2007 compared to the same period in 2006, primarily due to improved returns on the underlying investments.

Year-to-date DBG Results

DBG's operating income increased for the first six months of 2007 compared to the same period in 2006. The improvement is also reflected in the combined ratio, which declined 4.3 points in the first six months of 2007 compared to the same period in 2006, primarily due to an improvement

in the loss ratio of 4.5 points. The loss ratio for accident year 2007 recorded for the first six months of 2007 was 2.5 points lower than the loss ratio recorded in the same period of 2006 for accident year 2006. Prior year development and increases in the loss reserve discount reduced incurred losses by \$277 million and \$32 million for the three months ended June 30, 2007 and 2006, respectively, accounting for 2.0 points of the improvement.

DBG's net premiums written increased in the first six months of 2007 compared to the same period of 2006 due to the strength of AIG's capacity, commitment during challenging market conditions, diverse product offerings and the acquisition of TravelGuard, which markets accident and health products. Ceded premiums as a percentage of gross written premiums increased to 25 percent in the first six months of 2007 compared to 23 percent for the same period in 2006, primarily due to additional reinsurance for property risks to manage catastrophe exposures.

DBG's expense ratio increased to 18.3 for the first six months in 2007 compared to 18.1 in the same period of 2006, due to increases in operating expenses for marketing initiatives and operations as well as changes in the mix of business towards products with lower loss ratios and higher expense ratios.

DBG's net investment income increased for the first six months of 2007 compared to the same period in 2006, as interest income increased \$225 million for the six months ended June 30, 2007, on growth in the bond portfolio resulting from investment of operating cash flows and capital contributions. Income from partnership investments increased \$199 million for the first six months of 2007 compared to the same period in 2006, primarily due to improved returns on the underlying investments.

Quarterly Transatlantic Results

Transatlantic's net premiums written and net premiums earned increased for the three months ended June 30, 2007 compared to the same period in 2006 due primarily to increased writings in domestic and international operations. Statutory underwriting profit increased due to improved underwriting results from European operations for the three months ended June 30, 2007 compared to the same period in 2006. Operating income increased for the three months ended June 30, 2007 compared to the same period in 2006 due to increased net investment income and improved underwriting results.

Year-to-date Transatlantic Results

Transatlantic's net premiums written and net premiums earned increased for the first six months of 2007 compared to the same period in 2006 due primarily to increased writings in domestic operations. Statutory underwriting profit was adversely affected by European windstorm and flood losses

and storms in Australia, partially offset by lower net adverse development for the six months ended June 30, 2007 compared to the same period in 2006, resulting in an overall decline in statutory underwriting profit for the 2007 period. Operating income increased for the first six months of 2007 compared to the same period in 2006 as increased net investment income and net realized capital gains more than offset the decline in underwriting results.

Quarterly Personal Lines Results

Personal Lines operating income in the three months ended June 30, 2007 compared to the same period of 2006 was unchanged, and reflected a reduction in the loss ratio of 0.5 points. The loss ratio for accident year 2007 recorded for the three months ended June 30, 2007 was 1.5 points lower than the loss ratio recorded for the same period in 2006 for accident year 2006. Prior year development reduced incurred losses by \$32 million and \$43 million for the three months ended June 30, 2007 and 2006, respectively, increasing the 2007 loss ratio by 1.0 point relative to the 2006 loss ratio. The improvement in the accident year loss ratio is primarily due to favorable loss trends and growth in the Private Client Group. The improvement in the loss ratio along with a decrease in the expense ratio of 0.26 points resulted in an overall improvement of the combined ratio of 0.73 points.

Net premiums written increased 1.9 percent for the three months ended June 30, 2007 compared to the same period in 2006 due to continued growth in the Private Client Group, partially offset by an 11 percent reduction in Agency Auto.

On May 15, 2007, AIG and 21st Century Insurance Group entered into a definitive merger agreement providing that AIG will acquire the 21st Century shares it does not currently own at a price of \$22.00 per share in cash, for a total purchase price of approximately \$813 million. AIG already owns, through its subsidiaries, approximately 60.8 percent of the outstanding shares of 21st Century. Upon completion of the transaction, 21st Century will become a wholly owned subsidiary of AIG.

The merger is expected to be completed in the third quarter of 2007, subject to customary conditions and approvals. The exact time is dependent on the review and clearance of necessary filings with the SEC, which are in process. The transaction is subject to the affirmative vote of the holders of the majority of the outstanding shares of 21st Century. AIG has agreed to vote or cause to be voted all of its and its subsidiaries' 21st Century shares in favor of the merger.

Year-to-date Personal Lines Results

The modest increase in Personal Lines operating income in the first six months of 2007 compared to the same period of 2006 reflects a reduction in the loss ratio of 1.0 point. The loss ratio for accident year 2007 recorded for the first six

months of 2007 was 1.0 point lower than the loss ratio recorded in the same period of 2006 for accident year 2006. Prior year development reduced incurred losses by \$61 million and \$62 million for the six months ended June 30, 2007 and 2006, respectively, resulting in a negligible change in the loss ratio between the periods. The improvement in the accident year loss ratio was primarily due to favorable loss trends and growth in the Private Client Group, partially offset by increased losses in 21st Century. The improvement in the loss ratio was partially offset by an increase in the expense ratio of 0.6 points, primarily due to increased acquisition expenses in connection with the 21st Century merger, growth in the Private Client Group, and reduced premium writings in Agency Auto.

Net premiums written increased 2.3 percent for the first six months of 2007 compared to the same period in 2006 due to continued growth in the Private Client Group and a modest increase in the Direct business, partially offset by a 10 percent reduction in Agency Auto.

Quarterly Mortgage Guaranty Results

The significant decline in Mortgage Guaranty operating income for the three months ended June 30, 2007 compared to the same period in 2006 was due primarily to unfavorable loss experience in both the domestic first and second-lien businesses as a result of the continued softening in the U.S. housing market. Losses incurred were up significantly across all lines of the domestic Mortgage Guaranty business. UGC's consolidated loss ratio for the three months ended June 30, 2007 was 129.9 compared to a loss ratio of 33.1 for the same period in 2006. Prior year development reduced incurred losses by \$4 million and \$52 million for the three months ended June 30, 2007 and 2006, respectively, increasing the 2007 loss ratio by 27.6 points relative to the 2006 loss ratio.

Net premiums written increased 41 percent in the three months ended June 30, 2007 compared to the same period in 2006 as international premiums were up \$50 million, accounting for 26 points of the increase in net premiums written. In addition, first-lien premiums increased by \$23 million due to increased use of mortgage insurance for credit enhancement and improved persistency. Although UGC discontinued accepting new business for the poorly performing third-party originated second-lien product in the fourth quarter of 2006, UGC will continue to receive renewal premiums on the existing portfolio for the life of the loans, estimated to be three to five years. The expense ratio of 22.4 in the three months ended June 30, 2007 declined from 24.7 in the same period of 2006 as premium growth offset expenses related to UGC's international expansion and additional operational resources in the second-lien and private education loan businesses.

UGC's domestic mortgage net risk in force totaled \$25.9 billion as of June 30, 2007 with a 60-day delinquency ratio of 2.5 percent (based on number of policies, consistent with mortgage insurance industry practice). A significant portion of the mortgage risk is secured by first liens on single family, owner-occupied properties.

Year-to-date Mortgage Guaranty Results

The significant decline in Mortgage Guaranty operating income in the first six months of 2007 compared to the same period in 2006 was due primarily to the unfavorable loss experience in both the domestic first and second-lien businesses. The third-party originated second-lien product continued to perform poorly. UGC's consolidated loss ratio for the first six months was 111.5 compared to a loss ratio of 31.8 for the same period in 2006. Prior year development increased incurred losses by \$27 million in the first six months of 2007 compared to a reduction of \$65 million for the same period in 2006, accounting for 25 points of the increase in the loss ratio.

Net premiums written increased 38 percent in the first six months of 2007 compared to the same period in 2006 as international premiums grew \$85 million, accounting for 22 points of the increase in net premiums written. In addition, domestic first-lien premiums increased \$36 million for the six months ended June 30, 2007 compared to the same period in 2006 due to the increased use of mortgage insurance for credit enhancement as well as improved persistency. The expense ratio of 22.1 in the first six months of 2007 declined from 23.7 for the same period in 2006 as premium growth offset expenses related to UGC's international expansion and additional operational resources in the second-lien and private education loan businesses.

Quarterly Foreign General Insurance Results

Foreign General's operating income decreased in the three months ended June 30, 2007 compared to the same period in 2006 due to decreases in statutory underwriting profit and net investment income, partially offset by increases due to the effect of changes in the currency exchange rates of the Euro and the British Pound. Statutory underwriting profit decreased due to a \$68 million loss from the June 2007 U.K. floods. Net investment income in the prior year quarter included the \$412 million out of period UCITS adjustment.

Net premiums written increased 13 percent (9 percent in original currency) for the three months ended June 30, 2007 compared to the same period in 2006, reflecting growth in commercial and consumer lines driven by new business from both established and new distribution channels, including Central Insurance Co. Ltd. in Taiwan, and by greater retention of commercial lines accounts on renewal. Growth in consumer lines in Latin America and Europe and commercial lines in Europe and the U.K. also contributed to

the increase. Net premiums written also increased by one percent compared to the same period in 2006 due to decreases in the use of reinsurance. Net premiums written by the Lloyd's syndicate Ascot increased for the three months ended June 30, 2007 compared to the same period in 2006. Net premiums written for Aviation declined due to rate decreases resulting from increased market competition.

The loss ratio increased 5 points for the three months ended June 30, 2007 compared to the same period in 2006. The 2007 loss ratio increased 2.2 points due to the losses from the U.K. floods and increased 0.6 points due to higher asbestos and environmental reserves relating to one case. The 2007 and 2006 loss ratios benefited from favorable loss development on prior accident years, by 0.8 points and 2.7 points, respectively.

The expense ratio was unchanged for the three months ended June 30, 2007 compared to the same period in 2006. The 2006 expense ratio reflected a profit commission adjustment in Ascot which increased the second quarter 2006 expense ratio by 1.2 points. The comparable increase in the expense ratio in 2007 resulted from higher commission costs and higher operating expenses due to new business initiatives and the cost of realigning certain legal entities through which Foreign General operates. AIG expects the expense ratio to increase during the remainder of 2007 due to the underlying seasonality of renewals and as the consumer lines of business, which have higher acquisition costs, increase in significance as a component of net premiums written.

Net investment income decreased for the three months ended June 30, 2007 compared to the same period in 2006, as the 2006 period included the out of period UCITS adjustment, which more than offset underlying growth of \$237 million in net investment income. Net investment income for the second quarter of 2007 reflected higher interest rates, strong cash flows and increased equity mutual fund and partnership income. Equity mutual fund income was \$130 million higher than the same quarter last year reflecting the strong performance in the equity markets, and partnership income was \$69 million higher than prior year quarter due to strong infrastructure fund performance in Africa, Europe and Latin America.

Year-to-date Foreign General Insurance Results

Foreign General's operating income increased in the first six months of 2007 compared to the same period in 2006, due to the effect of changes in the currency exchange rates of the

Euro and the British Pound and increased net realized capital gains.

Net premiums written increased 15 percent (11 percent in original currency) for the six months ended June 30, 2007 compared to the same period in 2006, reflecting growth in commercial and consumer lines driven by new business from both established and new distribution channels, including a wholly owned insurance company in Vietnam and Central Insurance Co., Ltd. in Taiwan, and by greater retention of commercial lines accounts on renewal. Growth in consumer lines in Latin America and commercial lines in Europe and the U.K. also contributed to the increase. Net premiums written also increased by one percent from the same period in 2006 due to decreases in the use of reinsurance.

The loss ratio increased 2.5 points for the six months ended June 30, 2007 compared to the same period in 2006. The 2007 loss ratio increased 1.1 points due to the losses from the U.K. floods and increased 0.7 points due to severe but non-catastrophic losses. The 2007 and 2006 loss ratios benefited from favorable loss development on prior accident years by 1.5 points and 2.1 points, respectively.

The expense ratio was unchanged in the six months ended June 30, 2007 compared to the same period in 2006. The expense ratio for 2006 increased by 1.5 points due to a profit commission charge in Ascot and an out of period charge for amortization of deferred advertising costs. This increase in the 2006 expense ratio was offset by higher commission costs and higher operating expenses due to new business initiatives and the realignment costs mentioned above.

Net investment income decreased for the six months ended June 30, 2007 compared to the same period in 2006, as the 2006 period reflected the out of period UCITS adjustment, which more than offset underlying growth of \$348 million in net investment income. Net investment income for the first six months of 2007 reflected higher interest rates, strong cash flows and increased equity mutual fund and partnership income. Equity mutual fund income increased \$156 million for the six months ended June 30, 2007 compared to the same period in 2006 reflecting strong performance in the equity markets and partnership income increased \$94 million for the six months ended June 30, 2007 compared to the same period in 2006 due to strong infrastructure fund performance in Africa, Europe and Latin America.

Reserve for Losses and Loss Expenses

The following table presents the components of the General Insurance gross reserve for losses and loss expenses (loss reserves) as of June 30, 2007 and December 31, 2006 by major line of business on a statutory Annual Statement basis^(a):

<i>(in millions)</i>	June 30, 2007	December 31, 2006 ^(b)
Other liability occurrence	\$19,961	\$19,327
Workers compensation	14,502	13,612
Other liability claims made	13,470	12,513
Auto liability	6,137	6,070
International	6,100	6,006
Property	4,629	5,499
Reinsurance	3,152	2,979
Medical malpractice	2,330	2,347
Products liability	2,181	2,239
Accident and health	1,851	1,693
Commercial multiple peril	1,744	1,651
Aircraft	1,698	1,629
Fidelity/surety	1,248	1,148
Other	3,076	3,286
Total	\$82,079	\$79,999

^(a) Presented by lines of business pursuant to statutory reporting requirements as prescribed by the National Association of Insurance Commissioners.

^(b) Allocations among various lines were revised from the previous presentation.

AIG's gross reserve for losses and loss expenses represents the accumulation of estimates of ultimate losses, including provisions for losses incurred but not reported (IBNR) and loss expenses. The methods used to determine loss reserve estimates and to establish the resulting reserves are continually reviewed and updated by management. Any adjustments resulting therefrom are reflected in operating income currently. Because loss reserve estimates are subject to the outcome of future events, changes in estimates are unavoidable given that loss trends vary and time is often required for changes in trends to be recognized and confirmed. Reserve changes that increase previous estimates of ultimate cost are referred to as unfavorable or adverse development or reserve strengthening. Reserve changes that decrease previous estimates of ultimate cost are referred to as favorable development.

At June 30, 2007, General Insurance net loss reserves were \$65.20 billion, an increase of \$2.57 billion from the prior year-end. The net loss reserves represent loss reserves reduced by reinsurance recoverables, net of an allowance for unrecoverable reinsurance and applicable discount for future investment income.

The following table classifies the components of the General Insurance net loss reserves by business unit:

<i>(in millions)</i>	June 30, 2007	December 31, 2006
DBG ^(a)	\$45,650	\$44,119
Transatlantic	6,451	6,207
Personal Lines ^(b)	2,304	2,440
Mortgage Guaranty	718	460
Foreign General ^(c)	10,074	9,404
Total Net Loss Reserve	\$65,197	\$62,630

^(a) At June 30, 2007 and December 31, 2006, respectively, DBG loss reserves include approximately \$3.23 billion and \$3.33 billion (\$3.50 billion and \$3.66 billion, respectively, before discount), related to business written by DBG but ceded to American International Reinsurance Company Limited (AIRCO) and reported in AIRCO's statutory filings. DBG loss reserves also include approximately \$601 million and \$535 million related to business included in American International Underwriters Overseas, Ltd.'s (AIUO) statutory filings at June 30, 2007 and December 31, 2006, respectively.

^(b) At June 30, 2007 and December 31, 2006, respectively, Personal Lines loss reserves include \$826 million and \$861 million related to business ceded to DBG and reported in DBG's statutory filings.

^(c) At June 30, 2007 and December 31, 2006, respectively, Foreign General loss reserves include approximately \$2.90 billion and \$2.75 billion related to business reported in DBG's statutory filings.

The DBG net loss reserve of \$45.7 billion is comprised principally of the business of AIG subsidiaries participating in the American Home Assurance Company (American Home)/National Union Fire Insurance Company of Pittsburgh, Pa. (National Union) pool (11 companies) and the surplus lines pool (Lexington, Starr Excess Liability Insurance Company and Landmark Insurance Company).

DBG cedes a quota share percentage of its other liability occurrence and products liability occurrence business to AIRCO. The quota share percentage ceded was 15 percent for the six months ended June 30, 2007 and 20 percent for the year 2006 and covered all business written in these years for these lines by participants in the American Home/National Union pool. AIRCO's loss reserves relating to these quota share cessions from DBG are recorded on a discounted basis. As of June 30, 2007, AIRCO carried a discount of approximately \$270 million applicable to the \$3.50 billion in undiscounted reserves it assumed from the American Home/National Union pool via this quota share cession. AIRCO also carries approximately \$503 million in net loss reserves relating to Foreign General insurance business. These reserves are carried on an undiscounted basis.

The companies participating in the American Home/National Union pool have maintained a participation in the business written by AIU for decades. As of June 30, 2007, these AIU reserves carried by participants in the American Home/National Union pool totaled approximately \$2.90 billion. The remaining Foreign General reserves are carried by AIUO, AIRCO, and other smaller AIG subsidiaries domiciled outside the United States. Statutory filings in the U.S. by AIG companies reflect all the business written by

U.S. domiciled entities only, and therefore exclude business written by AIUO, AIRCO, and all other internationally domiciled subsidiaries. The total reserves carried at June 30, 2007 by AIUO and AIRCO were approximately \$4.57 billion and \$3.73 billion, respectively. AIRCO's \$3.73 billion in total general insurance reserves consist of approximately \$3.23 billion from business assumed from the American Home/National Union pool and an additional \$503 million relating to Foreign General Insurance business.

Discounting of Reserves

At June 30, 2007, AIG's overall General Insurance net loss reserves reflect a loss reserve discount of \$2.39 billion, including tabular and non-tabular calculations. The tabular workers compensation discount is calculated using a 3.5 percent interest rate and the 1979-81 Decennial Mortality Table. The non-tabular workers compensation discount is calculated separately for companies domiciled in New York and Pennsylvania, and follows the statutory regulations for each state. For New York companies, the discount is based on a five percent interest rate and the companies' own payout patterns. For Pennsylvania companies, the statute has specified discount factors for accident years 2001 and prior, which are based on a six percent interest rate and an industry payout pattern. For accident years 2002 and subsequent, the discount is based on the yield of U.S. Treasury securities ranging from one to twenty years and the company's own payout pattern, with the future expected payment for each year using the interest rate associated with the corresponding Treasury security yield for that time period. The discount is comprised of the following: \$726 million – tabular discount for workers compensation in DBG; \$1.39 billion – non-tabular discount for workers compensation in DBG; and, \$270 million – non-tabular discount for other liability occurrence and products liability occurrence in AIRCO. The total undiscounted workers compensation loss reserve carried by DBG is approximately \$12.2 billion as of June 30, 2007. The other liability occurrence and products liability occurrence business in AIRCO that is assumed from DBG is discounted based on the yield of U.S. Treasury securities ranging from one to twenty years and the DBG payout pattern for this business. The undiscounted reserves assumed by AIRCO from DBG totaled approximately \$3.50 billion at June 30, 2007.

Quarterly Reserving Process

Management believes that the General Insurance net loss reserves are adequate to cover General Insurance net losses and loss expenses as of June 30, 2007. While AIG regularly reviews the adequacy of established loss reserves, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's loss reserves as of June 30, 2007. In the opinion of management, such

adverse development and resulting increase in reserves is not likely to have a material adverse effect on AIG's consolidated financial condition, although it could have a material adverse effect on AIG's consolidated results of operations for an individual reporting period.

The following table presents the reconciliation of net loss reserves:

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006
Net reserve for losses and loss expenses at beginning of period	\$64,034	\$58,892	\$62,630	\$57,476
Foreign exchange effect	252	370	214	487
Losses and loss expenses incurred:				
Current year	7,334	6,911	14,549	13,752
Prior years, other than accretion of discount	(120)	(248)	(268)	(213)
Prior years, accretion of discount	12	101	128	202
Losses and loss expenses incurred	7,226	6,764	14,409	13,741
Losses and loss expenses paid	6,315	5,812	12,056	11,490
Net reserve for losses and loss expenses at end of period	\$65,197	\$60,214	\$65,197	\$60,214

The following tables summarize development, (favorable) or unfavorable, of incurred losses and loss expenses for prior years (other than accretion of discount):

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006
Prior Accident Year Development by Reporting Unit:

2001 & prior	360	501
Prior years, other than accretion of discount	\$ (268)	\$ (213)

In determining the quarterly loss development from prior accident years, AIG conducts analyses to determine the change in estimated ultimate loss for each accident year for each profit center. For example, if loss emergence for a profit center is different than expected for certain accident years, the actuaries examine the indicated effect such emergence would have on the reserves of that profit center. In some cases, the higher or lower than expected emergence may result in no clear change in the ultimate loss estimate for the accident years in question, and no adjustment would be made to the profit center's reserves for prior accident years. In other cases, the higher or lower than expected emergence may result in a larger change, either favorable or unfavorable, than the difference between the actual and expected loss emergence. Such additional analyses were conducted for each profit center, as appropriate, in the second quarter of 2007 to determine the loss development from prior accident years for the second quarter of 2007. As part of its quarterly reserving process, AIG also considers notices of claims received with respect to emerging issues, such as those related to stock option backdating. Also as part of the quarterly reserving process, beginning with the second quarter of 2007, AIG updated its analysis of the loss reserve discount pertaining to workers compensation reserves. Historically, this review was only performed at year end. As a result of the updated analysis in the second quarter of 2007, AIG increased its loss reserve discount for workers compensation by approximately \$155 million in the second quarter of 2007, bringing the total increase in loss reserve discount for workers compensation for the first six months of 2007 to approximately \$185 million.

2007 Net Loss Development

In the three months ended June 30, 2007, net loss development from prior accident years was favorable by approximately \$120 million, including approximately \$18 million of adverse development from the general reinsurance operations of Transatlantic; and excluding approximately \$12 million from accretion of loss reserve discount. Excluding Transatlantic, as well as accretion of discount, net loss development in the three months ended June 30, 2007 from prior accident years was favorable by approximately \$138 million. The overall favorable development of \$120 million consisted of approximately

\$475 million of favorable development from accident years 2003 through 2006, partially offset by approximately \$355 million of adverse development from accident years 2002 and prior. For the three months ended June 30, 2007, most classes of AIG's business continued to experience favorable development for accident years 2003 through 2006. The majority of the adverse development from accident years 2002 and prior was related to developments from excess casualty business within DBG and from Transatlantic.

In the first six months of 2007, net loss development from prior accident years was favorable by approximately \$268 million, including approximately \$36 million of adverse development from the general reinsurance operations of Transatlantic; and excluding approximately \$128 million from accretion of loss reserve discount. Excluding Transatlantic, as well as accretion of discount, net loss development in the first six months of 2007 from prior accident years was favorable by approximately \$304 million. The overall favorable development of \$268 million consisted of approximately \$740 million of favorable development from accident years 2003 through 2006, partially offset by approximately \$472 million of adverse development from accident years 2002 and prior. For the first six months of 2007, most classes of AIG's business continued to experience favorable development for accident years 2003 through 2006. The majority of the adverse development from accident years 2002 and prior was related to development from excess casualty business within DBG and from Transatlantic.

2006 Net Loss Development

In the second quarter of 2006, net loss development from prior accident years was favorable by approximately \$248 million. This reflects approximately \$63 million of favorable development pertaining to catastrophes in 2005, partially offset by adverse development of approximately \$30 million from Transatlantic. Excluding catastrophes and Transatlantic, as well as accretion of discount of approximately \$101 million, net loss development from prior accident years in the second quarter of 2006 was favorable by approximately \$215 million. The overall favorable development of \$248 million consisted of approximately \$490 million of favorable development from accident years 2003 through 2005, partially offset by approximately \$242 million of adverse development from accident years 2002 and prior. For the three months ended June 30, 2006, most classes of AIG's business experienced favorable development for accident years 2003 through 2005. The adverse development from accident years 2002 and prior reflected development from excess casualty business within DBG, and to a much lesser extent from excess workers compensation business within DBG, as well as development from Transatlantic.

In the first six months of 2006, net loss development from prior accident years was favorable by approximately \$213 million. This reflects approximately \$35 million of

adverse development pertaining to catastrophes in 2004 and 2005 and approximately \$65 million of adverse development from Transatlantic. Excluding catastrophes and Transatlantic, as well as accretion of discount of approximately \$202 million, net loss development from prior accident years in the first six months of 2006 was favorable by approximately \$313 million. The \$213 million of overall net favorable development was comprised of approximately \$775 million of favorable development from accident years 2003 through 2005, partially offset by approximately \$562 million of adverse development from accident years 2002 and prior. For the first six months of 2006, most classes of AIG's business experienced favorable development for accident years 2003 through 2005. The adverse development from accident years 2002 and prior reflected development from excess casualty business within DBG, and to a lesser extent from excess workers compensation business within DBG, as well as development from Transatlantic.

Asbestos and Environmental Reserves

The estimation of loss reserves relating to asbestos and environmental claims on insurance policies written many years ago is subject to greater uncertainty than other types of claims due to inconsistent court decisions as well as judicial interpretations and legislative actions that in some cases have tended to broaden coverage beyond the original intent of such policies and in others have expanded theories of liability.

As described more fully in the 2006 Annual Report on Form 10-K, AIG's reserves relating to asbestos and environmental claims reflect a comprehensive ground up analysis. In the first six months of 2007, one large asbestos settlement resulted in a minor amount of adverse incurred loss development, which was more than offset, on a net basis, by the favorable \$50 million effect of several other settlements.

A summary of reserve activity, including estimates for applicable IBNR, relating to asbestos and environmental claims separately and combined:

<i>(in millions)</i>	Six Months Ended June 30,			
	2007		2006	
	Gross	Net	Gross	Net
Asbestos:				
Reserve for losses and loss expenses at beginning of year	\$4,464	\$1,889	\$4,441	\$1,840
Losses and loss expenses incurred*	10	(25)	(1)	4
Losses and loss expenses paid*	(454)	(268)	(277)	(96)
Reserve for losses and loss expenses at end of period	\$4,020	\$1,596	\$4,163	\$1,748
Environmental:				
Reserve for losses and loss expenses at beginning of year	\$ 588	\$ 290	\$ 926	\$ 410
Losses and loss expenses incurred*	-	(1)	1	-
Losses and loss expenses paid*	(54)	(31)	(55)	(33)
Reserve for losses and loss expenses at end of period	\$ 534	\$ 258	\$ 872	\$ 377
Combined:				
Reserve for losses and loss expenses at beginning of year	\$5,052	\$2,179	\$5,367	\$2,250
Losses and loss expenses incurred*	10	(26)	-	4
Losses and loss expenses paid*	(508)	(299)	(332)	(129)
Reserve for losses and loss expenses at end of period	\$4,554	\$1,854	\$5,035	\$2,125

* All amounts pertain to policies underwritten in prior years, primarily to policies issued in 1984 and prior.

The gross and net IBNR included in the reserve for losses and loss expenses, relating to asbestos and environmental claims separately and combined, were estimated as follows:

<i>(in millions)</i>	Six Months Ended June 30,			
	2007		2006	
	Gross	Net	Gross	Net
Asbestos	\$3,011	\$1,279	\$3,100	\$1,351
Environmental	316	148	562	241
Combined	\$3,327	\$1,427	\$3,662	\$1,592

A summary of asbestos and environmental claims count activity was as follows:

	Six Months Ended June 30,					
	2007			2006		
	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined
Claims at beginning of year	6,878	9,442	16,320	7,293	9,873	17,166
Claims during year:						
Opened	300	695	995	453	900	1,353
Settled	(66)	(59)	(125)	(73)	(83)	(156)
Dismissed or otherwise resolved	(544)	(899)	(1,443)	(493)	(893)	(1,386)
Claims at end of period	6,568	9,179	15,747	7,180	9,797	16,977

Survival Ratios — Asbestos and Environmental

The table below presents AIG's survival ratios for asbestos and environmental claims at June 30, 2007 and 2006. The survival ratio is derived by dividing the current carried loss reserve by the average payments for the three most recent calendar years for these claims. Therefore, the survival ratio is a simplistic measure estimating the number of years it would be before the current ending loss reserves for these claims would be paid off using recent year average payments. The June 30, 2007 survival ratio is lower than the ratio at June 30, 2006 because the more recent periods included in the rolling average reflect higher claims payments. In addition, AIG's survival ratio for asbestos claims was negatively affected by the favorable settlements described above, which reduced gross and net asbestos survival ratios at June 30, 2007 by approximately 1.7 years and 4.1 years, respectively. Many factors, such as aggressive settlement procedures, mix of business and level of coverage provided, have a significant effect on the amount of asbestos and environmental reserves and payments and the resultant survival ratio. Thus, caution should be exercised in attempting to determine reserve adequacy for these claims based simply on this survival ratio.

AIG's survival ratios for asbestos and environmental claims, separately and combined were based upon a three-year average payment. These ratios at June 30, 2007 and 2006 were as follows:

(number of years)	Gross	Net
2007		
Survival ratios:		
Asbestos	8.5	7.4
Environmental	5.0	4.0
Combined	7.8	6.6
2006		
Survival ratios:		
Asbestos	13.2	15.9
Environmental	6.3	5.5
Combined	11.1	11.9

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad.

Domestically, AIG's Life Insurance & Retirement Services operations offer a broad range of protection

products, such as life insurance and group life and health products, including disability income products and payout annuities, which include single premium immediate annuities, structured settlements and terminal funding annuities. Home service operations include an array of life insurance, accident and health and annuity products sold primarily through career agents. Retirement services include group retirement products, individual fixed and variable annuities sold through banks, broker-dealers and exclusive sales representatives, and annuity runoff operations, which include previously acquired "closed blocks" and other fixed and variable annuities largely sold through distribution relationships that have been discontinued.

Overseas, AIG's Life Insurance & Retirement Services operations include insurance and investment-oriented products such as whole and term life, investment linked, universal life and endowments, personal accident and health products, group products including pension, life and health, and fixed and variable annuities.

AIG's Life Insurance & Retirement Services subsidiaries report their operations through the following major internal reporting units and business units:

Foreign Life Insurance & Retirement Services**Japan and Other**

- American Life Insurance Company (ALICO)
- AIG Star Life Insurance Co., Ltd. (AIG Star Life)
- AIG Edison Life Insurance Company (AIG Edison Life)

Asia

- American International Assurance Company, Limited, together with American International Assurance Company (Bermuda) Limited (AIA)
- Nan Shan Life Insurance Company, Ltd. (Nan Shan)
- American International Reinsurance Company Limited (AIRCO)
- The Philippine American Life and General Insurance Company (Philamlife)

Domestic Life Insurance

- American General Life Insurance Company (AIG American General)
- The United States Life Insurance Company in the City of New York (USLIFE)
- American General Life and Accident Insurance Company (AGLA)

Domestic Retirement Services

- The Variable Annuity Life Insurance Company (VALIC)

* Includes the effect of an out of period UCITS adjustment in the second quarter of 2006. For the three and six-month periods ended June 30, 2006, the effect was an increase of \$221 million and \$203 million, respectively, in net investment income and \$144 million and \$132 million, respectively, in operating income.

The following table presents the Insurance In-force for Life Insurance & Retirement Services:

<i>(in millions)</i>	June 30, 2007	December 31, 2006
Foreign	\$1,195,315	\$1,162,699
Domestic	946,598	907,901
Total	\$2,141,913	\$2,070,600

Life Insurance & Retirement Services total revenues for the three and six-month periods ended June 30, 2007 reflect growth in premiums and other considerations and net investment income offset by realized capital losses. Realized capital losses reduced revenues by \$279 million and \$535 million in the three and six-month periods ended June 30, 2007, respectively, while net realized capital losses

decreased revenues by \$157 million in the three months ended June 30, 2006 and net realized capital gains increased revenues by \$59 million in the six months ended June 30, 2006. Net realized capital losses in 2007 were primarily related to the decline in value of securities deemed to be other-than-temporary that AIG no longer intends to hold to recovery.

Operating income for the first six months of 2007 includes a charge of \$48 million related to SOP 05-1 which generally requires DAC related to group contracts to be amortized over a shorter duration than in prior periods, and also requires that DAC be expensed at the time a policy is terminated and prohibits recapitalization if that policy is reinstated. The effect of SOP 05-1 was most significant to the group products line in the Domestic Life operations.

Operating income for the six months ended June 30, 2007 also included a \$62 million charge for additional benefit expense resulting from a continuing industry-wide review of claims in Japan and a \$50 million charge related to balance sheet reconciliation remediation activities. Operating income for the six months ended June 30, 2006 included an increase of \$132 million for an out of period adjustment related to the accounting for UCITS.

Policyholder trading gains (losses) for the three and six months ended June 30, 2007 increased significantly compared to the same periods in 2006. The three and six

months ended June 30, 2007 included policyholder trading gains of \$784 million and \$1.3 billion, respectively, compared to losses of \$321 million and gains of \$69 million for the three and six months ended June 30, 2006, respectively. Policyholder trading gains (losses) are offset by an equal charge to incurred policy losses and benefits expense, as these investment returns accrue to the benefit of the policyholder. The trend in policyholder trading gains (losses) generally reflects the trend in equity markets.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers have managed their businesses, commencing in the first quarter of 2007, revenues and operating income related to foreign investment contracts, which were historically reported as a component of the Asset Management segment, are now being reported as part of Foreign Life Insurance & Retirement Services. Prior period amounts have been revised to conform to the current presentation.

* Includes the effect of an out of period UCITS adjustment in the second quarter of 2006. For the three and six-month periods ended June 30, 2006 the effect was an increase of \$221 million and \$203 million, respectively, in net investment income and \$144 million and \$132 million, respectively, in operating income.

AIG transacts business in most major foreign currencies and therefore premiums reported in U.S. dollars vary both by volume and as a result of changes in foreign currency translation rates. The following table summarizes the effect of changes in foreign currency exchange rates on the growth

of the Foreign Life Insurance & Retirement Services premiums and other considerations:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006
Growth in original currency*	7.8%	6.8%	6.5%	7.3%
Foreign exchange effect	0.9	(3.1)	1.9	(4.2)
Growth as reported in U.S. dollars	8.7%	3.7%	8.4%	3.1%

* Computed using a constant exchange rate throughout each period.

Quarterly Japan and Other Results

Total revenues for the three-month period ended June 30, 2007 increased compared to the same period in 2006, primarily due to higher premiums and net investment income partially offset by a decline in net realized capital gains. Operating income decreased for the three months ended June 30, 2007 compared to the same period in 2006 due to net realized capital losses and additional benefit expenses of \$25 million related to the continuing industry-wide regulatory review of unpaid benefits in Japan which is expected to be completed in late 2007.

Life insurance premiums and other considerations increased in the three months ended June 30, 2007 compared to the same period in 2006 due to strong sales in Japan of increasing term products that have tax benefits for corporate clients. Sales of these products ceased in April pending an industry-wide review by the National Tax Authority. In Japan, increased fees and policy charges related to interest sensitive universal life and U.S. dollar life insurance products were partially offset by the runoff of the acquired blocks of business in AIG Star Life and AIG Edison Life. In Europe, growth in premiums and other considerations was enhanced by the effect of changes in foreign exchange rates. The growth in net investment income was due to higher partnership income and equity income from unit investment trusts. Life insurance operating income declined for the three months ended June 30, 2007 compared to the same period in 2006 due to net realized capital losses, partially offset by the growth in net investment income.

Personal accident premiums and other considerations continue to grow. Strong growth in Europe has offset the declines in Japan, which has been adversely affected by increased competition and lower sales of tax-related products. When compared to the same period in 2006, net investment income increased primarily due to higher invested assets and increased partnership income. Operating income declined for the three months ended June 30, 2007 compared to the same period in 2006 due to lower net realized capital gains, additional benefit expenses related to the continuing industry-wide regulatory review, higher DAC amortization related to SOP 05-1, and higher expenses related to the termination of certain tax-related products in Japan. Loss ratios remained stable for this business which continues to enjoy relatively high margins.

Group products premiums and other considerations reflected growth for the three months ended June 30, 2007 compared to the same period in 2006 primarily due to rapidly growing credit business in Europe and higher fee income from pension business in Brazil. Net investment income increased over the same period last year as policyholder trading gains were higher. Operating income was flat compared to the same period in 2006 as improvements in

Europe from increased production of credit business were offset by lower realized capital gains.

Individual fixed annuities premiums and other considerations growth reflects higher surrender charges from U.S. dollar contracts in Japan where a weak yen makes it attractive for certain policyholders to lock in foreign exchange gains in excess of surrender charges. Surrender charges were \$33 million and \$18 million for the three months ended June 30, 2007 and 2006, respectively. Net investment income increased due to higher average investment yields and higher assets under management. Operating income declined in the three months ended June 30, 2007 compared to the same period in 2006 due to net realized capital losses in 2007 compared to net realized capital gains in 2006. The net realized capital losses offset increased earnings from higher assets under management, higher surrender charge income and higher positive DAC unlocking of \$9 million.

Individual variable annuity assets under management continued to grow, particularly in Europe, due to new product offerings and strong equity markets. The fees generated from the growth in assets under management increased premiums and operating income for the three months ended June 30, 2007 compared to the same period in 2006. Net investment income grew in the three months ended June 30, 2007 compared to the same period in 2006 due to increased policyholder trading gains which comprise the entirety of variable annuity net investment income.

Year-to-date Japan and Other Results

Total revenues for the first six months of 2007 increased compared to the same period in 2006, primarily due to higher premiums and net investment income partially offset by net realized capital losses. Operating income decreased in the first six months of 2007 compared to the same period in 2006 due to net realized capital losses. In addition, a \$62 million provision for additional benefit expense was established in Japan as a result of a continuing industry-wide regulatory review of claims.

Life insurance premiums and other considerations increased in the first six months of 2007 compared to the same period in 2006. In Japan, increased fees and policy charges related to interest sensitive universal life and U.S. dollar life insurance products, as well as strong sales of increasing term products with tax benefits for corporate clients, were partially offset by the runoff of the acquired blocks of business in AIG Star Life and AIG Edison Life. In Europe, growth in premiums and other considerations was enhanced by the effect of changes in foreign exchange rates. The growth in net investment income was due to higher income from partnerships and other yield enhancement income, equity income from UCITS, higher policyholder trading gains and growth in underlying invested assets. Life

insurance operating income declined in the first six months of 2007 compared to the same period in 2006 due to net realized capital losses which offset the benefits of higher net investment income, lower acquisition costs and lower benefit costs.

Personal accident premiums and other considerations growth in Japan has been adversely affected by increased competition and lower sales of tax-related products. Net investment income increased in the first six months of 2007 compared to the same period in 2006 primarily due to higher income from invested assets and increased partnership income. Operating income in the first six months of 2007 was affected by lower realized capital gains, the \$46 million provision for additional benefit expenses, \$34 million of expenses related to the termination of certain tax-related products in Japan and a \$12 million charge related to the effect of SOP 05-1. Loss ratios remained stable for this business which continues to enjoy relatively high margins.

Group products premiums and other considerations reflected growth for the first six months in 2007 compared to the same period of 2006 primarily due to credit business growth in Europe. Net investment income increased from the first six months of 2006 primarily related to higher policyholder trading gains. Operating income for the first six months of 2007 declined slightly from the same period in 2006 primarily due to SOP 05-1 and higher benefit expense in Japan.

Individual fixed annuities premiums and other considerations growth reflects higher surrender charges from U.S. dollar contracts in Japan where a weak yen makes it attractive for certain policyholders to lock in foreign exchange gains in excess of surrender charges. Surrender charges were \$86 million and \$42 million for the six months ended June 30, 2007 and 2006, respectively. Net investment income increased due to higher average investment yields, assets under management and partnership income. In the first half of 2007, AIG implemented a new investment strategy to enhance future investment yields that resulted in realized capital losses as a small portion of the existing bond portfolio was sold and reinvested in higher yielding assets. These actions resulted in net realized capital losses for the first six months of 2007 compared to net realized capital gains in 2006, which offsets the positive effect of higher assets under management.

Individual variable annuity assets under management continued to grow particularly in Europe, due to new product offerings and favorable market conditions. The fees generated from the growth in assets under management increased premiums and other considerations and operating income for the first six months of 2007 compared to the same period in 2006. Net investment income grew for the first six months of 2007 compared to the same period in 2006 due to

increased policyholder trading gains which comprise the entirety of variable annuity net investment income.

Quarterly Asia Results

Total revenues for the three months ended June 30, 2007 increased from the same period in 2006. Premiums and other considerations growth reflects a continued trend toward investment-oriented products where only a portion of policy charges are reported as premiums. Net investment income increased, primarily due to higher policyholder trading gains. Net investment income and operating income for the three months ended June 30, 2006 included out of period income related to unit investment trusts of \$221 million and \$144 million, respectively. Net realized capital gains were higher than the same period in 2006. Operating income for the three months ended June 30, 2007 improved over the same period in 2006 primarily due to growth in premiums and other considerations, higher investment returns and net realized capital gains.

Life insurance premiums and other considerations were up slightly in the three months ended June 30, 2007 compared to the same period in 2006. The shift in product mix from traditional life insurance products to investment-oriented products as mentioned above dampens the growth rate. Net investment income grew in the current period compared to the same period in 2006, due primarily to the growth in the underlying invested assets, higher partnership income and higher policyholder trading gains. Net investment income and operating income for the three months ended June 30, 2006 included out of period income related to unit investment trusts of \$221 million and \$144 million, respectively. Operating income increased for the three months ended June 30, 2007 compared to the same period in 2006, due primarily to higher realized capital gains, partnership income and the positive effect of SOP 05-1.

Personal accident premiums and other considerations increased primarily due to growth in Korea and the favorable effect of changes in foreign exchange rates. The primary focus in Asia has been on risk-based individual and rider accident and health (A&H) products particularly in Korea and Taiwan. Operating earnings reflect the combined effect of premium growth and stable loss ratios and also include a benefit resulting from SOP 05-1.

Group products premiums and other considerations grew in the three months ended June 30, 2007 compared to the same period in 2006, reflecting higher pension management fees and improved sales in Thailand, Hong Kong and Singapore. Operating income improved compared to the same period last year primarily due to lower realized capital losses and increased business in force.

Individual fixed annuities total revenues and operating income were higher for the three months ended June 30, 2007 compared to the same period in 2006 resulting from net

realized capital gains. Production for the three months ended June 30, 2007 increased compared to the same period in 2006, mostly due to the launch of a coupon product in Korea which pays periodic interest to policyholders based upon their election.

Year-to-date Asia Results

Total revenues for the first six months of 2007 were higher than in 2006, while operating income fell compared to the same period in 2006 due to net realized capital losses in 2007 compared to net realized capital gains in 2006. Premiums and other considerations grew moderately compared to the same period in 2006 reflecting a continued trend toward investment-oriented products where only a portion of policy charges are reported as premium. Net investment income grew due to higher policyholder trading gains, higher income from interests in unit investment trusts, and growth in underlying invested assets. Net investment income and operating income for the six months ended June 30, 2006 included out of period income related to unit investment trusts of \$203 million and \$132 million, respectively. Net realized capital losses in the current period compared to net realized capital gains in the same period last year also influenced the growth rate in total revenues and caused the decline in operating income. The net realized capital losses in the current period were driven primarily by the mark to market of derivatives that do not qualify for hedge accounting treatment under FAS 133 and the other-than-temporary decline in value of U.S. dollar bonds held in Singapore and Thailand.

Life insurance premiums and other considerations were up slightly in the first six months of 2007 compared to the same period in 2006, benefiting from improved sales in Thailand and the favorable effect of foreign exchange rates, partially offset by the shift in product mix from traditional life insurance products to investment-oriented products as mentioned above. Net investment income grew in the current

period compared to the same period in 2006, due primarily to higher policyholder trading gains, the growth in the underlying invested assets and earnings on certain interests in unit investment trusts. Operating income decreased in the first six months of 2007 compared to the same period in 2006, due mainly to net realized capital losses which more than offset the growth in other sources of earnings. Operating income for the first six months of 2007 includes a \$50 million charge related to balance sheet reconciliation remediation activity.

Personal accident revenues grew for the first six months of 2007 compared to the same period in 2006 primarily due to higher premiums and other considerations particularly in Korea and Taiwan. Operating earnings reflect the combined effect of premium growth and stable loss ratios that were partially offset by realized capital losses. In addition, results for the first six months of 2007 include a \$6 million positive effect related to SOP 05-1.

Group products premiums and other considerations grew in the first six months of 2007 compared to the same period in 2006. The increase reflected higher pension management fees and improved sales, particularly in Thailand, Hong Kong and Singapore, in the first six months of 2007 compared to the same period in 2006. Operating income declined in the first six months of 2007 compared to the same period in 2006 primarily due to realized capital losses and higher incurred policy losses and benefits of \$13 million due to a 2007 out of period reserve charge.

Individual fixed annuities total revenues increased in the first six months of 2007 compared to the same period in 2006, due primarily to higher net investment income on underlying assets and higher realized capital gains. Production for the six months ended June 30, 2007 was flat compared to the same period in 2006 due to increased competition in Korea.

(a) Premiums and other considerations include structured settlements, single premium immediate annuities and terminal funding annuities.

(b) Primarily represents runoff annuity business sold through discontinued distribution relationships.

Domestic Life Insurance

Quarterly Domestic Life Results

Domestic Life Insurance premiums and other considerations declined in the three months ended June 30, 2007 compared to the same period in 2006, primarily due to the exiting of the

financial institutions credit life business within the group life/health segment as of the end of 2006 and lower sales of payout annuities. These declines were partially offset by growth in the life insurance business in force. Premiums and other considerations for the home service segment declined in

the three months ended June 30, 2007 compared to the same period in 2006 as the reduction in premium in force from normal lapses and maturities exceeded sales growth. Premiums and other considerations from payout annuities decreased for the three-month period ended June 30, 2007 compared to the same period in 2006 reflecting decreased sales of single premium immediate annuities, which were affected by the re-pricing of this product line in the second half of 2006.

Domestic Life Insurance operating income increased in the three months ended June 30, 2007 compared to the same period in 2006. The increase was primarily driven by higher partnership income, lower realized capital losses and overall growth in the in-force business. Financial results for the three months ended June 30, 2007 also benefited from a \$15 million decrease in certain litigation accruals due to favorable developments from the related matters and were adversely affected by a \$17 million increase in DAC amortization related to SOP 05-1.

Life insurance operating income increased for the three months ended June 30, 2007 compared to the same period in 2006, primarily due to higher partnership income, increased net realized capital gains, a \$15 million release of litigation related reserves and growth in the underlying business, partially offset by higher policyholder benefits. Home service operating income for the three months ended June 30, 2007 was unchanged from the prior period in 2006 as higher net investment income from foreign denominated emerging market bonds offset the effect of the decline in premiums and other considerations. Group life/health operating income from the three months ended June 30, 2007 improved compared to the same period in 2006, as 2006 results included the effect of a \$24 million litigation accrual. Results for the three months ended June 30, 2007 included a \$12 million charge related to SOP 05-1. Payout annuities operating income increased for the three months ended June 30, 2007 due to growth in reserves offset by higher realized capital losses. Individual fixed annuities operating income remained unchanged as growth in net investment income was offset by higher interest credited and acquisition expenses. Individual annuities — runoff operating income increased for three months ended June 30, 2007 due to lower realized capital losses compared to same period in 2006.

Year-to-date Domestic Life Results

Domestic Life Insurance premiums and other considerations increased during the first six months of 2007 compared to the same period in 2006. The increase was primarily due to the

growth in life insurance business in force and payout annuities. Premiums and other considerations for the home service segment declined compared to the same period in 2006 as the reduction in premiums in force from normal lapses and maturities exceeded sales growth. Premiums and other considerations for group life/health for the first six months of 2007 declined compared to the same period in 2006, primarily due to the exiting of the financial institutions credit life business as of the end of 2006 and tightened pricing and underwriting in the group employer lines. Premiums and other considerations growth from payout annuities for the first six months of 2007 reflects increased sales of structured settlements and terminal funding annuities compared to the same period in 2006.

Domestic Life Insurance operating income increased in the first six months of 2007 compared to the same period in 2006, primarily due to increases in net investment income, lower realized capital losses, growth in the underlying business and a \$15 million reduction of certain litigation accruals due to favorable developments on the related matters. Operating income for the six-month period ended June 30, 2006 included a \$25 million charge for litigation accruals. The financial results for the six months ended June 30, 2007 were also affected by a \$39 million charge related to SOP 05-1.

Life insurance operating income increased for the first six months of 2007 compared to the same period in 2006 primarily due to higher net investment income, increased realized capital gains and a reduction of the aforementioned litigation-related accrual, partially offset by higher policyholder benefits. Home service operating income increased due to lower realized capital losses and higher net investment income offset by the decline in premiums and other considerations. Group life/health lines operating income decreased due to a charge of \$28 million resulting from SOP 05-1 partially offset by lower operating expenses. The operating income for the six-month period ended June 30, 2006 included a \$25 million charge for litigation accruals. Payout annuities operating income increased for the first six months of 2007 due to growth in the business and an increase in call and tender income on fixed maturity securities. Individual fixed annuities operating income increased primarily from higher net investment income. Individual annuities — runoff operating income decreased from the first six months in 2006 due to the reduction in the block of business partially offset by lower realized capital losses.

The following table reflects periodic Domestic Life Insurance sales by product:

<i>(in millions)</i>	Three Months Ended June 30,		Percentage Increase/ (Decrease)	Six Months Ended June 30,		Percentage Increase/ (Decrease)
	2007	2006		2007	2006	
Periodic premium sales by product*:						
Universal life	\$47	\$107	(56)%	\$98	\$243	(60)%
Variable universal life	12	18	(33)	25	27	(7)
Term life	57	63	(10)	112	123	(9)
Whole life/other	3	3	—	5	6	(17)
Total	\$119	\$191	(38)%	\$240	\$399	(40)%

* Periodic premium represents premium from new business expected to be collected over a one-year period.

Periodic life insurance sales declined for the three and six-month periods ended June 30, 2007 compared to the same periods in 2006 primarily as a result of the re-pricing of

certain universal life and term products and the tightening of underwriting standards during the second half of 2006.

Quarterly Domestic Retirement Services Results

Total Domestic Retirement Services operating income for the three months ended June 30, 2007 increased compared to the

same period in 2006. Group retirement products total revenues increased in the three months ended June 30, 2007 compared to the same period in 2006, primarily due to higher

income from partnerships, credit-linked notes and other yield enhancement income and an increase in variable annuity fees resulting from the increase in the equity markets. Group retirement products operating income increased for the three months ended June 30, 2007 driven by higher revenues related to partnerships and other yield enhancement income, partially offset by higher amortization of DAC. DAC amortization increases were related to the increase in surrenders and policy changes adding guaranteed minimum withdrawal benefit riders to existing contracts. Total revenues for individual fixed annuities increased in the three months ended June 30, 2007 compared to the same period in 2006 primarily driven by higher partnership and yield enhancement income. Individual fixed annuities operating income increased for the three months ended June 30, 2007 driven by higher revenues, partially offset by higher amortization of DAC resulting from an increase in early duration surrenders. Individual variable annuities total revenues increased in the three months ended June 30, 2007 compared to the same period in 2006, driven by higher fees primarily from the increase in the equity markets. Individual variable annuity fees also increased due to an increased number of contracts sold with living benefit features. The higher revenues, as well as decreased death benefits, were partially offset by higher amortization of DAC and higher net realized capital losses, and resulted in an increase in individual variable annuity operating income. Partnership investments of \$166 million were transferred to support the variable annuity line of business commencing in the second quarter of 2007. Although not significant to individual variable annuities in 2007, partnership income is expected to become more significant in future periods. Individual annuities — runoff operating income increased for the three months ended June 30, 2007 over the same period in 2006 even though the underlying reserves decreased. The higher income was primarily due to lower realized capital losses, partially offset by lower volumes due to the continued runoff of the business.

Year-to-date Domestic Retirement Services Results

Total Domestic Retirement Services operating income for the first six months of 2007 increased over the same period in 2006. Group retirement products total revenues increased in the first six months of 2007 compared to the same period in 2006, primarily due to higher partnership and yield enhancement income and an increase in variable annuity fees. Group retirement products income increased for the six months in 2007 driven by higher revenues related to income from partnerships and other yield enhancement income, partially offset by higher amortization of DAC. DAC amortization increases were related to the increase in surrenders and policy changes adding guaranteed minimum withdrawal benefit riders to existing contracts. Total revenues and operating income for individual fixed annuities increased in the first six months of 2007 compared to the first

six months in 2006 primarily driven by higher partnership and yield enhancement income and lower realized capital losses, partially offset by higher amortization of DAC as a result of lower realized capital losses and increased early duration surrenders. Individual variable annuities total revenues increased in the first six months of 2007 compared to the first six months in 2006, primarily driven by higher variable annuity fees resulting from the increase in the equity markets. Additionally, more contracts sold with living benefit features also contributed to higher individual variable annuity fees. The higher revenues as well as decreased death benefits, partially offset by higher amortization of DAC, resulted in the increase in individual variable annuities operating income. Individual annuities — runoff operating income increased in the first six months of 2007 over the same period of 2006 even though the underlying reserves decreased. The higher income was primarily due to lower realized capital losses and increased net spreads as a result of higher investment yields, partially offset by lower volumes due to the continued runoff of the business.

Domestic Retirement Services Supplemental Data

The following table presents deposits*:

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006
Group retirement products:				
Annuities	\$1,463	\$1,352	\$2,881	\$2,748
Mutual funds	330	256	795	801
Individual fixed annuities	1,633	1,194	2,864	2,735
Individual variable annuities	1,204	1,148	2,212	2,175
Individual fixed annuities – runoff	13	14	27	29
Total	\$4,643	\$3,964	\$8,779	\$8,488

* Excludes internal replacements.

Domestic Retirement Services total deposits increased for the three months ended June 30, 2007 compared to the same period in 2006 with all three primary product lines showing improved results. Group retirement deposits increased 12 percent in the three months ended June 30, 2007 compared to the same period in 2006 as a result of an increase in group annuity deposits and group mutual funds. Over time, AIG expects that group mutual fund sales will result in a gradual reduction in overall profit margins of this business due to the growth in the lower-margin mutual fund products relative to the annuity products. Individual fixed annuity deposits increased 37 percent for the three months ended June 30, 2007 compared to the same period in 2006, as several large bank distributors increased their focus on fixed annuities in the second quarter of 2007. Individual variable annuity deposits increased 5 percent for the three months ended June 30, 2007 compared to the same period in 2006. Individual fixed annuity surrenders increased in the three months ended June 30, 2007 compared to the same period in 2006 due to policies coming out of their surrender charge periods and increased competition from banks. AIG expects this trend to continue into the next year as a significant amount of business comes out of its surrender charge period.

Individual fixed annuity net flows for the three months ended June 30, 2007 improved compared to the same period in 2006, reflecting the higher deposits discussed above. Individual variable annuities net flows for the three months ended June 30, 2007 declined compared to the same period in 2006 due to higher surrender amounts resulting from market growth, while the surrender rate remained relatively constant.

Domestic Retirement Services total deposits increased for the first six months of 2007 compared to the same period in 2006. The increase in total deposits primarily reflects higher deposits from group annuities, individual fixed annuities and individual variable annuities. Group retirement deposits increased 4 percent in the first six months of 2007 compared to the same period in 2006 as a result of an increase in group variable annuity deposits, partially offset by slightly lower deposits in group fixed annuities and group mutual funds. Although individual fixed annuity sales continued to face increased competition from bank deposit products and money market funds offering very competitive short-term rates in the flat yield curve environment, individual fixed annuity deposits increased 5 percent for the six months ended June 30, 2007 compared to the same period in 2006. Individual variable annuity deposits increased slightly in the first six months of 2007 compared to the same period in 2006 despite the discontinuation of a major bank proprietary product. Group retirement surrenders increased as a result of normal maturing of the business and due to a few large group surrenders in the first three months of 2007 compared to the same period last year. Individual fixed annuity surrender rates increased in the first six months of 2007 compared to the same period in 2006 due to policies coming out of their surrender charge period and increased competition from banks. Individual fixed annuities net flows for the first six months of 2007 declined compared to the same period in 2006, reflecting the higher surrenders discussed above, partially offset by slightly higher deposits.

The following table presents Domestic Retirement Services reserves by surrender charge category as of June 30, 2007:

<i>(in millions)</i>	Group Retirement Products*	Individual Fixed Annuities	Individual Variable Annuities
Zero or no surrender charge	\$45,361	\$10,813	\$12,591
0% - 2%	6,734	4,068	5,424
Greater than 2% - 4%	3,872	6,665	5,589
Greater than 4%	3,241	27,182	9,355
Non-Surrenderable	877	3,442	92
Total	\$60,085	\$52,170	\$33,051

* Excludes mutual funds of \$7.6 billion.

Surrender rates increased for group retirement products and individual fixed annuities for the first six months of 2007 compared to the same period in 2006. Surrender rates for group retirement products increased as a result of an increase in mutual fund and group annuity surrenders. New products have been introduced to retain assets and AIG has retained or attracted over \$795 million in assets in the first six months of 2007. The increase in the surrender rate for fixed annuities continues to be driven by a relatively flat yield curve and the general aging of the in-force block; however, less than 21 percent of the individual fixed annuity reserves as of June 30, 2007 were available to be surrendered without charge. Individual variable annuities surrender rates were lower in the first six months of 2007 compared to the same period in 2006.

An increase in the level of surrenders in any of these businesses or in the individual fixed annuities runoff block could accelerate the amortization of DAC and negatively affect fee income earned on assets under management.

The following table presents the net flows^(a) by line of business:

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006
Group retirement products ^(b)	\$ 236	\$ 194	\$ 134	\$ 635
Individual fixed annuities	(675)	(873)	(1,512)	(1,019)
Individual variable annuities	18	88	(85)	(45)
Individual fixed annuities – runoff	(229)	(258)	(492)	(486)
Total	\$(650)	\$(849)	\$(1,955)	\$ (915)

(a) Net flows are defined as deposits received less benefits, surrenders, withdrawals and death benefits.

(b) Includes mutual funds.

Higher surrenders in the group retirement and individual fixed annuity blocks, offset somewhat by increased deposits on both blocks, resulted in negative net flows for the first six months of 2007. The continuation of the current interest rate and competitive environment could prolong this trend.

Life Insurance & Retirement Services Net Investment Income and Net Realized Capital Gains (Losses)

The following table summarizes the components of Net investment income:

(in millions)	Three Months Ended June 30,		Six Months Ended June 30,

Net investment income ^(d)	\$6,132	\$4,420	\$11,645	\$9,254

(a) Includes the effect of an out of period UCITS adjustment in the second quarter of 2006. For the three and six-month periods ended June 30, 2006 the effect was an increase of \$221 million and \$203 million, respectively, in net investment income and \$144 million and \$132 million, respectively, in operating income.

(b) Other includes real estate income, income on non-partnership invested assets, securities lending and Foreign Life Insurance & Retirement Services' equal share of the results of AIG Credit Card Company (Taiwan).

(c) Relates principally to assets held in various trading securities accounts that do not qualify for separate account treatment under SOP 03-1. These amounts are offset by an equal change included in incurred policy losses and benefits.

(d) Includes call and tender income.

Net investment income increased for the three and six-month periods ended June 30, 2007 compared to the same periods in 2006. Fixed maturities income rose as the underlying invested asset base grew. Yield enhancement activity increased over

the same period in 2006. Earnings on certain interests in unit investment trusts allocated to policyholder accounts through incurred policy losses and benefits for the current quarter and year-to-date include earnings of \$148 million and

\$189 million, respectively, compared to \$64 million for both the second quarter and first six months in 2006, respectively. Policyholder trading gains (losses) increased for both the quarter and year-to-date compared to the same period in 2006 and generally follow the trend of equity markets in the respective periods. Net investment income for certain operations include investments in structured notes linked to emerging market sovereign debt that incorporates both interest rate risk and currency risk. For 2007, these investments generated income of \$23 million and \$45 million for the three and six-month periods ended June 30, 2007, respectively, compared to losses of \$51 million and \$32 million for the same periods in 2006. In addition, period to period comparisons of investment income for some investment activities, particularly partnership income, are

affected by yield enhancement activity, as shown in the above table.

See also Insurance and Asset Management Invested Assets herein.

AIG generates income tax credits as a result of investing in synthetic fuel production (synfuels) related to the investment loss shown in the above table and records those benefits in its provision for income taxes. The amounts of those income tax credits were \$118 million and \$61 million for the first six months of 2007 and 2006, respectively. For a further discussion of the effect of fluctuating domestic crude oil prices on synfuel tax credits, see Note 6(c) of Notes to Consolidated Financial Statements.

The following table summarizes Net realized capital gains (losses) by major category:

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,

* Includes gains of \$66 million and losses of \$19 million allocated to participating policyholders for the three-month periods ended June 30, 2007 and 2006, respectively, and losses of \$5 million and gains of \$48 million for the first six months of 2007 and 2006, respectively.

Net realized capital gains (losses) include normal portfolio transactions as well as derivative gains (losses) for transactions that did not qualify for hedge accounting treatment under FAS 133, foreign exchange gains and losses and other-than-temporary declines in the value of investments. Net realized capital losses in the Foreign Life

operations in the first six months of 2007 include losses of \$65 million related to derivatives that did not qualify for hedge accounting treatment compared to a gain of \$346 million in the same period in 2006. Derivatives in the Foreign Life operations are primarily used to economically hedge cash flows related to U.S. dollar bonds back to the

respective currency of the country, principally in Taiwan, Thailand, and Singapore. The corresponding foreign exchange gain or loss with respect to the economically hedged bond is deferred in Accumulated other comprehensive income until the bond is sold or deemed to be other than temporarily impaired. In the first six months of 2007, Foreign Life operations incurred losses of \$462 million for the decline in the value of securities deemed to be other than temporarily impaired. A significant portion of those losses was related to the decline in value of U.S. dollar bonds held in Thailand and Singapore reflecting the depreciation of the U.S. dollar against the local currencies.

Deferred Policy Acquisition Costs, Sales Inducement Assets and Future Policy Benefit Reserves

DAC for Life Insurance & Retirement Services products arises from the deferral of those costs that vary with, and are

directly related to, the acquisition of new or renewal business. Policy acquisition costs for life insurance products are generally deferred and amortized over the premium paying period of the policy. Policy acquisition costs that relate to universal life and investment-type products, including variable and fixed annuities (investment-oriented products), are deferred and amortized, with interest, as appropriate, in relation to the historical and future incidence of estimated gross profits to be realized over the estimated lives of the contracts. Total acquisition costs deferred decreased \$118 million in the first six months of 2007 compared to the first six months in 2006 primarily due to lower Domestic Life sales. Total amortization expense increased \$79 million compared to the first six months in 2006. Annualized amortization expense levels for 2007 and 2006 are approximately 12 percent and 14 percent, respectively, of the opening DAC balance.

The following table summarizes the major components of the changes in DAC/Value of Business Acquired (VOBA) and Sales Inducement Assets (SIA):

(in millions)	Six Months Ended June 30,					
	2007			2006

* Primarily represents the cumulative effect of adoption of SOP 05-1.

DAC for insurance-oriented, investment-oriented and retirement services products is reviewed for recoverability, which involves estimating the future profitability of current business. This review involves significant management judgment. If actual future profitability is substantially lower than estimated, AIG's results of operations could be significantly affected in future periods.

Future Policy Benefit Reserves

Periodically, the net benefit reserves (policy benefit reserves less DAC) established for life and retirement services companies are tested to ensure that, including consideration of future expected premium payments, they are adequate to provide for future policyholder benefit obligations. The assumptions used to perform the tests are current best-estimate assumptions as to policyholder mortality, morbidity, terminations, company maintenance expenses and invested asset returns. For long duration traditional business, a "lock-in" principle applies, whereby the assumptions used to calculate the benefit reserves and DAC are set when a policy is issued and do not change with changes in actual experience. These assumptions include margins for adverse deviation in the event that actual experience might deviate from these assumptions. For business in force outside of North America, 46 percent of total policyholder benefit liabilities at June 30, 2007 resulted from traditional business where the lock-in principle applies. In most foreign locations, guarantees have been made to pay benefits to policyholders for many decades into the future.

As experience changes over time, the best-estimate assumptions are updated to reflect the observed changes. Because of the long-term nature of many of AIG's liabilities subject to the lock-in principle, small changes in certain of the assumptions may cause large changes in the degree of reserve adequacy that exists. In particular, changes in estimates of future invested asset return assumptions have a large effect on the degree of reserve adequacy that exists.

Taiwan

Beginning in calendar year 2000, the yield available on Taiwanese 10-year government bonds dropped from approximately 6 percent to approximately 2.5 percent at June 30, 2007. Yields on most other invested assets have correspondingly dropped over the same period of time. Current sales are focused on products such as a) variable separate account products which do not contain interest rate guarantees, b) participating products which contain very low implied interest rate guarantees, and c) A&H policies and riders.

In developing the reserve adequacy analysis for Nan Shan, several key best estimate assumptions have been made:

- Observed historical mortality improvement trends have been projected to 2014;
- Morbidity, expense and termination rates have been updated to reflect recent experience;
- Taiwan government bond rates are expected to remain at current levels for 10 years and gradually increase to best estimate assumptions of a market consensus view of long-term interest rate expectations. Foreign assets are assumed to comprise 35 percent of invested assets, resulting in a composite long-term investment assumption of approximately 4.7 percent; and
- The currently permitted practice of offsetting positive mortality experience with negative interest margins, thus eliminating the need for mortality dividends, will continue.

Future results of the reserve adequacy tests are uncertain given the long-term nature of the business and the volatility inherent in actual investment yields. The inability to achieve assumed investment returns could accelerate DAC amortization and necessitate reserve strengthening.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance.

Financial Services Results

Financial Services results were as follows:

<i>(in millions)</i>	Three Months Ended June 30,		Percentage Increase/ (Decrease)	Six Months Ended June 30,		Percentage Increase/ (Decrease)
	2007	2006		2007	2006

Total	\$ 47	\$ (530)	–%	\$ 339	\$ (638)	–%

(a) Revenues are primarily aircraft lease rentals from ILFC. Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2007 and 2006, the effect was \$24 million and \$10 million, respectively. For the six-month periods ended June 30, 2007 and 2006, the effect was \$(13) million and \$55 million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings. In the second quarter of 2007, ILFC began applying hedge accounting to most of its derivatives hedging interest rate and foreign exchange risks associated with its floating rate and foreign currency denominated borrowings.

(b) Revenues, shown net of interest expense of \$805 million and \$633 million for the three-month periods ended June 30, 2007 and 2006, respectively, and \$1.9 billion and \$1.3 billion for the six-month periods ended June 30, 2007 and 2006, respectively, were primarily from hedged financial positions entered into in connection with counterparty transactions. Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2007 and 2006, the effect was \$(528) million and \$(1.2) billion, respectively. For the six-month periods ended June 30, 2007 and 2006, the effect was \$(613) million and \$(1.8) billion, respectively. The second quarter and the first six months of 2007 include out of period charges of \$431 million and \$326 million, respectively, including a \$380 million charge in both periods to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIGFP. The first six months of 2006 include an out of period charge of \$300 million related to the remediation of the material weakness in accounting for certain derivative transactions under FAS 133. In the first quarter of 2007, AIGFP began applying hedge accounting for certain transactions.

(c) Certain transactions entered into by AIGFP generate tax credits and benefits which are included in income taxes in the consolidated statement of income. The amounts of such tax credits and benefits for the three-month periods ended June 30, 2007 and 2006 were \$18 million and \$8 million, respectively. The amounts of such tax credits and benefits for the six-month periods ended June 30, 2007 and 2006 were \$35 million and \$26 million, respectively.

(d) Revenues are primarily finance charges. Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended June 30, 2007 and 2006, the effect was \$20 million and \$5 million, respectively. For the six-month periods ended June 30, 2007 and 2006, the effect was \$(15) million and \$8 million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings. In the second quarter of 2007, AGF began applying hedge accounting to most of its derivatives hedging interest rate and foreign exchange risks associated with its floating rate and foreign currency denominated borrowings.

(e) The three-month and six-month periods ended June 30, 2007 included pre-tax charges of \$50 million and \$178 million, respectively, in connection with domestic consumer finance's mortgage banking activities.

Financial Services operating income increased in the three and six-month periods ended June 30, 2007 compared to the same periods in 2006 primarily due to differences in the accounting treatment for hedging activities. In the first quarter of 2007, AIGFP began applying hedge accounting to certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. In the second quarter of 2007, AGF and ILFC began applying hedge accounting to most of their derivatives hedging interest rate and foreign exchange risks associated with their floating rate and foreign currency denominated borrowings. During 2006, hedge accounting under FAS 133 was not being applied to

any of the derivatives and related assets and liabilities. Accordingly, revenues and operating income were exposed to volatility resulting from differences in the timing of revenue recognition between the derivatives and the related hedged assets and liabilities.

The second quarter and the first six months of 2007 included out of period charges of \$431 million and \$326 million, respectively, of which \$380 million was to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIGFP.

The first six months of 2006 included an out of period charge of \$300 million related to the remediation of the material weakness in accounting for certain derivative transactions under FAS 133.

Beginning in the first quarter of 2007, net realized capital gains and losses, including derivative gains and losses and foreign exchange transaction gains and losses for Financial Services entities other than AIGFP, which were previously reported as part of AIG's Other category, are now included in Financial Services revenues and operating income. For the three and six-month periods ended June 30, 2007, the amount included in both Financial Services revenues and operating income was a gain of \$63 million and a loss of \$4 million, respectively. All prior periods have been revised to conform to the current presentation.

Aircraft Leasing

AIG's Aircraft Leasing operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to foreign and domestic airlines. Revenues also result from the remarketing of commercial jets for ILFC's own account, and remarketing and fleet management services for airlines and financial institutions. ILFC finances its aircraft purchases primarily through the issuance of debt instruments. ILFC hedges the majority of its floating rate and foreign currency denominated debt using interest rate and foreign currency derivatives. Starting in the second quarter of 2007, ILFC began applying hedge accounting to most of its derivatives. All of ILFC's derivatives are effective economic hedges; however, since hedge accounting under FAS 133 was not applied prior to April 2, 2007, the benefits of using derivatives to hedge these exposures are not reflected in ILFC's 2006 corporate borrowing rate. The composite borrowing rates at June 30, 2007 and 2006 were 5.25 percent and 5.01 percent, respectively.

ILFC typically contracts to re-lease aircraft before the end of the existing lease term. For aircraft returned before the end of the lease term, ILFC has generally been able to re-lease such aircraft within two to six months of its return. As a lessor, ILFC considers an aircraft "idle" or "off lease" when the aircraft is not subject to a signed lease agreement or signed letter of intent. ILFC had no aircraft off lease at June 30, 2007, and all new aircraft scheduled for delivery through 2007 have been leased.

Quarterly Aircraft Leasing Results

ILFC's operating income increased in the three months ended June 30, 2007 compared to the same period of 2006 by \$9 million, or 5 percent. Rental revenues increased by \$136 million or 14 percent, driven by a larger aircraft fleet and higher lease rates. During the three months ended June 30, 2007, ILFC's fleet subject to operating leases increased by 38 airplanes to a total of 894. The increase in

rental revenues was partially offset by increases in depreciation and interest expense. During the second quarter of 2007, ILFC did not sell any aircraft compared to three aircraft sold in the same period in 2006, resulting in a decrease in revenues of \$18 million from the comparative period. Depreciation expense increased by \$49 million, or 13 percent, in line with the increase in the size of the aircraft fleet. Interest expense increased by \$71 million, or 21 percent, driven by rising cost of funds, a weaker U.S. dollar against the Euro and the British Pound and additional borrowings to fund aircraft purchases. As noted above, ILFC's interest expense did not reflect the benefit of hedging these exposures in 2006. For the three-month periods ended June 30, 2007 and 2006, the gains from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses, were \$24 million and \$10 million, respectively, in both revenues and operating income.

Year-to-date Aircraft Leasing Results

ILFC's operating income decreased in the first six months of 2007 compared to the same period of 2006 by \$3 million, or 1 percent. Rental revenues increased by \$273 million or 14 percent, driven by a larger aircraft fleet and higher lease rates. During the first six months of 2007, ILFC's fleet subject to operating leases increased by 70 airplanes to a total of 894. The increase in rental revenues was partially offset by increases in depreciation and interest expense. During the first six months of 2007, ILFC sold one aircraft compared to six aircraft sold in the same period in 2006, resulting in a decrease in revenues of \$35 million compared to the same period in 2006. Depreciation expense increased by \$92 million, or 12 percent, in line with the increase in the size of the aircraft fleet. Interest expense increased by \$142 million, or 22 percent, driven by rising cost of funds, a weaker U.S. dollar against the Euro and the British Pound and additional borrowings to fund aircraft purchases. ILFC's interest expense did not reflect the benefit of hedging these exposures in the first quarter of 2007 and in 2006. For the first six months of 2007 and 2006, the gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses, were \$(13) million and \$55 million, respectively, in both revenues and operating income.

Capital Markets

Capital Markets represents the operations of AIGFP, which engages as principal in a wide variety of financial transactions, including standard and customized financial products involving commodities, credit, currencies, energy, equities and rates. AIGFP also invests in a diversified portfolio of securities and principal investments and engages in borrowing activities involving issuing standard and

structured notes and other securities, and entering into guaranteed investment agreements (GIAs).

Beginning in 2007, AIGFP applied hedge accounting under FAS 133 to certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. As a result, AIGFP recognized in earnings the change in the fair value on the hedged items attributable to the hedged risks offsetting the gains and losses on the derivatives designated as hedges. Prior to 2007, AIGFP did not apply hedge accounting under FAS 133 to any of its derivatives or related assets and liabilities.

Since 1998, AIGFP has written super senior (AAA+) protection through credit default swaps, a portion of which is exposed to CDOs of residential mortgage-backed securities and other asset-backed securities. At June 30, 2007, the notional amount of this credit derivative portfolio was \$465 billion, including \$64 billion from transactions with mixed collateral that include U.S. subprime mortgages. As of August 6, 2007, all of AIGFP's super senior exposures continued to have tranches below AIGFP's attachment point which have been explicitly rated AAA or would have been rated AAA had they been rated. AIGFP's portfolio of credit default swaps is carefully structured, undergoes regular monitoring, modeling and analysis and contains significant protection through collateral subordination. In addition, in December 2005, AIGFP stopped committing to writing super senior protection for CDOs that included any subprime collateral. For a further description of AIGFP's risk management practices in its credit default swaps business, see Management's Discussion and Analysis of Financial Condition and Results of Operations — Risk Management — Segment Risk Management — Financial Services in the 2006 Annual Report on Form 10-K.

Quarterly Capital Markets Results

Capital Markets operating income increased in the three months ended June 30, 2007 by \$697 million compared to the same period in 2006. During the second quarter of 2007, AIGFP experienced increased transaction flow in its equity, credit and currency products.

In addition, AIGFP recognized a net loss of \$528 million related to hedging activities that did not qualify for hedge accounting treatment under FAS 133, compared to a net loss of \$1.2 billion for the same period in 2006. The net loss in the second quarter of 2007 includes out of period charges of \$431 million, including a charge of \$380 million to reverse net gains recognized in previous periods on transfers of available for sale securities among legal entities consolidated within AIGFP. The net loss also reflects the effect of increases in U.S. interest rates and the slight weakening of the U.S. Dollar on derivatives hedging AIGFP's assets and liabilities.

Financial market conditions in the three months ended June 30, 2007 were characterized by sizable increases in

global interest rates, increases in credit spreads, higher equity valuations and a slightly weaker U.S. dollar.

The most significant component of Capital Markets operating expenses is compensation, which was \$153 million and \$129 million in the three-month periods ended June 30, 2007 and 2006, respectively. The amount of compensation was not affected by gains and losses arising from derivatives not qualifying for hedge accounting treatment under FAS 133.

AIG elected to early adopt FAS 155, "Accounting for Certain Hybrid Financial Instruments" (FAS 155) in 2006 and AIGFP elected to apply the fair value option to certain structured notes and other financial liabilities containing embedded derivatives outstanding as of January 1, 2006. AIGFP recognized a gain of \$196 million in the second quarter of 2007 and a loss of \$98 million in the second quarter of 2006 on hybrid financial instruments for which it applied the fair value option under FAS 155. These amounts were largely offset by gains and losses on economic hedge positions also reflected in AIGFP's operating income.

Year-to-date Capital Markets Results

Capital Markets operating income increased in the first six months of 2007 by \$1.2 billion compared to the same period in 2006, as AIGFP experienced higher transaction flow in the first six months of 2007 in its equity and commodity products. AIGFP also recognized a net loss of \$613 million related to hedging activities that did not qualify for hedge accounting treatment under FAS 133, compared to a net loss of \$1.8 billion for the same period in 2006. The first six months of 2007 included out of period charges of \$326 million, as noted above, and a \$166 million reduction in fair value at March 31, 2007 of certain derivatives that are an integral part of, and economically hedge, the structured transactions potentially affected by the proposed regulations issued by the U.S. Treasury Department discussed above in Overview of Operations and Business — Outlook. The net loss on AIGFP's derivatives recognized in the first six months of 2006 included an out of period charge of \$300 million related to the remediation of the material weakness in accounting for certain derivative transactions under FAS 133. The net loss also reflects the effect of increases in U.S. interest rates and a weakening of the U.S. Dollar on derivatives hedging AIGFP's assets and liabilities.

Financial market conditions in the first six months of 2007 were characterized by increases in global interest rates, increases in credit spreads, higher equity valuations and a slightly weaker U.S. dollar.

The most significant component of Capital Markets operating expenses is compensation, which was \$276 million and \$265 million in the first six months of 2007 and 2006, respectively. The amount of compensation was not affected

by gains and losses arising from derivatives not qualifying for hedge accounting treatment under FAS 133.

AIGFP recognized a gain of \$30 million in the first six months of 2007 and a loss of \$89 million in the first six months of 2006 on hybrid financial instruments for which it applied the fair value option under FAS 155. These amounts were largely offset by gains and losses on economic hedge positions also reflected in AIGFP's operating income.

Consumer Finance

AIG's consumer finance operations in North America are principally conducted through AGF. On January 2, 2007, AGF expanded its operations into the United Kingdom through the acquisition of Ocean Finance and Mortgages Limited, a finance broker for home owner loans in the United Kingdom. AGF derives a substantial portion of its revenues from finance charges assessed on outstanding real estate loans, secured and unsecured non-real estate loans and retail sales finance receivables. The real estate loans are comprised principally of first-lien mortgages on residential real estate generally having a maximum term of 360 months, and are considered non-conforming. The real estate loans may be closed-end accounts or open-end home equity lines of credit and are principally fixed rate products. AGF does not offer mortgage products with borrower payment options that allow for negative amortization of the principal balance. The secured non-real estate loans are secured by consumer goods, automobiles or other personal property. Both secured and unsecured non-real estate loans and retail sales finance receivables generally have a maximum term of 60 months. The majority of AGF's finance receivables are sourced through its branches. However, a significant volume of real estate loans is also sourced through broker relationships, and to lesser extents, through correspondent relationships and direct mail solicitations.

AGF also conducts mortgage banking activities through its centralized real estate operations. It originates residential real estate loans, the majority of which are sold to investors on a servicing-released basis. These loans are collateralized by first and second-liens on one to four family properties and are originated largely through broker relationships and to a lesser extent are originated directly to consumers or through correspondent relationships. These real estate loans usually have maximum original terms of 360 months and generally have higher credit quality than the real estate loans sourced through its branches. These real estate loans are generally considered non-conforming and include fixed, adjustable and hybrid adjustable loans. From July 2003 through February 2006, these loans were originated through an arrangement with AIG Federal Savings Bank (AIG Bank), a federally chartered thrift. The origination relationship was terminated in the first quarter of 2006. Since then, all new loans have been originated directly by AGF subsidiaries under their own state licenses.

On June 7, 2007, AIG's domestic consumer finance operations, consisting of AIG Bank, AGF's mortgage banking subsidiary Wilmington Finance, Inc. (WFI) and AGF entered into a Supervisory Agreement with the Office of Thrift Supervision (OTS). The Supervisory Agreement pertains to certain mortgage loans originated in the name of AIG Bank from July 2003 through early May 2006 pursuant to a servicing agreement between WFI and AIG Bank, which was terminated in February 2006. Pursuant to the terms of the Supervisory Agreement, AIG Bank, WFI and AGF agreed to implement a financial remediation program whereby certain borrowers may be provided loans on more affordable terms and/or reimbursement of certain fees. The Supervisory Agreement also requires AGF to engage the services of an external consultant to monitor, evaluate and periodically report to the OTS with respect to the matters covered by the Supervisory Agreement. Separately, the domestic consumer finance operations also committed to donate \$15 million to certain not-for-profit organizations to support their efforts to promote financial literacy and credit counseling.

Management's best estimate of the cost of implementing the financial remediation plan contemplated by the Supervisory Agreement, including the \$15 million donation, was \$178 million at June 30, 2007. A charge in the amount of \$128 million was recorded in the first quarter of 2007 while the remaining \$50 million was recorded in the second quarter of 2007 at the time the terms of the Supervisory Agreement were finalized. As the estimate is based on judgments and assumptions made by management, the actual cost of implementing the financial remediation plan may differ from this estimate.

AIG's foreign consumer finance operations are principally conducted through AIG Consumer Finance Group, Inc. (AIGCFG). AIGCFG operates primarily in emerging and developing markets. AIGCFG has operations in Argentina, China, Hong Kong, Mexico, Philippines, Poland, Taiwan and Thailand and most recently began operations in India through the acquisition of a majority interest in a sales finance lending operation during the first quarter of 2007 and the acquisition of a mortgage lending operation in the second quarter of 2007. In addition, AIGCFG expanded its distribution channels in Thailand by acquiring in the first quarter of 2007 an 80 percent interest in a company with a network of over 130 branches for secured consumer lending. Certain of the AIGCFG operations are partly or wholly owned by life insurance subsidiaries of AIG. Accordingly, the financial results of those companies are allocated between Financial Services and Life Insurance & Retirement Services according to their ownership percentages. While products vary by market, the businesses generally provide credit cards, unsecured and secured non-real estate loans, term deposits, savings accounts, retail sales finance and real estate loans. AIGCFG originates finance receivables through its branches and direct solicitation. AIGCFG also originates finance

receivables indirectly through relationships with retailers, auto dealers, and independent agents.

Quarterly Consumer Finance Results

Consumer Finance operating income decreased by \$127 million, or 63 percent, in the three months ended June 30, 2007 compared to the same period in 2006.

The operating income from the domestic consumer finance operations, which include the operations of AGF and AIG Bank, decreased by \$127 million, or 68 percent, for the three months ended June 30, 2007 compared to the same period in 2006. Pursuant to the terms of the Supervisory Agreement, as discussed above, a charge of \$50 million was recorded in the second quarter of 2007. Additionally, for the three months ended June 30, 2007, domestic results were adversely affected by the slower housing market, higher interest rates on most long-term fixed rate loans and evolving changes in the regulatory environment which resulted in lower originations for both investment and held for sale real estate loans. For the three months ended June 30, 2007, results from mortgage banking activities included lower net gains on sales of real estate loans held for sale as well as an \$11 million increase in the provision for AGF's warranty reserve compared to the same period in 2006, which covers its obligations to repurchase loans sold to third-party investors should there be a first payment default or breach of representations and warranties.

AGF's finance receivables totaled \$24.9 billion as of June 30, 2007, including \$19.2 billion of loans for which some or all of the collateral consisted of real estate, and which were predominantly underwritten with full income verification. As of June 30, 2007, the 60-day delinquency rate for these real estate loans was 1.95 percent (based on outstanding loan balances, consistent with mortgage lending practice). The overall credit quality of AGF's finance receivables during the three months ended June 30, 2007 remained stable. AGF's net charge-off rate increased to 1.02 percent compared to 0.86 percent in the same period in 2006. The 60-day delinquency rate for all finance receivable types increased from 1.75 percent at June 30, 2006 to 2.18 percent at June 30, 2007.

AGF's interest expense increased by \$18 million or 6 percent as both its short-term and long-term borrowing rates increased in the three months ended June 30, 2007 compared to the same period in 2006. During the three months ended June 30, 2007, AGF recorded a net gain of \$17 million on its derivatives that did not qualify for hedge accounting under FAS 133, including the related foreign exchange losses, compared to a net gain of \$2 million for the same period in 2006. Commencing in the second quarter of 2007, AGF began applying hedge accounting.

Revenues from the foreign consumer finance operations increased by approximately 26 percent in the three months

ended June 30, 2007 compared to the same period in 2006. Loan growth, particularly in Poland and Argentina, was the primary driver behind the higher revenues.

Year-to-date Consumer Finance Results

Consumer Finance operating income decreased by \$267 million, or 71 percent, in the first six months of 2007 compared to the same period of 2006.

The operating income for the first six months of 2007 from the domestic consumer finance operations, which includes the operations of AGF and AIG Bank, decreased by \$311 million or 81 percent from the same period of 2006. Pursuant to the terms of the Supervisory Agreement, as discussed above, charges of \$178 million were recorded during the first six months of 2007.

Additionally, for the first six months of 2007, domestic results were adversely affected by the slower housing market, higher interest rates on most long-term fixed rate loans and evolving changes in the regulatory environment which resulted in lower originations for both investment and held for sale real estate loans. For the first six months of 2007, results from mortgage banking activities included a \$36 million increase in the provision for AGF's warranty reserve compared to the same period in 2006. Although mortgage loan originations declined in the first six months of 2007, the softening of home price appreciation (reducing the equity customers may be able to extract from their homes by refinancing) and higher mortgage loan interest rates contributed to an increase in non-real estate loans of 12 percent at June 30, 2007 compared to June 30, 2006. Retail sales finance receivables also increased 22 percent compared to June 30, 2006 due to increased marketing efforts and customer demand. AGF's results for the first six months of 2007 also included \$65 million from a favorable out of court settlement.

The credit quality of AGF's finance receivables during the first six months of 2007 remained stable. Its net charge-off ratio increased to 1.00 percent compared to 0.87 percent in the same period in 2006, which reflected \$6 million of non-recurring recoveries that were recorded in the first quarter of 2006. AGF's delinquency ratio remained relatively low, although it increased by 43 basis points to 2.18 percent at June 30, 2007 compared to June 30, 2006. AGF's allowance for finance receivables losses as a percentage of outstanding receivables was 2.04 percent at June 30, 2007 compared to 2.07 percent at June 30, 2006. The allowance for finance receivables losses includes an allowance for catastrophe-related losses relating to hurricane Katrina of \$11 million at June 30, 2007 compared to \$54 million at June 30, 2006.

AGF's interest expense increased by \$64 million or 11 percent as both its short-term and long-term borrowing rates increased in the first six months of 2007 compared to the same period of 2006. Its short-term borrowing rates

averaged 5.40 percent in the first six months of 2007 compared to 4.85 percent in the same period of 2006, while long-term borrowing rates averaged 5.19 percent in the first six months of 2007 compared to 4.89 percent in the first six months of 2006.

For the first six months of 2007, domestic consumer finance revenues and operating income also declined from the prior year, partially due to the change in fair value of the derivatives hedging borrowings which did not qualify for hedge accounting treatment under FAS 133 during either period. During the first six months of 2007, AGF recorded a net loss of \$19 million on such derivatives, including the related foreign exchange losses, compared to a net gain of \$4 million for the same period in 2006. Commencing in the second quarter of 2007, AGF began applying hedge accounting.

Revenues from the foreign consumer finance operations increased by 22 percent in the first six months of 2007 compared to the same period of 2006. Loan growth, particularly in Poland and Argentina, was the primary driver behind the higher revenues. Operating income in the first six months of 2006 reflects AIGCFG's \$44 million share of the allowance for losses related to industry-wide credit deterioration in the Taiwan credit card market.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products. Such services and products are offered to individuals and institutions both domestically and overseas, and are primarily comprised of Spread-Based Investment Businesses, Institutional Asset Management and Brokerage Services and Mutual Funds.

The revenues and operating income for this segment are affected by the general conditions in the equity and credit markets. In addition, net realized gains and performance fees are contingent upon various fund closings, maturity levels and market conditions.

Spread-Based Investment Business

In prior years, the sale of GICs to investors, both domestically and overseas, was AIG's primary institutional Spread-Based Investment Business. During 2005, AIG launched its MIP and its asset management subsidiaries, primarily SunAmerica Life, ceased writing new GIC business. The GIC business will continue to run off for the foreseeable future while the MIP business is expected to grow.

Institutional Asset Management

AIG's Institutional Asset Management business provides an array of investment products and services globally to

institutional investors, AIG subsidiaries and affiliates and high net worth investors. These products and services include traditional equity and fixed income investment management and a full range of alternative asset classes. Delivery of AIG's Institutional Asset Management products and services is accomplished via a global network of operating subsidiaries comprising AIG Global Asset Management Holdings Corp. and its subsidiaries and affiliated companies (collectively, AIG Investments). The primary operating entities within this group are AIG Global Investment Corp., AIG Global Real Estate Investment Corp. and AIG Private Bank. AIG Private Bank offers banking, trading and investment management services to private client and high net worth individuals and institutions globally.

Within the alternative investment asset class, AIG Investments offers hedge and private equity fund-of-funds, direct investments and distressed debt investments. Within the structured fixed income and equity product asset class, AIG Investments offers various forms of structured and credit linked notes, various forms of collateralized debt obligations and other investment strategies aimed at achieving superior returns or capital preservation. In addition, Institutional Asset Management's product offerings include various forms of principal protected and liability management structures.

Brokerage Services and Mutual Funds

AIG's Brokerage Services and Mutual Funds business provides mutual fund and broker-dealer related services to retail investors, group trusts and corporate accounts through an independent network of financial advisors. The AIG Advisor Group, Inc., a subsidiary of AIG Retirement Services, Inc., is comprised of several broker-dealer entities that provide these services to clients primarily in the U.S. marketplace. AIG SunAmerica Asset Management Corp. manages, advises and/or administers retail mutual funds, as well as the underlying assets of variable annuities sold by AIG SunAmerica and VALIC to individuals and groups throughout the United States.

Other

Included in the Other category for Asset Management is income or loss from certain SunAmerica sponsored partnerships and partnership investments. Partnership assets consist of investments in a diversified portfolio of private equity funds, affordable housing partnerships and hedge fund investments.

Asset Management Results**Asset Management results were as follows:**

<i>(in millions)</i>	Three Months Ended June 30,		Percentage Increase/ (Decrease)	Six Months Ended June 30,		Percentage Increase/ (Decrease)
	2007	2006		2007	2006	
Revenues:						
Spread-Based Investment Business	\$ 734	\$ 697	5%	\$1,749	\$1,372	27%
Institutional Asset Management	1,077	666	62	1,745	992	76
Brokerage Services and Mutual Funds	82	73	12	160	146	10
Other	96	79	22	243	144	69
Total	\$1,989	\$1,515	31%	\$3,897	\$2,654	47%
Operating income:						
Spread-Based Investment Business	\$ 244	\$ 216	13%	\$ 735	\$ 423	74%
Institutional Asset Management*	770	473	63	1,103	631	75
Brokerage Services and Mutual Funds	21	21	-	47	44	7
Other	93	75	24	237	136	74
Total	\$1,128	\$ 785	44%	\$2,122	\$1,234	72%

* Includes a total of \$223 million and \$270 million for the three-month periods ended June 30, 2007 and 2006, respectively, and \$451 million and \$366 million for the six-month periods ended June 30, 2007 and 2006, respectively, of income from certain AIG managed partnerships, private equity and real estate funds that are consolidated. Such income is offset in minority interest expense, which is not a component of operating income, on the consolidated statement of income.

Asset Management operating income increased in the three-month period ended June 30, 2007 compared to the same period in 2006 primarily due to higher investment gains, including a gain of \$398 million from the sale of a portion of AIG's investment in Blackstone Group, LP in connection with its initial public offering. Asset Management operating income increased in the six-month period ended June 30, 2007 compared to the same period in 2006 due to the aforementioned investment gains as well as growth in both the Spread-Based Investment business and the Institutional Asset Management business. Gains and losses arising from the consolidation of certain partnerships, private equity investments and real estate funds are included in operating income, but are offset in minority interest expense, which is not a component of operating income.

Beginning in the first quarter of 2007, net realized capital gains and losses, including derivative gains and losses and foreign exchange transaction gains and losses, which were previously reported as part of AIG's Other category, are now included in Asset Management revenues and operating income. For the three and six-month periods of 2007, the amount included in both Asset Management revenues and operating income was a gain of \$352 million and \$332 million, respectively. The three and six-month periods of 2006 reflected losses of \$8 million and \$3 million, respectively. All prior periods have been revised to conform to the current presentation.

Quarterly Spread-Based Investment Business Results

Operating income related to the Spread-Based Investment business increased in the three months ended June 30, 2007 compared to the same period in 2006 due to an increase in partnership income associated with the Domestic GIC program and higher income from hedge funds and private

equity partnerships. Partnership income is primarily derived from alternative investments and is affected by performance in the equity markets. Thus, revenues, operating income and cash flows attributable to GICs will vary from reporting period to reporting period.

Offsetting this growth in operating income was the continued runoff of GIC balances. A significant portion of the remaining GIC portfolio consists of floating rate obligations. AIG has entered into hedges to manage against increases in short-term interest rates. AIG believes these hedges are economically effective, but they did not qualify for hedge accounting treatment under FAS 133. Income or loss from these hedges are classified as net realized capital gains or losses in the Asset Management segment results.

The following table illustrates the anticipated runoff of the domestic GIC portfolio at June 30, 2007:

<i>(in billions)</i>	Less Than One Year	1-3 Years	3+5 Years	Over Five Years	Total
Domestic GICs	\$3,879	\$12,944	\$2,721	\$ 6,663	\$26,207

MIP operating income, which is reported in the Spread-Based Investment business, declined during the three months ended June 30, 2007 compared to the same period of 2006 primarily due to foreign exchange losses on foreign-denominated debt that, while economically hedged, did not qualify for hedge accounting treatment under FAS 133, including a \$36 million out of period loss recorded in the second quarter of 2007.

During 2005, the MIP replaced the GIC program as AIG's principal institutional spread-based investment activity. AIG does not expect that income growth in the MIP will offset the runoff in the GIC portfolio for the foreseeable future because the asset mix under the MIP does not include

the alternative investments utilized in the GIC program. Commencing with transactions initiated in the first quarter of 2007, AIG applied hedge accounting for certain derivative transactions related to the MIP.

Year-to-date Spread-Based Investment Business Results

Operating income related to the Spread-Based Investment business increased in the first six months of 2007 compared to the same period of 2006 due to a significant increase in partnership income associated with the Domestic GIC program and increased returns from hedge funds and private equity partnerships. Partnership income in the first six months of 2007 included a distribution from a single partnership of \$164 million, which became available after a five-year restriction on capital withdrawals.

MIP operating income grew in the first six months of 2007 compared to the same period of 2006, reflecting increased issuance activity. Through June 30, 2007, AIG has issued the equivalent of \$6.3 billion of securities to fund the MIP in the Euromarkets and the U.S. public and private markets.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers have managed their businesses, commencing in the first quarter of 2007, revenues and operating income related to foreign investment contracts, which were historically reported as a component of the Spread-Based Investment business, are now being reported in the Life Insurance & Retirement Services segment. All prior periods have been revised to conform to the current presentation.

Quarterly Institutional Asset Management Results

Operating income for Institutional Asset Management increased in the three months ended June 30, 2007 compared to the same period of 2006, reflecting the \$398 million gain from the sale of a portion of AIG's investment in Blackstone Group, LP in connection with its initial public offering. Operating income for the three months ended June 30, 2007 was negatively affected by a decline in net realized capital gains related to real estate investments, as well as carried interest on private equity investments, which were particularly strong during the same period of 2006. Also negatively affecting operating income was a decrease in carried interest, which was driven by lower valuations of portfolio investments and is generally associated with performance in the equity markets, and lower gains on certain consolidated investments and partnerships. These gains are offset in minority interest expense, which is not a component of operating income, on the Consolidated Statement of Income.

Year-to-date Institutional Asset Management Results

Operating income for Institutional Asset Management increased in the first six months of 2007 compared to the same period of 2006 reflecting the \$398 million gain from the sale of a portion of AIG's investment in Blackstone Group, LP in connection with its initial public offering and increased carried interest driven by higher valuations of portfolio investments which are generally associated with improved performance in the equity markets. Operating income also reflects higher gains on certain consolidated investments and partnerships; however, these gains are offset in minority interest expense. Partly offsetting these gains was a decrease in net realized capital gains related to real estate investments as well as increased expenses resulting from investment in sales and infrastructure enhancements.

AIG's unaffiliated client assets under management, including retail mutual funds and institutional accounts, increased 15 percent to \$86.5 billion from December 31, 2006 to June 30, 2007, contributing to growth in its base management fees. Additionally, AIG Investments successfully launched several new private equity and real estate funds in the first half of 2007, which provide both a base management fee and the opportunity for future performance fees.

While unaffiliated client assets under management and the resulting management fees continue to increase, the growth in operating income has trailed the growth in revenues due to higher fund-related expenses as well as sales and infrastructure enhancements. The fund-related expenses are associated with investments acquired and held in anticipation of future fund launches. It is anticipated that these expenses will be recovered from fund entities in future periods. The sales and infrastructure enhancements are associated with AIG's planned expansion of marketing and distribution capabilities, combined with technology and operational infrastructure-related improvements.

Other Operations

The operating loss of AIG's Other category was as follows:

<i>(in millions)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006
Other operating income (loss):				
Equity earnings in				
unconsolidated entities	\$ 50	\$ 111	\$ 91	\$ 130
Interest expense	(302)	(223)	(554)	(406)
Unallocated corporate expenses	(200)	(64)	(362)	(248)
Compensation expense – SICO Plans	(10)	(14)	(20)	(90)
Compensation expense – Starr tender offer	–	–	–	(54)
Net realized capital gains (losses)	22	(49)	(27)	(54)
Other miscellaneous, net	(20)	(19)	(58)	(45)
Total Other	\$(460)	\$(258)	\$(930)	\$(767)

The operating loss of AIG's Other category increased in the second quarter and first six months of 2007 compared to the comparable periods in 2006, reflecting higher interest expenses resulting from increased borrowings in the parent company, higher unallocated corporate expenses primarily resulting from ongoing efforts to improve internal controls, an increase in a provision for certain foreign payroll tax obligations to \$60 million, higher incentive plan costs and lower income from unconsolidated entities.

Operating loss for the first six months of 2006 included an out of period charge of \$61 million related to the SICO Plans and a one-time charge related to the Starr tender offer of \$54 million.

Beginning in the first quarter of 2007, derivative gains and losses and foreign exchange transaction gains and losses for Asset Management and Financial Services entities (other than AIGFP) are now included in Asset Management and Financial Services revenues and operating income. These amounts were previously reported as part of AIG's Other category. All prior periods have been revised to conform to the current presentation.

Capital Resources and Liquidity

At June 30, 2007, AIG had total consolidated shareholders' equity of \$104.3 billion and total consolidated borrowings of \$165.3 billion. At that date, \$148.1 billion of such borrowings were not guaranteed by AIG, were matched borrowings by AIG or AIGFP, or represented junior subordinated debt or liabilities connected to trust preferred stock.

Borrowings

At June 30, 2007, AIG's net borrowings were \$17.2 billion, excluding amounts that were matched borrowings by AIG and AIGFP, amounts not guaranteed by AIG, junior subordinated debt and liabilities connected to trust preferred stock.

The following table summarizes borrowings outstanding:

<i>(in millions)</i>	June 30, 2007	December 31, 2006
AIG's net borrowings	\$ 17,225	\$ 17,126

AIG (Parent Company)

AIG intends to continue its customary practice of issuing debt securities from time to time to meet its financing needs and those of certain of its subsidiaries for general corporate purposes, as well as for the MIP. As of June 30, 2007, AIG had up to \$16.6 billion of debt securities, preferred and common stock and other securities registered and available for issuance under its universal shelf registration statement. In July 2007, AIG's new universal shelf registration statement was declared effective. The new registration statement includes the securities registered on its existing shelf registration statement and results in AIG having up to \$22 billion of debt securities, preferred stock and other securities, including up to \$16.5 billion of common stock, registered and available for issuance from time to time.

AIG maintains a medium term note program under its shelf registration statement. As of June 30, 2007, approximately \$4.1 billion principal amount of notes were outstanding under the medium term note program, of which \$749 million was used for AIG's general corporate purposes, \$371 million was used by AIGFP and \$2.9 billion was used to fund the MIP. The maturity dates of these notes range from 2008 to 2052. To the extent deemed appropriate, AIG may enter into swap transactions to manage its effective borrowing rates with respect to these notes. In connection with AIG's new universal shelf registration statement, in July 2007, AIG increased the size of its medium term note program, allowing AIG to issue from time to time up to \$22 billion of its registered debt securities in the form of medium term notes.

AIG also maintains a Euro medium term note program under which, as of June 30, 2007, an aggregate nominal amount of up to \$10.0 billion of notes may be outstanding at any one time. As of June 30, 2007, the equivalent of \$9.4 billion of notes were outstanding under the program, of which \$7.4 billion were used to fund the MIP and the remainder was used for AIG's general corporate purposes. The aggregate amount outstanding includes \$284 million resulting from foreign exchange translation into U.S. dollars, of which \$198 million relates to notes issued by AIG for general corporate purposes and \$86 million relates to notes issued to fund the MIP.

During the first six months of 2007, AIG issued in Rule 144A offerings an aggregate of \$1.5 billion principal amount of senior notes, of which \$650 million was used to fund the MIP and \$850 million was used for AIG's general corporate purposes.

AIG maintains a shelf registration statement in Japan, providing for the issuance of up to Japanese Yen 300 billion principal amount of senior notes, of which the equivalent of \$400 million was outstanding as of June 30, 2007, the proceeds of which were used for AIG's general corporate purposes. AIG also maintains an Australian dollar debt program under which senior notes with an aggregate principal amount of up to 5 billion Australian dollars may be outstanding at any one time. Although as of June 30, 2007 there were no outstanding notes under the Australian program, AIG intends to use the program opportunistically to fund the MIP or for AIG's general corporate purposes.

In June 2007, AIG issued \$750 million of 6.45 percent Series A-4 junior subordinated debentures (Series A-4 Debentures), the proceeds of which were used for general corporate purposes, including the repurchase of shares of AIG common stock. Subject to the Replacement Capital Covenant (RCC) described below, the Series A-4 Debentures are scheduled for repayment in 2047 and have a final maturity in 2077. The Series A-4 Debentures are redeemable by AIG at par beginning in 2012.

AIG issued three series of junior subordinated debentures in March 2007, which, together with the Series A-4 Debentures, totaled \$4.59 billion outstanding as of June 30, 2007. In connection with each Series of junior subordinated debentures, AIG entered into an RCC for the benefit of the holders of AIG's 6.25 percent notes due 2036. The RCCs provide that AIG will not repay, redeem, or purchase the applicable series of junior subordinated debentures on or before a specified date (which, in the case of the Series A-4 Debentures, is June 15, 2057), unless it has received qualifying proceeds from the sale of replacement capital securities.

AIG began applying hedge accounting for certain AIG parent transactions in the first quarter of 2007.

AIGFP

AIGFP uses the proceeds from the issuance of notes and bonds and GIA borrowings to invest in a diversified portfolio of securities and derivative transactions. The borrowings may also be temporarily invested in securities purchased under agreements to resell. AIGFP's notes and bonds include structured debt instruments whose payment terms are linked to one or more financial or other indices (such as an equity index or commodity index or another measure that is not considered to be clearly and closely related to the debt instrument). These notes contain embedded derivatives that otherwise would be required to be accounted for separately under FAS 133. Upon AIG's early adoption of FAS 155, AIGFP elected the fair value option for these notes. The notes that are accounted for using the fair value option are reported separately under hybrid financial instrument liabilities. AIG guarantees the obligations of AIGFP under AIGFP's notes and bonds and GIA borrowings. See Operating Review — Financial Services Operations, Liquidity and Derivatives herein.

AIGFP has a Euro medium term note program under which an aggregate nominal amount of up to \$10.0 billion of notes may be outstanding at any one time. As of June 30, 2007, \$7.04 billion of notes were outstanding under the program, including \$748 million resulting from foreign exchange translation into U.S. dollars. The notes issued under this program are guaranteed by AIG and are included in AIGFP's Notes and Bonds Payable in the preceding table of borrowings.

AIG Funding

AIG Funding, Inc. (AIG Funding) issues commercial paper that is guaranteed by AIG in order to help fulfill the short-term cash requirements of AIG and its subsidiaries. The issuance of AIG Funding's commercial paper, including the guarantee by AIG, is subject to the approval of AIG's Board of Directors or the Finance Committee of the Board if it exceeds certain pre-approved limits.

As backup for the commercial paper program and for other general corporate purposes, AIG and AIG Funding maintain revolving credit facilities, which, as of June 30, 2007, had an aggregate of \$5.4 billion available to be drawn and which are summarized below under Revolving Credit Facilities. In July 2007, AIG and AIG Funding renewed their 364-day syndicated revolving credit facility and increased its size by \$500 million to \$2.125 billion.

ILFC

ILFC fulfills its short-term cash requirements through operating cash flows and the issuance of commercial paper. The issuance of commercial paper is subject to the approval of ILFC's Board of Directors and is not guaranteed by AIG. ILFC maintains syndicated revolving credit facilities which,

as of June 30, 2007, totaled \$6.5 billion and which are summarized below under Revolving Credit Facilities. These facilities are used as back up for ILFC's maturing debt and other obligations.

As a well-known seasoned issuer, ILFC has filed an automatic shelf registration statement with the SEC allowing ILFC immediate access to the U.S. public debt markets. At June 30, 2007, \$4.35 billion of debt securities were issued under this registration statement and \$5.84 billion were issued under a prior registration statement. In addition, ILFC has a Euro medium term note program for \$7.0 billion, under which \$4.28 billion in notes were outstanding at June 30, 2007. Notes issued under the Euro medium term note program are included in ILFC notes and bonds payable in the preceding table of borrowings. The foreign exchange adjustment for the foreign currency denominated debt was \$855 million at June 30, 2007 and \$733 million at December 31, 2006. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging the portion of the note exposure not already offset by Euro-denominated operating lease payments.

ILFC had a \$4.3 billion Export Credit Facility for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At June 30, 2007, ILFC had \$806 million outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured Export Credit Facility for up to a maximum of \$2.64 billion for Airbus aircraft to be delivered through May 31, 2005. The facility was subsequently increased to \$3.64 billion and extended to include aircraft to be delivered through May 31, 2008. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a six-month forward-looking calendar, and the interest rate is determined through a bid process. At June 30, 2007, ILFC had \$2.0 billion outstanding under this facility. Borrowings with respect to these facilities are included in ILFC's notes and bonds payable in the preceding table of borrowings.

From time to time, ILFC enters into funded financing agreements. As of June 30, 2007, ILFC had a total of \$1.1 billion outstanding, which has varying maturities through February 2012. The interest rates are LIBOR-based, with spreads ranging from 0.30 percent to 1.625 percent.

The proceeds of ILFC's debt financing are primarily used to purchase flight equipment, including progress payments during the construction phase. The primary sources for the

repayment of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. AIG does not guarantee the debt obligations of ILFC. See also Operating Review — Financial Services Operations and Liquidity herein.

AGF

AGF fulfills most of its short-term cash borrowing requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of AGF's Board of Directors and is not guaranteed by AIG. AGF maintains committed syndicated revolving credit facilities which, as of June 30, 2007, totaled \$4.25 billion and which are summarized below under Revolving Credit Facilities. The facilities can be used for general corporate purposes and to provide backup for AGF's commercial paper programs. In July 2007, AGF resyndicated its 364-day revolving credit facility and increased its size by \$500 million to \$2.625 billion.

As of June 30, 2007, notes and bonds aggregating \$19.03 billion were outstanding with maturity dates ranging from 2007 to 2031 at interest rates ranging from 1.94 percent to 8.45 percent. To the extent deemed appropriate, AGF may enter into swap transactions to manage its effective borrowing rates with respect to these notes and bonds. As a well-known seasoned issuer, AGF filed an automatic shelf registration statement with the SEC allowing AGF immediate access to the U.S. public debt markets. At June 30, 2007, AGF had the corporate authorization to issue up to \$12.2 billion of debt securities under its shelf registration statements.

AGF's funding sources include a medium term note program, private placement debt, retail note issuances, bank financing and securitizations of finance receivables that AGF accounts for as on-balance-sheet secured financings. In addition, AGF has become an established issuer of long-term debt in the international capital markets.

In addition to debt refinancing activities, proceeds from the collection of finance receivables are used to fund cash needs including the payment of principal and interest on AGF's debt. AIG does not guarantee any of the debt obligations of AGF. See also Operating Review — Financial Services Operations and Liquidity herein.

AIGCFG

AIGCFG has a variety of funding mechanisms for its various markets, including retail and wholesale deposits, short-term and long-term bank loans, and intercompany subordinated debt. AIG Credit Card Company (Taiwan), a consumer finance business in Taiwan, and AIG Finance (Thailand) PLC have issued commercial paper for the funding of their respective operations. AIG does not guarantee any

borrowings for AIGCFG businesses, including this commercial paper.

Revolving Credit Facilities

AIG, ILFC and AGF maintain committed, unsecured revolving credit facilities listed on the table below in order to support their respective commercial paper programs and for

As of June 30, 2007 (in millions)

general corporate purposes. AIG, ILFC and AGF expect to replace or extend these credit facilities on or prior to their expiration. Some of the facilities, as noted below, contain a “term-out option” allowing for the conversion by the borrower of any outstanding loans at expiration into one-year term loans.

Facility	Size	Borrower(s)	Available Amount	Expiration	One-Year Term-Out Option
AIG:

Total AGF	\$4,250		\$4,250		

(a) In July 2007, the size of this facility was increased to \$2.125 billion and the expiration was extended to July 2008.

(b) Guaranteed by AIG.

(c) This facility can be drawn in the form of loans or letters of credit. All drawn amounts shown above are in the form of letters of credit.

(d) Subsidiaries of AIG are the lenders on this facility.

(e) In July 2007, the size of this facility was increased to \$2.625 billion and the expiration was extended to July 2008.

(f) American General Finance, Inc. is an eligible borrower for up to \$400 million only.

Credit Ratings

The cost and availability of unsecured financing for AIG and its subsidiaries are generally dependent on their short-term and long-term debt ratings. The following table presents the credit ratings of AIG and certain of its subsidiaries as of July 31, 2007. In parentheses, following the initial occurrence

in the table of each rating, is an indication of that rating's relative rank within the agency's rating categories. That ranking refers only to the generic or major rating category and not to the modifiers appended to the rating by the rating agencies to denote relative position within such generic or major category.

	Short-term Debt			Senior Long-term Debt		
	Moody's	S&P	Fitch	Moody's(a)	S&P(b)	Fitch(c)
AIG	P-1 (1st of 3)	A-1+ (1st of 6)	F1+ (1st of 5)	Aa2 (2nd of 9)	AA (2nd of 8)	AA (2nd of 9)
AIG Financial Products Corp. ^(d)	P-1	A-1+	–	Aa2	AA	–
AIG Funding, Inc. ^(d)	P-1	A-1+	F1+	–	–	–
ILFC	P-1	A-1+	F1(1st of 5)	A1(3rd of 9)	AA ^(e) (2nd of 8)	A+(3rd of 9)
American General Finance Corporation	P-1	A-1(1st of 6)	F1	A1	A+ (3rd of 8)	A+
American General Finance, Inc.	P-1	A-1	F1	–	–	A+

(a) Moody's Investors Service (Moody's). Moody's appends numerical modifiers 1, 2 and 3 to the generic rating categories to show relative position within rating categories.

(b) Standard & Poor's, a division of the McGraw-Hill Companies (S&P). S&P ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(c) Fitch Ratings (Fitch). Fitch ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(d) AIG guarantees all obligations of AIG Financial Products Corp. and AIG Funding, Inc.

(e) Negative rating outlook. A negative outlook by S&P indicates that a rating may be lowered, but is not necessarily a precursor of a ratings change. The outlook on all other credit ratings in the table is stable.

These credit ratings are current opinions of the rating agencies. As such, they may be changed, suspended or withdrawn at any time by the rating agencies as a result of changes in, or unavailability of, information or based on other circumstances. Ratings may also be withdrawn at AIG management's request. This discussion of ratings is not a complete list of ratings of AIG and its subsidiaries.

"Rating triggers" have been defined by one independent rating agency to include clauses or agreements the outcome of which depends upon the level of ratings maintained by one or more rating agencies. Rating triggers generally relate to events which (i) could result in the termination or limitation of credit availability, or require accelerated repayment, (ii) could result in the termination of business contracts or (iii) could require a company to post collateral for the benefit of counterparties.

AIG believes that any of its own or its subsidiaries' contractual obligations that are subject to "ratings triggers" or financial covenants relating to "ratings triggers" would not have a material adverse effect on its financial condition or

liquidity. Ratings downgrades could also trigger the application of termination provisions in certain of AIG's contracts, principally agreements entered into by AIGFP and assumed reinsurance contracts entered into by Transatlantic.

It is estimated that, as of the close of business on July 31, 2007, based on AIGFP's outstanding municipal GIAs and financial derivatives transactions as of such date, a downgrade of AIG's long-term senior debt ratings to 'Aa3' by Moody's or 'AA-' by S&P would permit counterparties to call for approximately \$847 million of collateral. Further, additional downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIGFP manages its liquidity. The actual amount of additional collateral that AIGFP would be required to post to counterparties in the event of such downgrades depends on market conditions, the fair value of the outstanding affected transactions and other factors prevailing at the time of the downgrade. Additional obligations to post collateral would increase the demand on AIGFP's liquidity.

Contractual Obligations and Other Commercial Commitments**The maturity schedule of AIG's contractual obligations at June 30, 2007 was as follows:**

(in millions)	Total Payments	Payments due by Period			
		Less Than One Year	1-3 Years	3+5 Years	Over Five Years
Borrowings ^(a)	\$146,724	\$ 38,307	\$ 32,060	\$ 34,714	\$ 41,643
Interest payments on borrowings	84,018	6,164	10,668	7,338	59,848
Loss reserves ^(b)	82,209	22,607	25,075	11,920	22,607
Insurance and investment contract liabilities ^(c)	606,340	27,737	35,180	41,227	502,196
GIC liabilities ^(d)	32,619	5,235	14,175	3,659	9,550
Aircraft purchase commitments	20,928	890	6,765	2,445	10,828
Total	\$972,838	\$100,940	\$123,923	\$101,303	\$646,672

(a) Excludes commercial paper and borrowings incurred by consolidated investments and includes hybrid financial instrument liabilities recorded at fair value.

(b) Represents future loss and loss adjustment expense payments estimated based on historical loss development payment patterns.

(c) Insurance and investment contract liabilities include various investment-type products with contractually scheduled maturities, including periodic payments of a term certain nature. Insurance and investment contract liabilities also include benefit and claim liabilities, of which a significant portion represents policies and contracts that do not have stated contractual maturity dates and may not result in any future payment obligations. For these policies and contracts (i) AIG is currently not making payments until the occurrence of an insurable event, such as death or disability, (ii) payments are conditional on survivorship, or (iii) payment may occur due to a surrender or other non-scheduled event out of AIG's control. AIG has made significant assumptions to determine the estimated undiscounted cash flows of these contractual policy benefits, which assumptions include mortality, morbidity, future lapse rates, expenses, investment returns and interest crediting rates, offset by expected future deposits and premium on in-force policies. Due to the significance of the assumptions used, the amounts presented could be materially different from actual required payments. The amounts presented in this table are undiscounted and therefore exceed the future policy benefits and policyholder contract deposits included in the balance sheet.

(d) Represents guaranteed maturities under GICs.

The maturity schedule of other commercial commitments of AIG and its consolidated subsidiaries at June 30, 2007 was as follows:

(in millions)	Total Amounts Committed	Amount of Commitment Expiration			
		Less Than One Year	1-3 Years	3+5 Years	Over Five Years
Letters of credit:					
Life Insurance & Retirement Services	\$ 185	\$ 17	\$ 4	\$ 22	\$ 142

Parent and other companies	304	139	134	31	–
Total	\$32,406	\$10,528	\$5,704	\$5,702	\$10,472

(a) Represents reimbursement obligations under letters of credit issued by commercial banks.

(b) Primarily AIG SunAmerica construction guarantees connected to affordable housing investments.

(c) Excludes commitments with respect to pension plans. The annual pension contribution for 2007 is expected to be approximately \$95 million for U.S. and non-U.S. plans.

(d) Primarily liquidity facilities provided in connection with certain municipal swap transactions and collateralized bond obligations.

(e) Primarily in connection with options to acquire aircraft.

(f) Primarily AIG SunAmerica commitments to invest in partnerships.

(g) Includes commitments to invest in limited partnerships, private equity and hedge funds and commitments to purchase and develop real estate in the U.S. and abroad.

(h) Primarily commitments to invest in limited partnerships.

Shareholders' Equity**AIG's consolidated shareholders' equity increased during the first six months of 2007 as follows:**

<i>(in millions)</i>	June 30, 2007
Beginning of year	\$101,677
Net income	8,407
Unrealized appreciation (depreciation) of investments, net of tax	(712)
Cumulative translation adjustment, net of tax	(294)
Dividends to shareholders	(949)
Payments advanced to purchase shares	(2,336)
Share repurchase	(1,680)
Other*	217
End of period	\$104,330

* Reflects the effects of employee stock transactions and cumulative effect of accounting changes.

AIG has in the past reinvested most of its unrestricted earnings in its operations and believes such continued reinvestment in the future will be adequate to meet any foreseeable capital needs. However, AIG may choose from time to time to raise additional funds through the issuance of additional securities.

In February 2007, AIG's Board of Directors adopted a new dividend policy, which took effect with the dividend declared in the second quarter of 2007, providing that under ordinary circumstances, AIG's plan will be to increase its common stock dividend by approximately 20 percent annually. The payment of any dividend, however, is at the discretion of AIG's Board of Directors, and the future payment of dividends will depend on various factors, including the performance of AIG's businesses, AIG's consolidated financial position, results of operations and liquidity and the existence of investment opportunities.

Share Repurchases

From time to time, AIG may buy shares of its common stock for general corporate purposes, including to satisfy its obligations under various employee benefit plans. In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. During March 2007, AIG entered into a \$3 billion structured share repurchase arrangement and in May 2007, AIG entered into an additional \$1 billion structured share repurchase arrangement. A total of 24,491,961 shares were repurchased during the first six months of 2007. The portion of the payments advanced by AIG under the structured share repurchase arrangements that had not yet been utilized to repurchase shares at June 30, 2007, amounting to \$2.34 billion, has been recorded as a component of shareholders' equity under

the caption, Payments advanced to purchase shares. Purchases have continued subsequent to June 30, 2007, with an additional 24,501,510 shares purchased from July 1 through August 6, 2007. All shares repurchased are recorded as treasury stock at cost.

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At June 30, 2007, AIG's consolidated invested assets, primarily held by its subsidiaries, included \$29.4 billion in cash and short-term investments. Consolidated net cash provided from operating activities in the first six months of 2007 amounted to \$15.1 billion. At the parent company level, liquidity management activities are conducted in a manner to preserve and enhance funding stability, flexibility, and diversity through the full range of potential operating environments and market conditions. AIG's primary sources of cash flow are dividends and other payments from its regulated and unregulated subsidiaries, as well as issuances of debt securities. Primary uses of cash flow are for debt service, subsidiary funding, shareholder dividend payments and common stock repurchases. Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements, including the funding of increased dividends under AIG's new dividend policy and repurchases of common stock.

In the first six months of 2007, AIG parent collected \$1.8 billion in dividends and other payments from subsidiaries, principally from DBG companies, issued \$5.4 billion of debt securities and retired \$765 million of debt, excluding MIP and Series AIGFP debt. AIG parent also advanced \$4 billion for structured share repurchase arrangements. AIG parent made interest payments totaling \$158 million, made \$856 million in capital contributions to subsidiaries, and paid \$859 million in dividends to shareholders in the first six months of 2007.

AIG parent funds its short-term working capital needs through commercial paper issued by AIG Funding. As of June 30, 2007, AIG Funding had \$4.5 billion of commercial paper outstanding with an average maturity of 30 days. As additional liquidity, AIG parent and AIG Funding maintain revolving credit facilities that, as of June 30, 2007, had an aggregate of \$5.4 billion available to be drawn, which are summarized above under Revolving Credit Facilities.

Invested Assets

AIG's investment strategy is to invest primarily in high quality securities while maintaining diversification to avoid significant exposure to issuer, industry and/or country concentrations.

The following tables summarize the composition of AIG's invested assets by segment.

<i>(in millions)</i>	General Insurance	Life Insurance & Retirement Services	Financial Services	Asset Management	Other	Total
June 30, 2007

Investments in Residential Mortgage-Backed Securities and CDOs

As part of its strategy to diversify its investments, AIG invests in various types of securities, including residential mortgage-backed securities (RMBS) and CDOs. At June 30, 2007, AIG's investment portfolio included such securities with an amortized cost of \$98.5 billion and an estimated fair value of \$97.9 billion. The gross unrealized gains and gross unrealized losses related to these investments were \$134 million and \$(747) million, respectively, at June 30, 2007.

AIG's insurance operations held investments in RMBS with an estimated fair value of \$94 billion at June 30, 2007, or approximately 11 percent of AIG's total invested assets. In addition, AIGFP held investments totaling \$3.6 billion in CDOs which include some level of subprime exposure. AIG's RMBS investments are predominantly in highly-rated tranches that contain substantial protection features through collateral subordination. At June 30, 2007, approximately 91 percent of these investments were rated AAA and

approximately 7 percent were rated AA by one or more of the principal rating agencies. AIG's investments rated BBB or below totaled approximately \$400 million, or less than 1 percent of AIG's total invested assets at June 30, 2007. As of August 6, 2007, none of AIG's RMBS with some level of subprime collateral had been downgraded as a result of recent rating agency actions, and a small amount of AIG's RMBS investments with subprime collateral had been upgraded. AIG currently intends to hold these securities to full recovery and/or full payment of principal and interest, and therefore expects that any mark to market effect will result in only a temporary adjustment to shareholders' equity.

AIG's underwriting practices for investing in RMBS, other asset-backed securities and CDOs takes into consideration the quality of the originator, the manager, the servicer, security credit ratings, underlying characteristics of the mortgages, borrower characteristics, and the level of credit enhancement in the transaction. AIG's strategy is

typically to invest in securities rated AA or better and create diversification across multiple underlying asset classes.

Other-than-temporary impairments

As a result of AIG's periodic evaluation of its securities for other-than-temporary impairments in value, AIG recorded, in net realized capital gains (losses), other-than-temporary impairment pre-tax losses of \$417 million and \$370 million in the three-month periods ended June 30, 2007 and 2006, respectively, and \$884 million and \$596 million in the six-month periods ended June 30, 2007 and 2006, respectively.

AIG no longer intends to hold to recovery certain available-for-sale investments. Approximately 66 percent and 42 percent of the other-than-temporary losses for the three and six-month periods ended June 30, 2007, respectively, relate to changes in interest rates. The balance arises primarily from foreign exchange or issuer-specific events.

The principal causes of the other-than-temporary impairment losses in the three and six-month periods ended June 30, 2007 were as follows:

Three months ended June 30, 2007

- Securities which AIG no longer intends to hold until they have fully recovered their carrying value, totaling \$277 million.

- A decline in value of U.S. dollar bonds held by AIG's Foreign Life operations totaling \$92 million, due to the depreciation of the U.S. dollar against the local currency.
- Issuer-specific events totaling \$9 million and equity securities and partnership investments of \$31 million in an unrealized loss position for a continuous 12-month period.

Six months ended June 30, 2007

- Securities which AIG no longer intends to hold until they have fully recovered their carrying value, totaling \$371 million.
- A decline in value of U.S. dollar bonds held by AIG's Foreign Life operations totaling \$304 million, due to the depreciation of the U.S. dollar against the local currency.
- Issuer-specific events totaling \$26 million and equity securities and partnership investments of \$147 million in an unrealized loss position for a continuous 12-month period.

No impairment charge with respect to any one single credit was significant to AIG's consolidated financial condition or results of operations, and no individual impairment loss exceeded 1.0 percent of consolidated net income for the first six months of 2007.

An aging of the pre-tax unrealized losses of fixed maturity and equity securities, distributed as a percentage of cost relative to unrealized loss (the extent by which the fair value is less than amortized cost or cost), including the number of respective items, was as follows at June 30, 2007:

Aging (dollars in millions)	Less than or equal to 20% of Cost			Greater than 20% to 50% of Cost			Greater than 50% of Cost			Total

(a) For bonds, represents amortized cost.

(b) The effect on net income of unrealized losses after taxes will be mitigated upon realization because certain realized losses will be charged to participating policyholder accounts, or realization will result in current decreases in the amortization of certain DAC.

At June 30, 2007, the fair value of AIG's fixed maturity and equity securities aggregated \$505.2 billion. At June 30, 2007, aggregate pre-tax unrealized gains for fixed maturity and equity securities were \$18.0 billion (\$11.7 billion after tax). At June 30, 2007, the aggregate pre-tax unrealized losses of fixed maturity and equity securities were \$6.1 billion (\$3.9 billion after tax).

Additional information about these securities is as follows:

- These securities are trading, in the aggregate, at approximately 97 percent of their current amortized cost.
- Less than 1 percent of these securities are trading at a value which is less than 20 percent of its current cost, or amortized cost.
- Less than 4 percent of the fixed income securities have issuer credit ratings which are below investment grade.

AIG did not consider these investments to be other-than-temporarily impaired at June 30, 2007, as management has the intent and ability to hold these investments until they fully recover in value.

At June 30, 2007, unrealized losses for fixed maturity securities and equity securities did not reflect any significant industry concentrations.

The amortized cost of fixed maturity securities available for sale in an unrealized loss position at June 30, 2007, by contractual maturity, is shown below:

<i>(in millions)</i>	Amortized Cost
Due in one year or less	\$ 6,384
Due after one year through five years	36,213
Due after five years through ten years	84,052
Due after ten years	93,329
Total	\$219,978

For the six months ended June 30, 2007, the pre-tax realized losses incurred with respect to the sale of fixed maturities and equity securities were \$598 million. The aggregate fair value of securities sold was \$22.2 billion, which was approximately 97 percent of amortized cost. The average period of time that securities sold at a loss during the six months ended June 30, 2007 were trading continuously at a price below book value was approximately seven months.

Risk Management

For a complete discussion of AIG's risk management program, see Management's Discussion and Analysis of Financial Condition and Results of Operations in the 2006 Annual Report on Form 10-K.

Insurance, Asset Management and Non-Trading Financial Services VaR

AIG performs one comprehensive Value at Risk (VaR) analysis across all of its non-trading businesses, and a separate VaR analysis for its trading business at AIGFP. The comprehensive VaR is categorized by AIG business segment (General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management) and also by market risk factor (interest rate, currency and equity).

AIG calculated the VaR with respect to net fair values as of June 30, 2007 and December 31, 2006. The VaR number represents the maximum potential loss as of those dates that could be incurred with a 95 percent confidence and a one-month holding period.

The following table presents the period-end, average, high and low VaRs on a diversified basis and of each component of market risk for AIG's non-trading businesses. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

Increased equity investment allocation in the Life Insurance & Retirement Services and General Insurance segments, as well as growth in those businesses, contributed to the modest growth in AIG's total Non-Trading VaR during the first six months of 2007. Interest rate and equity volatilities continued to moderate in many markets.

Capital Markets Trading VaR

AIGFP's policy is to maintain a conservative market risk profile and minimize risks in interest rates, equities, commodities and foreign exchange. In addition, AIGFP's

primary market exposures in option implied volatilities, correlations and basis risks are closely managed.

AIGFP's minimal reliance on market risk driven revenue is reflected in its VaR. Because the market risk with respect to securities available for sale, at market, is substantially hedged, segregation of the financial instruments into trading and other than trading was not deemed necessary.

AIGFP reports its VaR using a 95 percent confidence interval and a one-day holding period.

The following table presents the period-end, average, high, and low VaRs (based on daily observations) on a diversified basis and of each component of market risk for AIG's Capital Markets operations. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

Catastrophe Exposures

The nature of AIG's business exposes it to various catastrophic events in which multiple losses across multiple lines of business can occur in any calendar year. In order to control this exposure, AIG uses a combination of techniques, including setting aggregate limits in key business units, monitoring and modeling accumulated exposures, and purchasing catastrophe reinsurance to supplement its other reinsurance protections.

Natural disasters such as hurricanes, earthquakes and other catastrophes have the potential to adversely affect AIG's operating results. Other risks, such as an outbreak of a pandemic disease, such as the Avian Influenza A Virus (H5N1), could adversely affect AIG's business and operating results to an extent that may be only partially offset by reinsurance programs.

AIG evaluates catastrophic events and assesses the probability of occurrence and magnitude of catastrophic events through the use of industry recognized models, among other techniques. AIG supplements these models by periodically monitoring the exposure risks of AIG's worldwide General Insurance operations and adjusting such models accordingly. Following is an overview of modeled losses associated with the more significant natural perils, which includes exposures for DBG, Personal Lines, Foreign General (other than Ascot), The Hartford Steam Boiler Inspection and Insurance Company and 21st Century. Transatlantic and Ascot utilize a different model, and their combined results are presented separately below. Significant life and A&H exposures have been added to these results as well. The modeled results assume that all reinsurers fulfill their obligations to AIG in accordance with their terms.

It is important to recognize that there is no standard methodology to project the possible losses from total property and workers compensation exposures. Further,

there are no industry standard assumptions to be utilized in projecting these losses. The use of different methodologies and assumptions could materially change the projected losses. Therefore, these modeled losses may not be comparable to estimates made by other companies.

These estimates are inherently uncertain and may not reflect AIG's maximum exposures to these events. It is highly likely that AIG's losses will vary, perhaps significantly, from these estimates.

AIG has revised the catastrophe exposure disclosures presented below from that presented in the 2006 Annual Report on Form 10-K to include significant life and A&H exposures to natural perils as well as to update the domestic property exposures to reflect more recent data. The modeled results provided in the table below were based on the aggregate exceedence probability (AEP) losses which represent total property, workers compensation, life, and accident and health losses that may occur in any single year from one or more natural events. The life and A&H data include exposures for United States, Japan, and Taiwan earthquakes. These represent the largest share of life and A&H exposures to earthquake. A&H losses were modeled using December 2006 data, and life losses were modeled using March 2006 data. The updated property exposures were generally modeled with exposure data as of year-end 2006. Lexington commercial lines exposure, which represents the largest share of the modeled losses, was based on data as of April 2007. All reinsurance program structures, including both domestic and international structures, have also been updated. The values provided were based on 100-year return period losses, which have a one percent likelihood of being exceeded in any single year. Thus, the model projects that there is a one percent probability that AIG could incur in any year losses in excess of the modeled amounts for these perils.

<i>(in millions)</i>	Gross	Net of Reinsurance	Net After Income Tax	% of Consolidated Shareholders' Equity at June 30, 2007
Natural Peril:				
Earthquake	\$ 4,970	\$ 2,705	\$ 1,758	1.7%
Tropical Cyclone*	\$ 5,546	\$ 2,980	\$ 1,937	1.9%

* Includes hurricanes, typhoons and other wind-related events.

The combined earthquake and tropical cyclone 100-year return period modeled losses for Ascot and Transatlantic together are estimated to be \$1.1 billion, on a gross basis, \$761 million, net of reinsurance, and \$494 million, net after income taxes, or 0.5 percent of total shareholders' equity at June 30, 2007.

In addition, AIG evaluates potential single event earthquake and hurricane losses that may be incurred. The single events utilized are a subset of potential events identified and utilized by Lloyd's⁽¹⁾ and referred to as Realistic Disaster Scenarios (RDSs). The purpose of this analysis is to utilize these RDSs to provide a reference frame and place into context the model results. However, it is important to note that the specific events used for this analysis do not necessarily represent the worst case loss that AIG could incur from this type of an event in these regions. The losses associated with the RDSs are included in the table below.

Single event modeled property and workers compensation losses to AIG's worldwide portfolio of risk for key geographic areas are set forth below. Gross values represent AIG's liability after the application of policy limits and deductibles, and net values represent losses after reinsurance is applied.

<i>(in millions)</i>	Gross	Net of Reinsurance
Natural Peril:		
San Francisco Earthquake	\$ 5,562	\$ 3,012
Miami Hurricane	\$ 5,375	\$ 2,651
Northeast Hurricane	\$ 4,755	\$ 2,779
Los Angeles Earthquake	\$ 4,750	\$ 2,614
Gulf Coast Hurricane	\$ 3,553	\$ 1,797
Japanese Earthquake	\$ 843	\$ 366
European Windstorm	\$ 239	\$ 87
Japanese Typhoon	\$ 185	\$ 149

(1) Lloyd's Realistic Disaster Scenarios, Scenario Specifications, April 2006.

The specific international RDS events do not necessarily correspond to AIG's international property exposures. As a result, AIG runs its own simulations where property statistical return period losses associated with the written exposure specific to AIG provide the basis for monitoring risk.

Based on these simulations, the 100-year return period loss for Japanese Earthquake is \$296 million gross, and \$120 million net, the 100-year return period loss for European Windstorm is \$269 million gross, and \$80 million net, and the 100-year return period loss for Japanese Typhoon is \$306 million gross, and \$252 million net.

Recent market conditions in the U.S. property business have supported growth in this line of business. Consequently, gross modeled catastrophe losses have increased. Associated net exposure has been carefully monitored and controlled through the strategic placement of reinsurance.

ACTUAL RESULTS IN ANY PERIOD ARE LIKELY TO VARY, PERHAPS MATERIALLY, FROM THE MODELED SCENARIOS, AND THE OCCURRENCE OF ONE OR MORE SEVERE EVENTS COULD HAVE A MATERIAL ADVERSE EFFECT ON AIG'S FINANCIAL CONDITION, RESULTS OF OPERATIONS AND LIQUIDITY.

ITEM 3. Quantitative and Qualitative Disclosures About Market Risk

Included in Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations.

ITEM 4. Controls and Procedures

In connection with the preparation of this Quarterly Report on Form 10-Q, an evaluation was carried out by AIG's management, with the participation of AIG's Chief Executive Officer and Chief Financial Officer, of the effectiveness of AIG's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (Exchange Act)). Disclosure controls and procedures are designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms and that such information is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial Officer, to allow timely decisions

regarding required disclosures. Based on its evaluation, and in light of the previously identified material weakness in internal control over financial reporting, as of December 31, 2006, relating to controls over income tax accounting described in the 2006 Annual Report on Form 10-K, AIG's Chief Executive Officer and Chief Financial Officer concluded that, as of June 30, 2007, AIG's disclosure controls and procedures were ineffective. In addition, there has been no change in AIG's internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) that occurred during the quarter ended June 30, 2007 that has materially affected, or is reasonably likely to materially affect, AIG's internal control over financial reporting.

Part II – OTHER INFORMATION

ITEM 2. *Unregistered Sales of Equity Securities and Use of Proceeds*

The table below provides information with respect to purchases of AIG Common stock during the three months ended June 30, 2007.

Period	Total Number of Shares Purchased ⁽¹⁾	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares that May Yet Be Purchased Under the Plans or Programs at End of Month ⁽²⁾
April 1 - 30	6,643,052	\$65.92	6,643,052	
May 1 - 31	—	—	—	
June 1 - 30	15,378,410	70.09	15,378,410	
Total	22,021,462	\$68.84	22,021,462	

(1) Reflects date of delivery. Does not include 8,061 shares delivered or attested to in satisfaction of the exercise price by holders of AIG employee stock options exercised during the three months ended June 30, 2007.

(2) In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. A balance of \$6.30 billion remained for purchases under the program as of June 30, 2007, although \$2.34 billion of that amount has been advanced by AIG to purchase shares under the program. The purchase program has no set expiration or termination date.

ITEM 4. *Submission of Matters to a Vote of Security Holders.*

At the Annual Meeting of Shareholders held on May 16, 2007, the Shareholders:

(a) Elected fifteen directors as follows:

Nominee	Shares For	Shares Withheld
Marshall A. Cohen	1,863,591,324	479,677,730
Martin S. Feldstein	1,925,930,648	417,338,406
Ellen V. Futter	1,920,091,144	423,177,910
Stephen L. Hammerman	2,316,775,772	26,493,282
Richard C. Holbrooke	1,787,372,289	555,896,765
Fred H. Langhammer	2,303,536,899	39,732,155
George L. Miles, Jr.	2,216,252,110	127,016,944
Morris W. Offit	1,920,016,457	423,252,597
James F. Orr III	2,246,051,541	97,217,513
Virginia M. Rometty	2,306,729,284	36,539,770
Martin J. Sullivan	1,929,344,493	413,924,561
Michael H. Sutton	2,309,868,113	33,400,941
Edmund S.W. Tse	1,929,071,878	414,197,176
Robert B. Willumstad	2,303,916,443	39,352,611
Frank G. Zarb	1,826,711,442	516,557,612

(b) Approved by a vote of 1,778,412,239 shares to 525,833,405 shares, with 39,023,410 abstaining, a proposal to ratify the selection of PricewaterhouseCoopers LLP as the independent registered public accounting firm for 2007.

(c) Approved by a vote of 1,529,091,124 shares to 572,822,919 shares, with 62,808,813 abstaining, and 178,546,198 shares not voting, a proposal to approve the American International Group, Inc. 2007 Stock Incentive Plan.

(d) Rejected by a vote of 554,311,568 shares for and 1,586,624,750 shares against, with 23,818,514 shares abstaining and 178,514,222 shares not voting, a shareholder proposal relating to performance-based stock options.

ITEM 6. *Exhibits*

See accompanying Exhibit Index.

American International Group, Inc.
 Computation of Ratios of Earnings to Fixed Charges

<i>(in millions, except ratios)</i>	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006
Income before income taxes, minority interest and cumulative effect of an accounting change	\$ 6,328	\$ 5,241	\$12,500	\$10,034
Less – Equity income of less than 50% owned persons	49	110	91	130
Add – Dividends from less than 50% owned persons	25	15	25	18
	6,304	5,146	12,434	9,922
Add – Fixed charges	2,442	2,048	5,114	3,996
Less – Capitalized interest	9	14	20	29
Income before income taxes, minority interest, cumulative effect of an accounting change and fixed charges	\$ 8,737	\$ 7,180	\$17,528	\$13,889
Fixed charges:				
Interest costs	\$ 2,381	\$ 1,995	\$ 4,993	\$ 3,891
Rental expense*	61	53	121	105
Total fixed charges	\$ 2,442	\$ 2,048	\$ 5,114	\$ 3,996
Ratio of earnings to fixed charges	3.58	3.51	3.43	3.48
Secondary Ratio				
Interest credited to GIC and GIA policy and contract holders	\$(1,268)	\$(1,097)	\$(2,847)	\$(2,187)
Total fixed charges excluding interest credited to GIC and GIA policy and contract holders	\$ 1,174	\$ 951	\$ 2,267	\$ 1,809
Secondary ratio of earnings to fixed charges	6.36	6.40	6.48	6.47

* The proportion deemed representative of the interest factor.

The secondary ratio is disclosed for the convenience of fixed income investors and the rating agencies that serve them and is more comparable to the ratios disclosed by all issuers of fixed income securities. The secondary ratio removes interest credited to guaranteed investment contract (GIC) policyholders and guaranteed investment agreement (GIA) contractholders. Such interest expenses are also removed from income before income taxes, minority interest and cumulative effect of an accounting change used in this

calculation. GICs and GIAs are entered into by AIG's insurance subsidiaries, principally Sun America Life Insurance Company and AIG Financial Products Corp. and its subsidiaries, respectively. The proceeds from GICs and GIAs are invested in a diversified portfolio of securities, primarily investment grade bonds. The assets acquired yield rates greater than the rates on the related policyholders obligation or agreement, with the intent of earning operating income from the spread.

CERTIFICATIONS

I, Martin J. Sullivan, certify that:

1. I have reviewed this Quarterly Report on Form 10-Q of American International Group, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited)*

1. Summary of Significant Accounting Policies

Basis of Presentation

These unaudited condensed consolidated financial statements do not include certain financial information required by U.S. generally accepted accounting principles (GAAP) for complete financial statements and should be read in conjunction with the audited consolidated financial statements and the related notes included in the Annual Report on Form 10-K of American International Group, Inc. (AIG) for the year ended December 31, 2006 (2006 Annual Report on Form 10-K).

In the opinion of management, these consolidated financial statements contain the normal recurring adjustments necessary for a fair statement of the results presented herein. All material intercompany accounts and transactions have been eliminated.

Revisions and Reclassifications

In the third quarter of 2007, AIG determined that certain products that were historically reported as separate account assets under Statement of Position 03-1, "Accounting and Reporting by Insurance Enterprises for Certain Nontraditional Long-Duration Contracts and for Separate Accounts" (SOP 03-1) should have been reported as general account assets. Accordingly, the December 31, 2006 consolidated balance sheet has been revised to transfer \$2.4 billion of assets from separate account assets to general account assets, and the same amount of liabilities from separate account liabilities to policyholders' contract deposits. This revision did not have any effect on consolidated income before income taxes, net income, or shareholders' equity for any period presented.

Certain reclassifications and format changes have been made to prior period amounts to conform to the current period presentation.

Out of period adjustments

During the three and nine-month periods ended September 30, 2007, AIG recorded the effects of certain out of period adjustments, which reduced net income by \$35 million and \$408 million, respectively, and diluted earnings per share by \$0.01 per share and \$0.16 per share, respectively.

During the three and nine-month periods ended September 30, 2006, AIG recorded the effects of certain out of period adjustments which increased (decreased) net income by \$73 million and \$(135) million, respectively, and diluted earnings per share by \$0.03 per share and \$(0.05) per share, respectively.

Recent Accounting Standards

Accounting Changes

SOP 05-1

On September 19, 2005, the American Institute of Certified Public Accountants (AICPA) issued Statement of Position

05-1, "Accounting by Insurance Enterprises for Deferred Acquisition Costs in Connection with Modifications or Exchanges of Insurance Contracts" (SOP 05-1). SOP 05-1 provides guidance on accounting for internal replacements of insurance and investment contracts other than those specifically described in Statement of Financial Accounting Standards (FAS) No. 97, "Accounting and Reporting by Insurance Enterprises for Certain Long-Duration Contracts and for Realized Gains and Losses from the Sale of Investments" (FAS 97). SOP 05-1 defines an internal replacement as a modification in product benefits, features, rights, or coverage that occurs by the exchange of a contract for a new contract, or by amendment, endorsement, or rider to a contract, or by the election of a feature or coverage within a contract. Internal replacements that result in a substantially changed contract are accounted for as a termination and a replacement contract.

The provisions of SOP 05-1 became effective as of January 1, 2007. On the date of adoption, AIG recorded a cumulative effect reduction of \$82 million, net of tax, to the opening balance of retained earnings to reflect changes in unamortized deferred policy acquisition costs (DAC), value of business acquired, deferred sales inducement assets, unearned revenue liabilities and future policy benefits for life and accident and health insurance contracts. This adjustment primarily reflects a shorter expected life related to certain group life and health insurance contracts and the effect on the gross profits of investment-oriented products related to previously anticipated future internal replacements. This cumulative effect adjustment affected only the Life Insurance & Retirement Services segment.

FIN 48

On July 13, 2006, the Financial Accounting Standards Board (FASB) issued FASB Interpretation No. 48, "Accounting for Uncertainty in Income Taxes – an interpretation of FASB Statement No. 109" (FIN 48), which clarifies the accounting for uncertainty in income tax positions. FIN 48 prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of an income tax position taken or expected to be taken in a tax return. FIN 48 also provides guidance on derecognition, classification, interest and penalties, accounting in interim periods, and additional disclosures. AIG adopted the provisions of FIN 48 on January 1, 2007. As a result of the adoption of FIN 48, AIG recognized a \$71 million increase in the liability for unrecognized tax benefits, which was accounted for as a decrease to opening retained earnings as of January 1, 2007.

As of the date of adoption and after recognizing the effect of the increase in the liability noted above, the total amount of AIG's unrecognized tax benefit, excluding interest and penalties, was \$1.138 billion. Included in this balance are \$407 million related to tax positions, the disallowance of which would not

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**1. Summary of Significant Accounting Policies** (continued)

affect the annual effective income tax rate. Accordingly, the amount of unrecognized tax benefit that, if recognized, would favorably affect the effective tax rate is \$731 million.

At September 30, 2007, AIG's unrecognized tax benefit, excluding interest and penalties, was \$1.139 billion, which includes \$447 million related to tax positions the disallowance of which would not affect the annual effective income tax rate. Accordingly, the amount of unrecognized tax benefit that, if recognized, would favorably affect the effective tax rate was \$692 million.

Interest and penalties related to unrecognized tax benefits are recognized in income tax expense. At January 1, 2007 and September 30, 2007, AIG had accrued \$176 million and \$207 million, respectively, for the payment of interest (net of tax benefits) and penalties.

Neither reserves for uncertain tax positions attributable to prior restatements (including various other remediation-related adjustments) nor the corresponding interest income have been recognized because such amounts are not currently estimable. In addition, certain tax benefits from compensation deductions have not been recognized because of existing uncertainty with respect to documentation supporting these tax benefits.

AIG continually evaluates proposed adjustments by taxing authorities. At September 30, 2007, such proposed adjustments would not result in a material change to AIG's consolidated financial condition. However, AIG believes that it is reasonably possible that the balance of the unrecognized tax benefits could decrease by \$0 to \$100 million within the next twelve months due to settlements or expiration of statutes.

Listed below are the tax years that remain subject to examination by major tax jurisdiction:

Major Tax Jurisdictions	Open Tax Years
United States	1991-2006
Hong Kong	1997-2006
Malaysia	1999-2006
Singapore	1993-2006
Thailand	2001-2006
Taiwan	2000-2006
Japan	2000-2006
United Kingdom	2003-2006
France	2003-2006
Korea	2001-2006

FSP 13-2

On July 13, 2006, the FASB issued FASB Staff Position (FSP) No. 13-2, "Accounting for a Change or Projected Change in the Timing of Cash Flows Relating to Income Taxes Generated by a Leveraged Lease Transaction" (FSP 13-2). FSP 13-2 addresses how a change or projected change in the timing of cash flows relating to income taxes generated by a leveraged lease transaction affects the accounting for the lease by the lessor, and directs that the tax assumptions be consis-

tent with any FIN 48 uncertain tax position related to the lease. FSP 13-2 is effective for fiscal years beginning after December 15, 2006. Upon adoption, AIG recorded a \$50 million decrease in the opening balance of retained earnings, net of tax, as of January 1, 2007 to reflect the cumulative effect of this change in accounting. The adoption of this guidance is not expected to have a material effect on AIG's results of operations in 2007.

As a result of the adoptions of SOP 05-1, FIN 48 and FSP 13-2, AIG recorded a total decrease to opening retained earnings of \$203 million as of January 1, 2007.

Future Application of Accounting Standards**FAS 157**

In September 2006, the FASB issued FAS No. 157, "Fair Value Measurements" (FAS 157). FAS 157 defines fair value, establishes a framework for measuring fair value and expands disclosure requirements regarding fair value measurements. FAS 157 will be effective January 1, 2008. AIG is currently assessing the effect of implementing this guidance.

FAS 159

In February 2007, the FASB issued FAS No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities" (FAS 159). FAS 159 permits entities to choose to measure at fair value many financial instruments and certain other items that are not currently required to be measured at fair value. Subsequent changes in fair value for designated items will be required to be reported in earnings in the current period. FAS 159 also establishes presentation and disclosure requirements for similar types of assets and liabilities measured at fair value. FAS 159 will be effective January 1, 2008. AIG is currently assessing the effect of implementing this guidance, which depends on the nature and extent of items elected to be measured at fair value upon initial application of the standard on January 1, 2008.

SOP 07-1

In June 2007, the AICPA issued Statement of Position No. 07-1 (SOP 07-1), "Clarification of the Scope of the Audit and Accounting Guide 'Audits of Investment Companies' and Accounting by Parent Companies and Equity Method Investors for Investments in Investment Companies." SOP 07-1 amends the guidance for whether an entity may apply the provisions of the Audit and Accounting Guide, "Audits of Investment Companies" (the Guide). Investment companies that are subject to the Guide must report all investments at fair value regardless of the nature of the investment or the level of ownership. SOP 07-1 also establishes new requirements for whether a parent company can retain specialized investment company accounting in its consolidated financial statements for subsidiaries and equity method investees that are covered by the Guide. At the October 17, 2007 Board

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**1. Summary of Significant Accounting Policies** (continued)

meeting, the FASB decided it would indefinitely defer the effective date of SOP 07-1. AIG understands that a FASB

2. Segment Information

AIG identifies its reportable segments by product line consistent with its management structure. These segments are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers have managed their businesses, commencing in the first quarter of 2007, AIG realigned certain products among reportable segments and major internal reporting units. AIG also began

Staff Position will be issued shortly. AIG is currently monitoring any changes to the existing guidance.

reporting net realized capital gains and losses for the Financial Services and Asset Management segments in the results of these segments. Historically, net realized capital gains and losses were included in the Other category. There has been no change in AIG's management structure or in its reportable segments. All prior period amounts presented in the tables below have been revised to conform to the current year's presentation of these items.

The following table summarizes AIG's operations by major operating segment:

Operating Segments (in millions)	Three Months Ended September 30,		Nine Months Ended September 30,	
	2007	2006	2007	2006
Revenues ^(a) :

Consolidated	\$ 4,879	\$ 6,301	\$17,379	\$16,335

(a) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS No. 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133), including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2007 and 2006, respectively, the effect was \$(178) million and \$165 million in both revenues and operating income. For the nine-month periods ended September 30, 2007 and 2006, respectively, the effect was \$(1.06) billion and \$(1.13) billion in both revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are hedging investments and borrowings. These gains (losses) for the three and nine-month periods ended September 30, 2007 include out of period charges of \$20 million and \$346 million, respectively, including a \$380 million charge in the nine months ended September 30, 2007 to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIG Financial Products Corp. and AIG Trading Group Inc. and their respective subsidiaries (collectively, AIGFP). The three and nine-month periods ended September 30, 2006 include an out of period gain of \$115 million and a charge of \$223 million related to the remediation of the material weakness in accounting for certain derivative transactions under FAS 133.

(b) Includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts (UCITS). For the three and nine-month periods ended September 30, 2006, the effect was an increase of \$92 million and \$472 million, respectively, in both revenues and operating income for General Insurance and an increase of \$24 million and \$240 million, respectively, in revenues and \$24 million and \$169 million, respectively, in operating income for Life Insurance & Retirement Services.

(c) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2007 and 2006, respectively, the effect was \$353 million, and \$581 million in both revenues and operating income. For the nine-month periods ended September 30, 2007 and 2006, respectively, the effect was \$(250) million and \$(1.2) billion in both revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings. The three and nine-month periods ended September 30, 2007 include out of period charges of \$20 million and \$346 million, respectively, as discussed above. The three and nine-month periods ended September 30, 2006 include an out of period gain of \$115 million and a charge of \$223 million as discussed above. In the first quarter of 2007, AIG began applying hedge accounting for certain transactions, primarily in its Capital Markets operations. In the second quarter of 2007, American General Finance, Inc. (AGF) and International Lease Finance Corporation (ILFC) began applying hedge accounting to most of their derivatives hedging interest rate and foreign exchange risks associated with their floating rate and foreign currency denominated borrowings.

(d) For the three and nine-month periods ended September 30, 2007, both revenues and operating income include an unrealized market valuation loss of \$352 million on AIGFP's super senior credit default swap portfolio.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**2. Segment Information** (continued)

(e) Includes AIG parent and other operations which are not required to be reported separately. The following table presents the operating loss for AIG's Other category:

(a) Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2007 and 2006, the effect was \$(19) million and \$(111) million, respectively. For the nine-month periods ended September 30, 2007 and 2006, the effect was \$(32) million and \$(56) million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings. In the second quarter of 2007, ILFC began applying hedge accounting to most of its derivatives hedging interest rate and foreign exchange risks associated with its floating rate and foreign currency denominated borrowings.

(b) Revenues, shown net of interest expense of \$1.4 billion and \$802 million for the three-month periods ended September 30, 2007 and 2006, respectively, and \$3.3 billion and \$2.1 billion for the nine-month periods ended September 30, 2007 and 2006, respectively, were primarily from hedged financial positions entered into in connection with counterparty transactions. Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2007 and 2006, the effect was \$428 million and \$783 million, respectively. For the nine-month periods ended September 30, 2007 and 2006, the effect was \$(185) million and \$(1.1) billion, respectively. The three and nine-month periods ended September 30, 2007 include out of period charges of \$20 million and \$346 million, respectively, including a \$380 million charge in the nine months ended September 30, 2007 to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIGFP. The three and nine-month periods ended September 30, 2006 include an out of period gain of \$115 million and a charge of \$223 million, respectively, related to the remediation of the material weakness in accounting for certain derivative transactions under FAS 133. In the first quarter of 2007, AIGFP began applying hedge accounting for certain transactions.

(c) For the three and nine-month periods ended September 30, 2007, both revenues and operating income include an unrealized market valuation loss of \$352 million on AIGFP's super senior credit default swap portfolio.

(d) Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2007 and 2006, the effect was \$(6) million and \$(73) million, respectively. For the nine-month periods ended September 30, 2007 and 2006, the effect was \$(21) million and \$(65) million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings. In the second quarter of 2007, AGF began applying hedge accounting to most of its derivatives hedging interest rate and foreign exchange risks associated with its floating rate and foreign currency denominated borrowings.

(e) The nine-month period ended September 30, 2007 includes a pre-tax charge of \$178 million in connection with domestic consumer finance's mortgage banking activities.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**3. Shareholders' Equity and Earnings Per Share****Earnings Per Share (EPS)**

Basic EPS of AIG is calculated using the weighted average number of common shares outstanding. Diluted EPS is based on those shares used in basic EPS plus shares that would have been outstanding assuming issuance of common shares for all potentially dilutive common shares outstanding.

The following table presents the computation of basic and diluted EPS:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2007	2006	2007	2006
<i>(in millions, except per share data)</i>				
Numerator for earnings per share:				
Income before cumulative effect of an accounting change	\$3,085	\$4,224	\$11,492	\$10,575
Cumulative effect of an accounting change, net of tax	—	—	—	34
Net income applicable to common stock for basic EPS	\$3,085	\$4,224	\$11,492	\$10,609
Interest on contingently convertible bonds, net of tax ^(a)	—	2	—	8
Net income applicable to common stock for diluted EPS	\$3,085	\$4,226	\$11,492	\$10,617
Cumulative effect of an accounting change, net of tax	—	—	—	(34)
Income before cumulative effect of an accounting change applicable to common stock for diluted EPS	\$3,085	\$4,226	\$11,492	\$10,583
Denominator for earnings per share:				
Weighted average shares outstanding used in the computation of EPS:				
Common stock issued	2,751	2,751	2,751	2,751
Common stock in treasury	(189)	(153)	(168)	(153)
Deferred shares	14	9	13	9
Weighted average shares outstanding – basic	2,576	2,607	2,596	2,607
Incremental shares from potential common stock:				
Weighted average number of shares arising from outstanding employee stock plans (treasury stock method) ^(b)	13	10	13	9
Contingently convertible bonds ^(a)	—	9	—	9
Weighted average shares outstanding – diluted ^(b)	2,589	2,626	2,609	2,625
Earnings per share:				
Basic:				
Income before cumulative effect of an accounting change	\$ 1.20	\$ 1.62	\$ 4.43	\$ 4.06
Cumulative effect of an accounting change, net of tax	—	—	—	0.01
Net income	\$ 1.20	\$ 1.62	\$ 4.43	\$ 4.07
Diluted:				
Income before cumulative effect of an accounting change	\$ 1.19	\$ 1.61	\$ 4.40	\$ 4.03
Cumulative effect of an accounting change, net of tax	—	—	—	0.01
Net income	\$ 1.19	\$ 1.61	\$ 4.40	\$ 4.04

(a) Assumes conversion of contingently convertible bonds due to the adoption of Emerging Issues Task Force Issue No. 04-8 "Accounting Issues Related to Certain Features of Contingently Convertible Debt and the Effect on Diluted Earnings per Share."

(b) Certain shares arising from employee stock plans were not included in the computation of diluted earnings per share where the exercise price of the options exceeded the average market price for the period and would have been antidilutive. The number of shares excluded was 7 million and 14 million for the nine-month periods ended September 30, 2007 and 2006, respectively.

Shareholders' Equity

From time to time, AIG may buy shares of its common stock for general corporate purposes, including to satisfy its obligations under various employee benefit plans. In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. In March 2007, AIG entered into a \$3 billion structured share repurchase arrangement and AIG entered into additional \$1 billion structured share repurchase arrangements in each of May and September 2007. A total of 55,103,845 shares were repur-

chased during the first nine months of 2007. The portion of the payments advanced by AIG under the structured share repurchase arrangements that had not yet been utilized to repurchase shares at September 30, 2007, amounting to \$1.28 billion, has been recorded as a component of shareholders' equity under the caption Payments advanced to purchase shares. Purchases have continued subsequent to September 30, 2007, with an additional 13,964,098 shares purchased from October 1 through November 5, 2007. All shares repurchased are recorded as treasury stock at cost.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)

The quarterly dividend per common share, commencing with the dividend declared in May 2007 and paid on September 21, 2007, was \$0.20.

The following table summarizes the changes in retained earnings during the first nine months of 2007:

<i>(in millions)</i>	September 30, 2007
Retained earnings:	
Balance at beginning of year	\$ 84,996
Cumulative effect of accounting changes, net of tax	(203)
Adjusted balance, beginning of year	84,793
Net income	11,492
Dividends to shareholders	(1,455)
Balance, end of period	\$ 94,830

4. Benefits Provided by Starr International Company, Inc. and C.V. Starr & Co., Inc.

Starr International Company, Inc. (SICO) has provided a series of two-year Deferred Compensation Profit Participation Plans (SICO Plans) to certain AIG employees. The SICO Plans came into being in 1975 when the voting shareholders and Board of Directors of SICO, a private holding company whose principal asset is AIG common stock, decided that a portion of the capital value of SICO should be used to provide an incentive plan for the current and succeeding managements of all American International companies, including AIG.

None of the costs of the various benefits provided under the SICO Plans has been paid by AIG, although AIG has recorded a charge to reported earnings for the deferred compensation amounts paid to AIG employees by SICO, with an offsetting amount credited to additional paid-in capital reflecting amounts deemed contributed by SICO. The SICO Plans provide that shares currently owned by SICO are set aside by SICO for the benefit of the participant and distributed upon retirement. The SICO Board of Directors currently may permit an early payout of units under certain circumstances. Prior to payout, the participant is not entitled to vote, dispose of or receive dividends with respect to such shares, and shares are subject to forfeiture under certain conditions, including but not limited to the participant's voluntary termination of employment with AIG prior to normal retirement age. Under the SICO Plans, SICO's Board of Directors may elect to pay a participant cash in lieu of shares of AIG common stock. Following notification from SICO to participants in the SICO Plans that it will settle specific future awards under the SICO Plans with shares rather than cash, AIG modified its accounting for the SICO Plans from variable to fixed measurement accounting. AIG gave effect to this change in settlement method beginning on December 9, 2005, the date of SICO's notice to participants in the SICO Plans. See also Note 6(b) "Commitments" herein.

In January 2006, C.V. Starr & Co., Inc. (Starr) completed its tender offer to purchase Starr interests from AIG

employees. In conjunction with AIG's adoption of FAS No. 123R "Share-Based Payments" (FAS 123R), Starr is considered to be an "economic interest holder" in AIG. As a result, compensation expense of \$54 million was included in the first nine months of 2006 with respect to the Starr tender offer.

Compensation expense with respect to the SICO Plans aggregated \$9 million and \$14 million for the three-month periods ended September 30, 2007 and 2006, respectively, and \$29 million and \$104 million for the nine-month periods ended September 30, 2007 and 2006, respectively. Compensation expense for the first nine months of 2006 included various out of period adjustments totaling \$61 million, primarily relating to stock splits and other miscellaneous items for the SICO plans.

5. Ownership

According to the Schedule 13D filed on March 20, 2007 by Starr, SICO, Edward E. Matthews, Maurice R. Greenberg, the Maurice R. and Corinne P. Greenberg Family Foundation, Inc., the Universal Foundation, Inc., the Maurice R. and Corinne P. Greenberg Joint Tenancy Company, LLC and the C.V. Starr & Co., Inc. Trust, these reporting persons could be deemed to beneficially own 354,987,261 shares of AIG's common stock at that date. Based on the shares of AIG's common stock outstanding as of October 31, 2007, this ownership would represent approximately 14 percent of the voting stock of AIG. Although these reporting persons have made filings under Section 16 of the Securities Exchange Act of 1934 (Exchange Act), reporting sales of shares of common stock, no amendment to the Schedule 13D has been filed to report a change in ownership subsequent to March 20, 2007.

6. Commitments, Contingencies and Guarantees

In the normal course of business, various commitments and contingent liabilities are entered into by AIG and certain of its

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

subsidiaries. In addition, AIG guarantees various obligations of certain subsidiaries.

(a) Litigation and Investigations

Litigation Arising from Operations. AIG and its subsidiaries, in common with the insurance and financial services industries in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. In AIG's insurance operations, litigation arising from claims settlement activities is generally considered in the establishment of AIG's reserve for losses and loss expenses. However, in certain circumstances, AIG provides disclosure because of the size or nature of the potential liability to AIG. The potential for increasing jury awards and settlements makes it difficult to assess the ultimate outcome of such litigation.

Litigation Arising from Insurance Operations – Caremark. AIG and certain of its subsidiaries have been named defendants in two putative class actions in state court in Alabama that arise out of the 1999 settlement of class and derivative litigation involving Caremark Rx, Inc. (Caremark). The plaintiffs in the second-filed action have intervened in the first-filed action, and the second-filed action has been dismissed. An excess policy issued by a subsidiary of AIG with respect to the 1999 litigation was expressly stated to be without limit of liability. In the current actions, plaintiffs allege that the judge approving the 1999 settlement was misled as to the extent of available insurance coverage and would not have approved the settlement had he known of the existence and/or unlimited nature of the excess policy. They further allege that AIG, its subsidiaries, and Caremark are liable for fraud and suppression for misrepresenting and/or concealing the nature and extent of coverage. In their complaint, plaintiffs request compensatory damages for the 1999 class in the amount of \$3.2 billion, plus punitive damages. AIG and its subsidiaries deny the allegations of fraud and suppression and have asserted, *inter alia*, that information concerning the excess policy was publicly disclosed months prior to the approval of the settlement. AIG and its subsidiaries further assert that the current claims are barred by the statute of limitations and that plaintiffs' assertions that the statute was tolled cannot stand against the public disclosure of the excess coverage. Plaintiffs, in turn, have asserted that the disclosure was insufficient to inform them of the nature of the coverage and did not start the running of the statute of limitations. The trial court is currently considering, under standards mandated by the Alabama Supreme Court, whether a class action can be certified and whether the defendants in the case brought by the intervenors should be dismissed. AIG cannot reasonably estimate either the likelihood of its prevailing in

these actions or the potential damages in the event liability is determined.

Litigation Arising from Insurance Operations – Gunderson. A subsidiary of AIG has been named as a defendant in a putative class action lawsuit in the 14th Judicial District Court for the State of Louisiana. The *Gunderson* complaint alleges failure to comply with certain provisions of the Louisiana Any Willing Provider Act (the Act) relating to discounts taken by defendants on bills submitted by Louisiana medical providers and hospitals that provided treatment or services to workers compensation claimants and seeks monetary penalties and injunctive relief. On July 20, 2006, the court denied defendants' motion for summary judgment and granted plaintiffs' partial motion for summary judgment, holding that the AIG subsidiary was a "group purchaser" and, therefore, potentially subject to liability under the Act. On November 28, 2006, the court issued an order certifying a class of providers and hospitals. In an unrelated action also arising under the Act, a Louisiana appellate court ruled that the district court lacked jurisdiction to adjudicate the claims at issue. In response, defendants in *Gunderson* filed an exception for lack of subject matter jurisdiction. On January 19, 2007, the court denied the motion, holding that it has jurisdiction over the putative class claims. The AIG subsidiary is appealing the class certification ruling and is seeking an appeal from the jurisdictional ruling. AIG believes that it has meritorious defenses to plaintiffs' claims and expects that the ultimate resolution of this matter will not have a material adverse effect on AIG's consolidated financial condition or results of operations for any period.

2006 Regulatory Settlements. In February 2006, AIG reached a resolution of claims and matters under investigation with the United States Department of Justice (DOJ), the Securities and Exchange Commission (SEC), the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). AIG recorded an after-tax charge of \$1.15 billion relating to these settlements in the fourth quarter of 2005.

The settlements resolved investigations conducted by the SEC, NYAG and DOI in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. These settlements did not, however, resolve investigations by regulators from other states into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Nor did the settlements resolve any obligations that AIG may have to state guarantee funds in connection with any of these matters.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

As a result of these settlements, AIG made payments or placed amounts in escrow in 2006 totaling approximately \$1.64 billion, \$225 million of which represented fines and penalties. Amounts held in escrow totaling \$344 million, including interest thereon, are included in other assets at September 30, 2007. At that date, approximately \$326 million of the funds were escrowed for settlement of claims resulting from the underpayment by AIG of its residual market assessments for workers compensation. The National Workers Compensation Reinsurance Pool, on behalf of its participant members, has filed a lawsuit against AIG with respect to the underpayment of such assessments. The National Association of Insurance Commissioners has formed a Settlement Review Working Group directed by the State of Indiana, which has commenced its own investigation into the underreporting of workers compensation premium. In addition, similar lawsuits filed by the Attorney General of the State of Minnesota, the Minnesota Workers Compensation Reinsurance Association and the Minnesota Workers Compensation Insurers Association are pending. AIG cannot currently estimate whether the amount ultimately required to settle these claims will exceed the funds escrowed or otherwise accrued for this purpose.

The remaining escrowed funds, which amounted to \$18 million at September 30, 2007, are set aside for settlements for certain specified AIG policyholders. During the first nine months of 2007, approximately \$367 million was paid out from escrow in exchange for releasing AIG and its subsidiaries from any alleged liability relating to, among other things, brokerage practices alleged in the NYAG settlement. Any funds remaining at the end of the escrow period can be used to resolve claims asserted by policyholders relating to such insurance brokerage practices, including those described in Private Litigation below.

In addition to the escrowed funds, \$800 million was deposited into a fund under the supervision of the SEC as part of the settlements to be available to resolve claims asserted against AIG by investors, including the shareholder lawsuits described herein.

Also, as part of the settlements, AIG agreed to retain, for a period of three years, an independent consultant to conduct a review that will include, among other things, the adequacy of AIG's internal control over financial reporting, the policies, procedures and effectiveness of AIG's regulatory, compliance and legal functions and the remediation plan that AIG has implemented as a result of its own internal review.

Other than as described above, at the current time, AIG cannot predict the outcome of the matters described above, or estimate any potential additional costs related to these matters.

Private Litigation

Securities Actions. Beginning in October 2004, a number of putative securities fraud class action suits were filed against AIG and consolidated as *In re American International Group, Inc. Securities Litigation*. Subsequently, a separate, though similar, securities fraud action was also brought against AIG by certain Florida pension funds. The lead plaintiff in the class action is a group of public retirement systems and pension funds benefiting Ohio state employees, suing on behalf of themselves and all purchasers of AIG's publicly traded securities between October 28, 1999 and April 1, 2005. The named defendants are AIG and a number of present and former AIG officers and directors, as well as Starr, SICO, General Reinsurance Corporation, and PricewaterhouseCoopers LLP (PwC), among others. The lead plaintiff alleges, among other things, that AIG: (1) concealed that it engaged in anti-competitive conduct through alleged payment of contingent commissions to brokers and participation in illegal bid-rigging; (2) concealed that it used "income smoothing" products and other techniques to inflate its earnings; (3) concealed that it marketed and sold "income smoothing" insurance products to other companies; and (4) misled investors about the scope of government investigations. In addition, the lead plaintiff alleges that AIG's former Chief Executive Officer manipulated AIG's stock price. The lead plaintiff asserts claims for violations of Sections 11 and 15 of the Securities Act of 1933, Section 10(b) of the Exchange Act, and Rule 10b-5 promulgated thereunder, Section 20(a) of the Exchange Act, and Section 20A of the Exchange Act. In April 2006, the court denied the defendants' motions to dismiss the second amended class action complaint and the Florida complaint. In December 2006, a third amended class action complaint was filed, which does not differ substantially from the prior complaint. Fact and class discovery is currently ongoing.

ERISA Action. Between November 30, 2004 and July 1, 2005, several Employee Retirement Income Security Act of 1974 (ERISA) actions were filed on behalf of purported class of participants and beneficiaries of three pension plans sponsored by AIG or its subsidiaries. A consolidated complaint filed on September 26, 2005 alleges a class period between September 30, 2000 and May 31, 2005 and names as defendants AIG, the members of AIG's Retirement Board and the Administrative Boards of the plans at issue, and four present or former members of AIG's Board of Directors. The factual allegations in the complaint are essentially identical to those in the securities actions described above. Plaintiffs allege that defendants violated duties under ERISA by allowing the plans to offer AIG stock as a permitted investment, when defendants allegedly knew it was not a prudent investment, and by failing to provide participants with accurate information about AIG stock. AIG's motion to dismiss was denied by

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

order dated December 12, 2006. AIG filed an answer on February 12, 2007, denying plaintiffs' allegations of wrongdoing and asserting affirmative defenses to plaintiffs' claims. AIG expects that the ultimate resolution of this matter will not have a material adverse effect on AIG's consolidated financial condition or results of operations for any period.

Derivative Actions – Southern District of New York.

Between October 25, 2004 and July 14, 2005, seven separate derivative actions were filed in the Southern District of New York, five of which were consolidated into a single action. The New York derivative complaint contains nearly the same types of allegations made in the securities fraud and ERISA actions described above. The named defendants include current and former officers and directors of AIG, as well as Marsh & McLennan Companies, Inc. (Marsh), SICO, Starr, ACE Limited and subsidiaries (ACE), General Reinsurance Corporation, PwC, and certain employees or officers of these entity defendants. Plaintiffs assert claims for breach of fiduciary duty, gross mismanagement, waste of corporate assets, unjust enrichment, insider selling, auditor breach of contract, auditor professional negligence and disgorgement from AIG's former Chief Executive Officer and Chief Financial Officer of incentive-based compensation and AIG share proceeds under Section 304 of the Sarbanes-Oxley Act, among others. Plaintiffs seek, among other things, compensatory damages, corporate governance reforms, and a voiding of the election of certain AIG directors. AIG's Board of Directors has appointed a special committee of independent directors (special committee) to review the matters asserted in the operative consolidated derivative complaint. The court has entered an order staying the derivative case in the Southern District of New York pending resolution of the consolidated derivative action in the Delaware Chancery Court (discussed below). The court also has entered an order that termination of certain named defendants from the Delaware derivative action applies to the New York derivative action without further order of the court. On October 17, 2007, plaintiffs and those AIG officer and director defendants against whom the shareholder plaintiffs in the Delaware action are no longer pursuing claims filed a stipulation providing for all claims in the New York action against such defendants to be dismissed with prejudice. Former directors and officers Maurice R. Greenberg and Howard I. Smith have asked the court to refrain from so ordering this stipulation.

Derivative Actions – Delaware Chancery Court.

From October 2004 to April 2005, AIG shareholders filed five derivative complaints in the Delaware Chancery Court. All of these derivative lawsuits have been consolidated into a single action. The amended consolidated complaint named 43 defendants (not including nominal defendant AIG) who, like

the New York consolidated derivative litigation, were current and former officers and directors of AIG, as well as other entities and certain of their current and former employees and directors. Earlier in 2007, the Court approved an agreement that AIG be realigned as plaintiff, and, on June 13, 2007, acting on the direction of the special committee, AIG filed an amended complaint against former directors and officers Maurice R. Greenberg and Howard I. Smith, alleging breach of fiduciary duty and indemnification. Also on June 13, 2007, the special committee filed a motion to terminate the litigation as to certain defendants, while taking no action as to others. Defendants Greenberg and Smith filed answers to AIG's complaint and brought third-party complaints against certain current and former AIG directors and officers, PwC and Regulatory Insurance Services, Inc. Certain defendants have subsequently filed motions to dismiss plaintiffs' complaint, as well as defendants Greenberg and Smith's third-party complaints. On September 28, 2007, AIG and the shareholder plaintiffs filed a combined amended complaint in which AIG continued to assert claims against defendants Greenberg and Smith and took no position as to the claims asserted by the shareholder plaintiffs in the remainder of the combined amended complaint. In that pleading, the shareholder plaintiffs are no longer pursuing claims against certain AIG officers and directors. The factual allegations, legal claims and relief sought in the Delaware action are similar to those alleged in the New York derivative actions, except that shareholder plaintiffs in the Delaware derivative action assert claims only under state law. Certain defendants have filed motions to dismiss the shareholder plaintiffs' claims. The shareholder plaintiffs have moved to sever their claims to a separate action. AIG has joined that motion to the extent that, among other things, the claims brought by AIG against defendants Greenberg and Smith remain for prosecution in the pending action. AIG also has moved to stay discovery in the Delaware derivative action pending the resolution of the claims against AIG in the New York consolidated securities action. That motion, together with the motion to sever, is currently pending before the court.

In December 2002, a derivative lawsuit was filed in the Delaware Chancery Court against twenty directors and executives of AIG as well as against AIG as a nominal defendant that alleges, among other things, that the directors of AIG breached the fiduciary duties of loyalty and care by approving the payment of commissions to Starr and of rental and service fees to SICO and the executives breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and their fiduciary duties by usurping AIG's corporate opportunity. The complaint further alleges that the Starr agencies did not provide any services that AIG was not capable of providing itself, and that the diversion of commissions to these entities was solely for the benefit of Starr's owners. The complaint also alleged that the service fees and rental

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

payments made to SICO and its subsidiaries were improper. Under the terms of a stipulation approved by the Court on February 16, 2006, the claims against the outside independent directors were dismissed with prejudice, while the claims against the other directors were dismissed without prejudice. On October 31, 2005, Messrs. Greenberg, Matthews and Smith, SICO and Starr filed motions to dismiss the amended complaint. In an opinion dated June 21, 2006, the Court denied defendants' motion to dismiss, except with respect to plaintiff's challenge to payments made to Starr before January 1, 2000. On July 21, 2006, plaintiff filed its second amended complaint, which alleges that, between January 1, 2000 and May 31, 2005, individual defendants breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and breached their fiduciary duties by usurping AIG's corporate opportunity. Starr is charged with aiding and abetting breaches of fiduciary duty and unjust enrichment for its acceptance of the fees. SICO is no longer named as a defendant. On April 20, 2007, the individual defendants and Starr filed a motion seeking leave of the Court to assert a cross-claim against AIG and a third-party complaint against PwC and the directors previously dismissed from the action, as well as certain other AIG officers and employees. On June 13, 2007, the Court denied the individual defendants' motion to file a third-party complaint, but granted the proposed cross-claim against AIG. On June 27, 2007, Starr filed its cross-claim against AIG, alleging one count that includes contribution, unjust enrichment and setoff. AIG has filed an answer and moved to dismiss Starr's cross-claim to the extent it seeks affirmative relief, as opposed to a reduction in the judgment amount. Starr has agreed to withdraw its claim for contribution and clarified that it is not seeking any relief on behalf of the individual defendants. AIG's motion to dismiss Starr's claim for affirmative relief is currently pending before the Court. Document discovery and depositions are currently ongoing.

Policyholder Actions. After the NYAG filed its complaint against insurance broker Marsh, policyholders brought multiple federal antitrust and Racketeer Influenced and Corrupt Organizations Act (RICO) class actions in jurisdictions across the nation against insurers and brokers, including AIG and a number of its subsidiaries, alleging that the insurers and brokers engaged in a broad conspiracy to allocate customers, steer business, and rig bids. These actions, including 24 complaints filed in different federal courts naming AIG or an AIG subsidiary as a defendant, were consolidated or will be consolidated by the judicial panel on multi-district litigation and transferred to the United States District Court for the District of New Jersey for coordinated pretrial proceedings. The consolidated actions have proceeded in that

court in two parallel actions, *In re Insurance Brokerage Antitrust Litigation* (the *First Commercial Complaint*) and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the *First Employee Benefits Complaint*, and, together with the *First Commercial Complaint*, the multi-district litigation).

The plaintiffs in the *First Commercial Complaint* are nineteen corporations, individuals and public entities that contracted with the broker defendants for the provision of insurance brokerage services for a variety of insurance needs. The broker defendants are alleged to have placed insurance coverage on the plaintiffs' behalf with a number of insurance companies named as defendants, including AIG subsidiaries. The *First Commercial Complaint* also named ten brokers and fourteen other insurers as defendants (two of which have since settled). The *First Commercial Complaint* alleges that defendants engaged in a widespread conspiracy to allocate customers through "bid-rigging" and "steering" practices. The *First Commercial Complaint* also alleges that the insurer defendants permitted brokers to place business with AIG subsidiaries through wholesale intermediaries affiliated with or owned by those same brokers rather than placing the business with AIG subsidiaries directly. Finally, the *First Commercial Complaint* alleges that the insurer defendants entered into agreements with broker defendants that tied insurance placements to reinsurance placements in order to provide additional compensation to each broker. Plaintiffs assert that the defendants violated the Sherman Antitrust Act, RICO, the antitrust laws of 48 states and the District of Columbia, and are liable under common law breach of fiduciary duty and unjust enrichment theories. Plaintiffs seek treble damages plus interest and attorneys' fees as a result of the alleged RICO and Sherman Antitrust Act violations.

The plaintiffs in the *First Employee Benefits Complaint* are nine individual employees and corporate and municipal employers alleging claims on behalf of two separate nationwide purported classes: an employee class and an employer class that acquired insurance products from the defendants from August 26, 1994 to the date of any class certification. The *First Employee Benefits Complaint* names AIG, as well as eleven brokers and five other insurers, as defendants. The activities alleged in the *First Employee Benefits Complaint*, with certain exceptions, track the allegations of contingent commissions, bid-rigging and tying made in the *First Commercial Complaint*.

On October 3, 2006, Judge Hochberg of the District of New Jersey reserved in part and denied in part motions filed by the insurer defendants and broker defendants to dismiss the multi-district litigation. The Court also ordered the plaintiffs in both actions to file supplemental statements of particularity to elaborate on the allegations in their complaints. Plaintiffs filed their supplemental statements on October 25, 2006, and the AIG defendants, along with other insurer and

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

broker defendants in the two consolidated actions, filed renewed motions to dismiss on November 30, 2006. On February 16, 2007, the case was transferred to Judge Garrett E. Brown, Chief Judge of the District of New Jersey. On April 5, 2007, Chief Judge Brown granted the defendants' renewed motions to dismiss the *First Commercial Complaint* and *First Employee Benefits Complaint* with respect to the antitrust and RICO claims. The claims were dismissed without prejudice and the plaintiffs were given 30 days, later extended to 45 days, to file amended complaints. On April 11, 2007, the Court stayed all proceedings, including all discovery, that are part of the multi-district litigation until any renewed motions to dismiss the amended complaints are resolved.

A number of complaints making allegations similar to those in the *First Commercial Complaint* have been filed against AIG and other defendants in state and federal courts around the country. The defendants have thus far been successful in having the federal actions transferred to the District of New Jersey and consolidated into the multi-district litigation and have petitioned to have a recently filed action transferred to the District of New Jersey for consolidation. The AIG defendants have also sought to have state court actions making similar allegations stayed pending resolution of the multi-district litigation proceeding. In one state court action pending in Florida, the trial court recently decided not to grant an additional stay, but instead to allow the case to proceed. Defendants filed their motions to dismiss, and on September 24, 2007, the court denied the motions with respect to the state antitrust, RICO, and common law claims and granted the motions with respect to both the Florida insurance bad faith claim against AIG (with prejudice) and the punitive damages claim (without prejudice). Discovery in this action is ongoing.

Plaintiffs filed amended complaints in both *In re Insurance Brokerage Antitrust Litigation* (the *Second Commercial Complaint*) and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the *Second Employee Benefits Complaint*) along with revised particularized statements in both actions on May 22, 2007. The allegations in the *Second Commercial Complaint* and the *Second Employee Benefits Complaint* are substantially similar to the allegations in the *First Commercial Complaint* and *First Employee Benefits Complaint*, respectively. The complaints also attempt to add several new parties and delete others; the *Second Commercial Complaint* adds two new plaintiffs and twenty seven new defendants (including three new AIG defendants), and the *Second Employee Benefits Complaint* adds eight new plaintiffs and nine new defendants (including two new AIG defendants). The defendants filed motions to dismiss the amended complaints and to strike the newly added parties.

The Court granted (without leave to amend) defendants' motions to dismiss the federal antitrust and RICO claims on August 31, 2007 and September 28, 2007, respectively. The Court declined to exercise supplemental jurisdiction over the state law claims in the *Second Commercial Complaint* and therefore dismissed it in its entirety. The *Second Employee Benefits Complaint* is still before the Court, pending a decision on defendants' motion for summary judgment on the ERISA claims.

On August 24, 2007, the Ohio Attorney General filed a complaint in the Ohio Court of Common Pleas against AIG and a number of its subsidiaries, as well as several other broker and insurer defendants, asserting violation of Ohio's antitrust laws. The complaint, which is similar to the *Second Commercial Complaint*, alleges that AIG and the other broker and insurer defendants conspired to allocate customers, divide markets, and restrain competition in commercial lines of casualty insurance sold through the broker defendant. The complaint seeks treble damages on behalf of Ohio public purchasers of commercial casualty insurance, disgorgement on behalf of both public and private purchasers of commercial casualty insurance, as well as a \$500 per day penalty for each day of conspiratorial conduct.

Litigation Relating to 21st Century. Shortly after the announcement in late January 2007 of AIG's offer to acquire the outstanding shares of 21st Century Insurance Group (21st Century) not already owned by AIG and its subsidiaries, two related class actions were filed in the Superior Court of California, Los Angeles County, against AIG, 21st Century, and the individual members of 21st Century's Board of Directors, two of whom are current executive officers of AIG. The actions were filed purportedly on behalf of the minority shareholders of 21st Century and assert breaches of fiduciary duty in connection with the AIG proposal. The complaints alleged that the proposed per share price was unfair and sought preliminary and permanent injunctive relief to enjoin the consummation of the proposed transaction. On May 23, 2007, a third action was filed alleging breaches of fiduciary duty by the same defendants based upon their entering into the merger agreement and taking steps to complete the contemplated merger, and seeking injunctive relief comparable to that sought in the first two complaints. All three actions were consolidated under the caption *In re 21st Century Shareholder Litigation*. On August 14, 2007, the court dismissed the action at the request of the plaintiffs.

SICO. In July, 2005, SICO filed a complaint against AIG in the Southern District of New York, claiming that AIG had refused to provide SICO access to certain artwork and asked the court to order AIG immediately to release the property to SICO. AIG filed an answer denying SICO's allegations and setting forth defenses to SICO's claims. In addition, AIG filed counterclaims asserting breach of contract, unjust en-

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

richment, conversion, breach of fiduciary duty, a constructive trust and declaratory judgment, relating to SICO's breach of its commitment to use its AIG shares only for the benefit of AIG and AIG employees. Fact and expert discovery has been substantially concluded and SICO's motion for summary judgment is pending.

Regulatory Investigations. Regulators from several states have commenced investigations into insurance brokerage practices related to contingent commissions and other industry-wide practices as well as other broker-related conduct, such as alleged bid-rigging. In addition, various federal and state regulatory agencies are reviewing certain transactions and practices of AIG and its subsidiaries in connection with industry-wide and other inquiries. AIG has cooperated, and will continue to cooperate, in producing documents and other information in response to subpoenas and other requests.

Wells Notices. AIG understands that some of its employees have received Wells notices in connection with previously disclosed SEC investigations of certain of AIG's transactions or accounting practices. Under SEC procedures, a Wells notice is an indication that the SEC staff has made a preliminary decision to recommend enforcement action that provides recipients with an opportunity to respond to the SEC staff before a formal recommendation is finalized. It is possible that additional current and former employees could receive similar notices in the future as the regulatory investigations proceed.

Effect on AIG

In the opinion of AIG management, AIG's ultimate liability for the unresolved litigation and investigation matters referred to above is not likely to have a material adverse effect on AIG's consolidated financial condition, although it is possible that the effect would be material to AIG's consolidated results of operations for an individual reporting period.

(b) Commitments**Flight Equipment**

At September 30, 2007, ILFC had committed to purchase 245 new aircraft deliverable from 2007 through 2017 at an estimated aggregate purchase price of \$21.0 billion. ILFC will be required to find customers for any aircraft acquired, and it must arrange financing for portions of the purchase price of such equipment.

Other Commitments

In the normal course of business, AIG enters into commitments to invest in limited partnerships, private equities, hedge

funds and mutual funds and to purchase and develop real estate in the U.S. and abroad. These commitments totaled \$5.98 billion at September 30, 2007.

On June 27, 2005, AIG entered into an agreement pursuant to which AIG agrees, subject to certain conditions, to make any payment that is not promptly paid with respect to the benefits accrued by certain employees of AIG and its subsidiaries under the SICO Plans (as discussed in Note 4 herein).

(c) Contingencies

Loss Reserves. Although AIG regularly reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's current loss reserves. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, directors and officers liability (D&O), professional liability, medical malpractice, workers compensation, general liability, products liability and related classes, as well as for asbestos and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss cost trends or loss development factors could be attributable to changes in inflation, in labor and material costs or in the judicial environment, or in other social or economic phenomena affecting claims.

Synthetic Fuel Tax Credits. AIG generates income tax credits as a result of investing in synthetic fuel production. Tax credits generated from the production and sale of synthetic fuel under the Internal Revenue Code are subject to an annual phase-out provision that is based on the average well-head price of domestic crude oil. The price range within which the tax credits are phased-out was originally established in 1980 and is adjusted annually for inflation. Depending on the price of domestic crude oil for a particular year, all or a portion of the tax credits generated in that year might be eliminated. AIG evaluates the production levels of its synthetic fuel production facilities in light of the risk of phase-out of the associated tax credits. As a result of fluctuating domestic crude oil prices, AIG evaluates and adjusts production levels when appropriate in light of this risk. Recent increases in oil prices have reduced the current estimate of 2007

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**6. Commitments, Contingencies and Guarantees** (continued)

tax credits. Under current legislation, the opportunity to generate additional tax credits from the production and sale of synthetic fuel expires on December 31, 2007.

Lease Transactions. In June and August, 2007, field agents at the Internal Revenue Service issued Notices of Proposed Adjustment (NOPAs) relating to a series of lease transactions by an AIG subsidiary. In the NOPAs, the field agents asserted that the leasing transactions were “lease-in lease-out” transactions described in Revenue Ruling 2002-69 and proposed adjustments to taxable income of approximately \$203 million in the aggregate for the years 1998, 1999, 2001 and 2002.

(d) Guarantees

AIG and certain of its subsidiaries become parties to derivative financial instruments with market risk resulting from both dealer and end-user activities and to reduce currency, interest rate, equity and commodity exposures. These instru-

ments are carried at their estimated fair values in the consolidated balance sheet. The vast majority of AIG’s derivative activity is transacted by AIGFP. See Note 9 below and see Note 19 to the consolidated financial statements in the 2006 Annual Report on Form 10-K.

AIG has issued unconditional guarantees with respect to the prompt payment, when due, of all present and future payment obligations and liabilities of AIGFP arising from transactions entered into by AIGFP.

SAI Deferred Compensation Holdings, Inc., a wholly owned subsidiary of AIG, has established a deferred compensation plan for registered representatives of certain AIG subsidiaries, pursuant to which participants have the opportunity to invest deferred commissions and fees on a notional basis. The value of the deferred compensation fluctuates with the value of the deferred investment alternatives chosen. AIG has provided a full and unconditional guarantee of the obligations of SAI Deferred Compensation Holdings, Inc. to pay the deferred compensation under the plan.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS *(unaudited) (continued)***9. Derivatives and Hedge Accounting**

AIG uses derivatives and other financial instruments as part of its financial risk management programs and as part of its investment operations. AIGFP also transacts in derivatives as a dealer.

Derivatives, as defined in FAS 133, are financial arrangements among two or more parties with returns linked to or “derived” from some underlying equity, debt, commodity or other asset, liability, or foreign exchange rate or other index or the occurrence of a specified payment event. Derivative payments may be based on interest rates, exchange rates, prices of certain securities, commodities, or financial or commodity indices or other variables.

Unless subject to a scope exclusion, AIG carries all derivatives on the consolidated balance sheet at fair value. The changes in fair value of the derivative transactions of AIGFP are presented as a component of AIG’s operating income.

AIGFP

AIGFP, in the ordinary course of operations and as principal, structures and enters into derivative transactions to meet the needs of counterparties who may be seeking to hedge certain aspects of such counterparties’ operations or obtain a desired financial exposure. AIGFP also enters into derivative transactions to mitigate risk in its exposures (interest rates, currencies, commodities, credit and equities) arising from such transactions. Such instruments are carried at market or fair value, whichever is appropriate, and are reflected on the balance sheet in “Unrealized gain on swaps, options and forward transactions” and “Unrealized loss on swaps, options and forward contracts.”

Beginning in the first quarter of 2007, AIGFP designated certain interest rate swaps as fair value hedges of the benchmark interest rate risk on certain of its interest bearing financial assets and liabilities. In these hedging relationships, AIG is hedging its fixed rate available for sale securities and fixed rate borrowings. AIGFP also designated foreign currency forward contracts as fair value hedges for changes in spot foreign exchange rates of the non-U.S. dollar denominated available for sale debt securities. Under these strategies, all or portions of individual or multiple derivatives may be designated against a single hedged item.

At inception of each hedging relationship, AIGFP performs and documents its prospective assessments of hedge effectiveness to demonstrate that the hedge is expected to be

highly effective. For hedges of interest rate risk, AIGFP uses regression to demonstrate the hedge is highly effective, while it uses the periodic dollar offset method for its foreign currency hedges. AIGFP uses the periodic dollar offset method to assess whether its hedging relationships were highly effective on a retrospective basis. The prospective and retrospective assessments are updated on a daily basis. The passage of time component of the hedging instruments and the forward points on foreign currency hedges are excluded from the assessment of hedge effectiveness and measurement of hedge ineffectiveness. AIGFP does not utilize the shortcut, matched terms or equivalent methods.

The change in fair value of the derivative that qualifies under the requirements of FAS 133 as a fair value hedge is recorded in current period earnings along with the gain or loss on the hedged item for the hedged risk. For interest rate hedges, the adjustments to the carrying value of the hedged items are amortized into income using the effective yield method over the remaining life of the hedged item. Amounts excluded from the assessment of hedge effectiveness are recognized in current period earnings.

For the three and nine months ended September 30, 2007, AIGFP recognized net losses of \$5 million and \$3 million in earnings, respectively, representing hedge ineffectiveness, and also recognized net losses of \$152 million and \$363 million, respectively, related to the portion of the hedging instruments excluded from the assessment of hedge effectiveness. All these amounts are reflected in Other income. AIGFP did not apply hedge accounting in 2006.

Other Derivative Users

AIG and its subsidiaries (other than AIGFP) also use derivatives and other instruments as part of their financial risk management programs. Interest rate derivatives (such as interest rate swaps) are used to manage interest rate risk associated with investments in fixed income securities, commercial paper issuances, medium and long-term note offerings, and other interest rate sensitive assets and liabilities. In addition, foreign exchange derivatives (principally cross currency swaps, forwards and options) are used to economically mitigate risk associated with non-U.S. dollar denominated debt, net capital exposures and foreign exchange transactions. The derivatives are effective economic hedges of the exposures they are meant to offset.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (unaudited) (continued)**9. Derivatives and Hedge Accounting** (continued)

In 2007, AIG and its subsidiaries other than AIGFP designated certain derivatives as either fair value or cash flow hedges of their debt. The fair value hedges included (i) interest rate swaps that were designated as hedges of the change in the fair value of fixed rate debt attributable to changes in the benchmark interest rate and (ii) foreign currency swaps designated as hedges of the change in fair value of foreign currency denominated debt attributable to changes in foreign exchange rates and/or the benchmark interest rate. With respect to the cash flow hedges, (i) interest rate swaps were designated as hedges of the changes in cash flows on floating rate debt attributable to changes in the benchmark interest rate, and (ii) foreign currency swaps were designated as hedges of changes in cash flows on foreign currency denominated debt attributable to changes in the benchmark interest rate and foreign exchange rates.

AIG assesses, both at the hedge's inception and on an ongoing basis, whether the derivatives used in hedging transactions are highly effective in offsetting changes in fair values or cash flows of hedged items. Regression analysis is employed to assess the effectiveness of these hedges both on a prospective and retrospective basis. AIG does not utilize the shortcut, matched terms or equivalent methods.

The change in fair value of derivatives designated and effective as fair value hedges along with the gain or loss on the hedged item are recorded in net realized capital gains (losses). Upon discontinuation of hedge accounting, the cumulative adjustment to the carrying value of the hedged

item resulting from changes in the benchmark interest rate is amortized into income using the effective yield method over the remaining life of the hedged item. Amounts excluded from the assessment of hedge effectiveness are recognized in current period earnings. During both the three and nine months ended September 30, 2007, AIG recognized a loss of less than \$1 million in earnings related to the ineffective portion of the hedging instruments. During the three and nine months ended September 30, 2007, AIG also recognized losses of \$45 million and \$53 million, respectively, related to the change in the hedging instruments forward points excluded from the assessment of hedge effectiveness.

The effective portion of the change in fair value of a derivative qualifying as a cash flow hedge is recorded in Accumulated other comprehensive income (loss), until earnings are affected by the variability of cash flows in the hedged item. The ineffective portion of these hedges is recorded in net realized capital gains (losses). During both the three and nine months ended September 30, 2007, AIG recognized losses of \$1 million in earnings representing hedge ineffectiveness. At September 30, 2007, \$10 million of the deferred net loss in Accumulated other comprehensive income is expected to be recognized in earnings during the next 12 months. All components of the derivatives' gains and losses were included in the assessment of hedge effectiveness. There were no instances of the discontinuation of hedge accounting in 2007.

10. Cash Flows

As part of its ongoing remediation activities, AIG has made certain revisions to the Consolidated Statement of Cash Flows, primarily relating to certain elements of net realized capital gains, the effect of reclassifying certain policyholders' account balances from Other policyholder funds to

Policyholders' contract deposits, the elimination of certain intercompany balances and revisions related to separate account assets. Accordingly, AIG revised the previous periods presented to conform to the revised presentation.

The revisions and their effect on the Consolidated Statement of Cash Flows for the nine months ended September 30, 2006 are presented below:

<i>(in millions)</i>	Originally Reported September 30, 2006	Revisions	As Revised
Cash flows from operating activities	\$ 6,004	\$(1,967)	\$ 4,037
Cash flows from investing activities	(51,400)	(744)	(52,144)
Cash flows from financing activities	44,865	2,711	47,576
Effect of exchange rate changes on cash	59	—	59
Change in cash	(472)	—	(472)

ITEM 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

Management's Discussion and Analysis of Financial Condition and Results of Operations is designed to provide the reader a narrative with respect to AIG's operations, financial condition and liquidity and certain other significant matters.

Cautionary Statement Regarding Projections and Other Information About Future Events

This Quarterly Report on Form 10-Q and other publicly available documents may include, and AIG's officers and representatives may from time to time make, projections concerning financial information and statements concerning future economic performance and events, plans and objectives relating to management, operations, products and services, and assumptions underlying these projections and statements. These projections and statements are not historical facts but instead represent only AIG's belief regarding future events, many of which, by their nature, are inherently uncertain and outside AIG's control. These projections and statements may address, among other things, the status and potential future outcome of the current regulatory and civil proceedings against AIG and their potential effect on AIG's businesses, financial position, results of operations, cash flows and liquidity, the effect of credit rating changes on AIG's businesses and competitive position, the unwinding and resolving of various relationships between AIG and SICO and AIG's strategy for growth, product development, market position, financial results and reserves. It is possible that AIG's actual results and financial condition may differ, possibly materially, from the anticipated results and financial condition indicated in these projections and statements. Factors that could cause AIG's actual results to differ, possibly materially, from those in the specific projections and statements are discussed throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations and in Item 1A. Risk Factors of AIG's Annual Report on Form 10-K for the year ended December 31, 2006 (2006 Annual Report on Form 10-K). AIG is not under any obligation (and expressly disclaims any such obligations) to update or alter any projection or other statement, whether written or oral, that may be made from time to time, whether as a result of new information, future events or otherwise.

In addition to reviewing AIG's results for the first nine months of 2007, this Management's Discussion and Analysis of Financial Condition and Results of Operations supplements and updates the information and discussion included in the 2006 Annual Report on Form 10-K. Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG presents its operations in the way it believes will be most meaningful. Statutory loss ratios and combined ratios are presented in accordance with accounting principles prescribed by insurance regulatory authorities because these are standard measures of performance filed with insurance regulatory authorities and used for analysis in the insurance industry and thus allow more meaningful comparisons with AIG's insurance competitors. AIG has also incorporated into this discussion cross-references to additional information included in this Quarterly Report on Form 10-Q and in the 2006 Annual Report on Form 10-K to assist readers seeking related information on a particular subject.

Overview of Operations and Business Results

AIG identifies its reportable segments by product or service line, consistent with its management structure. AIG's segments are General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management. AIG's operations in 2007 and 2006 were conducted by its subsidiaries through these segments. Through these segments, AIG provides insurance, financial and investment products and services to both businesses and individuals in more than 130 countries and jurisdictions. This geographic, product and service diversification is one of AIG's major strengths and sets it apart from its competitors. AIG's Other category consists of items not allocated to AIG's operating segments.

AIG's subsidiaries serve commercial, institutional and individual customers through an extensive property-casualty and life insurance and retirement services network. In the United States, AIG companies are the largest underwriters of commercial and industrial insurance and are among the largest life insurance and retirement services operations as well. AIG's Financial Services businesses include commercial aircraft and equipment leasing, capital markets operations and consumer finance, both in the United States and abroad. AIG also provides asset management services to institutions and individuals. As part of its spread-based business activities, AIG issues various debt instruments in the public and private markets.

Outlook

The following paragraphs supplement and update the information and discussion included in Management's Discussion and Analysis of Financial Condition and Results of Operations – Outlook, in the 2006 Annual Report on

Form 10-K to reflect developments in or affecting AIG's business during 2007.

The commercial property and casualty insurance industry has historically experienced cycles of price erosion followed by rate strengthening as a result of catastrophes or other significant losses that affect the overall capacity of the industry to provide coverage. Despite industry price erosion in commercial lines, AIG expects to continue to identify profitable opportunities and build attractive new general insurance businesses as a result of AIG's broad product line and extensive distribution networks in the U.S. and abroad. In October 2007, for example, AIG expanded its Foreign General insurance operations in Germany through the acquisition of Württembergische and Badische Versicherungs-Aktiengesellschaft.

Workers compensation remains under considerable pricing pressure, as statutory rates continue to decline. Rates for aviation, excess casualty, D&O and certain other lines of insurance also continue to decline due to competitive pressures. AIG also expects further price erosion for its foreign commercial lines during 2008. There can be no assurance that price erosion will not become more widespread or that AIG's profitability will not deteriorate from current levels in major commercial lines; however, AIG seeks to mitigate this risk by constantly seeking out profitable opportunities across its diverse product lines and distribution networks.

AIG has commenced a realignment of its Foreign General insurance operations, many of which were historically conducted through branches of U.S. companies. On December 1, 2007, Landmark Insurance Company Limited, a U.K. subsidiary, will assume all of the insurance liabilities of the U.K. branch of New Hampshire Insurance Company and will change its name to AIG U.K. Ltd.

In AIG's Foreign Retirement Services business, the continued weak yen has resulted in higher than normal surrenders and that trend, if prolonged, could further accelerate the amortization of deferred acquisition costs (DAC). Similarly, in the Domestic Retirement Services business, the competitive environment and the age of the in-force blocks of individual fixed annuities could result in ongoing heightened surrender activity.

In Japan, the National Tax Authority in cooperation with the Life Insurance Association of Japan is reviewing the tax treatment for increasing term life insurance, which may affect the amount of premiums that qualify as tax deductions for business owners. As a result of this review, AIG's life insurance companies in Japan suspended the sale of increasing term life insurance from early April 2007. This action had an adverse effect on life insurance sales in the third quarter of 2007 and AIG expects that trend to continue for the remainder of the year. AIG companies in Japan have taken several measures aimed at increasing sales of other

products in the Japanese market, in particular sales of U.S. dollar life insurance products.

In Japan, full deregulation of banks with respect to insurance product sales will become effective in December 2007. AIG expects that it will be able to leverage its existing bank relationships and innovative product expertise to expand sales of both life and accident and health products beginning in 2008.

During the third quarter of 2007, the Internal Revenue Service proposed to change the treatment of the dividends-received deduction on separate account assets held in connection with variable annuity contracts. This proposal was withdrawn later in the quarter for additional study. Should this change be adopted, AIG does not expect it would have a material effect on AIG's consolidated financial position or results of operations for any period.

In March 2007, the U.S. Treasury Department published proposed new regulations that, if adopted in their current form, would limit the ability of U.S. taxpayers to claim foreign tax credits in certain circumstances under the Internal Revenue Code. Should the proposed regulations be adopted in their current form, they would limit AIG's ability to claim foreign tax credits in connection with certain structured transactions entered into by AIG Financial Products Corp. and AIG Trading Group Inc. and their respective subsidiaries (collectively, AIGFP), resulting in a material adverse effect on AIGFP's operating results.

The ongoing disruption in the structured finance markets and the recent downgrades by rating agencies continue to adversely affect AIG's estimates of the fair value of the super senior credit derivatives written by AIGFP. Although it remains difficult to estimate the fair value of these derivatives due to continuing limitations on the availability of market observable data, AIG's best estimate of the further decline in the fair value of AIGFP's super senior credit derivatives since September 30, 2007 is approximately \$550 million as of October 31, 2007. The fair value of these derivatives is expected to fluctuate, perhaps materially, in response to changing market conditions, and AIG's estimates of the value of AIGFP's super senior credit derivative portfolio at future dates could therefore be materially different from current estimates. AIG continues to believe that it is highly unlikely that AIGFP will be required to make payments with respect to these derivatives.

The U.S. residential mortgage market is experiencing serious disruption due to credit quality deterioration in a significant portion of loans originated, particularly to non-prime and subprime borrowers, evolving changes in the regulatory environment, a slower residential housing market, increased cost of borrowings for mortgage participants and illiquid credit markets. AIG participates in the U.S. residential

mortgage market in several ways: American General Finance, Inc. (AGF) originates principally first-lien mortgage loans and to a lesser extent second-lien mortgage loans to buyers and owners of residential housing; United Guaranty Corporation (UGC) provides first loss mortgage guaranty insurance for high loan-to-value first and second-lien residential mortgages; AIG insurance and financial services subsidiaries invest in mortgage-backed securities and collateralized debt obligations (CDOs) in which the underlying collateral is composed in whole or in part of residential mortgage loans; and AIGFP provides credit protection through credit default swaps on certain super senior tranches of CDOs that have AAA underlying or subordinate layers. The operating results of AIG's consumer finance and mortgage guaranty operations in the United States have been and are likely to continue to be adversely affected by the factors referred to above. The downward cycle in the U.S. housing market is not expected to improve until residential inventories return to a more normal level and the mortgage credit market stabilizes. AIG expects that this downward cycle will continue to adversely affect UGC's operating results for the foreseeable future and will result in a significant operating loss for UGC in 2008. The effect of the downward cycle in the U.S. housing market on AIG's other operations, investment portfolio and overall consolidated financial position could be material if the market disruption continues and expands beyond the U.S. residential mortgage markets, although AIG seeks to mitigate the risks to its business by disciplined underwriting and active risk management.

In recent quarters, AIG's returns from partnerships and other alternative investments were particularly strong, driven by favorable equity market performance and credit conditions. These returns may vary from period to period and declined significantly in the most recent quarter. AIG believes that the particularly strong performance in certain prior periods is not indicative of the returns to be expected from this asset class in future periods.

As part of an ongoing project to increase the standardization of AIG actuarial systems and processes throughout the world, adjustments reflecting certain changes in actuarial estimates for future policy benefits and DAC have been recognized in the Life Insurance & Retirement Services segment results during 2006 and 2007. AIG expects further adjustments over time as these new systems and processes are implemented.

AIG has recorded out of period quarterly adjustments in the last two years due to the remediation of control deficiencies. As AIG continues its remediation activities, AIG expects to record additional out of period adjustments.

Consolidated Results

The following table summarizes AIG's consolidated revenues, income before income taxes, minority interest and cumulative effect of an accounting change and net income:

<i>(in millions)</i>	Three Months Ended September 30,		Percentage Increase/ (Decrease)	Nine Months Ended September 30,		Percentage Increase/ (Decrease)
	2007	2006		2007	2006	
Total revenues	\$29,836	\$29,247	2%	\$91,631	\$83,379	10%
Income before income taxes, minority interest and cumulative effect of an accounting change	4,879	6,301	(23)	17,379	16,335	6
Net income	\$ 3,085	\$ 4,224	(27)%	\$11,492	\$10,609	8%

AIG's consolidated revenues increased slightly for the three months ended September 30, 2007 compared to the same period in 2006. AIG's consolidated income before income taxes, minority interest and cumulative effect of an accounting change decreased for the three-month period ended September 30, 2007 compared to the same period in 2006 primarily due to higher Net realized capital losses and the operating loss in the Mortgage Guaranty business. Net realized capital losses included other-than-temporary declines of \$529 million and foreign currency related losses of \$361 million.

AIG's consolidated revenues increased for the nine-month period ended September 30, 2007 compared to the same period in 2006 as revenues increased in each of the operating segments. Operating income increased in all segments with the exception of Life Insurance & Retirement Services, which declined due to an increase in Net realized capital losses compared to the same period in 2006.

Operating income for the three and nine-month periods ended September 30, 2007 was significantly affected by the change in accounting treatment for hedging activities. In the first nine months of 2007, AIGFP applied hedge accounting to certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. As a result, AIGFP recognized in earnings the change in the fair value on the hedged items attributable to the hedged risks, offsetting the gains and losses on the derivatives designated as hedges. In 2006, AIGFP did not apply hedge accounting under FAS 133 to any of its assets and liabilities.

During the three months ended September 30, 2007, AIG recorded certain out of period adjustments. These adjustments collectively decreased pre-tax operating income in that quarter by \$33 million and net income by \$35 million. The adjustments were primarily comprised of a net charge of \$49 million (\$32 million after tax) in Capital Markets, a \$14 million increase in income tax expense related to the remediation of the material weakness in controls over income tax accounting and an increase to operating income of \$16 million (\$11 million after tax) primarily related to other remediation activities.

For the nine months ended September 30, 2007, out of period adjustments collectively decreased pre-tax operating income by \$536 million (\$408 million after tax). The adjustments were comprised of a charge of \$380 million

(\$247 million after tax) to reverse net gains on transfers of investment securities among legal entities consolidated within AIGFP and a corresponding increase to Accumulated other comprehensive income; \$58 million of additional income tax expense related to the aforementioned remediation activities; \$71 million (\$46 million after tax) of net realized capital gains related to foreign exchange; and \$227 million (\$149 million after tax) of additional expense, primarily relating to other remediation activities.

During the three months ended September 30, 2006, out of period adjustments collectively increased pre-tax operating income by \$293 million and net income by \$73 million. The adjustments were comprised of an increase in income primarily related to the remediation of the material weakness in accounting for certain derivative transactions under FAS 133 totalling \$151 million (\$23 million after tax); increases in bad debt expense of \$225 million (\$146 million after tax) and earned premiums of \$99 million (\$65 million after tax), both of which relate to balance sheet reconciliations; an increase in partnership income of \$121 million (\$79 million after tax), which relates to improved valuation information; a further increase in income from certain investments in unit investment trusts (UCITS) of \$116 million (\$75 million after tax), as described below; other favorable remediation adjustments of \$31 million (\$16 million after tax) and an increase in income tax expense of \$39 million relating to AIG's ongoing remediation of internal controls over income tax accounting. See also the discussion of AIG's reportable segments in Management's Discussion & Analysis of Financial Condition and Results of Operations.

For the nine months ended September 30, 2006, out of period adjustments collectively increased pre-tax operating income by \$173 million and reduced net income by \$135 million. The adjustments were comprised of \$642 million (\$417 million after tax) of additional investment income related to the accounting for UCITS; \$194 million (\$127 million after tax) of charges primarily related to the remediation of the material weakness in accounting for certain derivative transactions under FAS 133; \$239 million of additional income tax expense related to the aforementioned remediation activities; \$85 million (\$55 million after tax) of interest income related to interest earned on deposit contracts; \$61 million (before and after tax) of expenses related to the Starr International Company,

Inc. (SICO) Deferred Compensation Profit Participation Plans (SICO Plans); \$59 million (\$38 million after tax) of expenses related to deferred advertising costs; and \$240 million (\$142 million after tax) of additional expense, primarily related to other remediation activities.

Results for the first nine months of 2006 were also negatively affected by a one-time charge relating to the C.V. Starr & Co., Inc. (Starr) tender offer (\$54 million before and after tax) and an additional allowance for losses in AIG Credit Card Company (Taiwan) (\$88 million before and after tax), both of which were recorded in first quarter of 2006.

Segment Results

The following table summarizes AIG's operations by major operating segment. (See also Note 2 of Notes to Consolidated Financial Statements.)

(in millions)	Three Months Ended September 30,		Percentage Increase/ (Decrease)	Nine Months Ended September 30,		Percentage Increase/ (Decrease)
	2007	2006		2007	2006

(a) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133), including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2007 and 2006, respectively, the effect was \$(178) million and \$165 million in both revenues and operating income. For the nine-month periods ended September 30, 2007 and 2006, respectively, the effect was \$(1.06) billion and \$(1.13) billion in both revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are hedging investments and borrowings. These gains (losses) for the three and nine months ended September 30, 2007 include out of period charges of \$20 million and \$346 million, respectively, including a \$380 million charge in the nine months ended September 30, 2007 to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIGFP. The three and nine-month periods ended September 30, 2006 include an out of period gain of \$115 million and a charge of \$223 million related to the remediation of the material weakness in accounting for certain derivative transactions under FAS 133.

(b) Includes the effect of out of period UCITS adjustments. For the three and nine-month periods ended September 30, 2006, the effect was an increase of \$92 million and \$472 million, respectively, in both revenues and operating income for General Insurance and an increase of \$24 million and \$240 million, respectively, in revenues and \$24 million and \$169 million, respectively, in operating income for Life Insurance & Retirement Services.

(c) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2007 and 2006, respectively, the effect was \$353 million, and \$581 million in both revenues and operating income. For the nine-month periods ended September 30, 2007 and 2006, respectively, the effect was \$(250) million and \$(1.2) billion in both revenues and operating income. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings. The three and nine-month periods ended September 30, 2007 include out of period charges of \$20 million and \$346 million, respectively, as discussed above. The three and nine-month periods ended September 30, 2006 include an out of period gain of \$115 million and a charge of \$223 million as discussed above. In the first quarter of 2007, AIG began applying hedge accounting for certain transactions, primarily in its Capital Markets operations. In the second quarter of 2007, AGF and ILFC began applying hedge accounting to most of their derivatives hedging interest rate and foreign exchange risks associated with their floating rate and foreign currency denominated borrowings.

(d) For the three and nine-month periods ended September 30, 2007, both revenues and operating income include an unrealized market valuation loss of \$352 million on AIGFP's super senior credit default swap portfolio.

General Insurance

AIG's General Insurance operations provide property and casualty products and services throughout the world. Foreign operations provided approximately 25 percent and 27 percent of General Insurance operating income for the three months ended September 30, 2007 and 2006, respectively, and approximately 28 percent and 31 percent

AIG's effective income tax rates for the year ended December 31, 2006 and the three-month period ended September 30, 2007 were 30.1 percent and 30.0 percent, respectively. For the nine-month period ended September 30, 2007, the effective income tax rate declined to 28.0 percent, primarily due to recognition of tax benefits associated with the SICO Plans for which the compensation expense had been recognized in prior years. Such tax benefits amounted to \$194 million for the nine-month period ended September 30, 2007.

for the nine months ended September 30, 2007 and 2006, respectively. The decrease in General Insurance operating income in the three-month period ended September 30, 2007 compared to the same period in 2006 was primarily attributable to operating losses from the Mortgage Guaranty business and a decline in operating income in the Foreign

General and Personal Lines businesses, partially offset by improved underwriting results for the Domestic Brokerage Group (DBG) and higher net investment income.

Operating income grew in the nine-month period ended September 30, 2007 compared to the same period of 2006, driven by strength in DBG, partially offset by operating losses from the Mortgage Guaranty business.

Life Insurance & Retirement Services

AIG's Life Insurance & Retirement Services operations provide insurance, financial and investment products throughout the world. Foreign operations provided approximately 87 percent and 65 percent of Life Insurance & Retirement Services operating income for the three months ended September 30, 2007 and 2006, respectively, and approximately 68 percent and 67 percent for the nine months ended September 30, 2007 and 2006, respectively. Operating income for the three months ended September 30, 2007 declined compared to the same period in 2006, primarily due to the securities market volatility which resulted in lower investment income and higher net realized capital losses compared to the same period in 2006. For the nine months ended September 30, 2007, operating income declined 8 percent compared to the same period in 2006 due to charges related to balance sheet reconciliation remediation, an industry-wide claims review in Japan, the effect of SOP 05-1, trading account losses and realized capital losses.

Financial Services

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance.

Financial Services operating income decreased in the three-month period and increased in the nine-month period ended September 30, 2007 compared to the same periods in 2006 due, in large part, to differences in the accounting treatment for hedging activities. In the first quarter of 2007, AIGFP began applying hedge accounting to certain of its interest rate swaps and foreign currency forward contracts that hedge its investments and borrowings. In the second quarter of 2007, AGF and International Lease Finance Corporation (ILFC) began applying hedge accounting to most of their derivatives that hedge interest rate and foreign currency denominated borrowings. Prior to 2007, hedge accounting under FAS 133 was not being applied to any of AIG's derivatives and related assets and liabilities. Accordingly, revenues and operating income were exposed to volatility resulting from differences in the timing of revenue recognition between the derivatives and the hedged assets and liabilities. During the three and nine-month periods ended September 30, 2007 operating income was also adversely affected by an unrealized market valuation loss of \$352 million on AIGFP's super senior credit default swap portfolio.

ILFC generated strong operating income growth for the three and nine-month periods ended September 30, 2007 compared to the same periods in 2006, driven to a large extent by a larger aircraft fleet, higher lease rates and higher utilization.

AGF's operating income decreased in the three and nine months ended September 30, 2007, in large part due to the reduced residential mortgage origination volumes and lower revenues from its mortgage banking activities. Further, in the first nine months of 2007, AGF's mortgage banking operations recorded pre-tax charges of \$178 million, representing the estimated cost of implementing the Supervisory Agreement entered into with the Office of Thrift Supervision (OTS), which are discussed in the Consumer Finance results of operations section.

Asset Management

AIG's Asset Management operations include institutional and retail asset management, broker-dealer services and institutional spread-based investment businesses. The Matched Investment Program (MIP) has replaced the GIC program as AIG's principal institutional spread-based investment activity.

Asset Management operating income increased for the three and nine-month periods ended September 30, 2007 compared to the same periods in 2006, primarily due to higher income from consolidated managed partnerships and funds that is entirely offset in Minority interest expense, which is not a component of operating income. Realized capital losses, principally relating to economically effective hedges not qualifying for hedge accounting, also increased for the three months ended September 30, 2007 compared to the same period in 2006. Asset Management operating income also increased for the nine-month period ended September 30, 2007 compared to the same period in 2006 due to increased investment income from consolidated managed partnerships and funds, and a realized capital gain of \$398 million on the sale of a portion of AIG's investment in Blackstone Group, LP in connection with its initial public offering, as well as growth in both the Spread-Based Investment business and the Institutional Asset Management business.

Capital Resources

In the first nine months of 2007, AIG issued an aggregate of \$4.49 billion of junior subordinated debentures in four series of securities. Substantially all of the proceeds from these sales, net of expenses, are being used to repurchase shares of AIG's common stock.

At September 30, 2007, AIG had total consolidated shareholders' equity of \$104.1 billion and total consolidated borrowings of \$176.2 billion, of which \$20.3 billion represented AIG's net borrowings. At that date, \$155.9 billion of total borrowings represented obligations of

AIG's subsidiaries not guaranteed by AIG, matched borrowings by AIG parent or AIGFP, obligations of guaranteed investment agreements, junior subordinated debt, liabilities connected to trust preferred stock and hybrid financial instrument liabilities.

In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. Share repurchases during 2007 are described under Capital Resources and Liquidity – Share Repurchases and in Item 2. of Part II of this Quarterly Report on Form 10-Q.

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At September 30, 2007, AIG's consolidated invested assets, primarily held by its subsidiaries, included \$41.2 billion in cash and short-term investments. The increase in cash and short-term investments during the quarter was primarily the result of the steps AIG took to enhance the liquidity of its portfolios in light of the market disruption during the quarter. Consolidated net cash provided from operating activities in the first nine months of 2007 amounted to \$27.1 billion. Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements, including the funding of increased dividends under AIG's new dividend policy and repurchases of common stock.

Critical Accounting Estimates

AIG considers its most critical accounting estimates to be those relating to reserves for losses and loss expenses, future policy benefits for life and accident and health contracts, recoverability of DAC, estimated gross profits for investment-oriented products, fair value determinations for certain Capital Markets assets and liabilities, other-than-temporary declines in the value of investments and flight equipment recoverability. These accounting estimates require the use of assumptions about matters, some of which are highly uncertain at the time of estimation. To the extent actual experience differs from the assumptions used, AIG's results of operations would be directly affected.

Throughout this Management's Discussion and Analysis of Financial Condition and Results of Operations, AIG's critical accounting estimates are discussed in detail. The major categories for which assumptions are developed and used to establish each critical accounting estimate are highlighted below.

Reserves for Losses and Loss Expenses (General Insurance):

- *Loss trend factors:* used to establish expected loss ratios for subsequent accident years based on premium

rate adequacy and the projected loss ratio with respect to prior accident years.

- *Expected loss ratios for the latest accident year:* in this case, accident year 2007 for the loss reserve analyses updated through September 30, 2007. For low-frequency, high-severity classes such as excess casualty, expected loss ratios generally are utilized for at least the three most recent accident years.
- *Loss development factors:* used to project the reported losses for each accident year to an ultimate amount.
- *Reinsurance recoverable on unpaid losses:* the expected recoveries from reinsurers on losses that have not yet been reported and/or settled.

Future Policy Benefits for Life and Accident and Health Contracts (Life Insurance & Retirement Services):

- *Interest rates:* which vary by geographical region, year of issuance and products.
- *Mortality, morbidity and surrender rates:* based upon actual experience by geographical region modified to allow for variation in policy form, risk classification and distribution channel.

Estimated Gross Profits (Life Insurance & Retirement Services):

- *Estimated gross profits:* to be realized over the estimated duration of the contracts (investment-oriented products) affect the carrying value of DAC, unearned revenue liability and associated amortization patterns under FAS 97 and Sales Inducement Assets under SOP 03-1. Estimated gross profits include investment income and gains and losses on investments less required interest, actual mortality and other expenses.

Deferred Policy Acquisition Costs (Life Insurance & Retirement Services):

- *Recoverability:* based on current and future expected profitability, which is affected by interest rates, foreign exchange rates, mortality experience, and policy persistency.

Deferred Policy Acquisition Costs (General Insurance):

- *Recoverability and eligibility:* based upon the current terms and profitability of the underlying insurance contracts.

Fair Value Determinations Of Certain Assets And Liabilities:

- *Market price data:* AIG attempts to secure reliable and independent current market price data, such as published exchange rates from external subscription services such as IDC, Bloomberg or Reuters or third-party broker/dealer quotes for use in its models. When such data is not available, AIG uses an internal methodology, which includes interpolation and extrapolation from verifiable recent prices.

- *Valuation models:* utilizing factors, such as market prices, liquidity, commodity prices, credit spreads, and current interest, foreign exchange and volatility rates.

Other-Than-Temporary Declines In The Value Of Investments:

A security is considered a candidate for other-than-temporary impairment if it meets any of the following criteria:

- Trading at a significant (25 percent or more) discount to par or amortized cost (if lower) for an extended period of time (nine months or longer);
- The occurrence of a discrete credit event resulting in the debtor defaulting or seeking bankruptcy or insolvency protection or voluntary reorganization; or
- The probability of non-realization of a full recovery on its investment, irrespective of the occurrence of one of the foregoing events.

At each balance sheet date, AIG evaluates its securities holdings in an unrealized loss position. Where AIG does not intend to hold such securities until they have fully recovered their carrying value, based on the circumstances present at the date of evaluation, AIG records the unrealized loss in income. If events or circumstances change, such as unexpected changes in the creditworthiness of the obligor, unanticipated changes in interest rates, tax laws, statutory capital positions and unforeseen liquidity events, among others, AIG revisits its intent. Further, if a loss is recognized from a sale subsequent to a balance sheet date pursuant to these unexpected changes in circumstances, the loss is recognized in the period in which the intent to hold the securities to recovery no longer exists.

In periods subsequent to the recognition of an other-than-temporary impairment loss for debt securities, AIG amortizes the discount or reduced premium over the remaining life of the security in a prospective manner based on the amount and timing of estimated future cash flows.

Flight Equipment – Recoverability (Financial Services):

- *Expected undiscounted future net cash flows:* based upon current lease rates, projected future lease rates and estimated terminal values of each aircraft based on third party information.

Allowance for Finance Receivable Losses (Financial Services):

- *Historical defaults and delinquency experience:* utilizing factors, such as delinquency ratio, allowance ratio, charge-off ratio, and charge-off coverage.
- *Portfolio characteristics:* portfolio composition and consideration of the recent changes to underwriting criteria and portfolio seasoning.

- *External factors:* consideration of current economic conditions, including levels of unemployment and personal bankruptcies.
- *Migration analysis:* empirical technique measuring historical movement of like finance receivables through various levels of repayment, delinquency, and loss categories to existing finance receivable pools.

Operating Review

General Insurance Operations

AIG's General Insurance subsidiaries are multiple line companies writing substantially all lines of property and casualty insurance and various personal lines both domestically and abroad.

Domestic General Insurance operations are comprised of DBG, Reinsurance, Personal Lines and Mortgage Guaranty businesses.

DBG writes substantially all classes of business insurance, accepting such business mainly from insurance brokers. This provides DBG the opportunity to select specialized markets and retain underwriting control. Any licensed broker is able to submit business to DBG without the traditional agent-company contractual relationship, but such broker usually has no authority to commit DBG to accept a risk.

Transatlantic Holdings, Inc. (Transatlantic) subsidiaries offer reinsurance capacity on both a treaty and facultative basis both in the U.S. and abroad. Transatlantic structures programs for a full range of property and casualty products with an emphasis on specialty risk.

AIG's Personal Lines operations provide automobile insurance through aigdirect.com, the newly formed operation resulting from the merger of AIG Direct and 21st Century, and the Agency Auto Division, as well as a broad range of coverages for high net worth individuals through the AIG Private Client Group.

The main business of the UGC subsidiaries is the issuance of residential mortgage guaranty insurance that covers the first loss for credit defaults on high loan-to-value conventional first-lien mortgages for the purchase or refinance of one to four family residences. UGC subsidiaries also write second-lien and private student loan guaranty insurance.

AIG's Foreign General Insurance group accepts risks primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance group also includes business written by AIG's foreign-based insurance subsidiaries.

General Insurance Results

General Insurance operating income is comprised of statutory underwriting results, changes in DAC, net investment income and net realized capital gains and losses.

Operating income, as well as net premiums written, net premiums earned, net investment income and net realized capital gains (losses) and statutory ratios were as follows:

<i>(in millions, except ratios)</i>	Three Months Ended September 30,		Percentage Increase/ (Decrease)	Nine Months Ended September 30,		Percentage Increase/ (Decrease)
	2007	2006		2007	2006

AIG transacts business in most major foreign currencies. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of General Insurance net premiums written:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2007	2006	2007	2006
Growth in original currency*	4.3%	8.5%	4.6%	8.1%
Foreign exchange effect	1.0	0.3	1.1	(0.6)
Growth as reported in U.S. dollars	5.3%	8.8%	5.7%	7.5%

* Computed using a constant exchange rate throughout each period.

Quarterly General Insurance Results

General Insurance operating income decreased in the three months ended September 30, 2007 compared to the same period in 2006. The 2007 combined ratio increased to 90.2, an increase of 1.1 points over 2006, including an increase in the loss ratio of 2.1 points. The loss ratio for accident year 2007 recorded in the three months ended September 30, 2007 was 4.5 points higher than the loss ratio recorded in the three months ended September 30, 2006 for accident year 2006. Increases in Mortgage Guaranty losses accounted for 3.1 points of the higher accident year loss ratio. The downward cycle in the U.S. housing market is not expected to improve until residential inventories return to a more normal level, and AIG expects that this downward cycle will continue to adversely affect UGC's loss ratios for the foreseeable future.

The higher accident year loss ratio was partially offset by favorable development on prior years and increases in the loss reserve discount, reducing losses by \$377 million and \$41 million for three months ended September 30, 2007 and 2006, respectively. The three months ended September 30, 2006, included an increase to Other expenses of \$225 million in connection with balance sheet reconciliation remediation activities which accounted for 2.0 points of the decrease in the expense ratio in the three months ended September 30, 2007 compared to the same period in 2006. Net premiums written increased for the three months ended September 30, 2007 compared to the same period in 2006, driven by Foreign General growth from both established and new distribution channels and the effect of changes in foreign currency exchange rates.

General Insurance net investment income was essentially unchanged for the three months ended September 30, 2007 compared to the same period in 2006, which included an out of period increase to Net investment income of \$213 million related to the accounting for UCITS and additional partnership income arising from improved valuations. Interest and dividend income increased \$244 million for the third quarter of 2007 compared to the same period in 2006 as investment in fixed maturities and equity securities increased by \$12.0 billion from the investment of operating cash flow and the yield on interest earning investments increased 30 basis points to 4.8 percent. Income from partnership investments increased \$10 million for the three months ended September 30, 2007 compared to the same period in 2006, primarily due to improved returns on underlying investments. Other investment income decreased \$290 million, primarily due to declining returns on investments in mutual funds and the effect of the \$92 million out of period adjustment related to the accounting for UCITS recorded in 2006.

Year-to-Date General Insurance Results

General Insurance operating income increased for the first nine months of 2007 compared to the same period in 2006 due to growth in net investment income and an increase in underwriting profit, driven by an increase in earned premiums as the combined ratio was substantially the same for both periods. The loss ratio for accident year 2007 recorded in the first nine months of 2007 was 1.2 points higher than the loss ratio recorded in the first nine months of 2006 for accident year 2006, primarily due to an increase in Mortgage Guaranty losses in the 2007 period. The higher accident year loss ratio was substantially offset by favorable development on prior years and increases in the loss reserve discount, which combined to reduce losses by \$720 million and \$255 million in the first nine months of 2007 and 2006, respectively.

General Insurance net premiums written increased in the first nine months of 2007 compared to the same period in 2006, reflecting growth in Foreign General from both established and new distribution channels, the effect of changes in foreign currency exchange rates, and growth in Mortgage Guaranty, primarily from international business.

General Insurance net investment income increased in the first nine months of 2007 to \$4.6 billion. Interest and dividend income increased \$577 million for the first nine months of 2007 compared to the same period of 2006 as fixed maturities and equity securities increased by \$15.3 billion and the yield increased 20 basis points to 4.7 percent. Income from partnership investments increased \$312 million for the first nine months of 2007 compared to the same period in 2006, primarily due to improved returns on underlying investments and higher levels of invested assets, which increased by \$1.2 billion. Other investment income decreased by \$444 million, which reflects the effect of

the \$472 million out of period UCITS adjustment recorded in 2006. See also Capital Resources and Liquidity and Invested Assets herein.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers have managed their businesses, commencing in the first quarter of 2007, the foreign aviation business, which was historically reported in DBG, is now being reported as part of Foreign General, and the oil rig and marine businesses, which were historically reported in Foreign General, are now being reported as part of DBG. Prior period amounts have been revised to conform to the current presentation.

Quarterly DBG Results

DBG's operating income increased in the three months ended September 30, 2007 compared to the same period of 2006. The improvement is also reflected in the combined ratio, which declined 7.4 points in the three months ended September 30, 2007 compared to the same period of 2006 due to an improvement in the loss ratio of 3.7 points and an improvement in the expense ratio of 3.7 points. Favorable prior year development and increases in the loss reserve discount reduced incurred losses by \$353 million and increased incurred losses by \$67 million for the three months ended September 30, 2007 and 2006, respectively, accounting for 7.0 points of the improvement. The loss ratio for accident year 2007 recorded in the three months ended September 30, 2007 was 1.6 points higher than the loss ratio recorded in the same period of 2006 for accident year 2006. The expected loss ratios for accident year 2006 were reduced for a number of casualty classes of business in the three-month period ended September 30, 2006, accounting for most of the change in the accident year loss ratio compared to the same period in 2006. Net premiums earned in the three months ended September 30, 2006 included a favorable out of period adjustment of \$155 million which reduced the loss ratio by 1.7 points.

DBG's net premiums written declined for the three months ended September 30, 2007 compared to the same period in 2006 due to an increase in ceded premiums and declines in premium rates in casualty lines of business. Ceded premiums as a percentage of gross written premiums increased to 24 percent for the three months ended September 30, 2007 compared to 23 percent in the same period in 2006, primarily due to additional reinsurance for property risks to manage catastrophe exposures.

DBG's expense ratio decreased to 19.2 for the three months ended September 30, 2007 compared to 23.0 in the same period in 2006, primarily due to a decrease in charges related to remediation of the material weakness in balance sheet reconciliations which included a \$225 million out of period charge in the third quarter of 2006.

DBG's net investment income decreased for the three months ended September 30, 2007 compared to the same period in 2006, which included out of period increases in partnership and other investment income of \$121 million and \$70 million, respectively. Interest income increased \$139 million for the three months ended September 30, 2007, on growth in the bond portfolio resulting from investment of operating cash flows and capital contributions. Income from partnership investments increased \$16 million for the three months ended September 30, 2007 compared to the same period in 2006, primarily due to improved returns on the underlying investments.

Year-to-date DBG Results

DBG's operating income increased for the first nine months of 2007 compared to the same period in 2006 due to growth in both net investment income and underwriting profit. The improvement is also reflected in the combined ratio, which declined 5.2 points in the first nine months of 2007 compared to the same period in 2006, primarily due to an improvement in the loss ratio of 4.2 points. The loss ratio for accident year 2007 recorded for the first nine months of 2007 was 0.5 points lower than the loss ratio recorded in the same period of 2006 for accident year 2006. The loss ratio for accident year 2006 has subsequently improved in each quarter since September 30, 2006. Prior year development and increases in the loss reserve discount reduced incurred losses by \$630 million for the nine months ended September 30, 2007 and increased incurred losses by \$35 million for the same period in 2006, accounting for 3.7 points of the improvement.

DBG's net premiums written was essentially unchanged in the first nine months of 2007 compared to the same period of 2006. Ceded premiums as a percentage of gross written premiums increased to 25 percent in the first nine months of 2007 compared to 23 percent for the same period in 2006, primarily due to additional reinsurance for property risks to manage catastrophe exposures.

DBG's expense ratio decreased to 18.6 for the first nine months in 2007 compared to 19.7 in the same period of 2006, primarily due to the 2006 charge related to the remediation of the material weakness in internal control over certain balance sheet reconciliations that accounted for 1.6 points of the decline. The decline was partially offset by increases in operating expenses for marketing initiatives and operations as well as changes in the mix of business towards products with lower loss ratios and higher expense ratios.

DBG's net investment income increased for the first nine months of 2007 compared to the same period in 2006, as interest income increased \$334 million for the nine months ended September 30, 2007, on growth in the bond portfolio resulting from investment of operating cash flows and capital contributions. Income from partnership investments

increased \$215 million for the first nine months of 2007 compared to the same period in 2006, primarily due to improved returns on the underlying investments. Other investment income declined \$133 million in the first nine months of 2007 compared to the same period in 2006, primarily due to the out of period adjustment of \$151 million recorded in the 2006 period.

Quarterly Transatlantic Results

Transatlantic's net premiums written and net premiums earned increased for the three months ended September 30, 2007 compared to the same period in 2006 due primarily to increased writings in domestic and international operations and the strengthening of certain foreign currencies against the U.S. dollar. Statutory underwriting profit increased due to improved underwriting results from domestic operations for the three months ended September 30, 2007 compared to the same period in 2006. Operating income increased for the three months ended September 30, 2007 compared to the same period in 2006 due primarily to increased net investment income, improved underwriting results and increased net realized capital gains.

Year-to-date Transatlantic Results

Transatlantic's net premiums written and net premiums earned increased for the first nine months of 2007 compared to the same period in 2006 due primarily to increased writings in domestic operations. The increase in statutory underwriting profit in the nine months ended September 30, 2007 compared to the same period in 2006 reflects improved underwriting results in Domestic and European operations. Overall, costs from European windstorms and floods and storms in Australia in the nine months ended September 30, 2007 were largely offset by lower estimated net adverse development, related to losses occurring in prior years, compared to the same period of 2006. Operating income increased for the first nine months of 2007 compared to the same period in 2006 due principally to increased net investment income, improved underwriting results and net realized capital gains.

Quarterly Personal Lines Results

Personal Lines operating income for the three months ended September 30, 2007 was \$28 million, a decrease of \$105 million compared to the same period in 2006, primarily due to a \$53 million increase in incurred losses resulting from a change in prior year reserve development, mainly from discontinued businesses, and \$28 million of transaction and integration costs related to the acquisition of the minority interest in 21st Century Insurance Group (21st Century), as discussed below. The loss ratio for accident year 2007 recorded for the three months ended September 30, 2007 was 3.21 points higher than the loss ratio for the same period in 2006 primarily due to increasing accident frequency trends in

the direct businesses coupled with a decline in average premium, and increasing loss frequencies in the homeowners line of the Private Client Group segment. Prior year development increased incurred losses by \$32 million for the three months ended September 30, 2007 and decreased incurred losses by \$21 million for the three months ended September 30, 2006, thereby increasing the 2007 loss ratio by 4.52 points relative to the 2006 loss ratio. The transaction and integration costs related to the 21st Century acquisition increased the expense ratio in the third quarter of 2007 by 2.2 points compared to the same period of 2006.

Net premiums written increased 7.8 percent for the three months ended September 30, 2007 compared to the same period of 2006, which represents the highest growth rate since the third quarter of 2005. This increase resulted from continued growth in the Private Client Group, as well as growth in Agency Auto and the Direct segment.

On September 27, 2007, AIG completed its previously announced acquisition of 21st Century. AIG paid \$759 million to acquire the remaining 39.2 percent of the shares of 21st Century that it did not previously own. As a result of the acquisition, the AIG Direct and 21st Century operations will be combined as aigdirect.com. Duplicate positions which exist in both the home office and corporate functions and in the field organization will be eliminated. These positions, as well as the locations scheduled for closing over the next two years, have been identified and will affect about 11 percent of the combined workforce.

Under the purchase method of accounting, the assets and liabilities of 21st Century that were acquired were adjusted to their estimated fair values as of the date of the acquisition, and goodwill of \$233 million was recorded. A customer relationship intangible asset, initially valued at \$290 million, was also established.

Year-to-date Personal Lines Results

Personal Lines operating income for the nine months of 2007 was \$252 million, a decrease of \$100 million compared to the same period in 2006, primarily due to \$55 million of less favorable reserve development and \$31 million of transaction and integration costs related to the 21st Century acquisition. The loss ratio for accident year 2007 recorded for the first nine months of 2007 increased by 0.36 points compared to the same period in 2006 for accident year 2006. Favorable prior year development reduced incurred losses by \$29 million and \$84 million for the nine months ended September 30, 2007 and 2006, respectively, resulting in a 1.57 point increase in the loss ratio for the first nine months of 2007 compared to the same period of 2006. The 0.9 point increase in the expense ratio was primarily due to the transaction and integration costs associated with the 21st Century acquisition.

Net premiums written increased 4.1 percent for the first nine months of 2007 compared to the same period in 2006 due to continued growth in the Private Client Group and an increase in the aigdirect.com business, partially offset by a reduction in the Agency Auto segment.

Quarterly Mortgage Guaranty Results

Mortgage Guaranty reported an operating loss of \$216 million for the three months ended September 30, 2007 compared to operating income of \$85 million in the same period in 2006 due to the unfavorable loss experience in both the domestic first and second-lien businesses as continued deterioration in the U.S. housing market increased the frequency and severity of claims. The second-lien product was the major contributor to the operating loss, comprising \$206 million of the third quarter 2007 operating loss. UGC's consolidated loss ratio for the third quarter of 2007 was 197.0 compared to a loss ratio of 47.5 in the same period of 2006. Prior year development reduced incurred losses by \$27 million and \$22 million for the three months ended September 30, 2007 and 2006, respectively, decreasing the 2007 loss ratio by 0.4 points relative to the 2006 loss ratio.

Net premiums written increased 31 percent in the three months ended September 30, 2007 compared to the same period in 2006 as strong growth in the European markets, Canada and Australia led to higher International premiums of \$55 million. The increased use of mortgage insurance for credit enhancement, along with improved persistency, led to higher domestic first-lien premiums of \$32 million, an increase of 27 percent compared to the 2006 quarter. Although UGC discontinued accepting new business for the poorly performing third-party originated second-lien product in the fourth quarter of 2006, UGC will continue to receive renewal premiums on the existing portfolio for the life of the loans, estimated to be three to five years. The expense ratio of 16.8 points in the three months ended September 30, 2007 declined from 22.5 points in the same period of 2006 as premium growth offset the effect of increased expenses related to UGC's international expansion and the employment of additional operational resources in the second-lien business.

UGC's domestic mortgage risk in force totaled \$28.2 billion as of September 30, 2007 and the 60-day delinquency ratio was 3.0 percent (based on number of policies, consistent with mortgage industry practice) compared to domestic mortgage risk in force of \$24.2 billion and a delinquency ratio of 2.0 percent at September 30, 2006. Approximately 81 percent of the domestic mortgage risk is secured by first-lien, owner-occupied properties.

Year-to-date Mortgage Guaranty Results

Mortgage Guaranty's operating loss for the first nine months of 2007 was \$289 million compared to operating income of

\$301 million for the same period in 2006 as the deteriorating U.S. residential housing market adversely affected losses incurred for both the domestic first-lien and second-lien businesses. Domestic first and second-lien losses incurred increased 254 percent and 611 percent respectively, compared to the first nine months of 2006, resulting in year-to-date loss ratios of 87.6 and 343.1, respectively, for the first nine months of 2007. Increases in domestic losses incurred resulted in a consolidated UGC loss ratio of 140.9 for the first nine months of 2007 compared to 37.4 for the same period in 2006. Prior year development had minimal effect on incurred losses in the first nine months of 2007 compared to a reduction of \$86 million for the same period in 2006, which accounted for 16 points of the increase in the loss ratio.

Net premiums written increased 35 percent in the nine months ended September 30, 2007 compared to the same period in 2006 primarily due to growth in the International markets, accounting for 22 percent of the increase in net written premiums. In addition the increased use of mortgage insurance for credit enhancement as well as better persistency resulted in an increase in domestic first-lien premiums. The expense ratio for the first nine months of 2007 was 20.2, down from 23.3 in the same period in 2006 as premium growth offset the effect of increased expenses related to UGC's international expansion.

Quarterly Foreign General Insurance Results

Foreign General's operating income decreased in the three months ended September 30, 2007 compared to the same period in 2006 due to decreases in statutory underwriting profit, partially offset by increases in net investment income and the effect of changes in the currency exchange rates of the Euro and the British Pound. Statutory underwriting profit decreased due to lower favorable loss development on prior accident years of \$49 million, additional losses from the June 2007 U.K. floods of \$23 million and an increase over the 2006 quarter in severe but non-catastrophic losses of \$20 million.

Net premiums written increased 14 percent (11 percent in original currency) for the three months ended September 30, 2007 compared to the same period in 2006, reflecting growth in commercial and consumer lines driven by new business from both established and new distribution channels, including Central Insurance Co. Ltd. in Taiwan. Net premiums written for commercial lines in the U.K. and Europe increased due to new business and decreases in the use of reinsurance, partially offset by declines in premium rates. Growth in consumer lines in Latin America, Asia and Europe also contributed to the increase. Net premiums written also increased by one percent compared to the same period in 2006 due to decreases in the use of reinsurance. Net premiums for the Lloyd's syndicate Ascot and Aviation declined due to rate decreases resulting from increased market competition.

The loss ratio increased 4.0 points for the three months ended September 30, 2007 compared to the same period in 2006. The 2007 loss ratio increased a total of 3.3 points due to the losses described above. The lower favorable loss development on prior accident years was primarily due to increases in the allowance for reinsurance. Also, the loss ratio increased due to higher loss frequency for personal accident businesses in Japan.

The expense ratio increased 2.1 points for the three months ended September 30, 2007 compared to the same period in 2006 due to higher operating expenses relating to new business initiatives. In addition, the 2007 expense ratio increased 1.2 points due to accelerated amortization of advertising costs, the cost of realigning certain legal entities through which Foreign General operates and the increased significance of consumer lines of business, which have higher acquisition costs. AIG expects the expense ratio to increase in the fourth quarter of 2007 as a result of expected decreases in net premiums written due to continuing rate pressures in the commercial lines business, the underlying seasonality of renewals and the growth of the consumer lines of business.

Net investment income increased for the three months ended September 30, 2007 compared to the same period of 2006 reflecting higher interest rates and strong cash flows, partially offset by reductions in mutual fund income. Mutual fund income was \$61 million lower than the same quarter in 2006 reflecting a weaker performance in the equity markets and income of \$22 million from an out of period UCITS adjustment in the year ago quarter.

Year-to-date Foreign General Insurance Results

Foreign General's operating income decreased in the first nine months of 2007 compared to the same period in 2006, due primarily to decreases in statutory underwriting profits. Statutory underwriting profit decreased due to lower favorable loss development on prior accident years of \$101 million, losses from the June 2007 U.K. floods of \$91 million, and an increase in severe but non-catastrophic losses of \$48 million compared to the same period in 2006. Net investment income in the nine months ended September 30, 2006 included income of \$406 million from out of period UCITS adjustments.

Net premiums written increased 15 percent (11 percent in original currency) for the nine months ended September 30, 2007 compared to the same period in 2006, reflecting growth in commercial and consumer lines driven by new business from both established and new distribution channels.

The loss ratio increased 3.0 points for the nine months ended September 30, 2007 compared to the same period in 2006. The 2007 loss ratio increased 2.6 points, due to the losses described above.

The expense ratio increased 0.7 points for the nine months ended September 30, 2007 compared to the same period in 2006 due to higher commission costs and higher operating expenses resulting from new business initiatives and the costs to realign certain legal entities.

Net investment income was essentially unchanged in the nine months ended September 30, 2007 compared to the same period of 2006 as the 2006 period included the out of period UCITS adjustments, which more than offset increased investment income of \$402 million reflecting higher interest rates, strong cash flows and increased partnership and mutual fund income. Partnership income was \$97 million higher than prior year due to strong infrastructure fund performance in Africa, Europe and Latin America. Mutual fund income was \$117 million higher than the same period of the prior year reflecting strong performance in the equity markets for the nine month period.

Reserve for Losses and Loss Expenses

The following table presents the components of the General Insurance gross reserve for losses and loss expenses (loss reserves) as of September 30, 2007 and December 31, 2006 by major line of business on a statutory Annual Statement basis^(a):

<i>(in millions)</i>	September 30, 2007	December 31, 2006 ^(b)
Other liability occurrence	\$20,296	\$19,327
Workers compensation	14,994	13,612
Other liability claims made	13,546	12,513
Auto liability	6,208	6,070
International	6,173	6,006
Property	4,431	5,499
Reinsurance	3,371	2,979
Medical malpractice	2,349	2,347
Products liability	2,181	2,239
Accident and health	1,901	1,693
Commercial multiple peril	1,744	1,651
Aircraft	1,715	1,629
Fidelity/surety	1,248	1,148
Other	3,451	3,286
Total	\$83,608	\$79,999

^(a) Presented by lines of business pursuant to statutory reporting requirements as prescribed by the National Association of Insurance Commissioners.

^(b) Allocations among various lines were revised from the previous presentation.

AIG's gross reserve for losses and loss expenses represents the accumulation of estimates of ultimate losses, including provisions for losses incurred but not reported (IBNR) and loss expenses. The methods used to determine loss reserve estimates and to establish the resulting reserves are continually reviewed and updated by management. Any adjustments resulting therefrom are reflected in operating income currently. Because loss reserve estimates are subject to the outcome of future events, changes in estimates are unavoidable given that loss trends vary and time is often required for changes in trends to be recognized and

confirmed. Reserve changes that increase previous estimates of ultimate cost are referred to as unfavorable or adverse development or reserve strengthening. Reserve changes that decrease previous estimates of ultimate cost are referred to as favorable development.

Estimates for mortgage guaranty insurance losses and loss adjustment expense reserves are based on notices of mortgage loan delinquencies and estimates of delinquencies that have been incurred but have not been reported by loan servicers, based upon historical reporting trends. UGC establishes reserves using a percentage of the contractual liability (for each delinquent loan reported) that is based upon past experience regarding certain loan factors such as age of the delinquency, dollar amount of the loan and type of mortgage loan. Because mortgage delinquencies and claims payments are affected primarily by macroeconomic events, such as changes in home price appreciation, interest rates and unemployment, the determination of the ultimate loss cost requires a high degree of judgment. AIG believes it has provided appropriate reserves for currently delinquent loans. Consistent with industry practice, AIG does not establish a reserve for loans that are not currently delinquent, but that may become delinquent in future periods.

At September 30, 2007, General Insurance net loss reserves were \$66.94 billion, an increase of \$4.31 billion from the prior year-end. The net loss reserves represent loss reserves reduced by reinsurance recoverables, net of an allowance for unrecoverable reinsurance and applicable discount for future investment income.

The following table classifies the components of the General Insurance net loss reserves by business unit:

<i>(in millions)</i>	September 30, 2007	December 31, 2006
DBG ^(a)	\$46,511	\$44,119
Transatlantic	6,669	6,207
Personal Lines ^(b)	2,313	2,440
Mortgage Guaranty	1,016	460
Foreign General ^(c)	10,428	9,404
Total Net Loss Reserve	\$66,937	\$62,630

^(a) At September 30, 2007 and December 31, 2006, respectively, DBG loss reserves include approximately \$3.16 billion and \$3.33 billion (\$3.40 billion and \$3.66 billion, respectively, before discount), related to business written by DBG but ceded to American International Reinsurance Company Limited (AIRCO) and reported in AIRCO's statutory filings. DBG loss reserves also include approximately \$573 million and \$535 million related to business included in American International Underwriters Overseas, Ltd.'s (AIUO) statutory filings at September 30, 2007 and December 31, 2006, respectively.

^(b) At September 30, 2007 and December 31, 2006, respectively, Personal Lines loss reserves include \$844 million and \$861 million related to business ceded to DBG and reported in DBG's statutory filings.

^(c) At September 30, 2007 and December 31, 2006, respectively, Foreign General loss reserves include approximately \$3.05 billion and \$2.75 billion related to business reported in DBG's statutory filings.

The DBG net loss reserve of \$46.5 billion is comprised principally of the business of AIG subsidiaries participating in

the American Home Assurance Company (American Home)/ National Union Fire Insurance Company of Pittsburgh, Pa. (National Union) pool (10 companies) and the surplus lines pool (Lexington, AIG Excess Liability Insurance Company and Landmark Insurance Company).

DBG cedes a quota share percentage of its other liability occurrence and products liability occurrence business to AIRCO. The quota share percentage ceded was 15 percent for the nine months ended September 30, 2007 and 20 percent for the year 2006 and covered all business written in these years for these lines by participants in the American Home/National Union pool. AIRCO's loss reserves relating to these quota share cessions from DBG are recorded on a discounted basis. As of September 30, 2007, AIRCO carried a discount of approximately \$240 million applicable to the \$3.40 billion in undiscounted reserves it assumed from the American Home/National Union pool via this quota share cession. AIRCO also carries approximately \$523 million in net loss reserves relating to Foreign General insurance business. These reserves are carried on an undiscounted basis.

The companies participating in the American Home/ National Union pool have maintained a participation in the business written by AIU for decades. As of September 30, 2007, these AIU reserves carried by participants in the American Home/National Union pool totaled approximately \$3.05 billion. The remaining Foreign General reserves are carried by AIUO, AIRCO, and other smaller AIG subsidiaries domiciled outside the United States. Statutory filings in the U.S. by AIG companies reflect all the business written by U.S. domiciled entities only, and therefore exclude business written by AIUO, AIRCO, and all other internationally domiciled subsidiaries. The total reserves carried at September 30, 2007 by AIUO and AIRCO were approximately \$5.04 billion and \$3.69 billion, respectively. AIRCO's \$3.69 billion in total general insurance reserves consist of approximately \$3.16 billion from business assumed from the American Home/National Union pool and

an additional \$523 million relating to Foreign General Insurance business.

Discounting of Reserves

At September 30, 2007, AIG's overall General Insurance net loss reserves reflect a loss reserve discount of \$2.43 billion, including tabular and non-tabular calculations. The tabular workers compensation discount is calculated using a 3.5 percent interest rate and the 1979-81 Decennial Mortality Table. The non-tabular workers compensation discount is calculated separately for companies domiciled in New York and Pennsylvania, and follows the statutory regulations for each state. For New York companies, the discount is based on a five percent interest rate and the companies' own payout patterns. For Pennsylvania companies, the statute has specified discount factors for accident years 2001 and prior, which are based on a six percent interest rate and an industry payout pattern. For accident years 2002 and subsequent, the discount is based on the yield of U.S. Treasury securities ranging from one to twenty years and the company's own payout pattern, with the future expected payment for each year using the interest rate associated with the corresponding Treasury security yield for that time period. The discount is comprised of the following: \$726 million – tabular discount for workers compensation in DBG; \$1.46 billion – non-tabular discount for workers compensation in DBG; and, \$240 million – non-tabular discount for other liability occurrence and products liability occurrence in AIRCO. The total undiscounted workers compensation loss reserve carried by DBG is approximately \$12.7 billion as of September 30, 2007. The other liability occurrence and products liability occurrence business in AIRCO that is assumed from DBG is discounted based on the yield of U.S. Treasury securities ranging from one to twenty years and the DBG payout pattern for this business. The undiscounted reserves assumed by AIRCO from DBG totaled approximately \$3.40 billion at September 30, 2007.

Quarterly Reserving Process

Management believes that the General Insurance net loss reserves are adequate to cover General Insurance net losses and loss expenses as of September 30, 2007. While AIG regularly reviews the adequacy of established loss reserves, there can be no assurance that AIG's ultimate loss reserves will not develop adversely and materially exceed AIG's loss reserves as of September 30, 2007. In the opinion of management, such adverse development and resulting increase in reserves is not likely to have a material adverse effect on AIG's consolidated financial condition, although it could have a material adverse effect on AIG's consolidated results of operations for an individual reporting period.

The following table presents the reconciliation of net loss reserves:

<i>(in millions)</i>	Three Months Ended September 30,		Nine Months Ended September 30,	
	2007	2006	2007	2006
Net reserve for losses and loss expenses at beginning of period	\$65,197	\$60,214	\$62,630	\$57,476
Foreign exchange effect	224	34	438	521
Acquisition*	-	55	-	55
Losses and loss expenses incurred:				
Current year	7,636	6,957	22,185	20,710
Prior years, other than accretion of discount	(337)	(41)	(605)	(255)
Prior years, accretion of discount	92	101	220	303
Losses and loss expenses incurred	7,391	7,017	21,800	20,758
Losses and loss expenses paid	5,875	5,807	17,931	17,297
Net reserve for losses and loss expenses at end of period	\$66,937	\$61,513	\$66,937	\$61,513

* Reflects the opening balance with respect to the acquisition of the Central Insurance Co., Ltd. in the third quarter of 2006

The following tables summarize development, (favorable) or unfavorable, of incurred losses and loss expenses for prior years (other than accretion of discount):

<i>(in millions)</i>	Three Months Ended September 30,		Nine Months Ended September 30,	
	2007	2006	2007	2006
Prior Accident Year

Prior years, other than accretion of discount	\$ (605)	\$ (255)

In determining the quarterly loss development from prior accident years, AIG conducts analyses to determine the change in estimated ultimate loss for each accident year for each profit center. For example, if loss emergence for a profit center is different than expected for certain accident years, the actuaries examine the indicated effect such emergence would have on the reserves of that profit center. In some cases, the higher or lower than expected emergence may result in no clear change in the ultimate loss estimate for the accident years in question, and no adjustment would be made to the profit center's reserves for prior accident years. In other cases, the higher or lower than expected emergence may result in a larger change, either favorable or unfavorable, than the difference between the actual and expected loss emergence. Such additional analyses were conducted for each profit center, as appropriate, in the third quarter of 2007 to determine the loss development from prior accident years for the third quarter of 2007. As part of its quarterly reserving process, AIG also considers notices of claims received with respect to emerging issues, such as those related to the U.S. mortgage and housing market. Also as part of the quarterly reserving process, beginning with the second quarter of 2007, AIG updated its analysis of the loss reserve discount pertaining to workers compensation reserves. Historically, this review was only performed at year end. As a result of the

updated analysis in the third quarter of 2007, AIG increased its loss reserve discount for workers compensation by approximately \$70 million in the third quarter of 2007, bringing the total increase in loss reserve discount for workers compensation for the first nine months of 2007 to approximately \$255 million.

2007 Net Loss Development

In the three months ended September 30, 2007, net loss development from prior accident years was favorable by approximately \$337 million, including approximately \$11 million of adverse development from the general reinsurance operations of Transatlantic; and excluding approximately \$92 million from accretion of loss reserve discount. Excluding Transatlantic, as well as accretion of discount, net loss development in the three months ended September 30, 2007 from prior accident years was favorable by approximately \$348 million. The overall favorable development of \$337 million consisted of approximately \$764 million of favorable development from accident years 2004 through 2006, partially offset by approximately \$299 million of adverse development from accident years 2002 and prior and \$128 million of adverse development from accident year 2003. For the three months ended September 30, 2007, most classes of AIG's business continued to experience favorable development for accident years 2004 through 2006. The majority of the adverse development from accident years 2002 and prior was related to developments from excess casualty business within DBG and from Transatlantic. The adverse development from accident year 2003 was primarily related to developments from excess casualty business within DBG, which represented less than a 1 percent change in the ultimate loss estimate for accident year 2003. In the three months ended September 30, 2007, AIG completed an update of its ground up projections of claims exposure for the D&O and related management liability classes of business. AIG utilizes the ultimate loss estimates resulting from these claims projections as a benchmark in determining the appropriate loss reserves for this business. As a result of the updated claims projections, in addition to the quarterly review of reported loss experience as of September 30, 2007 and other relevant factors, AIG recognized approximately \$150 million in favorable loss development from prior accident years for the D&O and related management liability classes of business in the three months ended September 30, 2007. This consisted of approximately \$200 million of favorable development from accident years 2004 through 2006, partially offset by approximately \$50 million of adverse development from accident years 2002 and prior. The overall favorable development of \$337 million reflects this \$150 million from the D&O and related management liability classes of business within DBG.

In the first nine months of 2007, net loss development from prior accident years was favorable by approximately \$605 million, including approximately \$47 million of adverse development from the general reinsurance operations of Transatlantic; and excluding approximately \$220 million from accretion of loss reserve discount. Excluding Transatlantic, as well as accretion of discount, net loss development in the first nine months of 2007 from prior accident years was favorable by approximately \$652 million. The overall favorable development of \$605 million consisted of approximately \$1.52 billion of favorable development from accident years 2004 through 2006, partially offset by approximately \$771 million of adverse development from accident years 2002 and prior and \$143 million of adverse development from accident year 2003. For the first nine months of 2007, most classes of AIG's business continued to experience favorable development for accident years 2004 through 2006. The majority of the adverse development from accident years 2002 and prior was related to development from excess casualty business within DBG and from Transatlantic. The adverse development from accident year 2003 was primarily related to developments from excess casualty business within DBG. The overall favorable development of \$605 million includes approximately \$200 million pertaining to the D&O and related management liability classes of business within DBG, consisting of approximately \$235 million of favorable development from accident years 2004 through 2006, partially offset by approximately \$35 million of adverse development from accident years 2002 and prior.

2006 Net Loss Development

In the three months ended September 30, 2006, net loss development from prior accident years was favorable by approximately \$41 million, including approximately \$43 million of adverse development pertaining to the major hurricanes in 2005 and 2004 and \$24 million of adverse development pertaining to the general reinsurance operations of Transatlantic. Excluding catastrophes and Transatlantic, as well as accretion of discount of approximately \$101 million, net loss development from prior accident years in the three months ended September 30, 2006 was favorable by approximately \$108 million. This overall favorable development of \$41 million consisted of approximately \$511 million of favorable development from accident years 2003 through 2005, partially offset by approximately \$470 million of adverse development from accident years 2002 and prior. For the three months ended September 30, 2006, most classes of business throughout AIG experienced favorable development for accident years 2003 through 2005. The adverse development from accident years 2002 and prior reflected developments from excess casualty, workers compensation, and post-1986 environmental liability classes of business, all within DBG, and from Transatlantic.

In the first nine months of 2006, net loss development from prior accident years was favorable by approximately \$255 million, including approximately \$80 million of adverse development pertaining to the major hurricanes in 2004 and 2005 and \$89 million of adverse development from the general reinsurance operations of Transatlantic, and excluding approximately \$303 million from accretion of loss reserve discount. Excluding catastrophes and Transatlantic, as well as accretion of discount, net loss development from prior accident years in the first nine months of 2006 was favorable by approximately \$424 million. The overall favorable development of \$255 million consisted of approximately \$1.29 billion of favorable development from accident years 2003 through 2005, partially offset by approximately \$1.03 billion of adverse development from accident years 2002 and prior. For the first nine months of 2006, most classes of business throughout AIG experienced favorable development for accident years 2003 through 2005. The adverse development from accident years 2002 and prior reflected developments from excess casualty, workers compensation, excess workers compensation, and post-1986 environmental liability classes of business, all within DBG, and from Transatlantic.

As a result of the continued favorable experience for accident years 2003 through 2005, the expected loss ratios for accident year 2006 were improved for a number of casualty classes of business in the three months ended

September 30, 2006. For those classes of business where the expected loss ratio for accident year 2006 was adjusted in the three months ended September 30, 2006, the revised loss ratio was generally applied to the cumulative 2006 net earned premium for the class. The overall effect on the results for the three months ended September 30, 2006, was approximately a \$100 million improvement. This amount represents the application of the revised expected loss ratios to the net premiums earned reported for the first six months of 2006.

Asbestos and Environmental Reserves

The estimation of loss reserves relating to asbestos and environmental claims on insurance policies written many years ago is subject to greater uncertainty than other types of claims due to inconsistent court decisions as well as judicial interpretations and legislative actions that in some cases have tended to broaden coverage beyond the original intent of such policies and in others have expanded theories of liability.

As described more fully in the 2006 Annual Report on Form 10-K, AIG's reserves relating to asbestos and environmental claims reflect a comprehensive ground up analysis. In the first nine months of 2007, one large asbestos settlement, as well as a reduction in estimated reinsurance recoverable, resulted in a minor amount of adverse incurred loss development, which was partially offset, on a net basis, by the favorable \$50 million effect of several other settlements.

A summary of reserve activity, including estimates for applicable IBNR, relating to asbestos and environmental claims separately and combined:

<i>(in millions)</i>	Nine Months Ended September 30,			
	2007		2006	
	Gross	Net	Gross	Net
Asbestos:				
Reserve for losses and loss expenses at beginning of year	\$4,464	\$1,889	\$4,441	\$1,840
Losses and loss expenses incurred*	19	7	2	7
Losses and loss expenses paid*	(614)	(363)	(404)	(151)
Reserve for losses and loss expenses at end of period	\$3,869	\$1,533	\$4,039	\$1,696
Environmental:				
Reserve for losses and loss expenses at beginning of year	\$ 588	\$ 290	\$ 926	\$ 410
Losses and loss expenses incurred*	2	(1)	(3)	-
Losses and loss expenses paid*	(89)	(46)	(80)	(43)
Reserve for losses and loss expenses at end of period	\$ 501	\$ 243	\$ 843	\$ 367
Combined:				
Reserve for losses and loss expenses at beginning of year	\$5,052	\$2,179	\$5,367	\$2,250
Losses and loss expenses incurred*	21	6	(1)	7
Losses and loss expenses paid*	(703)	(409)	(484)	(194)
Reserve for losses and loss expenses at end of period	\$4,370	\$1,776	\$4,882	\$2,063

* All amounts pertain to policies underwritten in prior years, primarily to policies issued in 1984 and prior.

The gross and net IBNR included in the reserve for losses and loss expenses, relating to asbestos and environmental claims separately and combined, were estimated as follows:

<i>(in millions)</i>	Nine Months Ended September 30,			
	2007		2006	
	Gross	Net	Gross	Net
Asbestos	\$2,743	\$1,261	\$2,863	\$1,312
Environmental	289	127	567	242
Combined	\$3,032	\$1,388	\$3,430	\$1,554

A summary of asbestos and environmental claims count activity was as follows:

	Nine Months Ended September 30,					
	2007			2006		
	Asbestos	Environmental	Combined	Asbestos	Environmental	Combined
Claims at beginning of year	6,878	9,442	16,320	7,293	9,873	17,166
Claims during year:						
Opened	321	850	1,171	538	1,032	1,570
Settled	(113)	(101)	(214)	(126)	(120)	(246)
Dismissed or otherwise resolved	(745)	(2,138)	(2,883)	(678)	(1,295)	(1,973)
Claims at end of period	6,341	8,053	14,394	7,027	9,490	16,517

Survival Ratios – Asbestos and Environmental

The table below presents AIG's survival ratios for asbestos and environmental claims at September 30, 2007 and 2006. The survival ratio is derived by dividing the current carried loss reserve by the average payments for the three most recent calendar years for these claims. Therefore, the survival ratio is a simplistic measure estimating the number of years it would be before the current ending loss reserves for these claims would be paid off using recent year average payments. The September 30, 2007 survival ratio is lower than the ratio at September 30, 2006 because the more recent periods included in the rolling average reflect higher claims payments. In addition, AIG's survival ratio for asbestos claims was negatively affected by the favorable settlements described above, which reduced gross and net asbestos survival ratios at September 30, 2007 by approximately 1.4 years and 3.2 years, respectively. Many factors, such as aggressive settlement procedures, mix of business and level of coverage provided, have a significant effect on the amount of asbestos and environmental reserves and payments and the resultant survival ratio. Thus, caution should be exercised in attempting to determine reserve adequacy for these claims based simply on this survival ratio.

AIG's survival ratios for asbestos and environmental claims, separately and combined were based upon a three-year average payment. These ratios at September 30, 2007 and 2006 were as follows:

<i>(number of years)</i>	Gross	Net
2007		
Survival ratios:		
Asbestos	7.6	6.4
Environmental	4.8	3.8
Combined	7.1	5.8
2006		
Survival ratios:		
Asbestos	11.9	13.6
Environmental	6.5	5.3
Combined	10.4	10.7

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services subsidiaries offer a wide range of insurance and retirement savings products both domestically and abroad.

Overseas, AIG's Life Insurance & Retirement Services operations include insurance and investment-oriented products such as whole and term life, investment linked, universal life and endowments, personal accident and health products, group products including pension, life and health, and fixed and variable annuities.

Domestically, AIG's Life Insurance & Retirement Services operations offer a broad range of protection products, such as life insurance and group life and health products, including disability income products and payout annuities, which include single premium immediate annuities, structured settlements and terminal funding annuities. Home service operations include an array of life insurance, accident and health and annuity products sold primarily through career agents. Retirement services include group retirement products, individual fixed and variable annuities sold

through banks, broker-dealers and exclusive sales representatives, and annuity runoff operations, which include previously acquired “closed blocks” and other fixed and variable annuities largely sold through distribution relationships that have been discontinued.

AIG’s Life Insurance & Retirement Services subsidiaries report their operations through the following major internal reporting units and business units:

Foreign Life Insurance & Retirement Services

Japan and Other

- American Life Insurance Company (ALICO)
- AIG Star Life Insurance Co., Ltd. (AIG Star Life)
- AIG Edison Life Insurance Company (AIG Edison Life)

Asia

- American International Assurance Company, Limited, together with American International Assurance Company (Bermuda) Limited (AIA)
- Nan Shan Life Insurance Company, Ltd. (Nan Shan)

- American International Reinsurance Company Limited (AIRCO)
- The Philippine American Life and General Insurance Company (Philamlife)

Domestic Life Insurance

- American General Life Insurance Company (AIG American General)
- The United States Life Insurance Company in the City of New York (USLIFE)
- American General Life and Accident Insurance Company (AGLA)

Domestic Retirement Services

- The Variable Annuity Life Insurance Company (VALIC)
- AIG Annuity Insurance Company (AIG Annuity)
- AIG SunAmerica Life Assurance Company (AIG SunAmerica)

* Includes the effect of an out of period UCITS adjustment in 2006. For the three and nine-month periods ended September 30, 2006, the effect was increases of \$24 million and \$240 million, respectively, in net investment income and \$24 million and \$169 million, respectively, in operating income.

The following table presents the Insurance In force for Life Insurance & Retirement Services:

<i>(in millions)</i>	September 30, 2007	December 31, 2006
Foreign	\$1,237,507	\$1,162,699
Domestic	964,515	907,901
Total	\$2,202,022	\$2,070,600

Volatility in the securities markets had a negative effect on Life Insurance & Retirement Services results for the three months ended September 30, 2007, and resulted in lower investment income from partnerships and UCITS and higher net realized capital losses for the quarter compared to last year. This negative effect was partially offset by strong life insurance production in Asia, improved universal life and variable universal life sales in the Domestic Life operations, and improved deposit flows for group retirement products and individual variable annuities in the Domestic Retirement Services business. The fixed annuity business environment remained challenging both domestically and in Japan reflecting a continuation of trends seen throughout the year. Investment income for the three months ended September 30, 2007 reflects a decline of \$163 million in income from

partnerships, UCITS, mutual funds and hedge funds, particularly in the Domestic Retirement Services business, and \$74 million of trading account losses in the U.K. related to variable annuity products. In addition, the decline in Japanese equity markets resulted in higher incurred benefits of \$36 million on a closed block of business having guaranteed benefits. The nine-month period ended September 30, 2007 included an increase of \$176 million in income from partnerships, UCITS, mutual funds and hedge funds and \$88 million of trading account losses in the U.K. associated with the variable annuity products.

Life Insurance & Retirement Services total revenues for the three and nine-month periods ended September 30, 2007 reflect growth in premiums and other considerations and higher realized capital losses. Net investment income grew for

the nine months ended September 30, 2007 but declined for three months then ended compared to the same period in 2006. Net realized capital losses reduced revenues by \$491 million and \$1.0 billion in the three and nine-month periods ended September 30, 2007, respectively, while net realized capital losses decreased revenues by \$176 million and \$117 million in the three and nine-month periods ended September 30, 2006, respectively. Net realized capital losses in 2007 were primarily related to the other-than-temporary decline in value of securities that AIG no longer intends to hold to recovery. Net investment income includes policyholder investment income and trading gains and losses (collectively, policyholder trading gains), which are offset by an equal charge to incurred policy losses and benefits expense, as these investment returns accrue to the benefit of the policyholder. Policyholder trading gains generally reflect the trend in equity markets. Policyholder trading gains were \$150 million and \$2 billion for the three and nine-month periods ended September 30, 2007, respectively, compared to \$485 million and \$969 million for the three and nine-month periods ended September 30, 2006, respectively. Net investment income for the three and nine-month periods ended September 30, 2006 included an increase of \$24 million and \$240 million, respectively, for an out of period adjustment related to the accounting for UCITS.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers have managed their businesses, commencing in the first quarter of 2007, revenues and operating income related to foreign investment contracts, which were historically reported as a

component of the Asset Management segment, are now being reported as part of Foreign Life Insurance & Retirement Services. Prior period amounts have been revised to conform to the current presentation.

Operating income for the first nine months of 2007 includes the adverse effect of \$62 million related to SOP 05-1, a \$62 million charge for additional benefits expense and a \$50 million charge related to balance sheet reconciliation remediation activities. SOP 05-1 generally requires DAC related to group contracts to be amortized over a shorter duration than in prior periods and also requires that DAC be expensed at the time a policy is terminated. The effect of SOP 05-1 was most significant to the group products line in the Domestic Life operations. The additional benefit expense resulted from a continuing industry-wide review of claims in Japan. In addition, increased charges for DAC related to the conversion of actuarial systems to a common global standard within AIG decreased operating income by \$32 million for both the three and nine-month periods ended September 30, 2007, respectively. Operating income for the three and nine-month periods ended September 30, 2006 included an increase of \$24 million and \$169 million, respectively, for an out of period adjustment related to the accounting for UCITS. Operating income for the three-month period ended September 30, 2007 declined compared to the same period in 2006 due to higher net realized capital losses, lower income from partnerships, UCITS, mutual funds and hedge funds as discussed above, trading account losses in the U.K. and a \$14 million charge related to SOP 05-1.

* Includes the effect of an out of period UCITS adjustment in 2006. For the three and nine-month periods ended September 30, 2006, the effect was an increase of \$22 million and \$237 million, respectively, in net investment income and \$22 million and \$166 million, respectively, in operating income.

Foreign Life Insurance & Retirement Services Results (continued)

AIG transacts business in most major foreign currencies and therefore premiums reported in U.S. dollars vary both by volume and as a result of changes in foreign currency translation rates. The following table summarizes the effect of changes in foreign currency exchange rates on the growth of the Foreign Life Insurance & Retirement Services premiums and other considerations:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2007	2006	2007	2006
Growth in original currency*	7.5%	8.8%	6.8%	7.8%

* Includes the effect of an out of period UCITS adjustment in 2006. For the three-month period ended September 30, 2006, the effect was an increase of \$13 million for both net investment income and operating income.

Total revenues for the three-month period ended September 30, 2007 declined slightly compared to the same period in 2006, primarily due to securities markets volatility which resulted in lower policyholder trading gains and partnership and mutual fund income. Operating income increased for the three months ended September 30, 2007 compared to the same period in 2006 primarily due to net realized capital gains which more than offset the negative effect of securities markets volatility. The volatility in the securities markets reduced partnership and mutual fund revenues by \$89 million, increased incurred policyholder benefits by \$36 million related to a closed block of business with guaranteed benefits and resulted in trading account losses of \$74 million in the U.K. associated with the variable annuity product.

Life insurance premiums and other considerations increased moderately in the three months ended September 30, 2007 compared to the same period in 2006 reflecting a continuing shift to interest sensitive whole life products in Japan. In addition, first year premium sales in Japan declined due to the suspension of increasing term products pending completion of an industry-wide review by the National Tax Authority. Single premium sales of interest sensitive whole life products in Japan and investment linked products in Europe remained strong. Net investment income declined due to lower policyholder trading gains. Both net investment income and operating income for the three months ended September 30, 2006 included out of period income related to UCITS of \$13 million. Life insurance operating income for the three months ended September 30, 2007 was essentially unchanged compared to the same period in 2006 as higher realized capital gains and earnings from growth in new business were offset by the effects of securities market volatility which resulted in a decline in partnership and mutual fund income, and higher incurred benefits of \$36 million on a closed block of business with guaranteed benefits.

Personal accident premiums and other considerations continue to grow at a modest rate. Strong growth in Europe was offset by declines in Japan, which has been adversely

affected by increased competition and market saturation. When compared to the same period in 2006, net investment income increased due to higher invested assets. Operating income declined for the three months ended September 30, 2007 compared to the same period in 2006 due to changes in actuarial estimates, which decreased operating income in 2007 by \$14 million and increased operating income in 2006 by \$29 million.

Group products premiums and other considerations increased for the three months ended September 30, 2007 compared to the same period in 2006 primarily due to rapidly growing credit business in Europe and higher fee income from pension business in Brazil. Net investment income declined over the same period last year as policyholder trading gains were negatively affected by the volatile securities market. Operating income increased compared to the same period in 2006 reflecting higher premium revenues.

Individual fixed annuities premiums and other considerations growth reflects higher surrender charges from U.S. dollar contracts in Japan where a weak yen makes it attractive for certain policyholders to lock in foreign exchange gains in excess of surrender charges. Surrender charges were \$46 million and \$22 million for the three months ended September 30, 2007 and 2006, respectively. Operating income also reflected higher net realized capital gains.

Individual variable annuity deposits declined in Europe due to a change in consumer tax benefits for certain off-shore products, but increased in Japan as the bank distribution base for new products with guarantees is steadily expanding. New on-shore products are being launched in the U.K. to replace declining sales of off-shore products. Net investment income for the three months ended September 30, 2007 declined compared to the same period in 2006 due to lower policyholder trading gains as a result of the volatility in the securities markets. Net investment income in 2007 also included trading account losses of \$74 million, offset partially by higher fees generated from the growth in assets under management compared to the same period in 2006.

* Includes the effect of an out of period UCITS adjustment in 2006. For the nine-month period ended September 30, 2006, the effect was an increase of \$29 million for both net investment income and operating income.

Revenues for the first nine months of 2007 increased compared to the same period in 2006, primarily due to higher premiums and other considerations and net investment income partially offset by lower net realized capital gains. Investment income increased due to growth in assets under management and higher policyholder trading gains partially offset by lower partnership and mutual fund income for the nine months ended September 30, 2007. Operating income decreased in the first nine months of 2007 compared to the same period in 2006 due to lower net realized capital gains, trading account losses of \$88 million in the U.K. associated with the variable annuity products and \$62 million of additional reserve provisions related to the claims review in Japan.

Life insurance premiums and other considerations increased in the first nine months of 2007 compared to the same period in 2006. In Japan, increased fees and policy charges related to interest sensitive whole life and U.S. dollar life insurance products, as well as strong sales of increasing term products earlier in the year, were partially offset by the runoff of the acquired blocks of business in AIG Star Life and AIG Edison Life. In Europe, growth in premiums and other considerations was driven by the growing block of single premium investment-linked products and the positive effect of foreign exchange rates. The growth in net investment income was due to higher partnership income and other yield enhancement income, income from UCITS, higher policyholder trading gains and growth in underlying invested assets. Life insurance operating income declined in the first

nine months of 2007 compared to the same period in 2006 due to lower net realized capital gains.

Personal accident premiums and other considerations grew modestly as strong growth in Europe was offset by slower growth in Japan. Net investment income increased in the first nine months of 2007 compared to the same period in 2006 primarily due to higher invested assets and increased partnership income. Operating income in the first nine months of 2007 was affected by lower realized capital gains, a \$46 million provision related to the Japan claims review, and \$17 million of additional expenses related to the effect of SOP 05-1. The effect of the termination of certain tax-related accident and health products in Japan diminished in the third quarter of 2007 as the renewal cycle of these policies has been completed. Loss ratios remained stable for this business.

Group products premiums and other considerations increased for the first nine months in 2007 compared to the same period in 2006 primarily due to the growing credit business in Europe. Net investment income increased from the first nine months of 2006 primarily due to higher assets under management related to the Brazil pension business. Operating income for the first nine months of 2007 improved over the same period in 2006 primarily due to revenue growth, which was partially offset by a \$16 million adverse effect related to SOP 05-1.

Individual fixed annuity deposits declined in the first nine months of 2007 due to the effect of a weak Yen on sales in Japan as well as the market shift to variable annuity products in Japan. Assets under management however

continued to grow. Individual fixed annuities premiums and other considerations growth reflects a shift to front-end load products and higher surrender charges from U.S. dollar contracts in Japan where a weak yen makes it attractive for certain policyholders to lock in foreign exchange gains in excess of surrender charges. Surrender charges were \$132 million and \$64 million for the nine months ended September 30, 2007 and 2006, respectively. Net investment income increased due to higher average investment yields and growth in assets under management, partially offset by lower partnership income. Operating income declined in 2007 due to realized capital losses in 2007 versus realized capital gains in 2006.

Individual variable annuity deposits declined due to the effect of tax law changes in Europe that reduced tax benefits to policyholders and lower sales in Japan. The fees generated from the growth in assets under management increased premiums and other considerations for the first nine months of 2007 compared to the same period in 2006. Net investment income increased due to higher policyholder trading gains in the first nine months of 2007 compared to the same period in 2006. Operating income declined for the first nine months of 2007 compared to the same period in 2006 primarily due to \$88 million of trading account losses.

* Includes the effect of an out of period UCITS adjustment in 2006. For the three-month period ended September 30, 2006, the effect was an increase of \$9 million for both net investment income and operating income.

Total revenues for the three months ended September 30, 2007 increased from the same period in 2006. Premiums and other considerations growth reflects a continued trend toward investment-oriented products where only a portion of policy charges are reported as premiums. Net investment income increased due to growth in assets under management, higher equity dividends in Taiwan and higher policyholder trading gains. In Taiwan, it is customary for most companies to declare and distribute dividends in the third quarter of the calendar year. Dividend income for Taiwan was \$129 million and \$90 million for the three-month periods ended September 30, 2007 and 2006, respectively. Both net investment income and operating income for the three months ended September 30, 2006 included out of period income related to UCITS of \$9 million. Operating income for the three months ended September 30, 2007 improved over the same period in 2006 primarily due to growth in premiums

and other considerations, higher investment returns and lower net realized capital losses.

Life insurance premiums and other considerations grew modestly in the three months ended September 30, 2007 compared to the same period in 2006, despite strong growth in both first year and single premium business in the quarter. The strong sales growth, principally in Taiwan, Hong Kong, Thailand and Singapore, was primarily from investment-linked products. In Taiwan, the strong sales growth in the third quarter was due to a combination of sales campaigns and anticipation of regulatory changes related to investment-linked products that will be effective in the fourth quarter of 2007. The shift in product mix from traditional life insurance products to investment-oriented products as mentioned above dampens the growth rate of premiums and other considerations. Net investment income increased in the current period compared to the same period in 2006, due

primarily to the growth in the underlying invested assets, higher equity dividends in Taiwan and higher policyholder trading gains. Both net investment income and operating income for the three months ended September 30, 2006 included out of period income related to UCITS of \$9 million. Operating income increased for the three months ended September 30, 2007 compared to the same period in 2006 as a result of growth in revenues and lower net realized capital losses.

Personal accident premiums and other considerations increased primarily due to growth in Korea. Operating earnings reflect the combined effect of premium growth and stable loss ratios and include a benefit of \$4 million resulting from SOP 05-1.

Group products premiums and other considerations grew in the three months ended September 30, 2007 compared to the same period in 2006, reflecting higher pension management fees and growth in Australia. Operating income declined from the prior year due to realized capital losses, primarily related to hedging activities.

Individual fixed annuities total revenues and operating income were lower for the three months ended September 30, 2007 compared to the same period in 2006 resulting from net realized capital losses. New production for the three months ended September 30, 2007 increased compared to the same period in 2006, primarily due to new products in Korea, although market demand is shifting to variable annuities.

* Includes the effect of an out of period UCITS adjustment in 2006. For the nine-month period ended September 30, 2006 the effect was an increase of \$208 million and \$137 million in net investment income and operating income, respectively.

Revenues for the first nine months of 2007 were higher than the same period in 2006, but operating income declined compared to the same period in 2006 due to net realized capital losses in 2007 compared to net realized capital gains in 2006 and the positive effect from out of period adjustments in 2006. Premiums and other considerations increased over the same period in 2006, reflecting a continued trend toward investment-oriented products where only a portion of policy charges are reported as premium. Sales of investment-linked life products have been

particularly strong in Hong Kong, Korea, Singapore, and more recently in Taiwan. Net investment income grew due to higher policyholder trading gains, higher equity dividends in Taiwan of \$41 million and growth in underlying invested assets. Net investment income and operating income for the nine months ended September 30, 2006 included out of period income related to UCITS of \$208 million and \$137 million, respectively. Net realized capital losses in the current period compared to net realized capital gains in the same period in 2006 reduced the growth rate in revenues and

caused the decline in operating income. The net realized capital losses in the current period were driven primarily by the change in fair value of derivatives that do not qualify for hedge accounting treatment under FAS 133.

Life insurance premiums and other considerations were up slightly in the first nine months of 2007 compared to the same period in 2006, benefiting from improved sales in Thailand and the favorable effect of foreign exchange rates, partially offset by the shift in product mix from traditional life insurance products to investment-oriented products as discussed above. Net investment income grew in the current period compared to the same period in 2006, due primarily to higher policyholder trading gains, the growth in the underlying invested assets and higher equity dividends in Taiwan. Operating income decreased in the first nine months of 2007 compared to the same period in 2006, due to net realized capital losses and the positive effect on prior year operating income from the out of period adjustments discussed above. Operating income for the first nine months of 2007 included a \$50 million charge related to balance sheet reconciliation remediation activity.

Personal accident revenues grew for the first nine months of 2007 compared to the same period in 2006 primarily due

to higher premiums and other considerations particularly in Korea and Taiwan. Operating earnings reflect the combined effect of premium growth and stable loss ratios and a \$10 million positive effect related to SOP 05-1.

Group products premiums and other considerations grew in the first nine months of 2007 compared to the same period in 2006 due to higher pension management fees and sales in the first nine months of 2007 compared to the same period in 2006. Operating income declined in the first nine months of 2007 compared to the same period in 2006, primarily due to net realized capital losses resulting from hedging activities and higher incurred policy losses and benefits of \$10 million due to a 2007 out of period reserve charge.

Individual fixed annuities total revenues were unchanged in the first nine months of 2007 compared to the same period in 2006, due primarily to higher investment income, offset by lower premiums and other considerations and realized capital losses in 2007 compared to realized capital gains in 2006. Deposits for the nine months ended September 30, 2007 were flat compared to the same period in 2006 due to increased competition and a market shift to variable life products in Korea.

(a) Premiums and other considerations include structured settlements, single premium immediate annuities and terminal funding annuities.

(b) Primarily represents runoff annuity business sold through discontinued distribution relationships.

Domestic Life Insurance premiums and other considerations increased in the three months ended September 30, 2007 compared to the same period in 2006, primarily due to growth in the life insurance business in force, which includes increased policyholder charges related to interest sensitive whole life product sales, and in payout annuity deposits, reflecting increased sales of single premium immediate annuities and terminal funding annuities. The increase was partially offset by the decline in group life/health premiums and other considerations, primarily due to the exiting of the financial institutions credit life business at the end of 2006, and in home service premiums and other considerations, as the reduction in premiums in force from normal lapses and maturities exceeded sales growth. Domestic Life Insurance operating income decreased in the three months ended September 30, 2007 compared to the same period in 2006.

The decrease was primarily driven by higher net realized capital losses which consisted of both losses related to the sales of securities and an increase in other-than-temporary declines related to the fixed income portfolio and derivative losses. Operating income also included a \$30 million out of period adjustment to increase group annuity reserves for payout annuities in connection with AIG's continuing remediation efforts. These negative effects were partially offset by growth in the life insurance in-force block of business, increased net investment income, continued improvement in profit margins for the home service business and a \$52 million increase primarily related to additional reinsurance recoveries related to Superior National. Offsetting these increases was an \$18 million increase in DAC amortization related to SOP 05-1.

(a) Premiums and other considerations include structured settlements, single premium immediate annuities and terminal funding annuities.

(b) Primarily represents runoff annuity business sold through discontinued distribution relationships.

Domestic Life Insurance premiums and other considerations increased in the first nine months of 2007 compared to the same period in 2006. The increase was primarily due to the growth in life insurance business in force and payout annuity deposits from increased sales of structured settlements and terminal funding annuities, offset by the effect of exiting the financial institutions credit life business at the end of 2006, tightened pricing and underwriting in the group employer lines and the decline in home service premiums and other considerations. Domestic Life Insurance operating income decreased in the first nine months of 2007 compared to the

same period in 2006, primarily due to higher net realized capital losses, offset by an increase in life insurance net investment income from higher partnership income and a positive change from foreign denominated emerging market bonds, higher call and tender income for life insurance and payout annuities operations, a \$52 million decrease in policy benefits associated with the Superior National workers compensation reinsurance program described above and a \$15 million reduction of certain litigation accruals due to favorable developments on the related matters. Life insurance operating income was also adversely affected by higher

mortality in 2007, although mortality was still within normal ranges. The underlying profit margins on payout annuities continue to trail the increase in payout annuity reserves due to interest spread compression from prior period calls. The higher net realized capital losses consisted primarily of an increase in other-than-temporary declines related to the fixed income portfolio and derivative losses. Operating income for the nine-month period ended September 30, 2007 was also adversely affected by a \$30 million out of period adjustment to increase payout annuity reserves related to AIG's continuing remediation efforts and a \$57 million increase in

DAC amortization related to SOP 05-1, \$37 million of which was attributable to group life/health operations. Operating income for the nine-month period ended September 30, 2006 included a \$25 million charge for litigation accruals in group life/health operations. Individual annuities — runoff net investment income and operating income decreased for the nine-month period ended September 30, 2007 compared to the same period in 2006 consistent with the declining insurance reserves partially offset by lower realized capital losses.

The following table reflects periodic Domestic Life Insurance sales by product:

<i>(in millions)</i>	Three Months Ended September 30,		Percentage Increase/ (Decrease)	Nine Months Ended September 30,		Percentage Increase/ (Decrease)
	2007	2006		2007	2006	
Periodic premium sales by product*:						
Universal life	\$52	\$46	13%	\$150	\$289	(48)%
Variable universal life	19	15	27	44	42	5
Term life	53	59	(10)	165	182	(9)
Whole life/other	2	3	(33)	7	9	(22)
Total	\$126	\$123	2%	\$366	\$522	(30)%

* Periodic premium represents premium from new business expected to be collected over a one-year period.

Periodic life insurance sales increased slightly for the three months ended September 30, 2007 compared to the same period in 2006 primarily as a result of the increase in indexed universal life sales and the sale of a large private placement variable universal life case. Periodic life insurance

sales declined for the nine months ended September 30, 2007 compared to the same period in 2006 primarily as a result of the re-pricing of certain universal life and term products and the tightening of underwriting standards during the second half of 2006.

* Primarily represents runoff annuity business sold through discontinued distribution relationships.

Total revenues and operating income for each sub-product group included in Domestic Retirement Services declined for the three months ended September 30, 2007 compared to the same period in 2006, primarily due to increased realized

capital losses and lower net investment income. Net realized capital losses for group retirement products and individual fixed annuities increased due to an increase in other-than-temporary impairments and sales to reposition assets in

certain investment portfolios. For individual variable annuities, net realized capital losses were higher in 2007 compared to 2006, primarily due to changes in the value of certain product guarantees and related hedges associated with living benefit features. Net investment income decreased in group retirement and individual fixed annuities primarily due to lower income from partnerships. For individual variable annuities, net investment income was lower in 2007 compared to 2006 resulting from lower balances in the guaranteed fixed income option due to policyholder elections

and lower partnership income. These declines were partially offset by an overall increase in variable annuity fees resulting from an increase in assets under management. Individual variable annuity fees also increased due to an increased number of contracts with living benefit features. Individual annuities — runoff operating income declined for the three months ended September 30, 2007 compared to the same period in 2006 due to lower net investment income resulting from decreases in the underlying reserves and lower yield enhancement income.

Revenues and operating income for Domestic Retirement Services for the first nine months of 2007 declined compared to the same period in 2006 primarily due to increased realized capital losses, partially offset by higher net investment income in group retirement products and individual fixed annuities, and an overall increase in variable annuity fees resulting from the increase in assets under management and more individual variable annuity contracts with living benefit features. Net realized capital losses for Domestic Retirement Services increased due to higher other-than-temporary impairments and sales to reposition assets in certain investment portfolios for both group retirement products and individual fixed annuities, as well as from changes in the value of certain individual variable annuity product guarantees and related hedges associated with living benefit features. The increases in net investment income in group retirement products and individual fixed annuities resulted from higher partnership and yield enhancement income, while net investment income for individual variable annuities was lower in 2007 primarily due to

policyholders election to shift from the fixed income option to the variable income option. Operating income for group retirement products and individual fixed annuities decreased for the nine months in 2007 driven by the lower revenues and higher expenses, including higher amortization of DAC for both product groups and higher sales inducement costs for individual fixed annuities. DAC amortization increases for group retirement products were related to the increase in surrenders and policy changes adding guaranteed minimum withdrawal benefit riders to existing contracts. DAC amortization and sales inducement cost increases for individual fixed annuities were related to increased surrenders and an approximately \$32 million adjustment reflecting certain changes in actuarial estimates from the conversion to a new DAC system, as well as unlocking future assumptions and experience updates.

Individual annuities — runoff operating income increased in the first nine months of 2007 over the same period of 2006 largely due to lower realized capital losses.

Domestic Retirement Services Supplemental Data

The following table presents deposits*:

(in millions)	Three Months Ended September 30,		Nine Months Ended September 30,	
	2007	2006	2007	2006
Group retirement products:				
Annuities	\$1,533	\$1,335	\$ 4,414	\$ 4,083
Mutual funds	501	284	1,296	1,085
Individual fixed annuities	993	1,035	3,857	3,770
Individual variable annuities	1,181	1,059	3,393	3,234
Individual fixed annuities – runoff	13	13	40	42
Total	\$4,221	\$3,726	\$13,000	\$12,214

* Excludes internal replacements.

Domestic Retirement Services deposits increased for the three months ended September 30, 2007 compared to the same period in 2006. Group retirement deposits increased 26 percent in the three months ended September 30, 2007 compared to the same period in 2006 as a result of an increase in both group annuity deposits and group mutual funds. Over time, AIG expects that group mutual fund sales will result in a gradual reduction in overall profit margins in this business due to the growth in the lower-margin mutual fund products relative to the annuity products. Individual fixed annuity deposits decreased slightly for the three months ended September 30, 2007 compared to the same period in 2006 as a result of increased competition from bank deposit products and money market funds offering competitive short-term rates in the current yield curve environment. Individual variable annuity deposits increased 12 percent for the three months ended September 30, 2007 compared to the same period in 2006.

Individual fixed annuity surrenders increased 19 percent in the three months ended September 30, 2007 over the same period in 2006 due to policies coming out of their surrender charge periods and increased competition from banks. AIG expects this trend to continue into 2008 as a significant amount of business comes out of its surrender charge period. Individual fixed annuity net flows for the three months ended September 30, 2007 declined compared to the same period in 2006, reflecting the higher surrenders discussed above.

Domestic Retirement Services deposits increased for the first nine months of 2007 compared to the same period in 2006. The increase primarily reflects higher deposits from group retirement products, individual fixed annuities and individual variable annuities. Group retirement deposits increased 10 percent in the first nine months of 2007 compared to the same period in 2006 as a result of an increase in both group variable annuity and group mutual funds deposits, partially offset by slightly lower deposits in group fixed annuities. Although individual fixed annuity sales continued to face increased competition from bank

deposit products and money market funds offering very competitive short-term rates in the current yield curve environment, individual fixed annuity deposits increased 2 percent for the nine months ended September 30, 2007 compared to the same period in 2006. Individual variable annuity deposits increased 5 percent in the first nine months of 2007 compared to the same period in 2006 despite the discontinuation of a major bank proprietary product.

Group retirement surrenders increased as a result of normal maturing of the business and due to a few large group surrenders in the first three months of 2007 compared to the same period last year. Individual fixed annuity surrenders increased in the first nine months of 2007 compared to the same period in 2006 due to policies coming out of their surrender charge period and increased competition from banks. Individual fixed annuities net flows for the first nine months of 2007 declined compared to the same period in 2006, reflecting the higher surrenders discussed above, partially offset by slightly higher deposits.

The following table presents Domestic Retirement Services reserves by surrender charge category as of September 30, 2007:

(in millions)	Group Retirement Products*	Individual Fixed Annuities	Individual Variable Annuities
Zero or no surrender charge	\$46,193	\$ 9,763	\$13,142
0% - 2%	6,519	2,835	5,597
Greater than 2% - 4%	3,771	7,904	5,598
Greater than 4%	3,191	27,205	9,348
Non-Surrenderable	875	3,429	92
Total	\$60,549	\$51,136	\$33,777

* Excludes mutual funds of \$8.2 billion.

Surrender rates increased for group retirement products and individual fixed annuities for the first nine months of 2007 compared to the same period in 2006. Surrender rates for group retirement products increased as a result of normal maturing of the business and due to a few large group surrenders in the first nine months of 2007 compared to the same period in 2006. New products and strategies have been introduced to retain assets. The increase in the surrender rate for fixed annuities continues to be driven by a relatively flat yield curve and the general aging of the in-force block; however, less than 20 percent of the individual fixed annuity reserves as of September 30, 2007 were available for surrender without charge. Individual variable annuities surrender rates were slightly lower in the first nine months of 2007 compared to the same period in 2006.

An increase in the level of surrenders in any of these businesses or in the individual fixed annuities runoff block could accelerate the amortization of DAC and negatively affect fee income earned on assets under management.

The following table presents the net flows(a) by line of business:

<i>(in millions)</i>	Three Months Ended September 30,		Nine Months Ended September 30,	
	2007	2006	2007	2006
Group retirement products(b)	\$ 319	\$ 158	\$ 453	\$ 793
Individual fixed annuities	(1,535)	(1,179)	(3,047)	(2,198)
Individual variable annuities	26	11	(59)	(34)
Individual fixed annuities – runoff	(213)	(286)	(705)	(772)
Total	\$(1,403)	\$(1,296)	\$(3,358)	\$(2,211)

(a) Net flows are defined as deposits received less benefits, surrenders, withdrawals and death benefits.

(b) Includes mutual funds.

Higher surrenders in the group retirement and individual fixed annuity blocks, offset somewhat by increased deposits on both blocks, resulted in negative net flows for the first nine months of 2007. The continuation of the current interest rate and competitive environment would prolong this trend.

Life Insurance & Retirement Services Net Investment Income and Net Realized Capital Gains (Losses)

The following table summarizes the components of Net investment income:

(in millions)	Three Months Ended September 30,		Nine Months Ended September 30,	
	2007	2006	2007	2006
Foreign Life Insurance & Retirement Services:

Investment expenses	132	89	346	281
Net investment income ^(d)	\$4,823	\$5,045	\$16,468	\$14,299

(a) Includes the effect of an out of period UCITS adjustment in 2006. For the three and nine-month periods ended September 30, 2006 the effect was an increase of \$24 million and \$240 million, respectively, in net investment income and \$24 million and \$169 million, respectively, in operating income.

(b) Other includes real estate income, income on non-partnership invested assets, securities lending and Foreign Life Insurance & Retirement Services' equal share of the results of AIG Credit Card Company (Taiwan).

(c) Relates principally to assets held in various trading securities accounts that do not qualify for separate account treatment under SOP 03-1. These amounts are offset by an equal change included in incurred policy losses and benefits.

(d) Includes call and tender income.

Net investment income decreased for the three-month period ended September 30, 2007 compared to the same period in 2006. Securities market volatility significantly affected the

net investment income results for this quarter as partnership and hedge fund income, UCITS and mutual fund income and policyholder trading gains fell below last year's results. Net

investment income increased for the nine-month period ended September 30, 2007 compared to the same period in 2006. Fixed maturities income rose as the underlying invested asset base grew. Yield enhancement activity increased over the same period in 2006. Earnings on certain interests in UCITS for the first nine months of 2007 were lower than the same period in 2006 as results in 2006 included a \$240 million out of period adjustment. Policyholder trading gains (losses) increased for the nine months ended September 30, 2007 compared to the same period in 2006 and generally follow the trend of equity markets in the respective periods. Net investment income for certain operations include investments in structured notes linked to emerging market sovereign debt that incorporates both interest rate risk and currency risk. For 2007, these investments generated income of \$1 million and \$44 million for the three and nine-month periods ended September 30,

2007, respectively, compared to income of \$6 million and losses of \$22 million for the same periods in 2006. In addition, period to period comparisons of investment income for some investment activities, particularly partnership income, are affected by yield enhancement activity. See also Insurance and Asset Management Invested Assets herein.

AIG generates income tax credits as a result of investing in synthetic fuel production (synfuels) related to the investment loss shown in the above table and records those benefits separately from segment operating results in its consolidated provision for income taxes. The amounts of those income tax credits were \$115 million and \$79 million for the first nine months of 2007 and 2006, respectively. For a further discussion of the effect of fluctuating domestic crude oil prices on synfuel tax credits, see Note 6(c) of Notes to Consolidated Financial Statements.

The following table summarizes Net realized capital gains (losses) by major category:

(a) Includes losses of \$16 million and \$15 million for the three-month periods ended September 30, 2007 and 2006, respectively, and losses of \$21 million and gains of \$33 million for the nine months ended September 30, 2007 and 2006, respectively, allocated to participating policyholders.

(b) Includes losses of \$71 million and \$130 million for Domestic Life Insurance and Domestic Retirement Services, respectively, for the three and nine-month periods ended September 30, 2007, related to sales to reposition assets in certain investment portfolios.

Net realized capital gains (losses) include normal portfolio transactions as well as derivative gains (losses) for transactions that did not qualify for hedge accounting treatment under FAS 133, foreign exchange gains and losses and other-than-temporary declines in the value of investments. In the first nine months of 2007, Life Insurance & Retirement Services operations incurred losses of \$1 billion from the decrease in the value of securities deemed to be other than temporarily impaired. These losses were related to both the decline in value of U.S. dollar bonds held in Thailand and Singapore, which reflects the depreciation of the U.S. dollar against local currencies, and a change in management's intent to hold the securities to recovery, in part, due to the recent volatility in the securities markets. Net realized capital losses in the Foreign Life operations in the first nine months of 2007 include losses of \$195 million related to derivatives that did not qualify for hedge accounting treatment compared to a gain of \$127 million in the same period in 2006. Derivatives in the Foreign Life operations are primarily used to economically hedge cash flows related to U.S. dollar bonds back to the respective currency of the country, principally in Taiwan, Thailand, and Singapore. The corresponding foreign exchange gain or loss with respect to the economically hedged bond is deferred in accumulated other comprehensive income until the bond is sold or deemed to be other than temporarily impaired.

Deferred Policy Acquisition Costs, Sales Inducement Assets and Future Policy Benefit Reserves

DAC for Life Insurance & Retirement Services products arises from the deferral of those costs that vary with, and are directly related to, the acquisition of new or renewal business. Policy acquisition costs for life insurance products are generally deferred and amortized over the premium paying period of the policy. Policy acquisition costs that relate to universal life and investment-type products, including variable and fixed annuities (investment-oriented products), are deferred and amortized, with interest, as appropriate, in relation to the historical and future incidence of estimated gross profits to be realized over the estimated lives of the contracts. Total acquisition costs deferred increased \$138 million in the first nine months of 2007 compared to the first nine months in 2006, primarily due to higher production in the Foreign Life operations partially offset by lower Domestic Life sales. Total amortization expense increased \$307 million compared to the first nine months in 2006. Annualized amortization expense levels for 2007 and 2006 are approximately 13 percent of the opening DAC balance.

The following table summarizes the major components of the changes in DAC/Value of Business Acquired (VOBA) and Sales Inducement Assets (SIA):

(in millions)	Nine Months Ended September 30,

Balance at end of period	\$36,205	\$1,550	\$37,755	\$31,895	\$1,265	\$33,160

* Current year primarily represents the cumulative effect of the adoption of SOP 05-1. Prior year represents a balance sheet reclassification.

DAC for insurance-oriented, investment-oriented and retirement services products is reviewed for recoverability, which involves estimating the future profitability of current business. This review involves significant management judgment. If actual future profitability is substantially lower than estimated, AIG's results of operations could be significantly affected in future periods.

Future Policy Benefit Reserves

Periodically, the net benefit reserves (policy benefit reserves less DAC) established for Life Insurance & Retirement Services companies are tested to ensure that, including consideration of future expected premium payments, they are adequate to provide for future policyholder benefit obligations. The assumptions used to perform the tests are

current best-estimate assumptions as to policyholder mortality, morbidity, terminations, company maintenance expenses and invested asset returns. For long duration traditional business, a “lock-in” principle applies, whereby the assumptions used to calculate the benefit reserves and DAC are set when a policy is issued and do not change with changes in actual experience. These assumptions include margins for adverse deviation in the event that actual experience might deviate from these assumptions. For business in force outside of North America, 46 percent of total policyholder benefit liabilities at September 30, 2007 resulted from traditional business where the lock-in principle applies. In most foreign locations, guarantees have been made to pay benefits to policyholders for many decades into the future.

As experience changes over time, the best-estimate assumptions are updated to reflect the observed changes. Because of the long-term nature of many of AIG’s liabilities subject to the lock-in principle, small changes in certain of the assumptions may cause large changes in the degree of reserve adequacy. In particular, changes in estimates of future invested asset return assumptions have a large effect on the degree of reserve adequacy.

Taiwan

Beginning in 2000, the yield available on Taiwanese 10-year government bonds dropped from approximately 6 percent to approximately 2.6 percent at September 30, 2007. Yields on most other invested assets have correspondingly dropped

over the same period. Current sales are focused on products such as:

- variable separate account products which do not contain interest rate guarantees,
- participating products which contain very low implied interest rate guarantees, and
- A&H policies and riders.

In developing the reserve adequacy analysis for Nan Shan, several key best estimate assumptions have been made:

- Observed historical mortality improvement trends have been projected to 2014;
- Morbidity, expense and termination rates have been updated to reflect recent experience;
- Taiwan government bond rates are expected to remain at current levels for 10 years and gradually increase to best estimate assumptions of a market consensus view of long-term interest rate expectations. Foreign assets are assumed to comprise 35 percent of invested assets, resulting in a composite long-term investment assumption of approximately 4.8 percent; and
- The currently permitted practice of offsetting positive mortality experience with negative interest margins, thus eliminating the need for mortality dividends, will continue.

Future results of the reserve adequacy tests involve significant management judgment as to mortality, morbidity, expense and termination rates and investment yields. Changes in these assumptions accelerate DAC amortization and necessitate reserve strengthening.

Financial Services Operations

AIG’s Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance.

Financial Services Results

Financial Services results were as follows:

<i>(in millions)</i>	Three Months Ended		Percentage Increase/ (Decrease)	Nine Months Ended		Percentage Increase/ (Decrease)
	September 30, 2007	2006		September 30, 2007	2006	
Revenues:						
Aircraft Leasing ^(a)	\$1,237	\$ 950	30 %	\$3,468	\$3,013	15 %
Capital Markets ^{(b)(c)}	540	1,118	(52)	701	30	–
Consumer Finance ^{(d)(e)}	992	901	10	2,824	2,768	2
Other, including intercompany adjustments	16	42	(62)	116	112	4
Total	\$2,785	\$3,011	(8) %	\$7,109	\$5,923	20 %
Operating income (loss):						
Aircraft Leasing ^(a)	\$ 254	\$ 47	440 %	\$ 625	\$ 421	48 %
Capital Markets ^{(b)(c)}	370	965	(62)	183	(457)	–
Consumer Finance ^{(d)(e)}	69	151	(54)	180	529	(66)
Other, including intercompany adjustments	(24)	16	(–)	20	48	(58)
Total	\$ 669	\$1,179	(43) %	\$1,008	\$ 541	86 %

(a) Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2007 and 2006, the effect was \$(19) million and

\$(111) million, respectively. For the nine-month periods ended September 30, 2007 and 2006, the effect was \$(32) million and \$(56) million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings. In the second quarter of 2007, ILFC began applying hedge accounting to most of its derivatives hedging interest rate and foreign exchange risks associated with its floating rate and foreign currency denominated borrowings.

- (b) Revenues, shown net of interest expense of \$1.4 billion and \$802 million for the three-month periods ended September 30, 2007 and 2006, respectively, and \$3.3 billion and \$2.1 billion for the nine-month periods ended September 30, 2007 and 2006, respectively, were primarily from hedged financial positions entered into in connection with counterparty transactions. Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2007 and 2006, the effect was \$428 million and \$783 million, respectively. For the nine-month periods ended September 30, 2007 and 2006, the effect was \$(185) million and \$(1.1) billion, respectively. The three and nine-month periods ended September 30, 2007 include out of period charges of \$20 million and \$346 million, respectively, including a \$380 million charge in the nine months ended September 30, 2007 to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIGFP. The three and nine-month periods ended September 30, 2006 include an out of period gain of \$115 million and a charge of \$223 million, respectively, related to the remediation of the material weakness in accounting for certain derivative transactions under FAS 133. In the first quarter of 2007, AIGFP began applying hedge accounting for certain transactions.*
- (c) For the three and nine-month periods ended September 30, 2007, both revenues and operating income include an unrealized market valuation loss of \$352 million on AIGFP's super senior credit default swap portfolio.*
- (d) Both revenues and operating income include gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. For the three-month periods ended September 30, 2007 and 2006, the effect was \$(6) million and \$(73) million, respectively. For the nine-month periods ended September 30, 2007 and 2006, the effect was \$(21) million and \$(65) million, respectively. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of borrowings. In the second quarter of 2007, AGF began applying hedge accounting to most of its derivatives hedging interest rate and foreign exchange risks associated with its floating rate and foreign currency denominated borrowings.*
- (e) The nine-month period ended September 30, 2007 includes a pre-tax charge of \$178 million in connection with domestic consumer finance's mortgage banking activities.*

Financial Services operating income decreased in the three-month period and increased in the nine-month period ended September 30, 2007 compared to the same periods in 2006 primarily due to differences in the accounting treatment for hedging activities. In the first quarter of 2007, AIGFP began applying hedge accounting to certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. In the second quarter of 2007, AGF and ILFC began applying hedge accounting to most of their derivatives hedging interest rate and foreign exchange risks associated with their floating rate and foreign currency denominated borrowings. During 2006, hedge accounting under FAS 133 was not being applied to any of the derivatives and related assets and liabilities. Accordingly, revenues and operating income were exposed to volatility resulting from differences in the timing of revenue recognition between the derivatives and the related hedged assets and liabilities.

The third quarter and the first nine months of 2007 included out of period charges of \$49 million and \$346 million, respectively, including a \$380 million charge in the nine months ended September 30, 2007 to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIGFP. The three and nine-month periods ended September 30, 2006 included an out of period gain of \$115 million and a charge of \$223 million related to the remediation of the material weakness in internal control over accounting for certain derivative transactions under FAS 133.

Beginning in the first quarter of 2007, net realized capital gains and losses, including derivative gains and losses and foreign exchange transaction gains and losses for Financial Services entities other than AIGFP, which were previously reported as part of AIG's Other category, are now

included in Financial Services revenues and operating income. For the three and nine-month periods ended September 30, 2007, the amount included in both Financial Services revenues and operating income was a loss of \$66 million and a loss of \$70 million, respectively. All prior periods have been revised to conform to the current presentation.

Aircraft Leasing

Aircraft Leasing operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to foreign and domestic airlines. Revenues also result from the remarketing of commercial aircraft for ILFC's own account, and remarketing and fleet management services for airlines and financial institutions. ILFC finances its aircraft purchases primarily through the issuance of debt instruments. ILFC economically hedges the majority of its floating rate and foreign currency denominated debt using interest rate and foreign currency derivatives. Starting in the second quarter of 2007, ILFC began applying hedge accounting to most of its derivatives. All of ILFC's derivatives are effective economic hedges; however, since hedge accounting under FAS 133 was not applied prior to April 2, 2007, the benefits of using derivatives to hedge these exposures are not reflected in ILFC's 2006 corporate borrowing rate. The composite borrowing rates at September 30, 2007 and 2006 were 5.28 percent and 5.14 percent, respectively.

ILFC typically contracts to re-lease aircraft before the end of the existing lease term. For aircraft returned before the end of the lease term, ILFC has generally been able to re-lease such aircraft within two to six months of its return. As a lessor, ILFC considers an aircraft "idle" or "off lease" when the aircraft is not subject to a signed lease agreement or

signed letter of intent. ILFC had one aircraft off lease at September 30, 2007, and all but two new aircraft scheduled for delivery through 2008 have been leased.

Quarterly Aircraft Leasing Results

ILFC's operating income increased in the three months ended September 30, 2007 compared to the same period of 2006 by \$207 million, or 440 percent. Rental revenues increased by \$160 million or 15 percent, driven by a larger aircraft fleet, higher lease rates and higher utilization. As of September 30, 2007, ILFC's fleet subject to operating leases consisted of 894 aircraft compared to 818 aircraft as of September 30, 2006. Flight equipment marketing revenues increased by \$12 million in the third quarter of 2007 compared to the same period in 2006 due to higher realization on aircraft sales. During the third quarter of 2007, ILFC realized income of \$24 million from the sale of its rights against a bankrupt airline. The increase in revenues was partially offset by increases in depreciation and interest expense. Depreciation expense increased by \$42 million, or 10 percent, in line with the increase in the size of the aircraft fleet. Interest expense increased by \$20 million, or 5 percent, driven by additional borrowings to fund aircraft purchases and the rising cost of funds. As noted above, ILFC's interest expense did not reflect the benefit of hedging these exposures in 2006. For the three-month periods ended September 30, 2007 and 2006, the losses from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses, were \$19 million and \$111 million, respectively, in both revenues and operating income.

Year-to-date Aircraft Leasing Results

ILFC's operating income increased in the first nine months of 2007 compared to the same period in 2006 by \$204 million, or 48 percent. Rental revenues increased by \$432 million or 15 percent, driven by a larger aircraft fleet and higher lease rates. During the first nine months of 2007, ILFC realized income of \$24 million from the sale of its rights against a bankrupt airline. The increase in revenues was partially offset by reduced flight equipment marketing revenues and increases in depreciation and interest expense. Flight marketing revenues decreased by \$23 million compared to the same period in 2006 due to fewer aircraft sales. Depreciation expense increased by \$133 million, or 11 percent, in line with the increase in the size of the aircraft fleet. Interest expense increased by \$162 million, or 15 percent, driven by additional borrowings to fund aircraft purchases and the rising cost of funds. ILFC's interest expense did not reflect the benefit of hedging these exposures in the first quarter of 2007 and in 2006. For the first nine months of 2007 and 2006, the losses from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses, were \$32 million and \$56 million, respectively, in both

revenues and operating income. During the first nine months of 2006, ILFC recorded adjustments related to a tax settlement in Australia, increased credit reserves and lease accruals totaling \$37 million.

Capital Markets

Capital Markets represents the operations of AIGFP, which engages as principal in a wide variety of financial transactions, including standard and customized financial products involving commodities, credit, currencies, energy, equities and rates. AIGFP also invests in a diversified portfolio of securities and principal investments and engages in borrowing activities involving the issuance of standard and structured notes and other securities, and entering into guaranteed investment agreements (GIAs).

Beginning in 2007, AIGFP applied hedge accounting under FAS 133 to certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings. As a result, AIGFP recognized in earnings the change in the fair value on the hedged items attributable to the hedged risks offsetting the gains and losses on the derivatives designated as hedges. Prior to 2007, AIGFP did not apply hedge accounting under FAS 133 to any of its derivatives or related assets and liabilities.

Since 1998, AIGFP has written super senior (AAA+) protection through credit default swaps, a portion of which is exposed to CDOs of residential mortgage-backed securities and other asset-backed securities. AIGFP has structured this portfolio to provide protection such that AIGFP is at risk on only the super senior portion related to a diversified portfolio of credits referenced to loans or debt securities. The super senior risk portion is the last tranche to suffer losses after significant subordination. Credit losses would have to erode all tranches junior to the super senior tranche before AIGFP would have any payment obligation. The subordination level required for each transaction is determined based on internal modeling and analysis of the pool of underlying credits. The subordination levels are not dependent on ratings determined by the rating agencies.

At September 30, 2007, the notional amount of this credit derivative portfolio was \$513 billion, covering the following asset classes:

<i>(in billions)</i>	Net Notional Exposure
Corporate	\$294
European residential mortgages	141
Multi-sector CDO*	78
Total	\$513

* Approximately \$63 billion of the multi-sector CDO pools includes some exposure to U.S. subprime mortgages.

As of October 31, 2007, all of AIGFP's super senior exposures continued to have tranches below AIGFP's

attachment point that have been explicitly rated AAA or, in AIGFP's judgment, would have been rated AAA had they been rated. AIGFP's portfolio of credit default swaps is carefully structured, undergoes regular monitoring, modeling and analysis and contains significant protection through collateral subordination. In addition, in December 2005, AIGFP stopped committing to writing super senior protection for CDOs that included any U.S. subprime collateral, although collateral managers are permitted to substitute collateral in some of the underlying CDOs, in each case subject to certain restrictions.

AIGFP accounts for the super senior credit default swaps in accordance with FAS 133 "Accounting For Derivative Instruments and Hedging Activities" and Emerging Issues Task Force 02-3, "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities" (EITF 02-3). In accordance with EITF 02-3, AIGFP does not recognize income in earnings at the inception of each transaction because the inputs to value these instruments are not derivable from observable market data. AIGFP values its super senior credit default swaps using internal methodologies that utilize available market observable information and incorporate management estimates and judgments when information is not available. It also employs the Binomial Expansion Technique (BET) model where appropriate to help estimate the fair value of these derivatives. The BET model utilizes credit spreads for the collateral pool obtained from an independent source. The model also utilizes diversity scores, weighted average lives, recovery rates and discount rates. The BET model does not adequately quantify the benefit of certain structural mitigants, such as triggers that accelerate the amortization of the more senior tranches, that AIGFP believes are important to the appropriate valuation of its transactions. AIG believes that the value of these mitigants could range from zero to \$50 million, but is not able to reliably estimate their value at this time. Therefore, AIG's estimate of the fair value of AIGFP's super senior credit default swaps as of September 30, 2007 does not attribute value to these features.

The valuation of the super senior credit derivatives has become increasingly challenging given the limitation on the availability of market observable information due to the lack of trading and price transparency in the structured finance market. These market conditions have increased the reliance on management estimates and judgments in arriving at an estimate of fair value for financial reporting purposes. Further, disparities in the valuation methodologies employed by market participants and the varying judgments reached by such participants when assessing volatile markets has increased the likelihood that the various parties to these instruments may arrive at significantly different estimates as to their fair values.

As of October 31, 2007, AIG is aware that estimates made by certain AIGFP counterparties with respect to the fair value of certain AIGFP super senior credit default swaps and the collateral required in connection with such instruments differ significantly from AIGFP's estimates.

For a further description of AIGFP's risk management practices in its credit default swaps business, see Management's Discussion and Analysis of Financial Condition and Results of Operations — Risk Management — Segment Risk Management — Financial Services in the 2006 Annual Report on Form 10-K.

Quarterly Capital Markets Results

Capital Markets operating income decreased in the three months ended September 30, 2007 by \$595 million compared to the same period in 2006, primarily due to changes in accounting related to hedging activities that did not qualify for hedge accounting treatment under FAS 133, as described below. During the third quarter of 2007, AIGFP continued to experience good transaction flow in its rates and currency products which contributed to its revenues. AIGFP recognized total net gains of \$153 million for the three months ended September 30, 2007 related to credit default swaps and embedded credit derivatives in credit-linked notes. This gain was offset by an unrealized market valuation loss of \$352 million related to AIGFP's super senior credit default swap portfolio, principally written on multi-sector CDOs, and an out of period charge of \$51 million for a change in the projected timing of income tax cash flows from a series of lease transactions.

The \$352 million unrealized market valuation loss represented a decline in the fair value of super senior credit derivatives for the three-month period ended September 30, 2007, resulting from the significant disruption in the structured finance markets. AIG continues to believe that it is highly unlikely that AIGFP will be required to make payments with respect to these derivatives.

Included in the net gains of \$153 million recognized by AIGFP was a net unrealized market valuation gain of \$131 million on certain credit default swaps and embedded credit derivatives in credit-linked notes for the three and nine-month periods ended September 30, 2007. In these transactions, AIGFP purchased protection at the AAA to BBB-rated risk layers on portfolios of reference obligations that include multi-sector CDO obligations. This gain was driven by the significant widening in credit spreads during the period. Also included were net gains of \$22 million for the three and nine-month periods ended September 30, 2007 on credit derivatives on home equity, CMBS and corporate credits.

In addition, in the three months ended September 30, 2007 AIGFP recognized a net gain of \$428 million related to hedging activities that did not qualify for hedge accounting

treatment under FAS 133, compared to a net gain of \$783 million for the same period in 2006. The net gain in the three months ended September 30, 2007 reflects the effect of decreases in U.S. interest rates and the weakening of the U.S. dollar on derivatives hedging AIGFP's assets and liabilities. The net gain in the third quarter of 2006 included an out of period charge of \$115 million related to the remediation of the material weakness in internal control over accounting for certain derivative transactions under FAS 133.

Financial market conditions in the three months ended September 30, 2007 were characterized by decreases in global interest rates, increases in credit spreads, higher equity valuations and a weaker U.S. dollar.

The most significant component of Capital Markets operating expenses is compensation, which was \$136 million and \$115 million in the three-month periods ended September 30, 2007 and 2006, respectively. The amount of compensation is not affected by gains and losses arising from derivatives not qualifying for hedge accounting treatment under FAS 133. AIG does not currently intend to have the unrealized market valuation gains and losses described above affect the amount of compensation. Accordingly, compensation expense for the three and nine-month periods does not reflect these amounts.

AIG elected to early adopt FAS 155, "Accounting for Certain Hybrid Financial Instruments" (FAS 155) in 2006 and AIGFP elected to apply the fair value option to certain structured notes and other financial liabilities containing embedded derivatives outstanding as of January 1, 2006. AIGFP recognized a gain of \$21 million in the third quarter of 2007 and a gain of \$85 million in the third quarter of 2006 on hybrid financial instruments for which it applied the fair value option under FAS 155. These amounts were largely offset by gains and losses on economic hedge positions also reflected in AIGFP's operating income.

Year-to-date Capital Markets Results

Capital Markets operating income increased in the first nine months of 2007 by \$640 million compared to the same period in 2006, primarily due to changes in accounting related to hedging activities that did not qualify for hedge accounting treatment under FAS 133, as described below. AIGFP experienced higher transaction flow in the first nine months of 2007 in its rates and currency products. Operating income for the first nine months of 2007 also includes a net unrealized market valuation gain of \$131 million related to certain credit default swaps purchased against the AAA to BBB-rated risk layers on portfolios of reference obligations and net gains of \$35 million on home equity, CMBS and corporate credit derivatives. These gains were offset by the net unrealized market valuation loss of \$352 million and the out of period charge of \$51 million, discussed above.

In the first nine months of 2007, AIGFP also recognized a net loss of \$185 million related to hedging activities that did

not qualify for hedge accounting treatment under FAS 133, compared to a net loss of \$1.1 billion for the same period in 2006. The first nine months of 2007 included out of period charges of \$346 million, as noted above, including a charge of \$380 million to reverse net gains recognized in previous periods on transfers of available for sale securities among legal entities consolidated within AIGFP, and a \$166 million reduction in fair value at March 31, 2007 of certain derivatives that are an integral part of, and economically hedge, the structured transactions potentially affected by the proposed regulations issued by the U.S. Treasury Department discussed above in Overview of Operations and Business — Outlook. The net loss on AIGFP's derivatives recognized in the first nine months of 2006 included an out of period charge of \$223 million related to the remediation of the material weakness in internal control over accounting for certain derivative transactions under FAS 133. The net loss also reflects the effect of increases in U.S. interest rates and a weakening of the U.S. Dollar on derivatives hedging AIGFP's assets and liabilities.

Financial market conditions in the first nine months of 2007 were characterized by increases in global interest rates, increases in credit spreads, higher equity valuations and a slightly weaker U.S. dollar.

Compensation expense was \$412 million and \$380 million in the first nine months of 2007 and 2006, respectively.

AIGFP recognized a gain of \$51 million in the first nine months of 2007 and a loss of \$4 million in the first nine months of 2006 on hybrid financial instruments for which it applied the fair value option under FAS 155. These amounts were largely offset by gains and losses on economic hedge positions also reflected in AIGFP's operating income.

Consumer Finance

AIG's consumer finance operations in North America are principally conducted through AGF. AGF derives a substantial portion of its revenues from finance charges assessed on outstanding real estate loans, secured and unsecured non-real estate loans and retail sales finance receivables. The real estate loans are comprised principally of first-lien mortgages on residential real estate generally having a maximum term of 360 months, and are considered non-conforming. The real estate loans may be closed-end accounts or open-end home equity lines of credit and are principally fixed rate products. AGF does not offer mortgage products with borrower payment options that allow for negative amortization of the principal balance. The secured non-real estate loans are secured by consumer goods, automobiles or other personal property. Both secured and unsecured non-real estate loans and retail sales finance receivables generally have a maximum term of 60 months.

The majority of AGF's finance receivables are sourced through its branches. However, a significant volume of real estate loans is also sourced through its centralized real estate operations, which include its mortgage banking activities. These loans are collateralized by first and second liens on one to four-family properties and are originated largely through broker relationships and to a lesser extent are originated through correspondent relationships and directly to consumers. The majority of these loans are sold to investors on a servicing-released basis. These real estate loans usually have maximum original terms of 360 months, are generally considered non conforming and include fixed, adjustable and hybrid-adjustable loans. From July 2003 through May 2006, AGF's centralized real estate operations originated loans through a servicing arrangement with AIG Federal Savings Bank (AIG Bank), a federally chartered thrift. The origination relationship was terminated in the first quarter of 2006. Since then, all new loans have been originated directly by AGF subsidiaries under their own state licenses.

On June 7, 2007, AIG's domestic consumer finance operations, consisting of AIG Bank, AGF's mortgage banking subsidiary Wilmington Finance, Inc. (WFI) and AGF, entered into a Supervisory Agreement with the Office of Thrift Supervision (OTS). The Supervisory Agreement pertains to certain mortgage loans originated in the name of AIG Bank from July 2003 through early May 2006 pursuant to a servicing agreement between WFI and AIG Bank, which was terminated in February 2006. Pursuant to the terms of the Supervisory Agreement, AIG Bank, WFI and AGF have undertaken a financial remediation program whereby certain borrowers may be provided loans on more affordable terms and/or reimbursed for certain fees. Pursuant to the requirements of the Supervisory Agreement, AGF has engaged the services of an external consultant to monitor, evaluate and periodically report to the OTS with respect to the matters covered by the Supervisory Agreement. Separately, the domestic consumer finance operations also committed to donate \$15 million to certain not-for-profit organizations to support their efforts to promote financial literacy and credit counseling.

Management's best estimate of the cost of implementing the financial remediation plan contemplated by the Supervisory Agreement, including the \$15 million donation, was \$178 million at September 30, 2007. A charge in the amount of \$128 million was recorded in the first quarter of 2007 while the remaining \$50 million was recorded in the second quarter of 2007 at the time the terms of the Supervisory Agreement were finalized. As the estimate is based on judgments and assumptions made by management, the actual cost of implementing the financial remediation plan may differ from this estimate.

AIG's foreign consumer finance operations are principally conducted through AIG Consumer Finance Group, Inc. (AIGCFG). AIGCFG operates primarily in emerging and

developing markets. AIGCFG has operations in Argentina, China, Hong Kong, Mexico, Philippines, Poland, Taiwan and Thailand and most recently began operations in India through the acquisition of a majority interest in a sales finance lending operation during the first quarter of 2007 and the acquisition of a mortgage lending operation in the second quarter of 2007. In addition, AIGCFG expanded its distribution channels in Thailand by acquiring in the first quarter of 2007 an 80 percent interest in a company with a network of over 130 branches for secured consumer lending. AIGCFG is continuously exploring expansion opportunities in its existing operations as well as new geographic locations throughout the world. Certain of the AIGCFG operations are partly or wholly owned by life insurance subsidiaries of AIG. Accordingly, the financial results of those companies are allocated between Financial Services and Life Insurance & Retirement Services according to their ownership percentages. While products vary by market, the businesses generally provide credit cards, unsecured and secured non-real estate loans, term deposits, savings accounts, retail sales finance and real estate loans. AIGCFG originates finance receivables through its branches and direct solicitation. AIGCFG also originates finance receivables indirectly through relationships with retailers, auto dealers, and independent agents.

Quarterly Consumer Finance Results

Consumer Finance operating income decreased by \$82 million, or 54 percent, in the three months ended September 30, 2007 compared to the same period in 2006.

The operating income from the domestic consumer finance operations, which include the operations of AGF and AIG Bank, decreased by \$68 million, or 49 percent, for the three months ended September 30, 2007 compared to the same period in 2006. For the three months ended September 30, 2007, domestic results were adversely affected by the weakening housing market and tighter underwriting guidelines, which resulted in lower originations of real estate loans.

AGF's net finance receivables totaled \$25.4 billion at September 30, 2007, an increase of approximately \$1 billion compared to the prior year period, including \$19.5 billion of real estate secured loans, most of which were underwritten with full income verification. The increase in the net finance receivables resulted in a similar increase in revenues generated from these assets.

AGF's revenues increased \$34 million or 5 percent during the three-month period ended September 30, 2007 compared to the same period in 2006. Revenues from AGF's mortgage banking activities decreased \$68 million or 87 percent during the three-month period ended September 30, 2007 compared to the same period in 2006. The decrease in revenues was primarily caused by a

significantly reduced origination volume, and to a lesser extent, tighter underwriting guidelines, reduced third party margins and higher warranty reserves, which cover obligations to repurchase loans sold to third-party investors should there be a first payment default or breach of representations and warranties.

AGF's interest expense increased by \$9 million or 3 percent as its long-term borrowing rate increased in the three months ended September 30, 2007 compared to the same period in 2006. During the three months ended September 30, 2007, AGF recorded a net loss of \$5 million on its derivatives that did not qualify for hedge accounting under FAS 133, including the related foreign exchange losses, compared to a net loss of \$67 million for the same period in 2006. Commencing in the second quarter of 2007, AGF began applying hedge accounting.

Revenues from the foreign consumer finance operations increased by approximately 32 percent to \$232 million in the three months ended September 30, 2007 compared to the same period in 2006. Loan growth, particularly in Poland, Thailand and Latin America, was the primary driver of the higher revenues. The increase in revenues was more than offset by higher expenses associated with branch expansions, acquisition activities and product promotion campaigns.

Year-to-date Consumer Finance Results

Consumer Finance operating income decreased by \$349 million, or 66 percent, in the first nine months of 2007 compared to the same period in 2006.

The operating income for the first nine months of 2007 from the domestic consumer finance operations decreased by \$379 million or 72 percent from the same period of 2006. Pursuant to the terms of the Supervisory Agreement, as discussed above, charges of \$178 million were recorded during the first nine months of 2007.

Additionally, for the first nine months of 2007, domestic results were adversely affected by the weakening housing market and tighter underwriting guidelines, which resulted in lower originations for real estate loans.

Although mortgage loan originations declined in the first nine months of 2007, the softening of home price appreciation (reducing the equity customers may be able to extract from their homes by refinancing) contributed to an increase in non-real estate loans of 12 percent at September 30, 2007 compared to September 30, 2006. Retail sales finance receivables also increased 19 percent compared to September 30, 2006 due to increased marketing efforts and customer demand. AGF's centralized real estate business segment finance receivables decreased by 2 percent while branch business segment finance receivables increased by 9 percent. AGF's results for the first nine months of 2007 also

included a recovery of \$65 million from a favorable out of court settlement.

AGF's revenues decreased \$69 million or 3 percent for the nine-month period ended September 30, 2007 compared to the same period in 2006. Revenues from AGF's mortgage banking activities decreased \$306 million or 152 percent during the nine-month period ended September 30, 2007 compared to the same period in 2006, which also reflects charges relating to the Supervisory Agreement. The decrease in revenues was primarily caused by significantly reduced origination volume, and to a lesser extent, tighter underwriting guidelines, a shift in distribution channels, and higher warranty reserve, which covers AGF's obligations to repurchase loans sold to third-party investors should there be a first payment default or breach of representations and warranties.

AGF's interest expense increased by \$73 million or 8 percent as both its short-term and long-term borrowing rates increased in the first nine months of 2007 compared to the same period in 2006. Its short-term borrowing rates averaged 5.40 percent in the first nine months of 2007 compared to 5.06 percent in the same period of 2006, while long-term borrowing rates averaged 5.19 percent in the first nine months of 2007 compared to 4.97 percent in the first nine months of 2006.

For the first nine months of 2007, domestic consumer finance revenues and operating income also declined from the prior year, partially due to the change in fair value of the derivatives hedging borrowings which did not qualify for hedge accounting treatment under FAS 133 during either period. During the first nine months of 2007, AGF recorded a net loss of \$24 million on such derivatives, including the related foreign exchange losses, compared to a net loss of \$63 million for the same period in 2006.

Revenues from the foreign consumer finance operations increased by 25 percent in the first nine months of 2007 compared to the same period of 2006. Loan growth, particularly in Poland, Thailand and Latin America, was the primary driver of the increased revenues. The increase in revenues were more than offset by higher expenses associated with branch expansions, acquisition activities and product promotion campaigns. Operating income in the first nine months of 2006 reflects AIGCFG's \$44 million share of the allowance for losses related to industry-wide credit deterioration in the Taiwan credit card market.

Credit Quality of Finance Receivables

The overall credit quality of AGF's finance receivables portfolio deteriorated modestly due to negative economic fundamentals, a higher proportion of non-real estate loans and retail sales finance loans and the aging of the real estate loan portfolio.

As of September 30, 2007, the 60-day delinquency rate for the entire portfolio increased by 55 basis points to 2.47 percent compared to the same period in 2006, while the 60-day delinquency rate for the real estate loans increased by 63 basis points to 2.22 percent. For the three months ended September 30, 2007, AGF's net charge-off rate increased to 1.15 percent compared to 0.92 percent for the same period in 2006 and for the nine months ended September 30, 2007 increased to 1.05 percent compared to 0.89 percent for the same period in 2006, which reflected \$6 million of non-recurring recoveries recorded in the first quarter of 2006.

AGF's allowance for finance receivables losses as a percentage of outstanding receivables was 2.11 percent at September 30, 2007 compared to 1.99 percent at September 30, 2006.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products. Such services and products are offered to individuals and institutions both domestically and overseas, and are primarily comprised of Spread-Based Investment Businesses, Institutional Asset Management and Brokerage Services and Mutual Funds.

The revenues and operating income for this segment are affected by the general conditions in the equity and credit markets. In addition, net realized gains and performance fees are contingent upon various fund closings, maturity levels and market conditions.

Spread-Based Investment Business

In prior years, the sale of GICs to investors, both domestically and overseas, was AIG's primary institutional Spread-Based Investment Business. During 2005, AIG launched its MIP and its asset management subsidiaries, primarily SunAmerica Life, ceased writing new GIC business. The GIC business will continue to run off for the foreseeable future while the MIP business is expected to grow.

Institutional Asset Management

AIG's Institutional Asset Management business provides an array of investment products and services globally to institutional investors, AIG subsidiaries and affiliates and high net worth investors. These products and services include traditional equity and fixed income investment management and a full range of alternative asset classes. Delivery of AIG's Institutional Asset Management products and services is accomplished via a global network of operating subsidiaries

comprising AIG Global Asset Management Holdings Corp. and its subsidiaries and affiliated companies (collectively, AIG Investments). The primary operating entities within this group are AIG Global Investment Corp., AIG Global Real Estate Investment Corp. and AIG Private Bank. AIG Private Bank offers banking, trading and investment management services to private client and high net worth individuals and institutions globally.

Within the alternative investment asset class, AIG Investments offers hedge and private equity fund-of-funds, direct investments and distressed debt investments. Within the structured fixed income and equity product asset class, AIG Investments offers various forms of structured and credit linked notes, various forms of collateralized debt obligations and other investment strategies aimed at achieving superior returns or capital preservation.

From time to time, AIG Investments acquires alternative investments, primarily consisting of direct private equity investments, on a temporary basis, "warehousing" such investments until the investment or economic benefit thereof is transferred to a fund or other AIG managed investment product. As a consequence of this warehousing activity, AIG incurs the cost of carrying these investments and consolidates the balance sheet and operating results until the new managed investment product is launched.

Brokerage Services and Mutual Funds

AIG's Brokerage Services and Mutual Funds business provides mutual fund and broker-dealer related services to retail investors, group trusts and corporate accounts through an independent network of financial advisors. The AIG Advisor Group, Inc., a subsidiary of AIG Retirement Services, Inc., is comprised of several broker-dealer entities that provide these services to clients primarily in the U.S. marketplace. AIG SunAmerica Asset Management Corp. manages, advises and/or administers retail mutual funds, as well as the underlying assets of variable annuities sold by AIG SunAmerica and VALIC to individuals and groups throughout the United States.

Other

Included in the Other category for Asset Management is income or loss from certain SunAmerica sponsored partnerships and partnership investments. Partnership assets consist of investments in a diversified portfolio of private equity funds, affordable housing partnerships and hedge fund investments.

* Includes operating costs as well as the cost of funding these investments.

Asset Management revenues and operating income increased in the three and nine-month periods ended September 30, 2007 compared to the same periods in 2006 due to the effect of consolidated managed partnerships and funds, consolidated warehouse investments and, for the first nine months of 2007, a gain of \$398 million from the sale of a portion of AIG's investment in Blackstone Group, LP in connection with its initial public offering. Income arising from consolidated managed partnerships and funds is included in operating income, but offset in minority interest expense, which is not a component of operating income. Offsetting the increase in revenues is an operating loss due to the effect of consolidating the operating results of warehoused investments for the three and nine-month periods ended September 30, 2007. AIG expects to divest the consolidated warehouse investments through various managed investment products in future periods.

Beginning in the first quarter of 2007, net realized capital gains and losses, including derivative gains and losses and foreign exchange transaction gains and losses, which were previously reported as part of AIG's Other category, are now included in Asset Management revenues and operating income. For the three and nine-month periods of 2007, the amount included in both Asset Management revenues and operating income was a loss of \$232 million and a gain of \$100 million, respectively. The three and nine-month periods of 2006 reflected losses of \$106 million and \$109 million,

respectively. All prior periods have been revised to conform to the current presentation.

In order to better align financial reporting with the manner in which AIG's chief operating decision makers have managed their businesses, commencing in the first quarter of 2007, revenues and operating income related to foreign investment contracts, which were historically reported as a component of the Spread-Based Investment business, are now being reported in the Life Insurance & Retirement Services segment. All prior periods have been revised to conform to the current presentation.

Quarterly Spread-Based Investment Business Results

Operating income related to the Spread-Based Investment business decreased in the three months ended September 30, 2007 compared to the same period in 2006 due to losses associated with the MIP. MIP operating income decreased during the three months ended September 30, 2007 compared to the same period of 2006 primarily due to foreign exchange losses on foreign-denominated debt that, while economically hedged, did not qualify for hedge accounting treatment under FAS 133, as well as other than temporary write-downs on certain investments and mark to market losses on derivatives that did not qualify for hedge accounting treatment under FAS 133. These losses are partially offset by an increase in partnership income associated with the GIC program and higher income from private equity partnerships. Partnership income is primarily

derived from alternative investments and is affected by performance in the equity and credit markets. Thus, revenues, operating income and cash flows attributable to GICs will vary from reporting period to reporting period.

As anticipated, GIC balances continue to run off. A significant portion of the remaining GIC portfolio consists of floating rate obligations. AIG has entered into hedges to manage against increases in short-term interest rates. AIG believes these hedges are economically effective, but they did not qualify for hedge accounting treatment under FAS 133. Income or loss from these hedges are classified as net realized capital gains or losses in the Asset Management segment results.

The following table illustrates the anticipated runoff of the domestic GIC portfolio at September 30, 2007:

<i>(in billions)</i>	Less Than One Year	1-3 Years	3 ⁺ -5 Years	Over Five Years	Total
Domestic GICs	\$ 4.8	\$ 11.9	\$ 2.7	\$ 6.7	\$ 26.1

During 2005, the MIP replaced the GIC program as AIG's principal institutional spread-based investment activity. AIG does not expect that income growth in the MIP will offset the runoff in the GIC portfolio for the foreseeable future because the asset mix under the MIP does not include the alternative investments utilized in the GIC program. Commencing in the first quarter of 2007, AIG applied hedge accounting for certain derivative transactions related to the MIP.

Year-to-date Spread-Based Investment Business Results

Operating income related to the Spread-Based Investment business increased in the first nine months of 2007 compared to the same period in 2006 due to a significant increase in partnership income associated with the Domestic GIC program. Partnership income in the first nine months of 2007 included a distribution from a single partnership of \$164 million, which became available after a five-year restriction on capital withdrawals.

MIP operating income decreased in the first nine months of 2007 compared to the same period in 2006, reflecting foreign exchange losses on foreign-denominated debt that, while economically hedged, did not qualify for hedge accounting treatment under FAS 133, as well as other-than-temporary write-downs on certain investments and mark to market losses on derivatives not receiving hedge accounting treatment. Through September 30, 2007, AIG has issued the equivalent of \$6.8 billion of securities to fund the MIP in the Euromarkets and the U.S. public and private markets.

Quarterly Institutional Asset Management Results

Operating income for Institutional Asset Management increased in the three months ended September 30, 2007

compared to the same period in 2006, due to higher asset management fees resulting from growth in assets under management; an increase in carried interest, which was driven by higher valuations of portfolio investments and is generally associated with improved equity markets performance; and increased income from consolidated managed partnerships and funds, which are offset in minority interest expense that is not a component of operating income. These increases were partially offset by the effect of consolidating the operating results of various warehoused investments, an increase in distribution expenses related to the launch of several new investment products and the timing of real estate sales compared to the year ago quarter.

Year-to-date Institutional Asset Management Results

Operating income for Institutional Asset Management increased in the first nine months of 2007 compared to the same period in 2006 reflecting the \$398 million gain from the sale of a portion of AIG's investment in Blackstone Group, LP in connection with its initial public offering and increased carried interest driven by higher valuations of portfolio investments which are generally associated with improved performance in the equity markets. Operating income also reflects higher income from certain consolidated managed partnerships and funds; however, this income is offset in minority interest expense. Partly offsetting this income was a decrease in net realized capital gains related to real estate investments as well as increased expenses resulting from investment in sales and infrastructure enhancements and the effect of consolidating the operating results of various warehoused investments.

AIG's unaffiliated client assets under management, including retail mutual funds and institutional accounts, increased 24 percent to \$93.1 billion from December 31, 2006 to September 30, 2007, contributing to growth in base management fees. Additionally, AIG Investments successfully launched several new private equity and real estate funds in the first nine months of 2007, which provide both a base management fee and the opportunity for future performance fees.

While unaffiliated client assets under management and the resulting management fees continue to increase, the growth in operating income has trailed the growth in revenues due to additional warehousing activities as well as the costs associated with sales and infrastructure enhancements. The sales and infrastructure enhancements are associated with AIG's planned expansion of marketing and distribution capabilities, combined with technology and operational infrastructure-related improvements.

Other Operations

The operating loss of AIG's Other category was as follows:

(in millions)	Three Months Ended September 30,		Nine Months Ended September 30,	
	2007	2006	2007	2006
Other operating income (loss):				
Equity earnings in unconsolidated entities	\$ 37	\$ 48	\$ 128	\$ 178
Interest expense	(315)	(227)	(869)	(633)
Unallocated corporate expenses*	(157)	(89)	(519)	(337)
Compensation expense – SICO Plans	(9)	(14)	(29)	(104)
Compensation expense – Starr tender offer	-	-	-	(54)
Net realized capital gains (losses)	(199)	85	(226)	31
Other miscellaneous, net	16	11	(42)	(34)
Total Other	\$(627)	\$(186)	\$(1,557)	\$(953)

* Includes expenses of corporate staff not attributable to specific business segments, expenses related to efforts to improve internal controls, corporate initiatives and certain compensation plan expenses.

The operating loss of AIG's Other category increased in the third quarter and first nine months of 2007 compared to the comparable periods in 2006, reflecting higher interest expenses resulting from increased borrowings, higher unallocated corporate expenses and foreign exchange losses on foreign-denominated debt of which a portion is economically hedged, but did not qualify for hedge accounting treatment under FAS 133.

Operating loss for the first nine months of 2006 included an out of period charge of \$61 million related to the SICO Plans and a one-time charge related to the Starr tender offer of \$54 million.

Beginning in the first quarter of 2007, derivative gains and losses and foreign exchange transaction gains and losses for Asset Management and Financial Services entities (other than AIGFP) are now included in Asset Management and Financial Services revenues and operating income. These amounts were previously reported as part of AIG's Other category. All prior periods have been revised to conform to the current presentation.

Capital Resources and Liquidity

Borrowings

At September 30, 2007, AIG's total borrowings amounted to \$176.2 billion as follows:

(in millions)	September 30, 2007	December 31, 2006
AIG's net borrowings	\$ 20,299	\$ 17,126

AIG (Parent Company)

AIG intends to continue its customary practice of issuing debt securities from time to time to meet its financing needs and those of certain of its subsidiaries for general corporate purposes, as well as for the MIP. As of September 30, 2007, AIG had up to \$21.9 billion of debt securities, preferred stock and other securities, and up to \$16.5 billion of common stock, registered and available for issuance under its universal shelf registration statement.

AIG maintains a medium term note program under its shelf registration statement. As of September 30, 2007, approximately \$4.2 billion principal amount of notes were outstanding under the medium term note program, of which \$749 million was used for AIG's general corporate purposes, \$529 million was used by AIGFP and \$3.0 billion was used to

fund the MIP. The maturity dates of these notes range from 2008 to 2052. To the extent deemed appropriate, AIG may enter into swap transactions to manage its effective borrowing rates with respect to these notes.

AIG also maintains a Euro medium term note program under which, as of September 30, 2007, an aggregate nominal amount of up to \$20.0 billion of notes may be outstanding at any one time. As of September 30, 2007, the equivalent of \$10.9 billion of notes were outstanding under the program, of which \$8.4 billion were used to fund the MIP and the remainder was used for AIG's general corporate purposes. The aggregate amount outstanding includes \$839 million loss resulting from foreign exchange translation into U.S. dollars, of which \$288 million loss relates to notes

issued by AIG for general corporate purposes and \$551 million loss relates to notes issued to fund the MIP.

During the first nine months of 2007, AIG issued in Rule 144A offerings an aggregate of \$2.0 billion principal amount of senior notes, of which \$650 million was used to fund the MIP and \$1.4 billion was used for AIG's general corporate purposes.

AIG maintains a shelf registration statement in Japan, providing for the issuance of up to Japanese Yen 300 billion principal amount of senior notes, of which the equivalent of \$434 million was outstanding as of September 30, 2007, the proceeds of which were used for AIG's general corporate purposes. AIG also maintains an Australian dollar debt program under which senior notes with an aggregate principal amount of up to 5 billion Australian dollars may be outstanding at any one time. Although as of September 30, 2007 there were no outstanding notes under the Australian program, AIG intends to use the program opportunistically to fund the MIP or for AIG's general corporate purposes.

During the first nine months of 2007, AIG issued an aggregate of \$4.49 billion of junior subordinated debentures in four series of securities. Substantially all of the proceeds from these sales, net of expenses, are being used to repurchase shares of AIG's common stock. In connection with each series of junior subordinated debentures, AIG entered into a Replacement Capital Covenant (RCC) for the benefit of the holders of AIG's 6.25 percent senior notes due 2036. The RCCs provide that AIG will not repay, redeem, or purchase the applicable series of junior subordinated debentures on or before a specified date, unless it has received qualifying proceeds from the sale of replacement capital securities.

AIG began applying hedge accounting for certain AIG parent transactions in the first quarter of 2007.

AIGFP

AIGFP uses the proceeds from the issuance of notes and bonds and GIA borrowings to invest in a diversified portfolio of securities and derivative transactions. The borrowings may also be temporarily invested in securities purchased under agreements to resell. AIGFP's notes and bonds include structured debt instruments whose payment terms are linked to one or more financial or other indices (such as an equity index or commodity index or another measure that is not considered to be clearly and closely related to the debt instrument). These notes contain embedded derivatives that otherwise would be required to be accounted for separately under FAS 133. Upon AIG's early adoption of FAS 155, AIGFP elected the fair value option for these notes. The notes that are accounted for using the fair value option are reported separately under hybrid financial instrument liabilities. AIG guarantees the obligations of AIGFP under AIGFP's notes and bonds and GIA borrowings. See Operating Review –

Financial Services Operations, Liquidity and Derivatives herein.

AIGFP has a Euro medium term note program under which, as of September 30, 2007, an aggregate nominal amount of up to \$20.0 billion of notes may be outstanding at any one time. As of September 30, 2007, \$7.18 billion of notes were outstanding under the program, including \$899 million loss resulting from foreign exchange translation into U.S. dollars. The notes issued under this program are guaranteed by AIG and are included in AIGFP's Notes and Bonds Payable in the preceding table of borrowings.

AIG Funding

AIG Funding, Inc. (AIG Funding) issues commercial paper that is guaranteed by AIG in order to help fulfill the short-term cash requirements of AIG and its subsidiaries. The issuance of AIG Funding's commercial paper, including the guarantee by AIG, is subject to the approval of AIG's Board of Directors or the Finance Committee of the Board if it exceeds certain pre-approved limits.

As backup for the commercial paper program and for other general corporate purposes, AIG and AIG Funding maintain revolving credit facilities, which, as of September 30, 2007, had an aggregate of \$9.2 billion available to be drawn and which are summarized below under Revolving Credit Facilities.

ILFC

ILFC fulfills its short-term cash requirements through operating cash flows and the issuance of commercial paper. The issuance of commercial paper is subject to the approval of ILFC's Board of Directors and is not guaranteed by AIG. ILFC maintains syndicated revolving credit facilities which, as of September 30, 2007, totaled \$6.5 billion and which are summarized below under Revolving Credit Facilities. These facilities are used as back up for ILFC's maturing debt and other obligations.

As a well-known seasoned issuer, ILFC has filed an automatic shelf registration statement with the SEC allowing ILFC immediate access to the U.S. public debt markets. At September 30, 2007, \$4.65 billion of debt securities had been issued under this registration statement and \$5.89 billion had been issued under a prior registration statement. In addition, ILFC has a Euro medium term note program for \$7.0 billion, under which \$4.28 billion in notes were outstanding at September 30, 2007. Notes issued under the Euro medium term note program are included in ILFC notes and bonds payable in the preceding table of borrowings. The cumulative foreign exchange adjustment loss for the foreign currency denominated debt was \$1.1 billion at September 30, 2007 and \$733 million at December 31, 2006. ILFC has substantially eliminated the currency exposure arising from foreign currency denominated notes by economically hedging

the portion of the note exposure not already offset by Euro-denominated operating lease payments.

ILFC had a \$4.3 billion Export Credit Facility for use in connection with the purchase of approximately 75 aircraft delivered through 2001. This facility was guaranteed by various European Export Credit Agencies. The interest rate varies from 5.75 percent to 5.90 percent on these amortizing ten-year borrowings depending on the delivery date of the aircraft. At September 30, 2007, ILFC had \$748 million outstanding under this facility. The debt is collateralized by a pledge of the shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

In May 2004, ILFC entered into a similarly structured Export Credit Facility for up to a maximum of \$2.64 billion for Airbus aircraft to be delivered through May 31, 2005. The facility was subsequently increased to \$3.64 billion and extended to include aircraft to be delivered through May 31, 2008. The facility becomes available as the various European Export Credit Agencies provide their guarantees for aircraft based on a nine-month forward-looking calendar, and the interest rate is determined through a bid process. At September 30, 2007, ILFC had \$1.9 billion outstanding under this facility. Borrowings with respect to these facilities are included in ILFC's notes and bonds payable in the preceding table of borrowings. The debt is collateralized by a pledge of shares of a subsidiary of ILFC, which holds title to the aircraft financed under the facility.

From time to time, ILFC enters into funded financing agreements. As of September 30, 2007, ILFC had a total of \$1.1 billion outstanding, which has varying maturities through February 2012. The interest rates are LIBOR-based, with spreads ranging from 0.30 percent to 1.625 percent.

The proceeds of ILFC's debt financing are primarily used to purchase flight equipment, including progress payments during the construction phase. The primary sources for the repayment of this debt and the interest expense thereon are the cash flow from operations, proceeds from the sale of flight equipment and the rollover and refinancing of the prior debt. AIG does not guarantee the debt obligations of ILFC. See also Operating Review – Financial Services Operations and Liquidity herein.

AGF

AGF fulfills most of its short-term cash borrowing requirements through the issuance of commercial paper. The issuance of commercial paper is subject to the approval of AGF's Board of Directors and is not guaranteed by AIG. AGF maintains committed syndicated revolving credit facilities which, as of September 30, 2007, totaled \$4.75 billion and

which are summarized below under Revolving Credit Facilities. The facilities can be used for general corporate purposes and to provide backup for AGF's commercial paper programs.

As of September 30, 2007, notes and bonds aggregating \$19.01 billion were outstanding with maturity dates ranging from 2007 to 2031 at interest rates ranging from 1.94 percent to 8.45 percent. To the extent deemed appropriate, AGF may enter into swap transactions to manage its effective borrowing rates with respect to these notes and bonds. As a well-known seasoned issuer, AGF filed an automatic shelf registration statement with the SEC allowing AGF immediate access to the U.S. public debt markets. At September 30, 2007, AGF had remaining corporate authorization to issue up to \$10.8 billion of debt securities under its shelf registration statements.

AGF's funding sources include a medium term note program, private placement debt, retail note issuances, bank financing and securitizations of finance receivables that AGF accounts for as on-balance-sheet secured financings. In addition, AGF has become an established issuer of long-term debt in the international capital markets.

In addition to debt refinancing activities, proceeds from the collection of finance receivables are used to fund cash needs including the payment of principal and interest on AGF's debt. AIG does not guarantee any of the debt obligations of AGF. See also Operating Review – Financial Services Operations and Liquidity herein.

AIGCFG

AIGCFG has a variety of funding mechanisms for its various markets, including retail and wholesale deposits, short-term and long-term bank loans, securitizations and intercompany subordinated debt. AIG Credit Card Company (Taiwan), a consumer finance business in Taiwan, and AIG Retail Bank PLC, a full service consumer bank in Thailand, have issued commercial paper for the funding of their respective operations. AIG does not guarantee any borrowings for AIGCFG businesses, including this commercial paper.

Revolving Credit Facilities

AIG, ILFC and AGF maintain committed, unsecured revolving credit facilities listed on the table below in order to support their respective commercial paper programs and for general corporate purposes. AIG, ILFC and AGF expect to replace or extend these credit facilities on or prior to their expiration. Some of the facilities, as noted below, contain a "term-out option" allowing for the conversion by the

borrower of any outstanding loans at expiration into one-year term loans.

As of September 30, 2007 (in millions)

Facility	Size	Borrower(s)	Available Amount	Expiration	One-Year Term-Out Option
AIG:

Total AGF	\$ 4,750		\$4,750		

(a) Guaranteed by AIG.

(b) This facility can be drawn in the form of loans or letters of credit. All drawn amounts shown above are in the form of letters of credit.

(c) Subsidiaries of AIG are the lenders on this facility.

(d) American General Finance, Inc. is an eligible borrower for up to \$400 million only.

Credit Ratings

The cost and availability of unsecured financing for AIG and its subsidiaries are generally dependent on their short-term and long-term debt ratings. The following table presents the credit ratings of AIG and certain of its subsidiaries as of October 31, 2007. In parentheses, following the initial

occurrence in the table of each rating, is an indication of that rating's relative rank within the agency's rating categories. That ranking refers only to the generic or major rating category and not to the modifiers appended to the rating by the rating agencies to denote relative position within such generic or major category.

	Short-term Debt			Senior Long-term Debt		
	Moody's	S&P	Fitch	Moody's ^(a)	S&P ^(b)	Fitch ^(c)
AIG	P-1 (1st of 3)	A-1+ (1st of 6)	F1+ (1st of 5)	Aa2 (2nd of 9)	AA (2nd of 8)	AA (2nd of 9)
AIG Financial Products Corp. ^(d)	P-1	A-1+	—	Aa2	AA	—
AIG Funding, Inc. ^(d)	P-1	A-1+	F1+	—	—	—
ILFC	P-1	A-1+	F1 (1st of 5)	A1 (3rd of 9)	AA ^{-(e)} (2nd of 8)	A+ (3rd of 9)
American General Finance Corporation	P-1	A-1 (1st of 6)	F1	A1	A+ (3rd of 8)	A+
American General Finance, Inc.	P-1	A-1	F1	—	—	A+

(a) Moody's Investors Service (Moody's). Moody's appends numerical modifiers 1, 2 and 3 to the generic rating categories to show relative position within rating categories.

(b) Standard & Poor's, a division of the McGraw-Hill Companies (S&P). S&P ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(c) Fitch Ratings (Fitch). Fitch ratings may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

(d) AIG guarantees all obligations of AIG Financial Products Corp. and AIG Funding, Inc.

(e) Negative rating outlook. A negative outlook by S&P indicates that a rating may be lowered, but is not necessarily a precursor of a ratings change. The outlook on all other credit ratings in the table is stable.

These credit ratings are current opinions of the rating agencies. As such, they may be changed, suspended or withdrawn at any time by the rating agencies as a result of changes in, or unavailability of, information or based on other circumstances. Ratings may also be withdrawn at AIG management's request. This discussion of ratings is not a complete list of ratings of AIG and its subsidiaries.

"Rating triggers" have been defined by one independent rating agency to include clauses or agreements the outcome of which depends upon the level of ratings maintained by one or more rating agencies. "Ratings triggers" generally relate to events which (i) could result in the termination or limitation of credit availability, or require accelerated repayment, (ii) could result in the termination of business contracts or (iii) could require a company to post collateral for the benefit of counterparties.

AIG believes that any of its own or its subsidiaries' contractual obligations that are subject to "ratings triggers" or financial covenants relating to "ratings triggers" would not have a material adverse effect on its financial condition or

liquidity. Ratings downgrades could also trigger the application of termination provisions in certain of AIG's contracts, principally agreements entered into by AIGFP and assumed reinsurance contracts entered into by Transatlantic.

It is estimated that, as of the close of business on October 31, 2007, based on AIGFP's outstanding municipal GIAs and financial derivatives transactions as of such date, a downgrade of AIG's long-term senior debt ratings to 'Aa3' by Moody's or 'AA-' by S&P would permit counterparties to call for approximately \$830 million of collateral. Further, additional downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIGFP manages its liquidity. The actual amount of additional collateral that AIGFP would be required to post to counterparties in the event of such downgrades depends on market conditions, the fair value of the outstanding affected transactions and other factors prevailing at the time of the downgrade. Additional obligations to post collateral would increase the demand on AIGFP's liquidity.

Contractual Obligations and Other Commercial Commitments**The maturity schedule of AIG's contractual obligations at September 30, 2007 was as follows:**

<i>(in millions)</i>	Total Payments	Payments due by Period			
		Less Than One Year	1-3 Years	3 ⁽⁺⁾ -5 Years	Over Five Years
Borrowings ^(a)	\$152,135	\$ 42,513	\$ 34,762	\$ 31,874	\$ 42,986
Interest payments on borrowings	83,122	5,121	10,640	6,833	60,528
Loss reserves ^(b)	83,608	22,992	25,500	12,124	22,992
Insurance and investment contract liabilities ^(c)	620,375	29,495	35,992	41,232	513,656
GIC liabilities ^(d)	31,708	5,895	12,810	3,603	9,400
Aircraft purchase commitments	20,995	840	6,765	2,690	10,700
Total	\$991,943	\$106,856	\$126,469	\$ 98,356	\$660,262

(a) Excludes commercial paper and borrowings incurred by consolidated investments and includes hybrid financial instrument liabilities recorded at fair value.

(b) Represents future loss and loss adjustment expense payments estimated based on historical loss development payment patterns.

(c) Insurance and investment contract liabilities include various investment-type products with contractually scheduled maturities, including periodic payments of a term certain nature. Insurance and investment contract liabilities also include benefit and claim liabilities, of which a significant portion represents policies and contracts that do not have stated contractual maturity dates and may not result in any future payment obligations. For these policies and contracts (i) AIG is currently not making payments until the occurrence of an insurable event, such as death or disability, (ii) payments are conditional on survivorship, or (iii) payment may occur due to a surrender or other non-scheduled event out of AIG's control. AIG has made significant assumptions to determine the estimated undiscounted cash flows of these contractual policy benefits, which assumptions include mortality, morbidity, future lapse rates, expenses, investment returns and interest crediting rates, offset by expected future deposits and premium on in-force policies. Due to the significance of the assumptions used, the amounts presented could be materially different from actual required payments. The amounts presented in this table are undiscounted and therefore exceed the future policy benefits and policyholder contract deposits included in the balance sheet.

(d) Represents guaranteed maturities under GICs.

The maturity schedule of other commercial commitments of AIG and its consolidated subsidiaries at September 30, 2007 was as follows:

<i>(in millions)</i>	Total Amounts Committed	Amount of Commitment Expiration			
		Less Than One Year	1-3 Years	3 ⁽⁺⁾ -5 Years	Over Five Years
Guarantees:					
Liquidity facilities ^(a)	\$ 4,120	\$ 181	\$ 374	\$1,901	\$ 1,664
Standby letters of credit	1,727	1,466	68	37	156
Construction guarantees ^(b)	745	—	—	—	745
Guarantees of indebtedness	1,089	46	91	532	420
All other guarantees	662	65	58	64	475
Commitments:					
Investment commitments ^(c)	5,983	1,290	2,842	1,587	264
Commitments to extent credit	907	359	261	257	30
Securities lending commitments	84	47	37	—	—
Letters of credit	1,278	983	27	122	146
Other commercial commitments ^{(d)(e)}	17,963	7,659	3,716	166	6,422
Total	\$34,558	\$12,096	\$7,474	\$4,666	\$10,322

(a) Primarily liquidity facilities provided in connection with certain municipal swap transactions and collateralized bond obligations.

(b) Primarily AIG SunAmerica construction guarantees connected to affordable housing investments.

(c) Includes commitments to invest in limited partnerships, private equity, hedge funds and mutual funds and commitments to purchase and develop real estate in the U.S. and abroad.

(d) Excludes commitments with respect to pension plans. The annual pension contribution for 2007 is expected to be approximately \$95 million for U.S. and non-U.S. plans.

(e) Includes options to acquire aircraft.

Shareholders' Equity**AIG's consolidated shareholders' equity increased during the first nine months of 2007 as follows:**

<i>(in millions)</i>	September 30, 2007
Beginning of year	\$101,677
Net income	11,492
Unrealized appreciation (depreciation) of investments, net of tax	(3,165)
Cumulative translation adjustment, net of tax	216
Dividends to shareholders	(1,455)
Payments advanced to purchase shares	(1,275)
Share repurchase	(3,741)
Other*	318
End of period	\$104,067

* Reflects the effects of employee stock transactions and cumulative effect of accounting changes.

AIG has in the past reinvested most of its unrestricted earnings in its operations and believes such continued reinvestment in the future will be adequate to meet any foreseeable capital needs. However, AIG may choose from time to time to raise additional funds through the issuance of additional securities.

In February 2007, AIG's Board of Directors adopted a new dividend policy, which took effect with the dividend declared in the second quarter of 2007, providing that under ordinary circumstances, AIG's plan will be to increase its common stock dividend by approximately 20 percent annually. The payment of any dividend, however, is at the discretion of AIG's Board of Directors, and the future payment of dividends will depend on various factors, including the performance of AIG's businesses, AIG's consolidated financial position, results of operations and liquidity and the existence of investment opportunities.

Share Repurchases

From time to time, AIG may buy shares of its common stock for general corporate purposes, including to satisfy its obligations under various employee benefit plans. In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. In March 2007, AIG entered into a \$3 billion structured share repurchase arrangement and entered into additional \$1 billion structured share repurchase arrangements in each of May and September 2007. A total of 55,103,845 shares were repurchased during the first nine months of 2007. The portion of the payments advanced by AIG under the structured share repurchase arrangements that had not yet been utilized to repurchase shares at September 30, 2007, amounting to \$1.28 billion, has been recorded as a

component of shareholders' equity under the caption, Payments advanced to purchase shares. Purchases have continued subsequent to September 30, 2007, with an additional 13,964,098 shares purchased from October 1 through November 5, 2007. All shares repurchased are recorded as treasury stock at cost.

Liquidity

AIG manages liquidity at both the subsidiary and parent company levels. At September 30, 2007, AIG's consolidated invested assets, primarily held by its subsidiaries, included \$41.2 billion in cash and short-term investments. Consolidated net cash provided from operating activities in the first nine months of 2007 amounted to \$27.1 billion. At both the subsidiary and parent company level, liquidity management activities are conducted in a manner to preserve and enhance funding stability, flexibility, and diversity through the full range of potential operating environments and market conditions. AIG's primary sources of cash flow are dividends and other payments from its regulated and unregulated subsidiaries, as well as issuances of debt securities. Primary uses of cash flow are for debt service, subsidiary funding, shareholder dividend payments and common stock repurchases. As a result of market disruption in the credit markets during the third quarter of 2007, AIG took prudent steps to enhance the liquidity of its portfolios. Management believes that AIG's liquid assets, cash provided by operations and access to the capital markets will enable it to meet its anticipated cash requirements, including the funding of increased dividends under AIG's current dividend policy and repurchases of common stock.

In the first nine months of 2007, AIG parent collected \$2.6 billion in dividends and other payments from subsidiaries, principally from DBG companies, issued \$6.2 billion of debt securities and retired \$765 million of debt, excluding MIP and Series AIGFP debt. AIG parent also advanced \$5 billion for structured share repurchase arrangements. AIG parent made interest payments totaling \$376 million, made \$1.56 billion in capital contributions to subsidiaries, and paid \$1.41 billion in dividends to shareholders in the first nine months of 2007.

AIG parent funds its short-term working capital needs through commercial paper issued by AIG Funding. As of September 30, 2007, AIG Funding had \$5.8 billion of commercial paper outstanding with an average maturity of 28 days. As additional liquidity, AIG parent and AIG Funding maintain revolving credit facilities that, as of September 30, 2007, had an aggregate of \$9.2 billion available to be drawn, which are summarized above under Revolving Credit Facilities.

Invested Assets

AIG's investment strategy is to invest primarily in high quality securities while maintaining diversification to avoid significant exposure to issuer, industry and/or country concentrations.

The following tables summarize the composition of AIG's invested assets by segment.

<i>(in millions)</i>	General Insurance	Life Insurance & Retirement Services	Financial Services	Asset Management	Other	Total

* At December 31, 2006, approximately 68 percent and 32 percent of invested assets were held in domestic and foreign investments, respectively.

Investments in Residential Mortgage-Backed Securities and CDOs

As part of its strategy to diversify its investments, AIG invests in various types of securities, including residential mortgage-backed securities (RMBS) and CDOs. At September 30, 2007, AIG's investment portfolio included such securities with an amortized cost of \$96.8 billion and an estimated fair value of \$94.4 billion. The gross unrealized gains and gross unrealized losses related to these investments were \$333 million and \$2.7 billion, respectively, at September 30, 2007.

AIG's insurance operations held investments in RMBS with an estimated fair value of \$91 billion at September 30, 2007, or approximately 10 percent of AIG's total invested assets. In addition, AIGFP held investments totaling \$3.3 billion in CDOs which include some level of subprime exposure. AIG's RMBS investments are predominantly in highly-rated tranches that contain substantial protection features through collateral

subordination. At September 30, 2007, approximately 91 percent of these investments were rated AAA and approximately 7 percent were rated AA by one or more of the principal rating agencies. AIG's investments rated BBB or below totaled approximately \$500 million, or less than 1 percent of AIG's total invested assets at September 30, 2007. As of October 31, 2007, approximately \$598 million of AIG's RMBS backed primarily by subprime collateral had been downgraded as a result of rating agency actions in 2007, approximately \$236 million of such investments had been upgraded, \$70 million in the third quarter, and approximately \$819 million was on watch for downgrade and approximately \$30 million on watch for upgrade. AIG currently intends to hold these securities to full recovery and/or full payment of principal and interest, and therefore expects that any market effect will result in only a temporary adjustment to shareholders' equity.

AIG's underwriting practices for investing in RMBS, other asset-backed securities and CDOs takes into consideration the quality of the originator, the manager, the servicer, security credit ratings, underlying characteristics of the mortgages, borrower characteristics, and the level of credit enhancement in the transaction. AIG's strategy is typically to invest in securities rated AA or better and create diversification across multiple underlying asset classes.

Securities lending operations

At September 30, 2007, AIG's securities lending payables totaled \$88.4 billion, \$14.6 billion of which was one-day tenor, with the balance maturing within the next six months. Collateral held for this program at September 30, 2007 included interest bearing cash equivalents with overnight maturities of \$17.4 billion.

Other-than-temporary impairments

As a result of AIG's periodic evaluation of its securities for other-than-temporary impairments in value, AIG recorded, in net realized capital gains (losses), other-than-temporary impairment pre-tax losses of \$529 million and \$170 million in the three-month periods ended September 30, 2007 and 2006, respectively, and \$1.4 billion and \$766 million in the nine-month periods ended September 30, 2007 and 2006, respectively.

The principal causes of the other-than-temporary impairment losses in the three and nine-month periods ended September 30, 2007 were as follows:

Three months ended September 30, 2007

- Securities which AIG no longer intends to hold until they have fully recovered their carrying value, totaling \$250 million.
- Impairments of \$147 million related to certain structured securities, the carrying value of which is based on an estimate of the security's future cash flows

pursuant to the requirements of EITF No. 99-20, "Recognition of Interest Income and Impairment on Purchased and Retained Beneficial Interests in Securitized Financial Assets" (EITF No. 99-20).

- Issuer-specific events totaling \$104 million and equity securities and partnership investments of \$1 million in an unrealized loss position for a continuous 12-month period.
- A decline in value of U.S. dollar bonds held by AIG's Foreign Life operations totaling \$27 million, due to the depreciation of the U.S. dollar against the local currency.

Nine months ended September 30, 2007

- Securities which AIG no longer intends to hold until they have fully recovered their carrying value, totaling \$621 million.
- A decline in value of U.S. dollar bonds held by AIG's Foreign Life operations totaling \$333 million, due to the depreciation of the U.S. dollar against the local currency.
- Issuer-specific events totaling \$131 million and equity securities and partnership investments of \$148 million in an unrealized loss position for a continuous 12-month period.
- Impairments of \$159 million related to certain structured securities, the carrying value of which is based on an estimate of the security's future cash flows pursuant to the requirements of EITF No. 99-20.

No impairment charge with respect to any one single credit was significant to AIG's consolidated financial condition or results of operations, and no individual impairment loss exceeded 1.0 percent of consolidated net income for the first nine months of 2007.

An aging of the pre-tax unrealized losses of fixed maturity and equity securities, distributed as a percentage of cost relative to unrealized loss (the extent by which the fair value is less than amortized cost or cost), including the number of respective items, was as follows at September 30, 2007:

Aging (dollars in millions)	Less than or equal to 20% of Cost			Greater than 20% to 50% of Cost			Greater than 50% of Cost			Total		
	Cost ^(a)	Unrealized Loss	Items	Cost ^(a)	Unrealized Loss	Items	Cost ^(a)	Unrealized Loss	Items	Cost ^(a)	Unrealized Loss ^(b)	Items

(a) For bonds, represents amortized cost.

(b) The effect on net income of unrealized losses after taxes will be mitigated upon realization because certain realized losses will be charged to participating policyholder accounts, or realization will result in current decreases in the amortization of certain DAC.

(c) Beginning in the third quarter of 2007, includes securities lending collateral.

Unrealized gains and losses

At September 30, 2007, the fair value of AIG's fixed maturity and equity securities aggregated \$552.9 billion. At September 30, 2007, aggregate pre-tax unrealized gains for fixed maturity and equity securities were \$17.6 billion (\$11.4 billion after tax).

At September 30, 2007, the aggregate pre-tax unrealized losses of fixed maturity and equity securities were \$9.3 billion (\$6.07 billion after tax). Additional information about these securities is as follows:

- These securities are trading, in the aggregate, at approximately 97 percent of their current amortized cost.
- Less than 1 percent of these securities are trading at a value which is less than 20 percent of its current cost, or amortized cost.
- Less than 4 percent of the fixed income securities have issuer credit ratings which are below investment grade.

AIG did not consider these securities in an unrealized loss position to be other-than-temporarily impaired at September 30, 2007, as management has the intent and ability to hold these investments until they fully recover in value.

At September 30, 2007, unrealized losses for fixed maturity securities and equity securities did not reflect any significant industry concentrations.

For the three months ended September 30, 2007, unrealized losses related to investment grade bonds increased \$2.9 billion (\$1.9 billion after tax), reflecting the widening of credit spreads, partially offset by the effects of a decline in risk free interest rates.

The amortized cost of fixed maturity securities available for sale in an unrealized loss position at September 30, 2007, by contractual maturity, is shown below:

(in millions)	Amortized Cost
Due in one year or less	\$ 8,291
Due after one year through five years	48,310
Due after five years through ten years	78,136
Due after ten years	146,541
Total	\$281,278

For the nine months ended September 30, 2007, the pre-tax realized losses incurred with respect to the sale of fixed maturities and equity securities were \$931 million. The aggregate fair value of securities sold was \$32.0 billion, which was approximately 96 percent of amortized cost. The average period of time that securities sold at a loss during the nine months ended September 30, 2007 were trading

continuously at a price below book value was approximately five months.

Risk Management

For a complete discussion of AIG's risk management program, see Management's Discussion and Analysis of Financial Condition and Results of Operations in the 2006 Annual Report on Form 10-K.

Insurance, Asset Management and Non-Trading Financial Services VaR

AIG performs one comprehensive Value at Risk (VaR) analysis across all of its non-trading businesses, and a

separate VaR analysis for its trading business at AIGFP. The comprehensive VaR is categorized by AIG business segment (General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management) and also by market risk factor (interest rate, currency and equity).

AIG calculated the VaR with respect to net fair values as of September 30, 2007 and December 31, 2006. The VaR number represents the maximum potential loss as of those dates that could be incurred with a 95 percent confidence and a one-month holding period.

The following table presents the period-end, average, high and low VaRs on a diversified basis and of each component of market risk for AIG's non-trading businesses. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

<i>(in millions)</i>	2007				2006

Equity	13	10	13	8	8	9	13	8

Increased equity investment allocation in the Life Insurance & Retirement Services and General Insurance segments, combined with higher volatility in equity markets, contributed to the growth in AIG's total Non-Trading VaR during the first nine months of 2007. Interest rate volatilities continued to moderate in many markets.

Capital Markets Trading VaR

AIGFP's policy is to maintain a conservative market risk profile and minimize risks in interest rates, equities, commodities and foreign exchange. In addition, AIGFP's primary market exposures in option implied volatilities, correlations and basis risks are closely managed.

AIGFP's minimal reliance on market risk driven revenue is reflected in its VaR. Because the market risk with respect to securities available for sale, at market, is substantially hedged, segregation of the financial instruments into trading and other than trading was not deemed necessary.

AIGFP reports its VaR using a 95 percent confidence interval and a one-day holding period.

The following table presents the period-end, average, high, and low VaRs (based on daily observations) on a diversified basis and of each component of market risk for AIG's Capital Markets operations. The diversified VaR is usually smaller than the sum of its components due to correlation effects.

Catastrophe Exposures

The nature of AIG's business exposes it to various catastrophic events in which multiple losses across multiple lines of business can occur in any calendar year. In order to control this exposure, AIG uses a combination of techniques, including setting aggregate limits in key business units, monitoring and modeling accumulated exposures, and purchasing catastrophe reinsurance to supplement its other reinsurance protections.

Natural disasters such as hurricanes, earthquakes and other catastrophes have the potential to adversely affect AIG's operating results. Other risks, such as an outbreak of a pandemic disease, such as the Avian Influenza A Virus (H5N1), could adversely affect AIG's business and operating results to an extent that may be only partially offset by reinsurance programs.

AIG evaluates catastrophic events and assesses the probability of occurrence and magnitude of catastrophic events through the use of industry recognized models, among other techniques. AIG supplements these models by periodically monitoring the exposure risks of AIG's worldwide General Insurance operations and adjusting such models accordingly. Following is an overview of modeled losses associated with the more significant natural perils, which includes exposures for DBG, Personal Lines, Foreign General (other than Ascot), The Hartford Steam Boiler Inspection and Insurance Company and 21st Century. Transatlantic and Ascot utilize a different model, and their combined results are presented separately below. Significant life and A&H exposures have been added to these results as well. The modeled results assume that all reinsurers fulfill their obligations to AIG in accordance with their terms.

It is important to recognize that there is no standard methodology to project the possible losses from total property and workers compensation exposures. Further,

there are no industry standard assumptions to be utilized in projecting these losses. The use of different methodologies and assumptions could materially change the projected losses. Therefore, these modeled losses may not be comparable to estimates made by other companies.

These estimates are inherently uncertain and may not reflect AIG's maximum exposures to these events. It is highly likely that AIG's losses will vary, perhaps significantly, from these estimates.

AIG has revised the catastrophe exposure disclosures presented below from that presented in the 2006 Annual Report on Form 10-K to include significant life and A&H exposures to natural perils as well as to update the domestic property exposures to reflect more recent data. The modeled results provided in the table below were based on the aggregate exceedence probability (AEP) losses which represent total property, workers compensation, life, and accident and health losses that may occur in any single year from one or more natural events. The life and A&H data include exposures for United States, Japan, and Taiwan earthquakes. These represent the largest share of life and A&H exposures to earthquake. A&H losses were modeled using December 2006 data, and life losses were modeled using March 2006 data. The updated property exposures were generally modeled with exposure data as of year-end 2006. Lexington commercial lines exposure, which represents the largest share of the modeled losses, was based on data as of April 2007. All reinsurance program structures, including both domestic and international structures, have also been updated. The values provided were based on 100-year return period losses, which have a one percent likelihood of being exceeded in any single year. Thus, the model projects that there is a one percent probability that AIG could incur in any year losses in excess of the modeled amounts for these perils.

<i>(in millions)</i>	Gross	Net of Reinsurance	Net After Income Tax	% of Consolidated Shareholders' Equity at September 30, 2007
Natural Peril:				
Earthquake	\$4,970	\$2,705	\$1,758	1.7%
Tropical Cyclone*	\$5,546	\$2,980	\$1,937	1.9%

* Includes hurricanes, typhoons and other wind-related events.

The combined earthquake and tropical cyclone 100-year return period modeled losses for Ascot and Transatlantic together are estimated to be \$1.1 billion, on a gross basis, \$761 million, net of reinsurance, and \$494 million, net after income taxes, or 0.5 percent of total shareholders' equity at September 30, 2007.

In addition, AIG evaluates potential single event earthquake and hurricane losses that may be incurred. The single events utilized are a subset of potential events identified and utilized by Lloyd's⁽¹⁾ and referred to as Realistic Disaster Scenarios (RDSs). The purpose of this analysis is to utilize these RDSs to provide a reference frame and place into context the model results. However, it is important to note that the specific events used for this analysis do not necessarily represent the worst case loss that AIG could incur from this type of an event in these regions. The losses associated with the RDSs are included in the table below.

Single event modeled property and workers compensation losses to AIG's worldwide portfolio of risk for key geographic areas are set forth below. Gross values represent AIG's liability after the application of policy limits and deductibles, and net values represent losses after reinsurance is applied.

<i>(in millions)</i>	Gross	Net of Reinsurance
Natural Peril:		
San Francisco Earthquake	\$5,562	\$3,012
Miami Hurricane	\$5,375	\$2,651
Northeast Hurricane	\$4,755	\$2,779
Los Angeles Earthquake	\$4,750	\$2,614
Gulf Coast Hurricane	\$3,553	\$1,797
Japanese Earthquake	\$ 843	\$ 366
European Windstorm	\$ 239	\$ 87
Japanese Typhoon	\$ 185	\$ 149

(1) Lloyd's Realistic Disaster Scenarios, Scenario Specifications, April 2006.

The specific international RDS events do not necessarily correspond to AIG's international property exposures. As a result, AIG runs its own simulations where property statistical return period losses associated with the written exposure specific to AIG provide the basis for monitoring risk.

Based on these simulations, the 100-year return period loss for Japanese Earthquake is \$296 million gross, and \$120 million net, the 100-year return period loss for European Windstorm is \$269 million gross, and \$80 million net, and the 100-year return period loss for Japanese Typhoon is \$306 million gross, and \$252 million net.

Recent market conditions in the U.S. property business have supported growth in this line of business. Consequently, gross modeled catastrophe losses have increased. Associated net exposure has been carefully monitored and controlled through the strategic placement of reinsurance.

ACTUAL RESULTS IN ANY PERIOD ARE LIKELY TO VARY, PERHAPS MATERIALLY, FROM THE MODELED SCENARIOS, AND THE OCCURRENCE OF ONE OR MORE SEVERE EVENTS COULD HAVE A MATERIAL ADVERSE EFFECT ON AIG'S CONSOLIDATED FINANCIAL CONDITION, RESULTS OF OPERATIONS AND LIQUIDITY.

ITEM 3. Quantitative and Qualitative Disclosures About Market Risk

Included in Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations.

ITEM 4. Controls and Procedures

In connection with the preparation of this Quarterly Report on Form 10-Q, an evaluation was carried out by AIG's management, with the participation of AIG's Chief Executive Officer and Chief Financial Officer, of the effectiveness of AIG's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 (Exchange Act)). Disclosure controls and procedures are designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms and that such information is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial Officer, to allow timely decisions

regarding required disclosures. Based on its evaluation, and in light of the previously identified material weakness in internal control over financial reporting, as of December 31, 2006, relating to controls over income tax accounting described in the 2006 Annual Report on Form 10-K, AIG's Chief Executive Officer and Chief Financial Officer concluded that, as of September 30, 2007, AIG's disclosure controls and procedures were ineffective. In addition, there has been no change in AIG's internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) that occurred during the quarter ended September 30, 2007 that has materially affected, or is reasonably likely to materially affect, AIG's internal control over financial reporting.

Part II – OTHER INFORMATION

ITEM 2. Unregistered Sales of Equity Securities and Use of Proceeds

The table below provides information with respect to purchases of AIG Common stock during the three months ended September 30, 2007.

Period	Total Number of Shares Purchased⁽¹⁾	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares that May Yet Be Purchased Under the Plans or Programs at End of Month⁽²⁾
July 1 - 31	15,956,939	\$68.50	15,956,939	
August 1 - 31	9,464,750	67.10	9,464,750	
September 1 - 30	5,190,195	64.09	5,190,195	
Total	30,611,884	\$67.32	30,611,884	

(1) Reflects date of delivery. Does not include 42,867 shares delivered or attested to in satisfaction of the exercise price by holders of AIG employee stock options exercised during the three months ended September 30, 2007.

(2) In February 2007, AIG's Board of Directors increased AIG's share repurchase program by authorizing the repurchase of shares with an aggregate purchase price of \$8 billion. A balance of \$4.3 billion remained for purchases under the program as of September 30, 2007, although \$1.28 billion of that amount has been advanced by AIG to purchase shares under the program. The purchase program has no set expiration or termination date.

ITEM 6. Exhibits

Secondary Ratio				
Interest credited to GIC and GIA policy and contract holders	\$(1,949)	\$(1,266)	\$(4,796)	\$(3,453)
Total fixed charges excluding interest credited to GIC and GIA policy and contract holders	\$ 1,204	\$ 1,040	\$ 3,471	\$ 2,849
Secondary ratio of earnings to fixed charges	5.02	7.01	5.97	6.67

* The proportion deemed representative of the interest factor.

The secondary ratio is disclosed for the convenience of fixed income investors and the rating agencies that serve them and is more comparable to the ratios disclosed by all issuers of fixed income securities. The secondary ratio removes interest credited to guaranteed investment contract (GIC) policyholders and guaranteed investment agreement (GIA) contractholders. Such interest expenses are also removed from income before income taxes, minority interest and cumulative effect of an accounting change used in this

calculation. GICs and GIAs are entered into by AIG's insurance subsidiaries, principally Sun America Life Insurance Company and AIG Financial Products Corp. and its subsidiaries, respectively. The proceeds from GICs and GIAs are invested in a diversified portfolio of securities, primarily investment grade bonds. The assets acquired yield rates greater than the rates on the related policyholders obligation or agreement, with the intent of earning operating income from the spread.

CERTIFICATIONS

I, Martin J. Sullivan, certify that:

1. I have reviewed this Quarterly Report on Form 10-Q of American International Group, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

* Except for the information provided in Part I under the heading "Directors and Executive Officers of AIG," Part III Items 10, 11, 12, 13 and 14 are included in AIG's Definitive Proxy Statement to be used in connection with AIG's Annual Meeting of Shareholders scheduled to be held on May 14, 2008.

Part I

Item 1. Business

American International Group, Inc. (AIG), a Delaware corporation, is a holding company which, through its subsidiaries, is engaged in a broad range of insurance and insurance-related activities in the United States and abroad. AIG's primary activities include both General Insurance and Life Insurance & Retirement Services operations. Other significant activities include Financial Services and Asset Management. The principal business units in each of AIG's operating segments are as follows*:

General Insurance

American Home Assurance Company (American Home)
National Union Fire Insurance Company of Pittsburgh, Pa. (National Union)
New Hampshire Insurance Company (New Hampshire)
Lexington Insurance Company (Lexington)
The Hartford Steam Boiler Inspection and Insurance Company (HSB)
Transatlantic Reinsurance Company
United Guaranty Residential Insurance Company
American International Underwriters Overseas, Ltd. (AIUO)
AIU Insurance Company (AIUI)

Life Insurance & Retirement Services

Domestic:

American General Life Insurance Company (AIG American General)
American General Life and Accident Insurance Company (AGLA)
The United States Life Insurance Company in the City of New York (USLIFE)
The Variable Annuity Life Insurance Company (VALIC)
AIG Annuity Insurance Company (AIG Annuity)
AIG SunAmerica Life Assurance Company (AIG SunAmerica)

Foreign:

American Life Insurance Company (ALICO)
AIG Star Life Insurance Co., Ltd. (AIG Star Life)
AIG Edison Life Insurance Company (AIG Edison Life)
American International Assurance Company, Limited, together with American International Assurance Company (Bermuda) Limited (AIA)
American International Reinsurance Company Limited (AIRCO)
Nan Shan Life Insurance Company, Ltd. (Nan Shan)
The Philippine American Life and General Insurance Company (Philamlife)

Financial Services

International Lease Finance Corporation (ILFC)
AIG Financial Products Corp. and AIG Trading Group Inc. and their respective subsidiaries (collectively, AIGFP)
American General Finance, Inc. (AGF)
AIG Consumer Finance Group, Inc. (AIGCFG)
Imperial A.I. Credit Companies (A.I. Credit)

Asset Management

AIG SunAmerica Asset Management Corp. (SAAMCo)
AIG Global Asset Management Holdings Corp. and its subsidiaries and affiliated companies (collectively, AIG Investments)
AIG Private Bank Ltd. (AIG Private Bank)
AIG Global Real Estate Investment Corp. (AIG Global Real Estate)

At December 31, 2007, AIG and its subsidiaries had approximately 116,000 employees.

AIG's Internet address for its corporate website is www.aigcorporate.com. AIG makes available free of charge, through the Investor Information section of AIG's corporate website, Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K and Proxy Statements on Schedule 14A and amendments to those reports or statements filed or furnished pursuant to Section 13(a), 14(a) or 15(d) of the Securities Exchange Act of 1934 (the Exchange Act) as soon as reasonably practicable after such materials are electronically filed with, or furnished to, the Securities and Exchange Commission (SEC). AIG also makes available on its corporate website copies of the charters for its Audit, Nominating and Corporate Governance and Compensation and Management Resources Committees, as well as its Corporate Governance Guidelines (which include Director Independence Standards), Director, Executive Officer and Senior Financial Officer Code of Business Conduct and Ethics, Employee Code of Conduct and Related-Party Transactions Approval Policy. Except for the documents specifically incorporated by reference into this Annual Report on Form 10-K, information contained on AIG's website or that can be accessed through its website is not incorporated by reference into this Annual Report on Form 10-K.

Throughout this Annual Report on Form 10-K, AIG presents its operations in the way it believes will be most meaningful, as well as most transparent. Certain of the measurements used by AIG management are "non-GAAP financial measures" under SEC rules and regulations. Statutory underwriting profit (loss) and combined ratios are determined in accordance with accounting principles prescribed by insurance regulatory authorities. For an explanation of why AIG management considers these "non-GAAP measures" useful to investors, see Management's Discussion and Analysis of Financial Condition and Results of Operations.

*For information on AIG's business segments, see Note 2 to Consolidated Financial Statements.

The following table presents the general development of the business of AIG on a consolidated basis, the contributions made to AIG's consolidated revenues and operating income and the assets held, in the periods indicated, by its General Insurance, Life Insurance & Retirement Services, Financial Services and Asset Management operations and Other operations. For additional information, see Item 6. Selected Financial Data, Management's Discussion and Analysis of Financial Condition and Results of Operations and Notes 1 and 2 to Consolidated Financial Statements.

Year-end total assets	1,060,505	979,410	853,048	801,007	675,602

(a) Certain reclassifications have been made to prior period amounts to conform to the current period presentation.

(b) In 2006, includes the effect of out of period adjustments related to the accounting for certain interests in unit investment trusts (UCITS). The effect was an increase of \$490 million in both revenues and operating income for General Insurance and an increase of \$240 million and \$169 million in revenues and operating income, respectively, for Life Insurance & Retirement Services.

(c) Includes current year catastrophe-related losses of \$276 million, \$2.89 billion and \$1.05 billion in 2007, 2005 and 2004, respectively. There were no significant catastrophe-related losses in 2006 or 2003.

(d) Operating income was reduced by fourth quarter charges of \$1.8 billion and \$850 million in 2005 and 2004, respectively, resulting from the annual review of General Insurance loss and loss adjustment reserves. In 2006, 2005 and 2004, changes in estimates for asbestos and environmental reserves were \$198 million, \$873 million and \$850 million, respectively.

(e) Calculated on the basis under which the U.S.-domiciled general insurance companies are required to report such measurements to regulatory authorities.

- (f) In 2007, 2006, 2005, 2004 and 2003, includes other-than-temporary impairment charges of \$2.8 billion, \$641 million, \$425 million, \$441 million and \$1.2 billion. See Management's Discussion and Analysis of Financial Condition and Results of Operations — Invested Assets — Other-than-temporary impairments.
- (g) Includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under Statement of Financial Accounting Standards (FAS) No. 133, "Accounting for Derivative Instruments and Hedging Activities" (FAS 133), including the related foreign exchange gains and losses. In 2007, 2006, 2005, 2004 and 2003, respectively, the effect was \$211 million, \$(1.82) billion, \$2.01 billion, \$(1.22) million and \$(1.01) billion in both revenues and operating income for Capital Markets. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings. These gains (losses) in 2007 include a \$380 million out of period charge to reverse net gains recognized on transfers of available for sale securities among legal entities consolidated within AIGFP. In 2006, includes an out of period charge of \$223 million related to the remediation of the material weakness in internal control over the accounting for certain derivative transactions under FAS 133. In the first quarter of 2007, AIGFP began applying hedge accounting for certain of its interest rate swaps and foreign currency forward contracts hedging its investments and borrowings.
- (h) In 2007, both revenues and operating income (loss) include an unrealized market valuation loss of \$11.5 billion on AIGFP super senior credit default swap portfolio and an other-than-temporary impairment charge of \$643 million on AIGFP's available for sale investment securities. See Management's Discussion and Analysis of Financial Condition and Results of Operations — Invested Assets — Other-than-temporary impairments.
- (i) In 2005, includes \$1.6 billion of regulatory settlement costs as described under Item 3. Legal Proceedings.
- (j) In 2007, 2006, 2005, 2004 and 2003, includes other-than-temporary impairment charges of \$4.7 billion, \$944 million, \$598 million, \$684 million and \$1.5 billion. Also includes gains (losses) from hedging activities that did not qualify for hedge accounting treatment under FAS 133, including the related foreign exchange gains and losses. In 2007, 2006, 2005, 2004 and 2003, respectively, the effect was \$(1.44) billion, \$(1.87) billion, \$2.02 billion, \$385 million and \$(1.50) billion in revenues and \$(1.44) billion, \$(1.87) billion, \$2.02 billion, \$671 million and \$(1.22) billion in operating income. These amounts result primarily from interest rate and foreign currency derivatives that are effective economic hedges of investments and borrowings.
- (k) Represents income before income taxes, minority interest and cumulative effect of accounting changes.

General Insurance Operations

AIG's General Insurance subsidiaries write substantially all lines of commercial property and casualty insurance and various personal lines both domestically and abroad. Domestic General Insurance operations are comprised of the Domestic Brokerage Group (DBG), Reinsurance, Personal Lines and Mortgage Guaranty.

AIG is diversified both in terms of classes of business and geographic locations. In General Insurance, workers compensation business is the largest class of business written and represented approximately 15 percent of net premiums written for the year ended December 31, 2007. During 2007, 10 percent and 7 percent of the direct General Insurance premiums written (gross premiums less return premiums and cancellations, excluding reinsurance assumed and before deducting reinsurance ceded) were written in California and New York, respectively. No other state or foreign country accounted for more than five percent of such premiums.

The majority of AIG's General Insurance business is in the casualty classes, which tend to involve longer periods of time for the reporting and settling of claims. This may increase the risk and uncertainty with respect to AIG's loss reserve development.

DBG

AIG's primary Domestic General Insurance division is DBG. DBG's business in the United States and Canada is conducted through American Home, National Union, Lexington, HSB and certain other General Insurance company subsidiaries of AIG. During 2007, DBG accounted for 51 percent of AIG's General Insurance net premiums written.

DBG writes substantially all classes of business insurance, accepting such business mainly from insurance brokers. This provides DBG the opportunity to select specialized markets and retain underwriting control. Any licensed broker is able to submit business to DBG without the traditional agent-company contractual relationship, but such broker usually has no authority to commit DBG to accept a risk.

In addition to writing substantially all classes of business insurance, including large commercial or industrial property insurance, excess liability, inland marine, environmental, workers compensation and excess and umbrella coverages, DBG offers many specialized forms of insurance such as aviation, accident and health, equipment breakdown, directors and officers liability (D&O), difference-in-conditions, kidnap-ransom, export credit and political risk, and various types of professional errors and omissions coverages. Also included in DBG are the operations of AIG Risk Management, which provides insurance and risk management programs for large corporate customers and is a leading provider of customized structured insurance products, and AIG Environmental, which focuses specifically on providing specialty products to clients with environmental exposures. Lexington writes surplus lines for risks on which conventional insurance companies do not readily provide insurance coverage, either because of complexity or because the coverage does not lend itself to conventional contracts. The AIG Worldsource Division introduces and coordinates AIG's products and services to U.S.-based

multinational clients and foreign corporations doing business in the U.S.

Reinsurance

The subsidiaries of Transatlantic Holdings, Inc. (Transatlantic) offer reinsurance on both a treaty and facultative basis to insurers in the United States and abroad. Transatlantic structures programs for a full range of property and casualty products with an emphasis on specialty risk. Transatlantic is a public company owned 59.0 percent by AIG and therefore is included in AIG's consolidated financial statements.

Personal Lines

AIG's Personal Lines operations provide automobile insurance through aigdirect.com, the newly formed operation resulting from the 2007 combination of AIG Direct and 21st Century Insurance Group (21st Century) operations, and the Agency Auto Division, as well as a broad range of coverages for high net worth individuals through the AIG Private Client Group.

Mortgage Guaranty

The main business of the subsidiaries of United Guaranty Corporation (UGC) is the issuance of residential mortgage guaranty insurance, both domestically and internationally, that covers the first loss for credit defaults on high loan-to-value conventional first-lien mortgages for the purchase or refinance of one to four family residences. UGC subsidiaries also write second-lien and private student loan guaranty insurance.

Foreign General Insurance

AIG's Foreign General Insurance group accepts risks primarily underwritten through American International Underwriters (AIU), a marketing unit consisting of wholly owned agencies and insurance companies. The Foreign General Insurance group also includes business written by AIG's foreign-based insurance subsidiaries. The Foreign General Insurance group uses various marketing methods and multiple distribution channels to write both commercial and consumer lines insurance with certain refinements for local laws, customs and needs. AIU operates in Asia, the Pacific Rim, Europe, the U.K., Africa, the Middle East and Latin America. During 2007, the Foreign General Insurance group accounted for 28 percent of AIG's General Insurance net premiums written.

Discussion and Analysis of Consolidated Net Losses and Loss Expense Reserve Development

The reserve for net losses and loss expenses represents the accumulation of estimates for reported losses (case basis reserves) and provisions for losses incurred but not reported (IBNR), both reduced by applicable reinsurance recoverable and the discount for future investment income, where permitted. Net losses and loss expenses are charged to income as incurred.

Loss reserves established with respect to foreign business are set and monitored in terms of the currency in which payment is expected to be made. Therefore, no assumption is included for

changes in currency rates. See also Note 1(ff) to Consolidated Financial Statements.

Management reviews the adequacy of established loss reserves utilizing a number of analytical reserve development techniques. Through the use of these techniques, management is able to monitor the adequacy of AIG's established reserves and determine appropriate assumptions for inflation. Also, analysis of emerging specific development patterns, such as case reserve redundancies or deficiencies and IBNR emergence, allows management to determine any required adjustments.

The "Analysis of Consolidated Losses and Loss Expense Reserve Development" table presents the development of net losses and loss expense reserves for calendar years 1997 through 2007. Immediately following this table is a second table that presents all data on a basis that excludes asbestos and environmental net losses and loss expense reserve development. The opening reserves held are shown at the top of the table for each year end date. The amount of loss reserve discount included in the opening reserve at each date is shown immediately below the reserves held for each year. The undiscounted reserve at each date is thus the sum of the discount and the reserve held.

The upper half of the table presents the cumulative amounts paid during successive years related to the undiscounted opening loss reserves. For example, in the table that excludes asbestos and environmental losses, with respect to the net losses and loss expense reserve of \$24.83 billion as of December 31, 2000, by the end of 2007 (seven years later) \$33.05 billion had actually been paid in settlement of these net loss reserves. In addition, as reflected in the lower section of the table, the original undiscounted reserve of \$26.12 billion was reestimated to be

\$41.21 billion at December 31, 2007. This increase from the original estimate would generally result from a combination of a number of factors, including reserves being settled for larger amounts than originally estimated. The original estimates will also be increased or decreased as more information becomes known about the individual claims and overall claim frequency and severity patterns. The redundancy (deficiency) depicted in the table, for any particular calendar year, presents the aggregate change in estimates over the period of years subsequent to the calendar year reflected at the top of the respective column heading. For example, the redundancy of \$672 million at December 31, 2007 related to December 31, 2006 net losses and loss expense reserves of \$62.72 billion represents the cumulative amount by which reserves in 2006 and prior years have developed favorably during 2007.

The bottom of each table below presents the remaining undiscounted and discounted net loss reserve for each year. For example, in the table that excludes asbestos and environmental losses, for the 2002 year end, the remaining undiscounted reserves held as of December 31, 2007 are \$13.57 billion, with a corresponding discounted net reserve of \$12.57 billion.

The reserves for net losses and loss expenses with respect to Transatlantic and 21st Century are included only in consolidated net losses and loss expenses commencing with the year ended December 31, 1998, the year they were first consolidated in AIG's financial statements. Reserve development for these operations is included only for 1998 and subsequent periods. Thus, the presentation for 1997 and prior year ends is not fully comparable to that for 1998 and subsequent years in the tables below.

Analysis of Consolidated Losses and Loss Expense Reserve Development

The following table presents for each calendar year the losses and loss expense reserves and the development thereof including those with respect to asbestos and environmental claims. See also Management's Discussion and Analysis of Financial Condition and Results of Operations — Operating Review — General Insurance Operations — Reserve for Losses and Loss Expenses.

Redundancy/(Deficiency)	(5,972)	(10,993)	(17,135)	(21,643)	(22,920)	(19,181)	(14,957)	(8,310)	(1,220)	672	

The reserve for losses and loss expenses as reported in AIG's consolidated balance sheet at December 31, 2007 differs from the total reserve reported in the Annual Statements filed with state insurance departments and, where appropriate, with foreign regulatory authorities. The differences at December 31, 2007 relate primarily to reserves for certain foreign operations not required to be reported in the United States for statutory reporting purposes. Further, statutory practices in the United States require reserves to be shown net of applicable reinsurance recoverable.

The reserve for gross losses and loss expenses is prior to reinsurance and represents the accumulation for reported losses and IBNR. Management reviews the adequacy of established gross loss reserves in the manner previously described for net loss reserves.

For further discussion regarding net reserves for losses and loss expenses, see Management's Discussion and Analysis of Financial Condition and Results of Operations — Operating Review — General Insurance Operations — Reserve for Losses and Loss Expenses.

Life Insurance & Retirement Services Operations

AIG's Life Insurance & Retirement Services operations provide insurance, financial and investment-oriented products throughout the world. Insurance-oriented products consist of individual and group life, payout annuities (including structured settlements), endowment and accident and health policies. Retirement savings products consist generally of fixed and variable annuities.

Foreign Life Insurance & Retirement Services

In its Foreign Life Insurance & Retirement Services businesses, AIG operates principally through ALICO, AIG Star Life, AIG Edison Life, AIA, Nan Shan and Philamlife. ALICO is incorporated in Delaware and all of its business is written outside of the United States. ALICO has operations either directly or through subsidiaries in Europe, including the U.K., Latin America, the Caribbean, the Middle East, South Asia and the Far East, with Japan being the largest territory. ALICO also conducts life insurance business through a joint venture in Brazil. AIA operates primarily in China (including Hong Kong), Singapore, Malaysia, Thailand, Korea, Australia, New Zealand, Vietnam, Indonesia and India. The operations in India are conducted through a joint venture, Tata AIG Life Insurance Company Limited. Nan Shan operates in Taiwan. Philamlife is the largest life insurer in the Philippines. AIG Star Life and AIG Edison Life operate in Japan. Operations in foreign

countries comprised 79 percent of Life Insurance & Retirement Services Premiums and other considerations and 76 percent of Life Insurance & Retirement Services operating income in 2007.

The Foreign Life Insurance & Retirement Services companies have over 285,000 full and part-time agents, as well as independent producers, and sell their products largely to indigenous persons in local and foreign currencies. In addition to the agency outlets, these companies also distribute their products through direct marketing channels, such as mass marketing, and through brokers and other distribution outlets, such as financial institutions.

Domestic Life Insurance & Retirement Services

AIG's principal Domestic Life Insurance & Retirement Services operations include AGLA, AIG American General, AIG Annuity, USLIFE, VALIC and AIG SunAmerica. These companies utilize multiple distribution channels including independent producers, brokerage, career agents and financial institutions to offer life insurance, annuity and accident and health products and services, as well as financial and other investment products. The Domestic Life Insurance & Retirement Services operations comprised 21 percent of total Life Insurance & Retirement Services Premiums and other considerations and 24 percent of Life Insurance & Retirement Services operating income in 2007.

Reinsurance

AIG's General Insurance subsidiaries worldwide operate primarily by underwriting and accepting risks for their direct account and securing reinsurance on that portion of the risk in excess of the limit which they wish to retain. This operating policy differs from that of many insurance companies that will underwrite only up to their net retention limit, thereby requiring the broker or agent to secure commitments from other underwriters for the remainder of the gross risk amount.

Various AIG profit centers, including DBG, AIU and AIG Risk Finance, as well as certain Life Insurance subsidiaries, use AIRCO as a reinsurer for certain of their businesses. In Bermuda, AIRCO discounts reserves attributable to certain classes of business assumed from other AIG subsidiaries.

For a further discussion of reinsurance, see Item 1A. Risk Factors — Reinsurance; Management's Discussion and Analysis of Financial Condition and Results of Operations — Risk Management — Reinsurance; and Note 5 to Consolidated Financial Statements.

Insurance Investment Operations

A significant portion of AIG's General Insurance and Life Insurance & Retirement Services revenues are derived from AIG's insurance investment operations.

The following table summarizes the investment results of the insurance operations:

Years Ended December 31, (in millions)	Annual Average Cash and Invested Assets			Return on Average Cash and Invested Assets ^(b)	Return on Average Invested Assets ^(c)
	Cash (including short-term investments) ^(a)	Invested Assets ^(a)	Total		
General Insurance:					
2007	\$ 5,874	\$117,050	\$122,924	5.0%	5.2%
2006	3,201	102,231	105,432	5.4	5.6
2005	2,450	86,211	88,661	4.5	4.7
2004	2,012	73,338	75,350	4.2	4.4
2003	1,818	59,855	61,673	4.2	4.3
Life Insurance & Retirement Services:					
2007	\$25,926	\$423,473	\$449,669	5.0%	5.3%
2006	13,698	392,348	406,046	4.9	5.1
2005	11,137	356,839	367,976	5.1	5.2
2004	7,737	309,627	317,364	4.9	5.1
2003	4,680	247,608	252,288	5.3	5.4

(a) Including investment income due and accrued and real estate. Also, includes collateral assets invested under the global securities lending program.

(b) Net investment income divided by the annual average sum of cash and invested assets.

(c) Net investment income divided by the annual average invested assets.

AIG's worldwide insurance investment policy places primary emphasis on investments in government and other high quality, fixed income securities in all of its portfolios and, to a lesser extent, investments in high yield bonds, common stocks, real estate, hedge funds and partnerships, in order to enhance returns on policyholders' funds and generate net investment income. The ability to implement this policy is somewhat limited in certain territories as there may be a lack of adequate long-term investments or investment restrictions may be imposed by the local regulatory authorities.

Financial Services Operations

AIG's Financial Services subsidiaries engage in diversified activities including aircraft and equipment leasing, capital markets, consumer finance and insurance premium finance. Together, the Aircraft Leasing, Capital Markets and Consumer Finance operations generate the majority of the revenues produced by the Financial Services operations. A.I. Credit also contributes to Financial Services income principally by providing insurance premium financing for both AIG's policyholders and those of other insurers.

Aircraft Leasing

Aircraft Leasing operations represent the operations of ILFC, which generates its revenues primarily from leasing new and used commercial jet aircraft to foreign and domestic airlines. Revenues also result from the remarketing of commercial jets for ILFC's own account, and remarketing and fleet management services for airlines and financial institutions. See also Note 2 to Consolidated Financial Statements.

Capital Markets

Capital Markets represents the operations of AIGFP, which engages as principal in a wide variety of financial transactions, including standard and customized financial products involving commodities, credit, currencies, energy, equities and rates. The credit products include credit protection written through credit default swaps on super senior risk tranches of diversified pools of loans and debt securities. AIGFP also invests in a diversified portfolio of securities and principal investments and engages in borrowing activities that include issuing standard and structured notes and other securities and entering into guaranteed investment agreements (GIAs).

Consumer Finance

Consumer Finance operations include AGF as well as AIGCFG. AGF provides a wide variety of consumer finance products, including real estate and non-real estate loans, retail sales finance and credit-related insurance to customers in the United States, the U.K., Puerto Rico and the U.S. Virgin Islands. AGF's finance receivables are primarily sourced through its branches, although many of AGF's real estate loans are sourced through its centralized real estate operations, which include AGF's mortgage banking activities. AIGCFG, through its subsidiaries, is engaged in developing a multi-product consumer finance business with an emphasis on emerging and developing markets.

Asset Management Operations

AIG's Asset Management operations comprise a wide variety of investment-related services and investment products. These ser-

ices and products are offered to individuals, pension funds and institutions globally through AIG's Spread-Based Investment business, Institutional Asset Management, and Brokerage Services and Mutual Funds business. Also included in Asset Management operations are the results of certain SunAmerica sponsored partnership investments.

Spread-Based Investment Business

AIG's Spread-Based Investment business includes the results of AIG's proprietary spread-based investment operations, the Matched Investment Program (MIP), which was launched in September of 2005 to replace the Guaranteed Investment Contract (GIC) program, which is in runoff. The MIP is an investment strategy that involves investing in various asset classes with financing provided through third parties. This business uses various risk mitigating strategies designed to hedge interest rate and currency risk associated with underlying investments and related liabilities.

Institutional Asset Management

AIG's Institutional Asset Management business, conducted through AIG Investments, provides an array of investment products and services globally to institutional investors, pension funds, AIG subsidiaries and high net worth investors. These products include traditional equity and fixed income investments, and a wide range of alternative asset classes. These services include investment advisory and subadvisory services, investment monitoring and investment transaction structuring. Within the fixed income and equity asset classes, AIG Investments offers various forms of structured investments aimed at achieving superior returns or capital preservation. Within the alternative asset class, AIG Investments offers hedge and private equity fund-of-funds, direct investments and distressed debt investments.

AIG Global Real Estate provides a wide range of real estate investment and management services for AIG subsidiaries, as well as for third-party institutional investors, high net worth investors and pension funds. Through a strategic network of local real estate ventures, AIG Global Real Estate actively invests in and develops office, industrial, multi-family residential, retail, hotel and resort properties globally.

AIG Private Bank offers banking, trading and investment management services to private clients and institutions globally.

From time to time, AIG Investments acquires alternative investments, primarily consisting of direct controlling equity interests in private enterprises, with the intention of "warehousing" such investments until the investment or economic benefit thereof is transferred to a fund or other AIG-managed investment product. During the warehousing period, AIG bears the cost and risks associated with carrying these investments and consolidates them on its balance sheet and records the operating results until the investments are transferred, sold or otherwise divested. Changes in market conditions may negatively affect the fair value of these warehoused investments. Market conditions may impede AIG from launching new investment products for which these warehoused assets are being held, which could result in AIG not

recovering its investment upon transfer or divestment. In the event that AIG is unable to transfer or otherwise divest its interest in the warehoused investment to third parties, AIG could be required to hold these investments indefinitely. In certain instances, the consolidated warehoused investments are not wholly owned by AIG. In such cases, AIG shares the risk associated with warehousing the asset with the minority interest investors.

Brokerage Services and Mutual Funds

AIG's Brokerage Services and Mutual Funds business, conducted through AIG Advisor Group, Inc. and AIG SunAmerica Asset Management Corp., provides broker-dealer related services and mutual funds to retail investors, group trusts and corporate accounts through an independent network of financial advisors. AIG Advisor Group, Inc., a subsidiary of AIG Retirement Services, Inc., is comprised of several broker-dealer entities that provide these services to clients primarily in the U.S. marketplace. AIG SunAmerica Asset Management Corp. manages, advises and/or administers retail mutual funds, as well as the underlying assets of variable annuities sold by AIG SunAmerica and VALIC to individuals and groups throughout the United States.

Other Asset Management

Included in Other Asset Management is income or loss from certain AIG SunAmerica sponsored partnerships and partnership investments. Partnership assets consist of investments in a diversified portfolio of private equity funds, affordable housing partnerships and hedge fund investments.

Other Operations

Certain AIG subsidiaries provide insurance-related services such as adjusting claims and marketing specialized products. Several wholly owned foreign subsidiaries of AIG operating in countries or jurisdictions such as Ireland, Bermuda, Barbados and Gibraltar provide insurance and related administrative and back office services to affiliated and unaffiliated insurance and reinsurance companies, including captive insurance companies unaffiliated with AIG.

AIG has several other subsidiaries that engage in various businesses. Mt. Mansfield Company, Inc. owns and operates the ski slopes, lifts, a school and an inn located in Stowe, Vermont. Also reported in AIG's Other operations are interest expense, expenses of corporate staff not attributable to specific business segments, expenses related to efforts to improve internal controls, corporate initiatives, certain compensation plan expenses and the settlement costs more fully described in Item 3. Legal Proceedings and Note 12(a) to Consolidated Financial Statements.

Additional Investments

AIG's significant investments in partially owned companies (which are accounted for under the equity method) include a 25.4 percent interest in The Fuji Fire and Marine Insurance Co., Ltd., a general insurance company in Japan, a 26.0 percent interest in Tata AIG Life Insurance Company, Ltd. and a 26.0 percent interest

in Tata AIG General Insurance Company, Ltd. in India. Substantially all of AIG's equity interest in Allied World Assurance Holdings, Ltd. was sold by AIG in December 2007. For a discussion of AIG's investments in partially owned companies, see Note 1(s) to Consolidated Financial Statements.

Locations of Certain Assets

As of December 31, 2007, approximately 37 percent of the consolidated assets of AIG were located in foreign countries (other than Canada), including \$4.4 billion of cash and securities on deposit with foreign regulatory authorities. Foreign operations and assets held abroad may be adversely affected by political developments in foreign countries, including tax changes, nationalization and changes in regulatory policy, as well as by consequence of hostilities and unrest. The risks of such occurrences and their overall effect upon AIG vary from country to country and cannot easily be predicted. If expropriation or nationalization does occur, AIG's policy is to take all appropriate measures to seek recovery of such assets. Certain of the countries in which AIG's business is conducted have currency restrictions which generally cause a delay in a company's ability to repatriate assets and profits. See also Notes 1 and 2 to Consolidated Financial Statements and Item 1A. Risk Factors — Foreign Operations.

Regulation

AIG's operations around the world are subject to regulation by many different types of regulatory authorities, including insurance, securities, investment advisory, banking and thrift regulators in the United States and abroad. The regulatory environment can have a significant effect on AIG and its business. AIG's operations have become more diverse and consumer-oriented, increasing the scope of regulatory supervision and the possibility of intervention. Although AIG cannot predict the scope or effect of such regulation on its business, AIG expects further regulation of its domestic consumer finance operations as a result of the current disruption of the U.S. residential mortgage market. In addition, the investigations into financial accounting practices that led to two restatements of AIG's consolidated financial statements have heightened regulatory scrutiny of AIG worldwide.

In 1999, AIG became a unitary thrift holding company within the meaning of the Home Owners' Loan Act (HOLA) when the Office of Thrift Supervision (OTS) granted AIG approval to organize AIG Federal Savings Bank. AIG is subject to OTS regulation, examination, supervision and reporting requirements. In addition, the OTS has enforcement authority over AIG and its subsidiaries. Among other things, this permits the OTS to restrict or prohibit activities that are determined to be a serious risk to the financial safety, soundness or stability of AIG's subsidiary savings association, AIG Federal Savings Bank.

Under prior law, a unitary savings and loan holding company, such as AIG, was not restricted as to the types of business in which it could engage, provided that its savings association subsidiary continued to be a qualified thrift lender. The Gramm-Leach-Bliley Act of 1999 (GLBA) provides that no company may acquire control of an OTS regulated institution after May 4, 1999 unless it engages only in

the financial activities permitted for financial holding companies under the law or for multiple savings and loan holding companies. The GLBA, however, grandfathered the unrestricted authority for activities with respect to a unitary savings and loan holding company existing prior to May 4, 1999, so long as its savings association subsidiary continues to be a qualified thrift lender under the HOLA. As a unitary savings and loan holding company whose application was pending as of May 4, 1999, AIG is grandfathered under the GLBA and generally is not restricted under existing laws as to the types of business activities in which it may engage, provided that AIG Federal Savings Bank continues to be a qualified thrift lender under the HOLA.

Certain states require registration and periodic reporting by insurance companies that are licensed in such states and are controlled by other corporations. Applicable legislation typically requires periodic disclosure concerning the corporation that controls the registered insurer and the other companies in the holding company system and prior approval of intercorporate services and transfers of assets (including in some instances payment of dividends by the insurance subsidiary) within the holding company system. AIG's subsidiaries are registered under such legislation in those states that have such requirements.

AIG's insurance subsidiaries, in common with other insurers, are subject to regulation and supervision by the states and by other jurisdictions in which they do business. Within the United States, the method of such regulation varies but generally has its source in statutes that delegate regulatory and supervisory powers to an insurance official. The regulation and supervision relate primarily to approval of policy forms and rates, the standards of solvency that must be met and maintained, including risk-based capital, the licensing of insurers and their agents, the nature of and limitations on investments, restrictions on the size of risks that may be insured under a single policy, deposits of securities for the benefit of policyholders, requirements for acceptability of reinsurers, periodic examinations of the affairs of insurance companies, the form and content of reports of financial condition required to be filed, and reserves for unearned premiums, losses and other purposes. In general, such regulation is for the protection of policyholders rather than the equity owners of these companies.

AIG has taken various steps to enhance the capital positions of the Domestic General Insurance companies. AIG entered into capital maintenance agreements with the Domestic General Insurance companies that set forth procedures through which AIG will provide ongoing capital support. Also, in order to allow the Domestic General Insurance companies to record as an admitted asset at December 31, 2007 certain reinsurance ceded to non-U.S. reinsurers (which has the effect of increasing the statutory surplus of such Domestic General Insurance companies), AIG obtained and entered into reimbursement agreements for approximately \$1.8 billion of letters of credit issued by several commercial banks in favor of certain Domestic General Insurance companies.

In the U.S., Risk-Based Capital (RBC) is designed to measure the adequacy of an insurer's statutory surplus in relation to the risks inherent in its business. Thus, inadequately capitalized general and life insurance companies may be identified. The U.S. RBC formula develops a risk-adjusted target level of statutory

surplus by applying certain factors to various asset, premium and reserve items. Higher factors are applied to more risky items and lower factors are applied to less risky items. Thus, the target level of statutory surplus varies not only as a result of the insurer's size, but also based on the risk profile of the insurer's operations.

The RBC Model Law provides for four incremental levels of regulatory attention for insurers whose surplus is below the calculated RBC target. These levels of attention range in severity from requiring the insurer to submit a plan for corrective action to placing the insurer under regulatory control.

The statutory surplus of each of AIG's Domestic General Insurance and Life Insurance subsidiaries exceeded their RBC target levels as of December 31, 2007.

To the extent that any of AIG's insurance entities would fall below prescribed levels of statutory surplus, it would be AIG's intention to provide appropriate capital or other types of support to that entity.

A substantial portion of AIG's General Insurance business and a majority of its Life Insurance business is carried on in foreign countries. The degree of regulation and supervision in foreign jurisdictions varies. Generally, AIG, as well as the underwriting companies operating in such jurisdictions, must satisfy local regulatory requirements. Licenses issued by foreign authorities to AIG subsidiaries are subject to modification or revocation by such authorities, and these subsidiaries could be prevented from conducting business in certain of the jurisdictions where they currently operate. In the past, AIG has been allowed to modify its operations to conform with new licensing requirements in most jurisdictions.

In addition to licensing requirements, AIG's foreign operations are also regulated in various jurisdictions with respect to currency, policy language and terms, advertising, amount and type of security deposits, amount and type of reserves, amount and type of capital to be held, amount and type of local investment and the share of profits to be returned to policyholders on participating policies. Some foreign countries regulate rates on various types of policies. Certain countries have established reinsurance institutions, wholly or partially owned by the local government, to which admitted insurers are obligated to cede a portion of their business on terms that may not always allow foreign insurers, including AIG subsidiaries, full compensation. In some countries, regulations governing constitution of technical reserves and remittance balances may hinder remittance of profits and repatriation of assets.

See Management's Discussion and Analysis of Financial Condition and Results of Operations — Capital Resources and Liquidity — Regulation and Supervision and Note 15 to Consolidated Financial Statements.

Competition

AIG's Insurance, Financial Services and Asset Management businesses operate in highly competitive environments, both domestically and overseas. Principal sources of competition are insurance companies, banks, investment banks and other non-bank financial institutions.

The insurance industry in particular is highly competitive. Within the United States, AIG's General Insurance subsidiaries compete with approximately 3,400 other stock companies, specialty insurance organizations, mutual companies and other underwriting organizations. AIG's subsidiaries offering Life Insurance & Retirement Services compete in the United States with approximately 2,100 life insurance companies and other participants in related financial services fields. Overseas, AIG subsidiaries compete for business with foreign insurance operations of the larger U.S. insurers, global insurance groups and local companies in particular areas in which they are active.

Directors and Executive Officers of AIG

All directors of AIG are elected for one-year terms at the annual meeting of shareholders. All executive officers are elected to one-year terms, but serve at the pleasure of the Board of Directors.

Except as hereinafter noted, each of the executive officers has, for more than five years, occupied an executive position with AIG or companies that are now its subsidiaries. Other than the employment contracts between AIG and Messrs. Sullivan and Bensingner, there are no other arrangements or understandings between any executive officer and any other person pursuant to which the executive officer was elected to such position. From January 2000 until joining AIG in May 2004, Dr. Frenkel served as Chairman of Merrill Lynch International, Inc. Prior to joining AIG in September 2006, Ms. Kelly served as Executive Vice President and General Counsel of MCI/WorldCom. Previously, she was Senior Vice President and General Counsel of Sears, Roebuck and Co. from 1999 to 2003. From June 2004 until joining AIG in May 2007, Mr. Kaslow was a managing partner of QuanStar Group, LLC (an advisory services firm), and, from January 2002 until May 2004, Mr. Kaslow was Senior Executive Vice President of Human Resources for Vivendi Universal (an entertainment and telecommunications company).

Set forth below is information concerning the directors and executive officers of AIG as of February 28, 2008.

Name	Title	Age	Served as Director or Officer Since
Stephen F. Bollenbach	Director	65	2008
Marshall A. Cohen	Director	72	1992
Martin S. Feldstein	Director	68	1987
Ellen V. Futter	Director	58	1999
Stephen L. Hammerman	Director	69	2005
Richard C. Holbrooke	Director	66	2001
Fred H. Langhammer	Director	64	2006
George L. Miles, Jr.	Director	66	2005
Morris W. Offit	Director	71	2005
James F. Orr III	Director	64	2006
Virginia M. Rometty	Director	50	2006
Martin J. Sullivan	Director, President and Chief Executive Officer	53	2002
Michael H. Sutton	Director	67	2005
Edmund S. W. Tse	Director, Senior Vice Chairman – Life Insurance	70	1996
Robert B. Willumstad	Director and Chairman	62	2006
Frank G. Zarb	Director	73	2001
Jacob A. Frenkel	Vice Chairman – Global Economic Strategies	64	2004
Frank G. Wisner	Vice Chairman – External Affairs	69	1997
Steven J. Bensinger	Executive Vice President and Chief Financial Officer	53	2002
Anastasia D. Kelly	Executive Vice President, General Counsel and Senior Regulatory and Compliance Officer	58	2006
Rodney O. Martin, Jr.	Executive Vice President – Life Insurance	55	2002
Kristian P. Moor	Executive Vice President – Domestic General Insurance	48	1998
Win J. Neuger	Executive Vice President and Chief Investment Officer	58	1995
Robert M. Sandler	Executive Vice President – Domestic Personal Lines	65	1980
Nicholas C. Walsh	Executive Vice President – Foreign General Insurance	57	2005
Jay S. Wintrob	Executive Vice President – Retirement Services	50	1999
William N. Dooley	Senior Vice President – Financial Services	55	1992
David L. Herzog	Senior Vice President and Comptroller	48	2005
Andrew J. Kaslow	Senior Vice President and Chief Human Resources Officer	57	2007
Robert E. Lewis	Senior Vice President and Chief Risk Officer	56	1993
Brian T. Schreiber	Senior Vice President – Strategic Planning	42	2002

Item 1A. Risk Factors

Casualty Insurance Underwriting and Reserves

Casualty insurance liabilities are difficult to predict and may exceed the related reserves for losses and loss expenses.

Although AIG annually reviews the adequacy of the established reserve for losses and loss expenses, there can be no assurance that AIG's loss reserves will not develop adversely and have a material effect on AIG's results of operations. Estimation of ultimate net losses, loss expenses and loss reserves is a complex process for long-tail casualty lines of business, which include excess and umbrella liability, D&O, professional liability, medical malpractice, workers compensation, general liability, products liability and related classes, as well as for asbestos and environmental exposures. Generally, actual historical loss development factors are used to project future loss development. However, there can be no assurance that future loss development patterns will be the same as in the past. Moreover, any deviation in loss cost trends or in loss development factors might not be discernible for an extended period of time subsequent to the recording of the initial loss reserve estimates for any accident year. Thus, there is the potential for reserves with respect to a number of years to be significantly affected by changes in loss cost trends or loss development factors that were relied upon in setting the reserves. These changes in loss cost trends or loss development factors could be attributable to changes in inflation or in the judicial environment, or in other social or economic phenomena affecting claims, such as the effects that the recent disruption in the credit markets could have on reported claims under D&O or professional liability coverages. See also Management's Discussion and Analysis of Financial Condition and Results of Operations — Operating Review — General Insurance Operations — Reserve for Losses and Loss Expenses.

Credit Market Environment

AIG's businesses may continue to be adversely affected by the current disruption in the global credit markets and repricing of credit risk. During the second half of 2007, disruption in the global credit markets, coupled with the repricing of credit risk, and the U.S. housing market deterioration created increasingly difficult conditions in the financial markets. These conditions have resulted in greater volatility, less liquidity, widening of credit spreads and a lack of price transparency in certain markets. These conditions continue to adversely affect Mortgage Guaranty's results of operations and the fair value of the AIGFP super senior credit default swap portfolio and contribute to higher levels of finance receivables delinquencies at AGF and to the severe and rapid decline in the fair value of certain investment securities, particularly those backed by U.S. residential mortgage loans. It is difficult to predict how long these conditions will exist and how AIG's markets, products and businesses will continue to be adversely affected. Accordingly, these conditions could adversely affect AIG's consolidated financial condition or results of operations in future periods. In addition, litigation and regulatory or governmental investigations and inquiries have been commenced

against AIG related to these events and AIG may become subject to further litigation and regulatory or governmental scrutiny as a result of these events.

Risk Management

AIG is exposed to a number of significant risks, and AIG's risk management processes and controls may not be fully effective in mitigating AIG's risk exposures in all market conditions and to all types of risk. The major risks to which AIG is exposed include: credit risk, market risk, operational risk, liquidity risk and insurance risk. AIG has devoted significant resources to the development and implementation of risk management processes and controls across AIG's operations, including by establishing review and oversight committees to monitor risks, setting limits and identifying risk mitigating strategies and techniques. Nonetheless, these procedures may not be fully effective in mitigating risk exposure in all market conditions, some of which change rapidly and severely. A failure of AIG's risk management processes or the ineffectiveness of AIG's risk mitigating strategies and techniques could adversely affect, perhaps materially, AIG's consolidated results of operations, liquidity or financial condition, result in regulatory action or litigation or damage AIG's reputation. See Management's Discussion and Analysis of Financial Condition and Results of Operations — Risk Management.

Liquidity

AIG's liquidity could be impaired by an inability to access the capital markets or by unforeseen significant outflows of cash.

This situation may arise due to circumstances that AIG may be unable to control, such as a general market disruption or an operational problem that affects third parties or AIG. In addition, this situation may arise due to circumstances specific to AIG, such as a decline in its credit ratings. AIG depends on dividends, distributions and other payments from its subsidiaries to fund dividend payments and to fund payments on AIG's obligations, including debt obligations. Regulatory and other legal restrictions may limit AIG's ability to transfer funds freely, either to or from its subsidiaries. In particular, many of AIG's subsidiaries, including AIG's insurance subsidiaries, are subject to laws and regulations that authorize regulatory bodies to block or reduce the flow of funds to the parent holding company, or that prohibit such transfers altogether in certain circumstances. These laws and regulations may hinder AIG's ability to access funds that AIG may need to make payments on its obligations. See also Item 1. Business — Regulation.

Some of AIG's investments are relatively illiquid and would be difficult to sell, or to sell at acceptable prices, if AIG required cash in amounts greater than its customary needs. AIG's investments in certain securities, including certain structured securities, direct private equities, limited partnerships, hedge funds, mortgage loans, flight equipment, finance receivables and real estate are relatively illiquid. These asset classes represented approximately 23 percent of the carrying value of AIG's total cash and invested assets as of December 31, 2007. In addition, the current disruption in the credit markets has affected the liquidity of other AIG portfolios

including the residential mortgage-backed securities portfolio. If AIG requires significant amounts of cash on short notice in excess of normal cash requirements or is required to post or return collateral in connection with its investment portfolio, derivative transactions or securities lending activities, then AIG may have difficulty selling these investments or terminating these transactions in a timely manner or may be forced to sell or terminate them for less than what AIG might otherwise have been able to, or both. Although AIGFP has no current intent to do so, if AIGFP sells or closes out its derivative transactions prior to maturity, the effect could be significant to AIG's overall liquidity.

AIG's liquidity may be adversely affected by requirements to post collateral. Certain of the credit default swaps written by AIGFP contain collateral posting requirements. The amount of collateral required to be posted for most of these transactions is determined based on the value of the security or loan referenced in the documentation for the credit default swap. Continued declines in the values of these referenced securities or loans will increase the amount of collateral AIGFP must post which could impair AIG's liquidity.

See also Management's Discussion and Analysis of Financial Condition and Results of Operations — Capital Resources and Liquidity — Liquidity.

Investment Concentration

Concentration of AIG's investment portfolios in any particular segment of the economy may have adverse effects. Any concentration of AIG's investment portfolios in any particular industry, group of related industries, asset classes, such as residential mortgage-backed securities and other asset-backed securities, or geographic sector could have an adverse effect on the investment portfolios and consequently on AIG's consolidated results of operations or financial condition. While AIG seeks to mitigate this risk by having a broadly diversified portfolio, events or developments that have a negative effect on any particular industry, asset class, group of related industries or geographic region may have a greater adverse effect on the investment portfolios to the extent that the portfolios are concentrated. Further, AIG's ability to sell assets relating to such particular groups of related assets may be limited if other market participants are seeking to sell at the same time.

Credit Ratings

Ratings actions regarding AIG could adversely affect AIG's business and its consolidated results of operations. Following AIG's filing with the SEC on February 11, 2008 of a Current Report on Form 8-K regarding the valuation of AIGFP's super senior credit default swap portfolio and reporting the conclusion by AIG's independent auditors that AIG had a material weakness in internal control over financial reporting and oversight relating to this valuation, the following credit rating actions were taken:

- Standard & Poor's, a division of The McGraw-Hill Companies, Inc. (S&P) affirmed its 'AA' counterparty credit ratings on AIG and its 'AA+' counterparty credit and financial strength ratings on AIG's core subsidiaries, but revised the rating outlook to negative. In addition, S&P revised its rating

outlook on ILFC's corporate credit rating (AA-) to negative. A negative ratings outlook by S&P indicates that a rating may be lowered, but is not necessarily a precursor of a ratings change.

- Moody's Investors Service (Moody's) changed its rating outlook for AIG and its subsidiaries that have substantial exposure to the U.S. subprime mortgage market or whose ratings rely on significant explicit or implicit support from AIG to negative. Moody's rates AIG 'Aa2' and nearly all of its insurance subsidiaries either 'Aa1' or 'Aa2'. A negative ratings outlook by Moody's indicates that a rating may be lowered, but is not necessarily a precursor of a ratings change.
- Fitch Ratings (Fitch) placed AIG's and its subsidiaries' long-term debt ratings (AA), including ILFC (A+) and AGF (A+), on Rating Watch Negative. Rating Watch Negative indicates that a rating has been placed on active rating watch status. Fitch indicated that it expects to resolve the Rating Watch after it reviews AIG's 2007 audited financial statements.
- A.M. Best Company (A.M. Best) placed most of its financial strength and issuer credit ratings on AIG's domestic Life Insurance and Retirement Services (A++) and Domestic General Insurance subsidiaries (including Transatlantic) (A+), as well as AIG's issuer credit rating (AA), under review with negative implications. A.M. Best indicated that following a detailed review of AIG's 2007 audited financial statements and further discussion with AIG management, it will re-evaluate the "under review" rating status.

Financial strength and credit ratings by the major ratings agencies are an important factor in establishing the competitive position of insurance companies and other financial institutions and affect the availability and cost of borrowings. Financial strength ratings measure an insurance company's ability to meet its obligations to contract holders and policyholders, help to maintain public confidence in a company's products, facilitate marketing of products and enhance a company's competitive position. Credit ratings measure a company's ability to repay its obligations and directly affect the cost and availability to that company of unsecured financing. AIG's ratings have historically provided it with a competitive advantage. However, a ratings downgrade could adversely affect AIG's business and its consolidated results of operations in a number of ways, including:

- increasing AIG's interest expense;
- reducing AIGFP's ability to compete in the structured products and derivatives businesses;
- reducing the competitive advantage of AIG's insurance subsidiaries, which may result in reduced product sales;
- adversely affecting relationships with agents and sales representatives;
- in the case of a downgrade of AGF or ILFC, increasing their interest expense and reducing their ability to compete in their respective businesses; and
- triggering the application of a termination provision in certain of AIG's contracts, principally agreements entered into by AIGFP and assumed reinsurance contracts entered into by Transatlantic.

In the event of a downgrade of AIG, AIG would be required to post additional collateral. It is estimated that, as of the close of business on February 14, 2008, based on AIG's outstanding municipal GIAs and financial derivatives transactions as of such date, a further downgrade of AIG's long-term senior debt ratings to Aa3 by Moody's or AA- by S&P would permit counterparties to call for approximately \$1.39 billion of additional collateral. Further, additional downgrades could result in requirements for substantial additional collateral, which could have a material effect on how AIG manages its liquidity. For a further discussion of AIG's credit ratings and the potential effect of posting collateral on AIG's liquidity, see Management's Discussion and Analysis of Financial Condition and Results of Operations — Capital Resources and Liquidity — Credit Ratings and — Liquidity.

Catastrophe Exposures

The occurrence of catastrophic events could adversely affect AIG's consolidated financial condition or results of operations.

The occurrence of events such as hurricanes, earthquakes, pandemic disease, acts of terrorism and other catastrophes could adversely affect AIG's consolidated financial condition or results of operations, including by exposing AIG's businesses to the following:

- widespread claim costs associated with property, workers compensation, mortality and morbidity claims;
- loss resulting from the value of invested assets declining to below the amount required to meet the policy and contract liabilities; and
- loss resulting from actual policy experience emerging adversely in comparison to the assumptions made in the product pricing related to mortality, morbidity, termination and expenses.

Reinsurance

Reinsurance may not be available or affordable. AIG subsidiaries are major purchasers of reinsurance and utilize reinsurance as part of AIG's overall risk management strategy. Reinsurance is an important risk management tool to manage transaction and insurance line risk retention, and to mitigate losses that may arise from catastrophes. Market conditions beyond AIG's control determine the availability and cost of the reinsurance purchased by AIG subsidiaries. For example, reinsurance may be more difficult to obtain after a year with a large number of major catastrophes. Accordingly, AIG may be forced to incur additional expenses for reinsurance or may be unable to obtain sufficient reinsurance on acceptable terms, in which case AIG would have to accept an increase in exposure risk, reduce the amount of business written by its subsidiaries or seek alternatives.

Reinsurance subjects AIG to the credit risk of its reinsurers and may not be adequate to protect AIG against losses. Although reinsurance makes the reinsurer liable to the AIG subsidiary to the extent the risk is ceded subject to the terms and conditions of the reinsurance contracts in place, it does not relieve the AIG subsidiary of the primary liability to its policyholders. Accordingly, AIG bears credit risk with respect to its subsidiaries' reinsurers to

the extent not mitigated by collateral or other credit enhancements. A reinsurer's insolvency or inability or refusal to make timely payments under the terms of its agreements with the AIG subsidiaries could have a material adverse effect on AIG's results of operations and liquidity. See also Management's Discussion and Analysis of Financial Condition and Results of Operations — Risk Management — Reinsurance.

Adjustments to Life Insurance & Retirement Services Deferred Policy Acquisition Costs

Interest rate fluctuations and other events may require AIG subsidiaries to accelerate the amortization of deferred policy acquisition costs (DAC) which could adversely affect AIG's consolidated financial condition or results of operations.

DAC represents the costs that vary with and are related primarily to the acquisition of new and renewal insurance and annuity contracts. When interest rates rise, policy loans and surrenders and withdrawals of life insurance policies and annuity contracts may increase as policyholders seek to buy products with perceived higher returns, requiring AIG subsidiaries to accelerate the amortization of DAC. To the extent such amortization exceeds surrender or other charges earned upon surrender and withdrawals of certain life insurance policies and annuity contracts, AIG's results of operations could be negatively affected.

DAC for both insurance-oriented and investment-oriented products as well as retirement services products is reviewed for recoverability, which involves estimating the future profitability of current business. This review involves significant management judgment. If the actual emergence of future profitability were to be substantially lower than estimated, AIG could be required to accelerate its DAC amortization and such acceleration could adversely affect AIG's results of operations. See also Management's Discussion and Analysis of Financial Condition and Results of Operations — Critical Accounting Estimates and Notes 1 and 6 to Consolidated Financial Statements.

Use of Estimates

If actual experience differs from management's estimates used in the preparation of financial statements, AIG's consolidated results of operations or financial condition could be adversely affected. The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires the application of accounting policies that often involve a significant degree of judgment. AIG considers that its accounting policies that are most dependent on the application of estimates and assumptions, and therefore viewed as critical accounting estimates, are those described in Management's Discussion and Analysis of Financial Condition and Results of Operations — Critical Accounting Estimates. These accounting estimates require the use of assumptions, some of which are highly uncertain at the time of estimation. For example, recent market volatility and declines in liquidity have made it more difficult to value certain of AIG's invested assets and the obligations and collateral relating to certain financial instruments issued or held by AIG, such as

AIGFP's super senior credit default swap portfolio. To the extent actual experience differs from the assumptions used, AIG's consolidated results of operations or financial condition would be directly affected, perhaps materially.

Legal Proceedings

Significant legal proceedings may adversely affect AIG's results of operations. AIG is party to numerous legal proceedings and regulatory or governmental investigations. It is possible that the effect of these unresolved matters could be material to AIG's consolidated results of operations for an individual reporting period. For a discussion of these unresolved matters, see Item 3. Legal Proceedings.

Foreign Operations

Foreign operations expose AIG to risks that may affect its operations, liquidity and financial condition. AIG provides insurance, investment and other financial products and services to both businesses and individuals in more than 130 countries and jurisdictions. A substantial portion of AIG's General Insurance business and a majority of its Life Insurance & Retirement Services business is conducted outside the United States. Operations outside of the United States, particularly those in developing nations, may be affected by regional economic downturns, changes in foreign currency exchange rates, political upheaval, nationalization and other restrictive government actions, which could also affect other AIG operations.

The degree of regulation and supervision in foreign jurisdictions varies. Generally, AIG, as well as its subsidiaries operating in such jurisdictions, must satisfy local regulatory requirements. Licenses issued by foreign authorities to AIG subsidiaries are subject to modification and revocation. Thus, AIG's insurance subsidiaries could be prevented from conducting future business in certain of the jurisdictions where they currently operate. Adverse actions from any single country could adversely affect AIG's results of operations, liquidity and financial condition depending on the magnitude of the event and AIG's net financial exposure at that time in that country.

Regulation

AIG is subject to extensive regulation in the jurisdictions in which it conducts its businesses. AIG's operations around the world are subject to regulation by different types of regulatory authorities, including insurance, securities, investment advisory, banking and thrift regulators in the United States and abroad. AIG's operations have become more diverse and consumer-oriented, increasing the scope of regulatory supervision and the possibility of intervention. In particular, AIG's consumer lending business is subject to a broad array of laws and regulations governing lending practices and permissible loan terms, and AIG would expect increased regulatory oversight relating to this business.

The regulatory environment could have a significant effect on AIG and its businesses. Among other things, AIG could be fined, prohibited from engaging in some of its business activities or subject to limitations or conditions on its business activities.

Significant regulatory action against AIG could have material adverse financial effects, cause significant reputational harm or harm business prospects. New laws or regulations or changes in the enforcement of existing laws or regulations applicable to clients may also adversely affect AIG and its businesses.

A Material Weakness

A material weakness in internal control over financial reporting and oversight relating to the AIGFP valuation of its super senior credit default swap portfolio could adversely affect the accuracy or timing of future regulatory filings. AIG's management has concluded that a material weakness relating to the internal control over financial reporting and oversight relating to the fair value valuation of the AIGFP super senior credit default swap portfolio existed as of December 31, 2007. Until remediated, this weakness could adversely affect the accuracy or timing of future filings with the SEC and other regulatory authorities. A discussion of this material weakness and AIG's remediation efforts can be found in Item 9A. Controls and Procedures — Management's Report on Internal Control Over Financial Reporting.

Employee Error and Misconduct

Employee error and misconduct may be difficult to detect and prevent and may result in significant losses. Losses may result from, among other things, fraud, errors, failure to document transactions properly or to obtain proper internal authorization or failure to comply with regulatory requirements.

There have been a number of highly publicized cases involving fraud or other misconduct by employees in the financial services industry in recent years, and AIG runs the risk that employee misconduct could occur. It is not always possible to deter or prevent employee misconduct and the controls that AIG has in place to prevent and detect this activity may not be effective in all cases.

Aircraft Suppliers

There are limited suppliers of aircraft and engines. The supply of jet transport aircraft, which ILFC purchases and leases, is dominated by two airframe manufacturers, Boeing and Airbus, and a limited number of engine manufacturers. As a result, ILFC is dependent on the manufacturers' success in remaining financially stable, producing aircraft and related components which meet the airlines' demands, both in type and quantity, and fulfilling their contractual obligations to ILFC. Competition between the manufacturers for market share is intense and may lead to instances of deep discounting for certain aircraft types and could negatively affect ILFC's competitive pricing.

Item 1B. Unresolved Staff Comments

There are no material unresolved written comments that were received from the SEC staff 180 days or more before the end of AIG's fiscal year relating to AIG's periodic or current reports under the Exchange Act.

Item 2. Properties

AIG and its subsidiaries operate from approximately 2,100 offices in the United States, 6 offices in Canada and numerous offices in approximately 100 foreign countries. The offices in Greensboro and Winston-Salem, North Carolina; Springfield, Illinois; Amarillo, Ft. Worth, Houston and Lewisville, Texas; Wilmington, Delaware; San Juan, Puerto Rico; Tampa, Florida; Livingston, New Jersey; Evansville, Indiana; Nashville, Tennessee; 70 Pine Street, 72 Wall Street and 175 Water Street in New York, New York; and offices in more than 30 foreign countries and jurisdictions including Bermuda, Chile, Hong Kong, the Philippines, Japan, the U.K., Singapore, Malaysia, Switzerland, Taiwan and Thailand are located in buildings owned by AIG and its subsidiaries. The remainder of the office space utilized by AIG subsidiaries is leased.

Item 3. Legal Proceedings

General

AIG and its subsidiaries, in common with the insurance industry in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. See also Note 12(a) to Consolidated Financial Statements, as well as the discussion and analysis of Reserve for Losses and Loss Expenses under Operating Review — General Insurance Operations in Management's Discussion and Analysis of Financial Condition and Results of Operations.

Litigation Arising from Operations. AIG and its subsidiaries, in common with the insurance and financial services industries in general, are subject to litigation, including claims for punitive damages, in the normal course of their business. In AIG's insurance operations, litigation arising from claims settlement activities is generally considered in the establishment of AIG's reserve for losses and loss expenses. However, the potential for increasing jury awards and settlements makes it difficult to assess the ultimate outcome of such litigation.

Litigation Arising from Insurance Operations — Caremark. AIG and certain of its subsidiaries have been named defendants in two putative class actions in state court in Alabama that arise out of the 1999 settlement of class and derivative litigation involving Caremark Rx, Inc. (Caremark). The plaintiffs in the second-filed action have intervened in the first-filed action, and the second-filed action has been dismissed. An excess policy issued by a subsidiary of AIG with respect to the 1999 litigation was expressly stated to be without limit of liability. In the current actions, plaintiffs allege that the judge approving the 1999 settlement was misled as to the extent of available insurance coverage and would not have approved the settlement had he known of the existence and/or unlimited nature of the excess policy. They further allege that AIG, its subsidiaries, and Caremark are liable for fraud and suppression for misrepresenting and/or concealing the nature and extent of coverage. In addition, the intervenor-plaintiffs allege that various lawyers and law firms who represented parties in the underlying class and derivative litigation (the "Lawyer Defend-

ants") are also liable for fraud and suppression, misrepresentation, and breach of fiduciary duty. The complaints filed by the plaintiffs and the intervenor-plaintiffs request compensatory damages for the 1999 class in the amount of \$3.2 billion, plus punitive damages. AIG and its subsidiaries deny the allegations of fraud and suppression and have asserted that information concerning the excess policy was publicly disclosed months prior to the approval of the settlement. AIG and its subsidiaries further assert that the current claims are barred by the statute of limitations and that plaintiffs' assertions that the statute was tolled cannot stand against the public disclosure of the excess coverage. The plaintiffs and intervenor-plaintiffs, in turn, have asserted that the disclosure was insufficient to inform them of the nature of the coverage and did not start the running of the statute of limitations. On November 26, 2007, the trial court issued an order that dismissed the intervenors' complaint against the Lawyer Defendants and entered a final judgment in favor of the Lawyer Defendants. The intervenors are appealing the dismissal of the Lawyer Defendants and have requested a stay of all trial court proceedings pending the appeal. If the motion to stay is granted, no further proceedings at the trial court level will occur until the appeal is resolved. If the motion to stay is denied, the next step will be to proceed with class discovery so that the trial court can determine, under standards mandated by the Alabama Supreme Court, whether the action should proceed as a class action. AIG cannot reasonably estimate either the likelihood of its prevailing in these actions or the potential damages in the event liability is determined.

Litigation Arising from Insurance Operations — Gunderson. A subsidiary of AIG has been named as a defendant in a putative class action lawsuit in the 14th Judicial District Court for the State of Louisiana (Gunderson). The *Gunderson* complaint alleges failure to comply with certain provisions of the Louisiana Any Willing Provider Act (the Act) relating to discounts taken by defendants on bills submitted by Louisiana medical providers and hospitals that provided treatment or services to workers compensation claimants and seeks monetary penalties and injunctive relief. On July 20, 2006, the court denied defendants' motion for summary judgment and granted plaintiffs' partial motion for summary judgment, holding that the AIG subsidiary was a "group purchaser" and, therefore, potentially subject to liability under the Act. On November 28, 2006, the court issued an order certifying a class of providers and hospitals. In an unrelated action also arising under the Act, a Louisiana appellate court ruled that the district court lacked jurisdiction to adjudicate the claims at issue. In response, defendants in *Gunderson* filed an exception for lack of subject matter jurisdiction. On January 19, 2007, the court denied the motion, holding that it has jurisdiction over the putative class claims. The AIG subsidiary appealed the class certification and jurisdictional rulings. While the appeal was pending, the AIG subsidiary settled the lawsuit. On January 25, 2008, plaintiffs and the AIG subsidiary agreed to resolve the lawsuit on a class-wide basis for approximately \$29 million. The court has preliminarily approved the settlement and will hold a final approval hearing on May 29, 2008. In the event that the settlement is not finally approved, AIG believes that it has meritorious defenses to

plaintiffs' claims and expects that the ultimate resolution of this matter will not have a material adverse effect on AIG's consolidated financial condition or results of operations for any period.

2006 Regulatory Settlements. In February 2006, AIG reached a resolution of claims and matters under investigation with the United States Department of Justice (DOJ), the Securities and Exchange Commission (SEC), the Office of the New York Attorney General (NYAG) and the New York State Department of Insurance (DOI). AIG recorded an after-tax charge of \$1.15 billion relating to these settlements in the fourth quarter of 2005.

The settlements resolved investigations conducted by the SEC, NYAG and DOI in connection with the accounting, financial reporting and insurance brokerage practices of AIG and its subsidiaries, as well as claims relating to the underpayment of certain workers compensation premium taxes and other assessments. These settlements did not, however, resolve investigations by regulators from other states into insurance brokerage practices related to contingent commissions and other broker-related conduct, such as alleged bid rigging. Nor did the settlements resolve any obligations that AIG may have to state guarantee funds in connection with any of these matters.

As a result of these settlements, AIG made payments or placed amounts in escrow in 2006 totaling approximately \$1.64 billion, \$225 million of which represented fines and penalties. Amounts held in escrow totaling \$347 million, including interest thereon, are included in other assets at December 31, 2007. At that date, approximately \$330 million of the funds were escrowed for settlement of claims resulting from the underpayment by AIG of its residual market assessments for workers compensation. On May 24, 2007, The National Workers Compensation Reinsurance Pool, on behalf of its participant members, filed a lawsuit against AIG with respect to the underpayment of such assessments. On August 6, 2007, the court denied AIG's motion seeking to dismiss or stay the complaint or in the alternative, to transfer to the Southern District of New York. On December 26, 2007, the court denied AIG's motion to dismiss the complaint. AIG filed its answer on January 22, 2008. On February 5, 2008, following agreement of the parties, the court entered an order staying all proceedings through March 3, 2008. In addition, a similar lawsuit filed by the Minnesota Workers Compensation Reinsurance Association and the Minnesota Workers Compensation Insurers Association is pending. On August 6, 2007, AIG moved to dismiss the complaint and that motion is under review. A purported class action was filed in South Carolina Federal Court on January 25, 2008 against AIG and certain of its subsidiaries, on behalf of a class of employers that obtained workers compensation insurance from AIG companies and allegedly paid inflated premiums as a result of AIG's alleged underreporting of workers compensation premiums. AIG cannot currently estimate whether the amount ultimately required to settle these claims will exceed the funds escrowed or otherwise accrued for this purpose.

AIG has settled litigation that was filed by the Minnesota Attorney General with respect to claims by the Minnesota Department of Revenue and the Minnesota Special Compensation Fund.

The National Association of Insurance Commissioners has formed a Market Analysis Working Group directed by the State of Indiana, which has commenced its own investigation into the underreporting of workers compensation premiums. In early 2008, AIG was informed that the Market Analysis Working Group had been disbanded in favor of a multi-state targeted market conduct exam focusing on worker's compensation insurance.

The remaining escrowed funds, which amounted to \$17 million at December 31, 2007, are set aside for settlements for certain specified AIG policyholders. As of February 20, 2008, eligible policyholders entitled to receive approximately \$359 million (or 95 percent) of the excess casualty fund had opted to receive settlement payments in exchange for releasing AIG and its subsidiaries from liability relating to certain insurance brokerage practices. Amounts remaining in the excess casualty fund may be used by AIG to settle claims from other policyholders relating to such practices through February 29, 2008 (originally set for January 31, 2008 and later extended), after which they will be distributed pro rata to participating policyholders.

In addition to the escrowed funds, \$800 million was deposited into a fund under the supervision of the SEC as part of the settlements to be available to resolve claims asserted against AIG by investors, including the shareholder lawsuits described herein.

Also, as part of the settlements, AIG agreed to retain, for a period of three years, an independent consultant to conduct a review that will include, among other things, the adequacy of AIG's internal control over financial reporting, the policies, procedures and effectiveness of AIG's regulatory, compliance and legal functions and the remediation plan that AIG has implemented as a result of its own internal review.

Other than as described above, at the current time, AIG cannot predict the outcome of the matters described above, or estimate any potential additional costs related to these matters.

Private Litigation

Securities Actions. Beginning in October 2004, a number of putative securities fraud class action suits were filed against AIG and consolidated as *In re American International Group, Inc. Securities Litigation*. Subsequently, a separate, though similar, securities fraud action was also brought against AIG by certain Florida pension funds. The lead plaintiff in the class action is a group of public retirement systems and pension funds benefitting Ohio state employees, suing on behalf of themselves and all purchasers of AIG's publicly traded securities between October 28, 1999 and April 1, 2005. The named defendants are AIG and a number of present and former AIG officers and directors, as well as C.V. Starr & Co., Inc. (Starr), Starr International Company, Inc. (SICO), General Reinsurance Corporation, and PricewaterhouseCoopers LLP (PwC), among others. The lead plaintiff alleges, among other things, that AIG: (1) concealed that it engaged in anti-competitive conduct through alleged payment of contingent commissions to brokers and participation in illegal bid-rigging; (2) concealed that it used "income smoothing" products and other techniques to inflate its earnings; (3) concealed that it marketed and sold "income smoothing" insurance products to other companies; and (4) misled investors about the scope of

government investigations. In addition, the lead plaintiff alleges that AIG's former Chief Executive Officer manipulated AIG's stock price. The lead plaintiff asserts claims for violations of Sections 11 and 15 of the Securities Act of 1933, Section 10(b) of the Exchange Act, and Rule 10b-5 promulgated thereunder, Section 20(a) of the Exchange Act, and Section 20A of the Exchange Act. In April 2006, the court denied the defendants' motions to dismiss the second amended class action complaint and the Florida complaint. In December 2006, a third amended class action complaint was filed, which does not differ substantially from the prior complaint. Fact and class discovery is currently ongoing. On February 20, 2008, the lead plaintiff filed a motion for class certification.

ERISA Action. Between November 30, 2004 and July 1, 2005, several Employee Retirement Income Security Act of 1974 (ERISA) actions were filed on behalf of purported class of participants and beneficiaries of three pension plans sponsored by AIG or its subsidiaries. A consolidated complaint filed on September 26, 2005 alleges a class period between September 30, 2000 and May 31, 2005 and names as defendants AIG, the members of AIG's Retirement Board and the Administrative Boards of the plans at issue, and four present or former members of AIG's Board of Directors. The factual allegations in the complaint are essentially identical to those in the securities actions described above. The parties have reached an agreement in principle to settle this matter for an amount within AIG's insurance coverage limits.

Securities Action — Oregon State Court. On February 27, 2008, The State of Oregon, by and through the Oregon State Treasurer, and the Oregon Public Employee Retirement Board, on behalf of the Oregon Public Employee Retirement Fund, filed a lawsuit against American International Group, Inc. for damages arising out of plaintiffs' purchase of AIG common stock at prices that allegedly were inflated. Plaintiffs allege, among other things, that AIG: (1) made false and misleading statements concerning its accounting for a \$500 million transaction with General Re; (2) concealed that it marketed and misrepresented its control over off-shore entities in order to improve financial results; (3) improperly accounted for underwriting losses as investment losses in connection with transactions involving CAPCO Reinsurance Company, Ltd. and Union Excess; (4) misled investors about the scope of government investigations; and (5) engaged in market manipulation through its then Chairman and CEO Maurice R. Greenberg. The complaint asserts claims for violations of Oregon Securities Law, and seeks compensatory damages in an amount in excess of \$15 million, and prejudgment interest and costs and fees.

Derivative Actions — Southern District of New York. On November 20, 2007, two purported shareholder derivative actions were filed in the Southern District of New York naming as defendants the then-current directors of AIG and certain senior officers of AIG and its subsidiaries. Plaintiffs assert claims for breach of fiduciary duty, waste of corporate assets and unjust enrichment, as well as violations of Section 10(b) of the Exchange Act and Rule 10b-5 promulgated thereunder, and Section 20(a) of the Exchange Act, among other things, in connection with AIG's public disclosures

regarding its exposure to what the lawsuits describe as the subprime market crisis. The actions were consolidated as *In re American International Group, Inc. 2007 Derivative Litigation*. On February 15, 2008, plaintiffs filed a consolidated amended complaint alleging the same causes of action.

Between October 25, 2004 and July 14, 2005, seven separate derivative actions were filed in the Southern District of New York, five of which were consolidated into a single action. The New York derivative complaint contains nearly the same types of allegations made in the securities fraud and ERISA actions described above. The named defendants include current and former officers and directors of AIG, as well as Marsh & McLennan Companies, Inc. (Marsh), SICO, Starr, ACE Limited and subsidiaries (ACE), General Reinsurance Corporation, PwC, and certain employees or officers of these entity defendants. Plaintiffs assert claims for breach of fiduciary duty, gross mismanagement, waste of corporate assets, unjust enrichment, insider selling, auditor breach of contract, auditor professional negligence and disgorgement from AIG's former Chief Executive Officer and Chief Financial Officer of incentive-based compensation and AIG share proceeds under Section 304 of the Sarbanes-Oxley Act, among others. Plaintiffs seek, among other things, compensatory damages, corporate governance reforms, and a voiding of the election of certain AIG directors. AIG's Board of Directors has appointed a special committee of independent directors (special committee) to review the matters asserted in the operative consolidated derivative complaint. The court has entered an order staying the derivative case in the Southern District of New York pending resolution of the consolidated derivative action in the Delaware Chancery Court (discussed below). The court also has entered an order that termination of certain named defendants from the Delaware derivative action applies to the New York derivative action without further order of the court. On October 17, 2007, plaintiffs and those AIG officer and director defendants against whom the shareholder plaintiffs in the Delaware action are no longer pursuing claims filed a stipulation providing for all claims in the New York action against such defendants to be dismissed with prejudice. Former directors and officers Maurice R. Greenberg and Howard I. Smith have asked the court to refrain from so ordering this stipulation.

Derivative Actions — Delaware Chancery Court. From October 2004 to April 2005, AIG shareholders filed five derivative complaints in the Delaware Chancery Court. All of these derivative lawsuits were consolidated into a single action as *In re American International Group, Inc. Consolidated Derivative Litigation*. The amended consolidated complaint named 43 defendants (not including nominal defendant AIG) who, like the New York consolidated derivative litigation, were current and former officers and directors of AIG, as well as other entities and certain of their current and former employees and directors. The factual allegations, legal claims and relief sought in the Delaware action are similar to those alleged in the New York derivative actions, except that shareholder plaintiffs in the Delaware derivative action assert claims only under state law. Earlier in 2007, the Court approved an agreement that AIG be realigned as plaintiff, and, on June 13,

2007, acting on the direction of the special committee, AIG filed an amended complaint against former directors and officers Maurice R. Greenberg and Howard I. Smith, alleging breach of fiduciary duty and indemnification. Also on June 13, 2007, the special committee filed a motion to terminate the litigation as to certain defendants, while taking no action as to others. Defendants Greenberg and Smith filed answers to AIG's complaint and brought third-party complaints against certain current and former AIG directors and officers, PwC and Regulatory Insurance Services, Inc. On September 28, 2007, AIG and the shareholder plaintiffs filed a combined amended complaint in which AIG continued to assert claims against defendants Greenberg and Smith and took no position as to the claims asserted by the shareholder plaintiffs in the remainder of the combined amended complaint. In that pleading, the shareholder plaintiffs are no longer pursuing claims against certain AIG officers and directors. In November 2007, the shareholder plaintiffs moved to sever their claims to a separate action. AIG joined the motion to the extent that, among other things, the claims against defendants Greenberg and Smith would remain in prosecution in the pending action. In addition, a number of parties, including AIG, filed motions to stay discovery. On February 12, 2008, the court granted AIG's motion to stay discovery pending the resolution of claims against AIG in the New York consolidated securities action. The court also denied plaintiff's motion to sever and directed the parties to coordinate a briefing schedule for the motions to dismiss.

A separate derivative lawsuit was filed in December 2002 in the Delaware Chancery Court against twenty directors and executives of AIG as well as against AIG as a nominal defendant that alleges, among other things, that the directors of AIG breached the fiduciary duties of loyalty and care by approving the payment of commissions to Starr and of rental and service fees to SICO and the executives breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and their fiduciary duties by usurping AIG's corporate opportunity. The complaint further alleges that the Starr agencies did not provide any services that AIG was not capable of providing itself, and that the diversion of commissions to these entities was solely for the benefit of Starr's owners. The complaint also alleged that the service fees and rental payments made to SICO and its subsidiaries were improper. Under the terms of a stipulation approved by the Court on February 16, 2006, the claims against the outside independent directors were dismissed with prejudice, while the claims against the other directors were dismissed without prejudice. On October 31, 2005, defendants Greenberg, Matthews, Smith, SICO and Starr filed motions to dismiss the amended complaint. In an opinion dated June 21, 2006, the Court denied defendants' motion to dismiss, except with respect to plaintiff's challenge to payments made to Starr before January 1, 2000. On July 21, 2006, plaintiff filed its second amended complaint, which alleges that, between January 1, 2000 and May 31, 2005, individual defendants breached their duty of loyalty by causing AIG to enter into contracts with Starr and SICO and breached their fiduciary duties by usurping AIG's corporate opportunity. Starr is charged with aiding and abetting breaches of fiduciary duty and unjust enrichment for its acceptance of the

fees. SICO is no longer named as a defendant. On April 20, 2007, the individual defendants and Starr filed a motion seeking leave of the Court to assert a cross-claim against AIG and a third-party complaint against PwC and the directors previously dismissed from the action, as well as certain other AIG officers and employees. On June 13, 2007, the Court denied the individual defendants' motion to file a third-party complaint, but granted the proposed cross-claim against AIG. On June 27, 2007, Starr filed its cross-claim against AIG, alleging one count that includes contribution, unjust enrichment and setoff. AIG has filed an answer and moved to dismiss Starr's cross-claim to the extent it seeks affirmative relief, as opposed to a reduction in the judgment amount. On November 15, 2007, the court granted AIG's motion to dismiss the cross-claim by Starr to the extent that it sought affirmative relief from AIG. On November 21, 2007, shareholder plaintiffs submitted a motion for leave to file their Third Amended Complaint in order to add Thomas Tizzio as a defendant. On February 14, 2008, the court granted this motion and allowed Mr. Tizzio until April 2008 to take additional discovery. Document discovery and depositions are otherwise complete.

Policyholder Actions. After the NYAG filed its complaint against insurance broker Marsh, policyholders brought multiple federal antitrust and Racketeer Influenced and Corrupt Organizations Act (RICO) class actions in jurisdictions across the nation against insurers and brokers, including AIG and a number of its subsidiaries, alleging that the insurers and brokers engaged in a broad conspiracy to allocate customers, steer business, and rig bids. These actions, including 24 complaints filed in different federal courts naming AIG or an AIG subsidiary as a defendant, were consolidated by the judicial panel on multi-district litigation and transferred to the United States District Court for the District of New Jersey for coordinated pretrial proceedings. The consolidated actions have proceeded in that court in two parallel actions, *In re Insurance Brokerage Antitrust Litigation* (the *First Commercial Complaint*) and *In re Employee Benefit Insurance Brokerage Antitrust Litigation* (the *First Employee Benefits Complaint*, and, together with the *First Commercial Complaint*, the multi-district litigation).

The plaintiffs in the *First Commercial Complaint* are nineteen corporations, individuals and public entities that contracted with the broker defendants for the provision of insurance brokerage services for a variety of insurance needs. The broker defendants are alleged to have placed insurance coverage on the plaintiffs' behalf with a number of insurance companies named as defendants, including AIG subsidiaries. The *First Commercial Complaint* also named ten brokers and fourteen other insurers as defendants (two of which have since settled). The *First Commercial Complaint* alleges that defendants engaged in a widespread conspiracy to allocate customers through "bid-rigging" and "steering" practices. The *First Commercial Complaint* also alleges that the insurer defendants permitted brokers to place business with AIG subsidiaries through wholesale intermediaries affiliated with or owned by those same brokers rather than placing the business with AIG subsidiaries directly. Finally, the *First Commercial Complaint* alleges that the insurer defendants entered into agreements with broker defendants that tied insurance placements to reinsurance placements in order to provide additional

compensation to each broker. Plaintiffs assert that the defendants violated the Sherman Antitrust Act, RICO, the antitrust laws of 48 states and the District of Columbia, and are liable under common law breach of fiduciary duty and unjust enrichment theories. Plaintiffs seek treble damages plus interest and attorneys' fees as a result of the alleged RICO and Sherman Antitrust Act violations.

The plaintiffs in the *First Employee Benefits Complaint* are nine individual employees and corporate and municipal employers alleging claims on behalf of two separate nationwide purported classes: an employee class and an employer class that acquired insurance products from the defendants from August 26, 1994 to the date of any class certification. The *First Employee Benefits Complaint* names AIG, as well as eleven brokers and five other insurers, as defendants. The activities alleged in the *First Employee Benefits Complaint*, with certain exceptions, track the allegations of contingent commissions, bid-rigging and tying made in the *First Commercial Complaint*.

On October 3, 2006, Judge Hochberg of the District of New Jersey reserved in part and denied in part motions filed by the insurer defendants and broker defendants to dismiss the multi-district litigation. The Court also ordered the plaintiffs in both actions to file supplemental statements of particularity to elaborate on the allegations in their complaints. Plaintiffs filed their supplemental statements on October 25, 2006, and the AIG defendants, along with other insurer and broker defendants in the two consolidated actions, filed renewed motions to dismiss on November 30, 2006. On February 16, 2007, the case was transferred to Judge Garrett E. Brown, Chief Judge of the District of New Jersey. On April 5, 2007, Chief Judge Brown granted the defendants' renewed motions to dismiss the *First Commercial Complaint* and *First Employee Benefits Complaint* with respect to the antitrust and RICO claims. The claims were dismissed without prejudice and the plaintiffs were given 30 days, later extended to 45 days, to file amended complaints. On April 11, 2007, the Court stayed all proceedings, including all discovery, that are part of the multi-district litigation until any renewed motions to dismiss the amended complaints are resolved.

A number of complaints making allegations similar to those in the *First Commercial Complaint* have been filed against AIG and other defendants in state and federal courts around the country. The defendants have thus far been successful in having the federal actions transferred to the District of New Jersey and consolidated into the multi-district litigation. The AIG defendants have also sought to have state court actions making similar allegations stayed pending resolution of the multi-district litigation proceeding. In one state court action pending in Florida, the trial court recently decided not to grant an additional stay, but instead to allow the case to proceed. Defendants filed their motions to dismiss, and on September 24, 2007, the court denied the motions with respect to the state antitrust, RICO, and common law claims and granted the motions with respect to both the Florida insurance bad faith claim against AIG (with prejudice) and the punitive damages claim (without prejudice). Discovery in this action is ongoing.

Plaintiffs filed amended complaints in both *In re Insurance Brokerage Antitrust Litigation* (the *Second Commercial Complaint*)
